Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the general term used in this synopsis for the main forms of provision is **ECEC centre** (*Kindertageseinrichtung, Kita 0–5¹*). The term **nursery** (*Kinderkrippe*) is used for settings specifically for under 3 year-olds and **kindergarten** for settings for children aged 2/3–5 years. Any additional forms are described where appropriate.

Historical milestones in ECEC in Germany

1802	Founding of the first custodial institution (<i>Kleinkinderbewahranstalt</i>) for children up to the age of four in Detmold by Princess Pauline zu Lippe-Detmold
First half of 19th century	Institutions (also known as <i>Kleinkinderschulen</i>) are founded along confessional lines and by philanthropic associations for neglected children of the poor.
1840	Friedrich Froebel (1782-1852) founds the first “kindergarten” in Blankenburg (Thüringia) with a comprehensive approach towards early childhood education – intentionally open for children of all social classes, but fees in effect excluded poor families.
1848	Public discussion of Froebel’s proposal to integrate the kindergarten into the general education system. There is no state financial support for either confessional <i>Kleinkinderschulen</i> or non-confessional kindergartens.
1851-1860	Kindergartens are banned by the Prussian government until 1860.
Late 19th century	There is still virtually no financial support for kindergartens from the state.
1910	Around 13% of 3 to 5 year-olds attend a kindergarten, with marked regional variations.
1920	The Reich Schools Conference (<i>Reichsschulkonferenz</i>) debates whether kindergartens should be part of the school system or assigned to social welfare.
1922	National Youth Welfare Act (<i>Reichsjugendwohlfahrtgesetz</i>) assigns kindergartens to the social welfare sector and provides a prerogative for private (confessional) provision. ECEC settings come under the responsibility of the youth office as part of the municipal welfare authorities and are thus excluded from public education. To this day, the majority of child and youth welfare services are provided by non-governmental organisations.
1933	With the onset of the Nazi regime, progressive approaches in kindergartens (<i>Reformpädagogik</i>) come to an abrupt halt. Kindergartens are gradually appropriated by the National Socialist Welfare Organisation and come under the influence of Nazi ideology.
Post WW2 – 1990	In the socialist and centralised <i>German Democratic Republic (GDR)</i> the participation of women in the labour market is a declared political goal, supported by the development of a system of full-day kindergartens and nurseries, both of which have an explicitly educational mission. The decentralised <i>Federal Republic of Germany (FRG)</i> follows a distinctly different policy agenda. Expansion is slow and provision levels are much lower than in the GDR. Kindergartens for 3 to 6 year-olds are open on a predominantly part-time basis only.

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years, as in Germany.

1990	Following the unification of the two German states, a new federal-level law, the Child and Youth Services Act (Book Eight of the Social Code), comes into force (1990 in the eastern and 1991 in the western <i>Länder</i>).
1996	Legal entitlement to a kindergarten place for 3 to 6 year-olds is introduced, leading to a steady expansion of kindergartens. The level of services for under 3 year-olds improves only minimally during this time. By 2002, the overall level of provision has risen to 9%, but differences between the eastern <i>Länder</i> (37%) and the western <i>Länder</i> (3%) remain significant.
2002	Early childhood education starts to move up the policy agenda. Two strategies in particular mark a significant change of direction in the history of ECEC in Germany. One is the decision to introduce official curricular guidelines for the early childhood sector, which are successively issued between 2003 and 2008 in all 16 <i>Länder</i> ; the other is a government commitment to expand places for under 3 year-olds to provide coverage for 35% of this age group by 2013 and guaranteeing entitlement to a place for children aged 1 and 2 years.
2004	Inter-ministerial (Youth Affairs/Education) agreement at federal level on a (non-mandatory) <i>Common Framework for Early Education in ECEC centres</i> . The Childcare Expansion Act comes into force.
2008	The Childcare Funding Act (<i>KiFög</i>) comes into force.
2013	All children in Germany from the age of 13 months are entitled to a place in centre-based or home-based ECEC provision.
2013 - 2018	Increased federal funding leads to a rapid expansion of ECEC settings, especially of places for under 3 year-olds. By 2018, the enrolment rate for this age group has risen to 33.6% (compared to 9% in 2002).
2019	A "Law for the advancement of quality and participation in ECEC" (<i>Gute-Kita-Gesetz</i>) comes into force, aiming to improve quality in 10 areas through written contracts between the federal government (<i>Bund</i>) and the 16 regional governments (<i>Länder</i>) and to introduce new monitoring and evaluation measures.
2019	From 2019 to 2022 the federal government funds a comprehensive "Staffing Campaign" programme to help towards easing the shortage of staff in the ECEC sector.
2021	The Act on All-Day Provision for Children of Primary School Age (<i>GaFöG</i>) of 2 October establishes a legal entitlement to all-day education and care provision for primary school-age children on a staggered basis up to 2029.
2022	Revised version of the 2004 (non-mandatory) <i>Common Framework for Early Education in ECEC centres</i>
2023	The KiTa Quality Act comes into force on 1 January. In 2023 and 2024, the federal government is supporting the <i>Länder</i> in the implementation of quality enhancement measures and improving participation in ECEC with a total of around 4 billion euros.

Sources: Erning 1987; Ebert 2006, 2021; BMFSFJ 2013; Franke-Meyer 2016, 2024; Destatis 2019; Willekens and Scheiwe 2020; BMFSFJ 2023a

ECEC system type and auspices

In the Federal Republic of Germany, ECEC settings for the years before compulsory schooling starts are part of the child and youth welfare system. Over 100 years ago, the Reich Youth Welfare Act (1922) established that kindergartens were not part of the public education system (Franke-Meyer 2024). This decision remains valid up to the present day and was only overturned during the 40-year existence of the German Democratic Republic.

The system of early childhood education and care in Germany comprises not only centre-based ECEC settings (nurseries, kindergartens, multi-age centres), but also home-based childcare provision as well as complementary education and care services for school-age children. Federalism

and subsidiarity are the underlying political and organisational principles with regard to the legislation, regulation and funding of these different types of setting.

In a system of multi-level governance, responsibilities are shared between the federal government, the 16 *Länder* and the local authorities – in partnership with non-governmental, voluntary child and youth welfare agencies.

At the **federal level** (*Bund*), the main responsibility lies with the Federal Ministry for Family Affairs, Senior Citizens, Women and Youth, which has "stimulatory competence" (*Anregungskompetenz*) regarding ECEC. At the **regional level** (*Länder*), the federal states implement the federal-level requirements through the supreme state youth authorities, which are usually a unit within the social affairs ministry or (less common) the ministry of education. They are responsible for regulating the issues not determined by federal law. At the **local level** (*Kommunen*), the municipalities (districts, towns, boroughs) are in charge of organising and securing funding for early education and childcare provision. To this end, they work together with non-governmental agencies, mainly voluntary youth welfare associations and church organisations. The public youth welfare authority has the basic overall responsibility for ensuring the implementation of child and youth welfare policies. This multi-level policy-making can lead to considerable regional differences (Diskowski 2006; Oberhuemer 2014; ICEC 2023).

General objectives and legislative framework

The overarching goals at federal level are set out in Book Eight of the Social Code (*Sozialgesetzbuch VIII, Kinder- und Jugendhilfe*) (BMFSFJ 2020a) - also known as the Child and Youth Services Act (KJHG 1990, with amendments). These include supporting children in their individual and social development; complementing family upbringing practices; and supporting parents in balancing employment and family duties. The overall approach combines three interlinked dimensions: education (*Bildung*), care (*Betreuung*) and upbringing (*Erziehung*). ECEC settings are to be adapted to the needs of the children and their families in terms of pedagogy and organisation. Parents are to be included in key decision-making processes.

The principles and requirements of Book Eight of the Social Code (SGB VIII) are transposed into regional legislation by the parliaments of the 16 federal states (*Länder*) and implemented by the state ministries/state youth welfare offices. A significant amendment made to the Child and Youth Services Act in 1996 was the provision of a legal entitlement to a kindergarten place for children between the ages of 3 and school entry. Some *Länder* had already established legal entitlements by this time. Further changes in federal-level legislation include the 2005 Day Care Expansion Act (TAG), the 2005 Child and Youth Welfare Development Act (KICK), and the 2009 Childcare Funding Act (KiFög).

In 2019, the Act on the Further Development of Quality and Participation in ECEC (KiQuTG) – known as the *Gute-KiTa-Gesetz* – came into force (BMFSFJ 2020b). The goals are (1) to improve quality in 10 fields of action² through written agreements between the federal government and the 16 state governments, and (2) to introduce new monitoring and evaluation measures. Up to 2022, the federal government invested 5.5 billion euros in this project.

The subsequent KiTa Quality Act (1.1.2023) has extended the provisions of the *Gute-KiTa-Gesetz* beyond 2022 until the end of 2024. In 2023 and 2024, the federal government is supporting the *Länder* with a total of around 4 billion euros in measures to further develop quality and improve

² The 10 fields of action are: needs-based services; good child to staff ratios; qualified professionals; strong ECEC management; child-friendly spaces; growing up healthy; language education; good home-based provision; networks for more quality; diverse educational services.

participation in ECEC (BMFSFJ 2023a). The *Länder* can decide for themselves on which fields of action³ to focus.

In addition, the Act on All-Day Provision for Children of Primary School Age (*Ganztagsförderungsgesetz - GaFöG*) was passed in October 2021. For the first time, children of primary school age will be granted a legal entitlement to a place in an all-day education and care programme. The entitlement begins in 2026 for children in the first grade and will apply to all grades on a staggered basis up to 2029.

ECEC entitlement and compulsory attendance

In Germany, there has been a federally defined legal entitlement since August 2013, as well as relevant regulations in the individual *Länder* for a place either in a centre-based or home-based ECEC setting for children from their 1st birthday until they start school (BMFSFJ 2018).

When children aged 3 years and upwards were granted this right under federal law (1996), the guaranteed "place" was not further defined in hours or days. In the meantime, ten of the 16 *Länder* have specifications which range from a guaranteed place between four to 10 hours a day. The higher levels tend to be found in eastern *Länder*. In five western *Länder* and one eastern federal state there are no specifications regarding the hourly duration of a guaranteed place. In the city state of Berlin, the guaranteed hours are extended for children who are in a facility for the homeless. In the city state of Hamburg, the total amount of guaranteed enrolment is limited to 60 hours per week (Bock-Famulla et al. 2023).

Attending an ECEC setting is not obligatory in Germany. Compulsory schooling begins at around 6 years of age. However, some *Länder* have provisions in school education legislation for compulsory language assessments; these may specify attending an ECEC setting prior to school enrolment (see also *Monitoring* section).

Main types of provision

On 1st March 2023, there were 60,045 (E)CEC facilities in Germany, with various organisational structures (Destatis/Genesis 2023⁴).

(E)CEC centres (*Kindertageseinrichtungen* – literally 'day centres for children' and increasingly referred to as *Kitas*) is an umbrella term for a broad spectrum of centre-based education and care settings, both for young children and school children up to age 12. In addition to the classic forms of nurseries and kindergartens, multi-age facilities for 0 to 6 year-olds or 0 to 14 year-olds are increasingly common, as are, for example, parent-child groups in various forms, in-company childcare services, cooperation networks between ECEC centres and other services in the neighbourhood, and foreign-language kindergartens. The number of centres which offer ECEC exclusively for children from the age of three until they start school has decreased, whereas more and more multi-age settings cater for both under 3 year-olds and 3 to under 6 year-olds. As a

³ In the KiTa Quality Act (2023), the previous 10 fields of action have been reduced to 7 core fields of action: needs-based provision; staff to child ratio; recruiting and maintaining qualified staff; strong management; language education; measures for child development, health, nutrition and movement; strengthening home-based provision.

⁴ The cut-off date for all Federal Statistical Office figures (Destatis/Genesis 2023) used in this report is 01.03.2023. However, at the time of reporting, some more differentiated data were only available in the 2022 edition (Destatis 2023a), with a cut-off date of 01.03.2022.

rule, they open between 7:00/7:30 (70.4%) and close between 16:30/18:00 (61%) (Destatis/Genesis 2023, own calculations).

The opening hours of (E)CEC centres vary considerably; 70.4% open between 7:00/7:30 and 61% close between 16:30/18:00 (Destatis/Genesis 2023, own calculations).

Nurseries (*Kinderkrippen*) are ECEC settings for children under 3 years of age. The difference in the relative proportion of available places for under 3 year-olds as well as their participation rates in the eastern and western *Länder* continues, although a strong expansion of places in western Germany has helped to mitigate these disparities (see section on *Participation rates*).

Kindergartens were traditionally the classic and predominant form of institutional care for children from the age of 3 until they started school in the western federal states. In recent years, as a result of the extension of legal entitlement in 2013, admission procedures increasingly include 2 year-olds. The opening times of kindergartens vary considerably.

Centres for children and families (known mostly as *Kinder- und Familienzentren*, but with a variety of local names), provide both education/care services for children and family support for parents. This relatively new form of integrated provision in Germany has been expanding over recent years. Such centres have now been established in most federal states, either with state-wide funding or targeted funding at the municipal level (Schlevogt 2021). Profiles vary considerably; however, a key aim of all such settings is to provide accessible and reliable childcare services for families and to network with relevant agencies and organisations in the community (Rauschenbach 2008).

Deferred school-entry provision known as *Schulkindergarten* or *Vorklasse*, is available in some *Länder* or municipalities as a specific type of institutional setting provided for 6 year-old children considered not yet ready for school. In some federal states these come under the responsibility of the school sector (e.g. since 2018 in Hesse), in others under child and youth welfare. According to Statista data (2024a, b), in 2022/23 there are 1,207 *Schulkindergärten* and *Vorklassen* in Germany in which 10,205 children are enrolled.

Home-based ECEC provision (*Kindertagespflege*) is an integral part of the child and youth welfare services for young children and has the same legal status at the federal level as centre-based ECEC provision. Four main forms are available: (1) as a service in the parents' own home; the parents are the employers, and no operational license is required; (2) as a service in the child carer's house: up to five children are allowed to participate at the same time (regulations differ in some *Bundesländer*); the Childcare Funding Act 2009 (*Kinderförderungsgesetz*) stipulates that if more than five children are enrolled, a pedagogical qualification is necessary. For this type of home-based provision, a local authority license is required which has to be renewed every five years; (3) a service located in third-party rooms: local authorities decide on the room suitability; (4) as a family child care network (*Großtagespflege*): In some regions several child carers may join up to provide a service for more than five children. Sometimes special regulations exist for this kind of setting, since it is sometimes difficult to distinguish it from a regular ECEC centre (BMFSFJ 2010, 10ff; Bundesverband für Kindertagespflege 2021).

Provider structures

In Germany, the child and youth welfare services, including ECEC, have traditionally been provided by non-governmental, non-profit providers (mainly the welfare associations and the Protestant and Catholic churches). Even today, they play a prominent role in the provision and organisation of early childhood education and care facilities, especially in the western *Länder*, where in 2021 there were 25,768 ECEC centres (excluding out-of-school provision) run by non-

profit providers compared to 5,960 ECEC centres in the eastern *Länder* (Bock-Famulla et al. 2023).

These responsibility structures are based on the principle of subsidiarity, under which the public sector is obliged to support non-governmental agencies and only provide social services if the NGOs are not in a position to do so. In former East Germany (GDR), public and employer-based ECEC settings were the norm. In the meantime, the number of settings in the eastern *Länder* run by independent organisations is increasing.

Currently, a further diversification of the provider landscape can be observed (Fuchs-Rechlin and Riedel 2021). In the last two decades, since about 2000, the number of "other" non-profit providers (besides the welfare and church organisations) has increased significantly. These are often smaller providers which are not members of any umbrella organisation. The share of private commercial providers is also growing, although this still makes up a small part of the overall picture (3.0%, see *Table 1*).

In 2023, there were a total of 60,045 (E)CEC centres, of which 19,930 were run by the public sector (33.2%) and 40,115 by independent providers (66.8%). The latter are divided in roughly equal parts into church and non-church providers. Overall, there is a threefold division into approximately one-third public, one-third church and one-third non-church settings, i.e. two-thirds of all (E)CEC settings are run by non-profit child and youth welfare organisations (Destatis/Genesis 2023, own calculations).

Table 1

Germany: (E)CEC provider distribution, centre-based provision, 2023

Provider type		Distribution in %	
Public			33.2
Church affiliated, non-profit	Protestant (<i>Diakonie</i>)	15.6	31.7
	Catholic (<i>Caritas</i>)	15.	
	Other church affiliated	0.4	
Non-church affiliated, non-profit	The <i>Paritätische</i> (non-governmental welfare association)	9.1	32.1
	Workers' Welfare Association (<i>Arbeiterwohlfahrt</i>)	4.6	
	German Red Cross (<i>Deutsches Rotes Kreuz</i>)	3.2	
	Other non-profit (e.g. parent initiatives)	15.2	
Commercial, for-profit			3.0

Source: Destatis/Genesis 2023, own calculations

In 2022, 220,539 under 3 year-olds and 1,020,875 children aged 3 up to school entry⁵ were enrolled in **public** sector *Kitas*. In the same year, 485,254 of under 3 year-olds and 1,800,251 children aged 3 up to school entry, were attending **private**, mainly publicly subsidised non-profit ECEC centres (Destatis 2023a). In 2022, 28,963 (4%) of the 0–2 year-olds were enrolled in parent initiatives as were 95,007 children (4%) over 3 years of age (Bock-Famulla et al. 2023).

In 2023, a total of 721,551 children under 3 years of age and 2,670,366 children aged 3 up to school entry were enrolled in an ECEC centre. 1,441,101 were in public and 2,485,322 in private non-profit ECEC centres (Destatis/Genesis 2023).

⁵ Including some children under 8 years of age not yet attending primary school.

Participation rates in regulated ECEC provision

Table 2 shows the overall participation rates across the country broken down into single age-groups for 2022, whereas Table 3 indicates the distribution patterns across the western and eastern *Länder*. While there are still considerable differences in enrolment levels in centre-based settings in the western and eastern *Länder* for children up to age 3, participation rates even out for children aged 3 up to school entry. Overall, participation rates have risen over the past few years in Germany, particularly in the case of children under age 3⁶.

Table 2

Germany: Enrolment rates (in %) in centre-based settings by age, 2009–2022

Age group	2009	2015	2022
Under 1 year	1.5	1.8	1.3
1 year-olds	16.1	28.8	30.8
2 year-olds	34.8	54.7	57.7
3 year-olds	83.1	90.0	85.3
4 year-olds	94.3	96.0	93.1
5 year-olds	97.1	96.5	95.3

Table 3

Germany: Participation rates (in %) in centre-based and home-based settings, 2009–2022

Year	Regional distribution	Under 3 years in %	3 to under 6 years in %
2009	Western <i>Länder</i> , without Berlin	12.0	91.1
	Eastern <i>Länder</i> , including Berlin	41.3	94.6
	Germany, total	17.4	91.7
2015	Western <i>Länder</i> , without Berlin	23.6	94.4
	Eastern <i>Länder</i> , including Berlin	46.8	96.0
	Germany, total	28.2	94.7
2022	Western <i>Länder</i> , without Berlin	25.8	90.8
	Eastern <i>Länder</i> , including Berlin	49.4	93.3
	Germany, total	29.9	91.3

Source: Bock-Famulla et al. 2023

In 2022, more than one third of children from age 3 up to school entry (39%) spent between 25 to 35 hours weekly in centre-based ECEC provision, slightly more than half (52.5%) spent more than 35 hours and 8.5% less than 25 hours. In the same year, 11.2% of under 3 year-olds spent less than 25 hours, 33% between 25 and 35 hours and 55.8% more than 35 hours per week in an ECEC setting (Destatis 2023a). Across both age groups, most children (38%) attended an ECEC setting for 25 to 35 hours per week in 2023, 30% spent more than 45 hours there and just under 16% attended for less than 25 hours (Destatis/Genesis 2023).

For both age groups, in 2021, the amount of time was markedly higher in the eastern federal states (including Berlin) than in the western part of the country: Of the children who spent over 45 hours in an ECEC centre, the respective proportions were 60% and 27% for the under 3 year-olds and 63% and 28% for children from age 3 up to school entry (Bock-Famulla et al. 2023).

⁶ Following a data correction, the national statistics report that in 2023, a total of 856,600 children under age 3 (36.4%) and 2,821,126 children between age 3 and school entry (90.9%) were enrolled in ECEC centres (Destatis 2023c).

Financing and costs for parents

The ECEC system in Germany is mainly publicly funded (Autorengruppe Bildungsberichterstattung 2018). Funding procedures are regulated by state-level legislation and vary considerably across the country. Primarily, the municipalities and the federal states are involved in financing ECEC; providers and parents also contribute to the costs. In addition, the federal government is increasingly financing special investment programmes.

In 2022, federal, state and local government spending on education totalled €176 billion. The planned expenditure for 2023 totals €181 billion or 4.6% of gross domestic product (Statista 2023). Public expenditure on (E)CEC in 2022 amounted to €43.5 billion, 6.4% more than in the previous year (Destatis 2023d).

Nationwide, the **municipalities** bore slightly more than half of the expenditure for ECEC in 2021 (51.1%) and the *Länder* 47.6% (Destatis 2022, 48f). However, there are considerable regional disparities in municipal budgets with regard to tax revenues from trade tax, which accounts for about half of the financial capital and is dependent on the presence of industry and economic fluctuations. In addition, further tax revenues are redistributed from the federal government and the *Länder* to the municipalities. This leads to regional differences in municipal budgets and thus also in the provision of ECEC (Scholz et al. 2019).

At the level of the **Länder**, significantly more funds have been made available for ECEC in recent years. Between 2010 and 2022, expenditure on ECEC more than tripled in three federal states and at least doubled in 13 *Länder* (Destatis 2022, 127). However, there are still considerable differences, not least in the expenditure per child expenditure. At the end of 2020, this varied between €9,469 in Berlin and €6.550 in Bayern (Bock-Famulla et al. 2023).

Although the **federal government** has a legally limited role with regard to ECEC financing, the factual importance of the *Bund* in this regard has increased in recent years. Since 2008, the *Länder* have been supported with grants via a "special fund for the expansion of childcare". These programmes provide financial incentives for specific reform initiatives of nationwide significance. After considerable investment in the expansion of places for under 3 year-olds, the federal government funded a comprehensive "Staffing Campaign: Recruiting Young Talent, Retaining Professionals" from 2019 to 2022 (Evaluation Report: Weltzien et al. 2022). From 2022 to 2024, the federal government is funding the implementation of the KiTa Quality Act in the *Länder* with approximately 4 billion euros (BMFSFJ 2023a).

Parental contributions vary considerably depending on the provider, municipality and federal state. The *Gute-KiTa-Gesetz* specified an obligatory income-related adjustment of parental contributions and extended the criteria for fee exemption. Municipalities have a statutory duty to provide advice on the possibility of applying for a fee exemption. Nevertheless, parental contributions vary greatly across Germany at the municipal level (Mühleib et al. 2021). Even in the case of settings offering the same service for the same age range of children and where parental income levels are similar, the costs for parents can sometimes differ by several hundred euros per month. In 2020, for example, the monthly parental contributions for a full-day place (more than 35 hours) for children under the age of 3 varied – with a wide range within the federal states – between an average of €0 (in Berlin, Mecklenburg-Western Pomerania and Rhineland-Palatinate) and €360 (North Rhine-Westphalia) or €335 (Baden-Württemberg) (Klinkhammer et al. 2022, 227).

With the extended fee exemption in the course of the amendment of the Child and Youth Welfare Act (§ 90 SGB VIII), significantly more families have become eligible for fee exemption. However, in August 2022, there were only three federal states with full exemption from fees: Hamburg, Mecklenburg-Western Pomerania and the city state of Berlin; in three *Länder* (Baden-Württemberg, Saarland and Saxony) there is no exemption at all and in the remaining ten *Länder*

there is a partial exemption linked to certain criteria (e.g. age of the child or length of attendance at the facility) or a subsidy system (Bock-Famulla et al. 2023).

In 2022, a couple with two children spent about 1% of net household income on childcare costs⁷ (OECD.Stat 2023).

Staff to child ratios and group size

In Germany, it is not possible to calculate a specific staff to child ratio or current group size through the official child and youth welfare statistics. This is because the pedagogical work with children is not separated from other work tasks (e.g. planning, cooperation with parents). Instead, a staffing ratio can be calculated, which relates the contractually agreed weekly working hours of the educational staff to the contractually agreed weekly hours of childcare in a *Kita*.⁸ In this respect, the differences between the federal states are considerable.

The staffing ratio calculation in ECEC settings is carried out at group level, i.e. only settings with a fixed group structure are taken in account.

In 2021, one staff member in Germany was responsible for an average of 3.9 children under 3 years of age, but there are marked differences between the federal states, ranging from 2.9 children per qualified staff member in Baden-Württemberg to 5.8 children in Mecklenburg-Western Pomerania.

There were similar differences for children between 3 years and school entry: overall, a staffing ratio of 1:8.4 applied here, ranging from 6.5 children per specialist in Baden-Württemberg to 12.9 children in Mecklenburg-Western Pomerania. In mixed-age groups from 0 years onwards, the national average staffing ratio was 1:6.3 (from 1:5.2 in Baden-Württemberg to 1:10.5 in Mecklenburg-Western Pomerania). Overall, the staffing ratio in the eastern *Länder* is less favourable than in the western *Länder* (Bock-Famulla et al. 2023).

Table 4

Germany: Average staffing ratio by region and age of children, 2021

	1 qualified staff member for ... children		
	0 to under 3 years	3 years to school entry	Mixed-age groups
Western <i>Länder</i>	3.3	7.8	5.9
Eastern <i>Länder</i> (including Berlin)	5.3	10.7	8.3
Total average	3.9	8.4	6.3

Curricular frameworks

Traditionally, unlike the situation during the German Democratic Republic (GDR) era, there were no official curricular frameworks for the pedagogical work in ECEC settings in former West Germany. This was primarily a matter for the providers, even if guiding principles were set out in the few *Länder* with specific kindergarten legislation. However, after the so-called "PISA shock"

⁷ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

⁸ The calculation of staffing ratios in ECEC settings is based on a standardised calculation of full-time equivalents of the children enrolled (full-time care equivalent) and the pedagogical staff in the setting (full-time employment equivalent) for the different types of groups (Bock-Famulla et al. 2023).

in 2001, when Germany performed worse than expected in the OECD tests for 15 year-olds, the urgency of “laying firm foundations” through early childhood education became a hot topic across the country. Gradually, from 2004 onwards, the first early education frameworks were introduced. In the meantime, these have been revised at least once in most of the *Länder*.

These 16 curricular frameworks see children as agents of their own learning – in a co-constructive process with adults and other children. They are not prescriptive catalogues of learning goals, but rather descriptive accounts of varying aspects of pedagogy, based on research literature. They differ in length and the degree of obligation. Most *Länder* regard these framework plans as a guiding orientation for ECEC centres. In Bavaria, Brandenburg, Saxony and Thuringia, ECEC settings are obliged by law to integrate the main principles into their centre-specific programmes. The implementation of the principles and goals is the responsibility of the respective provider. All curricular frameworks specifically cover the age group up to school entry; in some *Länder* they also include guidelines for out-of-school education and care for children up to age 10 (Berlin, Brandenburg, Bremen, Hesse, Mecklenburg-Western Pomerania, North Rhine-Westphalia, Saxony, Saxony-Anhalt), in Thuringia even up to age 18 (Bock-Famulla et al. 2023; Deutscher Bildungsserver 2023; see *Appendix 1* for links to the individual curricular frameworks – in German).

Meanwhile, all curricular frameworks contain areas on language, mathematics or science education; more than half also on health, music, movement and sport, technology, body, religion and values, media, environment, as well as art/presentation and design. Nevertheless, there is still a lack of comprehensive data on how the theoretical educational concepts are implemented and evaluated in the everyday life of ECEC settings (Autor:innengruppe Bildungsberichterstattung 2022, 98).

In addition to these state-level curricular documents, the 16 Ministers of Education and Cultural Affairs and the 16 Ministers of Youth Affairs also agreed in 2004 on a *Common Framework for Early Education in ECEC centres*, which was updated in 2022 (JMK 2004; KMK 2022). The basic principles of this non-binding common framework include a holistic approach to learning, the participation of children in decision-making processes, intercultural pedagogy, gender-sensitive practices, and targeted support for children with developmental risks or impending disabilities as well as for highly gifted children. Areas of learning include language, literacy and communication; personal and social development; values education/religious education; mathematics, natural sciences, technology; music education and media; physical development, movement, health; nature and culture. These areas of learning are to be embedded in an integrated and holistically organised approach in the ECEC setting. In addition, special emphasis is placed on the transition between kindergarten and primary school. In this respect, a significant challenge for the future is to strengthen cooperation at all levels: the steering level, the local and institutional level and the curricular level.

Digital education

Although digital media are omnipresent in children’s lives from a very early age, the way they are handled both in families and in ECEC settings varies considerably. Experts and pedagogical staff see aspects of digital media that on the one hand promote education (cf. Blossfeld et al. 2018; Knauf 2018; Reichert-Garschhammer 2018) and on the other hand impair child development (Fröhlich-Gildhoff and Fröhlich-Gildhoff 2018). Overall, the acceptance of digital media in ECEC environments is still rather hesitant from the perspectives of all stakeholders involved, i.e. providers, educational professionals and also parents (cf. Autorengruppe Bildungsberichterstattung 2020).

Digital media have become established in most ECEC settings as a support and facilitator for organisational tasks or for communication within the team and with parents - as the Corona pandemic in particular has shown. However, it is still rather uncommon for them to be available as a tool for children in the same way as pens and paper are. No one is born a “digital native”. However, it is still not widely acknowledged that children have to learn how to use digital media, and ECEC centres face the challenge of finding an appropriate approach towards supporting children’s digital competence.

In the curricular frameworks of the 16 *Länder* (see *Appendix 1* for links in German), the terms “digital education” or “digital media” have been included in very different ways (see, e.g., Lienau and van Roessel 2019). Only four of the 16 curricular documents explicitly refer to “digital media” or “digital education” in a separate section. In all others, there are only general references to “media” – either unspecifically or only mentioning analogue media. Mostly they are subsumed under another section, such as “language” or “communication”. A definition of media literacy and a differentiation of objectives of media education are provided by ten of the curricular frameworks. While some highlight the dangers and disadvantages of “excessive media use”, others emphasise the constructive coexistence of analogue and digital experiences or postulate very specifically that it “makes no sense to exclude children’s media experiences... they must become the subject of pedagogical work...” (Bildungsplan Saarland 2018, 84). Twelve of the 16 *Länder* emphasise the importance of an age-appropriate or critical accompaniment of the children’s media experiences by the professionals.

In order to strengthen the presence of “digital education” in the early childhood field on the basis of knowledge and experience, a pilot project was carried out in Bavaria from 2018 to 2020, aiming to sensitise ECEC settings to it and to support the professionals in developing the necessary knowledge and skills. Commissioned by the Bavarian Ministry of Social Affairs (StMAS), the State Institute for Early Childhood Research and Media Literacy (IFP) was responsible for the conceptual framework and implementation. In terms of the number of participating ECEC centres (100) and “media coaches”, it was the most extensive pilot project in Germany to date⁹. Following the successful completion of this pilot project, its findings are now being implemented state-wide. Starting in September 2021, ECEC settings in Bavaria (in the second year of the campaign 308) will be supported professionally through a multi-year qualification programme “Kampagne Startchance digital” in the use of media with children and the involvement of parents (IFP 2024).¹⁰

Monitoring – evaluation

One of the main goals of the Good Childcare Act 2019 was to improve quality and participation in ECEC settings nationwide. Improved monitoring (BMFSFJ 2020b) and improved evaluation were further goals. From ten fields of action, the 16 *Länder* selected the issues that were particularly relevant for the development of quality in their federal state. Two comprehensive evaluation studies also examined the impact of the Good Childcare Act itself (BMFSFJ 2021).

Under the new KiTa Quality Act (2023), the *Länder* receive funds from the allocated 4 billion euros until the end of 2024, provided that at least 50% of the funds flow into the new seven

⁹ More information (in German) about this project can be found under the following link: <https://www.kita-digital-bayern.de/>

¹⁰ More information (in German) about the implementation can be found under the following link: <https://www.ifp.bayern.de/projekte/qualitaet/startchancekitadigital.php>

priority fields of action (see footnote 3). New measures from 2023 onwards may only be implemented in these fields of action. The *Länder* determine the specific measures together with the federal government (BMFSFJ 2023a).

Child-related assessment

The starting point for an increase in documentation and assessment of children's performance and progress in Germany is, on the one hand, concern about early language development in general and, on the other hand, about the language acquisition of children with a family language other than German. To assess the developmental progress of children in ECEC settings, observations, tests or portfolios are among the tools used. In some *Länder*, mandatory language assessments and, if necessary, support measures are laid down by law. In Bavaria, for example, the use of an assessment tool called Seldak ("Sprachentwicklung und Literacy bei deutschsprachig aufwachsenden Kindern" - Language Development and Literacy in German-speaking Children) is obligatory for 4 to 5 year-olds (IFP 2016).

Centre-based self-evaluation

Self-evaluation procedures include, for example, assessing the general quality of the setting, how the centre team cooperates, liaising with parents, or the implementation of the centre programme based on the state curricular framework. There are no recommendations regarding the frequency of evaluations. The respective ECEC provider decides whether to publish the results or not.

The city state of Berlin was the first of the 16 *Länder* to introduce steps regarding monitoring related to the Berlin curricular framework, in which evaluation is prescribed. An agreement with the providers, linked to the funding of the ECEC settings, requires a number of self-evaluations and (every five years) an external evaluation. The Berlin Kita Institute for Quality Development (BEKI 2022) is responsible for monitoring and evaluations, the results of which contribute to ongoing developments and improvements in early education. The providers finance the evaluation, are informed about the results and measures and have to adapt their professional development programmes accordingly.

External evaluation

There is no national inspection system in Germany. External monitoring is carried out at the regional and municipal level. Since 2008, the Bertelsmann Foundation has conducted an independent and detailed annual review of the most important structural features of the early childhood education system in Germany, focusing on quality-related aspects. Sources are mainly federal statistics and federal state reports (Bock-Famulla et al. 2023).

In general, control measures to check compliance with state regulations are low key and based mainly on agreements with the provider organisations. The frequency of external evaluations or the submission of written reports is rarely prescribed. The main responsibility for the quality of monitoring lies with the providers, who have developed their own systems of quality management and pedagogical guidance. At the municipal-regional levels there are also some guidelines for both external and self-evaluation procedures.

Inclusion agenda

Children with special educational needs and disabilities

The UN Convention on the Rights of Persons with Disabilities (2006), which was ratified in Germany in 2009, reignited the discussion on inclusive education at the political level.

"Children with and without disabilities should be able to learn together in one group, as far as the specific need for individual support allows" (SGB VIII 2012) – this is laid down in federal legislation. In doing so, providers have a duty to ensure that the staff in ECEC settings work together with families, community organisations and schools. The federal states have their own guidelines and/or legislation for implementation.

The inclusion in mainstream settings of children with special educational needs, developmental risks and (pending) disabilities has developed steadily since the 1970s. In all 16 federal states, the care of children with special educational needs and disabilities is regulated by law, either in ECEC legislation or under social law. In order to expand and strengthen inclusion and accessibility, corresponding laws (e.g. Disability Equality Act, General Equality Act, Accessibility Strengthening Act, Participation Strengthening Act) are to be further developed in the new coalition agreement of the government (BMAS 2021).

In 2022, 39.4% of all *Kitas* (23,374 out of 59,323) operated according to an inclusive approach while the number of special facilities for children with special needs decreased from 691 in 1998 to 229 in 2022 (Destatis 2023a). In 2022, 40.3% of ECEC centres care for at least one child who receives "inclusion support" (Bock-Famulla et al. 2023). 2.4% of children in (E)CEC settings were recipients of inclusion support in 2022: only 0.5% in the under-three age group and 3.2% in the group of over 3 year-olds (FKB 2023, 161).

Various projects initiated by ECEC providers also deal with the topic of inclusion in *Kitas*, e.g.:

In Baden-Württemberg, the Protestant Regional Association carried out the project "Shaping participation – avoiding disadvantage – *Kitas* develop an inclusion-oriented practice" in 24 *Kitas* from 2016 to 2019 as part of the action plan "Living inclusion". These were to be supported by professional supervision in the sustainable anchoring of an inclusion-oriented practice (Evangelischer Landesverband 2016).

In a pilot project of the city of Munich and Upper Bavaria, four ECEC centres in the city committed to offering at least five places for children with special needs in 2020/21. These centres were accompanied by specialists in inclusion issues and were also additionally staffed. Following the evaluation of the project, the model is to be transferred to other ECEC settings in Upper Bavaria (City of Munich 2021).

Children with a migration background – children from Roma communities

Pedagogical approaches in early childhood education are increasingly being framed in a paradigm that emphasises inclusion and the recognition of diversity of all kinds. This includes children with a migration background (defined as "at least one parent is of foreign origin").

In 2022, a total of 13.1% people with non-German nationality lived in Germany. Of these, 41.5% came from other EU27 countries. In the under-5 age group, these proportions were 14.1% and 34.7% respectively (Eurostat 2023c, own calculations).

Of the children under 3 years of age attending an ECEC centre in 2022, 22.8% had a migration background; in the group of children over 3 years of age 31.2%, i.e. almost one third. German is the language mostly spoken at home in 37.8% and 31.8% of these families respectively (Destatis 2023a, own calculations).

Since the beginning of the war in February 2022, 1,099,905 refugees from **Ukraine** have sought protection in Germany (as of 30.09.2023). Of the 347,000 children and young people, 38% are

of primary school age (Mediendienst Integration 2023). According to the second survey of the study "Refugees from Ukraine in Germany (IAB-BiB/FReDA-BAMF-SOEP Survey)" at the beginning of 2023, about every second child up to 6 years of age attended an ECEC centre, with large differences depending on the age of the children: While only 7% of 1 year-olds and 16% of 2 year-olds are enrolled in a centre, the proportion of 6 year-olds is 72%. The proportion of children attending a Kita is also higher in the eastern federal states (66%) than in the western states (46%). The results of the survey indicate that attendance at an ECEC centre is more frequent when one parent is employed or taking part in a language course (DIW 2023). The legal entitlement to a place in ECEC from the age of 1 also applies to refugee children. Upon application, the Youth Welfare Office pays the childcare costs for refugees (BMFSFJ 2023b).

A study by the DIW (Gambaro et al. 2019) examined the effects of children's attendance at ECEC centres on the integration of their parents on the basis of surveys¹¹ of refugees (N = 5,859, 2016 and 2017). It was found that especially mothers of children attending an ECEC centre were significantly better integrated, had higher language skills and a stronger labour market orientation. Therefore, care should be taken to ensure that the children of families who have fled to Germany are given the opportunity to attend an ECEC setting as early as possible.

A current project "Kitas and Ukrainian mothers with Kita children" is conducting an online survey of (a) 500 mothers each with questions on, among other things, the well-being and life of the mothers and their children in Germany, and (b) an online survey of Kita managers on the children enrolled (DJI 2023).

Reliable statistics on the number of **Roma** living in Germany are not available, as statistical data on ethnicity are not collected. Estimates range from 70,000 according to the Central Council of German Sinti and Roma (Frietsch 2018) to 120,000 (Statista 2010).

At the EU level, seven targets have been set for national Roma inclusion strategies for the period up to 2030, based on evidence from surveys of Roma communities, covering equality, inclusion, participation, education, employment, housing and health. With regard to early childhood education, the main aim is to improve access for Roma children (European Commission 2021). A measure for the integration and participation of Sinti and Roma in Germany within the framework of the ESF federal programme "Elternchance II" (Parental Opportunity II) also relates to improved access to early childhood education by strengthening cooperation with parents. To this end, persons, some of whom also belonged to the Roma, were trained as parent guides (BMI 2019).

Parental leave arrangements¹²

Fully paid **Maternity leave** (*Mutterschutz*) begins six weeks before the birth and lasts until eight weeks afterwards. These eight weeks are compulsory for all mothers. During that time 100% of the income is paid, with no upper limit.

There is no legal provision for **Paternity leave** (*Vaterschaftsurlaub*). However, fathers can take two months of exclusive parental leave. An entitlement to Paternity leave is being prepared for 2024.

Parental leave (*Elternzeit*) is regulated by the Federal Parental Leave and Parental Benefits Act (*Bundeselternzeit- und Elterngeldgesetz*, BEEG) and can be taken by both parents as an individual

¹¹ These surveys contained data from the Socio-Economic Panel (SOEP), the Institute for Employment Research (IAB) and the Federal Office for Migration and Refugees (BAMF).

¹² The brief summary in this section is based on the country note for Germany by Pia Schober and colleagues in the *International Review of Leave Policies and Research 2023* (see *References*).

entitlement for three years up to the child's 3rd birthday. 24 months of this can also be taken up to the child's 8th birthday.

Parents who take Parental leave on a full-time or part-time basis can choose between two allowance options or combine them: (a) Basic parental allowance (*Basiselterngeld*) and (b) Parental allowance plus (*ElterngeldPlus*).

Basic parental allowance: The income-related Basic parental allowance is paid for twelve months - for 14 months if both partners take parental leave for two months (partner months). A minimum of €300 per month is paid, a maximum of €1,800. Parents with a previous net monthly income between €1,000 and €1,240 receive 67%, above €1,240 the share is 65%, below €1,000 they receive a higher share. Parents can work part-time for up to 32 hours per week.

ElterngeldPlus is paid for 24 (+four) months in the first two years of the child's life as partial compensation for the salary lost through part-time work. Up to four additional months (partnership bonus) are paid if both parents work part-time between 25 and 30 hours per week for up to four consecutive months. As with the Basic parental allowance, 65% or 67% is paid, depending on income - but only for the difference from the previous income. Both parents can take Parental leave at the same time and divide it into up to three blocks.

In Bavaria and Saxony, an income-related so-called state child-raising allowance of €150 to €300 per month and child is paid.

The main aim of the 2007 Parental allowance reform was to increase the proportion of fathers taking Parental leave. Overall, 38.7% of eligible women and 16.1% of men chose the *ElterngeldPlus* option in 2022. An average of 26.1% of eligible fathers made use of parental allowances. The average duration of Parental allowance receipt for mothers remained at 14.6 months; for fathers, this period was significantly shorter at 3.6 months and even decreased somewhat in recent years. However, there are significant regional differences with regard to the proportion of fathers: While 30.2% of eligible fathers received parental benefits in Saxony in 2022, in Saarland the relevant share was only 20.8% (Destatis 2023b).

Current challenges for the ECEC system in Germany

Country expert assessment by *Sigrid Lorenz*

In public discourse, the high systemic relevance of early childhood education, care and upbringing within the complex and federally organised German society of today is undisputed. This has not only been the case since the experience of nationwide closures of (E)CEC centres and schools to contain the coronavirus pandemic, although this once again sharpened the focus on specific professions and people (cf. Kaldewey 2022). The urgent question of current and medium-term challenges facing the (E)CEC system must be answered in particular against the backdrop of current social and lifeworld characteristics and developments. These are often described as uncertain, complex, ambiguous, diverse and dynamic and are essentially generated by the effects of globalisation, digitalisation and climate change (cf. OECD 2019; Fritz 2020).

Accordingly, two fundamental challenges need to be highlighted for the early childhood education system: On the one hand, the system itself has a responsibility to develop even more strongly into a dynamic, flexible system in order to be able to respond adaptively to these social developments, as well as providing its own impetus. On the other hand, it is linked to the concrete task of early education in the present to prepare all (!) children for a world described in

this way with as many opportunities as possible, on the basis of corresponding pedagogical concepts. With regard to the in-depth structure, this results in multiple developmental tasks for early education; three tasks are discussed below with subjective preference.

Challenge 1: High quality early education must remain in focus.

Currently, scarce financial and human resources dominate the situation and discussion of institutional ECEC in Germany. The associated focus on ensuring the care of children tends to marginalise qualitative aspects of early childhood education and upbringing, aspects of education that have been fought over for decades and which are enshrined in law and in the state-specific regulations. It is necessary to focus more strongly on this quality again in the future, because "the most important factor in a child's development that can be influenced by society is education" (Fritz 2020, 8; Rauschenbach und Meiner-Teubner 2019).

Challenge 2: Educational content must be conceptualised as future-oriented.

Early childhood education needs to follow a positive narrative and in this respect be understood as a formative, not a preventative pedagogy (Durand and Birnbacher 2021). This is linked to the challenge of ensuring the development of children's individual potential and enabling them to participate and shape their lives in a committed and responsible manner under the conditions of a dynamic, complex future (as outlined). For this reason, particular emphasis should be placed on exploring which forward-looking educational topics should be included in early education concepts.

In addition to cross-cutting problem-solving skills, such as collaboration, communication, creativity and critical thinking (OECD 2019/2020), which support children in finding their own (knowledge) path even in the face of uncertainty, the areas of "digital education", "education for sustainable development and climate protection (ESD)" and "democratic education" should be given special visibility in the curricular frameworks of all federal states in the future. "Digital education" is an indispensable key competence in a digitally permeated world; "ESD" supports children in thinking and acting sustainably and is therefore important for the future and for survival; "democratic education", understood as making it possible to experience and practice a democratic set of values and a values-based way of life, is of enormous importance for the continued existence of a democratic way of life in view of increasing anti-democratic tendencies. (cf., for example, SWK 2022; Schipprack 2021; Wunderlich et al. 2023; Deutscher Bundestag 2020).

Challenge 3: Educational disparities must be reduced and effective action plans developed.

Despite the constitutionally guaranteed right to equal education for all, the educational biographies of children and young people in Germany are still unequal in terms of opportunities and strongly linked to social background and parental education. Counteracting this and organising education in such a way that all children can develop according to their skills and interests continues to pose major challenges for the education system (Bertram 2021).

Even if there are clear limits to the compensatory influence of institutional early childhood education (Rauschenbach und Meiner-Teubner 2019), ECEC needs to (be able to) make an even greater contribution to reducing disparities in the future. This includes reducing existing barriers to access, as enrolment in ECEC varies according to the economic resources of families. To this end, a solid framework, relevant concepts and specialist knowledge must be promoted, as many

professionals are still uncertain about how to deal with heterogeneity and the associated support for children from disadvantaged families (Spensberger und Taube 2022).

Overcoming these and other challenges requires a well-equipped and competent education system in order to avoid "implementation dilemmas" (cf. Viernickel und Weltzien 2023). It also requires an intensification of vertical and horizontal coordination between the federal government, federal states and local authorities (including other groups), as regional and supra-regional differences in quality can still be observed (BMFSFJ 2023c). In order to reduce such fluctuations and ensure good educational and participation opportunities for children regardless of location, legally defined, cross-state minimum quality standards accompanied by monitoring and evaluation are likely to be an adequate control instrument. One example of such a cross-state agreement is the "Common Framework of the *Länder* for Early Education in ECEC Centres" (JMK/KMK 2004; KMK 2022); it should be actively promoted in the future, as the first years of early childhood development are crucial.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Germany was 83,237,124.

Between 1995 (81,538,603) and 2005 (82,500,849) there was a slight rise in the overall population. After a peak of 81,802,257 in 2010, numbers since then have decreased slightly (2015: 81,197,537; 2020: 83,166,711) (Eurostat 2023a).

Total fertility rate

In 2021, the average total birth rate in the EU27 (as of 2020) was 1.53. The highest total birth rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.58, Germany is close to the EU27-average (Eurostat 2023b).¹³

Children under age 6

In 2022, 2.8% of the total population were children under 3 years of age, and 5.8% were children under age 6. For the first time, these relative shares are slightly above the respective EU-average (see *Table 5*, Eurostat 2023a).

¹³ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Table 5

Germany: Children under 6 years of age, 2022

Age	Number of children
Under age 1	791,254
1 year-olds	780,795
2 year-olds	789,145
3 year-olds	803,334
4 year-olds	810,805
5 year-olds	816,142
0 to 6 year-olds total	4,791,475

	Ø EU27	2.7	2.9	5.7

Source: Eurostat 2023a, *own calculations

Single households with children under age 6

The majority of households with children under 6 years of age were couple households in 2022. Households with single parents accounted for only 4.4% - as a rule, these are single mothers, the share of single fathers is very low at 0.4%.

Table 7

Germany: Households with children under age 6 in Germany, 2022

Household type	Total households	Share of total households, in %*
Single and couple households	7,136,200	
Couple households	6,078,900	85.2
Other household type	714,600	10.0
Single households, total	342,700	4.8
Single households, women	313,700	4.4
Single households, men	29,000	0.4

¹⁴ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Employment rates of parents with children under 6 years of age

In Germany, in 2022, the employment rate (15–64 years) of men as a whole was 83.7%, that of women 75.6% (Eurostat 2023g).

In 2022, 65.8% of women and 90.4% of men with children under 6 were in employment (18–64 years). The shares of fathers in employment were thus above the average (87.2%) of the 27(2020) EU countries, as were those of mothers (EU average 63.6%) (Eurostat 2023d).

Table 8a

Germany: Employment rates of parents with children under age 6 compared with other EU countries, 2010 and 2022

	2010	
	Mothers, in %	Fathers, in %
Germany	54.6	90.4
Highest employment rate in the EU27 ¹⁵	Denmark: 82.7	Netherlands: 93.4

Children at risk of poverty or social exclusion¹⁶

In 2022, 24.3% of children under 6 were at risk of poverty or social exclusion. This proportion was slightly above the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 20.9% (EU27: 21.6%). In 2020, 2.6% of children under 6 and 1.2% of the total population suffer from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023e, f).

About the author

Maria Sakellariou is a Professor in the Department of Early Childhood Education at the University of Ioannina and Director of the "Pedagogical and Teaching Methodology" Laboratory. She is a Visiting Professor at the University of Cyprus and the European University of Cyprus. Her research interests focus on issues of pedagogy and preschool/primary education, particularly on educational effectiveness, teaching methodology, curriculum design and evaluation. She has authored and co-authored numerous books and peer-reviewed articles in international journals.

1. ECEC governance in Greece

A split system

In Greece, early childhood education and care is not organised as a unified system. There are two main types of institution that serve the needs of children from 6 months up to 6 years: on the one hand, nurseries, extended-age nurseries and childcare centres for the younger children; on the other hand, kindergartens or pre-primary units in schools for 4 and 5 year-old children. Nurseries are attended by children aged 6 months to 2½ years, sometimes up to 4 years, while childcare centres admit children from 2½ years up to enrolment in compulsory education at age 4. In certain cases, infants as young as 2 months old may be admitted to a nursery if the board of directors of the setting or, in the case of municipal services, the municipal council, agrees to this (MD/2808 / 1997; Government Gazette 4249 / 05-12-2017).

At the local level, both public and private (MD D22 / 11828 / 293/2017) childcare centres fall under the jurisdiction of local government. At the national level, public childcare settings come under the responsibility of the Ministry of the Interior (Law 2880/2001; Law 3801/2009) and private settings under the Ministry of Labour and Social Affairs (MD C2b 1570/1999). Kindergartens come under the auspices of the Ministry of Education and Religious Affairs and are part of the primary education system. There are also private kindergartens which come under the supervision of the Ministry of Education (Ministry of Education and Religious Affairs 2022). Attendance is obligatory for 4 and 5 year-olds (Law 4521/2018).

2. Who belongs to the early year’s workforce?

2.1 Regular contact staff in ECEC provision

Table 1 shows ECEC staff working in direct contact with children in centre-based settings and also categorises the core professionals (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this chapter).

Table 1
Greece: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Kindergarten Teacher <i>Nipiagogos</i> <i>Profile:</i>	<i>Nipiagogeio</i>	Core practitioner with group responsibility	4–5 years	University degree (4 years) awarded by the School of Education Early Childhood Department

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Pre-primary Education Professional	Kindergarten (public, private) 4–5 years ¹ May also work in public and private childcare centres with 4–5 year-olds	Kindergarten principal <i>Proistamenos/Proistameni</i>		ECTS credits: 240 EQF level: 6 ISCED 2011: 6
Nursery and Childcare Teacher <i>Vrefonipiokomos</i> <i>Profile:</i> Early Childhood Pedagogy Professional	<i>Vrefikos stathmos</i> Nursery Mainly from 6 months (in specific cases from 2 months) up to 2½ years <i>Vrefonipiakos stathmos</i> Extended-age nursery 6 months (in specific cases from 2 months) up to 4 years <i>Pedikos stathmos</i> Childcare centre 2½–3 years	Core practitioner with group responsibility Centre head <i>Diefthin-tis/Diefthintri a</i>	2 months-3 years	4-year degree at University of Applied Sciences, awarded by Department of Early Childhood Care and Education (formerly Technological Education Institute (TEI) until reform in 2019) ECTS credits: 240 EQF level: 6 ISCED 2011: 6
Nursery and Childcare Teaching Assistant <i>Voithos vrefonipiokomou</i>	<i>Vrefikos stathmos</i> Nursery Mainly from 6 months (in specific cases from 2 months) up to 2½ years <i>Vrefonipiakos stathmos</i> Extended-age nursery 6 months (in specific cases from	Qualified co-worker	2/6 months–3 years	Certificate/Diploma as Nursery/Childcare Teaching Assistant (3 years) ECTS credits: n/a ² EQF level: 4/5 ISCED 2011: 3/4

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In Greece the corresponding formats are **0–3** and **4–5** years.

² Not applicable

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
	2 months) up to 4 years <i>Pedikos stathmos</i> Childcare centre 2½–3 years May also work as a self-employed family day carer (also in: maternity clinics, summer camps, family planning centres)			

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Kindergarten settings 4–5 years

In public kindergartens, fully qualified Kindergarten Teachers may be appointed to the post of Kindergarten Principal, based on certain criteria and subject to an evaluation process (Law 4327/2015). In order to apply for a position as head of a kindergarten, a teacher must have reached a certain point on the salary scale (in Greece, PE60). Kindergarten Principals are granted a position allowance. There are no required training programmes either before or after taking up their appointment to this position and their continuing professional and educational development is not mandatory.

The specific position of Kindergarten Principals depends on the size of the setting. Kindergartens with one to three groups or classes have their own Principal. The head of kindergartens/pre-primary units with four or more classes is the Primary School Director. Management staff are appointed for a four-year term.

Kindergarten Principals and School Directors are recruited through an announcement on the website of the Ministry of Education and Religious Affairs or the Regional Primary Education Directorate at least three months before the end of term. In the case of larger kindergartens

applicants must have had at least twelve years of professional experience, in the case of smaller kindergartens at least eight years. They must also possess a Level A certification for Information and Communication Technologies (ICT). Decisions about the placement of Kindergarten Principals and School Directors are made by the Regional Director of Education on the advice of a local selection board. Exceptions may be made to the requirements concerning the length of service or the ICT certification if no other suitable candidates are available.

The selection criteria include the candidate's scientific-educational background and training, administrative and teaching experience as well as their contribution to the field and personal qualities (Sakellariou, Strati, and Anagnostopoulou 2018). This latter criterion is assessed orally in an interview with the selection board. Both the candidate's abilities as well as personal qualities exhibited during the kindergarten's daily routine, e.g. ethos, integrity, sense of justice, democratic behaviour, professional development and consistency, are evaluated. Required competences include, indicatively, the ability to communicate and collaborate; to undertake initiatives and to support problem solving, especially with respect to teaching; administrative, organisational and operational issues and the ability to create an appropriate and inspiring environment for the kindergarten staff. Also taken into consideration the points awarded from the relevant Regional Primary Education Service Council, as well as other supportive information such as: studies in a different field; training and retraining; organisation of educational conferences, seminars and training programmes, including participation as group rapporteur; being a member of a scientific team or a trainer; published and research work; initiatives in education; carrying out educational programmes and implementing innovations; administrative or instructional experience; participation in councils, committees or work groups; social and union action; participation in administrative bodies of scientific and educational organisations or in local participation bodies and official awards (Doliopoulou 2018). The candidates are evaluated based on the points they are awarded according to the above criteria.

Kindergarten Principals and School Directors have a dual role of teaching and administrative duties (Law 1566/1985), without these duties being described in detail. They are not only teachers with full responsibility for a class of children, but also managers and supervisors of the kindergarten unit with considerable administrative tasks; there is no kind of secretarial support.

Kindergarten Heads are responsible for the planning, organisation, management and supervision of the setting. In general, Kindergarten Teachers are not strongly motivated to take on this position. This is mainly due to the large workload of bureaucratic administration in parallel with the work in the classroom and across kindergarten classes (Government Gazette 1340/2002). Overtime compensation is not provided, neither for Kindergarten Principals nor for teachers. A reduction of total contact hours is only awarded to School Directors; the allowance granted to Kindergarten Principals does not compensate for this wide range of required duties.

The position involves guiding the kindergarten community to set high goals and ensuring the conditions for achieving them under democratic working conditions. Tasks include guiding and assisting particularly younger teachers in their work, undertaking educational and pedagogical initiatives and acting as a role model. Furthermore, the Kindergarten Principal is responsible for ensuring that the workplace is a place for professional development in administrative, pedagogical and scientific matters. In general, in the larger kindergartens, where a reduction of teaching hours for management purposes is more likely, leadership duties tend to be primarily administrative rather than pedagogical (Sakellariou, Strati, and Anagnostopoulou 2018).

Nurseries/childcare centres

Childcare centres and nurseries fall under the jurisdiction of local authorities. They operate as legal entities, based on the "Standard Regulations for the Operation of Municipal Childcare Centres and Nurseries", the provisions of which constitute the framework for the operation of ECEC settings. A decision of the municipal councils determines these Regulations, which constitutes minimum operating conditions of municipal nurseries (Law 4368/2016). For Childcare Centres and Nurseries, standard operating regulations come under decision No. 16065 of the Ministers of the Interior, Public Administration and Decentralisation - Health and Welfare (Government Gazette 497 / 22.4.2002 and the Government Gazette 4249 / 5.12.2017).

The administrative management structure of the public and municipal childcare centres and nurseries is as follows:

- Director of the childcare centres in the municipality
- Director of each childcare centre and nursery
- Deputy director and
- Head of each group unit.

The administrative work of childcare settings is performed by the person in charge of the centre, who is appointed by the Head of the municipal department and with the consent of (a) the Directorate of childcare settings in the specific municipality and (b) the Chairman of the municipal council.

The work schedule is eight hours and is adjusted according to the needs of the childcare centre by the Directorate. The person in charge is usually from among the Early Childhood Pedagogy Professional staff, but it could be any municipal employee. For this reason, the working hours vary. If the person in charge is an Early Childhood Pedagogy Professional and acts as a Director as well as teaching, the work schedule is set at six hours.

The manager of each childcare setting conducts the administrative work of the setting (correspondence, implementation of circulars, operating regulations, etc.) and informs the staff about any changes, as well as the parents/guardians. Also, once a month the manager discusses and informs the staff about general issues related to the childcare setting. Another task is to oversee the supply of materials for the administrative and pedagogical activities, as well as the preparation of meals for the children. The manager also informs the municipality's legal entity of any technical problems (MD 41087, 2017).

For each privately run (for-profit and non-profit) **childcare unit**, the person in charge is required to have a degree awarded by a

- Specialist University Department of Early Childhood Education or a Pedagogical Department of Primary Education
- Specialist University of Applied Sciences Department of Early Learning and Care, Social Work or Home Economics.

For the **nursery unit** Director is required to have a degree awarded by a specialist department at a University of Applied Sciences (Early Childhood Education and Care, Obstetrics) or by a Higher School of Midwifery or equivalent in Greece or abroad (Law 3801/2009).

It is possible that in nursery and childcare centres which come under the responsibility of the municipalities and are governed by an internal regulation of the board of directors that no centre leaders will be appointed. Due to the varying internal regulations, there is no uniform operating procedure throughout the country.

2.3 Centre-based posts of responsibility

In Greek **kindergartens** there are no designated centre-based posts of responsibility. Regular teaching staff are responsible for specific tasks which may arise. These may include guiding the internships of students from abroad, taking on a mentoring role for students during their practicum, or informing parents about the kindergarten programme. For most administrative and operational issues, the Kindergarten Supervisor or the School Director is responsible.

At a more general level, there is a provision for someone to be responsible for managing violence within schools, for civil protection in cases of critical situations, such as floods, earthquakes, etc. where all school teachers take on specific roles (such as pharmacy manager). Also, due to the pandemic and within the framework of the health protocols that are observed in the schools, there is a person responsible for COVID-19 within each kindergarten unit. There is no extra pay for these roles.

In the case of **nurseries and childcare centres**, there is no legal framework for assigning centre-based posts of responsibility.

2.4 Co-ordinating and supervisory staff

Kindergarten units 4–5 years

School Counsellors (formerly known as **Educational Project Coordinators**) are assigned to teachers in the kindergarten sector. The selection is made by a five-member regional council (one regional director, three faculty members, one director of primary education). Each Educational Project Coordinator has the scientific and pedagogical responsibility for the issues relating to all school units located in the Regional Centre of Educational Planning (Law 4823/2021).

Although the duties, responsibilities and tasks of School Counsellors are wide-ranging and supportive (see below), for kindergartens the number of such Counsellors is insufficient. The settings for which they are responsible may be spread over two prefectures, making cooperation and communication and supporting them difficult. Implementing the position of School Counsellors in recent years has highlighted the complexity of these structures as well as the cumbersome procedures. In contrast, for primary schools, there may be several School Counsellors even in the same prefecture, meaning they can share the school units with each other, something that facilitates their work.

School Counsellors are selected from teachers of the relevant branches with at least fifteen years of educational service and who also have knowledge of a foreign language to at least the B2 level of proficiency. Duties and responsibilities of School Counsellors are the pedagogical and scientific guidance of teachers and special education teachers and auxiliary personnel. These include training, the development of innovative educational initiatives, as well as the evaluation of the teachers and special education staff. Duties also include participation in the process of collective planning and self-evaluation of the work of the kindergarten/school unit and the relevant support structures.

In particular, the tasks of School Counsellors are to monitor and support teaching and educational needs, to monitor and support school laboratories and libraries and their utilisation, to initiate subject-specific improvements, to ensure the quality of the educational work and the overall smooth operation of the kindergarten/school unit. This includes cooperating with the teaching and special education staff of the school units for which they are responsible, their directors and supervisors and the parents' and guardians' associations on all matters concerning the effective operation of the school units (Law 4823/2021).

Pedagogical coordinators in the childcare sector

There is no provision for pedagogical coordinators to work with nursery and childcare centres. For any problems that may arise, the employees address these to the centre manager in the legal entity of the municipality.

2.5 Specialist support staff

Kindergarten units 4–5 years

Within the regular classes in a kindergarten unit, in addition to the Kindergarten Teachers there may also be a Nurse, a Psychologist and a Social Worker from the Committee for Diagnostic Educational Evaluation and Support assigned to each group of schools (Law 4115/2013) in order to support children with special needs or children with health problems such as diabetes. Each school unit belongs to such a committee (MD 17812 / C6 / 2014). Since the school year 2021/22, English language teachers are employed for two hours per week in each kindergarten class. Also, in cases of children with disabilities or special educational needs attending a regular kindergarten class, provision is made for their support by a Kindergarten Teacher specialising in special education, both within and parallel to the kindergarten teacher.

Law 4547/2018 ensures the right of *all* children, including SEND children, to education and establishes Schools of Educational Support Networks), which consist of School Units of Special Education and Educational Centres across the entire education system.

Diagnostic, evaluative and supportive bodies that investigate and ascertain the special educational needs of children with disabilities and special educational needs, are the Centres for Interdisciplinary Assessment, Counselling and Support, the Special Diagnostic Evaluation Committee and Education Medical-Pedagogical Centres of other ministries.

Regarding special education and training units, apart from the Special Educators, additional services are provided by specialist support staff including: School Nurses, Occupational Therapists, Speech Therapists, Physiotherapists, Psychologists, Social Workers, Professional Counsellors, sign language of deaf students, specialists in the orientation, mobility and daily living skills of blind students (Law 2817/2000; Law 3699/2008).

Nurseries/childcare centres

For the childcare centres and nurseries, special support staff are provided. These may be a Social Worker, who contributes to the prevention or treatment of problems of the children in each group and their families if requested or if considered necessary. Social Workers may carry out research in collaboration with the pedagogical staff, with whom they are in constant contact, while also collaborating with the Paediatrician of the childcare centres and nurseries. A Psychologist provides counselling services for the psychological support of children and parents in close cooperation with the Paediatrician, Social Worker and pedagogical staff. They also support the pedagogical staff in improving their work through lectures, discussions and special meetings. The Paediatrician visits each childcare centre and nursery at least once a week, examines and monitors the children's health and development, noting observations on the individual card of each child. Paediatricians are also responsible for advising on general health and hygiene measures in the settings. In each setting there are basic medicinal and first aid resources. In the case of an emergency, the Paediatrician is expected to be at the centre as soon as possible.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Kindergarten units 4–5 years

The Hellenic Statistical Authority publishes annual statistics on the workforce of public and private kindergartens in Greece. The data for the public schools are taken from the MySchool platform of the Ministry of Education and Religious Affairs, which is constantly updated. This platform collects data on schools related to staff, infrastructure and timetables. Data collection for private schools is compiled through printed questionnaires.

The statistical unit for Primary Education aims at compiling statistics on an annual basis regarding the number of school units and number of teaching staff in Kindertartens and Primary Schools. These surveys are conducted on an annual basis in all Member States of the European Union, using common standards and methods. The legal framework governing investigations is Regulation 452/2008 of the European Parliament and of the Council and the implementing Commission Regulation 912/2013. The reference unit is the school unit of education (kindergarten and primary school).

Table 2a

Greece: Structural composition of ECEC workforce in the education sector (4–5 years), 2019-2020

Staff categories	Year / proportion of workforce
Staff with a pre-primary and primary education higher education teaching degree	All core pedagogues employed in kindertartens have at least a four-year higher education (university) degree. 5.97% of staff in public kindertartens and 1.58% of staff in private kindertartens have postgraduate or other higher education studies. In the case of public sector teaching staff: 0.44% hold a doctoral degree 5.11% a postgraduate diploma and 0.41% another higher education degree
Staff with a specialist vocational qualification (upper secondary, post-secondary)	Not applicable
Unqualified staff	Not applicable
Specialist support staff (e.g. speech therapists) who work on site on a regular basis	Not applicable in regular kindertartens. Such services are available only in special education settings.
Male kindertarten teachers	Public sector: 1.23% Private sector: No statistics available
Staff with a minority ethnic background	No national statistics available

Source: Hellenic Statistical Authority 2019

Nurseries/childcare centres

There are no such data for childcare centres and nurseries. There is a provision by the Statistical Authority to collect data and relevant forms are provided on its website. However, these are not completed. It should be noted that it is the responsibility of the municipalities to submit these data to the Statistical Authority.

Table 2b

Greece: Structural composition of ECEC workforce – Childcare sector (0–3 years)

Staff categories	Year / proportion of workforce
Staff with a specialist three-year (or longer) early years higher education degree	There are no national statistics available. However, key professionals have a specialist four-year degree from the Early Years Learning and Care Department of a University of Applied Sciences/Higher Education Institution
Staff with a specialist vocational qualification (post-secondary)	No national statistics available
Staff with a specialist vocational qualification (upper secondary)	No national statistics available
Non-qualified or minimally qualified staff	No national statistics available
Specialist support staff (e.gg speech therapists) who work on site on a regular basis	No national statistics available
Male practitioners	No national statistics available
Staff with a minority ethnic background	No national statistics available

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

According to the National Agency for Certification of Qualifications and Vocational Guidance (NACQVG), the Greek National Qualifications Framework (NQF) corresponds with the European Qualifications Framework (EQF) in the following way:

The degrees of Kindergarten Teachers and Nursery and Childcare Teachers are classified at EQF level 6. The vocational award of Nursery and Childcare Assistants is classified at level 5 or at level 4, depending on whether they graduated from a post-secondary Vocational Training Institution or from an upper secondary Vocational High School.

In terms of the International Standard Classification of Education (ISCED), the degrees of Kindergarten Teachers and Nursery and Childcare Teachers are likewise classified at level 6, while the Nursery and Childcare Assistants' vocational qualification is classified at level 4 if they graduated from a Vocational Training Institution and at level 3 if they graduated from Vocational High School (NACQVG 2022).

The initial professional education routes of Kindergarten Teachers, Nursery and Childcare Teachers and Nursery and Childcare Assistants are briefly outlined in the following tables.

Table 3a

Greece: Kindergarten Teacher

Job title in Greek: <i>Nipiagogos</i> Profile: Pre-primary Education Professional
Entry requirements: Higher school leaving certificate (<i>lykeio</i>); national entrance examination (<i>genikes exetaseis</i>) for university candidates (General Panhellenic Examination)
Professional studies: Four years at university (School of Education, Department of Early Childhood Education), specialising in pre-primary education

Job title in Greek: <i>Nipiagogos</i> Profile: Pre-primary Education Professional
Award: University degree in Early Childhood Education (there are no Bachelor degrees in Greece) ECTS credits: 240 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: Kindergarten (4–5 years)

The qualification requirement for work as a Kindergarten Teacher in both public and private kindergartens is a degree from one of the nine Greek University Departments of Early Childhood Education. To be accepted for a degree course, students must have completed their high school diploma and have gained the required grade in the General Panhellenic Examination (held annually in June). Each student is required to complete eight semesters (four years) of coursework and to accumulate 240 ECTS credits. A full academic year corresponds to 60 credits and a full semester to 30 credits. The ECTS credits correspond to the workload that has been determined by each university for each course in order to be considered acquired knowledge. The University degree corresponds internationally to EQF level 6 and ISCED level 6.

Each university department develops its own curriculum. This includes compulsory courses, optional compulsory courses and also elective courses. Course content is compiled by a committee of teaching and research staff, put forward for approval to the General Assembly of the Department and the Dean of Faculty, and finally for approval by the Dean of the University. Learning goals and competences are defined for the overall curriculum and for each course unit (seminar, project, workplace-based learning etc.). The credits and level of skills correspond to international standards (Sakellariou 2010; Doliopoulou 2018).

Although the ratio of supply and demand in the field of public education is considered discouraging, a graduate of the Department of Early Childhood Education has opportunities to work in other areas. Specifically, graduates can also work as scientific/research staff or as a provider of private ECEC settings.

There is also the possibility of studying for other degrees, such as second degree, postgraduate or doctoral diploma, seminars, specialisations, foreign languages, giving them the opportunity to develop vertically in the administrative hierarchy.

Table 3b:

Greece: Nursery and Childcare Teacher

Job title in Greek: <i>Vrefonipiokomos</i> Profile: Early Childhood Pedagogy Professional
Entry requirements: Higher school leaving certificate (<i>lykeio</i>) or vocational certificate; entry waiver defined by the respective University of Applied Sciences Professional studies: Four years at a University of Applied Sciences (School of Social Sciences, Department of Early Years Learning and Care), specialising in early childhood education and care Award: Degree / University of Applied Sciences (there are no Bachelor degrees in Greece) ECTS credits: 240 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: Nursery/extended-age nursery (0–2 or 0–3 years) or childcare centre (0–3 years or 2½–3 years)

The qualification requirement for work as a Nursery and Childcare Teacher in both public and private ECEC settings is the completion of a degree from one of the three Departments of Early Years Learning and Care at a University of Applied Sciences. Entry requirements are a secondary education (Lyceum) leaving certificate and the required grade in the General Panhellenic Examination. Admission to these departments may also occur through qualifying examinations of candidates for holders of other university degrees. The duration of studies is eight semesters. During the first seven, students attend theoretical courses and participate in workshops. During the final (eighth) semester of studies, there is the possibility of preparing a thesis or two additional compulsory courses. The completion of an internship is a necessary condition for obtaining the degree, whereas the dissertation is optional.

Educational activities correspond to 30 credits per semester and 240 ECTS credits overall. The ECTS credits correspond to the workload that has been determined by each university for each course in order to be considered acquired knowledge. Learning outcomes and skills provided correspond to the requirements of the National and European Qualifications Frameworks. The University of Applied Sciences degree is placed at EQF level 6 and ISCED level 6.

The curricula of the Departments for Early Years Learning and Care are compiled by a special committee of faculty set up by the head of the department. The courses of study include compulsory, optional compulsory and also elective classes. Student education focuses on acquiring tools that will support the understanding of the importance of the child's early experiences and the application of developmentally appropriate practices and multidisciplinary approaches during the early stages of human development, from birth to compulsory education.

Graduates are qualified to work either in municipal or private day nurseries and childcare centres or to be self-employed as home-based carers of children aged from a few months old up to their enrolment in primary school. Furthermore, they may set up and operate nursery or childcare centres, as well as practise any other professional activity associated with their educational qualifications, including the entire range of administrative posts related to their field of expertise. They may work in all countries of the European Union and are accepted by universities in Greece, Europe and the USA for postgraduate and doctoral studies (MD 119730/2021).

Table 3c

Greece: Nursery and Childcare Assistant

Job title in Greek: Voithos Vrefonipiokomou
<p>Entry requirements: Completion of first year of Lyceum (high school)</p> <p><i>Route 1</i></p> <p>Professional studies: Three years at Vocational High School, starting from the second year of High School and specialising in early childhood education and care</p> <p>Award: Certificate as Nursery and Childcare Assistant</p> <p>ECTS credits: not applicable</p> <p>EQF level: 4</p> <p>ISCED 2011: 3</p> <p>ECEC workplaces: Nursery/extended-age nursery (0–2 years or 0–3 years) or childcare centre (0–3 or 2½–3 years)</p> <p><i>Route 2</i></p> <p>Professional studies: 2 years at a Vocational Training Institute, following successful completion of the certificate course above. Specialisation in early childhood education and care</p> <p>Award: Diploma as Nursery and Childcare Assistant</p>

Job title in Greek: *Voithos Vrefonipiokomou*

ECTS credits: not applicable

EQF level: 5 after the successful participation in exams conducted by National Agency for the Certification of Qualifications and Vocational Guidance.

ISCED 2011: 5

ECEC workplaces: Nursery/extended-age nursery (0–2 years or 0–3 years) or childcare centre (0–3 or 2½–3 years)

Route 1: Vocational High Schools (*Epagelmatiko Lykeio*) offer a specialisation to become a Nursery and Childcare Assistant which starts during the second year of high school. The duration of studies is three years (Law 3475/2006). The graduate of a Vocational High School receives two awards: (1) a certificate as a "Nursery and Childcare Teaching Assistant" and (2) a Higher School Leaving Certificate/Diploma. The specialised qualification (certificate) awarded corresponds to Level 4 of the National and European Qualifications Frameworks. The certificate also corresponds to a general school leaving certificate for admission to tertiary education through the process of the General Panhellenic Examination.

The Nursery and Childcare Assistant can work as an auxiliary member of staff in nurseries and childcare centres, in maternity clinics, camps, family planning centres, or as a freelancer taking care of infants and children at home.

Route 2: Those with a Vocational High School award are authorised to enrol in a **Vocational Training Institute** (*Institouto Epagelmatikis Katartisis*) in a course related to the specialism of their leaving certificate. The diploma they receive falls under EQF level 5 and ISCED level 4. The study programme is determined either at the central level by legislation for Vocational High Schools or by the Vocational Training Institute itself and is accredited by a central authority such as the National Agency for the Certification of Qualifications and Vocational Guidance.

Studies at the Vocational Training Institute are for five semesters in total, divided into four semesters of theoretical and laboratory training (1,200 hours) and one semester of Internship or Apprenticeship (960 hours). The graduates of the specialty "Nursery and Childcare Assistant" after the successful completion of their studies receive a Vocational Training Certificate. Following successful participation in exams conducted by National Agency for the Certification of Qualifications and Vocational Guidance they are awarded a level 5 Diploma of Vocational Specialty Education and Training.

Graduates can work in public and private childcare centres, settings related to the care and education of children up to 4 years of age, Ministry of Housing and Social Insurance, municipal and community nurseries and childcare centres and a variety of further qualification-relevant options.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Kindergarten Teacher

Competences: Upon completion of the Department's Undergraduate Studies Programme graduates are expected to:

- Have acquired a strong background in the Sciences of Education and Education as well as excellent knowledge in specific fields of these
- Substantiate their opinions with data by developing arguments and causal reasoning

- Have acquired primary experiences
- Be familiar with reflective and metacognitive processes
- Have acquired critical, creative thinking, solving skills problem solving, decision making, while developing their imagination and their empathy to be able to respond to children's special needs
- Have developed the ability to continue their studies further with a large degree of autonomy as required in responsible research and innovation
- Have acquired a balanced development in the fields of the social sciences and humanities for their role as responsible educators and citizens
- Act in the context of the educational community for its goals of sustainable development (environment, climate change, place, time, social exclusions, inequalities, state participation, health and well-being) (University of Ioannina 2022, a).

Curriculum: Prospective Kindergarten Teachers must complete their four-year initial professional education at one of the nine Greek University Departments of Early Childhood Education. The curriculum is organised in four modules: Pedagogy; Social Sciences in Education; Positive Sciences and their Teaching; Speech, Art and Education, which correspond to the learning areas of the kindergarten curriculum. Learning activities include attending lectures, seminars, assignments, internships, personal study and exams. 60 ECTS credits correspond to the workload of a full year of formal full-time learning (academic year) and related learning outcomes. In most cases, the student workload ranges from 1,500 to 1,800 hours for an academic year, where one credit equals 25 to 30 working hours (University of Ioannina 2022a).

Pedagogical-didactic approaches: The courses include lectures, tutorial exercises, seminars or workshops or a combination of these. In the lectures an area of the subject matter and the related concerns are supervised. The tutoring exercises aim at providing or consolidating basic or general knowledge and are carried out, as far as possible, in small groups. In the seminars, the students research a special topic with the help of the relevant scientific literature. In the laboratories, applications of theoretical teaching are made (University of Ioannina 2022a).

While the above refers to the University of Ioannina Department Early Childhood Education, a similar structure is followed by other Departments across Greece.

The Department of Early Childhood Education in Ioannina has the following laboratories that enhance the scientific and professional dimension of the student: laboratory of special and therapeutic education; psychology; pedagogy; new technologies and distance education; human rights and interpersonal relationships in education; teaching and teaching sustainability; intercultural education and diversity pedagogy.

In addition to undergraduate studies, students can participate in training activities, in summer and winter schools, in international student mobility partnerships (ERASMUS+ Programmes), in research programmes, in conferences and workshops and in internships. By participating in all of the above, studies and activities within the university community, students essentially build the profile of a modern educator who can teach in the classroom or continue at a research level. The degree awarded by Departments of Early Childhood Education is uniform. However, the modules may differ from university to university.

Some examples of units in the four modules are summarised below:

- **Pedagogy:** Organising and implementing play, rhythm and movement in kindergarten: planning and evaluation of activities; introduction to intercultural education and the teaching of Greek as a second language; preschool pedagogy; modern teaching approaches in preschool education; teaching Greek as an additional language in modern (primary) school education;

- language education in kindergarten and communication approach; philosophical and pedagogical anthropology, modern preschool education programmes
- **Social Sciences:** motivational psychology; psychophysiology I; cognitive psychology I; clinical psychology; the dynamics of family systems through children's drawing; counselling in special education; elements of paediatrics; sociology of Greek education; adult psychology
- **Positive Sciences and their Teaching:** Introduction to informatics and education – new technologies; introduction to computational statistics; basic mathematical concepts in kindergarten; teaching of mathematics II; teaching the concepts of natural sciences
- **Speech, Art and Education:** Modern Greek poetry; theory of literature 1; the international fairy tale; dramatisation and theatrical expression; rhythm and movement; themes of philosophy of education; creative music education; painting; Greek language and education; special themes of visual arts – applications; drama
- Foreign languages: English, French, German
- Internship issues (University of Ioannina 2022a).

Nursery and Childcare Teacher

Competences: Upon completion of their studies in the Department of Early Learning and Care, graduates are expected to:

- Possess a complete and scientifically proven body of knowledge in the professional field in which they will work
- Recognize the evolutionary and dynamic characteristics of education and care in infancy,
- understand relevant concepts, methods and practical applications
- Critically understand theories, basic principles and methodology related to education and care in early childhood
- Deepen, explore and enrich their knowledge
- Utilise their knowledge in order to respond in a flexible, creative and, above all, scientific way in the context of pre-school education and the needs arising from the special circumstances
- Use scientific sources and manage the data resulting from them in a responsible and critical way
- Design, manage and implement programme interventions aimed at the holistic development and well-being of children and their families
- Apply knowledge, skills and abilities in an environment of constant development and change with professionalism and responsibility
- Adopt a teacher-researcher identity that will allow them to reflect on their role and practice and to utilise data and current developments in order to solve problems, evolve and improve.

Curriculum: The curriculum courses include: Introduction to the sciences of education; education and infant care; Greek language, culture and history; introduction to psychology; health education; music pedagogy; preschool pedagogy; evolutionary psychology; art education and creativity; educational games; nutrition and child development; research methodology in educational sciences; first aid for infants and children; teaching – methodological approaches and preschool education programmes; introduction to children's literature; occupational ethics; innovation; neurodevelopmental disorders; developmental paediatrics; intercultural education - teaching approaches in early childhood; developmental psychopathology; critical review Semi-

nar on developmental frameworks in preschool and early childhood models; counselling psychology; theatrical play and dramatisation; environmental education; preschool management; employment relations; ICT utilisation in preschool education; puppetry; pedagogical resources and applications in early childhood; special education; critical Reflection and personal development.

Pedagogic-didactic approaches: In the majority of courses the teachers use classic teaching methods, such as lectures through PowerPoint presentations and other audio-visual media, case / example analysis, individual or group work, presentation of students' work in the group, use of the internet. The use of new technologies is particularly important, where students have access to teaching materials through online learning platforms such as Moodle (University of Ioannina 2022 d).

Nursery and Childcare Assistant

In order to obtain a vocational award as a Nursery and Childcare Assistant, two paths can be followed, through studies either at a Vocational High School or at a Vocational Training Institute.

Upper secondary route (Vocational High School)

Competence requirements: The graduate of the upper secondary vocational specialist track acquires knowledge and skills for working under the supervision of the Nursery and Childcare Teacher. These include: providing care to the young child; supporting children's comprehensive physical, mental, verbal and motor development through appropriate pedagogical methods; caring for children with special needs; implementing accident prevention measures in any area related to the children's activities; providing first aid and acting appropriately in emergencies; filling in the child's personal card and keeping records; giving advice to the child's parents or guardians.

Specific personal qualities and abilities include love for children, creativity and imagination, patience, responsibility, consistency, ability to follow instructions, composure in difficult situations.

Curriculum: Curricular studies include: elements of anatomy-physiology; hygiene; creative activities in preschool, infant and toddler education; music and movement; principles of general and developmental psychology; adult psychology; pedagogical environment of the nursery/childcare centre.

The curriculum includes common courses for all students, general education courses, orientation courses and elective courses.

Post-secondary route (Vocational Training Institute)

Competence specifications: The graduates of the Vocational Training Institute course of studies: are skilled in the use of materials, techniques and musical instruments in work with infants and toddlers. They are also able to:

- Organise a nursery/childcare centre based on pedagogical principles
- Assist the Nursery and Childcare Teacher in the implementation of appropriate pedagogical intervention in cases of diagnosis of disability, learning difficulties or other adjustment difficulties in supervised infants and toddlers
- Organise and manage space and time appropriately, taking into account the needs and capabilities of infants and children
- Organise and implement activities related to the verbal integration of all infants in the group

- Make puppets and puppet-shadow theatre sets and prepare theatrical performances for infants
- Inform parents daily about the childrens' time at the centre and any specific observations (physical, organic, emotional) made during the day
- Provide first aid in emergencies.

Curriculum: Curricular fields include: pedagogical – kindergarten; general, developmental and social psychology; infancy; paediatrics; hygiene; dietetics; play; music-rhythmic; children's art; puppetry-theatrical play; painting; environmental education; kindergarten Organisation; and interpersonal relationships and communication.

Pedagogical approaches: All known teaching methods are applied, while special emphasis is given to the application of participatory teaching methods and active teaching techniques according to the principles of adult education. Course content may also include: Lectures held by specialist professionals in the field, educational visits to companies and thematic exhibitions.

4.3 Alternative entry and qualification routes, system permeability

Kindergarten Teachers

There is no other way to enter the profession of Kindergarten Teacher other than through graduation from one of the nine University Departments of Early Childhood Education (see *Chapter 4.1*). However, holders of a degree as Kindergarten Teacher are authorised to work in other institutions and services besides public and private kindergartens. In terms of their career development, this concerns administrative positions in the school unit –as heads, principals, deputy principals or as a director of primary education at the school and regional level, or as school counsellors, provided they have the appropriate formal qualifications for each position.

Some examples of potential additional fields of employment for Kindergarten Teachers are: as an owner/service provider of a private kindergarten; in services, organisations and institutions concerned with education; as scientific staff in the production of pedagogical material and children's books; as scientific staff in public and private sector services; in children's creativity centres, summer camps, children's museums, playgrounds.

Kindergarten Teachers with postgraduate training in special education can teach in special education schools.

Teachers in service have the opportunity to be seconded for a period of one year and in positions outside the school upon request.

These secondments concern positions in services and bodies of the public sector such as the Ministry of Education and Religious Affairs, in the offices of the Regional Directorates of Education and the Directorates of Primary Education, as Coordinators of Refugee Education, in Universities, in Higher Education, in the Supreme Ecclesiastical Academies, in independent and decentralised services, supervised legal entities under public law and legal entities under private law such as: Academy of Athens, National Library of Greece, Public Libraries, National Agency for the Certification of Qualifications and Vocational Guidance, Public Vocational Training Institute, Greek Language Centre, Inter-Orthodox Centre of the Church of Greece, Holy Synod of the Church of Greece, Holy Archdioceses in the Holy See.

Nursery and Childcare Teachers

There are no flexible pathways for becoming a Nursery and Childcare Teacher. The only legitimate entry to the profession is the qualification routes described in *Chapter 4.1*.

Nursery and Childcare Teachers may also be employed as (Doliopoulou 2018):

- Managers of research, organisation and operation of nursery and childcare centres
- Supervisors/principals of operational units (directorates, departments, offices) in nursery and childcare centres of local government bodies
- Teacher educators in secondary and tertiary education responsible for the theoretical and practical teaching in early childhood education course classes (Presidential Decree 523/24.12.91).

For staff of municipal nursery and childcare centres, the posting of an employee of one Local Government Body (LGB) to another LGB is possible subsequent to a petition filed by the employee and subsequent to the approval of the originating body with a decision of the person responsible for appointments of the receiving LGB. The posting is for two years and may be extended for one extra year (Law 4257/2014).

The formal opportunities for moving up the system are available only at the vertical level (i.e. starting with a specialist first degree and moving on to take a Master's degree or a Doctoral degree). There are no specifically horizontal qualifying options for side entries by career changers with non-specialist qualifications, i.e. no specifically defined career pathways with diverse entry points at different levels and a clear progression route (Law 3801/2009; Law 4674/2020).

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Kindergarten Teacher

Internships are included in the programmes of all the University Departments of Early Childhood Education in Greece, although their duration and point of time during the study programme may vary. This chapter describes how the University of Ioannina provides guided workplace experience.

Internships ("Practical Exercises") are carried out in kindergartens (in this case of the Prefecture of Ioannina) designated by the Ministry Education. For the academic year 2019/20, the certified kindergartens were defined according to the Ministerial Decision of the Ministry of Education sub no. 27/14599/D1 (Government Gazette Issue B' 398/13.02.2019). Following a request from the Ioannina Department of Early Childhood Education, Refugee Reception and Education Centres (DYEP) were included in the 2019 list of certified kindergartens in order to sensitise students to issues of intercultural education during their studies.

The internship of students in kindergartens is mandatory for obtaining the degree and takes place throughout the study period from the third semester onwards, with the guidance and co-operation of teachers seconded to the University Department. At the same time, specialised Practical Exercises are carried out in the context of other mandatory courses. The supervisory responsibility for the internship lies with the teacher of the relevant course, after preparation in the context of laboratory courses.

The internship aims to prepare professional teachers who can independently and responsibly undertake pedagogical work in early childhood education. The purpose of the internship is not limited to gaining practical experience in the workplace, but is associated with the use of theoretical knowledge and the development of research and thinking skills, seeking a critical approach to both personal teaching practice and the ways other teachers work. Its main goal is to connect theoretical knowledge with educational practice and to enhance the participation of

the students in activities that will help them to become reflective professional teachers. More specifically, the objectives of the internship are for students to be able to:

- Link academic theory with educational practice by relating their teaching options to the various theories and using them to analyse and understand the context in which they are going to intervene in the educational act itself
- Familiarise themselves with procedures for exploring the context of the classroom and the wider context before making decisions about the planning, implementation and evaluation of the activities they organise
- Be involved in self-assessment processes and to realise that this reflective practice contributes to a teacher's professional development.

Specialised Practical Exercises are carried out in the following mandatory and optional courses:

Systematic Observation in Kindergarten is an optional course taught in the 3rd semester of studies (6 ECTS). This particular course includes 4 days of practical training in partner cooperating kindergartens in the Prefecture of Ioannina. Before the start of the internship, the students attend four laboratory courses on systematic observation, its methodology, recording techniques and the axes on which their observations in the kindergartens will be based.

Teaching of Concepts of Natural Sciences, I and II: Practical training is directly linked to the objectives of the courses. These include the recognition of (a) the socio-cultural component of Natural Sciences, (b) the procedures of the scientific method in an organised activity, (c) of teaching objectives in a series of organised activities and (d) dealing with conflicts. In this context, the main objective of the internship is to prepare work plans for micro-teaching and whole class teaching. The internship period lasts two weeks. Course I (6 ECTS) is taught in the 5th semester and Course II (8 ECTS) during the 6th semester.

Teaching Mathematics II. This is a mandatory elective course taught in the 6th semester (8 ECTS). It aims to develop the management of knowledge, abilities and skills for mathematics in the kindergarten curriculum. More specifically, key goals are for the students to be able to: (a) recognise the mathematical ideas underlying the activities for maths in the kindergarten, (b) evaluate maths activities in terms of their objective, their degree of difficulty, and their teaching management, (c) plan and carry out maths activities in a classroom with specific and worthwhile learning objectives and adjust them to the requirements and needs of the children they address, (d) to analyse and evaluate the children's action and their own when carrying out a mathematical activity. The internship period lasts two weeks and the course is taught in the 6th semester (8 ECTS).

Information Technology and Education – New Technologies. This is a compulsory course taught in the 6th semester (8 ECTS). Key goals are-(a) to acquire general background knowledge in this area and (b) to develop knowledge, skills and application skills about teaching IT and the new technologies in education, in particular in kindergarten. The objectives of the internship are (a) to utilise knowledge about new technologies (e.g. language programming in educational technology, security issues of the internet and copyright), (b) to utilise new technologies (e.g. educational software, modern online applications) in early childhood education, and (c) to develop teaching abilities and skills about computers in the kindergarten, with modern methods. The internship period lasts two weeks. The course is taught in the 6th semester (8 ECTS).

Teaching Applications II. This is a compulsory course which is taught in the 8th semester (10 ECTS). The internship in the context of this course includes laboratory courses and a training project by the students lasting four weeks in cooperating kindergartens. In particular, objectives of the internship are:

- To approach the educational process as an exploratory procedure

- To understand the classroom as a learning environment
- To plan both short-term and long-term activities
- To choose the appropriate activity for the realisation of specific goals and to experiment with new methods and media
- To develop observation and interpretation skills
- To create an open and flexible learning environment that facilitates the all-round development of children
- To recognise the importance of assessment and make use of appropriate methods, techniques and tools for educational evaluation
- To form their own personal educational theory through action and reflection

The internship of the course **Teaching Applications II** consists of three phases.

During the **first phase**, students participate in laboratory courses at the University by delving into issues related to the collection, analysis and utilisation of information for the design of teaching interventions through observation, recording and reflective practice. At the same time, they plan cross-curricular activities around a topic in pairs, choosing the objectives, the teaching aids, the methods, the content and the process of evaluating the activities. Based on the feedback provided by the teacher and their classmates, they redesign the planned curriculum. During this period, they are placed in cooperating kindergartens and are informed about the internship file that they will have to submit at the end of the semester in order to be evaluated.

In the **second phase**, the students undertake a complete educational project in placement kindergartens. The first of four weeks of the internship is spending in study the context of the classroom by collecting, recording and interpreting data in order to decide on any variations of the educational programme that they have designed and become familiar with the classroom environment. In the following weeks, the students undertake in pairs to carry out all the activities included in the kindergarten schedule during the morning session, such as the reception of children, free play and activities in the learning centres, break, children leaving for home, as well as the organised activities they have planned. The students work in the same classroom with the same group of children but alternate roles so that they take turns in having the main responsibility of the programme while the other observes, records and supports the whole process. At the end of each week, the two collaborating students meet up to, identify and interpret their observations, taking them into account for the planning of next week's programme. During this phase, visits are made to the placement kindergartens by the supervising and collaborating staff at the University in order to support and give feedback to the students and to communicate and cooperate with the teaching staff of the kindergartens.

In the **third phase** after the end of the internship in the cooperating kindergartens, the students present their work at the university and reflect on their teaching interventions. At the same time, they receive feedback from the professor in charge of the specific lesson on the project they presented and are supported in the compilation of the internship portfolio.

The presence of students is mandatory in all activities of the course. During their time in the cooperating kindergartens, the students must adhere to the schedule of the kindergarten, to adapt to the regulations and the specifics of its operation and to cooperate harmoniously with the kindergarten staff. In case they need to be absent for health reasons or for any other serious reason, they should inform the kindergarten teacher and the teacher and after consultation are required to make up for the day / days of their absence. Students who have not fulfilled their obligations have to repeat the course. When they have completed all their obligations (except the submission of their personal file / portfolio), they can be evaluated in the September exam. This is important for working students who do not have the possibility of additional educational

leave. According to the university guide to mandatory practical exercises they can, after presenting a relevant certificate, complete their internship in partner kindergartens in two instead of four weeks (Sakellariou 2010; University of Ioannina 2022b).

Nursery and Childcare Teacher

In Greece, three higher education institutions have a Department of Early Childhood Education and Care. The practicum of six months is mandatory in two of them. At the International Hellenic University (2021) the practicum is awarded 24 ECTS. At the University of West Attica practicum is mandatory (20 ECTS) (University of West Attica n.d.). In the Department of Early Childhood Education and Care at the University of Ioannina (2022c) the practicum of six months is optional. Moreover, students of the ECEC Department at the University of Ioannina – where there are two Departments, a Kindergarten Department and an ECEC Department – are provided with the opportunity to do an optional internship within the programme (ESPA) Enterprise Agreement for the Development Framework 2021-2027, which is the basic strategic plan for the development of the country with the assistance of significant resources from the European Structural and Investment Funds (ESIF) of the European Union.

(ESPA) Enterprise Agreement for the Development Framework funded Internship Programme: The internship lasts for two months (continuous duration) full time; it takes place in private and public sector institutions and is awarded at least 2 ECTS. It is offered in the final semester of the degree programme as an optional/elective course. It is not taken into account in the calculation of the degree grade. Participation in the programme takes place following an invitation to express interest and selection of students according to criteria set by the Department. Those students who finally complete an internship will receive, together with their degree, a certificate of internship, where the organisation of the internship will be indicated.

Internship outline: During the optional internship the student should be trained in all areas of the service. It is structured in four progressive stages of activities:

- First stage: Duration of one week. The aim is to get acquainted with the infants and to participate in the work of the Nursery and Childcare Teacher: care, nutrition, education (handicrafts, play, etc.).
- Second stage: Duration of two weeks. The student coordinates the programme of the nursery and childcare centre (nutrition, pedagogical occupations of infants) with the participation of the responsible teacher.
- Third stage: Duration of four weeks. The student assumes full responsibility of the nursery under the supervision of the responsible teacher.
- Fourth stage: Duration of one week. Information and training on administrative and management issues (infant registration, correspondence with various services, archiving, cost sharing, etc.).

The working hours of the students coincide throughout the semester with the working hours of the permanent pedagogical staff (University of Ioannina 2022d).

Nursery and Childcare Assistants

Field studies in the post-secondary study route at a Vocational Training Institute

A six-month internship or workplace apprenticeship, lasting 960 hours, is mandatory for students of Vocational Training Institutes (VTI) and is considered a prerequisite for obtaining a Vocational Training Certificate (Government Gazette 1245/2017).

The **Internship** can take place after completion of the first two semesters. The students may carry out the internship in public and private sector bodies and services in accordance with the

relevant legal provisions in force (Law 4186/2013 (A '193)) under the responsibility of the Vocational Training Institute in which they study. The internship period can be continuous or spaced out. The supervision, coordination, quality assurance and evaluation of the internship are carried out under the responsibility of the Director of the Vocational Training Institute or another person designated by him as an Internship Coordinator. Coordinator is responsible for monitoring the presence of the trainees, ensuring the quality of their work environment, the on-site inspection of the company and the maintenance of an individual internship file with the relevant monthly progress reports. The internship, both in private and in public bodies, can be financed from national and / or community resources in accordance with the provisions in force at the time (Government Gazette 1245/2017).

The students of Vocational Training Institutes who have completed at least 120 working days or at least 120 days of insurance as self-employed or self-employed professionals in the specialty they are registered are exempted, if they wish, by filling out a declaration form, from the obligation to attend the semester of internship and they are awarded the certificate of vocational training upon completion of the four semesters of theoretical and laboratory training (Government Gazette 1245/2017).

The **Apprenticeship Programme VTI** at a Vocational Training Institute consists of two sections, one at the VTI and one at the workplace. Graduates of the 4th semester are registered for the programme if they have not completed an internship. The total duration of the Apprenticeship Programme is 960 hours and is divided into 192 hours of training at the VTI and 768 hours of apprenticeship in the workplace. The Apprenticeship Programme VTI is implemented in accordance with the respective current provisions of the VTI Operating Regulations.

The monitoring and coordination of the Apprenticeship Programme in the workplace is the responsibility of the relevant VTI. The evaluation of the learning outcomes of the apprentices is carried out at the VTI and in the workplace.

The purpose of the both the internship and the apprenticeship programmes for prospective Nursery and Childcare Assistants is for the trainees to gain experience in the workplace and to upgrade their professional knowledge, skills and abilities in order to acquire the qualifications with which they will be able to fulfil their professional duties.

In terms of knowledge, with the completion of the Internship or the Apprenticeship the trainee will be able to:

- Describe the purposes of a nursery
- Distinguish the basic principles that govern the profession of Nursery and Childcare Assistant
- Know the daily pedagogical and care programme, depending on the age, interests and needs of children
- Understand the value of a daily pedagogical schedule and a consistent routine in the lives of infants and toddlers
- Recognise cases of children with special needs
- Know in practice the ethics of the profession of Nursery and Childcare Assistant
- Understand the factors that can create obstacles in the developmental process of children
- Understand the cases of children who show particular characteristics and difficulties in their behaviour and know how to manage their difficulties
- Recognise the importance of special education in supporting children with disabilities
- Identify the factors that can contribute to the normal psycho-emotional development of infants and toddlers.

At the skills level the trainee will be able to:

- Familiarise themselves with and adapt to the conditions of the work environment with infants and toddlers
- Explain the role and duties of a Nursery and Childcare Assistant
- Take care of infants and toddlers
- Organise space and time and implement activities, depending on the children's age, needs and interests
- Select and use the psycho-pedagogical material depending on the age and the developmental level of the children
- Provide personal hygiene to infants and toddlers during routine hours
- Take care of the arrangement and hygiene of the space, equipment and materials
- Organise and implement activities based on a topic of choice, which is multifaceted and interdisciplinary
- Plan, implement and evaluate a daily programme
- Address the difficulties and problems that arise during pedagogical practice
- Manage child safety issues and provide first aid in emergencies
- Act based on the basic principles of ethics of the profession
- Enhance knowledge and skills for the care and education of infants and toddlers
- Contribute to the formation of a suitable and safe environment for the smooth psycho-emotional and social development of infants and toddlers
- Work according to the pedagogical principles and the culture of the workplace
- Respect diversity
- Work with responsibility, conscientiousness, consistency, patience and empathy
- Collaborate effectively with the administration, the staff of the nursery/childcare centre and the parents of the children.

Upper secondary study route at a Vocational High School

There is the possibility of optional attendance of an Apprenticeship programme after the completion of studies at the VHS, with the aim of upgrading knowledge, professional skills and abilities which smooth the transition of students from the school unit to the workplace and in real-life professional conditions.

Emphasis is placed on learning outcomes and the implementation of the curriculum focuses on the student-centred approach and collaborative learning and combines pedagogical learning principles with adult education principles (MD F2/181534/D4/2017).

6. Continuing professional development (CPD) of ECEC staff

Kindergarten Teachers

Continuing professional development activities for Kindergarten Teachers are provided within the larger framework of CPD provision for all teachers in the education system. There is no specific CPD framework for teachers working in kindergartens or pre-primary units in schools.

Compulsory or optional? Continuing professional development for Kindergarten Teachers is partly compulsory, partly optional. It is provided in the form of training programmes, which, after their approval by the Ministry of Education and Religious Affairs, are implemented by professional development agencies.

The forms of *compulsory* training are (PD 250/1992 with amendments, PD 101/1994, 145/1997, 45/1999):

Introductory training, lasting at least one hundred teaching hours for newly qualified Kindergarten Teachers who are applying for a post or for newly appointed teachers before taking up their post. This training aims to renew and supplement their theoretical and practical training (in Greece, newly qualified staff often have to wait several years before taking up their first post). A presidential decree, issued on the proposal of the Minister of Education and Religious Affairs, determines the bodies, the duration of the training and any relevant details. During the training, the teachers attend classes in kindergartens where they also teach in parallel with their theoretical training. Those who are invited to the introductory training before their appointment are paid compensation, the amount of which is determined by a joint decision of the Ministers of Education and Religious Affairs and Finance.

Periodic training is offered in two training cycles each academic year lasting up to three months for full-time teachers with a permanent post. It is repeated for teachers every four to six years and aims at informing them about recent research, innovative educational programmes, new teaching and assessment methods and generally enhancing their professional expertise. However, this type of CPD is no longer offered, because it requires the absence of teachers from schools and their replacement, a procedure which is not chosen due to the economic crisis.

Special short-term training programmes of 10 to 100 hours' duration are offered for all serving teachers and up to 200 hours for teachers serving in special education units. These are related to educational reforms and innovations, changes in school curricula, the introduction of new courses, new teaching methods and textbooks.

Teachers serving in public schools with an employment contract under private law for an indefinite period of time and teachers serving in private schools which have been recognised as equal to the public can also participate in this type of training during their working hours.

Additional compulsory forms of CPD can be, for example, training seminars and workshops, decided on by the Education Counsellor (PD 79/2017, Law 4823/2021). These training sessions aim to address issues related to the scientific and pedagogical support of teachers, the implementation of curricula, the planning and evaluation of educational work or the treatment of problems that hinder the proper functioning of settings.

Funding: In the case of compulsory CPD, the employer funds the training. Forms of continuing professional development such as postgraduate or doctoral studies, participation in seminars or conferences are not financed by the Ministry of Education and Religious Affairs and are not supported through paid leave. However, in certain cases teachers may participate in exams, conferences and other training activities while receiving their full salary. These activities usually take place outside of teaching hours. Permission is also provided for the participation in exams (see Law 3528/2007, Law 4210/2013, Law 4590/2019).

Providers of both compulsory and optional continuing professional development courses for teachers can be: (a) the school units, (b) the Regional Education Quality Supervisors; Education Quality Supervisors; Education Consultants; Interdisciplinary Assessment, Counselling and Support Centres; and Education Centres for the Environment and Sustainability, under the coordination of the Regional Education Quality Supervisors; (c) Higher Education Institutions and supervised bodies of the Ministry of Education; (d) teachers' unions through their research centres; (e) international organisations such as OMEP through its Greek branch.

The universities are providers of continuing professional development options through their postgraduate and doctoral programmes and Training and Lifelong Learning Centres, which offer courses for higher education graduates and teachers, including courses in the latest developments in science and technology and in interdisciplinary fields which are currently developing rapidly. They may also offer short- and medium-term specialisation programmes and internships by scientific specialists in specific fields and applications of technology and science which require additional in-depth studies. A further focus includes the development and implementation of continuing vocational training programmes to complement, modernise or upgrade the participants' knowledge, abilities and skills with the aims of integration into the labour market, job security, as well as professional and personal development.

In addition to the above-mentioned providers, the Education Centres for the Environment and Sustainability also have an educational role through their support of schools in matters related to environmental education, with an emphasis on ecology and sustainable development.

CPD offers at the school unit level: On-site professional development through training seminars in the school setting is carried out for at least 15 hours per school year according to decisions made by the Kindergarten Principal or School Head. Topics of the training seminars are based in particular on: (a) the needs of the school unit, (b) the specific CPD provider. The training seminars are conducted outside teaching hours. Teacher participation is optional; participation, however, is taken into account in their individual evaluation. After the completion of each training seminar, the Kindergarten Principal or the Head of the school issues a printed or electronic certificate of attendance and enters the latter in the teacher's electronic service file. A characteristic feature of the 15-hour training is that it is the teachers' responsibility to organize it, to find lecturers and hours outside of working hours, which is a burden on their personal and family time, as well as tiring for them, since it is required to take place during the academic year.

CPD offers at the regional level: The Regional Supervisor organises and implements training programmes or seminars and other CPD activities at the level of the Regional Directorate of Primary and Secondary Education collaborating in particular with: (a) the Institute of Educational Policy (IEP), (b) the Quality Assurance Authority in Primary and Secondary Education, (c) Higher Education Institutions (HEI); (d) research centres/institutes; (e) local self-government organisations; (f) teachers with additional qualifications or experience in relevant issues arising. The Education Counsellors ensure the dissemination and exchange of knowledge and experiences between teachers of the same or different level and of the same or different disciplines in pedagogical and scientific matters.

CPD activities can be organised in September and June each year by the Education Counsellor in collaboration with the Primary Education support structures (PD 79/2017 as amended by Government of Greece 2018).

Further CPD options: Kindergarten Teachers can also participate in the mobility plan of the ERASMUS+ programme of the European Commission. Within this framework they have, for example, the opportunity to spend a period abroad in a similar educational institution, giving them the opportunity to improve their knowledge, professional and language skills, their abilities to get in touch with a new culture and civilisation and to develop a sense of European identity. Some Kindergarten Teachers participate in Erasmus programmes, but not as a part of their initial professional education. They choose this programme for their professional development. Moreover, participation in these programmes is positively graded in terms of career advancement. The number of participants in the programme per year, the length of participation and the number of participating teachers, students and accompanying teachers (who, as mentioned above, must necessarily belong to the school units and pedagogical groups of the programme), are de-

terminated according to the approved programme in which the participation is included. The number of submissions of Erasmus+ programmes by the same school unit depends on the existing human resources and their management capacity and is decided by the Teachers' Association in the context of the strategic planning of the school units in combination with Erasmus+ priorities. The participation of Primary and Secondary education teachers for training, further training, attending seminars and teaching may last up to 14 days, including holidays. The participation of teachers without accompanying students in the context of the preparation of the approved European Programmes in which the school units participate, may not exceed five days, of which three must be working days.

The duration of travel within the framework of the Erasmus+ programmes is approved by the relevant Directorate of Education (MD 25735/H1/20-2-2020).

Each cycle of an eTwinning seminar lasts approximately 6 months (e.g. October 2022 until May 2023). The seminars are not specialised for a specific level of education; they are also used by Kindergarten Teachers (eTwinning Teacher Training Community 2023; Eurydice 2023).

Planning, coordination and supervision of CPD: The Institute of Educational Policy (IEP) is the main body supporting the Ministry of Education and Religious Affairs in matters related to the continuing professional development of teachers. It is responsible for the design of training programmes, for the planning of the national CPD strategy and for the certification of CPD providers. The IEP coordinates and monitors the implementation, certification and evaluation processes of the training.

More specifically, one of its scientific departments, the Teacher Training Unit, based on law 4763/2020 (Chapter DG, art. 96):

- Plans the national strategy for teacher training and monitors its implementation
- Cooperates with the Department of Training of Primary and Secondary Education Teachers of the Ministry of Education and Religious Affairs, the other services and bodies of the Ministry of Education and Religious Affairs and other Ministries, as well as other Greek or international organisations for the planning and implementation of action
- Gives an opinion on the allocation of national and Community resources available for teacher training and on teacher training proposals submitted to the Minister of Education and Religious Affairs
- Advises on the certification of training institutions, coordinates and monitors the processes of implementation, certification and evaluation of teacher training
- Implements, in cooperation with the project manager, the criteria for registration of trainers in special registers, based in particular on the suitability and qualifications of the trainers, the subject matter, the objectives and the population to which the training programmes are addressed
- Establishes, maintains and updates the registers of trainers, prepares and implements training programmes and training actions
- Prepares or proposes studies and research on issues related to teacher training
- Organises publicity and dissemination events of the results of training actions and
- Ensures the development and sustainability of training activities, as well as any necessary details related to the operation and implementation of training programmes prepared by the IEP.

The following are examples of programmes that the IEP implements for teachers:

- Special Education and Training
- Training of specialised educational support for the integration of students with disabilities and / or special educational needs

- Training in the New Foreign Language Curricula - Unified Foreign Language Curriculum (EPS-XG) and English Early Childhood Learning Programmes
- Training Actions to support the education of refugee children
- Training in Skills Workshops (Ministry of Education and Religious Affairs 2020; Educational Policy Institute 2023).

CPD evaluation: Law 4610/2019 established the **National Teacher Training Centre** at the Hellenic Open University. The purpose of this Centre is the design, implementation and evaluation of training programmes, held in person or online, for education staff, members of the Special Teaching Staff (SPD) and the Special Auxiliary Personnel (APS) of Primary and Secondary Education, as well as prospective members of these categories of staff. In order to achieve its goals, NTTCH cooperates with the IEP and the responsible service of the Ministry of Education. University lecturers and Collaborating Teaching Staff are employed as teachers in the training programmes.

Priority topics for kindergartens: Priority topics for those working in kindergartens include:

- Cooperation with families and supporting the parental role
- Training in the curricula
- Training in administrative tasks
- Crisis management (COVID-19)
- Class management
- Resilience in teachers and children
- Intercultural education.

In order to prioritise the training issues, the Principal of the school unit decides whether it is a matter for school-level training or whether it is a large-scale issue that concerns all Kindergarten Teachers in a prefecture or a district. Teachers' views are not formally submitted as a recording of needs. The possibilities are limited.

Large-scale and still ongoing CPD activities have focused for many years on the training of teachers in the utilisation of ICT. Currently, the Institute of Computer Technology and Publications "Diofantos" is implementing, in collaboration with the IEP, an educational project in the framework of the Act "Training of Teachers for the Utilisation and Application of Digital Technologies in Teaching Practice" which is co-financed by the European Union (European Social Fund, NSRF 2014-2020) and the Greek State and continues the previous comprehensive training on the use and application of ICT in teaching.

The training is developed and implemented in two levels of knowledge and skills:

1. Introductory training for the educational use of ICT (**B1** ICT level) and
2. Advanced training for the use and application of ICT in teaching practice (**B2** ICT level).

CPD for Kindergarten Principals and School Heads include topics related, in particular, to the leadership, organisation and administration of the education system, human resource management, quality improvement in education, evaluation, national and international education policy and adult education and may vary according to the position of the specific duties and responsibilities of the education executives.

The acquisition of qualifications for professional development is also provided by law (L4823 / 2021). In order to be selected as an executive, additional qualifications to the necessary teaching experience are also required (postgraduate, doctoral or second university degree, foreign languages, ICT, seminars, etc.). The higher the position in the management pyramid, the more formal qualifications are required. For example, the position of consultant or regional director requires a doctorate. The acquisition of qualifications is done with personal funding and outside

school hours, as there are now few cases of supported leave (usually only for the examination period).

Leave entitlement: Kindergarten Teachers do not have official permits for attending professional development courses. For postgraduate studies, primary and secondary education teachers are only granted unpaid leave under the current restrictive fiscal policy.

However, the grant-renewal of in-service training licenses leave with mandatory remuneration to IKY (State Scholarship Foundation) fellows is allowed. Teachers who were granted a scholarship from the State Scholarship Foundation are allowed to have paid leave (Law 3528/2007).

For teachers attending a course at a higher education institution, an annual exam leave license may be granted for a period of up to 14 days (Law 3528/2007, 4210/2013, 4590/2019).

Short-term paid leave for educational or scientific reasons can be granted in accordance with Law 3528/2007. These leave licenses are issued compulsorily to employees who participate in competitions to receive a scholarship, to be admitted to the National School of Public Administration and Local Government or to be selected to study in postgraduate courses, to participate in conferences, seminars and all kinds of scientific meetings, at home or abroad, on subjects of interest to the service.

Motivation for participation in professional development activities: The Ministry of Education and Religious Affairs is obliged to take care of the training of its employees throughout their career regardless of their category, branch, specialty and grade (Law 3528/2007).

Motivating factors for participation in certified training activities may be both personal (enhancing knowledge of recent research and pedagogical methods) or related to career development. If a teacher wishes to apply for a position of responsibility in the administration of education (e.g. as a consultant, supervisor, administrative officer (director), Law 4823/2021 sets as a prerequisite certified knowledge of Information and Communication Technologies (ICT) at Level A. Also included as selection criteria may be the certified knowledge of Level B' ICT, annual training through a university department, certificates of attendance of certified training programmes of the Ministry of Education.

Research on continuing professional development: There have been no research projects in recent years focusing specifically on the CPD of Kindergarten Teachers (and the same is true for Nursery and Childcare Teachers).

Current issues relating to CPD: Ongoing professional development involves kindergarten staff, permanent and substitute teachers. In addition to the essential need for continuing education, they all face new challenges in their work, such as classes with refugees, children with learning difficulties in regular classes (cooperation with a special educator if any), managing financial and health crises, changes in the curriculum. Ongoing professional development is a matter of constant concern and demand by the teacher trade unions. During the pandemic, distance education emerged as an issue, as it was used as the only way to train teachers. This process is very problematic since it has nothing to do with the principles of adult education and proves to be insufficient and often tedious. Training by the IEP in the use of distance education took place during the health crisis and still continues with skills workshops or the introduction of English in the kindergarten curriculum, in addition to online seminars by the School Communication Control Council and the Regional Centre for Educational Planning. The approaches towards CPD described are not appropriate, as teachers cannot leave the classroom in order to be trained effectively and exclusively. In particular, very tight schedules are followed and in fact in the middle of the school year, the workload is particularly heavy, while CPD takes place remotely in a modern and asynchronous way.

In 2011 there were mergers, abolitions and cuts in education due to the financial crisis and also the abolition of the retraining of current teachers and Kindergarten Teachers, which was carried

out through an institution called “The Faculty”. The Faculty was an important and pioneering institution for the further education and training of current teachers. There were nine centres across the country connected to the respective university Departments of Early Childhood Education. The admission of teachers was through exams and lasted two years, a period of time when teachers were seconded in order to be able to improve their knowledge and reflective competences at universities. Since then, training priorities and assessment have been oriented towards the acquisition of formal qualifications through fee-paying training programmes, in which teachers are forced to participate without being given time off.

Continuing professional development falls under the principles of adult education, but the way it is conducted does not take these principles into account to ensure that learning is effective. More specifically, it is known that adults face obstacles (family obligations, etc.) and the possibility of overcoming them has not been explored. Also, while Kindergarten Teachers have a tendency for active participation, no one has asked their opinion on issues that concern them, their needs have not been investigated. A technique of one-sided information has been followed and not active / experiential techniques, no effective communication has been formed, there is no feeling of mutual respect. The pace at which Kindergarten Teachers want to and can learn is not taken into account, resulting in the risk of frustration. In addition, all CPD sessions are now held outside working hours, mainly in the afternoons and at the weekends, where they coincide with the necessary preparation for work. This leads to exhausting hours, fatigue, burnout and loss of personal and family time.

Nursery and Childcare Teachers

For the Nursery and Childcare Teachers there is no special provision for professional development. They are civil servants in the social welfare sector and are governed by this legislation. The CPD of Kindergarten Teachers, who are also civil servants but within the education sector, is organised differently.

The legal framework (Law 3528/2007) states that on-the-job training is a right of the employee, to be carried out through introductory training at the beginning of the employee’s career, continuing professional development activities, postgraduate programmes or postgraduate education cycles. The programmes take place either in Greece, particularly within the framework of the National Centre of Public Administration and Local Government, or abroad, according to the legal provisions in force.

Introductory training is mandatory, both for the service provider and for the employee. It takes place during the first two years following appointment and aims to familiarise the Nursery and Childcare Teachers with their duties both as an employee in their specific workplace and as an employee of Local Government Organisations in general. The employee is not promoted to the next grade level without successfully completing this introductory training, as a course which is mandatory.

Service providers are obliged to take care of the continuing professional development of their employees throughout their career, regardless of their category, industry, specialty and grade. The training can be general or in the form of specialisation related to the specific service. Employee participation in training programmes can be defined as mandatory, as can postgraduate education in recognised universities in Greece or abroad.

7. Working conditions and current workforce issues

7.1 Remuneration

Kindergarten Teachers

According to the current legislation (Law 4354 / 2015, Law 4823 / 2021) the salaries of Kindergarten Teachers are at the same level as those of all teachers in primary education. The pay level is shaped by factors such as years of service, marital status, obtaining degrees beyond the basic degree, serving in border areas, serving in a position of responsibility (manager, supervisor, advisor, etc.), but also the employment relationship (permanent or contract employee).

The new salary scale provides for scales from 1 to 19. The salary scale changes every two years and the employee receives a corresponding increase of €15-20. Holders of postgraduate and doctoral degrees count extra working time of two and six years respectively. Position allowances are provided, i.e. for the supervisor (€150), the manager (€300), the deputy manager (€150) and the consultant (€300). The salary scale has been valid since 01.01.2016, with increases every four years. The increase of the basic salary amounts to 25% every year and concerns the years 2016, 2017, 2018, 2019. For example, an increase of €60 was attributed to €15 each year for the twelve months. There are also allowances paid in addition to the salary, such as family allowance (€50 for the first child, €70 for two), or service allowance in remote or border areas (approximately €100).

The average salary of a teacher, as a result of the continuous cuts due to the financial crisis, is estimated at around one thousand euros. This amount is not enough to live on in a big city as a single parent or a family. In the case of contract teachers, who during school holidays are paid with an allowance by the Organisation of Labour Employment (OAED), extra financial support is needed, which comes mainly from their parents. In addition to covering their living expenses with their salary, teachers also have to cover their travel expenses to and from their workplace, even if it is far away from home. Moreover, they have to cover their training needs, the printed or electronic resources they need for their work and also the tuition fees for the various seminars they attend. Contract teachers also face the risk of precarious sources of funding for their work as these are EU funding programmes which may be withdrawn at any time; the same applies even more so to those working in special education and training, where their pay is not part of government spending on education. A typical example is the non-payment of their salary even for one day's absence due to circumstances beyond their control, e.g. if the school closes and does not operate due to adverse weather conditions.

Nursery and Childcare Teachers

Their salary is determined on a monthly basis, corresponds to the total remuneration of their specific position and is paid fortnightly in advance. Salary, bonuses and benefits are the same as for other civil servants. While overtime is provided for work beyond the mandatory working hours. The director of the centre receives a bonus due to position (Law 4354/2015). According to data provided by the Ministry of Finance, for civil servants the salary scales start from 1 to 19. For example, an employee on salary scale 1 receives a salary of €1,151; on a salary scale of 10 and 18–20 years of service, he/she receives a salary of €1,623; on a salary scale of 19 and 38 years of service, he/she receives a salary of €2,154. These amounts refer to salary without deductions for care and pension. So the actual amounts are lower. For example, on salary scale 12

with 24 years of service, the employee's salary is €1,741, but in real terms, the net amount is around €1,100 (Ministry of Finance 2022).

7.2 Full-time and part-time employment in ECEC provision

Kindergarten Teachers

With the Ministerial Decision no. 127187 / E1 / 01-08-2016 (Government Gazette 2524/2016), total working hours in primary education are 30 hours per week, five of which are non-teaching hours. Working hours mean that teachers attend the school unit even if they have completed their teaching hours in order to complete other tasks related to their class or school unit. Also, the teaching schedule differs according to the years of service and the type of school unit. As for the contractors, these can be full time, like the permanent staff, but there are also part-time workers, who work up to sixteen hours. The selection of substitute / contract teachers is carried out by the Supreme Personnel Selection Council, with transparent and objective procedures. In recent years, due to the retirement of teachers and at the same time the absence of permanent appointments in education while the needs remain the same, there has been an increase in the percentage of contract teachers working in education, amounting to about 25% of all Primary School Teachers, including Kindergarten Teachers.

Nursery and Childcare Teachers

Nursery and Childcare Teachers with permanent employment status and Nursery and Childcare Assistants work five days a week for thirty hours. Holiday leave is the same as for the other civil servants. During their two-year probationary period they attend introductory education programmes. Among nursery workers, a large percentage of the workforce are contract staff. This rate is on the increase due to the absence of permanent posts.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

For the newly appointed **Kindergarten Teachers** as employees with a permanent employment status, the possibility of introductory training is provided, which should be completed within the first two years, during which time they are considered probationers. Apart from this training, no further support is provided during their introduction to the profession. There are no on-site mentors supporting newcomers to the profession. Contract Kindergarten Teachers are not eligible for this training. Teachers' associations advocate for supportive institutions for new Kindergarten Teachers. With their mission of scientific and professional guidance, the Education Counsellors work in support of the teachers, whether permanent, contracted or newly appointed. However, in the kindergarten field the problem is the limited number of counsellors and the large number of schools for which they are responsible. This means a reduced possibility of effective support. In addition to the relevant law (4823/2021) which provides for the evaluation of Teachers and Kindergarten Teachers, School Counsellors are likely to have increased bureaucratic work with the evaluation, which means that their advisory duties will take second place.

For **Nursery and Childcare Teachers**, no similar support measures are provided, neither by a mentor, nor by the Counsellor, while any issue that refers to the operation of the nurseries and childcare centres which is not included in their Rules of Operation, is regulated by a decision of the Board of Directors.

7.4 Non-contact time

A feature of the work of teachers is the high workload and work outside the classroom, to prepare the work in the classroom, to hold meetings of the teachers' association, to correct, to organise activities of the school community in collaboration with various agencies (excursions, visits, etc.), to organise parent information events, school festive events, but also holding meetings with parents, etc. For these reasons, alongside the five non-teaching hours, a preparation and extracurricular employment allowance was introduced and granted. However, these allowances were abolished in 2011 when uniform salaries were applied to civil servants due to the financial crisis and thus there was a large reduction in salaries. Although these allowances have been abolished, teachers and Kindergarten Teachers in particular continue to function as before, for example in their cooperation and communication with parents outside the opening hours of the kindergarten, without receiving any additional remuneration (Law 4024/2011; MD 127187 / E1 / 01-08-2016).

7.5 Current staffing issues

Kindergarten Teachers

Between 2010 and 2015, 2,721 Kindergarten Teachers left the kindergartens, the permanent recruitments in those years amounted to 529, while in the years 2014 and 2015 no recruitments were made at all (Bratis 2016), while between 2010 and 2022, 4,070 Kindergarten Teachers retired (Teaching Federation of Greece (DOE) 2022). With Law 4589/2019 (Government Gazette 13 AD), 289 permanent Special Education Kindergarten Teachers were appointed in special education units and integration groups. However, these recruitments have not met the existing needs which are met by the temporary recruitment of contract teachers or in many cases are not covered at all. After many years of the absence of permanent appointments, or minimal in relation to the needs, 1,500 permanent appointments of general education Kindergarten Teachers took place in 2020 and in 2021 (MD 91715/E1/22-7-2022).

According to the European Commission's annual report on the monitoring of education and training, there is a steady decline in the funding for education in Greece (3.20% in 2012-2013, 2.85% in 2017, 3.44% in 2018 and 3.9% in 2019), whereas the European average is 4.6%. This is also reflected in the preference for contract staff, who cost less than a permanent employee in terms of salary, while their recruitment can also be covered through programmes to mitigate unemployment. In Greece, the ESPA program (Corporate Pact for the Development Framework) is utilised, which draws resources from the European Structural and Investment Funds. This is one of the reasons why many educators consider their contracts precarious, as this financial support may be discontinued. Also, under funding leads to understaffing, while there are mergers of schools, a reduction of teachers' income, insufficient and delayed staffing (mainly in special education) and a lack of logistical infrastructure.

In Greece, the education system is characterised as centralised, with the Ministry of Education and Religious Affairs being the only authority responsible for the formulation and implementation of educational policy. Among the issues that are regulated centrally is that of the staffing of the education system. Law 2525/1997 abolished the system of appointment of teachers through the yearbook and replaced it with a system of examinations under the responsibility of the Supreme Council for Civil Personnel Selection, an independent authority established by law 2190/1994. From the year 2003 and with law 3027/2002, the appointment of teachers was determined at a rate of 75% from the competition and 25% from a list of contractors. These percentages changed several times in the following years. It is a fact that from 2008 onwards the

permanent posts for teachers were dramatically reduced and the needs were covered by contractors or substitutes. In 2010, with law 3848/2010, in parallel with the grade in the competition, the candidates could count other academic criteria such as a Bachelor's degree, postgraduate and doctoral degree, but also social criteria such as disability, while the possession of a Certificate of Pedagogical Competence was also institutionalised. Although this law provides for the appointment of permanent teachers, these are not made and this was the reason why no staff selection examinations of the Supreme Personnel Selection Council are held. As a consequence, temporary substitute Kindergarten Teachers are hired on a contract basis. Up to today, the competition has not taken place since 2008, although the Ministry of Education has recently spoken of its intention to reinstate it as part of the teaching staff selection process.

By law 4589/2019, the Supreme Council for Civil Personnel Selection, at the request of the Ministry of Education and Religious Affairs, announces and conducts every two school years a classification process in order of priority, by sector and specialty, of the candidates for vacancies in primary and secondary education, including special education staff. The appointment or recruitment of teachers is made exclusively by ranking boards, which are valid until the end of the second school year following the end of the school year in which they were published in the Government Gazette, without the possibility of modifying the data in the intermediate period.

These tables are compiled on the basis of predetermined and objective criteria (academic, educational background, social criteria) in descending order of the overall score resulting from the cumulative rating of these criteria.

ASEP and the Ministry of Education then post the provisional ranking tables on their websites. Candidates can file an objection within a specified period of time. After checking the objections, ASEP prepares the final tables which are published in the Government Gazette.

Those interested can submit a candidacy application in the manner specified in the relevant announcement of ASEP. Candidate teachers and members of special education staff who have the formal qualifications for appointment in primary or secondary education are accepted in the process.

This law on the system of permanent appointments has provoked many reactions from teachers, because it devalues the previous service of deputies and proposes the formal qualifications, while it also devalues the basic university degree which is no longer enough to secure a job as a teacher.

As for recruitment strategies to meet the increased licensing needs of individuals belonging to vulnerable groups during the health crisis, this was addressed by the government with three-month training contractors.

Data on the number of contract teachers show a steady increase in recent years. Specifically, in the school year 2016/2017, 1,718 Kindergarten Teachers were hired on a contract basis, in the following school year 2,007, one year later 2,554, and in 2019/2020 3,742. Conversely, the proportion of permanent and seconded Kindergarten Teachers has decreased, due to retirement and the failure to recruit young people. This means that the needs for teaching staff remain and the shortages are great. From the school year 2019-2020, the provision of Law 4589/2019 came into force which allows a reduction of the maximum number of children in kindergarten groups from 25 to 22, in order to improve the pedagogical and didactic support of the children. However, this provision was changed again through law 4692/2020 and the aim is now to reduce the number of teaching staff, mainly by increasing the number of children by 3 per teacher, ignoring what is required pedagogically for the teaching and learning of young children.

According to the data of the Hellenic Statistical Authority for the school year 2019/2020, regarding the age distribution of the teaching staff in kindergartens, 39.94% of the teaching staff are over 55 years old. The total number of active teaching staff in kindergartens for the same school

year was 16,483. 29.56% are between 40 and 50 years old and 26.54% are between 30 and 40 years old.

Nursery and Childcare Teachers

Nurseries and childcare centres also face staff shortages. The recruitment of permanent staff has not changed since the 1990s. The needs are covered by contract workers who usually work for eight months a year, recruited through the Labour Organisation.

Each municipality, through the Legal Entity under Public Law responsible for children, announces the intention to conclude a fixed-term employment contract. The recruitments concern a fixed-term private law employment contract to cover the seasonal or temporary needs of any additional qualifications. The Supreme Council for Civil Personnel Selection posts the announcement and the deadline for applications (Law 4257/2014; Law 4354/2015). The existing workforce, the current permanent Nursery and Childcare Teachers with many years of work experience, will be retiring during the coming years. This implies the aging of the permanent teaching staff.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Kindergarten Teachers

Although not recent, it is worth noting that in 2013, the working hours of Kindergarten Teachers were officially regulated in the same way as those of Primary School Teachers. This was an important step forward for Kindergarten Teachers as professionals (Law 4115/2013).

In 2020, with Law 4589/2019 (Government Gazette 13/A/29-1-2019), 289 permanent Special Education Kindergarten Teachers were appointed in special education units and integration groups³.

In 2018, a two-year compulsory education for 4 and 5 year olds was established by law (Law 4521/2018). This has slightly increased the number of jobs, as there are no more student outflows into other settings. Both teachers and parents supported the demand for the institutionalisation of a 2-year compulsory education in public kindergartens. The advantages include facilitation of the non-discriminatory inclusion of all children in the educational process, as it ensures the early detection of their educational needs, guides them for timely and valid assessment in the appropriate state services and agencies when this is necessary and offers the possibility to Kindergarten Teachers to implement the required pedagogical interventions. Furthermore, through transition programmes planned and jointly implemented by Kindergarten and Primary School Teachers, a smooth transition to primary school can be facilitated (Sakellariou, Anagnostopoulou, and Strati 2018).

³ The same law appointed 1,041 permanent employees of special education and special auxiliary personnel for primary and secondary education. The positions included 116 Speech Therapists, 137 Psychologists, 114 School Nurses, 70 Physiotherapists, 81 Occupational Therapists-Occupational Therapists, 135 Social Workers, and 388 Special Auxiliary Staff. Most of the above employees were appointed to special education schools, the rest to regular schools, but also to Committees of Scientific Education Evaluation and Support (E.D.E.A.Y.) who are responsible for the educational evaluation and support of students and the school community.

Nursery and Childcare Teachers

An important development for Nursery and Childcare Teachers was the maximisation of the institutions that offer their studies, which were renamed from Technological Educational Institutions (TEI) to Universities of Applied Sciences. The staffing of the nursery and childcare settings with permanent staff is part of the public sector process (Law 3584/2007), but as mentioned in the previous chapter, permanent appointments have not been made in recent years. Consequently, the majority of employees are contract workers. Characteristic is also the absence of a selection procedure for Centre Heads/Directors due to a lack of relevant legislation since 2011. A serious issue is also the lack of formal and continuing training, but also the lack of pedagogical support through Counsellors.

9. Recent country-specific research focusing on ECEC staff

In terms of research studies focusing on Kindergarten Teachers, two kinds can be identified: (1) from a broader perspective as public sector employees, and (2) from the perspective of the trade union to which both Kindergarten Teachers and Nursery and Childcare Teachers belong, the "Supreme Administration of Civil Servants Associations". Within the trade union, a *Social Multicentre* organisation was founded in December 2004 with the aim of scientifically supporting the diverse activities of the trade union through educational research, while cooperating with respective institutes and higher education institutions in Greece and the European area.

It also promotes the continuing education and training of employees in the public sector.

The level and evolution of wages in the Greek public sector from the crisis of 2009-10 until today

Source: Mavroudeas, S., and K. Passas 2022 (see *References* for full details)

Aims and methods: The aim of this study was to record the level and the evolution of the salaries of the employees in the public sector in Greece from the outbreak of the Greek crisis until the present day. Data on employment in the public sector were used and analysed based on the data of the Labour Force Survey, which are compared with the data of the Register of Employees of the Greek State.

Selected findings: The main conclusions of the study can be summarised as follows:

- It is confirmed that public sector employees contribute more than they are paid for, while in terms of taxation, employees, and especially civil servants, they contribute the most.
- Due to adverse financial conditions, wages in general, but especially those for public sector workers, are more affected, leaving them in a more vulnerable position in terms of their income.
- Specifically, during the period 2010 to 2020, the average salary of doctors decreased by 10.5% – from €1,443 to €1,291 – while the average salary of teachers decreased by 15.7%, from €1,311 to €1,105, of health technicians by 11.9%, from €1,176 to €1,036 and the salary of general office clerks by 14.7%, from €1,196 to €1,020.
- Respectively, we can observe that the reduction of the salaries of the civil servants by sector of economic activity amounts to 11.5% in the sector of health, to 15.8% in the sector of education and to 15% in the sector of public administration. During the period 2010-2020,

average wages for both men and women declined while at the same time the gap between wages by gender increased.

- More specifically, it is observed that the average salary for male civil servants decreased by 14.7%, from €1,326 to €1,131, while for women it decreased by 15.4% from €1,210 to €1,024. As a result of this simultaneous decline, the average wage for women from 92.1% of the corresponding for men in 2010 falls to 90.6%. In other words, the crisis is leading to a widening of the gender pay gap.
- The proportion of the lowest paid employees is also increasing. It is indicative that employees earning between €1,000 to €1,100 have increased from 11% to 16% of the total, those earning €900 to €1,000 from 6% to 10%, while those with a salary level below €900 have increased from 12% to 20%.
- The evolution of the salaries of public sector employees in Greece is always adjusted negatively in relation to European countries where Economic Adjustment Programmes were implemented: for example, Cyprus shows an increase of 6.3%, Portugal of 5.2%; only Ireland shows a decrease of 6.5%, while in Greece the average salary in the public sector decreased by 25%. At the same time, it increased by 21.4% in the Eurozone and by 23.8% in the EU.

Implications: During the current period, the observed increase in inflation will lead to a decrease in the purchasing power of public sector employees, which also applies to Kindergarten Teachers and Nursery and Childcare Teachers, if there is no corresponding increase in wages.

Education and teachers during the COVID-19 pandemic: narratives, experiences, practices – qualitative and quantitative dimensions

Source: Zagos, C., I. Kamarianos, A. Kyridis, and N. Fotopoulos 2022 (see *References* for full details)

Background: A second study by the Social Multicentre of the trade union concerns the levels of education of teachers in general, including Kindergarten Teachers as part of primary education, but not Nursery and Childcare Teachers.

Aims and methods: The purpose of this study was to highlight the optics and dimensions of conditions faced by the educational community during the pandemic period, both inside and outside classrooms and educational institutions. The authors use a rich range of methodological tools for approaching, analysing and interpreting the Greek educational reality during the period of the pandemic crisis. A sociological perspective productively combines theoretical and empirical approaches with qualitative and quantitative character. Specifically, questionnaires were analysed and processed, as well as interviews with teachers (among them Kindergarten Teachers) and university teachers, trying to investigate how they as actors managed the extreme and unprecedented conditions in the education and practice of their work crisis. The sample drew from teachers working in both kindergartens and primary classes. The questionnaires were distributed to approximately 9,000 people. The response rate was 12.04% (1,084 responses).

Selected findings: The conclusions of the study include the following:

- During the COVID-19 pandemic, the teaching profession and teachers went through an unprecedented and difficult period. The question is the magnitude of the impact of the pandemic on the substance of the teaching profession, the nature of teaching and the character of schools. The pandemic crisis came to intensify the already burdened landscape in education and to make the experience of everyday life more painful and stressful.

- In their responses to the Professional Exhaustion questionnaire, the teachers did not present extreme and unpleasant situations. Quite a significant percentage (27.9%) of the sample is in the range of high emotional exhaustion, 35.8% show low personal achievement, while 19.9% high.
- Regarding the scale Sources of Teachers' Stress, they include: the educational organisation, the lack of support for and prestige of the profession, the management of the pandemic, followed by factors related to learning, behaviour, relationships, workload and the pressure of time. In previous research (Leontari, Kyridi, and Gialama 1996) the factors causing the greatest stress to teachers are student behaviour and working conditions.
- The degree of satisfaction of teachers regarding the response of Greek public education is low and even lower regarding the response of Greek educational policy. In e-learning there were technical problems that made their work difficult, while they themselves experienced significant financial costs in supplying infrastructure and technological equipment. The sample considers that in terms of training and logistical support the Ministry of Education did not respond properly to support their work. The trainings were not focused on distance education, while training focused on the psychological management-support of their students did not exist and in general the responsibility of distance education was transferred from the ministry to the teachers.
- Teachers say they feel the nature of their work is changing. Regarding teaching and learning, they record the incomparable value of living teaching, the inability to evaluate the performance of students, the lack of control over the learning climate and the learning process in general, the inability of all students to participate in the distance learning process, but also the difficulty of teaching all courses remotely. They express their concern that in the future the methodology of distance learning, e-learning and in general the toolbox of e-learning methods and approaches will be used more and that in this way their jobs will be endangered. Also, in terms of distance learning, the lack of technological means and infrastructure did not allow equal access and participation of all students, while state resources for the purchase of equipment were limited and allocated with a long delay and a minimal percentage of schools, teachers and students.
- Vulnerable groups of the student population (students from weaker economic strata, children in remote areas, Roma, children of refugees and immigrants) were excluded from the educational process. The teachers, however, have done their job and continue with solidarity through independent activities and voluntary work – but at great personal cost, since they are not provided with the means to fulfil their social mission.

Implications: The study clearly highlighted the important role of schools (including kindergartens), and education in general, for the children's psychosocial development and well-being; in other words, the importance of living teaching and learning and the social role of the school.

Characteristics of public human resources in critical areas of education and health

Source: Tsiolas, G., and M. Filiopoulou 2021 (see *References* for full details)

Background: A report on the human resources of the public sector in the field of education is part of the documentation work by the Social Multicentre of the trade union.

Aims and methods: The aim is to record the characteristic elements of the public's human resources in the critical field of education. Data on gender, age and years of service are used to show the demographic trends and specifics in each of the category of the professions in the field of education. The study draws on data from the 2020 census of public employees and from other official databases, such as the Public Sector Inventory Register.

Selected findings: This report notes that in primary education (including kindergartens), 32% of permanent teachers have 20 to 30 years of service, indicating an aging of the permanent teaching staff. The average age of teachers in primary education is 53 years. 37.0% are aged 51 to 60 years, while 34.7% are aged 41 to 50 years. In primary education, 75.3% are women. At all levels of education, the percentage of women is higher among the younger generation of teachers (under 30 years old) than among older people (50 years and older).

On average in OECD countries, 70% of teachers in 2019 were women at all levels of education. The largest concentration of women in the teaching profession is noted in the first years of school education and the percentage shrinks proportionally in the next levels of education. Women represent 96% of the teaching staff in pre-school education and 82% in primary education. At secondary level they make up 63% and only 44% at higher level on average in OECD countries (OECD 2021, 396).

No similar studies were found for the Nursery and Childcare Teachers, except for the first one presented in this chapter, which focused on all civil servants, including the employees of local government organisations.

10. Workforce challenges – country expert assessment

Kindergarten Teachers

Kindergarten Teachers are very likely to face a reduction of jobs due to demographic issues: while the birth rate has been decreasing dramatically, at the same time the **unfavourable staff to child ratio** (1 teacher to 25 children) has been maintained. Another significant problem is the **aging of the teaching staff** and this will intensify even more with the constant increase in retirement age limits. This is particularly significant because the nature of the profession requires physical endurance to cope with the daily life of a Kindergarten Teacher, in addition to professional development activities to update their knowledge. In terms of day-to-day operation, another challenge is an **increase in bureaucracy** through the push for efficiency and promoting a culture of accountability. Under these conditions, the kindergarten curriculum is at risk of becoming overly structured and rigid, with more of an academic orientation rather than remaining flexible and offering opportunities for social learning.

A further continuing difficulty is the fixation of **salaries and pensions at very low levels** (Law 3833/2010) compared to those in force in the rest of Europe, with no prospect of improvement as the economy is not expected to recover. **Low funding for education** (Law 4584/2018) compared to other countries (OECD 2022, 4) is an important element that should be improved and which is not expected to improve immediately, also due to the prevailing economic situation and other factors. The underfunding of education is justified by the rulers at the level of public rhetoric with the underestimation of the profession, but also of teachers as public servants, with teachers arguing that it is simply a matter of priorities.

A further challenge with social implications is the increase in the relative number of substitute / **contract teachers**, who experience precarious working conditions while being expected to have high-level scientific and professional training. In the past, the local government authorities have often expressed the desire to have the operation and funding of primary education under their supervision, something that Kindergarten Teachers do not want and are constantly debating,

because they believe that not only will the quality of education provided to children be degraded, but also their own official status. Teachers believe that local government authorities under fund the organisations under their responsibility, that there is no transparency in the recruitment of staff and also fear that there will be no uniform professional development opportunities offered throughout the country, as is currently the case in the public sector.

Another challenge is the fact that in times of crisis, like the health care crisis which we have recently gone through, teachers in Greece have completed **remote learning** without support from the ministry (training, logistics) and this is required by the ministry, even in periods when, for example schools have to close due to adverse weather conditions. In addition to this fact, CPD programmes for Kindergarten Teachers tend to depend entirely on remote learning, which is not in line with the principles of adult education. The experience of the pandemic crisis raises many challenges, such as how much the teaching profession will be affected, its nature and character, how the curricula will be affected, what form initial and continuing professional education will take in the future, what organisational models will be developed and how much the forms of teaching in education will be changed, including the relative role distance education (modern or asynchronous) will occupy through remote learning or other e-learning tools (Sakellariou et al. 2021; Sakellariou and Banou. 2020).

Nursery and Childcare Teachers

Nursery and Childcare Teachers, as well as all civil servants, face the fixation of wages at very low levels (Law 3833/2010). The country's demographic problem, which could lead to a reduction in jobs, is a possible negative development for the employees in nurseries and childcare centres. Further negative factors are the absence of permanent appointments, the job insecurity and uncertainty of contract workers. This fact is directly related to the aging of the staff, a condition which complicates the daily operation of employees due to the requirements of the profession and the quality of work.

Another challenge will be to address the demand for places in nurseries and childcare centres, because currently, not all applications for registration can be met. Due to the lack of places in the public sector, many children have to be enrolled either in private nursery provision at an additional cost, or their parents have to use vouchers from European Union programmes, or the children have to stay at home. The needs exist mainly for the very young children, since the municipalities do not establish nurseries and childcare centres to the same extent. Nurseries require the recruitment of more staff (small groups of children and more staff due to the young age of the children). For this reason, the government has announced the intention to implement a programme called "Neighbourhood Nanny", which promises to meet the existing needs. Of course, the question remains as to why the existing structures are not improved, upgraded or why the nurseries are not strengthened with new buildings. This situation does not serve working parents, especially mothers, who find it difficult to look for work and to reconcile work and family life. Another important issue in the operation of nurseries and childcare centres is the need for a curricular framework which would be implemented in all settings.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms chosen in this report for the main forms of centre-based ECEC settings are **nursery** (*vrefikos stathmos*, 0–2), **childcare centre** (*paidikos stathmos*), 2½–3) and **pre-primary school**¹ (*nipiagogeio*, 4–5)². Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Greece

1831	<ul style="list-style-type: none"> – The first infant school (<i>nipiako scholio</i>) for 2 to 6 year-olds is founded on the island of Syros by the German missionary Hildner. – In Athens a similar infant school is opened for 2 to 8 year-old girls by the American missionaries John and Francis Hill, considered to be the first initiative of systematic and organised early childhood education.
1836	Establishment of another private school by the organisation <i>Filekpedeftiki Eteria</i> in Athens which includes a pre-primary unit for 3 to 6 year-olds.
1837	Hildner establishes the first training school for early childhood education teachers on the island of Syros.
1853	Further training institutions are established: one by Hill in Athens and also one by the organisation <i>Filekpedeftiki Eteria</i> .
1864	Ekaterini Laskaridou establishes the first kindergarten based on Froebelian principles in Athens.
1895	Statutory definition of kindergarten education for 3 to 5 year-olds
1897	The first kindergarten teacher training school established in Athens by E. Laskaridou.
1926	Opening of first public day nursery
1929	Kindergartens come under the responsibility of the Ministry of Education.
1962	First official curriculum for kindergartens issued
1966	Founding of one-year kindergarten training departments in the pedagogical academies which close again after four years
1971-1974	Besides the Athens kindergarten teacher school, three new ones are founded in Thessaloniki, Karditsa and Chania, each with a two-year programme.
1980	New official curriculum for kindergartens introduced, putting the child in the centre of the educational process.
1982	Abolition of kindergarten teacher training schools and establishment of Early Childhood Education Departments at the universities
1985	<ul style="list-style-type: none"> – Kindergartens and childcare centres are seen as two separate institutions. – Establishment of experimental kindergartens at the universities – Kindergarten attendance increases gradually and in some areas is made mandatory. – Introductory, annual and periodical CPD of kindergarten teachers are held at the Pedagogical Institute, the Regional Training Centres and in the experimental kindergartens.

¹ In previous SEEPRO studies, these pre-primary educational institutions in Greece were called "kindergartens" – and still are in every day usage. However, as they are now part of the compulsory school system, we will refer to them in this key data synopsis as "pre-primary schools" or "pre-primary groups" or "pre-primary settings".

² **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In Greece, where primary school starts at age 6, the corresponding formats are **0–2½/3** and **4–5** years.

1989	Revised curriculum for kindergartens issued.
1997	Official mandate of all-day kindergartens issued.
1998	Organisation and tasks of regular kindergartens issued.
2001	Responsibilities for childcare centres are transferred from the Ministry of Health and Welfare to the Ministry of the Interior; they are now funded and monitored by the municipalities.
2002/03	<ul style="list-style-type: none"> – Official curriculum for kindergartens is revised again. – Standard operating regulations are issued for municipal and private non-profit childcare centres.
2006	Kindergarten attendance in the year before starting primary school is made obligatory.
2017	Ministerial Decision 79 specifies regulations for the organisation, objectives and evaluation of pre-primary education and schools.
2018-2021	Gradual lowering of age for compulsory pre-primary enrolment to 4 years of age
2021	A new detailed curriculum is piloted.
2023	New pre-primary curriculum comes into force in September.

ECEC system type and auspices³

Early childhood education and care in Greece is organised as a multi-sectoral system, involving three different ministries. The Ministry of the Interior (*Ypourgeío Esoterikón kai Dioikitikís Anasynkrótisis*) is responsible for municipal **nurseries** for under 3 year-olds (*vrefikoi stathmoi*) and **age-extended nurseries** for children aged 2 months to 4 years (*vrefonipiakoi stathmoi*), as well as municipal **childcare centres** for children aged 2½ to 4 years (*paidikoi stathmoi*). The Ministry of Labour and Social Affairs (*Ypourgeío Apaschólisis*) is responsible for licensing and supervising private-commercial and non-profit childcare settings. The municipalities are responsible for the establishment and operation of public and private childcare facilities.

Both public and private **pre-primary schools** (*nipiagogeia*) for 4 and 5 year-olds are part of the primary education sector under the responsibility of the Ministry of Education and Religious Affairs (*Ypourgeío Paideías kai Thriskevμάτων*).

General objectives and legislative framework

Childcare sector

The objectives of childcare settings for children up to 4 years of age are primarily related to holistic development, mitigating cultural, economic and educational inequalities, supporting a smooth transition from the family to the institution, and paying attention to health and safety aspects. Municipal nurseries and childcare centres for children up to 4 years of age are bound by the standard regulations of the Ministry of the Interior and the Ministry of Health (Ministerial Decision 41087/29.11.2017 with amendments of 2020), which define the minimum requirements of the facilities.

³ The Eurydice country report on ECEC in Greece³ provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

Education sector

The overarching goal of early childhood education primarily concerns the balanced development of children's intellectual, psychological and physical potential, regardless of origin or gender. Important basic principles are freedom of religion, respect for different cultures, peaceful coexistence with others and protection of the environment.

Starting in 2018, attending a pre-primary education setting became mandatory for children from the age of 4, mainly to counteract inequalities of opportunity. Important goals are to build and maintain relationships with others and to prepare children for primary school. The Framework Law and the Presidential Decree (Law 1566/1985) lay down the operating modalities of the pre-primary education settings and the organisation of professional training.

ECEC entitlement and compulsory attendance

Up to the age of 4, attending a childcare centre is voluntary and children have no legal entitlement to a place.

Law 4521/2018 stipulates that attending a pre-primary school for two years before primary school is to become mandatory on a staggered basis, starting from the 2018-2019 school year. This regulation was implemented nationwide in 2021/22. 25 hours of educational activities per week are obligatory. Four optional hours are offered in the afternoons to enable full-day attendance if desired.

Children start regular primary education at the age of 6.

Main types of provision

Childcare sector

Nurseries (*vrefikoi stathmoi*) are ECEC settings for under 3 year-olds and age-extended nurseries (*vrefonipiakoi stathmoi*) admit children aged 2 months to 4 years. In some private nurseries, babies are accepted as early as 40 days.

Childcare centres (*paidikoi stathmoi*) admit children between 2½ years of age and entry into the compulsory pre-primary programme. **Special needs settings** also exist to cater for children in these age groups.

Enrolment priority is given to children of working parents, children from unemployed families, families from disadvantaged backgrounds, children of single parents, separated parents and children with special needs.

Childcare settings are open from 1 September to 31 July; they are closed in August, on Christmas Eve, Easter and on official holidays. As a rule, they open at 7:00 in winter, 6:45 in summer and close at 16:00. Opening hours can also be adapted to the needs of parents.

Education sector

Public and private education in **pre-primary schools** (*nipiagogeia* – formerly kindergartens) is now officially part of the primary school system (as with the *écoles maternelles* in France) for 4 and 5 year-olds. Compulsory educational activities take place from 8:30 to 13:00 (25 hours per week), non-compulsory sessions may follow up to 16:00. A pre-primary school can also open as early as 7:45 if more than five children are enrolled for the full-day programme. Children who live more than 1.2 km from the facility are transported there free of charge.

Private kindergartens follow the same organisational structures as public ones.

In 2022, there were a total of 5,734 preschools in Greece, 85.5% of which had public providers (Eurydice 2023, 2.8).

Provider structures

Nurseries, extended nurseries and childcare centres (ISCED 01) may be run by municipal or private providers or in municipal-private partnership. The majority are public. In 2022, overall there were 4,040 of these ECEC settings.

Table 1

Greece: Number of settings in the childcare sector by provider type, 2022/2023

Provider type	Nursery (<i>vrefikos stathmos</i> , 0–2, 2½–4)	Childcare centre (<i>paidikos stathmos</i>)	Total number of settings in the childcare sector
Public	764	1,125	1,889
Private	717	1,434	2,151
Total	2,151	1,889	4,040

Source: EETAA 2023

Most pre-primary settings in Greece are public. According to Eurostat data as well as to data of the national statistic, 11.9% of children (3–6) attended settings under private ownership in 2021 (Eurostat 2023e and *table 2*). The number of private pre-primary schools is increasing slightly: while in 2020/21, 722 of them were public, in 2022 the figure was 833 (see *Table 2*).

Table 2

Greece: Number of pre-primary schools and children enrolled by provider type, 2022

Provider type	Number of pre-primary schools (4-5)	Number of children enrolled*	Relative share of pre-primary settings, in %
Public	4,901	154,311	85.5
Private	833	20,797	14.5
Total	5,734	175,108	

Source: Eurydice 2023, 2.8; *Hellenic Statistical Authority 2023, 135, data from 2020/21

Participation rates in regulated provision

According to Eurostat data, the enrolment rates of under 3 year-olds in centre-based childcare settings quadrupled between 2005 (7%) and 2022 (29.1%). In 2022, 80.5% of children between 3 years of age and the start of primary school attended an ECEC setting, an increase of nearly 20% since 2005.

Table 3

Greece: Enrolment rates in ECEC centre-based settings according to age and duration of attendance, 2005-2022

Year	Weekly attendance rate	Under 3 year-olds in %	3 years to minimum compulsory school age in %
2005	1 to 29 hours	3	27
	Over 30 hours	4	34
	No enrolment in ECEC	92	38

Year	Weekly attendance rate	Under 3 year-olds in %	3 years to minimum compulsory school age in %
2010	1 to 29 hours	3	46
	Over 30 hours	5	23
	No enrolment in ECEC	92	31
2015	1 to 29 hours	4.9	41.1
	Over 30 hours	6.5	26.0
	No enrolment in ECEC	88.6	32.9
2022	1 to 29 hours	8.7	39.8
	Over 30 hours	20.4	40.7
	No enrolment in ECEC	70.9	19.5

Source: Eurostat 2023b, Slight deviations from 100% due to rounding

In recent years, parental demand for childcare places for under 4 year-olds has exceeded the number of places available – both in public and in private settings.

Although the two years preceding primary school are now compulsory, only 82.8% of 4 to 5 year-olds are enrolled in a setting, but almost all 5 to 6 year-olds.

Table 4

Greece: Number and enrolment rates of children in ISCED-02 settings, by age, 2021

Age	Number of children	Enrolment rates in %
4 year-olds	82,171	82.8
5 year-olds	90,143	92.6
6 year-olds	3,575	3.7

Source: Eurostat 2023f, j

Financing and costs for parents

In 2019, public expenditure on early childhood education and care totalled 0.34% of the GDP (OECD 2023).

ECEC settings for children under 4 years of age and also the compulsory pre-primary groups are generally financed by state funds through municipal budgets. The salaries of municipal childcare centres are funded by the Ministry of the Interior through the municipalities in the form of regular monthly subsidies.

In public pre-primary settings, education for 4 and 5 year-olds is free of charge. In facilities for children under 4 years of age, monthly contributions based on income may be charged, especially for meals. Transport to the ECEC setting may be reimbursed under certain circumstances (e.g. income, distance, child's disability).

The Ministry of Education is also responsible for private pre-primary education settings. However, enrolment at a private institution that is not subsidised by the state is subject to fees set by the institution; these are significantly higher than in municipal settings. Parents do not have to pay fees if their annual income is below €15,000 (Megalonidaou 2020).

In 2022, a couple with two children spent about 6% of net household income on childcare costs⁴ (OECD.Stat 2023).

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Staff to child ratios and group size in centre-based settings

In municipal nurseries, children are divided into two age-groups (2 months to 1½ years; 1½ to 2½ years). The groups consist of a maximum of 12 children, together with two qualified professionals and one assistant.

In childcare centres, children between 2½ and 3½ years form one group, those between 3½ and entry into a pre-primary group/unit another. The maximum number of children in a group is 25, supervised by one core professional and one assistant.

In pre-primary schools, the composition of each class includes children from both age groups, half 4 to 5 year-olds and half 5 to 6 year-olds. This is done on purpose. If there are more than 25 children registered, either a second group can be formed if this is possible in terms of room space, or 25 children are selected based on the distance of their permanent residence from the school, the rest are distributed to other settings which are closer to their home.

In 2020/21, the staffing ratio in public pre-primary settings was much better than in private ones (1:9.3 and 1:15.7 respectively (Hellenic Statistic Authority 2023, 135).

For a pre-primary school to be able to operate as a full-day setting (optional half-day provision alongside the compulsory half-day), the following conditions have to be met: in small *nipiagogeia* with only one teacher, at least five children need to be enrolled, in settings with two teachers at least ten children and in pre-primary schools with three or more teachers, at least 14 children (Eurydice 2023, 5.1).

Table 5

Greece: Maximum number of children per staff member and per qualified professional and maximum group size, by age

Age-group	Max. number of children per staff member	Max. number of children per core practitioner	Max. number of children per group
Under 3 years	4	6	12
3 year-olds	13	25	25
4 and 5 year-olds	25	25	25

Curricular frameworks

Childcare sector

There is no national curriculum for work with under 4 year-olds in **childcare settings**. The respective centre-specific programmes are based on the standard regulations and also include free play activities, group activities and quiet times. Goals for children under 2½ years of age are primarily to develop their social, emotional, intellectual and motor skills in a safe environment. For older children, group play and encouragement to develop initial reading, writing and maths skills are also common features of the programme. Helping to mitigate educational inequalities and to make parents aware of educational and psychological issues are also general goals.

Education sector

In the compulsory **pre-primary curricular framework** for 4 and 5 year-olds (2003), there are guidelines on educational activities in five learning areas: (1) language; (2) mathematics; (3) environmental studies; (4) creativity and expression; and (5) information and communication technologies. The educational and learning processes are oriented towards free and organised play activities that take into account the children's needs and interests as well as their competences,

prior knowledge and individual learning pace. Compulsory activities take place from 8:30 to 13:00 and are complemented by four non-compulsory hours per day. The compulsory part includes a pilot initiative to promote new topics such as social skills, life skills, digital literacy and scientific literacy, as well as two hours of English per week.

Professionals are supported in the implementation of the curriculum through guidelines (Ministerial Decision No. 21072b/G2/28-2-2003). The curriculum and support materials for professionals (and parents) were prepared under the supervision of the Institute for Education Policy (*Instituto Ek-paideutikäs Politikäs, IEP*) and approved by the Ministry of Education.

In 2022, a revision of the national curriculum took place (Eurydice 2022). The focus was on children and their well-being as well as openness to social challenges. Also highlighted are the individuality of the children, learning in the community, learning environments, the promotion of self-motivation and communication, as well as the challenges posed by the rapid growth in the field of new technologies. In the context of global education, since 2021/22, English is now taught in pre-primary education and digital technologies have been introduced as a tool for research and learning.

Digital education

Information and communication technology is explicitly mentioned as an area of learning in the current pre-primary curriculum. Moreover, a pilot project was carried out in 2020/21 which, among other things, aimed to develop digital skills. As early as 2003, a project was carried out in western Greece including 653 pre-primary settings (kindergartens) and schools, in which network equipment, hardware and software as well as technical support were provided (CTI 2021).

The revised national curriculum (Eurydice 2023) focuses mainly on the:

- Acquisition of knowledge of basic IT concepts and the ability to use basic IT environments
- Competent use of digital tools for research, creativity, communication and education in the context of the themes of the curriculum and everyday school life
- Recognition and solving of technical problems
- Development of a digital identity (e-citizenship).

Monitoring – evaluation

Child-related assessment

There is no formal assessment for children under 4 years of age in **childcare settings**. However, professionals are expected to inform parents about their children's development once a month. Observations are considered the most important tool for child assessments, both in an ongoing form and as regular on-the-spot observations (European Commission/EACEA/Eurydice 2019, 103).

Such formative assessment of children in **pre-primary settings** is integrated into the daily routine. The professional determines a child's knowledge and experience at the beginning and tries to match learning processes to this. At the end, the progress of each child is considered and compared with the achievement of the goals of the centre-specific programme. The child's portfolio is also used for the assessments. Moreover, children are encouraged to assess their own progress.

Evaluation procedures involve the parents and specialist staff. On the basis of their assessments, teachers give the parents advice on how to support the learning process at home. In the case of

serious difficulties confirmed by a paediatrician or more than 100 days of absence, it is possible for a child to repeat a year in the pre-primary school. Children receive an official certificate of attendance at the end of their pre-primary years, which is a prerequisite for entry into primary school.

Centre-level assessment

There are no regulations or recommendations regarding self-evaluation procedures in the **child-care sector** (European Commission/EACEA/Eurydice 2019, 126).

Annual self-evaluation and external evaluation procedures in **pre-primary schools** are regulated by law (Law 4692/2020). According to Presidential Decision 79 (Official Gazette 109, 2017), kindergartens have to evaluate their educational work at the end of each scholastic year and make suggestions for improvement for the next year. In 2019/20 a new framework came into force (Ministerial Decision, Official Gazette (FEK) 16, 2019) which defines thematic areas for evaluation and also provides templates for the report.

The self-evaluation is carried out annually by the centre heads/principals. The objectives are to assess the educational programme, to define improvement strategies and to track implementation procedures and outcomes. The evaluation is based on 15 quality indicators which cover, for example, buildings and room space, human and financial resources, management, curricular effectiveness, and the assessment of children's personal and social development and achievements.

Regional Centres for Educational Planning (*Perifereiaká Kéntra Ekpaideftikoú Schedias-mou, PEKES*) support professionals in assessing their educational work. The institutions themselves are responsible for preparing an annual self-evaluation report, about which the regional supervisors are then informed. They use the self-evaluation reports to make suggestions for the next year's planning.

External evaluation

External evaluations in **childcare settings** focus primarily on structural quality and are carried out regularly by regional supervisors (European Commission/EACEA/Eurydice 2019, 125).

The independent authority for "Quality Assurance in Primary and Secondary Schools" (*Archä Diasphalisäs täs Poiotätas stän Protobathmiakai Deuterobathmia Ekpaideusä, ADIPPDE*) is responsible for example: monitoring and evaluating the implementation of education programmes; evaluating the quality of work in **pre-primary education** and schools; monitoring the evaluation of pedagogical staff; and for the meta-evaluation of quality assurance measures. *ADIPPDE* establishes criteria and indicators for the evaluations and, in collaboration with the Ministry of Education, develops an integrated information system and database for educational evaluation. It also provides support to the institutions and its agencies regarding self-evaluation and carries out research projects, and cooperates with international networks. *ADIPPDE* also takes into account the reports on external evaluations prepared by the Regional Centres for Educational Planning (PEKE).

For each education department, the *ADIPPDE* sets up an evaluation committee with five members. On the basis of pre-determined criteria, a report based on document analysis or on visits to the institutions is prepared and submitted to the *ADIPPDE* Board of Directors, which evaluates these reports. Both the reports and the decisions are published on the *ADIPPDE* website.

Inclusion agenda

Children with special educational needs and disabilities

Guidelines for the organisation of education and care for children with special needs are set out in a statutory framework (Law 3699/2008; amendments: 4713/2020). This specifies that the state is obliged to provide appropriate educational support at all levels of education. In general, children with special needs are to be integrated into mainstream institutions whenever possible. Currently, a "Strategic Action Plan" is being implemented, which contains 13 goals. These include promoting and improving accessibility to inclusive programmes. Center for Interdisciplinary Assessment, Counseling and Support and Interdisciplinary Education, Evaluation and Support Committees provide assistance by recommending the appropriate institution and support for a child. Children have the option of attending either a mainstream institution, a group with support from support staff or specially equipped integrative groups.

Children with disabilities or special educational needs may attend a special needs setting up to the age of 7. As in mainstream pre-primary education, the Institute for Educational Policy is responsible for developing and organising an appropriate educational curriculum. In addition to a general curriculum, there are also programmes tailored to specific needs/disabilities. The development of curricula for support institutions is regulated by law and a personalised educational plan is prepared for each child. The exact schedule (25 hours per week) is prescribed by Ministerial Decree 85317/2019.

In 2022, there were 114 municipal pre-primary settings specifically for children with special educational needs (Eurydice 2023, 2.8).

Children with a migration background

Children with a migration background are to be integrated into ECEC settings with respect for their culture and language. In recent years, the education of children from refugee families and their inclusion has also been a predominant goal. Although the number of asylum seekers and refugees has decreased somewhat compared to previous years, in 2023 Greece recorded 21,100 asylum seekers and 70,000 refugees. Most of them came from Ukraine (25,000), followed by persons from Syria (16,453) and Afghanistan (15,062) (UNHCR 2023).

Since 2016, a project supported by the European Asylum, Migration and Integration Fund has ensured access to early childhood education specifically for children of refugee and migrant families. A special education programme for so-called "reception or preparation groups" makes it easier for children in reception camps in particular to attend regular institutions. Within the camps there are pre-primary groups for 4 to 5 year-olds that work according to the regular curriculum (European Commission 2020, 123).

In 2022, 7.1% of the population held a non-Greek citizenship, the same as in the age group of children under 5 years (7%). 15.4% of the total non-Greek population came from other EU27 countries, for the under 5 year-olds this rate was 8.2% (Eurostat 2023c, own calculations).

Parental leave arrangements⁵

Private sector leaves are the responsibility of the Ministry of Labour and Social Affairs whereas public sector leaves are regulated by the Ministry of the Interior.

⁵ The brief overview in this section is based mainly on the country note for Greece by Evi Hatzivarnava-Kazassi and Maria Karamessini in the 19th *International Review of Leave Policies and Research 2023* (see *References*).

Maternity leave (*Adeia Mitrotitas*): In the private sector, compulsory basic Maternity leave is fully paid and lasts 17 weeks, of which eight weeks must be taken before and nine weeks after the birth. Employees have to have worked for 200 days during the previous two years. This can be followed by a special Maternity leave (*Eidiki Adeia gia tñn Prostasia tās Mitrotitas*), which lasts nine months paid at minimum wage level. Up to seven months can be transferred to fathers.

In the public sector, Maternity leave, which is also compulsory and fully paid, lasts five months, of which two must be taken before and three after the birth. There are no conditions linked to the length of former employment.

Paternity leave (*Adeia Gennisis Teknu*): In both the private and public sectors, fathers are granted 14 working days around the time of birth, fully paid (by the employer).

Parental leave (*Goniki Adeia Anatrophis*): In the private sector (including teachers without a permanent employment relationship) each parent can take four months altogether, two months paid at minimum wage level and two months unpaid. This leave is non-transferable and can be taken up to the child's 8th birthday. If both parents work for the same private employer, they cannot take parental leave at the same time.

In the public sector, employees can be granted leave for up to five years if requested and up to their child's 8th birthday, although only the first two months are paid corresponding to the minimum wage, the rest is unpaid.

Childcare leave: In addition, each parent has the right to work two hours less per day at full pay in the private sector for the first 12 months after Maternity leave and one hour less per day for another six months. These reductions can also include more hours over a shorter period of time or be taken in different blocks of time within a 30-month period after Maternity leave. The leave is a family entitlement and parents decide who and for how long each will take this fully compensated leave.

In the public sector, instead of reducing weekly working hours, it is also possible to take nine months of fully paid childcare leave after maternity leave or has two hours less work per day up to the child's 2. birthday and one hour less if the child is between 2 and 4.

In both cases, Childcare leave is paid by the employer.

Statistical data on the uptake of Parental and Childcare leave do not exist.

Current challenges for the ECEC system in Greece

Country expert assessment by Maria Sakellariou

Meeting current challenges in the field of Education are first and foremost a question of sufficient **investment** in key components of the education system as a whole. These include improving the quality of education, the continuing professional development of teachers, labour relations and the financing of Education (operational, infrastructure, logistical), strengthening inclusion practices in order to deal positively with diversity and the increasing social and cultural heterogeneity within the population, utilising research and innovative initiatives, utilising digital technology in the promotion of learning and development, and ensuring smooth transitions both from one educational level to another and also from one setting to another within each level.

A great challenge for ECEC is that of **providing quality education** for all children. In terms of pre-primary settings for the 4 and 5 year-olds, this is achieved through a strong, inclusive and publicly funded school system. The universal provision of quality early childhood education and care

mitigates against inequalities and exclusion, works to compensate for learning and developmental deficits and supports the inalienable right of every child to quality education. The challenge of quality early childhood education is considered pivotal, as it lays the foundations for successful lifelong learning (European Commission/EACEA/Eurydice 2019; European Union 2021).

However, in Greece, care and education **do not form a single educational system** in the years preceding primary schooling; they are framed within education policy on the one hand and social policy on the other. “Education” is provided for 4 and 5 year-olds in public (fee-free) and private kindergartens, with the Ministry of Education being responsible for the administrative and educational organisation and the municipalities (through the School Committees) for financial matters concerning equipment and operational issues. “Care, education and social support” for children up to compulsory education at age 4 is provided in municipal and private nurseries and childcare centres under the supervision of local government authorities and at the national level under the Ministry of the Interior and the Ministry of Labour. In other words, at the level of service provision, the presence of a dichotomous model between educational and social policy can be observed.

With the election of a new political leadership in the Ministry of Education, a Government intention was announced to place municipal and private nurseries and kindergartens under the supervision of the Ministry of Education, accompanied by relevant evaluation studies. This emphasis on “education” as a key point of reference for the future of ECEC in Greece constitutes an important indicator of change and paradigm shift; it also presents a significant challenge for the structural reorganising of a “Unified Early Childhood Education”.

A further challenge within ECEC is to ensure the **smooth transitions** of children from the family to nursery, from nursery to kindergarten and from kindergarten to primary school with the cooperation of all those in the local community involved.

As far as operational issues are concerned, it is a constant challenge to provide **CPD support** for all teachers in kindergartens, nurseries and childcare centres in a uniform and ongoing way, although it is obvious that this is the key to ensuring the quality of early childhood education and care in the context of a common vision. The role of ECEC (Unified Early Childhood Education) and Training is multi-layered and complex, as there is a need to develop a collective professional identity that meets the needs of 21st century learning, within the context of the operation of all structures of early childhood education as a learning community.

In the context of all the above challenges, providing continuous internal and external evaluation of all ECEC structures within a common evaluation framework, with the purpose of improving the quality of education and of the services in general, is of major importance.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Greece was 10,459,782. It increased steadily until 2010, then started to decrease (2000: 10,775,627, 2005: 10,969,912, 2010: 11,119,289, 2015: 10,858,018, 2020: 10,718,565) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.43, Greece is below the EU27 average (Eurostat 2023d)⁶.

Children under 6 years of age

Table 6

Greece: Children under 6 years of age, 2022

Age	Number of children
Under age 1	84,618
1 year-olds	84,613
2 year-olds	83,768
3 year-olds	86,019
4 year-olds	87,170
5 year-olds	90,421
Total 0 to 6 year-olds	516,609

Source: Eurostat 2023a

In 2022, 2.4% of the total population were children under 3 years of age, 4.9% were children under 6 years of age. For about 20 years, the shares of both age groups have been slightly below the respective EU averages.

Table 7

Greece: Share of children under 6 years of age in the total population compared with other EU countries, 2000 - 2022, in %*

Year	Comparison Greece/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Greece	2.8	2.8	5.6
	Ø EU15 ⁷	3.2	3.2	6.4
2005	Greece	2.9	2.9	5.8
	Ø EU25	3.1	3.1	6.2
2015	Greece	2.6	3.0	5.6
	Ø EU28	3.0	3.2	6.2
2022	Greece	2.4	2.5	4.9
	Ø EU27(2020)	2.7	2.9	5.7

Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>)

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Single households with children under 6 years of age

The majority of households (84.3%) with children under 6 in Greece in 2022 were couple households. Single-parent households accounted for only 0.6% - exclusively single mothers.

Table 8

Greece: Households with children under age 6, 2022

Household type	Total households	Share of all households, in %*
Total households	834,800	
Couple households	703,700	84.3
Other types of households	126,400	15.1
Single households, total	4,800	0.6
Single households, women	4,800	0.6
Single households, men	--

Employment rates of parents with children under 6 years of age

In Greece, in 2022, the overall employment rate for men (15-64 years) was 77.5% and for women 61.4% (Eurostat 2023k).

In 2022, 58.1% of women and 88.3% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were slightly above the EU-average (87.2%) while those of mothers were well below the EU-average (63.6%) (Eurostat 2023i, own calculations).

Table 9a

Greece: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Greece	54.0	91.1
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2022

Children at risk of poverty or social exclusion¹⁰

In 2022, 24.4% of children under 6 were at risk of poverty or social exclusion, which was higher than the EU27 average (23.3%). The share of all persons at risk of poverty or social exclusion in the total population was 26.3% in Greece, compared to 21.6% for the European average. 7% of children under 6 and 5.8% of the total population suffered from severe material deprivation in 2020 (EU average 6.1% and 4.3% respectively) (Eurostat 2023g, h).

¹⁰ 'At risk of poverty or social exclusion' refers to the situation of people either at risk of poverty (threshold set at 60% of the national median equivalised disposable income after social transfers), or (severely) materially deprived or living in a household with a very low work intensity. (https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Glossary:Material_deprivation)

About the author

Marta Korintus worked as a childcare expert and director of research at government institutes in Hungary. For more than 40 years she was involved in research and development work related to services for children under the age of 3. Her international work experience includes bi-lateral and cross-national cooperation and research as well as participation in international (EU, OECD) projects and activities.

1. ECEC governance in Hungary

The system of ECEC in Hungary is bi-sectoral. ECEC for children younger than 3 years of age (*bölcsőde*) is regulated by the legislation relevant to children's rights, child welfare and child protection, and is therefore part of the child welfare system, whereas ECEC for children between 3 years and compulsory school age (*óvoda*) is part of the education system. *Bölcsőde* is the responsibility of the Minister of Culture and Innovation and *óvoda* is the responsibility of the Minister of the Interior since the new government was set up after the national elections in 2022. Provision and organisation of *bölcsőde* and *óvoda* are delegated to local authorities.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The term *nevelés* has a central role in early childhood work in Hungary. It does not have an exact English equivalent, the closest translation being 'upbringing'. It is a holistic concept, including not just care and education (considered as very closely related, if not inseparable), but also health, behaviour, and social skills – everything needed in life. It has, therefore, much in common with the concept of 'social pedagogy' (as used, for example in Denmark or Germany) or 'education in its broadest sense' (Kaga, Bennett and Moss 2010, 104). When you provide care, you also teach children directly or indirectly and vice-versa. In other words, it relates to the concept of 'pedagogy'.

The **occupational titles** of core pedagogues in ECEC centres for children under the age of 3 are *kisgyermeknevelő* (Infant and Early Childhood Educator) and *szolgáltatásnyújtó* (Childcare Worker, lit. 'Childcare Service Provider'). The term *kisgyermeknevelő* was first introduced in the relevant legislation in 2011 to replace the term *gondozónő* (childcarer) and to acknowledge the work in nurseries and mini nurseries as pedagogical. *Szolgáltatásnyújtó* is the occupational title for practitioners working in family nurseries and workplace nurseries. The occupational title of core pedagogues in ECEC centres for children between the ages of 3 and 6 is *óvodapedagógus* ('Pre-primary Pedagogue').

The jobs and the content of the respective initial professional studies of *kisgyermeknevelő* and *óvodapedagógus* follow the pedagogical tradition, and both have the term 'pedagogue' (*nevelő* and *pedagógus*) in the Hungarian terminology. It is important to note that the translation 'Pre-primary Pedagogue' does not indicate a school-type approach in kindergartens. The job and content of the 100-hour course to qualify as a *szolgáltatásnyújtó* also includes pedagogical aspects, but to a lesser extent and for a shorter duration.

There are several types of qualification which are acceptable when wishing to work as a *kisgyermeknevelő*. Three of these in *Table 1*, the Bachelor's degree (*csecsemő – és kisgyermeknevelő*), the Certificate in Childcare and Early Education¹ (*kisgyermekgondozó,-nevelő*) and the

¹ This form of VET education replaced the first one in this column, which has the same name, in 2020. it is now a school-based form of education.

Certificate as Childcare Worker (*szolgáltatásnyújtó*) can be currently acquired during initial professional education/training. However, five other, older qualifications are also still legally recognised (15/1998 NM *rendelet*, Ministry of Welfare 15/1998).

Auxiliary Co-workers/Assistants (*bölcsődei dajka*) in nurseries, who do the cleaning, bring the food to the children's room, prepare the room for after-lunch nap, etc. can acquire a vocational certificate for support staff in *bölcsőde* as specified in legislation (Ministry of Human Resources 20/2017)². The content of the 100-hour course includes 75 hours theoretical subjects and 25 hours practicum.

Table 1 shows the details and also categorises the core pedagogues (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this chapter).

Table 1

Hungary: ECEC staff in centre-based settings

² 20/2017. (IX. 18.) EMMI rendelet (Ministry of Human Resources 20/2017 Ministerial Decree)

³ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Hungary): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

Job title	Main ECEC work- place settings and age range	Main roles and positions	Main age- range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
				ECTS credits: n/a ⁴ EQF: Level 5 ISCED-P 2011: 454 ⁵ or Childcare Diploma (csecsemő- és kis- gyermeknevelő asszisztens) Since 2017 the occupa- tional title ECEC Assis- tant is used. ECTS credits: 120 EQF: Level 5 ISCED 2011: 5 or one of the older (up to 2002) upper secondary Childcare Certificates listed in legislation ECTS credits: n/a EQF: Level 3 ISCED 2011: 4 and 3
Nursery auxiliary co-worker <i>Bölcsődei dajka</i>	<i>Bölcsőde</i> Nursery Mini-nursery 0–2 years	Co-worker with no for- mal IPE or specialist qualification		20 hour training course leading to a vocational certificate for support staff
Childcare Worker (lit. ‘Childcare ser- vice Provider’) <i>Szolgáltatásnyújtó</i>	<i>Munkahelyi bölcsőde</i> Workplace nursery 0–2 years <i>Családi bölcsőde</i> Family nursery 0–2 years	Core peda- gogue with group respon- sibility no IPE requirement.		100-hour training course leading to a vocational certificate for working in family nurseries and workplace nurseries. <i>Award: Certificate as Childcare Worker (lit. ‘Childcare Service Pro- vider’) (szolgál- tatásnyújtó)</i>

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<i>Óvodapedagógus</i> <i>Profile:</i> Pre-primary Education Professional	3–5 years	group responsibility Centre head with group responsibility in small centres		ECTS credits: 180 EQF: Level 6 ISCED 2011: 6 Centre Heads: 5 years' work experience as a Pedagogue plus a certificate in centre leadership
Minority Ethnic Pre-Primary Pedagogue <i>Nemzetiségi óvodapedagógus</i> <i>Profile:</i> Early Childhood Pedagogy Professional (minority ethnic specialist)	<i>Óvoda Kindergarten</i> 3–5 years	Core pedagogue with group responsibility	3–6 years	3 years at university with specialisation in a minority language <i>Award:</i> Bachelor's degree ECTS credits: 180 EQF: Level 6 ISCED 2011: 6
Auxiliary Co-worker <i>Dajka</i>	<i>Óvoda Kindergarten</i> 3–5 years	Co-worker with no formal IPE or specialist qualification		No requirements Since 1990 available: 400 hour training course leading to a vocational certificate for support staff

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Centre Heads in **settings for children under the age of 3** may have one of the following qualifications:

- Master's degree with a specialisation in early childhood pedagogy

- Bachelor’s degree as Infant and Early Childhood Educator
- One of the (upper secondary vocational) qualifications listed in legislation⁶
- Higher education degree in other study areas listed in legislation (e.g. health visiting, health management, pedagogy, social pedagogy) in addition to one of the qualifications for regular contact staff as specified in the 15/1998 NM *rendelet* (Ministerial regulation, Ministry of Welfare 1998).

Employers usually issue calls for the job requiring one of the higher level qualifications.

The requirements for Centre Heads in **settings for children between the ages of 3 and 6** are:

- Bachelor’s degree as *óvodapedagógus* (pre-primary education professional)
- Certificate specialising in centre leadership
- Five years of work experience as a Pre-primary Pedagogue (Hungarian Parliament 2011).

Centre Leaders for large centres in both sectors usually have administrative tasks and responsibility for the pedagogical work. In smaller centres – defined either by the low number of children or by its position in a large hierarchy – the director works directly with children on a regular basis and also fulfils administrative tasks. The daily work hours are divided between these responsibilities.

2.3 Centre-based posts of responsibility

Centre-based posts of responsibility can be for supervising students coming for their practicum and placed with regular staff. Either the Centre Head or one of the core pedagogues (*kisgyermeknevelő* or *óvodapedagógus* respectively) is assigned this responsibility. The Hungarian Government 230/2012 Regulation states the requirement to draw up a contract for the cooperation between IPE institutions and ECEC centres for students’ field-based studies, including the rights and obligations of higher education institutions and of the hosting ECEC centre.

2.4 Co-ordinating and supervisory staff

Coordinating and supervisory staff are employed in designated large nurseries for monitoring, coordinating and advising staff in other nurseries in a given area to ensure a standard level of quality. These employees usually do not work in children’s groups but have the same qualification as the core workers.

In the case of family nurseries, legislation (Ministry of Welfare 1998) requires setting up a network with a coordinator for every three or more services having the same owner/provider. The coordinator is responsible for providing support and coordinating work within the network.

There are no coordinators or supervisory staff in kindergartens.

2.5 Specialist support staff

Special support staff to work with individual children is not employed by the ECEC sites, but usually come to work with the children at pre-arranged given times. Such staff can be Special Needs Educators, Paediatricians, Nurses working with paediatricians or Speech Therapists (in kindergarten).

⁶ *Bölcsődei szakgondozó (OKJ), csecsemő- és kisgyermekgondozó (OKJ), csecsemő- és kisgyermeknevelő-gondozó (OKJ), csecsemő- és gyermeknevelő-gondozó (OKJ), kisgyermekgondozó, -nevelő (OKJ), csecsemő- és kis-gyermeknevelő asszisztens (FOSZK), csecsemő- és gyermekgondozó (OKJ)*

In addition, integrated kindergartens (centres located at several sites) with 500 places have to employ a Kindergarten Psychologist and an Assistant (not a Pedagogue) for every three children's groups.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Staffing qualifications are different for core pedagogues in ECEC centres for children under the age of 3 and in those for children between the ages of 3 and 6.

Since 2018, the Statistical Office no longer compiles such detailed data as in previous years concerning staff in nurseries and kindergartens. In 2022, there were altogether 10,251 core pedagogues employed in the different types of nurseries (0–2), 100% of them qualified. There were approximately 84% working as *kisgyermeknevelő*, and 16% working as *szolgáltatásnyújtó* (Hungarian Central Statistical Office 2023a). In 2020, about 25% of all *kisgyermeknevelő* worked with a BA qualification as Infant and Early Childhood Educator or another legally accepted higher education degree.

Tertiary level education has been available for **Pre-primary Pedagogues** since 1958/59, and this became obligatory in 1993. Since 2008, this is a BA level course. Only the BA level qualification (and its earlier tertiary equivalent) is accepted for *óvodapedagógus* as the minimum qualification, i.e. 100% of Pre-primary Pedagogues in kindergarten settings have a specialist higher education degree.

In the 2021/2022 academic year, there were 30,750 Pre-primary Pedagogues *óvoda* (3–5) (Hungarian Central Statistical Office 2023b).

Auxiliary Co-workers/Assistants (*dajka*) work alongside Pre-primary Pedagogues. They basically perform care work and cleaning. No special qualification is required for this job. In 1990, however, a special 400-hour training course was set up for these workers who now can acquire a vocational certificate as support staff in *óvoda* (3–5).

Infant and Early Childhood Educators in *bölcsőde* (0–2) are exclusively female, and there are only a handful of male Pre-primary Pedagogues in *óvoda* (3–5).

There are no systematically compiled data on the ethnic background of workers in *bölcsőde* or *óvoda*.

Table 2 shows the composition of the ECEC workforce in Hungary without the data on the main support staff *dajka*. There are 2,305 *bölcsődei dajka* working in nurseries and mini nurseries but there is no available data about the ratio of them having a vocational certificate for support staff. There is only general data, not separated according to staff categories, on 'educational support personnel' and 'other support personnel' (e.g. *dajka*) in *óvoda*.

Table 2

Hungary: Structural composition of ECEC workforce, 2021/22

Staff categories	Proportion of workforce in %
<i>Bölcsőde</i> (0–2 settings)	
Staff with legally required qualifications in nursery, mini nursery, workplace nursery and family nursery	100
– <i>kisgyermeknevelő</i>	84
– <i>szolgáltatásnyújtó</i>	16

Staff categories	Proportion of workforce in %
Staff with higher education degree (BA or other legally accepted qualifications)	25
Staff with no formal IPS	No data available
Specialist support staff (e.g. speech therapists)	Mostly off-site
Male staff	0
Staff with minority ethnic background	No systematically compiled national data
Óvoda (3–5 settings)	
Staff with specialist higher education degree	100
Staff with non-specialist qualification	0
Staff with no formal IPE	0
Specialist support staff (e.g. speech therapists)	Mostly off-site
Male staff	0.5
Core workers with minority ethnic background	No systematically compiled national data

Source: own calculation based on tabular data prepared by the HCSO [Hungarian Central Statistical Office] in 2022 upon individual request

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

The qualifying routes for core pedagogues in nurseries and kindergartens are separate. However, there is no entrance exam either for the *kisgyermeknevelő* or the *óvodapedagógus* BA study programmes. The entrance criteria for both consist of the number of points accumulated based on the grades (evaluation) received during the secondary school leaving exam and the singing and physical abilities of prospective *kisgyermeknevelő* and the singing and speech abilities of prospective *óvodapedagógus*.

Childcare sector

Infant and Early Childhood Educators (*kisgyermeknevelő*)

Since 1991, the entry requirement for all initial professional studies for the Infant and Early Childhood Educators has been the completion of the secondary school leaving exam. Before 2009, several types of qualification were awarded at the upper secondary and post-secondary level for those working in *bölcsőde* (0–2). In 2009, a BA-level qualification was introduced. In 2012, structural changes were made to the National Qualification Register (*Országos Képzési Jegyzék, OKJ*) in accordance with the government's intention to change the system of vocational training in order to meet the needs surfacing in the economy (see Eurofound 2016). The post-secondary vocational education for workers in nurseries was moved to the new system of vocational training (CEDEFOP 2019) in 2020.

The current system includes two different pathways for attaining *kisgyermeknevelő* qualification:

- Higher education studies (BA level) for the award of *csecsemő- és kisgyermeknevelő* (Infant and Early Childhood Educator)
- At the post-secondary vocational programme level for the *kisgyermekgondozó, -nevelő* (Early Childhood Caregiver and Educator).

However, it is also possible to work in a nursery or mini-nursery with one of the earlier upper secondary qualifications mentioned in legislation (see footnote under *Chapter 2.2*).

<p>Job title in Hungarian: <i>Csecsemő és kisgyermeknevelő</i> Profile: Early Childhood Pedagogy Professional (nursery specialist)</p>
<p>Entry requirements: 12 years schooling with a secondary school leaving certificate, specific entrance criteria Professional studies: 3 years at university – specialising in early childhood education and care Award: Bachelor’s degree ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: <i>Bölcsőde, Mini bölcsőde</i> (ECEC centres for children younger than 3 years of age)</p>

Table 4

Hungary: Early Childhood Caregiver and Educator

<p>Job title in Hungarian: <i>Kisgyermekgondozó, -nevelő</i> Profile: Early Childhood Pedagogy Professional (nursery specialist)</p>
<p>Entry requirements: 12 years schooling with a secondary school leaving certificate Professional studies: Regular school-based full time education with 1 or 2 year post-secondary vocational programme Award: Certificate in Childcare and Early Childhood Education ECTS credits: n/a EQF level: 5 ISCED-P 2011: 454 (see CEDEFOP 2019) Main ECEC workplace: <i>Bölcsőde, Mini bölcsőde, Munkahelyi bölcsőde, Családi bölcsőde</i> (ECEC for children younger than 3 years of age), children’s residential home</p>

Childcare Worker (lit. ‘Childcare Service Provider’) (*szolgáltatásnyújtó*)

In the current system, there is only one pathway to attain the *szolgáltatásnyújtó* qualification as a Childcare Worker. Since 2020, a specialised 100-hour training course leads to a vocational certificate for working in family nurseries and workplace nurseries.

Table 5

Hungary: Childcare Worker (lit. ‘Childcare Service Provider’)

<p>Job title in Hungarian: <i>Szolgáltatásnyújtó</i></p>
<p>Entry requirements: 12 years schooling, no specific entrance criteria Professional studies: 100-hour training course – specialising in early childhood education and care Award: Vocational certificate as ‘Childcare Service Provider’ ECTS credits: n/a EQF level: n/a ISCED 2011: n/a Main ECEC workplace: <i>Családi bölcsőde, Munkahelyi bölcsőde</i> (Family nursery, Workplace nursery for children younger than 3 years of age)</p>

Education sector

For core pedagogues working in kindergartens (*óvoda*, 3–5) there is only one qualifying route – resulting in a BA qualification.

Table 6

Hungary: Pre-primary Pedagogue

Job title in Hungarian: <i>Óvodapedagógus</i> Profile: Pre-primary Education Professional
Entry requirements: 12 years schooling with a secondary school leaving certificate, specific entrance criteria (see above)
Professional studies: 3 years at university, specialising in pre-primary education
Award: Bachelor's degree
ECTS credits: 180
EQF level: 6
ISCED 2011: 6
Main ECEC workplace: <i>Óvoda</i> (ECEC centre for children between the ages of 3 and 6), children's residential home

The qualifying route for **Minority Ethnic Pre-primary Pedagogues** is the same as for Pre-primary Education professionals, with a specialisation in one of the minority languages used in Hungary. By the end of their professional studies, these pedagogues have been prepared to educate children (according to the Hungarian Kindergarten Core Programme) both in Hungarian and in the chosen minority language. They are also expected to demonstrate a good knowledge of the minority language, history and culture.

Table 7

Hungary: Minority Ethnic* Pre-primary Pedagogue

Job title in Hungarian: <i>Nemzetiségi óvodapedagógus</i> Profile: Pre-primary Education Professional (minority ethnic)
Entry requirements: 12 years schooling with a secondary school leaving certificate, entrance criteria (see above)
Professional studies: 3 years at university, specialising in pre-primary education and a chosen minority language
Award: Bachelor's degree
ECTS credits: 180
EQF level: 6
ISCED 2011: 6
Main ECEC workplace: <i>Óvoda</i> (ECEC centre for children between the ages of 3 and 6), children's residential home

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Childcare sector

Infant and Early Childhood Educator (*Csecsemő és kisgyermeknevelő*) – Bachelor's degree programme

A number of universities offer BA courses in Infant and Early Childhood Pedagogy.

Competence specifications are grouped into four categories: (1) Knowledge, (2) Ability, (3) Attitude, (4) Autonomy and responsibility. Some examples:

1. **Knowledge** is expected to cover the development, characteristics, care, education, and feeding of young children; the options and methods of forming good habits; the importance and effects of play, arts and singing; the legal framework of working with young children; administrative tasks; ethics, specifics of caring for children in ECEC services; the effects of family upbringing and the importance of early attachment; electronic information systems.
2. **Abilities** include applying a holistic view towards educating and caring for the children; to apply early childhood pedagogical methods; to recognise the processes of normal development and to interpret family contexts; to form good relationships with the children, their families and other professionals; to create conditions suitable for the education and care of young children; to organise the daily routine; to handle information and document children's development; to communicate well.
3. **Attitudes** include the recognition of professional competencies and their limitations; use reflections; having empathy.
4. In terms of **autonomy and responsibility**: to make decisions, to demonstrate responsibility; to cooperate with other professionals; to observe ethics; to be able to make compromises; to be able to work in teams.

Curricular areas: The overall emphases of the study programme are set out in *Table 8* below. The ratio of theory to practice is 83% to 17%.

Table 8

Hungary: IPE curricular areas – Infant and Early Childhood Educator

Curricular areas	ECTS credits/ credit framework
Social sciences and information technology	10–20
Pedagogy, psychology	40–65
Health sciences	15–35
Methodology of early childhood education and care, supporting development and care	20–40
Practicum: at least 6 weeks (240 hours) in the final year, spent in a nursery or mini-nursery	30
Total min ECTS credit requirement	180
Total max ECTS credits	190

Source: Ministry for Innovation and Technology 2021

Early Childhood Caregiver and Educator (*Kisgyermekgondozó, -nevelő*), post-secondary vocational programme

Regular school-based full-time education in a one or two-year post-secondary vocational programme. This form of vocational education is regulated by legislation (Hungarian Parliament 2019) and is based on specific competence specifications (IKK 2022a, 2022b).

Competence specifications

1. 18 competence areas cover skills and abilities related to sector specific basic education: communication and cooperation; preparing paper-based and electronic documentation; digital competence; using legislative, health and special knowledge in practice; protection of interests; identifying risks and dilemmas related to changes in life; understanding health-related data.
2. A further 18 competence areas cover skills and abilities related to specialised education (child welfare and child protection): understanding and using relevant legislation and literature; understanding and supporting children's development; applying an individual pedagogical and psychological approach to children; identifying atypical development; understanding different socio-cultural family backgrounds and supporting families; communication and cooperation; setting goals and planning processes based on pedagogical and psychological knowledge.

Curricular areas: The overall emphases of the study programme are set out below. ECTS credits are not awarded.

- Employment issues
- Social sector specific basic education related subjects (professional personality development, psychology, health, first aid, social studies)
- Child welfare and child protection, nursery care
- Professional skills development
- Knowledge and practice of child development and care
- Atypical development and special education
- Family pedagogy
- Practicum (200 hours)
- Optional subject
- Thesis.

Childcare Worker (*Szolgáltatásnyújtó*)

This special 100-hour training course leading to a vocational certificate for working in family nurseries and workplace nurseries is based on legislation (Ministry of Human Resources 20/2017) and a national education programme (Ministry of Human Resources 2017 EKP). Responsibility for the training is put with the non-profit organisation coordinating family nursery care nationally, called MACSKE (Ministry of Human Resources 20/2017), both for the organisation and delivery of the courses.

Competence requirements: Knowledge and application of relevant legislation, child development and play, characteristics and licencing of family- and working place nurseries, possible ways to address atypical development, ability to make decisions.

Curricular areas (modules):

- Licencing and conditions of running family nurseries and workplace nurseries
- Nursery pedagogy and care
- Pedagogy, psychology, development of play
- First aid and caring for children

- Professional skill development
- Operational issues and administrative tasks in nurseries
- Practicum.

The ratio of theory to practice is 75% to 25%.

Education sector

Pre-primary Pedagogue (*óvodapedagógus*)

Minority Ethnic Pre-primary Pedagogue (*nemzetiségi óvodapedagógus*)

A number of universities and teacher training colleges offer this study programme.

Competence requirements are grouped into four categories: (1) Knowledge, (2) Ability, (3) Attitude, (4) Autonomy and responsibility. Some examples:

1. **Knowledge** is expected to cover the links between societal changes, public education and pre-primary education; the documents, legislations and regulations related to their work; theory and practice of development and education of 3-6 years old children; the specifics of working with special needs and disadvantaged children and their families; the methods of organising activities; theoretical and practical issues of mental and physical health; and the theory and methods of assessment, evaluation and quality improvement.
2. **Abilities** will be to provide the necessary conditions for the personal development of children; to recognise and critically analyse problems and solve conflicts; to work together with families, other professionals and services; to learn new competencies, and to communicate in a foreign language.
3. Some of the professional **attitudes** and behaviours include a child centred approach and ability to play; good communication skills; social responsibility; respect for human values; ability to cooperate in a team; environmentally conscious behaviour.
4. In terms of **autonomy and responsibility**: to carry out pedagogical activities; to assess their professional options and tasks; to make pedagogical decisions.

Curricular areas: These are set out in *Table 9* below. The ratio of theory to practice is 80% to 20%.

Table 9

Hungary: Curricular areas – (Minority Ethnic) Pre-school Pedagogue

Curricular areas	ECTS credits/ credit framework
Pedagogy, psychology, social sciences and information technology	32–45
Methodology of early childhood education and care in <i>óvoda</i> (related to play, native language, literature, mathematics, surrounding environment, music and singing, visual arts and physical education)	54–72
Additional special subjects (such as inclusion, family pedagogy, multi- and intercultural education and special needs) or ethnic minority subjects (such as ethnic language, ethnic minority culture and bilingualism)	32–40
Practicum: at least 8 weeks (at least 6 weeks of these in an ethnic minority setting for Minority Ethnic Pre-primary Pedagogue students)	26–34
Thesis	10
Total ECTS credits	180

4.3 Alternative entry and qualification routes, system permeability

There are no alternative forms of qualification accrual for either of the occupations. The BA level qualification is the highest level of initial professional education both for Infant and Early

Childhood Educators and Pre-primary Pedagogues. Core pedagogues with a BA can study further for an MA in educational sciences.

Formal opportunities for moving up qualification frameworks are different for *bölcsőde* (0–2) and *óvoda* (3–5) core pedagogues, and opportunities for moving across qualifications are limited for both. Only the specialised qualifications are accepted for work in each kind of setting. For example, Infant and Early Childhood Educators wishing to work as a Pre-primary Pedagogue have to complete the full study programme for Pre-primary Pedagogy. Some subjects which were part of the initial qualifying route (up to 75% of the curriculum content is similar) may be acknowledged. However, this does not mean that the student can finish the course in a shorter length of time.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Guided workplace experience in the IPE of prospective core pedagogues working in both nurseries and kindergartens takes the form of a practicum⁷. The general requirements for higher education programmes are stated in legislation (Hungarian Government 230/2012), as for all nationally recognised vocational education studies and are required to follow the national curriculum framework for each specific vocational occupation. Government Regulation 230/2012 states the requirement to draw up a contract for the cooperation between IPE institutions and ECEC centres for students' field-based studies, including the rights and obligations of higher education institutions and of the hosting ECEC centre.

The technical descriptions of the higher education study programmes for Infant and Early Childhood Educators and for Pre-primary Pedagogues describe in detail the specific requirements in terms of content, length of time, number of credits, and so on. All include a longer, continuous time period to be spent at an ECEC centre, usually during the last semester of the course of study.

Table 10

Hungary: Duration of field practice during IPE in higher education institutions

Qualification	Length of time spent in the training place	ECTS credits
Infant and Early Childhood Educator (Bachelor)	At least 6 weeks (240 hours) in the final year	30
Pre-primary Pedagogue (Bachelor)	8 weeks	26–34

Guided workplace experience in the **post-secondary vocational education** future employees in nurseries (**Early Childhood Caregiver and Educator**) is 200 hours, but theory and practice are not clearly divided. The aim is to provide opportunities to teach theory even during the practicum. Decisions on the minimum number of hours of practice are made separately for each subject by the school.

The practicum for **Childcare Workers** is 25 hours to be spent at a family nursery or workplace nursery, with a duty to prepare written tasks on different topics, based on their observations.

⁷ Field practice: practice during which a group of students acquires and practices professional skills in a natural environment or in real working conditions under the supervision of an instructor.

There are no criteria for the selection of ECEC provision sites where the students can spend their practicum. Usually, nearby centres or centres known to the university staff are the ones contracted. During the 1990s, a CPD course was designed for people mentoring/supporting the students in the ECEC centres for children under the age of 3. However, it was not adopted into legislation and has since been discontinued. Despite this, the ECEC sites are expected to nominate staff to help and supervise students while conducting the observations and/or the work assigned to them. Individual student's work is evaluated at the end of the practicum period. Some remuneration for the mentoring staff at the ECEC sites is provided by the higher education institution or MACSKE, respectively.

Selection criteria to be a practice site for family nurseries includes the completion of a self-evaluation form and a site visit from the organisation responsible for the specialised training course (MACSKE n.d.).

6. Continuing professional development (CPD) of ECEC staff

CPD is defined by legislation for Infant and Early Childhood Educators, Childcare Workers and Pre-primary Pedagogues. Non-qualified co-workers are not required to attend CPD.

Qualified core pedagogues both in the social/child welfare and education sector can obtain a specialist professional diploma if they have worked at least five years in a relevant job, by passing a specialist exam related to their specific profession, which can result in a salary increase, depending on the employer's decision. Some universities offer preparatory courses for the specialist pedagogue exam (e.g. Apor Vilmos Catholic College).

Centre Leaders in nurseries are not required to attend CPD courses, but those in kindergartens are.

Infant and Early Childhood Educator (*kisgyermeknevelő*)

The Social Act of 1993 (Hungarian Parliament 1993) lays down the obligation of core pedagogues in social and child welfare services (including *kisgyermeknevelő*) to attend CPD programmes in order to maintain their job and to stay on the National Register of Care Workers. In case of not fulfilling the obligation, the core pedagogue's employment can be terminated. The 9/2000 Ministerial Decree (Ministry for Social and Family Affairs 9/2000) describes the regulatory framework and details the requirements, including the number of credits (which are not linked to the ECTS system) to be accumulated, the type of formal CPD programmes that can be accepted for accreditation and for prospective CPD providers as well as the process of applying to have different programmes accredited.

One CPD period is six years, during which core pedagogues with a higher education, post-secondary, or upper secondary qualification have to accumulate 80 credits, whereas those with a lower level (older) qualification have to accumulate 60 credits to stay on the National Register. If someone fails to achieve this, she/he can be taken off the register and could lose her/his job as a consequence. There are no specific requirements for heads of ECEC provision in terms of CPD.

All formal CPD programmes are accredited with a different number of credits that are not taken into account when participating in other higher education courses.

- a. *Courses of at least 30 hours* addressing different professional themes and ending with some form of report (30–50 credits)
- b. *Group work of at least 25 hours* related to professional personal development and skills development, including case studies and supervision (25–35 credits)
- c. *Meetings or conferences having at least five presentations* in social policy, child protection, child welfare, or social work (5–10 credits)
- d. *Study trip* lasting at least three days *to learn about a certain topic or to gain experience* (10–20 credits)
- e. *Professional workshops* with at least six meetings in a year addressing different themes each time (10–20 credits).

In order to have all credit points recognised in a six-year CPD period, the *kisgyermeknevelő* has to attend at least one 30-hour course directly related to work with children under the age of 3. Any organisation or legal person can apply for CPD programmes to be accredited. The Slachta Margit National Institute for Social Policy Institute accredits and allocates credits to all CPD programmes for staff working in social, child welfare and child protection services once a year, and maintains the register for CPD programmes. The duty of CPD providers to document the programmes is also detailed in the Ministerial Decree 9/2000 (Ministry for Social and Family Affairs 9/2000).

Core pedagogues in *bölcsőde* (0–2) have 45–46 days of paid leave days a year (20–21 working days regular annual leave and 25 working days additional leave for pedagogues). 10–15 days of these can be used for professional development. The Centre Head has to design a yearly CPD plan that takes into account all staff with still unmet duties in order to make sure that everyone who needs to fulfil their CPD obligation has the opportunity to do so. The plan includes a schedule for attending programmes, the substitution of staff while they are away from work and a financial plan for support. Employers have to ensure remunerated time for the CPD and to pay the participation fee.

The qualification requirements for Centre Heads are listed in the legislation (Ministry of Welfare 15/1998). There are no additional requirements in terms of CPD.

Childcare Worker (*Szolgáltatásnyújtó*)

CPD is also compulsory for Childcare Workers through legislation (Ministry of Welfare 15/1998) – once every three years. The responsibility for accrediting and offering CPD programmes was also placed with the NGO organisation MACSKE and since 2023 is placed with the NGO “*Magyar Bölcsődék Egyesülete*” (Association of Hungarian *Bölcsődés*). The cost of participating in a CPD programme can be covered either by the participant or the employer. Employers have to ensure remunerated time for the CPD.

Pre-primary Pedagogue (*óvodapedagógus*)

The Act CXC of 2011 on National Public Education (Hungarian Parliament 2011), which has replaced the former Education Act of 1993, lays down the obligation of all pedagogues (including kindergarten core pedagogues) to attend CPD programmes. The Government Decree on Teacher Further Training (Hungarian Government 277/1997) details the conditions related to participation in and funding of CPD programmes, the rights and duties of both staff and centre leaders and the process of accrediting CPD programmes. Participating in CPD programmes is also a legislative right, not just a duty for pedagogues.

Kindergarten core pedagogues have to attend 120 teaching hours (45 minutes/teaching hour) of pedagogue CPD courses within every seven years. Those who finish the courses successfully are mostly given a financial reward by their employer, although this is not binding. Those who

do not meet this obligation or cannot finish the courses successfully can lose their job. Heads of *óvoda* (3–5) have to attend CPD courses that contribute to their knowledge advancement and skills as a manager of the centre.

As is the case with staff in nurseries, core pedagogues in kindergartens have 45–46 days of leave days a year (20–21 working days of regular leave and 25 working days of additional leave for pedagogues). The head of the centre has to design a five-year CPD plan that takes into account all staff with still unmet duties in order to make sure that everyone who needs to fulfil their CPD obligation has the opportunity to do so. The plan includes a schedule for attending programmes, the substitution of staff while they are away from work and a financial plan for support.

Being a public education duty, pedagogue CPD programmes are free of charge. The costs for the participants are covered by contributions from the state (central budget), the provider and the employer. If the CPD programme is not offered within the state educational duty, the contribution by the state cannot be more than 80% unless the course is necessary for obtaining the next level (qualification) within the Promotion System of Teachers (Hungarian Parliament 2011).

Employers have to ensure remunerated time for CPD activities and to pay the participation fee. Pedagogue CPD courses have to be approved by the Minister responsible for education. Applications for running such programmes are to be submitted to the Education Office (*Oktatási Hivatal*). The decisions of the Minister are based on the recommendations of the Pedagogue CPD Accreditation Council.

Prospective providers can submit programmes for accreditation all the year round. The Education Office keeps a register of approved programmes, makes it available on its website and is responsible for inspecting them. The duty of providers to document the programmes is also detailed in the decree.

Any organisations registered as providers of adult education can apply for accreditation with pedagogue CPD programmes within the higher education accreditation system.

Main providers of CPD

Most of the CPD programme providers – both for *kisgyermeknevelő* and *óvodapedagógus* – are public. The roles and responsibilities described by the legislation apply to public and private providers alike. They have to follow the same procedures and have to comply with the same national standards specified in the 9/2000 Ministerial Decree (Ministry for Social and Family Affairs 9/2000) and the 277/1997 Government Decree (Hungarian Government 277/1997). Their choice of teachers/trainers employed and programme content influence their chances of accreditation and the number of credits the programme is awarded.

During past 10 years or so, many EU funded projects offered training courses for free, which have been accepted as part of CPD fulfilment in both sectors.

Challenges regarding CPD

Finding replacements for practitioners attending CPD programmes can be a problem both for *bölcsőde* (0–2) and *óvoda* (3–5). Other practitioners from the same centre usually substitute, but it can be difficult for the Centre Leader to keep the balance between guaranteeing available leave days for staff members and absences due to CPD activities, especially for smaller centres with only a few staff. CPD programmes are usually offered in the evenings or on the weekends, since some of the service providers work alone or with one helper and cannot close the site for the duration of the courses.

The certificates of CPD programmes are only partially and selectively accepted across the two sectors (e.g. pedagogues working in children's homes or in a childcare centre can fulfil part of their professional development duties in pedagogue CPD programmes).

There are no systematically collated data on the content of CPD programmes. The specific topics are not prioritised, they arise as a result of the accreditation process. Prospective CPD providers aim to submit topics of interest since there is a (market) competition for attracting participants. In addition to compulsory CPD, most core professionals participate in non-formal professional development activities in the centre, such as regular consultations, organised visits to other centres, etc. The content and form of these activities depend on the perceived needs of children, parents and the staff themselves.

Act CXC of 2011 (Hungarian Parliament 2011) on National Public Education introduced the Promotion System of Teachers, which also applies to Pre-primary Pedagogues and Infant and Early Childhood Educators with a BA degree. The system has five levels:

- Trainee
- Pedagogue I
- Pedagogue II
- Master Pedagogue
- Researcher Pedagogue.

The first level is the trainee programme, which lasts for one or two years. Government Decree 326/2013 (Hungarian Government 326/2013) lists the relevant detailed requirements for each level: the contents of the portfolio (documents representing the activities of the pedagogue) to be submitted and evaluated by an independent committee; the requirement for a site visit by the committee to assess and evaluate the practice of the pedagogue; and the need to pass a relevant exam. Achieving the Pedagogue I. level is obligatory as a means of quality assurance. The need for mentoring, the tasks and duties of both the mentor and the trainee are also included. The trainee is to be evaluated regularly every six months and at the end of the trainee period. If the trainee's certification/qualification exam is successful, they can be ranked into the next category, which is Pedagogue I.

One of the important elements of the system is the requirement for Pedagogues to reflect on their work before their assessment by an independent committee. Achieving a new level comes with a raise in salary.

7. Working conditions and current workforce issues

7.1 Remuneration

Most *kisgyermeknevelő* and *óvodapedagógus* work in public ECEC provision and they receive salaries according to unified wage scales. The wages of *kisgyermeknevelő* are based on the wage table of public employees regulated jointly in the Act XXXIII of 1992 on public employees (Hungarian Parliament 1992), and the Government Decree 257/2000 (Hungarian Government 257/2000). The table determines the minimum wages based on the qualification and number of years worked. The Government Decree states the additional wage supplements as well.

The wages of *óvodapedagógus* are determined by a so-called pedagogue wage table, which takes into consideration the number of years worked and the level (qualification) within the Promotion System of Teachers (Hungarian Government 326/2013). This table is the basis for all teachers/pedagogues in the entire education system.

Over the past 5–10 years, core staff in nurseries coming under the Act XXXIII of 1992 (Hungarian Parliament 1992) have received several types of wage supplements, with the result that now a *kisgyermeknevelő* with a BA level education (salary set by the pedagogue wage table) earns less than lower educated colleagues.

The wages of core pedagogues in *bölcsőde* (0–2) were traditionally low, partly because they are part of the social sector, where the wages are the lowest in Hungary, and partly because many of them did not have higher level qualifications. Core pedagogues in *óvoda* (3–5), and pedagogues in general had higher wages, partly because they all have BA level qualifications and partly because of the government’s earlier reform of the evaluation of pedagogues and teachers working in public education (Promotion System of Teachers). However, this situation has reversed recently due to the several wage corrections for people working in *bölcsőde*, which resulted in somewhat higher wages than for those in working in *óvoda*.

In both types of ECEC centres there is additional payment for posts of responsibility, which is also regulated in legislation (Hungarian Government 230/2012).

The government introduced a major wage increase for pedagogues employed in *bölcsőde*, *óvoda* and schools and other types of services. The scale of contribution from the central budget is an average 32.2% effective on 1 January 2024 (Hungarian Government 662/2023). Further plans include yearly increases to achieve an average 90% wage increase by the year 2025.

7.2 Full-time and part-time employment in ECEC provision

Workers in *bölcsőde* (0–2) and *óvoda* (3–5) are almost exclusively employed full time. The official weekly working time amounts to 40 hours. According to the author’s own calculation (based on Hungarian Central Statistical Office data 2021 provided for the author’s request⁸) 99% of *kisgyermeknevelő* work full time. The Ministry of Human Resources (2016) indicated that 99% of the staff in *óvoda* also worked full time and only 1% part time.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Newly qualified core pedagogues are legally obliged to spend a certain period of time as a trainee (*gyakornok*) when they begin to work in their job. Act XXXIII of 1992 (Hungarian Parliament 1992) on public employees states the requirement for applying the trainee programme in the case of newly qualified staff and Government Decrees describe the varying details for the different sectors. A *kisgyermeknevelő* and also a *óvodapedagógus* who is new in the job has to work as a trainee for a period of two years. The Government Decree 257/2000 (Hungarian Government 257/2000) lists the requirements for the ECEC centre to develop the guidelines, to appoint a mentor and to set out the tasks and duties of both the mentor and the trainee. At the end of the trainee programme period, the trainee is evaluated. Failure results in job loss. In the absence of a central government contribution for the mentoring, the ECEC centre has to provide the mentoring remuneration from its own budget.

There are no such measures required for new practitioners in family nurseries and workplace nurseries. If a regional network for these workers exists, the coordinator’s duty is to provide the support.

⁸ The data have been created with the use of “Ikmazásban állók létszáma, 2020. december 31.” (Number of employees in *bölcsőde*) Datafile prepared upon individual request by the Hungarian Central Statistical Office (www.ksh.hu). The calculations and the conclusion are the sole intellectual products of the author of this report, Marta Korintus.

7.4 Non-contact time

Legislation states that the contact time for core pedagogues in *bölcsőde* (0–2) is seven hours per day. One hour per day can be used for preparation work, staff meetings, administration, and so on. Contact time for core pedagogues in *óvoda* (3–5) is 32 hours a week (Hungarian Parliament 2011). The remaining eight hours can be used for preparation work, or anything else related to their work.

There is no such time included in the work hours of childcare service providers.

7.5 Current staffing issues

For a few years after the introduction of the Bachelor level qualification for *kisgyermeknevelő* and the Promotion System of Teachers including *óvodapedagógus* (see also Korintus 2018), better pay and career advancement opportunities were available and therefore there was no severe shortage of staff in either *bölcsőde* (0–2) or *óvoda* (3–5) nationally. However, due to changes in remuneration for *kisgyermeknevelő* with lower level qualifications (i.e. the introduction of wage supplements), staff with a BA education level now earn somewhat less. This situation creates tensions within the workplace, and also results in less people wanting to work in these jobs.

Over the past years, the government introduced higher wages in many sectors of the economy with the result that earnings in the education sector as a whole are left behind. The situation has become so serious that in 2022, fewer prospective students applied for admission to pedagogical oriented universities than the number of places available.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

There have been some educational reforms introduced by the government since the previous SEEPRO report.

Reform of vocational education and training (VET)

Major changes were introduced in 2013, modifying the structure of VET schools, the content and the qualification requirements of VET, as well as the organisation and implementation of guided workplace experience. All these changes have aimed at better serving the demands and needs of the labour market/economy and increasing the attractiveness of VET. In 2013, responsibility for VET schools changed from the local government level to central maintenance by the state (Eurofound 2016) The post-secondary vocational education for workers in nurseries (*kisgyermekgondozó, -nevelő*) was moved to the new system of vocational training (CEDEFOP 2019) in 2020.

Reform of home-based ECEC provision and the structure of the nursery system

In 2017, the system of ECEC for children under the age of 3 was changed, by including and re-defining home-based childcare provision as family nurseries. It meant a major change in the training of childcare workers (extending it to pedagogical and professional issues) and a major change in the minimum requirements in terms of the spatial environment and the pedagogical work with children. Since then, all basic requirements are the same for all types of nurseries.

Reform related to digital education

Affecting workers in both sectors is The Digital Education Strategy of Hungary, which was adopted by the Government Decree 1536/2016, IX. 13 (Hungarian Government 1536/2016). The main goal of DES is that nobody leaves the public education and training system without adequate digital competencies.

9. Recent country-specific research focusing on ECEC staff

Over the past six years in Hungary, no government-funded or third-party funded research has been conducted which specifically focuses on ECEC staff. However, several EU funded projects both in the education sector and in the social welfare sector have aimed to provide a basis for and develop the professional aspects and/or training materials required by reforms in both sectors. One specific example is the following:

Early Childhood Programme

Sources: EFOP-1.9.5-VEKOP-16-2016-00001 "A kora gyermekkori intervenció ágazatközi fejlesztése" [Intersectoral development of early childhood intervention] 2017-2022, National Centre for Public Health 2018 (see *References* for further details)

Aims: The aims of the complex programme – built on cooperation among the different sectors (education, health and social) responsible for young children – were to provide/ensure a system of higher quality and better access services that meet the needs of children below school age and their families, especially of those with special needs; and to design a complex screening measure to support professionals and parents in supporting children with atypical development.

Methods: The methods involved designing a common "route for children" (*gyermekút*) by modernizing the institutional structure, endorsing coordination; expanding the types and forms of services; developing the competences of professionals; and providing better information for parents.

Selected findings: Several documents of guidance have been developed – including a detailed description of children's development below school age, information for parents and guidance for health and education personnel – which can also be used by staff in nurseries and kindergartens⁹. One example is a description of standards for professional work in all types of *bölcsőde*, and another is a developmental questionnaire to be used by staff in both sectors to follow children's development and receive feedback based on national standard values (see also Szombathelyiné et al. 2021).

Implications: The use of both are expected to become compulsory in nurseries and kindergartens.

⁹ See the gyermekut.hu website for publications and guidance for professionals and parents

10. Workforce challenges – country expert assessment

Several changes in the auspices of nurseries within the government structure and ministerial re-organisation after the 2022 elections have affected the perspectives. Nurseries and kindergartens came under the same ministry (EMMI – Ministry of Human Resources) before 2022. Even though the responsibilities were under different parts of the ministry, there was some hope of achieving a unified approach to ECEC. Now different ministries are responsible for nurseries (Ministry of Culture and Innovation) and kindergartens (Ministry of the Interior), once again diminishing hopes of a society-level acceptance of nurseries as places of early childhood education. The workforce challenges Hungary is facing are still mainly related to the level of wages. Teachers, *óvodapedagógusok* and *kisgyermeknevelők* have always had lower wages compared with other sectors (maybe the only exception being social services). However, since the major wage increase introduced by the Hungarian Government (2023), with effect from January 2024, this is now changing.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC are **nursery** (*bölcsőde*, 0–2) and **kindergarten** (*óvoda*, 3–5)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Hungary

1828	First kindergarten established by Therese Brunswick
1891	The first Kindergarten Act emphasises a holistic approach to children’s development.
1852	First day nursery for children of working mothers is opened in Budapest.
1879	First state kindergarten is opened.
1891	Attendance made compulsory for 3 to 6 year-olds but without compliance procedures
1936	The mission of kindergartens changes from an educational to a health-oriented approach.
1953	Legal entitlement to a place in early childhood provision is established and state provision transferred to the municipalities.
As from 1967	Steady expansion of ECEC provision with a number of quality measures (such as national guidelines, regular inspections) introduced both for nurseries and kindergartens.
1970	The first institute (<i>Bölcsődék Országos Módszertani Intézete</i>) for supporting, monitoring and inspecting nurseries nationwide is established by the Ministry of Health as part of a general effort to establish national institutes in many areas in Hungary.
1984-2003	Drop in the birth rate and financial constraints lead to the closing of roughly 60% of the available provision.
1993	Kindergartens recognised as part of the education system
1997	Nurseries are recognised as part of the new child protection/child welfare system.
1997	Licensed family day care and home childcare are also included in the 1997 legislation as basic services to be provided for families with young children.
2009	Introduction of Sure Start Children’s Houses as a pilot project
2012	National Core Curriculum for kindergartens comes into force.
2013	Sure Start Children’s Houses become a state-financed service regulated under the Child Protection Act.
2015	Kindergarten are made compulsory for 3 year-olds and above.
2017	Integration of all types of ECEC services for children under 3 years of age under the term <i>bölcsőde</i>
2018	The Public Education Act is amended.
2022	Responsibility for nurseries is assigned to the Minister of Culture and Innovation and for kindergartens to the Ministry of the Interior.

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years, as in Hungary, where children usually start school when they are 6 years old.

ECEC system type and auspices²

Early childhood education and care in Hungary is organised as a bi-sectoral system. Since 2022, nurseries (*bölcsőde*) for children under 3 years of age come under the responsibility of the Minister of Culture and Innovation, whereas kindergartens (*óvoda*) for children between the ages of 3 and statutory school age come under the Minister of the Interior. The municipalities are responsible for the operation and organisation of both nurseries and kindergartens.

General objectives and legislative framework

The Basic Law of 2011 enshrines the universal right to education, irrespective of gender, race, language, social origin or any other status.

The overarching socio-political goals of early childhood education, care and upbringing are to support family employment and to reduce disadvantages. Particularly important goals in education and learning processes are the transmission of democratic and humanistic values and respect for the individual. Emphasis is placed on the basic right to education and equality of opportunity as well as the right of national minorities to their culture. In the field of early education, the importance of cooperation between the family, ECEC settings and the state is also emphasised.

Relevant laws for kindergartens, childcare centres and home-based ECEC provision are, on the one hand, the Public Education Act (Act CXC, *törvény a nemzeti köznevelésről*) of 2011 with amendments) which confirms local authorities as the responsible bodies for providing kindergartens and on the other hand, the Child Protection Act (XXXI, 1997, amended in 2017), which in 2017 reorganised the structure of nursery provision (KSH 2023b) and confirms local authorities as the responsible bodies for providing nurseries. Other important legal provisions are:

- Government Decision 229/2012 on the implementation of the Education Act
- Ministerial Decision 20/2012 on the management of educational institutions
- Ministerial Decree 15/1998 on the Task and Operational Criteria of Child Protection Institutes and Personnel and
- Government Decision 1246/2015 on measures for effective early childhood development.

These laws define minimum standards, the inspection system, educational content and quality standards.

ECEC entitlement and compulsory attendance

Attendance is voluntary for children under 3 years of age. Since 2017, however, municipalities have been obliged to provide places if at least 40 children under the age of 3 live in the area or at least five families express a wish for childcare services.

Children from the age of 3 have a legal right to a free place in a kindergarten. The Education Act stipulates that attendance is compulsory for at least four hours per day. Hungary is one of the few European countries with a three-year compulsory kindergarten enrolment (European Commission/EACEA/Eurydice 2019, 53). Stricter regulations have been in place since 2019 to strengthen compliance with this requirement.

Primary school (ISCED 1) starts at the age of 6.

² The Eurydice country report on ECEC in Hungary provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

Main types of provision

Childcare sector

Since January 2017, there are three types of ECEC setting for under 3 year-olds: (1) centre-based (childcare centres, mini nurseries), (2) home-based and (3) workplace nurseries.

Nurseries (*bölcsőde*) are the most common type. They operate according to the National Core Framework for Education and Care in Nurseries. A few (no statistical data available) offer 24-hour care or care during weekends or holidays. However, these may be used by a child for a maximum of ten days per year.

Mini nurseries (*mini-bölcsőde*) can be set up if necessary where only a few children (seven or even eight if they are all over 2 years old) are to be cared for.

Family nurseries (*családi bölcsőde*) as a home-based ECEC setting provide for children between 20 weeks and 3 years and may be (but are not usually) located in the provider's home. Since 2017, this form of care has replaced the former family day care (*családi napközi*) (European Commission/EACEA/Eurydice 2019, 183).

Workplace nurseries (*munkahelyi bölcsőde*) are set up by employers, primarily for the children of their employees. Here, a maximum of seven children can be cared for on the premises of the workplace. Family nurseries and workplace nurseries have less strict legal requirements for operation than regular nurseries.

Sure Start Children's Houses (*biztos kezdet gyerekházak*) are a new kind of multi-age ECEC setting established by law in 2013. They provide for 0 to 5 year-old children and their families in disadvantaged areas where most of the population live in poverty and social exclusion (Farkas 2020, 80) (see section on *Inclusion agenda*). They provide preventive services to support the healthy development of children, compensate developmental delay and strengthen parental competence.

In 2023, 55,748 children were enrolled in a total of 2,611 different nursery facilities. The number of available places was slightly higher than the relevant demand (see *Table 1*), yet the available places and attendance rates are very unevenly distributed across the country: In Budapest in 2018, for example, 21.2% of children under 2 attended a nursery, but only less than 10% in northern Hungary (Farkas 2020, 90). Although the number of children under 3 years of age who do not have access to childcare facilities at their place of residence decreased in recent years, 20.1% of children (4,991) under 3 years of age were still unable to attend an ECEC setting in 2023 (KSH 2023b, 25.1.1.9).

Table 1

Hungary: Number of nurseries, available places and enrolments, 2023

Type of nursery	Number of nurseries	Number of available places	Number of children enrolled
Traditional day nursery	1,016	48,444	44,420
Mini-nurseries	398	3,500	3,283
Family nurseries	1,171	8,018	7,829
Workplace nurseries	26	300	216
Total	2,611	60,262	55,748

Source: KSH 2023b, 25.1.1.9

Nurseries are open for at least ten hours a day; the opening hours, which are usually based on parents' working hours, are set by the provider. According to the Welfare Act 15/1998, a child

should spend a minimum of four and a maximum of twelve hours in a nursery. In summer, nurseries can be closed for up to five weeks, some are open all summer.

Education sector

Kindergartens (*óvoda*) provide education, care and upbringing for children aged between 3 years and statutory school age. The kindergarten year runs from 1 September to 31 August. The daily opening and closing times and holidays are decided by the provider or the kindergarten head. Kindergartens are usually open on 250 to 252 working days per year, mostly from 7:00 to 18:00; in summer they are closed for up to five weeks.

In 2022/2023, there were 4,599 kindergartens in Hungary, with 387,649 available places and 322,868 children. Of these, 2,335 children attended special education groups or facilities (KSH 2023a, Tab 23.1.1.7). As with the nurseries, the total supply of places is greater than the demand. Despite this, in 2017, an average of 2% of children nationwide lived in an area without kindergarten, and in some parts of the country up to 14% of children had no access to kindergarten (Farkas 2020, 94).

Provider structures

Kindergartens and nurseries are predominantly public and are then either run by the state or by municipalities. Private, state-subsidised facilities, or settings run by churches or other legal entities were attended by 12.1% of kindergarten children in 2021 (Eurostat 2023e, own calculations).

Table 2

Hungary: Number and relative share of children in kindergartens by age-group and provider type, 2021

Type of provider	Under 3 year-olds**		3 years to statutory school age	
	Number of children	Relative share of age-group*	Number of children	Relative share of age-group*
Public	11,235	79.2	276,091	87.9
Private state-subsidised	1,349	9.5	26,229	8.3
Private independent	1,599	11.3	11,949	3.8
Total	14,183		314,269	

*Own calculations ** These are children aged 2½ to 3 years who are admitted to kindergartens if needed
Source: Eurostat 2023e

Childcare sector

The greater majority of centre-based provision (nurseries and mini nurseries) for under 3 year-olds is publicly run. However, most home-based settings (family nurseries) are private, non-profit (see Table 3).

Table 3

Hungary: Distribution of nursery provision by provider type, 2022

Provider type	Nurseries		Mini nurseries		Family nurseries		Workplace nurseries	
	No. of settings	No. of children	No. of settings	No. of children	No. of settings	No. of children	No. of settings	No. of children
Public	853	38,519	290	2,232	118	754	6	39
Private non-profit	75	2,345	44	403	924	6,104	5	37

Provider type	Nurseries		Mini nurseries		Family nurseries		Workplace nurseries	
	No. of settings	No. of children	No. of settings	No. of children	No. of settings	No. of children	No. of settings	No. of children
Private commercial					44	273	1	14
Total	928	40,864	334	2,635	1,086	7,131	12	90

Source: KSH 2023g (HB1021)

Education sector

In 2022, most of the 4,599 kindergartens had a public provider (82.2%), 9.9% of the facilities were run by churches and 7.9% had another provider (foundations, private organisations), see Table 4.

Table 4

Hungary: Number and distribution of kindergartens by provider type, 2022

Provider type	Number of kindergartens	Relative share, in %
Municipal	3,782	82.2
Church-affiliated	455	9.9
Others	362	7.9
Total	4,599	

Source: KSH 2023g (FS1A03)

Participation rates in regulated provision

The proportion of children under 3 years of age attending kindergartens increased from 7% to 12.9% between 2005 and 2022. In the same period, the attendance rate of children between 3 years and statutory school entry increased from 79% to 100% (see Table 5).

Table 5

Hungary: Enrolment rates in ECEC centre-based settings according to age group and duration of attendance, 2005-2022

Year	Weekly hours of attendance	Under 3 year-olds, in %*	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	2	30
	Over 30 hours	5	49
	No enrolment in ECEC	93	22
2010	1 to 29 hours	1	14
	Over 30 hours	8	66
	No enrolment in ECEC	91	21
2015	1 to 29 hours	4.6	9.6
	Over 30 hours	10.8	79.5
	No enrolment in ECEC	84.7	10.9
2022	1 to 29 hours	3.9	20.9
	Over 30 hours	9.0	79.1
	No enrolment in ECEC	87.1	0.0

*These data refer only to children under 3 in kindergartens, not in the various nursery types.

Source: Eurostat 2023b, Slight deviations from 100% due to rounding

Looking at the age groups separately (see *Table 6*), the 4 to under 6 year-olds in particular had very high attendance rates of more than 95% in 2021. However, very few under 2 year-olds are enrolled in centre-based nursery settings.

Table 6

Hungary: Number and enrolment rates of children in nurseries and kindergartens, by age, 2021

Age	Number of children in nurseries	Enrolment rates in nurseries	Number of children in kindergartens	Enrolment rates in kindergartens
Under 2 years	1,736	0.9	--	--
2 year-olds	10,113	10.9	--	--
3 year-olds	1,395	1.5	79,413	83.9
4 year-olds	637	0.7	91,709	95.7
5 year-olds	247	0.3	91,217	98.4
6 year-olds	55	0.1	50,062	53.3

Source: Eurostat 2023f, g

According to national statistics, in 2022/23, the nationwide enrolment rate in the 3–5 years age group is 93.1% (KSH 2023e, Table 23.1.2.3).

Table 7

Hungary: Number and enrolment rates of children in kindergartens by age, 2020/21

Age	Number of children	Enrolment rate, in %*
Under 3 years	8,500	3.0
3 year-olds	79,400	85.0
4 year-olds	91,800	96.8
5 year-olds	91,200	95.1
6 year-olds	50,000	53.9
7 year-olds	1,900	2.0
Total	322,800	

Source: KSH 2021; * own calculations based on data of KSH 2023c

Financing and costs for parents

The share of GDP spent on education was 3.5% in 2021 – a significant reduction during the past decade from 4.3% in 2011, especially from 2019 onwards. 16% of education expenditure was spent on kindergartens (KSH 2023f, own calculations).

According to OECD data, total public expenditure on early childhood education and care amounted to 0.66% of GDP in 2019. Of this, 0.1% was allocated to childcare (OECD 2023).

In nurseries, parental fees may not exceed 25% of the family's per capita net income. In traditional nurseries and mini nurseries, the fee averages 8,000 HUF (€21) per month in 2022, in family crèches 40,000-100,000 HUF (€102-256). There is no charge for the care of children with disabilities, or for families with more than three children, or for families with an income below 130% of the minimum income (Farkas 2020, 92).

Kindergartens are usually financed through municipal budgets. The municipalities receive funds from the national budget for this purpose, based on the number of core professionals and support staff. The calculation is based on the average national salary of kindergarten teachers and the number of kindergarten children.

Kindergartens that care for children with language disabilities or learning difficulties receive double the rate for each of these children, and triple the rate for children with physical or sensory impairments.

In public kindergartens, parents pay only for meals. In privately subsidised kindergartens, parents pay a monthly fee of about €223 (without meals).

In 2022, a couple with two children spent about 4% of net household income on childcare costs³ (OECD.Stat 2023).

Staff to child ratios and group size

In **nurseries**, there are usually 12 children in a group with two professionals, or 14 if all the children are over 2 years old. Up to seven children are cared for in a mini nursery by one professional and one assistant. Up to seven children are also cared for in a workplace nursery; if more than five children are present, an assistant must be employed, whose working hours are determined by the provider. In family nurseries there can be 5 children or up to 8 if 2 core pedagogues or 1 core pedagogue and 1 assistant are employed.

Table 8

Hungary: Staffing ratios and group size in nursery settings

Nursery type	Number of staff	Maximum number of children per group
Traditional nursery	2 core pedagogues	12
Nursery where all children are over 2 years of age	2 core pedagogues	14
Mini nursery	1 core pedagogue and 1 assistant	7 8 if all children are over 2 years of age
Workplace nursery	1 core pedagogue 1 core pedagogue and 1 assistant if more than 5 children are in the group	7 or 8 if children are older than 2 years of age

Source: Ministry of Welfare 1998 with amendments 2017

As a rule, **kindergartens** have an average of four same-age or mixed-age groups, with a maximum group size of 25 children. Each group is staffed by two professionals, whose working hours overlap by two hours, and one assistant. One full-time pedagogical assistant must be employed for every three groups.

In 2022/23, one core pedagogue was responsible for an average of 10.5 children and there was an average of 21.5 children in a group. While there are hardly any differences between public and church-affiliated kindergartens, the average number of children in a group in facilities run by foundations or other organisations tends to be slightly lower (KSH 2023a).

When children with disabilities attend, the group size is reduced – as a rule, one child with a disability counts as two or three children without a disability. If only children with disabilities are

³ The OECD calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included. From 2022, the gross childcare fee is calculated using an ad-hoc survey managed by the Ministry for Culture and Innovation. Previously, the gross childcare fee was based on the regulations of Budapest-District 8.

in a group, the maximum number may not exceed seven to 15, depending on the type of disability.

Curricular frameworks

Childcare sector

The National Core Programme for Nursery Education and Care (Ministry Decision 15/1998) applies to various nursery settings and the centre-based educational programmes are based on this. The following aspects are emphasised: the importance of family upbringing, respect for the child's personality, the unity of education and care, individualisation, security and stability, encouraging activity and self-confidence, the influence of education. Nurseries are required to support these goals by advocating a healthy lifestyle and fostering emotional, social and cognitive development. Methods that the professionals are free to choose include play, story reading, singing and creative activities. An individual plan is drawn up for each child based on observations by the core pedagogue.

Education sector

The compulsory National Core Programme for Kindergarten Education (Government Decision 363/2012, XII. 17) applies to all kindergartens, regardless of the provider, and defines the pedagogical principles and goals, such as the individual, needs-based development of emotional, social and cognitive skills. Particular emphasis is placed on accepting each child as a unique person and adapting pedagogical approaches to account for this. Based on the core curriculum, the professionals either develop their own centre-specific programme or adopt a ready-made one. An overriding goal is always to achieve "school readiness" and a smooth transition to school. Beyond this, the acquisition of key competences is also emphasised, such as communication in the family language, mathematical and scientific competences as well as social and artistic competences. Play is considered the most important form of learning, but reading stories is also valued, as are singing, drawing, painting and motor activities. The professionals are free to choose their own methods. The core curriculum is updated every five years by the government and supplemented if necessary.

Digital education

The government's Digital Education Strategy (Hungarian Government 1536/2016) makes it clear that knowledge of information technology and digital education must be integrated into everyday activities in kindergarten. As part of the Digital Success programme, the Digital Child Protection Strategy was also developed in 2016.

Among other things, the strategy recommends integrating digital education in ECEC settings, particularly since neither the information society per se nor digital tools or technologies are currently addressed in the core curriculum. Nor is there any mention of how professionals should deal with them. Therefore, the strategy emphasises the need to adapt the curriculum accordingly.

As a rule, digital devices are used in kindergartens primarily for documentation purposes. Here data protection needs to be guaranteed, that parents are included and that a safety awareness is developed among all those involved. In practice, this means supporting children in developing safety awareness to the extent that they become aware of the possible risks of the internet. It

also means ensuring that the professionals have sufficient digital knowledge, that only controlled content is accessible on the end devices used in kindergartens, that the children's personal data is always protected and that overall children learn to acquire critical digital consumer behaviour.

The strategy also points out that kindergartens need the appropriate equipment for this and that the training of professionals must be adapted. It is also recommended that specialist centres be set up to support the ECEC settings with problems in this area (Hungarian Government 2016a, b).

Monitoring – evaluation

Child-related assessment

In **nursery settings**, observations on the development of the children are documented by the core professionals in a diary, provided that the parents have given their consent. At the request of the parents, this documentation is handed over to them. Entries are made monthly until the first birthday, then every three months. Keeping a group diary is obligatory for centre-based nurseries.

In **kindergartens**, the assessment of children is laid down by law (Government Decision 20/2012, VIII. 31) and is also based primarily on observations. The professionals choose a monitoring system which can be adapted to the respective setting's programme. Health data, emotional, social, intellectual, linguistic and physical development (at least every six months) as well as other observations by the professionals are recorded. Parents are informed regularly. At the end of the kindergarten period, an assessment is made to determine whether the child has the "maturity" required for school. The standardised DIFER instrument (Diagnostic Instrument for the Assessment of Children, 4 to 8 years old, DIFER) is also used as an assessment method. This instrument is particularly suitable for assessing basic competencies and skills that are considered necessary for a successful start in primary school.

Centre-level internal evaluation

Each kindergarten carries out self-evaluation procedures, the results of which are included in the external evaluation and feedback from parents and children. These self-evaluation measures also serve to prepare the five-year plan (see below). The work of the management and staff as well as the work of the institution as a whole are evaluated. In 2019, revised guidelines for self-evaluation in kindergartens were issued by the education authority (*Oktatási Hivatal*).

External evaluation

A national inspection system evaluates all levels of education according to the same criteria. In **nurseries** these evaluations are conducted by a government agency (*Kormányhivatal*) every two years and by local authorities once a year. For **kindergartens** they are carried out by the education authority and take place every five years.

This national inspection system, also for kindergartens, is the responsibility of the State Education Secretariat, which appoints specialist education authorities for this purpose. In detail, the professionals, the management and the facilities are inspected, usually through on-site visits. The methods used are document analysis, observations, questionnaires and interviews. With regard to the inspection of the kindergartens, the emphasis is on pedagogical processes, the

implementation of the national core programme through centre-specific plans, the centre management, the work of the staff and compliance with prescribed standards. The results are summarised in a report which is sent to the management and the provider.

Based on this report, the management draws up a five-year action plan to implement improvement measures. The provider of an institution has to examine its efficiency as well as the implementation of the respective pedagogical programme. The education authority analyses the reports and evaluations and compiles them in the education information system (*köznevelés információs rendszerének*, KIR). Since 2018, the evaluated managers and professionals have the possibility to evaluate the evaluators in an anonymous questionnaire.

Inclusion agenda

Children with special educational needs and with disabilities

Regulations regarding the education and care of children with special educational needs are laid down by the Government Decision 110/2012 (amended in this respect in 2022). With the involvement of the National Committee for Minorities in Hungary, the Ministry of Education issued guidelines as early as 1997 which are to be observed by kindergartens when drawing up their curricula. The National Core Programme for Kindergarten Education also applies in special education settings.

Children with disabilities can – depending on their disability – attend either special or mainstream institutions or, for example, receive additional support measures beyond attending a mainstream institution. Guidelines for inclusive education in mainstream settings are provided as a support for professionals.

Additionally, educational support services which employ around 5,000 professionals also provide free diagnoses and advice to special education institutions. In 2016/17, 4,542 children under 5 years of age in these settings attended special educational counselling and early intervention services, but this represented less than 1% of the age group (Farkas 2020, 79).

ECEC settings attended by children with special educational needs have a duty to ensure that they receive sufficient support. An individual plan is drawn up for each child and the methods used are based on individual needs. The institutions are supported by the staff of the Methodological Centres in Integrative Support Education (*Integrált Gyógypedagógiai Módszertani Institution*).

Kindergartens that work inclusively and follow the corresponding regulations of the Ministry can receive financial subsidies.

In 2022, 2,335 kindergarten children attended separate special needs classes and 9,244 were enrolled in integrative groups (KSH2023g, HB1015).

Children with a migration background and from national ethnic minorities – children from Roma communities

In 2023, 2.4% of the total population had non-Hungarian citizenship. Of these, almost one half (45%) came from other EU27 countries, mainly from Germany, Slovakia and Romania. Persons from Ukraine represented 15.9% of the population with non-Hungarian citizenship (KSH 2023c, tab 22.1.1.3, KSH 2023d, tab 22.1.1.23, own calculations).

According to Eurostat data, in 2022, 0.9% in the age group up to 5 years had a non-Hungarian citizenship with 62.7% of them coming from countries outside the EU27 (as of 2020) (Eurostat 2023c, own calculations).

The core curriculum states that every child in Hungarian kindergartens has the right to education in his or her ethnic or family language. If there are at least eight children of a specific national minority, the establishment of an ethnic kindergarten can be applied for (Pálfi et al. 2019, 15f). According to the Rights of National Minorities Act (2011), the languages of ethnic groups from Bulgaria, Greece, Croatia, Poland, Germany, Armenia, Romania, Serbia, Slovenia, Slovakia and Ukraine as well as the language of the Ruthenians and the Roma are legally defined as languages of national and ethnic minorities. Kindergartens are required to promote their culture and language and they should have access to education in their family language.

In the 2011 census, 315,000 people (at that time about 3% of the population) identified themselves as Roma, making them the largest minority group in Hungary. Efforts to provide better opportunities for participation, especially for Roma children suffering from poverty or social exclusion, are particularly concentrated in the areas with the most Roma communities in northern Hungary. In the past, Roma children were often excluded from educational opportunities (Farkas 2020, 70, 80).

In order to integrate disadvantaged children, especially Roma children, into the education system as early as possible, relevant support measures have been implemented. For example, "Sure Start Children's Houses" have been established in the most disadvantaged areas of Hungary to provide comprehensive and free support to families with children under 6 years of age. In 2019, there were 155 centres reaching 2,150 families (Farkas 2020, 81).

Parental leave arrangements⁴

Maternity leave (*csecsemőgondozási díj- CSED*) is 24 weeks, of which up to four weeks can be taken before the birth. Two weeks are compulsory. Women who have been employed for at least 365 days over the last two years receive 100% of their daily average earnings (without upper limit).

Paternity leave is fully paid for ten days, which can be taken in the first two months of the child's life, also in two parts.

There are two types of **Parental leave** and allowances: (1) for uninsured parents (*Gyermekgondozási segítő ellátás – GYES*) and (2) for insured parents (*Gyermekgondozási díj – GYED*). GYES is a lump sum, equal to the twofold daily minimum salary of HUF 28,500 (€74,42), paid until the child's 3rd birthday. Parents receiving GYES must not work until the child turns 6 months, after that they may work full time. The GYED allowance is 70% of the average income of the 365 days before birth, up to a maximum of HUF 324,000 (€848.15) per month, and cannot be claimed by both parents at the same time; it is possible to work in addition. GYED can also be claimed under the same conditions by grandparents from the 1. to the 3. birthday of the child, if they care for the child at home. All parents who have been employed for at least one year and have at least one child under the age of 3 receive 44 additional days paid at 10% of an absence fee.

It is estimated that almost all mothers take Maternity leave and most fathers also take the days to which they are entitled. Only absolute figures exist on the take-up of parental leave: in 2021, 113,033 parents received GYED and 148,496 GEYES. No further statistics are available.

⁴ The brief overview in this section is based mainly on the country note for Hungary by András Gábos and Zsuzsanna Makay in the *International Review of Leave Policies and Research 2023* (see *References*).

Current challenges for the ECEC system in Hungary

Country expert assessment by *Marta Korintus*

Several changes in the auspices of nurseries within the government structure and ministerial re-organisation after the 2022 elections have affected the perspectives. Before 2022, nurseries and kindergartens came under the same ministry (EMMI – Ministry of Human Resources). Even though the responsibilities were under different ministry departments, there was some hope of achieving a unified approach to ECEC. Now different ministries are once again responsible for nurseries (Ministry of Culture and Innovation) and kindergartens (Ministry of the Interior), thus diminishing hopes of a society-level acceptance of nurseries as places of early childhood education.

1. Affecting workers in both sectors is the *The Digital Education Strategy of Hungary*, which was adopted by the Government Decree 1536/2016, IX. 13 (Hungarian Government, 1536/2016). The main goal of DES is that nobody leaves the public education and training system without adequate digital competencies. An expected additional result would be to ensure that all children's groups in nurseries and kindergartens have the necessary equipment (e.g. laptops) for the administrative tasks.
2. The workforce challenges Hungary is facing are still related to the level of wages. Teachers, *óvodapedagógusok* in kindergartens and *kisgyermeknevelő* in nurseries, have always had lower wages compared with other sectors (maybe the only exception being social services). Over the past years, the government introduced higher wages in many sectors of the economy with the result that earnings in the education sector as a whole have been left behind. The situation had become so serious that in 2022, fewer prospective students applied for admission to pedagogical oriented universities than the number of places available. However, the government has now recently introduced a major wage increase for pedagogues employed in *bölcsőde, óvoda* and schools and other types of services. The scale of contribution from the central budget is an average 32.2% effective on 1 January 2024 (Hungarian Government 662/2023). Further plans include yearly increases to achieve an average 90% wage increase by the year 2025.
3. Due to changes in the remuneration (i.e. the introduction of wage supplements) for *kisgyermeknevelő* with lower-level qualifications in nurseries, staff with a BA education level now earn somewhat less. This situation creates tensions within the workplace, and also results in less people wanting to work in these jobs.

Demographic data

Please note

For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Hungary was 9,689,010, representing a continuous decrease over the last 20 years (2000: 10,221,644; 2010: 10,014,324; 2020: 9,769,526) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate among 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.61, Hungary was slightly above the EU27 average (Eurostat 2023d)⁵.

Children under 6 years of age

Table 9

Hungary: Number of children under 6 years of age, 2022

Age	Number of children
Under age 1	93,594
1 year-olds	93,677
2 year-olds	93,107
3 year-olds	93,411
4 year-olds	94,835
5 year-olds	95,918
Total 0 to 6 year-olds	564,542

Source: Eurostat 2023a.

In 2022, 2.9% of the total population were children under 3 years of age, 5.8% were children under 6 years of age. Since 2000, these percentages have been below the respective EU averages, in 2022 they were slightly above.

Table 10

Hungary: Distribution of under 6 year-olds in population by age-group compared with EU averages, 2000 – 2022, in %*

Year	Comparison Hungary/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds

Employment rates of parents with children under 6 years of age

In Hungary, in 2022, the overall employment rate for men (15-64 years) was 81.9% and for women 72.4% (Eurostat 2023j).

In 2022, 68.3% of women and 89.5% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were above the EU-average (87.2%) as were those of mothers (EU-average 63.6%) (Eurostat 2023k, own calculations).

Table 12a

Hungary: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010

Children at risk of poverty or social exclusion⁹

In 2022, 16.3% of children under 6 were at risk of poverty or social exclusion. This proportion was well below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 18.4% (EU: 21.6%). In 2020, 15.6% of children under 6 and 7.6% of the total population suffered from severe material deprivation which was significantly above the EU average (6.1% and 4.3% respectively) (Eurostat 2023h, i). National data show that in 2019, the proportion of families with more than three children (22%) and Roma families (30.9%) suffering from severe material deprivation were among the highest in Europe (Eurochild 2021).

⁹ 'At risk of poverty or social exclusion' refers to the situation of people either at risk of poverty (threshold set at 60% of the national median equivalised disposable income after social transfers), or (severely) materially deprived or living in a household with a very low work intensity. (https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Glossary:Material_deprivation)

About the author

Maresa Duignan is Assistant Chief Inspector in the Ministry for Education in Ireland with particular responsibility for the evaluation of education provision in state funded early education and care settings for children aged from birth to six years. She has worked on the development of key national policy for the ECEC sector and has a particular interest in the professionalisation of the ECEC workforce, including the role of internal and external evaluation processes and their impact on professionalism in practice.

1. ECEC governance in Ireland

In Ireland, Early Childhood Education and Care (ECEC) services have a long tradition of multi-sectoral governance. This is primarily related to the source of state funding. ECEC provision is funded, in the main, by two government departments. The Department of Education (DE) provides for early education and primary education for children aged 3–6 years located in and under the governance of schools. ECEC for children under 3 years and for children aged 3–6 years in settings other than primary schools is funded by the Department of Children, Equality, Disability, Integration and Youth (DCEDIY). There is some small level of provision for children with disabilities or at risk funded by the Department of Health; however, these are small scale interventions and usually subject to regulation and policy generated by either of the two lead departments.

Children aged 0–6 are enrolled in centre-based ECEC settings on the basis of their parents' choice. There is low level of participation by 0 to 3 year-olds in centre-based settings, with the majority of parents providing care themselves or making informal childcare arrangements (Doorley et al. 2021; McGinnity et al. 2013). A further complexity to the pattern of ECEC enrolment in Ireland is the traditional early enrolment in formal education. Despite the fact that the compulsory school starting age is 6 years, some 4 year-olds and almost all 5 year-olds attend primary school (DE 2022a)

Governance and funding of ECEC is centralised, however there is a national support system at county level which assists ECEC services with funding application and improving the quality of provision. In November 2018, a landmark policy document was published which has the potential to transform the delivery of early childhood supports and services across multiple domains. *First Five: A Whole of Government Strategy for Babies, Young Children and their Families* presents a comprehensive cross-ministry strategy to deliver:

- A broader range of options for parents to balance working and caring
- A new model of parenting support
- New developments in child health, including a dedicated child health workforce
- Reform of the Early Learning and Care (ELC) system, including a new funding model
- A package of measures to tackle early childhood poverty.

Despite the interruption to the implementation plan for this strategy as a result of the COVID-19 global pandemic, a range of actions have already been delivered. The title for the Early Years sector, historically used to refer to the diverse range of ECEC (non-primary) settings and staff was replaced with the term Early Learning and Care (ELC) and this term is now used in all national policy pertaining to ECEC in non-school based settings in Ireland. The commitment to reform the ELC sector has multiple elements with the most significant for this report being the commitment to developing “an appropriately skilled and sustainable professional workforce that is supported and valued and reflects the diversity of babies, young children and their families” (DCEDIY 2018, 103). This translates into a series of actions including:

- *Identifying and putting in place the staff requirements to deliver early childhood supports and services*
- *Improving access to high-quality initial training and CPD opportunities to ensure the staff involved in delivering early childhood supports and services are fully prepared for the demands of their professional roles*

- *Developing mechanisms to raise the professional status of the ELC (and school-age childcare) workforce and support employers to offer more favourable working conditions to attract and retain staff increasing the qualification profile of the workforce (ibid, 112).*

It is also of note that the systems and structures that comprise the operating model for ECEC funded by DCEDIY were subject to review in 2020/21 as a result of a Programme for Government commitment to establish a national agency to support the development of “high quality childcare” (Government of Ireland 2020, 80). The report arising from this review was published in December 2021 (Indecon 2021) and is one of a number of significant research and policy publications that were published in 2021 and which will impact on the future development of the ECEC sector and workforce in the years ahead. These policy developments will be further detailed in *Chapter 6*.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The complex nature of provision of ECEC services and patterns of enrolment of children aged 0–6 years in a variety of state funded care and education provision makes the definition and description of the ECEC workforce in Ireland quite challenging. The following definition, taken from Irish national policy, clearly excludes the staff in primary schools from the ECEC workforce as it characterises ECEC provision to be:

“...daycare facilities and services for pre-school children and school-going children out of school hours. It includes services offering care, education and socialisation opportunities for children to the benefit of children, parents, employers and the wider community. Thus, services such as pre-schools, naíonraí [Irish language: pre-schools], daycare services, crèches, play groups, childminding and after-school groups are included, but schools (primary, secondary and special) and residential centres for children are excluded” (DJELR 1999).

However, for the purposes of this report, staff in primary schools working with children aged 3–6 years will be included in order to provide a full picture of workforce in Ireland engaged in the care and education of children aged 0–6 years.

Staff working directly with children in ECEC settings 0–5 (non-Primary)

The data in this paper draw from a Pobal¹ survey of ECEC settings which have an active contract with the state to deliver non-primary ECEC services for children. This survey is administered annually via an integrated IT system which manages the state ECEC funding programmes. While completion of the survey data was not a requirement for funding prior to 2022, it was integrated on the funding application system and completion of this ‘survey profile’ data was strongly encouraged by both Pobal and DCEDIY. The most recent survey results were published in December 2023 with a strong response rate (88.6%) that reflects the commitment of the Early Years sector to engagement with this survey. The Annual Early Years Sector Profile Report 2022/2023 (Pobal 2023) estimates that almost 33,000 staff worked in the Early Years sector in 2022/2023, with 83% working directly with children. This represented a 2% increase in the workforce since the pre-pandemic survey results for 2019/2020. This stability in the workforce across the years

¹ Pobal is a not-for-profit company with charitable status. Pobal manages programmes on behalf of Government departments, other national agencies and the EU.

of the pandemic may be attributed to the Government decision to establish an employee wage subsidy scheme which effectively supported the continued employment of staff in ECEC services throughout the COVID-19 Pandemic.

Traditionally there has been a diverse range of titles for staff working in direct contact with children in ECEC settings (0 to 5 year-olds) in Ireland, with no consensus on terminology. This issue was again identified by the DCEDIY in *Nurturing Skills: The Workforce Development Plan for the Early Learning and Care and School Age Childcare sector 2022-2028*. This report, the culmination of two years of research and consultation with all stakeholders identified that “... final decisions on terminology for the profession should be a matter for future decision by a professional body for the sector” (DCEDIY 2021b, 19). It determined that in the interim, the following titles would be adopted as working titles:

- **Early Years Educator** – staff working directly with children in centre based ECEC settings, irrespective of grade or qualification.
- **Lead Educator** – staff who lead practice with a group of children /other early years educators
- **Manager** – used to refer to the person in charge of the day-to-day operation of a setting

Prior to 2022, the Annual Early Years Sector Profile report maintained the naming conventions for staff used in previous reports (the *Nurturing Skills* titles will be used in all future surveys) and this can be observed in *Table 1* below which provides a breakdown of staff working directly with children (including managers) as follows:

Table 1
Ireland: Staff in ECEC settings (non-Primary) – percentage according to job titles, 2023

Job Title	Proportion of staff in %
Centre Manager	10
Deputy Centre Manager	3
Lead Educator	30
Educator	50
AIM ² Level 7	6
Student placement/volunteer	1
Grand Total	100

Source: Pobal 2023

Data are also available on ancillary or support staff not working directly with children (including managers) in ECEC settings as follows:

Table 2
Ireland: Ancillary Staff in ECEC settings (non-primary) – percentage according to job titles³, 2023

Job Title	Proportion of staff in %
Kitchen Staff	29
Cleaner	19
Administrator	18
Caretaker / Maintenance / Gardener	11

² Access and Inclusion Model
³ Based on 3,440 staff, excluding 487 staff that did not have a job title.

Job Title	Proportion of staff in %

Staff working directly with children in primary schools

In the primary education sector, staff working directly with children include qualified Primary School Teachers and Special Needs or Classroom Assistants. All Primary Teachers are required to have an honours Bachelor's degree in primary teaching and be registered with the Teaching Council of Ireland (The Teaching Council 2016). Special Needs Assistants (SNA) are required to have achieved a NFQI (*National Framework of Qualifications Ireland*, QQI 2021) Level 3 (ISCED Level 2) major award or equivalent, but no specialist subject is specified (DES 2011). Anecdotal evidence would suggest that many SNAs have achieved a specialist qualification. However, as this is not a requirement for employment, no data are available on the extent of such qualifications.

In 2022/2023, a total of 38,976 Primary Teachers were on the Department of Education payroll; however, these data are not disaggregated by the age of the children and so it is not possible to isolate those working directly with children aged 4 and 5 years old. Similarly, there were 16,827 full-time equivalent SNA posts sanctioned for employment in primary schools in 2022/2023, but there are no data available for the number allocated to work with 4 and 5 year-olds.

Table 3 shows ECEC staff in centre-based settings (non-primary) and the main staff in primary classrooms and also categorises the core pedagogues (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO-study (see Box 1 at end of this chapter). The titles from Nurturing Skills have been adopted in this table.

Table 3

Ireland: ECEC staff in centre-based settings (0–5 non-primary and 4–5 primary)

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
ECEC sector 0–5⁴ (non-primary)				
Centre Manager	Full- and part-time day care	Centre head	0 to 5 years	Post-secondary vocational qualification in

⁴ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. The relevant formats for Ireland are **0–5** and **4–5** years.

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
(qualification only required if working directly with children) <i>Profile:</i> Early Childhood Pedagogy Professional	Sessional pre-school After school services Drop-in services 0–5 years If after school provision is offered, the age range may extend to 14 years			early childhood care and education ECTS credits: n/a ⁵ NFQI: level 5 EQF: level 4 or 5 ISCED 2011: 4
Lead Educator (ECCE) <i>Profile:</i> Early Childhood Pedagogy Professional	Full- and part-time day care Sessional pre-school After school services ⁶ Drop-in services 0–5 years If after school provision is offered, the age range may extend to 14 years	Core pedagogue with group responsibility	0 to 5 years	Post-secondary vocational qualification in early childhood care and education ECTS credits: n/a NFQI: level 6 EQF: level 5 ISCED 2011: 4/5
Lead Educator (non-ECCE) <i>Profile:</i> Early Childhood Pedagogy Professional	Full- and part-time day care Sessional pre-school After school services Drop-in services 0–5 years If after school provision is offered, the age range may extend to 14 years	Core pedagogue with group responsibility	0 to 5 years	Post-secondary vocational qualification in early childhood care and education ECTS credits: n/a NFQI: level 5 EQF: level 4 ISCED 2011: 4
Early Years Educator <i>Profile:</i> Early Childhood	Full- and part-time day care Sessional pre-school After school services	Qualified co-worker	0 to 5 years	Post-secondary vocational qualification in early childhood care and education ECTS credits: n/a

⁵ n/a = not applicable

⁶ For both Lead Educator and Educator roles, whilst individuals may also provide after-school services, their *roles* in after-school service provision have different titles (as set out in *Nurturing Skills*). In particular, in after-school provision, the equivalent of Early Years Educator is “School-Age Childcare Practitioner”.

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Pedagogy Professional	Drop-in services 0–5 years If after school provision is offered, the age range may extend to 14 years			NFQI: level 5 EQF: level 4 ISCED 2011: 4

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

⁷ Ireland has a 10 level national qualification framework (NFQI) through which all learning achievements may be measured and related to each other in a coherent way. The many different types and sizes of qualifications included in the NFQI are organised based on their level of knowledge, skill and competence. Level 5 and 6 awards broadly equate to ISCED level 4 (ISCED 2011). For further information, see QQI – Quality and Qualifications Ireland 2017 and 2021.

2.2. Centre leader

ECEC Manager (non-primary)

The predominance of private for-profit provision in Ireland and the lack of regulation to practice until 2016 has mitigated against the availability of definitive role profiles for any staff in centre based ECEC (non-primary) settings. In the 2021 Workforce Development Plan, three “basic career grades are identified: Early Years Educator, Lead Educator (building on the current room leader role), and Manager” (DCEDIY 2021b, 51). The Manager role is described as “... the person in charge of a setting” (*ibid*). There is currently no qualification requirement for this role beyond the regulated qualification (NFQ Level 5 award) required of all staff working directly with children. However, the Workforce Plan makes the following commitment:

Over the lifetime of this Workforce Plan, minimum Qualification requirements will be introduced for Managers, at Level 6 in ELC ... In line with First 5, it will be a target that by 2028 all Managers of ELC services should have a qualification at Level 7 or higher (ibid, 53).

The tasks of the Manager are briefly described as including:

...human resources, finance, planning, quality improvement, and collaboration with a wide range of community partners and external agencies (ibid).

However, perhaps reflecting the early stage of this development, the Workforce Plan also acknowledges that, “other leadership responsibilities may be distributed across a service in different ways”. These leadership responsibilities have been identified as including pedagogy, diversity and inclusion, family and community partnership and student placement and induction. Data on centre-based managerial staff collated in the Annual Early Years Sector Profile Report 2022/2023 (Pobal 2023) indicates the following:

- 40% are owner managers, 60% are employees of the service.
- On average 70% of the total cohort work directly with children.
- 71% hold a qualification at NFQ Level 7 (ordinary Bachelor’s degree) or higher (this may not be in a field of study related to ECEC).
- The average hourly wage for a centre manager is €17.26.

It is worth noting that since September 2022 a legal minimum wage has been established through Employment Regulation Order of €16.50 for non-graduates and €17.25 for graduates.

Principal (primary)

The Principal is responsible for the day to day management of the school, is the leader both of learning and the school community, is a member of the Board of Management and an employee of the Board. The Principal can be secretary to the Board of Management but cannot be Chairperson or Treasurer. The Principal’s Role is set out in Circular 16/’73 (Department of Education, Primary Branch 1973) and in Section 22 and Section 23 (eISB 1998a, b) of the Education Act 1998 as amended. The former document dates from 1973 when primary schools in Ireland were referred to as National Schools. In larger schools, the Principal may be appointed in a non-teaching capacity and may be assisted by a Deputy Principal. The Department of Education pays the salaries of Principals in recognised primary schools according to established and agreed pay scales. The Principal’s salary is a combination of the teacher salary plus a post of responsibility allowance (incremental scales).

2.3 Centre-based posts of responsibility

ECEC sector 0–5 (non-primary)

Once again, the historical absence of standardised role profiles or nationally agreed terms and conditions of employment in the ECEC (non-primary) sector has resulted in a variety of arrangements for deployment of staff to special assignments. The introduction of the Lead Educator post in the Workforce Plan, building on a previous role of Room Leader in the free preschool programme, is the closest articulation of a post of responsibility in this sector. This role is described as follows:

“A Lead Educator will have responsibility for the learning and care for a group of children, leading the practice with that group” (*ibid*:52).

Further role profiles are set out in *Nurturing Skills* (*ibid*: 121-136). The different roles now have legal force through being the basis for the different pay rates specified in the Employment Regulation Orders in September 2022. *Nurturing Skills* commits to further development of roles of special responsibility, building on the INCO model, with the objective of developing a model of distributed leadership across ELC and SAC settings.

The role of Inclusion Coordinator (INCO) is regarded as a post of responsibility in ELC settings as it is usually a post allocated to an existing staff member, who is required to undertake a specialised qualification to occupy the post in the setting. This qualification and the operation of this post in the ELC setting is funded through the Access and Inclusion Model of supports for the inclusion of children with a disability in the ECCE programme of free preschool (see LINC 2022 for full details of the role profile of the INCO and the specialised course required for these staff).

ECE 4–5 years (primary)

There is a very well-established structure for the organisation and allocation of posts of responsibility in the primary school system (DES 2019).

They are part of a school's leadership and management structure. They are promotion posts and are referred to as Principal, Deputy Principal, Assistant Principal I and Assistant Principal II.

2.4 Pedagogical co-ordinators and supervisory staff

ECEC sector 0–5 (non-primary)

This category of staff in Ireland represents a very small percentage of the overall workforce, and traditionally has been employed either in national voluntary organisations, private large-scale ECEC services (e.g. chains) or private consultancy firms. There are no data available on the number, qualification requirements or terms and conditions of staff in these organisations. In 2015, the Better Start, National Quality Development Service was established to provide a range of supports for the improvement of the quality of provision in the ECEC (non-primary) sector. The Access and Inclusion Model (AIM) was launched in June 2016 to enable the full inclusion and meaningful participation of children with disabilities in the Early Childhood Care and Education (ECCE) Programme. Early Years Specialists recruited to staff these new programmes had to be higher education graduates with a minimum of three years of relevant practice experience in ECEC (Pobal 2020). There are currently 147 Early Years Specialists employed by Better Start *National Quality Development Service* with a salary scale ranging between €41,528 and €56,968 per annum (Pobal employee management system/Pobal salary scale, information provided by personal email communication, January 2024).

Two distinct inspectorates monitor and evaluate the quality of the ECEC sector in Ireland. These are the TUSLA Early Years Inspectorate (TUSLA 2016) and the Department of Education Inspec-

torate (DE 2022b). Inspectors in each organisation must be higher education graduates. The Department of Education Inspectorate requires applicants for Early Years Inspector positions to hold a recognised qualification in ECEC and have a minimum of five years of practical experience in the ECEC sector preferably in a leadership role in a centre based ECEC setting providing for children aged 0–5 years. The TUSLA Early Years Inspectorate recruits from a wider range of qualifications with a significant number qualified as Public Health Nurses (TUSLA 2018).

2.5 Specialist support staff

ECEC sector 0–5 (non-primary)

Once again, due to the private sector nature of the significant majority of ELC settings, local arrangements are more generally the rule for the deployment of specialist support staff. Through the Access and Inclusion Model (AIM) a pilot programme has been established to allow for nursing support staff to be employed to support children with complex healthcare needs in mainstream ELC settings. Another pilot programme, The In-School and Early Years Therapy Demonstration Project, is a joint initiative by the two main government departments to provide specialised therapist support in school or preschool settings to children with disabilities (NCSE 2020).

ECE 4–5 years (primary)

The provision of therapeutic or other non-teaching supports for children in primary school (apart from SNAs) is generally managed by external agencies such as the Health Service Executive (HSE 2019), National Council for Special Education (NCSE 2022a) and the National Educational Psychological Service (NEPS) (DE 2022c).

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

ECEC sector 0–5 (non-primary)

The Irish ECEC workforce is strongly female with less than 2% being male. Since the introduction of the universal free preschool education programme by the Irish Government in 2010, the qualification profile of the workforce has steadily improved due to the unprecedented introduction in 2010 of a contractual requirement for Preschool Leaders to have achieved minimum qualification levels to practise. The contractual qualification requirement for Preschool lead staff was raised to a minimum of a Level 6 major award in Early Childhood Education and Care in 2016, and a minimum of a Level 5 major award in ECEC became the regulated qualification to practise for all staff working directly with children in ECEC settings under the Child Care Act 1991 (Early Years Services) Regulations 2016. The current qualification profile of staff in settings on contract to deliver state funded ECEC is represented in *Table 4* below.

Table 4

Ireland: ISCED levels of education, main programmes in Irish education/training, typical awards and National Framework of Qualifications Ireland (NFQI) levels

ISCED 2011 Level	Corresponds to:	Typical award	EQF Level	Award NFQI Level
0 Pre-primary education	Early Start and other pre-primary provision	QQI Certificate		Level 1/2
1 Primary education	Primary education		1	
2 Lower secondary	2nd level education – Junior Cycle	Junior Certificate	2	Level 3

Table 5

Ireland: ECEC staff (non-primary) – percentage according to qualification levels, 2023

Qualification Level	Percentage
No Qualification	6.7
NFQI Level 4	0.2
NFQI Level 5	24.3
NFQI Level 6	34.4
NFQI Level 7	11.8
NFQI Level 8	21.1
NFQI Level 9/10	1.5
Total	100

Source: Pobal 2023

The figure of 6.7% for unqualified staff in ECEC settings includes staff who worked only in school-age childcare (both those in SAC-only services and those staff employed in combined ELC/SAC services but who worked only with school-age children), as well as students on practice placements and volunteers. There are no specified qualification requirements for SAC staff.

There is also a small legacy from the 2013 policy decision to allow for a 'grandfathering' rule to apply to staff who are approaching retirement from their employment in the ECEC sector and who do not wish to undertake courses leading to the required regulated qualification. In such

cases staff can sign a declaration of their intention to retire from the sector and are then exempted from the minimum qualification requirement. This exemption was due to expire September 2021 but was extended for a further two years to September 2023.

The predominance of vocational qualifications at a lower level than a Bachelor’s degree reflects the traditional absence of regulation for the ECEC workforce. Even with the introduction of regulation to practise in the ECEC sector, the required qualification will be set at a minimum level of 5 on the National Framework of Qualifications (NFQI). This is equivalent to ISCED 4 internationally (see *Table 4* above). However, despite the limited availability of funding to support the workforce to achieve higher level qualifications (a Learner Fund was set up in 2017 to support early years educators who complete degree programmes at level 7 or higher), there has been a steady increase since 2010 in the number of staff with a Bachelor’s degree or higher working in the sector. In 2016, the percentage stood at 18% and was 34.4% in 2023 (Pobal 2023).

This has certainly been influenced by a range of incentives available to employers to recruit higher education graduates. Higher Capitation payments were established in the ECCE programme since 2011 and have recently been replaced by graduate premium payments for Lead Educators and Managers in the Core Funding Model in 2022. Since September 2022 there has been a higher minimum wage for Lead Educators and Managers who have a DCEDIY-approved qualification at level 7 or higher. These factors are likely to have been significant contributors to the rising proportion of graduates. It should also be noted here that *First 5* commits to a graduate-led workforce by 2028, and Nurturing Skills commits to introduce a new funding mechanism to support the upskilling of early years educators.

There are no data available regarding the ethnic breakdown of the ECEC workforce. However, processing of applications for contracts to deliver the Free Preschool in Early Childhood Care and Education (ECCE) Programme funding has led to the establishment of a qualification database which details qualifications currently accepted as fulfilling the contractual requirements for the DCYA funded free preschool education programme. This shows that there is a growing diversity in the qualification profile of the ECEC workforce albeit starting from a very homogeneous Irish national base.

Table 6
Ireland: Structural composition of ECEC staff (non-primary), 2023

Staff categories	Proportion of workforce in %
Staff with specialist higher education degree	34.4
Staff with specialist vocational qualification (post-secondary)	58.9
Staff with non-specialist qualification	n/a
Unqualified staff	6.7
Specialist support staff (e.g. Speech Therapists)	n/a
Male staff	3.2
Staff with a background of migration	No comprehensive national data available; however, 13.9% of staff with qualifications achieved their initial qualification outside Ireland.

Source: Pobal 2023; 2022a, 105

ECE 4–5 years (primary)

The total number of Primary Teachers working with children aged 4 to 12 years on the payroll of the DE in 2022/23 was 38,976. There are no disaggregated figures for those working with 4 to under 6 year-olds in primary schools. Special Needs Assistants’ (SNAs) employment is broken down into full time and part time as follows:

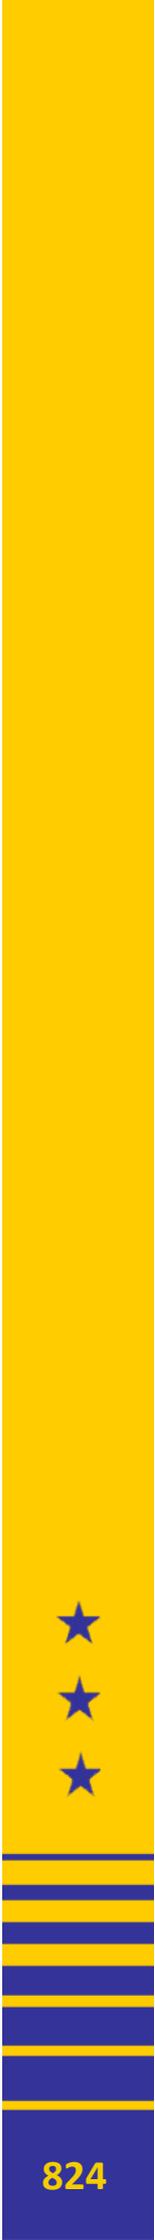

Table 7

Ireland: Special Needs Assistants according to gender and employment, 2022/23

	Full time	Part time	Full-time equivalent
Males	946	223	1,093
Females	12,603	4,792	15,734
Total	13,549	5,015	16,827

Source: DE 2022e

The combined workforce amounts to a total of 57,540 persons.

Table 8

Ireland: Structural composition of primary sector (no disaggregated data for pre-primary section), 2022/23

Staff categories	Proportion of workforce in % n = 57,540
Staff with specialist higher education degree	68
Staff with specialist vocational qualification (post-secondary)	n/a
Staff with non-specialist qualification (SNA)	32
Unqualified staff	n/a
Specialist support staff (e.g. speech therapists)	n/a
Male staff	Primary Teachers: 15 SNAs: 6
Staff with a background of migration	No national data available

Source: DE 2022a

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Regulation of qualification to practise in the ECEC sector was introduced in 2016. The Childcare Act 1991 (Early Years Services) Regulations 2016 require that

“... all staff members working directly with children in pre-school services must hold at least a major award in early childhood care and education at level 5 on the National Qualifications Framework, or a qualification deemed by the Minister to be equivalent” (Government of Ireland 2016).

The historical absence of regulation of staff qualification has resulted in a very diverse workforce whose members have undertaken a variety of initial professional studies (or in some cases none at all) before commencing work in ECEC settings. Into the future the likely range of IPE will comprise the following:

1. Completion of school leaving certificate (completed by the majority of pupils at the end of secondary education) as point of entry into a higher education programme in early childhood studies at Levels 6, 7 or 8 on the Irish national framework of qualifications (NFQI).
2. Completion of a further education programme in early childhood studies at Levels 4, 5 or 6 on the NFQI – this may also facilitate progression to awards in higher education as above.

For many in the ECEC sector in Ireland (outside of staff in primary schools), the latter route has been the most common. This is primarily due to the relatively recent introduction of minimum qualification requirements into the statutory regulations governing the registration and operation of ECEC services (specified as a vocational qualification QQI Level 5/ISCED Level 3); but is also a result of the low status with which work in this sector has traditionally been regarded (Duignan 2012; DES 2016a; DCEDIY 2021b).

Tables 9 to 11 give a brief overview of the main qualifying routes for core pedagogues and other key contact staff (e.g. Early Years Educators) in the 0–5 non primary ECEC sector. As all staff must now comply with regulatory requirements for a minimum qualification of a nationally accredited major award in Early Childhood Care and Education (or equivalent as detailed by the Department of Children, Equality, Disability, Integration and Youth list of recognised qualifications) (Government of Ireland 2023), the qualification route to achieving this award is common for all staff.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Vocational/Further Education Awards (ECEC sector 0–5, non-primary)

In 2018, Qualifications and Quality Ireland (QQI), the body responsible for the quality of further and higher education programmes in Ireland, also instituted a review of the Common Award System (CAS) (QQI 2011) which included standards for further education awards in Early Childhood Care and Education (QQI 2018). The CAS included a range of mandatory and elective component awards that could be selected by education and training providers who wish to deliver nationally accredited programmes of education and training for the early years sector in Ireland. The review was conducted by a Standards Review Group comprising representatives of the Early Learning and Care community of practice. This work took place concurrently with a similar review of higher education awards (see *Chapter 4.3* below) and ultimately resulted in the publication of *Professional Award-type Descriptors at NFQ Levels 5 to 8: Annotated for QQI Early Learning and Care (ELC) Awards* in November 2019 (QQI 2019). These specially annotated Professional

⁸ The number of places on initial primary teaching courses in Ireland is restricted annually by the Government. Each third level institution offering this programme has an allocation of places and sets the minimum points requirement for entry each year based upon demand. The average points requirement in 2016/7 was 465 (out of a possible 625). Alternative entry routes are available for mature students (The Teaching Council 2015b).

Award Type Descriptors (PATD) were then used as the basis for the development of new programmes of IPS at levels 5 and 6 on the NFQI. The introduction to the PATD explains the way in which they operate:

The Awards Standards herein set out, in broad terms, the standards of knowledge, skill and competence that must be achieved before a major award can be made in Early Learning and Care (ELC) at National Framework of Qualifications (NFQ) Levels 5, 6, 7 or 8. The awards standards are presented in the form of annotations to the NFQ Professional Award-type Descriptors (PATDs). The annotations explain how to interpret the PATD indicators when designing programmes leading to ELC awards (ibid, 1)

The development of programmes leading to awards in ELC by educational institutions is governed by QQI validation processes (QQI 2017). The Awards Standards comprise a generic element, applicable to any professional award type and an ELC annotation. The annotation explains how the standards should be interpreted for ELC. The PATD for ELC also include a set of specific validation criteria as follows:

1. Programme development

- 1.1 The programme will show evidence of the involvement of a broad range of expertise and experience in its development, including, Early Learning and Care professionals, curriculum development experts, programme providers, regulators, employers, higher education representatives.
- 1.2 Programmes leading to a major award at NFQ Level 5 are expected to be at least one (full-time equivalent) academic year. Add on programmes leading to an ELC major award at NFQ Level 6 for those with an ELC major at Level 5 (or an equivalent award) are also expected to be at least one (full-time equivalent) academic year.

2. Teaching staff

- 2.1 Teaching staff for programmes leading to ELC awards will hold a relevant Major Award at NFQ Level 7 or higher and either a teaching qualification or five or more years of teaching experience on programmes designed to prepare learners for practice in the ELC sector.
- 2.2 The teaching team will include some with ELC qualifications, or equivalent, and previous experience working in the ELC sector.
- 2.3 New staff members will be provided with an induction programme and all staff will have access to ongoing professional learning opportunities.

3. Professional Practice placements

- 3.1 Professional Practice placements will be integral to the programme. Programme providers will maintain an appropriate code of practice for providers of Professional ELC Practice placement and associated procedures and criteria. Code of practice will apply to all aspects of the professional placements.
- 3.2 Providers must specify (in writing as part of the application for validation) the intended learning outcomes for the practice placement and the strategy for the assessment of the achievement of those outcomes by learners.
- 3.3 The programme will ensure that each (full-time) learner completes 150 hours of Professional Practice placement (per annum) in a minimum of two ELC settings: (1) working directly with children aged between 0 and 20 months and (2) working with children between 20 months and 6 years; with an appropriate balance between settings.

- 3.4 All Professional Practice placement settings must be with entities currently registered as service providers with TUSLA⁹⁹ and must meet the programme provider's criteria for placements selection.
- 3.5 During Professional Practice placements learners will have the opportunity to:
 - a) Observe experienced practitioners and reflect on these observations
 - b) Integrate theory and practice
 - c) Apply knowledge and practice
 - d) Acquire and demonstrate the required competence, values and work practices with babies, toddlers and young children in the context of their setting, family and community under the supervision of more experienced practitioners
 - e) Engage in self-reflection and self-evaluation of their own practice and engage in conversations with more experienced practitioners around their practice.
- 3.6 Learners must be Garda Vetted before going on Professional Practice placement and have completed the current *Children First* (DCEDIY 2021a) E-learning programme.
- 3.7 Providers will have policies and procedures covering elements such as: selection of placements to ensure a quality learning experience; an effective system to ensure the ongoing quality of the practice placements; procedures for effective communication with the practice placements; assessment of learners while on practice placement.
- 3.8 There will be a formal written agreement between the provider and the practice placement setting out respective roles and responsibilities and a code of practice for supervision of learners.
- 3.9 Professional Practice placement supervisors will be suitably qualified at NFQ level above that of the learner being supervised or will have appropriate experience/alternative qualifications.
- 3.10 Professional Practice placement monitors will be suitably qualified and experienced in ELC, be Garda Vetted and have experience in the assessment of learners.
- 3.11 Learners, Professional Practice placement supervisors and professional practice placement monitors will be informed about practice placement assessments, their link to programme learning outcomes and the marking criteria used.
- 3.12 While on Professional Practice placement, appropriate support, guidance and supervision arrangements will be maintained for the learner by the education programme team and supports will be in place for learners who are experiencing difficulties during the professional practice placement.
- 3.13 Learners must pass the Professional Practice placement element of the programme before an award can be made.

4. Learner language competence

- 4.1 Minimum English language and literacy competence at entry to the programme for speakers of English as a second language would be B2 in writing, reading, listening and speaking.

The emphasis on professional practicum and professional formation processes is the significant difference between these professional award type descriptors (PATD) for ELC and the preceding Common Award Standards (CAS). Their development in parallel with the professional award criteria and guidelines (PACG) for higher education programmes has also allowed for the develop-

⁹⁹ TUSLA, the Child and Family Agency through its Early Years Inspectorate is the statutory regulator of ELC/SAC services in Ireland.

ment of a suite of awards across the further and higher education systems that facilitate professional progression pathways for learners and removes traditional barriers between further and higher education awards by promoting continuity and coherence across the continuum of professional awards from QQI level 5–8. The PATD also promotes the possibility of cooperation across education and training providers in the development and validation of programmes leading to these awards thus providing greater consistency in the content and quality of initial professional education. (For further detail of the ELC related content in these award descriptors, see QQI 2019.)

Higher Education Awards

ECEC sector 0–5 (non-primary)

The Government commitment in *First 5* to support the development of a graduate-led workforce by 2028 in ECEC settings coincided with an initiative led by the Department of Education and Skills and the Department of Children and Youth Affairs to develop a suite of professional awards from Level 5 to Level 8 on the National Framework of Qualifications for the Early Learning and Care sector. The first stage of this work resulted in the publication of *Professional Award Criteria and Guidelines (PACG) for Initial Professional Education (Level 7 and Level 8) Degree Programmes for the Early Learning and Care (ELC) Sector in Ireland (2019)*. The purpose of these criteria and guidelines is to support the development by higher education institutions of professional awards for early childhood educators, at Level 7 and Level 8 on the Irish national framework of qualifications. The aim is to guarantee consistency of approach and quality in provision of education, ensuring graduates are fully prepared to take on the complex challenges of practice in this field. In 2020, the Minister for Education and the Minister for Children, Equality, Disability, Integration and Youth jointly instituted a Qualifications Advisory Board on a non-statutory basis to review Initial Professional Education (Level 7 and Level 8) Degree Programmes for the Early Learning and Care (ELC) Sector against the PACG. By June 2022, a total of 27 higher education institutions had successfully submitted their Level 7 and Level 8 programmes for review and it is anticipated that the first graduates of these programmes will be available for employment in ECEC settings in 2024.

Details of the content of the Professional Award Criteria and Guidelines (PACG) for *Initial Professional Education (Level 7 and Level 8) Degree Programmes for the Early Learning and Care (ELC) Sector in Ireland* may be viewed online (see DE 2022d).

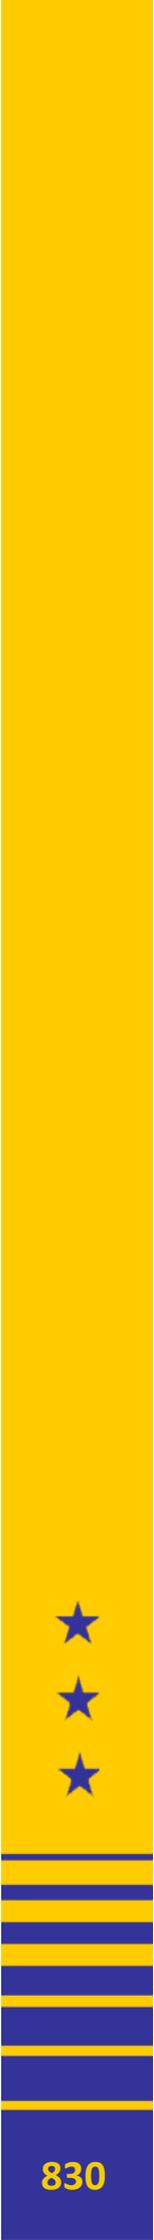

ECE 4–5 years (primary)

Staff working in primary schools with children aged 4 and 5 years comprise qualified and registered Primary School Teachers and Special Needs or general classroom Assistants. Primary Teachers are required to have a higher education Bachelor’s degree that meets the requirements of registration with the Teaching Council of Ireland and must meet the required Irish language proficiency requirements.

Table 13

Ireland: Mandatory Elements of Programmes of Initial Teacher Education (ITE)

<p>The following are mandatory elements of all ITE programmes as stipulated by The Teaching Council of Ireland (2011).</p> <p>Early Childhood Education (Primary)/Adolescent Learning (Post-primary)</p> <ul style="list-style-type: none"> – Inclusive Education (Special Education, Multiculturalism, Disadvantage, etc.) – Numeracy – Literacy – Gaeilge (Irish) (Primary)
--

- The Teacher as Professional/Reflective Practitioner/Researcher
- Developing a Professional Portfolio
- Parents in Education – Co-operation and Collaboration
- The School as a Learning Community
- Preparation for School Placement
- Teaching, Learning and Assessment including School and Classroom Planning
- Differentiation
- Behaviour Management
- ICT in Teaching and Learning
- Legislation Relevant to School and Classroom
- The Teacher and External Agencies.

In all areas of study there should be provision for:

- The promotion of the love of learning, reflective practice and critical thinking
- The development of student teachers’ understanding of schools as organisations
- The development of student teachers as researchers and lifelong learners
- Students’ personal and social development, having regard to teachers’ pastoral role
- Student teachers’ literacy and numeracy and their competence in promoting and assessing literacy and numeracy as appropriate to their curricular/subject area.

The lack of specialised qualification requirements for the **Special Needs Assistants / Classroom Assistants** means that there are no specific competency or curricular requirements available for this role.

4.3 Alternative entry and qualification routes, system permeability

ECEC 0–5 sector (non-primary)

The National Framework for Qualifications in Ireland (NFQI) describes a 10 level awards framework that provides clarity for learners regarding the potential pathways towards achieving qualifications awarded/recognized by the State (QQI 2021). This includes the options for linear progression through the Irish education system and for alternative entry routes and pathways including recognition of prior and experiential learning. The establishment of a suite of professional awards in ECEC (non-primary) since 2019 should provide greater opportunities for access transfer and progression for early years professionals into the future. The facilitation of career pathways that encourage continuing professional education is a core element of Nurturing Skills. It also includes a strong commitment to examining the development of a range of entry routes into the sector (including apprenticeships or other work-based learning, and access programmes in further and higher education) (DCEDIY 2021b, 55).

ECE 4–5 years (primary)

Entry into the teaching profession in Ireland is regulated by the Teaching Council of Ireland. There are also post-graduate routes into teaching (The Teaching Council 2015c).

5. Guided workplace experience (practicum) in the initial professional education of core professionals

ECEC 0–5 sector (non-primary)

A practicum in an ECEC setting is a requirement of all nationally accredited major awards in ECEC in Ireland. It is a core criterion for the recognition of international awards to be deemed equivalent to Irish awards in ECEC. Since the publication of the PACG in 2019, detailed specifications regarding the nature of this practicum element of IPE have been available to higher education institutions and this has been mirrored in the professional award type descriptors (annotated for Early Learning and Care published by QQI). This was a much welcomed development in Ireland as it streamlined this aspect of professional education across all national awards and addressed previously expressed dissatisfaction by graduates of ECEC award programmes at all levels (DES 2016a). See *chapter 4.2* above for further details of guidelines for professional practice in initial professional education for ELC staff.

ECE 4–5 years (primary)

In the primary sector, supervised practicum for Primary Teachers is standardised and specified by the Teaching Council of Ireland. In general, it is required that 40% of initial professional education should comprise a supervised practicum. Further, it is a requirement of registration as a Primary Teacher that each student passes this element of the programme (The Teaching Council of Ireland 2011).

6. Continuing professional development (CPD) of ECEC staff

ECEC 0–5 sector (non-primary)

Once again, the traditionally unregulated nature of practice in ECEC in Ireland prior to 2016 has predicated against a coherent system for CPD. However, a number of significant developments have impacted on this situation including the establishment in 2014 of Better Start, National Early Years Quality Development Service (2022) and the National Síolta Aistear Initiative (NSAI) (Aistear Síolta 2016). Both of these initiatives have developed national programmes for CPD on a range of practice-oriented topics as well as online resources and materials to encourage engagement in internal/self-evaluation as a professional activity. Furthermore, the Access and Inclusion Model has had a significant impact through the delivery of the Leadership for Inclusion qualification and a range of other short courses to support the inclusion of children with disabilities in mainstream preschool settings (e.g. Hanen, Lámh, SPEL). A national initiative to provide training for ECEC (non-primary) staff in child safeguarding/child protection has also been established.

Other CPD opportunities are delivered through organisations and agencies at regional or local level, which are either funded by the state or membership fees to support quality improvement in ECEC. The courses offered through these organisations are varied and rarely adhere to a standardised format. ECEC staff traditionally have attended such CPD in their own time and at their own expense, however the Core Funding model established in 2022 includes funding to services to support early years educators to participate in CPD. In some instances, employers

may subsidise this activity for their staff but there are no national data available to establish the extent of this support. One of the five “pillars” of Nurturing Skills (DCEDIY 2021b, 70) is the development of a national CPD system for the ELC/SAC sector. This pillar includes commitments to:

- Adopt a “whole system” approach to CPD, with CPD to be coordinated by a single agency
- Develop a single national “gateway” to facilitate access to quality-assured CPD resources and supports
- Develop an online system to enable the recording, tracking and viewing of CPD engagement at individual and service levels
- Develop a single, national self-evaluation framework, supported by a suite of resources and training programmes
- Develop structures and processes for the quality assurance of CPD resources, activities and supports.

ECE 4–5 years (primary)

Continuing Professional Development (CPD) of Primary School Teachers falls under the remit of the Teaching Council of Ireland (for details see: The Teaching Council 2015a). Under the terms of rule 58 of the Rules for National Schools, Primary Teachers are incentivised, through the availability of extra personal vacation days (EPV), to avail of a wide range of CPD courses during the summer months when schools are closed (DES 2017). Some of these courses are particularly relevant to teachers of children in the infant classes of primary schools (4 and 5 year-olds); however, they are not mandatory and are offered by a wide range of private education providers.

In the instance of the introduction of new curricula/practice in primary education, teachers will be offered specific CPD by the Professional Development Service for Teachers (PDST). The PDST was established in September 2010 as a generic, integrated and cross-sectoral support service for schools (PDST 2017). The PDST offers professional learning opportunities to teachers and school leaders in a range of pedagogical, curricular and educational areas.

7. Working conditions and current workforce issues

7.1 Remuneration

ECEC 0–5 sector (non-primary)

The annual Early Years sector profile report for 2022/2023, published in December 2023, highlights the continuing challenge of poor terms and conditions of employment that has existed across the ECEC workforce (non-primary) for decades. It reported that the average hourly wages of staff working directly with children was €14.34. When this data is disaggregated by role within the ECEC setting, it reveals that staff working directly with children in non-leadership roles earned an average of €13.93 (Pobal 2023).

It is important to note that a Joint Labour Committee for Early Years Services was established in 2021, and resulted in the Employment Regulation Orders that came into force in 2022. The legally binding minimum wage in the sector is now €13 per hour, and higher minimum wages are specified for those in Lead Educator and Manager roles and those in such roles who have relevant graduate qualifications.

ECE 4–5 years (primary)

Primary teachers' terms and conditions of employment are established centrally by the Department of Education in consultation with national representative bodies. Salaries are paid directly to teachers by the DE, however they are employed by the Board of Management of the school in which they work. Circular 0056/2021 provides full details of salaries and is available to view online (DE 2021).

A teacher's gross salary is comprised of various elements as follows – although these allowances may not be applicable to all teachers:

- The appropriate incremental point of the common basic scale
- An additional allowance for academic qualifications
- An additional allowance for a promoted post (i.e. principal, deputy principal, assistant principal, special duties teacher)
- Other special allowances
- Teachers' Children's Allowance in certain cases.

Special Needs Assistants (SNA)

Salaries of SNA's were revised in 2022 and full details can be found in circular 009/2022 and below. All SNA commence employment at point 1 on the salary scale (DE 2022e).

7.2 Full-time and part-time employment in ECEC provision

A further disincentive to work in the ECEC sector may be the prevalence of part-time contracts for staff which translate into staff becoming unemployed for a number of weeks in each year. *Table 14* below shows the prevalence of this across the workforce.

Table 14

Ireland: ECEC staff working part time and full time¹⁰

Weeks paid per year	Number of staff	% of staff
Under 38 weeks	1,462	6
38–42 weeks	5,426	21
43–49 weeks	1,937	8
50–52 weeks	16,423	65

Source: Pobal:2023

7.3 Support measures in the workplace for newly qualified and newly appointed staff

In the ECEC (non-primary) sector, this is another aspect of Professional Practice that has not been developed in a standardised manner. However, the deficit has been noted in *Nurturing Skills* with a commitment to developing an induction programme for new graduates entering the ELC sector.

In the primary sector the induction and support processes for newly qualified teachers are detailed in the National Induction Programme for Teachers (NIPT 2022).

¹⁰ This data does not include managers working directly with children in ECEC settings

7.4 Non-contact time

There is very little information available at national level regarding the terms and conditions of employment of the ECEC 0–5 sector (non-primary) workforce due to the predominance of privately operated ECEC services. However, data on the number of non-contact hours worked per week by staff working directly with children was gathered in 2020/21 and showed that 60% worked at least one non-contact hour. The number of hours was higher for managerial staff in community (not-for-profit) ECEC settings. It is positive that recognition is being given by employers to the importance of paid non-contact time as a support for the professional activities of staff in ELC settings including for example, planning and internal review. However, the fact that 40% of staff still do not benefit from paid non-contact time is indicative of the need for continued promotion of the professional nature of this field of work. The Core Funding Model, which includes funding to services to support non-contact time for early years educators and managers, may serve to address this.

The terms and conditions of employment for Primary Teachers are standardised and subject to national pay agreements. This includes agreements regarding working hours and contact and non-contact time. The details of these arrangements are contained in Circular 11/95 (Department of Education and Science, Primary Branch 1995). The working time of SNAs is based upon the allocation of special education teaching resources to the school. However, in general there is minimal allocation (10–15 minutes before and after) of paid time for non-contact with children (NCSE 2022b).

7.5 Current staffing issues

Data collected on the length of time working in the ECEC (non-primary) sector identified that there was considerable mobility across the workforce in 2021/22 and in fact the annual staff turnover rate had increased 5% on the previous year to an average of 25% (Pobal 2022a, 119). When ECEC providers were surveyed regarding the retention of staff it became apparent that large, privately operated ECEC settings in urban areas had the greatest challenge in retaining staff and those with higher qualifications were the most likely to leave their employment. The survey data also revealed that only 29% of staff had moved to another ECEC setting, with 40% leaving the sector for employment elsewhere (a variety of other reasons accounted for the balance). It is also of note that 60% of ECEC settings with staff vacancies reported that they were experiencing difficulties with recruitment (*ibid*: 123).

The traditionally more stable workforce in the ECEC (primary) sector has also been experiencing challenges in the recruitment and retention of qualified Primary School Teachers. In both sectors the sustained rise in the cost and availability of housing is a strong factor influencing this situation.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

A series of policy reforms are underway in Ireland that will directly or indirectly impact on the situation of ECEC (non-primary) staff. These include changes to the way in which the sector is funded; the systems and structures that support the organisation and governance of the sector,

including regulation; the structure and delivery of initial and continuing professional development of the workforce and initiatives to begin to improve the terms and conditions of employment of staff. The following publications provide detail on each aspect of the reform agenda:

- *First Five: A Whole of Government Strategy for Babies, Young Children and their Families* (Government of Ireland 2018)
- *Partnership for the Public Good: A New Funding Model for Early Learning and Care and School-Age Childcare, the Report of the Expert Group* (DCEDIY 2021c)
- *Review of Early Learning and Care (ELC) and School Age Childcare (SAC) Operating Model in Ireland*. Report Submitted to Department of Children, Equality, Disability, Integration and Youth. Prepared by Indecon International Consultants (Indecon 2021)
- *Strengthening Early Childhood Education and Care in Ireland, the Report of the OECD's Country Policy Review* (OECD 2021)
- *Nurturing Skills – The Workforce Plan for Early Learning and Care and School-Age Childcare, 2022-2028* (DCEDIY 2021b).

In 2022 and 2023, some of the actions and commitments contained in these publications have commenced implementation. Of note is the establishment of the Core Funding Model (First 5 2022) which is designed to promote the following objectives.

- Improved affordability for parents by ensuring that fees do not increase
- Improved quality through, among other things, better pay and conditions for the workforce
- Supporting the establishment of an Employment Regulation Order through the Joint Labour Committee (Early Years' Joint Labour Committee 2022)¹¹
- Supporting the employment of graduate staff
- Improved sustainability and stability for services.

Nurturing Skills contains a comprehensive vision for the future of the ECEC (non-primary) workforce and identifies actions under five distinct but inter-related pillars.

- Establishing a career framework
- Raising qualification levels
- Developing a national Continuing Professional Development system
- Supporting recruitment, retention and diversity
- Moving towards regulation of the workforce.

Successful delivery of commitments under the five pillars will be supported by three "key enablers" that are identified in *Nurturing Skills* as:

- Improvement in pay and conditions of employment
- Coordination of the quality support infrastructure
- Ongoing engagement with the profession.

Another key reform agenda that has potential to impact upon the practice of ECEC in both non-primary and primary ECEC settings is that being undertaken by the National Council for Curriculum and Assessment [NCCA]. The NCCA has initiated an extensive consultation and research programme to review both *Aistear*, the early childhood curriculum framework (NCCA 2021) and the 1999 (NCCA 2020) primary school curriculum. The first ever Primary Curriculum Framework

¹¹ This initiative resulted in the establishment of a legally binding minimum hourly remuneration for staff in ELC/SAC settings. Two Employment Regulation Orders were established, one for early years educators and one for lead educators and managers.

was published in March 2023 (NCCA 2023) and marks the beginning of a period of sustained development of both curriculum content specification and continuing professional development for the ECEC (primary) workforce.

Impact of national initiatives to improve the quality of ECEC on the early years workforce

Since the establishment of the universal free early childhood care and education (ECCE) Programme in 2010 there has been a sustained national government commitment to capacity building of the ECEC (non-primary) workforce. Initially this took the form of a ‘Learner Fund’ which was established in 2014 to support early years educators to achieve a qualification in ECEC studies equivalent to a major award at NFQI level 5 or level 6. This was a very successful intervention and resulted in over 5,000 staff employed in ECEC settings achieving these awards (Pobal 2022b). The establishment of a higher capitation grant in 2011 and its successor, the graduate premium payments in Core Funding, acted to incentivise the employment of higher education graduates in ECEC (non-primary) settings. It has also proven to be influential in encouraging the development of the capacity of that workforce to engage with increased expectations regarding pedagogy and quality improvement.

Regulation has played a major role in the evolution of the ECEC (non-primary) sector. The commencement of the Childcare Act 1991 (Early Years Services) Regulations 2016 (DCEDIY 2019) which transformed the workforce in ECEC (non-primary) into a regulated profession, sustained the demand for support for initial professional education and in more recent years the Learner Fund also offered bursaries to staff wishing to achieve NFQI Level 7 and Level 8 qualifications.

Another major initiative to build the capacity of the ECEC workforce was established in 2016 in the format of the Leadership for INclusion (LINC) in the Early Years programme. LINC, is a NFQI Level 6 Special Purpose Award (Higher Education), that is designed to support the inclusion of all children in the universal ECCE programme of free preschool. The course is offered for free to people working within Early Learning and Care and is fully funded by the Department of Children, Equality, Disability, Integration and Youth. Once qualified, graduates perform the role of Inclusion Coordinator within their Early Learning and Care Setting. This role was developed as part of the Access and Inclusion Model (AIM), a national Government strategy to support the inclusion of all children in the ECCE programme (AIM 2016). The LINC programme contains online and classroom based sessions in order to ensure a flexible and quality learning experience, enabling pre-school staff in full-time employment to participate in the programme. Over 4,000 staff have graduated from the programme in the period 2016–2021 and it will continue to operate until 2023 (LINC 2022).

The transformation of the qualification profile of staff in ECEC settings, as evidenced in *Table 5*, is strong testimony to the effectiveness of these initiatives. However, with the publication of *First Five* and *Nurturing Skills* and the commitment to a graduate-led workforce by 2028, there is a need for further investment of resources into IPE at higher education level. Plans for such investment are contained in *Nurturing Skills – The Workforce Plan for Early Learning and Care and School-Age Childcare 2022–2028* (DCEDIY 2021b) as previously discussed and have the potential to raise the profile, status and attractiveness of professional roles in the ECEC (non-primary) sector in the future.

9. Recent country-specific research focusing on ECEC staff

Each of the policy documents listed in *chapter 6* above were based on programmes of research and consultation. Most specific to the professionalisation of the ECEC workforce is the Workforce Development Plan for the Early Learning and Care and School Age Childcare Sector in Ireland. This publication includes a vision for a graduate-led workforce in centre-based ELC settings and the introduction of registration and qualification requirements for home-based workers. The Plan includes commitments to “... raise qualification levels, to create professional development pathways and to promote careers in the sector” (*ibid*, 7). The background research studies that informed the Workforce Development Plan are published online (DCEDIY 2021b) and are available for review. The implementation of the plan is to be realised through a complex, but inter-related set of actions over the period 2022–2028.

The fact that the significant majority of ECEC settings are in receipt of funding from the State to deliver their services has allowed for the collection and collation of profile data through an annual beneficiary survey. Participation in this survey is obligatory since 2022, and it will be a very valuable source of profile data on the growth and development of the ECEC (non-primary) workforce into the future.

10. Workforce challenges – country expert assessment

The two years of the global COVID-19 pandemic, 2020–2022 served to highlight a wide range of challenges for the ECEC workforce in Ireland, both for those working with children in ECEC (non-primary) and in primary schools. The challenge of the largely private sector nature of ECEC (non-primary) was evident in the struggle many services experienced in retaining staff during periods of closure or limited operation due to public health restrictions. This struggle was significantly mitigated by the introduction of an employment wage subsidy scheme (Irish Tax and Customs 2022) which effectively stabilised the workforce and allowed this strongly private sector provision to continue to offer services during the pandemic. This scheme supported the idea of ECEC (non-primary) as a *public good* that should be substantially supported by the State in the same way as ECEC (primary), wider education provision and health services. This was reinforced in *Partnership for the Public Good* (DCEDIY 2021c) which was followed by the announcement of the Core Funding Model (DCEDIY 2021c) in December 2021. This included a commitment to improve the terms and conditions of employment of the ECEC workforce. How this translates into practice in a continued private for-profit ECEC sector will present a significant challenge in the coming years.

The pandemic also highlighted challenges for the practice of ECEC across all settings. These included working in partnership with parents and families, promoting the well-being of children, using ICT, supporting children with special educational needs and managing effective transitions across the early childhood continuum. The key challenge now is to ensure that the learning from these experiences is translated in professional education and support programmes.

A significant challenge for the ECEC workforce in Ireland is the continuing disparity between staff working in primary schools and those working in the non-primary sector. Whilst the past decade

has seen significant progress towards creating the context in which such parity could be established – through the establishment of a universal free preschool programme, increased State investment in ECEC provision, publication of professional awards for IPE and regulation of qualification to practice – there remains much work to be done. The scope and nature of this work has been identified in relation to the non-primary ECEC workforce (DCEDIY 2021b) and a complex series of implementation strategies is underway to deliver on the vision they articulate of a graduate-led sector fully equipped with the appropriate skills, knowledge and values to deliver high quality ECEC for babies, young children and their families in Ireland.

However, in addition to addressing challenges particular to the ECEC (non-primary) workforce there is the wider issue of addressing the disconnect between the two cohorts of the ECEC workforce, primary and non-primary. This is important because of the impact this disconnect has on the early learning and care experiences of children aged 0–5 years, particularly in relation to transitions across the continuum of settings funded by the State for children in this age range.

In recent years a number of national policy decisions have begun to erode the divide between these two workforces including in particular the establishment of universal free pre-primary education for all children for up to two years before enrolment in primary school. From a very low level of participation pre 2010, almost every child now attends some form of pre-primary education before entering primary school. The commission from the Department of Children, Equality, Disability, Integration and Youth to the Department of Education Inspectorate to extend inspection to include early learning and care provision in 2016 was also a significant development and established parity of terms and conditions of employment for education inspectors in early years, primary and post-primary education contexts. More recently the establishment of a suite of professional award standards for qualifications for ECEC (non-primary) staff has identified the common aspects of initial professional education with ECEC staff in primary contexts and there is evidence that the higher education institutions delivering IPE for both cohorts of undergraduates have identified aspects of the content of IPE programmes that can be held jointly.

In summary, there is much reason to be optimistic regarding the potential for future ECEC workforce development in Ireland. A key challenge will be the retention of the current experienced workforce in the ECEC (non-primary) sector until these reforms are realised in practice.

Early childhood education and care (ECEC)

Please note

Early Learning and Care (ELC) is the widely accepted terminology for ECEC in Ireland. In alignment with country-specific usage, the terms used in this report for the main forms of centre-based provision are: (1) **ELC settings** when referring to facilities for 0 to 5 year-olds outside the school sector; and (2) **infant classes** in primary schools for 4 and 5 year-olds¹. Any additional setting types are described where appropriate.

Historical milestones in ECEC in Ireland

End of the 1960s	<ul style="list-style-type: none"> – The first playgroups are established. – In Dublin, the first state-funded ECEC setting opened in Rutland Street in 1969, which later became a model for Early Start centres in the country.
1973	A strong tradition of mothers remaining at home as primary carers of children in Ireland was reinforced by a ban on married women working in the civil service. This changed in 1973 when the so called ‘marriage bar’ was removed as a result of Ireland entering the European Union.
1991	Child Care Act
1994	The first Early Start centres are set up.
1997	Child Care (Pre School Services) Regulations 1996 and Child Care (Pre School Services) (Amendment) Regulations 1997 were commenced introducing first-ever statutory regulation for ECEC (non-primary).
1998	<ul style="list-style-type: none"> – Education Act – White Paper on Early Childhood Education
1999	National Child Care Strategy
2000	National Children’s Strategy
2000–2006	Equal Opportunities Childcare Programme
2006	The Centre for Early Childhood Development and Education (CECDE) produces the first quality framework <i>Síolta</i> , published by the Ministry of Education.
2006–2008	National Children’s Investment Programme
2009	The National Council for Curriculum and Assessment (NCCA) publishes <i>Aistear</i> , The Early Childhood Curriculum Framework.
2010	Universal Free Pre-school Education in Early Childhood Care and Education settings (ECCE) Programme commences.
2013	National Quality Agenda for Early Childhood Care and Education
2014	Better Outcomes, Brighter Futures: The national policy framework for children and young people 2014-2020
2015	<ul style="list-style-type: none"> – Report of Inter-Departmental Working Group: Future Investment in Childcare in Ireland – Better Start, the National Quality Support Service for the Early Years Sector is launched. – Access and Inclusion Model (AIM) launched to support the participation of children with disabilities in ECCE

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for settings for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. The relevant formats for Ireland are **0–5** and **4–5** years.

2016	<ul style="list-style-type: none"> – Commencement of Department of Education Inspection of the ECCE Programme of universal free preschool – Child Care Act (Early Years Services) regulations commenced, introducing first national registration system for early years services and mandatory minimum qualification requirements for staff. – Free enrolment in ECCE is extended to two years.
2017	Affordable Childcare Scheme
2018	Childcare Support Act comes into force.
2018/19	<i>First 5, A Whole of Government Strategy for Babies, Young Children and their Families</i> is a 10-year reform strategy to include an overhaul of the ECCE system and structures supporting the delivery of ECEC (non-primary) (e.g. new funding models, measures to combat poverty, and workforce reform).
2019	<ul style="list-style-type: none"> – National Childcare Scheme (NCS) is launched to reduce childcare costs for parents. – Universal Design Guidelines for Early Learning and Care Settings published
2021	<ul style="list-style-type: none"> – Review of <i>Aistear, the early childhood curriculum</i> framework commenced – Amendments to Education Act – <i>Partnership for the Public Good: A New Funding Model for Early Learning and Care and School-Age Childcare</i>, the Report of the Expert Group – Review of Early Learning and Care (ELC) and School Age Childcare (SAC) Operating Model in Ireland. ECEC system type and auspices²

The early childhood education and care system in Ireland differs from most European countries in that there is no long tradition of state funded support for ECEC outside the primary school system which is open for enrolment of children from aged 4. However, since the first OECD review of ECEC in Ireland 20 years ago, the approach towards investing in the early years education and care outside the primary school system has changed considerably. Building on this shift in approach, the government is currently pursuing a comprehensive policy agenda through the “First 5” strategy (2019-2028) in terms of improving access, affordability and quality in the sector (OECD 2004; 2021b).

Today, ECEC for under 6 year-olds is primarily a bi-sectoral system funded and regulated by two lead ministries³. The Department of Children, Equality, Disability, Integration and Youth (DCEDIY) is responsible for the governance, quality, funding, regulation, monitoring and evaluation and workforce development of non-school settings for children under 6 years of age, co-operating with the Department of Education (DE) on issues of quality, curriculum development,

² The Eurydice country report on ECEC in Ireland provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

³ For the purpose of this report we will refer to the ELC services outside the education system as the **early years sector** and to provision for 4 and 5 year-olds within schools as the **primary sector**.

special needs education and workforce development. Although the governance and funding of ECEC provision is centralised, there is a national support system at district level which assists ECEC services with funding applications and improving the quality of provision. More than 30 City and County Childcare Committees (CCC) represent DCEDIY at the local level and are a first point of contact for providers and parents.

The Department of Education (DE) is responsible for a range of early education programmes in primary schools for children aged 3 and above with special educational needs, including Early Start (40) and Early Intervention classes for children with a diagnosis of autism (150). It also provides funding for early education provision to some children with disabilities, for education-focused inspections, curriculum development and provision of initial professional education for early years educators and primary school teachers (Frontier Economics 2020, 8). The DE is also responsible for infant classes in primary schools for 4 and 5 year-olds.

General objectives and legislative framework

Overarching goals of ECEC are to take a holistic approach towards promoting lifelong learning, supporting inclusion and diversity, especially for those with additional needs and improving quality and the infrastructure to support it, including the expansion of places.

The government's ten-year “First 5” strategy 2019-2028 for children in the first five years of life and their families commits to improving accessibility, affordability and quality in the ECEC sector by implementing national standards. In addition to improved and paid parental leave, parents should be able to access ECEC services more easily in order to better reconcile work and child-care (DCEDIY 2021). The strategy builds on the former government initiative Better Outcomes, Brighter Futures, a national policy framework for children and young people from 2014-2020 (DCEDIY 2019a). It reinforces commitments to five overarching goals or outcomes: “Active and healthy; Achieving in learning; Safe and protected; Economically secure; Connected, respected and contributing” (Government of Ireland 2019). First 5 adopts the term **Early Learning and Care (ELC)** to define all regulated centre-based and home-based services that provide education and care from birth to compulsory primary school age. It does not include the early years of primary school (Government of Ireland 2019). In December 2023 a phase two Implementation Plan 2023–2025 was published by the Minister for Children, Equality, Disability, Integration and Youth. It outlined a number of strategic objectives to streamline the infrastructure that supports the governance, delivery, evaluation and monitoring of ELC services (DCEDIY 2023).

Both the Child Care Act, 1991 (amended 2016) and the Education Act, 1998 (amended 2021) provide the relevant legislation for early education and care. The Child Care Act sets out the basic regulatory requirements of ECEC settings, such as health and safety provisions (Government of Ireland 2021a).

The Education Act emphasises the right of parents to a free choice of provision. The general objectives of the education system are to help each person reach their full potential and thus contribute to the social, cultural and economic development of society. Important goals are the promotion of equal opportunities, inclusion, lifelong learning and the support of individual needs.

In 2019, Universal Design Guidelines for Early Learning and Care Settings were published, aiming to improve accessibility to early learning settings for all children. The guidelines follow a participatory approach (European Commission 2020b).

ECEC entitlement and compulsory attendance

Attending an ELC setting or an infant class in primary school is voluntary (Department of Education 2019).

Since September 2016, all children aged 2 years 8 months before 31 August are eligible to attend a universal two-year state-funded **ECCE programme** (early childhood care and education) until they are 5 years 6 months old. Attendance is free of charge for three hours a day for a total of 76 weeks. There is no such programme for children younger than 2 years 8 months.

Compulsory schooling starts at the age of 6.

Main types of provision

Early years sector

Centre-based **ELC (early learning and care) settings** (non-school) are variously called: crèches, nurseries, preschools, *naíonraí* (Irish medium preschools), playgroups, playschools, day care services, Montessori groups, drop-in centres. Settings eligible for government subsidies receive these primarily through the Department of Children, Equality, Disability, Integration and Youth (DCEDIY).

ELC settings offer the following (TUSLA 2022a):

- Sessional pre-school service lasting 3½ hours or less
- Part-time day care service lasting a minimum of 3½ and a maximum of 5 hours a day (half-day)
- Full day care service for more than 5 hours a day
- Short-term drop-in centre services (maximum two hours)
- Temporary pre-school service during a short absence of the parents
- Overnight pre-school service during which children are taken care of for a total of more than 2 hours between the hours of 19:00 and 6:00.

All ECEC settings are required to register with TUSLA - the Child and Family Agency. Since 2014, TUSLA has been the state authority (Early Years Inspectorate) responsible for the supervision and monitoring of early years services for children from birth to 5 (TUSLA 2022b). The Quality and Regulatory Framework (QRF), developed by TUSLA and the DCEDIY, provides reference support for ECEC providers (TUSLA 2022a).

Through the ECCE programme (see above), which includes children in Early Learning and Care (ELC) and - if enrolled in a primary school - School Age Childcare (SAC), children may attend a setting for three hours a day, five days a week and 38 weeks a year, free of charge, in the two years prior to compulsory school enrolment. Moreover, the National Childcare Scheme provides a flat-rate support for parents of 50c per hour towards the cost of a registered ELC place for a maximum of 45 hours per week (Government of Ireland 2021b).

In **home-based provision**, a registered childminder cares for up to five children up to 6 years of age at home alongside their own children. The times are agreed upon by the parents and the childminder (Citizens Information 2021a). However, home-based ECEC provision is largely unregulated and only a very small minority of childminders are registered (OECD 2021b, 35). Looking forward, a National Action Plan for Childminding (2021-2028) has set out phased steps for supporting and improving the quality of this neglected form of ECEC provision at all levels, including strengthening qualifications, funding support and monitoring (Government of Ireland 2021c).

In 2022, there were 4,483 ECEC providers with a contract with the Department of Children, Equality, Disability, Integration and Youth (DCEDIY) (Pobal 2023). 16% of ELC/SAC institutions were located in disadvantaged areas.

According to an annual survey of centre-based setting providers (N=4,009), in 2022/23 the most common form of enrolment in services for under 6 year-olds was part-time morning (82%), followed by half-day (39%) and full-day (37%) (Pobal 2023).

Primary sector

Infant classes in primary schools for 4 and 5 year-olds are funded by the Department of Education. Although compulsory education does not start until the age of 6, some 4 and most 5 year-olds attend a junior or senior infant class (ISCED 02), usually for 5 hours and 40 minutes a day (Department of Education 2023). The age of junior infants has been steadily increasing for the past twenty years, although the trend has accelerated in recent times. This is most likely due to the introduction of the free preschool scheme in 2010, and its expansion to two years in 2016. Overall, the proportion of 4 year-olds (and younger) in junior infants has fallen from 46.3 per cent in 2002 to 16.9 per cent in 2022 (Department of Education 2023c).

In addition, the Department of Education also funds **early intervention programmes in schools**. These are primarily targeted at the inclusion of children with special educational needs and include Early Start and Early Intervention classes for children with a diagnosis of Autism. The Early Start programme was initiated as a pilot project for inner-city children in Dublin in 1994. Children must be at least 3 years and 2 months and no more than 4 years and 7 months old on 1 September of the year in which they are enrolled. In 2021, the Early Start programme was offered in 40 schools. Children attend for two and a half to three hours every weekday for about 183 days a year (same as primary school). Early Intervention classes for children aged 3–5 years with a diagnosis of autism were established by the National Council for Special Education (NCSE) and were offered in approx. 150 schools in 2021. The school receives an allocation of one teacher for the early intervention class and the teacher is allocated to the class by the principal. Further resources are also made available to support the class, including building, training and transport. Six children are enrolled in each class and each class typically has two Special Needs Assistants (SNA) The classes follow the infant school day, i.e. 4 hours 40 minutes each day. Following early intervention, it is intended that the child will attend a mainstream class unless there is professional guidance that they require a special class.

Enrolment rates for children between 4 years of age and compulsory school entry are among the highest in Europe and among those with the most increases between 2009 and 2018 (European Commission 2020a).

Provider structures

Early years sector

ECEC in Ireland is operated by private providers. Through the introduction of Core Funding in 2022 all Early Learning and Care (ELC) services now have access to government funding (Together for Better Early Learning and Childcare 2023).

The relative share of private for-profit services has increased somewhat over the past few years, whereas the share of private non-profit community services (typically with a volunteer management board which may include parents) has remained stable. Private providers include chains, large structures and small structures (OECD 2021b, 34).

Of the 4,483 ELC/SAC providers, in services three-quarters (75%, 3,341) were private for-profit in 2022/23, and one-quarter (25%, 1,142) were private non-profit community settings. Overall,

108,619 children up to compulsory school age were registered in ECCE-programmes (Pobal 2023).

Table 1 illustrates the predominance of private ECEC provision in Ireland. According to these Eurostat 2021 data, in 2021, only a small percentage of children over 3 years of age in Early Start/Early Intervention settings and no children under 3 years of age attend a publicly funded programme.

Table 1

Ireland: Number of children in early years settings by provider type, 2021

Provider type	Under 3 year-olds	Share in %	3 years to statutory school age	Share in %
Private for-profit and Private non-profit	3,934	100.0	108,621	9.2
Public	0	0	905	0.8
Total	3,934		109,526	

Source: Eurostat 2023e

Primary sector

ECEC (primary) mostly takes place in public primary schools, i.e. in infant classes in mainstream national schools. Table 2 also shows the number of children under and over 4 years of age attending a special school or a private school.

Table 2

Ireland: Number of children under and over 4 years of age in primary school infant classes by school type, 2001 and 2022/23

	Mainstream national		Special national		Private primary	
	2001	2022/23	2001	2022/23	2001	2022/23
Under 4 years of age	25,792	10,697	171	253	910	697
Over 4 years of age (5, 6, 7 years)	152,545	185,040	745	993	1,822	1,542
Total	178,337	195,737	916	1,246	2,732	2,239

Source: CSO 2023

The strong decrease in the number of under 4 year-olds attending both public and private primary schools between 2001 and 2022 is attributed to the increasing number of younger children participating in the 'free preschool' programme from 2010 onwards (Department of Education 2022a).

Participation rates in regulated ECEC settings

Early years sector

In 2022/23, 221,513 children were enrolled in at least one government-subsidised programme, an increase of 22% compared to the year before. This is mainly due to the statutory entitlement for the NCS age eligibility increasing from 3 years to 15 years and the increase to the universal minimum subsidy. 108,619 children benefited from ECCE programmes (Pobal 2023).

From August 2022 to August 2023, a total of 144,810 children from 103,048 households received financial assistance under the National Childcare Scheme (NCS). Since 2019, this scheme includes a statutory entitlement to financial support to attend ELC/SAC facilities (Pobal 2023). Subsidies are paid to providers, who reduce parental fees for hours beyond the ECCE entitlement (OECD 2021b, 33).

Broken down by age, the highest enrolment rates in non-school early years settings are found among 3 and 4 year-olds. In 2023 this was the case for 90.9% of children aged 3 and for almost 80% of 4 year-olds (see *Table 3*).

Table 3

Ireland: Number and enrolment rates of children in centre-based ECEC settings by age, 2023

Age	Number of children	Enrolment rates
Under 2 years	15,878	14.0
2 year-olds	24,623	42.0
3 year-olds	54,480	90.9
4 year-olds	47,621	78.1
5 year-olds	6,308	9.9

Source: Pobal 2023

According to Eurostat data, slightly fewer under 3 year-olds were enrolled in ECEC in 2022 than in 2005 (19.1% vs. 20%). The enrolment rates of children from 3 years to school entry age increased since 2005 from 78% to 94.4% (see *Table 4*).

Table 4

Ireland: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005–2022

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	14	64
	Over 30 hours	6	14
	No enrolment in ECEC	80	22
2010	1 to 29 hours	21	73
	Over 30 hours	8	17
	No enrolment in ECEC	71	10
2015	1 to 29 hours	21.7	73.5
	Over 30 hours	9.0	18.8
	No enrolment in ECEC	69.3	7.7
2022	1 to 29 hours	6.7	81.3
	Over 30 hours	12.4	13.1
	No enrolment in ECEC	80.9	5.6

Source: Eurostat 2023b

Primary sector

By 2022/23, a total of 126,566 4 to 6 year-olds were attending entry classes; of these, almost all 6 year-olds (97.3%) were enrolled in a senior infant class, and most of the 5-year-olds (83.2%) were enrolled in a junior infant class (see *Table 5*).

Table 5

Ireland: Number of children in infant classes in primary schools by age, 2022/23

	Under 4 years	5 year-olds	6 year-olds	Total
Junior infants	10,695	51,296	1,446	63,437
Senior infants	1	10,382	52,746	63,129
Total	10,696	61,678	54,192	126,566

Financing and costs for parents

In 2019, the average expenditure of OECD countries on ECEC was 0.87% of gross domestic product (OECD 2021b, 25), whereas in Ireland, in 2019, only 0.33% of GDP was spent the early education sector in 2017 (OECD 2023). Looking forward, the government budget for 2022 includes plans for increasing public funding on ECEC (OECD 2021b, 24).

In order to receive subsidies from DCEDIY, settings in the **early years sector** must be registered with TUSLA, the Child and Family Agency. The providers receive per capita lump sums from DCEDIY, in return for which they must ensure that the facility is open free of charge to parents for three hours a day, five days a week and 183 days a year. Fees are charged for additional services outside the three hours of educational activities, e.g. excursions, meals (DCEDIY 2021). The Department for Children, Equality, Disability, Integration and Youth (DCEDIY) is responsible for state subsidy of the early years sector. Care for children under 3 years old is usually paid for by the parents. However, since 2017, they have been supported by the Affordable Childcare Scheme (ACS) in terms of costs. This strategy aims to increase accessibility to services and reduce poverty. Since January 2023, a universal subsidy of €1.40 per hour (with a maximum of 45 hours per week) is available to all families with children under 15 years attending ELC or school-age childcare services.

In addition, the former "free preschool year" for children between 3 years and 4½ years of age introduced in 2010 was extended to two years (the age of eligibility was lowered to 2 years 8 months) since 2016 until the start of primary school.

In 2022, a Core Funding Model was introduced. €259 million in full year costs includes allocations for improvements in staff pay and conditions, administrative staff/time, a contribution to non-staff overhead costs, and a contribution to support the employment of graduate Lead Educators across ELC and to support graduate Managers in ELC or combined ELC and SAC services.

The majority of Core Funding (€212 million of the €259 million) is distributed based on a service's capacity – the opening hours, opening weeks and the age group of children for whom services are provided as well as number of places available. It gives providers a stable income source based on the nature of the service they deliver. A provider's income now consists of Core Funding, NCS and ECCE subsidies, and parental fees.

Structuring Core Funding primarily based on capacity means that services have an allocation each year that does not fluctuate in line with children's attendance, thus contributing to services' sustainability and stability. The new funding model will include funding for universal and targeted measures to address socioeconomic disadvantage (Together for Better Early Learning and Childcare 2023).

Fees are generally set by the provider. In 2022/23, for full-day attendance the weekly average it was €197.43, for part-day €115.16. The younger the child, the higher the fees (€206.27 for full-day attendance for under 1 year-olds, €189.96 for over 5 year-olds); in Dublin the fees are higher

than elsewhere. Private institutions charge more than community ones €205.88 vs €174.33 for full-day attendance) (Pobal 2023).

In 2022, a couple with two children spent about 19% of net household income on childcare costs⁴ (OECD.Stat 2023).

Through the National Childcare Scheme (NCS 2019), parents receive a flat rate for children under 3 years of age and an income-related amount for children up to 15 years of age. Since 2022, the lump sum can also be granted for up to 15 year-olds - parents can choose the option that is more favourable for them. The prerequisite is that the provider is registered with TUSLA. Since August 2021, the NCS system has replaced all previous support programmes. This does not include the ECCE programme, which will continue to offer free education units in the two years before primary school (Citizens Information 2021a, 2021b).

Under the leadership of the DCEDIY, a review of the established funding model was undertaken with a remit to assess its effectiveness in terms of quality, sustainability and inclusion. The opinions of providers, parents and other stakeholders were canvassed. The group consisted of representatives from all relevant early education agencies, financial and economic experts, and representatives from ministries. A report issued in December 2021 (DCEDIY 2021).

As part of the school system, infant classes in the **primary sector** are free of charge.

Staff to child ratios and group size

Early years sector

In the early years sector, one qualified member of staff cares for a maximum of three children under 1 year, five between 1 and 2 years, six between 2 and 3 years or eight over 3 year olds (see Table 6).

Table 6

Ireland: Maximum number of children per group/professional in ECEC settings by age, 2022/23

Age	Max. number of children per professional	Max. number of children per group
Under 1 year	3	n/a
1 year-olds	5	n/a
2 year-olds	6	n/a
3 year-olds	8	22
4 year-olds	8	22
5 year-olds	8	22

Source: Eurydice 2023, 4

Furthermore, there are requirements regarding the square metres per child in ELC settings: 3,5sqm for children under 1 year, 2.8 for children aged 1 to 2 years, 2.35 for children aged 2 to 3 years and 2.3 for children aged 3 to 6 years (Eurydice 2023, 4).

A childminder in home-based provision who looks after five children or more must, like other providers, be registered with TUSLA (DCEDIY 2021). A maximum of two children may be under 15 months old (European Commission/EACEA/Eurydice 2019, 90).

⁴ The calculation is based on the following fictitious model: two parents working full-time (average income); two 2 and 3 year-old children in full-time care; relevant care allowances included.

Primary sector

In the primary sector, groups in the Early Start programme usually consist of 30 children, 15 of whom are present in the morning (9:00 to 11:30) and 15 in the afternoon (12:00 to 14:30). Each group is led by a Primary School Teacher and a qualified Childcare Worker and, where appropriate, supported by parents working on a voluntary basis (Citizens Information 2021d). When six children aged 3–5 years diagnosed with autism are enrolled in Early Intervention classes, each class typically has two Special Needs Assistants (SNA). The change in average class size has been relatively stable during the last 20 years with its lowest point in 2021 at 22.8 (highest in 2015 at 24.9). The number of classes with 35 or more pupils fell significantly between 2001 and 2022 (from 13,844 to 2,435). The pupil to teacher ratio on the other hand has fallen consistently over the same period, from 18.4 in 2001 to 13.4% in 2022 (Department of Education 2023c, 6, 9).

Curricular frameworks

Early years sector

The Department of Education is responsible for the curricular and quality frameworks developed for the early years sector, but these do not apply to primary school infant classes (Department of Education 2021a).

Aistear, The Early Childhood Curricular Framework was introduced in 2009 for all **early years services** as a non-mandatory framework for working with children aged 0 to 6 years. It is structured around four overarching themes: Well-being, Identity and Belonging, Communication, and Exploring and Thinking. For each of these areas, specific skills, attitudes and values are defined. It was developed by the National Council for Curriculum and Assessment (NCCA) over a long period of time in close collaboration with the early years sector. The NCCA is also responsible for the implementation of *Aistear*. Currently, the framework is under review, with stakeholder consultations being held in 2022 (NCCA 2021a).

For settings which have a contract with the Department for Children, Equality, Disability, Inclusion and Youth for the two free years of early learning and care before starting school, the framework is mandatory. Settings for children under 3 years of age may develop their own curricula/programme as long as they adhere to the core principles of *Aistear* (European Commission/EACEA/Eurydice 2019, 96ff).

Síolta, the National Quality Framework for Early Childhood Education (2006), is a process-oriented framework and sets out quality criteria based on 12 principles: the value of early childhood; 'children first'; parenting; relationships; equality; diversity; enriching environments; care; the role of adults; teamwork; pedagogy and play. 16 quality standards and relevant indicators are intended to help translate the vision of quality into practice. Settings participating in the ECCE free pre-school scheme must develop a programme of activities based on this quality framework (Department of Education 2021a).

The NCCA has published guidance for the implementation of *Aistear* and *Síolta*.

Primary sector

Curricular guidelines for the **Early Start** programme in the primary sector include structured play activities designed to enhance children's language, cognitive and social development.

Infant classes in primary schools follow the Primary School Curriculum (1999), which is structured around seven areas of learning: language (English and Irish); mathematics; social, environmental and science education (history, geography and science); arts education (visual arts, mu-

sis, drama); physical education; social, personal and health education; religious, ethical education (NCCA 2021b). In March 2023 a new primary curriculum framework for primary and special schools was published. It builds on the successes and strengths of previous curricula while recognising and responding to challenges, changing needs, and priorities; provides agency and flexibility in schools; makes connections with what and how children learn in preschool, primary, special, and post-primary schools; identifies and responds to emerging priorities for children's learning; changes how the curriculum is structured and presented and supports a variety of pedagogical approaches and strategies with assessment central to learning and teaching. The curriculum is presented in five broad curriculum areas: 1. Language, 2. Science, Technology, Engineering, and Mathematics (STEM) Education, 3. Wellbeing, 4. Arts Education and 5. Social and Environmental Education. Additionally, schools can design their own programme in accordance with the ethos of the school (Department of Education 2023a).

Digital education

In the *Aistear* curriculum framework, handling digital media is not a specific requirement but it is recommended that they be integrated into children's daily lives. This was also foreseen in the digital strategy for schools 2015-2020 (including infant classes), which produced a digital learning framework to support schools. Here, in addition to incorporating digital technologies into learning processes, the digital skills of professionals and the digital infrastructure of institutions are addressed. The foundations are to be laid in early childhood through playful, active and question-centred approaches. For the ELC institutions, it was found that there is need for action but currently no agreed procedure; for example, there are still questions regarding the age-appropriate use of digital media (Department of Education 2020).

Monitoring – evaluation

Child-related assessment

There is no formal evaluation system in the **early years sector** in Ireland. However, the curricular framework *Aistear* contains guidelines for assessing children's developmental progress and planning the next stages of learning. As a rule, children are assessed through observation. How the results are recorded is left to ECEC staff. It is recommended to document learning progress by means of a portfolio according to the areas mentioned in the curriculum (European Commission/EACEA/Eurydice 2019, 103f).

In the **infant classes** in primary schools, observations or screening tests are carried out in order to detect possible developmental delays or difficulties as early as possible. Children are also encouraged to evaluate their own activities (NCCA 2021c).

Centre-based internal evaluation

The *Síolta* Quality Framework contains information on self-evaluation. The implementation of self-evaluation measures is not obligatory, but recommended. As part of this quality assurance process, settings may document relevant steps in a 'quality portfolio' (European Commission/EACEA/Eurydice 2019, 126f). In 2015, *Better Start* – a national quality support service for the Early Learning and Care sector – was established by the Department of Children, Equality, Disability, Integration and Youth and hosted by Pobal. *Better Start* promotes quality and inclusion in Early Learning and Care (ELC) settings for children from birth to 6 years of age in Ireland and offers three programmes: "Quality Development Service", "The Access and Inclusion Model"

and "Early Years Learning and Development Unit". The Quality Development Service includes the provision of onsite mentoring and coaching to support internal quality review and development processes (Better Start 2023).

For infant classes in primary school a comprehensive system of school self-evaluation (SSE) is mandated by the Ministry of Education. During 2023–2026, schools will have autonomy to choose the focus of their SSE if they have a three-year plan which addresses, for example, context-specific school priorities related to teaching, equity and inclusion. In this period schools are supported by materials, inspections, collaborations with and between schools (Department of Education 2022b).

External evaluation

The monitoring and external evaluation of ECEC in Ireland is divided across three main institutions:

(1) TUSLA, The Child and Family Agency is responsible for assessing regulatory compliance in the early years sector. Inspections take place on the basis of the 2016 amended regulations of the Childcare Act (1991) and are based on the Quality and Regulatory Framework (QRF) published by TUSLA in 2018 which also offers guidance to providers on quality aspects (European Commission/EACEA/Eurydice 2019, 125). In addition to observations, checklists are also used. The reviews take place approximately every three years and the results are made available to the public.

(2) The Inspectorate of the Department of Education is responsible for evaluating quality in institutions participating in the ECCE Scheme and since 2022 for all ELC settings receiving Core Funding. The inspections (Early Years Education Inspections, EYEIs) are legally provided for in the Education Act 1998 (section 13(3)b) and are coordinated with the DCEDIY. They focus on the quality of children's learning processes in different areas, the learning context, learning processes, children's experiences and management and leadership for learning; they are primarily conducted through observation of practice. The inspections are based on a quality framework informed by the *Aistear* and *Síolta* principles. The framework describes 20 key aspects of best practice. After the inspection, the providers receive feedback and a written report with recommendations for quality improvement is sent to the ECEC setting. These reports are published. There are also follow-up inspections to assess the progress of the facility in implementing the recommended actions (Department of Education 2021c).

(3) Pobal, a government-funded, non-profit organisation, manages and monitors early years funding programmes on behalf of government departments, other national agencies and the EU. It works closely with the Department of Children, Equality, Disability, Integration and Youth, where it is responsible for the disbursement of government funds to early years services. It also inspects the institutions to check whether the conditions of each funding programme are being adhered to (Pobal 2022).

Support for quality improvement is offered by a number of actors, including local City and County Childcare Committees, National Voluntary Childcare Organisations and the aforementioned *Better Start* (OECD 2021b, 40).

Inclusion agenda

Children with special educational needs and disabilities

– Early years sector

In June 2016, a new Access and Inclusion Model (AIM) was introduced for children attending early years services. The model includes seven levels of support, depending on the needs of the

individual child. *Levels 1 to 3* provide general support that promotes an inclusive culture in institutions. This includes the commitment of the setting to a Charter of Diversity, Equality and Inclusion and the publication of a setting-specific inclusion strategy; the funding by the DCEDIY of a new university degree programme in Leadership for Inclusion in the Early Years for professionals who wish to work as inclusion coordinators; and a multi-year training programme for early years staff. *Levels 4 to 7* refer to a range of targeted supports to promote the participation of children with special educational needs. These may include: accessing advice and support from early childhood experts; applying for special equipment or minor alterations; accessing therapy services; applying for additional per capita funding for further staff support in the setting (DCEDIY 2021).

In 2022/23, 14,822 children with special needs were enrolled in 3,197 ELC and SAC facilities. 57% of all facilities participated in the AIM model (Pobal 2023).

In 2018/19, more than three-quarters (77%) of early years settings had at least one child with special needs, and 54% had at least one with a disability (Eurochild 2021).

The Health Service Executive (HSE) provides a free screening test for pre-school children. In addition to an assessment of hearing, vision and physical abilities, it also includes language development (HSE 2021).

– *Primary sector*

In the school sector, children with special educational needs attend mainstream settings whenever possible; sometimes in a special class or group or on an integrated basis with supports. There are also special schools for children with complex disabilities.

For the inclusion of children with special educational needs, there is also a Delivering Equality of Opportunity in Schools (DEIS) action plan, updated in 2017, which also applies to the infant classes. This plan includes a standardised system for identifying disadvantages and an integrated School Support Programme (SSP) in a multi-layered approach. The action plan also emphasises the involvement of parents and families (Department of Education 2021b).

Children with a migration background – Children from Traveller and Roma communities

The wide range of private institutions in Ireland makes it difficult to find robust data on children with a migration background.

In 2022, 13.3% of the population had a non-Irish citizenship; of these, just over half (53%) were from other EU27-countries. In the group of under 5 year-olds 6.4% had a non-Irish background, just under two-thirds (65%) of them came from other EU countries (Eurostat 2023c, own calculations).

For refugee children up to the age of 5, the Community Childcare Subsidy Re-settlement (CCSR) programme provides free part-time and full-day care to support their integration into Irish society (European Commission/EACEA/Eurydice 2019, 61).

17% of settings had at least one Traveller child enrolled in 2018/19, and 7% had at least one Roma child enrolled. 12% of all children enrolled did not speak English or Irish (Eurochild 2021). In 2022/23, national statistics report 907 Roma children and 2,533 Traveller children in 303 and 687 ELC/SAC settings respectively. While 74% of Roma children (670) attended private institutions, the majority of Traveller children (65%, 1,650) were enrolled in community institutions (Pobal 2023).

Parental leave arrangements⁵

Maternity leave lasts 42 weeks, at least two of which must be taken before the birth. For 26 weeks, a weekly amount of €262 is paid, provided that the mother was in compulsory employment for 39 weeks in the 12 months before the birth.

The two weeks of **Paternity leave** must be taken in one go during the first six months after the birth and are paid at €262 per week.

Unpaid **Parental leave** is granted for 26 weeks per parent and child and is not transferable, unless both parents work for the same employer. In this case, 14 weeks can be transferred to the other parent with the employer's consent. Parental leave can be taken until the child's 12th birthday. Both parents may also take parental leave at the same time and in different blocks of at least six consecutive weeks. All persons who have been continuously employed by the same employer for one year are entitled to parental leave.

After taking maternity leave and parental leave, each parent is entitled to a further seven weeks of **Parent's leave**, remunerated at €262 per week, which must be taken in the first two years after the birth, even by both parents at the same time.

In 2019, maternity allowances were paid to 5.3% of employed mothers. Take-up of Paternity leave rose to 48% in 2020. Also, the take-up of paternity benefit has increased significantly in recent years (from 27,295 in 2019 to 26,539 in 2021). After the introduction of *Parent's leave* in 2020, its take-up increased significantly: from 16,683 in 2020 to 51,395 in 2021. It is estimated that nearly 100% of mothers and 48% of fathers made use of it in 2021. Data on the overall take-up of parental leave is not available.

Current challenges for the ECEC system in Ireland

Country expert assessment by Maresa Duignan

Ireland has made major progress in the development of the provision of ECEC services for children aged 0–6 years since 2000. With an almost 200-year history of infant education in primary schools for children aged from 4 years, attendance at 'pre-school' ECEC provision was traditionally low and exacerbated by a low participation rate of mothers of young children in the labour market. In 2023, Ireland's demographic, economic and social policy profile has undergone radical change and the State has responded positively in relation to the provision of ECEC services. The level of state investment in ECEC (non-primary) provision exceeded €1 billion for the first time in the national budget for 2022 and a suite of national policy commitments were published to articulate a clear, strategic and cross government vision for the future development of the sector (DCEDIY 2022).

Whilst much of this commitment was built on decades of advocacy, research and evaluation of a continuum of previous government initiatives, the global Covid-19 pandemic (2020–2022), certainly highlighted the importance of realising this vision in a timely manner. During this period, the important role played by ECEC provision as a critical support for both economic activity and an inclusive society was widely accepted. In 2024, a renewed focus on development of the ECEC sector is gathering momentum. A set of cross government initiatives have been established to ensure that Ireland is a nurturing, enriching place to be a child. As the vision for *First 5, A Whole of Government Strategy for Babies, Young Children and their Families 2019–2028* states:

⁵ The brief overview in this section is based mainly on the country note for Ireland by Stephan Köppe und Dorota Szelewa in the *International Review of Leave Policies and Research 2023* (see References).

All babies' and young children's early years will be valued as a critical and distinct period which should be enjoyed. Families will be assisted and enabled to nurture babies and young children and support their development, with additional support for those who need it. Those providing services for babies, young children and their families will be equipped to contribute to their learning, development, health and wellbeing. Community contexts will help babies and young children make the most of their early years and fulfil their potential. (DCEDIY 2018).

Whilst the range of initiatives are complex and cross-cutting, the core objectives can be summarised under the following headings:

1. **Improving access** – The commencement of Core Funding is a major step forward in state support for access to ECEC. Core Funding improves affordability for parents by instituting a fee freeze in participating early learning and care services; access for parents by expanding the capacity being offered by the sector, particularly for younger children; quality including promoting stability across the workforce through improved pay, conditions and career structure underpinned by Employment Regulation Orders; and operational stability and sustainability for providers.
2. **Promoting inclusion and participation** – A review of the innovative Access and Inclusion model of supports for children with disabilities in ECEC provision has been completed and a report is due to be published in 2024. Enrolment data would suggest that the findings of this review will be positive with the significant majority of all eligible children availing of publicly funded ECEC.
3. **Improving quality** - Investment in the quality of ECEC provision has resulted in a range of initiatives including: the establishment of Better Start, a national quality support service for ECEC; introduction of revised regulations to allow for establishment of a registration system for ECEC services; commencement of Education-focused inspection. An ambitious reform programme is underway in 2024 that aims to restructure governance and funding systems; extend regulation to family day-care and school age childcare; build workforce capacity and security; promote inclusion and participation for all children in Ireland and improve the quality of children's early learning and care experiences.
4. **Promoting positive transitions** – It is important to note that there is a clear understanding evident in national Government policy, that children's lived experiences must be to the fore in the shaping and delivery of public ECEC services. This translates into a series of commitments to promote positive, and where possible seamless transitions across the diverse settings they may experience in early childhood and beyond.

In conclusion

Ireland's journey toward establishing universal access for all children to high quality ECEC provision has advanced significantly in the two decades since 2000. A clear and coherent national vision with strong commitment to substantial State funding has been established and instils much optimism for future developments in ECEC.

Undoubtedly many challenges for implementation remain. The legacy of diverse provision and practice across ECEC services, including the split systems of governance for school and non-school based provision continues to create barriers to seamless transitions for children and their families. Increases to funding, whilst substantial are still significantly short of the international averages across OECD nations. Global inflationary pressures and increased costs of living, the war in the Ukraine and concomitant refugee crises have acted to exacerbate Ireland's home grown economic and social problems including a national homelessness crisis and staff shortages across the public services.

However, on balance a positive trajectory of improvement in ECEC provision has been achieved in a relatively short two decades of investment in change. The realisation of national commitments over the next ten years will act to consolidate and progress these achievements in the best interests of young children and their families.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Ireland was 5,060,004. This represents a steady increase over the last 20 years (2000: 3,777,565; 2010: 4,549,428; 2020: 4,964,440) (Eurostat 2023a).

Total fertility rate

In 2021, the average total birth rate in the EU27 (as of 2020) was 1.53. The highest total birth rate in the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.78, Ireland is well above the EU27 average (Eurostat 2023d)⁶.

Children under age 6

Table 7
Ireland: Number of under 6 year-olds in total population, 2022

Age	Number of children
Under 1 year-olds	58,868
1 year-olds	56,524
2 year-olds	60,385
3 year-olds	61,980
4 year-olds	63,465
5 year-olds	64,274
Total 0 to under 6 year-olds	365,496

Source: Eurostat 2023a

In 2022, 3.5% of the total population were children under the age of 3, and 7.2% were children under the age of 6. As in the last 20 years, these proportions are significantly higher than the respective EU averages.

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Table 8

Ireland: Relative share of under 6 year-olds in population by age groups compared with EU averages, 2000 to 2022, in %*

Year	Comparison Ireland/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Ireland	4,3	4,1	8,4
	∅ EU15 ⁷	3.2	3.2	6.4
2005	Ireland	4,4	4,2	8,6
	∅ EU25	3.1	3.1	6.2
2015	Ireland	4,3	4,6	8,8
	∅ EU28	3.0	3.2	6.2
2022	Ireland	3.5	3.7	7.2
	∅ EU27(2020)	2.7	2.9	5.7

Source: Eurostat 2023a, * Own calculations, slight deviations due to rounding

Single households with children under age 6

71.9% of households with children under 6 in Ireland were couple households in 2022. Single parent households accounted for 9.5% - a good two-thirds of them were single mothers (6.8%), one-third single fathers (2.7%).

Table 9

Ireland: Households with children under age 6, 2022

Household type	Total households	Relative share of all households, in %*
Total households	553,200	
Couple households	397,600	71.9
Other types of households	103,300	18.7
Total single households	52,300	9.5
Single households, women	37,500	6.8
Single households, men	14,800	2.7

Employment rates of parents with children under 6 years of age

In Ireland, in 2022, the overall employment rate for men (15–64 years) was 81.8% and for women 71.8% (Eurostat 2023i).

In 2022, 68.7% of women and 88% of men (18–64 years) with children under 6 were employed. The share of employed fathers was thus slightly above the average of the 27 (2020) EU countries, while the share of mothers was more pronounced (averages 87.2% and 63.6% respectively) (Eurostat 2023h, own calculations).

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 10a

Ireland: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers in %	Fathers in %
Ireland	55.5	77.3
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2022	
	Mothers in %	Fathers in %
Ireland	68.7	88.0
Highest rate of employment in 27 (2020) EU countries ⁹	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Source: Eurostat 2023h

For the SEEPRO-3 countries that were not part of the EU27(2020) in 2021/2022, data are displayed in *Table 10b*

Table 10b

Employment rates in non-EU SEEPRO-3 countries, 2021/2022/2023

Countries	Parents with children under 6 years		Overall employment rate	
	Mothers in %	Fathers in %	Women in %	Men in %
*Norway (2022)	82.9	94.3	75.4	80.1
***Russia (2021/2022)	67.1 (2021)	k.A.	55.6 (2022)	70.4 (2022)
*Serbia (2022)	64.4	78.3	57.9	71.0
**Switzerland (2022/2023)	46.9	95.3	60.0 61.1 (2023)	83.5 84.2 (2023)
+Ukraine (2021)	n.d.	n.d.	60.7	69.9
+++United Kingdom (2021/2023)	75.6	92.1	++72.3	++79.2
with dependent children	72.4	93.1		
with children under 2 years	70.7	95.0	++72.1 (2023)	++79.4 (2023)
with children 3–4 years

Children at risk of poverty or social exclusion¹⁰

In 2022, 19.7% of children under 6 in Ireland were at risk of poverty or social exclusion. This proportion is lower than the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 20.7% (EU: 21.6%). In 2020, 2.8% of children under 6 suffered from severe material deprivation - this proportion is significantly lower than the EU27 average of 6.1%. For the total population, it was 1.4% (EU: 4.3%) (Eurostat 2023f, g).

The strategy "A roadmap for social inclusion 2020-2025" aims to reduce the proportion of people living in poverty to 2% or less. Children with single parents are particularly affected by poverty or social exclusion (Eurochild 2021).

About the authors

Mariacristina Picchio, PhD in Education, is a researcher at the Institute for Cognitive Sciences and Technologies of the National Research Council of Italy (ISTC-CNR). Her research is mainly focused on socialisation processes in early childhood, evaluation of ECEC services, and initial training and continuing professional development of ECEC professionals. She is country coordinator for the European Early Childhood Education Research Association (EECERA).

Chiara Bove, PhD, is a Full Professor of General and Social Pedagogy at the Department of Human Sciences for Education, University of Milan-Bicocca, where she currently coordinates the PhD “Education in Contemporary Society”. Her research mainly concerns early childhood education, school and family relationships, diversity/intercultural education and continuing professional development of ECEC professionals. She is country coordinator for the Early Childhood Education Research Association (EECERA). She has authored books as well as articles in national and international journals.

1. ECEC governance in Italy

In Italy, early childhood education and care (ECEC) is currently organised within the ‘Integrated System of Education from birth to six years’ (*Sistema integrato di educazione e istruzione dalla nascita ai sei anni*), which was established by Law 107/2015 (The Good School – *La Buona Scuola*), and it has been regulated by a subsequent Act (Law Decree 65/2017). This newly Integrated System, from now on referred to as “Integrated System 0–6”, overcomes the previous split system between childcare (0–3) and early education (3–6) which has existed since the 1960s.

The Integrated System 0–6 is part of the national education system under the responsibility of the Ministry of Education and is composed of two sectors according to the children’s age:

- (1) The sector of “educational services for early childhood” (*servizi educativi per l’infanzia*), from now on referred to as “educational services 0–3 years”¹ comprises a variety of provisions for infants and toddlers up to age 3. These include: nurseries (*nidi or micronidi*, depending on their capacity) and integrative services (*servizi integrativi*) such as centres for children and families (*centri per bambini e famiglie*) and playgroups (*spazi gioco*) for children from 12 to 36 months for up to a maximum of 5 hours per day. Also included are so-called “spring sections” (*sezioni primavera*) for children aged 24–36 months, usually located in pre-primary schools. These services are provided by local municipal authorities or by the private sector, according to general criteria defined at the regional level. Attendance at educational services 0–3 years requires families to pay fees (*nidi* are on-demand services – *servizi a domanda individuale*);
- (2) The provision for children aged 3–6 years consists of *scuole dell’infanzia* (lit. schools of early childhood), from now on referred to as “pre-primary schools”, which can be provided by the state, municipalities or the private sector. Within the private sector, there are “recognised” private sector schools (*scuole paritarie*), most of which are managed by a catholic non-profit organisation (FISM)–and are normally subsidised through national or regional funds. There are also some “non-recognised” private schools. Attendance at state-maintained and municipal pre-primary schools is free of charge (families pay a fee only for lunch and the school bus), while confessional schools may charge modest participation fees.

The enactment of Law Decree 65/2017 has been driving a process of integration between the two sectors (Art. 4 “Institution of the integrated system from birth to six years”) in terms of both governance and educational continuity (see *Chapter 8*). It has designed a complex governance of the Integrated System 0–6 within an articulated framework of interaction and cooperation between State, Regional governments, and Local authorities:

- The Minister of Education steers, plans, and coordinates actions for the progressive extension and qualification of the integrated system in collaboration with regional governments and has recently defined and drawn up Pedagogical Guidelines for the Integrated System 0–6 (*Linee Pedagogiche per il Sistema Integrato Zerosei*) (Ministerial Decree-DM 334/2021).

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: 0–2 years for countries with a school starting age at 6; 0–2 years for children up to 3 years of age and 3–5 years for 3, 4 and 5 year-olds. In the case of Italy, however, in compliance with Italian legislation and regulations, the authors of this report have chosen the age formats: 0–3 years for settings for children up to 3 years of age and 3–6 years for pre-primary settings.

- Regions define the structural, organisational and quality standards of educational services 0–3 years, plan and develop the Integrated System 0–6 according to the specific needs of their areas, support the professionalism of ECEC staff and promote local pedagogical coordination in agreement with the *Uffici Scolastici Regionali* (Regional Ministry School Offices) and representatives of the local authorities.
- Local authorities have specific competences in managing (directly or through agreements with the private sector) and monitoring the educational services 0–3 years according to regional regulations and, in some cases, a number of municipal pre-primary schools. They also have the important tasks of promoting the quality of the Integrated System 0–6, by providing continuing professional development initiatives for professionals, and activating the local pedagogical coordination of all the educational services 0–3 years and pre-primary schools in their areas.

The implementation of this complex system of governance is currently an ongoing process and is supported by the National Multiannual Implementation Plan (*Piano di Azione Nazionale Pluriennale per la Promozione del Sistema Integrato di Educazione e Istruzione*) that defines actions and financial resources for developing and qualifying the system (see *Chapter 8*).

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The staff categories currently working directly with children in the Italian ECEC provision are:

Educatori/educatrici (Educators), who are qualified professionals working with under 3 year-olds in nurseries (*nidi*), integrative services and spring sections (*sezioni primavera*). Upon the approval of the Law Decree 65/2017, from 2019/2020 onwards, a Bachelor's degree in Educational Science (*Scienze dell'Educazione*) with a specific pathway in Early Childhood Education or a 5-year degree in Primary and Pre-primary Education, plus a 60 ECTS credits additional module in Early Childhood Education, have become the mandatory requirements for working in an educational service 0–3 years.

Insegnanti (Teachers), who are qualified professionals working with children aged 3–6 years in pre-primary schools (*scuole dell'infanzia*). Their teaching qualification is a 5-year university degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*), which makes them eligible to teach in both primary and pre-primary settings.

Ausiliari/ausiliarie or **operatori/operatrici** (auxiliary staff), who are responsible for cleaning, preparing lunch and providing practical backup for educators and teachers as necessary, for example by clearing up materials and tidying the room. They are not “teaching assistants” (this category does not exist in Italy) and do not assist teachers in delivering educational activities. The minimum qualification requirements for auxiliary staff are defined at the regional level but usually include having successfully completed compulsory education (*diploma di scuola dell'obbligo*).

Table 1 outlines the profiles and minimum qualification requirements of core practitioners working directly with children, who are categorised according to one of five ECEC professional profiles adapted from the original SEEPRO study (*Box 1*).

Table 1

Italy: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Dirigenti scolastici (School Heads) are qualified professionals who have management and educational responsibilities for state-maintained pre-primary schools or *istituti comprensivi* (groups of pre-primary, primary and lower-secondary schools under one head). They hold a relevant third-level qualification (a 5-year university degree/Master’s degree) and are recruited from among former teachers who have worked in schools for at least five years. They are in charge of managing the human and financial resources of schools; they usually do not have a specific pedagogical competence in early childhood education.

For information on the management of nurseries and other services for under 3 year-olds, see *Chapter 2.4*.

2.3 Centre-based posts of responsibility

In state-maintained pre-primary schools (*scuole dell’infanzia*), Teachers can take on the role of managing, organising or coordinating specific projects aimed at implementing the quality of

ECEC provision, such as activities for promoting the inclusion of children with disabilities, continuity between educational services 0–3 years, pre-primary schools and primary schools or evaluation according to the national guidelines and procedures (INVALSI 2016). This role – called “instrumental function” (*funzione strumentale*) – has to be performed outside working hours and is remunerated with a fixed fee of €1,400 for each project plus an extra fee that varies according to the number of children attending the pre-primary school.

In some state-maintained pre-primary schools, a Teacher with a high level of seniority may be appointed as Referent for the coordination of pre-primary schools at the discretion of the School Head.

2.4 Co-ordinating and supervisory staff

Coordinatori pedagogici (Pedagogical Coordinators, called *pedagogista* in the municipality of Reggio Emilia) are qualified professionals with management and educational responsibilities in the municipal ECEC system for 0–6 year-olds. This professional role was created in the 1980s and 1990s by local governments in the cities that had invested in ECEC provision areas (Baudelot, Rayna, Mayer, and Musatti 2003; Catarsi, 2010; Musatti, Mayer, and Braga 2003). Over the past 20 years, the number of Pedagogical Coordinators has increased significantly in the cities of the central and northern regions.

Pedagogical Coordinators are key figures in the Integrated System 0–6 approach to education. In municipal ECEC provision, they are responsible for a number of ECEC centres (usually both educational services 0–3 years and pre-primary schools) according to regional regulations. The presence of a Coordinator is a basic requirement for private providers of educational services 0–3 years to obtain public funding and is widespread in municipal pre-primary schools, while the role in state pre-primary schools is still to be defined.

No competence profile for Pedagogical Coordinators exists at national level, but most regional regulations have a job description for them. Although these descriptions may vary, the overall profile is found to be quite homogeneous: supporting educators’/teachers’ reflection on their practice; monitoring educational practices sometimes documenting and evaluating ECEC quality; encouraging pedagogical continuity; promoting and caring relationships between the educational services 0–3 years/pre-primary schools and the municipal administration; promoting CPD initiatives specifically addressing ECEC core practitioners; and contributing to orienting and planning policies for early childhood and families at the local level (Campioni 2022). The crucial role of Pedagogical Coordinators is emphasised in the Pedagogical Guidelines of the Integrated System 0–6 (see *Chapter 8*), recently approved by the Minister of Education.

In most medium-sized and large cities (such as Reggio-Emilia, Milan or Rome) (see *Box 2*), Pedagogical Coordinators form a team at the municipal level (*coordinamenti pedagogici municipali*). Some regions (Tuscany, Emilia-Romagna and Umbria) have established a stable network of Pedagogical Coordinators at the regional or district level (*coordinamenti pedagogici regionali, coordinamenti pedagogici provinciali and coordinamenti pedagogici zonali*), which brings together all municipal pedagogical coordinators of the area (even from small towns). The team is responsible for research and innovation and thus for constantly revising the values underlying the overall educational programme, as well as directing and guiding everyday educational activities (Lazari, Picchio, and Musatti 2013; Murphy, Ridgway, Cuneen, and Horgan 2016).

Italy: The role of the Pedagogical Coordinator in the ECEC system*Three examples:*

In **Milan**, a large and cosmopolitan city with about 300 ECEC services directly under the management of the city council, Pedagogical Coordinators (called *posizioni organizzative*) play a crucial role as trained professionals with education and management responsibilities. They work to improve the quality of ECEC provision and are each responsible for three to four ECEC services in one of the city's nine zones. At present, 68 Pedagogical Coordinators (*posizioni organizzative*) are employed in ECEC provision in the city of Milan. They are key figures within the integrated 0–6 approach that characterises the city's early education system. Each *Posizione Organizzativa* coordinates educational services, pre-primary schools and spring sections of the same "educational unit" in the logic of an integrated 0–6 system. Their role includes pedagogical, managerial and administrative tasks (*Linee Pedagogiche*, Comune di Milano 2016).

In **Reggio Emilia**, the role of Pedagogical Coordinator – called in this municipality *pedagogista* – is embedded in a system of relationships with educators, teachers, other school staff, parents, citizens, administrators, public officials and external audiences. *Pedagogisti* are organised in a Pedagogical Coordinating Team, form their own collaborative working group and interface with the educational services 0–3 years and pre-primary schools' teams (educators, teachers, *atelieristi*, mentor teachers, auxiliaries, cooks and other staff) as well as with administrators, officials and public bodies who are stakeholders in the Reggio Emilia ECEC system.

The municipal ECEC system of **Rome** consists of a large number of ECEC services. 400 educational services 0–3 years and 317 *scuole dell'infanzia* are managed directly by the municipality, while 173 educational services 0–3 years are subsidised by the municipal administration on the basis of specific agreements and quality requirements. In 2001, the municipality of Rome introduced the professional profile of Pedagogical Coordinator and employed a considerable number of coordinators (more than 200) in order to qualify the whole ECEC system in the city. Each of them, who was responsible for both municipal educational services 0–3 years and *scuole dell'infanzia*, supports staff practice and promotes its improvement. Subsidised educational services 0–3 years were also requested to employ Pedagogical Coordinators. Municipal Pedagogical Coordinators were grouped into district teams (*coordinamenti pedagogici municipali*) in order to network the ECEC services of the same area. A central coordination team (*coordinamento centrale*) at the city Department of Education coordinated their activities and organised CPD initiatives. In recent years, the number of Pedagogical Coordinators has decreased substantially due to many retirements, causing an overload for the coordinators still in service. In 2021, a decree of the Lazio Region (DR 61/2021) defined the professional profile of Pedagogical Coordinators and their workload. Currently, the municipal administration of Rome is discussing how to hire new staff and reorganise the pedagogical coordination teams in the different areas of the city according to the recent regional decree.

The Law Decree 65/2017 (see *Chapter 8*) confirms the importance of these key figures: it considers that establishing local pedagogical coordination is a strategic part of implementing the Integrated System 0–6 and states that Regions are expected to promote and Local governments to activate *coordinamenti pedagogici territoriali* in their areas; these will include Pedagogical Coordinators of municipal and private educational services 0–3 years and municipal, private and state-maintained pre-primary schools.

2.5 Specialist support staff

Insegnanti di sostegno (Special Needs Teachers) are qualified professionals working in pre-primary and primary schools. Their teaching qualification is a 5-year university degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*) plus a 1-year course (60 ECTS credits = 1,500-hour course) on inclusion and teaching methods and approaches for children with special needs and disabilities.

A Special Needs Teacher usually works in a pre-primary school when a child with special needs attends it. Their role is not only supporting the child for a certain number of hours a day, but

also promoting processes of inclusion and integration within the group of children. The overall idea (pedagogy) is to respond to children’s needs by fostering inclusion through personalised interventions as well as a suitable organisation of space and activities within the group of peers. When a child with special needs attends an educational service 0–3 years, no Special Needs Teacher is required but either the number of children in the group is decreased or the number of Educators (*educatori/educatrici*) is increased.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

It is difficult to source data concerning the structural composition of the Italian ECEC workforce for a number of reasons. Firstly, as stated above, the reformed Italian ECEC system has not yet been fully implemented as a unitary system in terms of organisation and governance. Furthermore, multiple institutions are involved in gathering data related to 0–3 and 3–6 ECEC services in the public (municipal and state) and private sectors. Data are thus fragmented and collected according to different criteria. The most reliable sources are the Italian National Institute of Statistics (ISTAT), the *Istituto degli Innocenti* (the first secular institution dedicated to taking in children, studying children’s living conditions and promoting their rights and culture) and the Ministry of Education, which do not systematically collect data on the structural composition of the ECEC workforce.

Currently, the only data compiled by the Ministry of Education are related to the gender of teachers who work in pre-primary schools run by the state and the percentage of Special Needs Teachers in these schools. However, the implementation of a national information system for the Integrated System 0–6, envisaged by Law Decree 65/2017, should provide more information on the structural composition of the Italian ECEC workforce in the near future.

Table 2

Italy: Structural composition of ECEC workforce in state-maintained pre-primary education (3–6)

Staff category	Year/provision/proportion of workforce
Staff with specialist higher education degree	<i>No national statistical data available</i>
Staff with specialist vocational qualification (post-secondary)	<i>No national statistical data available</i>
Staff with specialist vocational qualification (upper secondary)	<i>No national statistical data available</i>
Staff with non-specialist qualification (other qualification)	<i>No national statistical data available</i>
Unqualified staff	<i>No national statistical data available</i>
Specialist support staff (e.g. Special Needs Teachers)	2021: State maintained pre-primary schools (3–6): 18.2%
Male staff	2021: State maintained pre-primary schools (3–6): 0.8%
Staff with a background of migration	<i>No national statistical data available</i>

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Educators (*educatori/educatrici*)

The Law Decree 65/2017 states that, from 2019/2020, two qualification alternatives are mandatory requirements for working in 0–3 settings. One is a Bachelor's degree in Educational Science (*Scienze dell'Educazione*) with a specific pathway in Early Childhood Education; these are differently named from university to university – such as *Educatore di Nido e di Comunità Infantili* (Educator for Nurseries and Early Childhood Communities), *Scienze dell'Infanzia* (Early Childhood Studies) or *Educatore della Prima Infanzia* (Early Childhood Educator). The other is a 5-year degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*, supplemented by a module of 60 ECTS credits in Early Childhood Education).²

Before the approval of Law Decree 65/2017, only three universities (the University of Bologna, University of RomaTre and IUL Online University) had already implemented a 3-year Bachelor's degree in Educational Science focused on early childhood education, while, following the approval of the Law Decree, an increasing number of universities (currently 33³) are activating a specific pathway in Early Childhood Education (55 ECTS credits) within the 3-year Bachelor's Degree in Educational Science.

To date, only a few universities have introduced the supplemented postgraduate module addressing Pre-primary Education Teachers, which enables them to work in educational services 0–3 years. This is due to a lack of applications by teachers.

Pre-primary Education Teachers (*insegnanti*)

The entry requirements for teachers working in pre-primary schools are established at the national level. Since 2010 (Ministerial Decree-DM 249/2010), these teachers have been required to hold a 5-year university degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*), which qualifies them for posts in both pre-primary schools (3–6 years) and primary schools (6–11 years). This course of studies is not organised consecutively with a Bachelor's and a Master's degree but is a unified course. It is therefore termed a 'continuous cycle' degree. The universities chosen to provide this 5-year course (one per region and two each in Lombardy and Lazio), the syllabus and the entry criteria (number of students and tests) are decided each year by the Ministry of Universities and Research.

Special Needs Teachers (*insegnante di sostegno*)

Candidates wishing to work as a Special Needs Teacher (*insegnante di sostegno*) in pre-primary education settings have to complete the 5-year university degree in Primary and Pre-primary

² In Note 14176/2018, the Ministry of Education, University and Research (MIUR 2018a) stated that, in this transition phase, a Bachelor's degree in Educational Science (without a specific focus on early childhood education), a 5-year degree in Primary and Pre-primary Education or any other qualifications required by regions that have not yet updated their laws on the basis of Law Decree 65/2017 (such as a Secondary School Diploma in Education/Human Science) can also still be accepted.

³ Sources: *Universitaly* database (<https://www.universitaly.it>) and university sites (last consultation May 2022).

Education (*Scienze della Formazione Primaria*) plus a 1-year postgraduate course (60 ECTS credits) on ‘inclusion and educational approaches’ to work with children with special needs and disabilities (*diploma di specializzazione per l’attività di sostegno didattico agli alunni con disabilità*).

Auxiliary staff (*personale ausiliario*)

The minimum entry requirements for auxiliary staff working in educational services 0–3 years and pre-primary schools are set at regional level. Typically, auxiliary staff are required to have successfully completed compulsory education (i.e. lower-secondary school prior to 2003; currently at least the first two years of upper-secondary school, given that compulsory schooling now ends at the age of 16).

School Heads (*dirigente scolastico*)

State-maintained pre-primary schools (*scuole dell’infanzia*) are under the direction of *dirigenti scolastici* (school heads), who are responsible for the *istituti comprensivi* (group of pre-primary, primary and lower-secondary schools) to which *scuole dell’infanzia* belong. These heads hold a relevant third-level qualification (a 5-year university degree/Master’s degree), and they are recruited from among former teachers who have worked in pre-primary, primary or secondary schools for at least five years.

Pedagogical Coordinators (*coordinatori pedagogici*)

The minimum qualification requirements for Pedagogical Coordinators (*coordinatori pedagogici*) with managerial, organisational and educational responsibilities in municipal ECEC settings are locally defined via regional legislation and vary across regions (see *Chapter 2.4*); however, a Master’s Degree in Education, Psychology, Sociology or Social Work is usually requested.

Two examples follow: In the Lombardy region (e.g., in the city of Milan), a Pedagogical Coordinator (called *posizione organizzativa*) may hold a Bachelor’s or Master’s degree in Education, Psychology, Sociology or Social Work or a Master’s degree in Primary and Pre-primary Education. It is also possible to work in this position at a lower level with 5 years of prior work experience in educational services 0–3 years, while, in the Emilia-Romagna region, a Master’s degree in Education is required.

Some universities provide a Master’s degree in Planning and Management of Educational Services (*Laurea Magistrale in Programmazione e Gestione dei Servizi Educativi*), which is aimed at training qualified professionals with competences in planning, managing and coordinating a variety of services, such as educational and socio-educational services, socio-cultural services, school and out-of-school services, integration and cultural mediation services for all ages, training agencies and so on. Other universities provide a 1-year Master’s course (60 ECTS credits) specifically aimed at training Pedagogical Coordinators of ECEC services. For instance, since 2006, the University of Florence has been providing the first Master’s degree course in “Pedagogical Coordination of Early Childhood Education and Care”, instituted by Enzo Catarsi, professor of general pedagogy at the University of Florence (Silva 2019).

The following tables summarise the initial qualifying routes for ECEC staff.

Table 3

Italy: Educator

Job title in Italian: <i>Educatore/educatrice</i> Profile: Social and Childhood Pedagogy Professional
<p>The following qualification routes are the current <i>requirements</i> for core professionals (Educators) for working in educational services 0–3 years.</p> <p><i>Route 1</i></p> <p>Entry requirements: General university entrance qualification (<i>Diploma di istruzione secondaria superiore</i>); individual university selection procedures</p> <p>Professional studies: 3-year university degree programme</p> <p>Award: Bachelor’s degree in Educational Science (<i>Laurea triennale in Scienze dell’Educazione</i>), with a specific pathway in Early Childhood Education.</p> <p>ECTS credits: 180</p> <p>EQF level: 6</p> <p>ISCED 2011: 64</p> <p>Main ECEC workplaces: Nursery centres (<i>Nidi</i>) 0–3 years; Spring section (<i>Sezioni Primavera</i>) 2–3 years; Integrative services such as Centres for children and families (<i>Centri per bambini e famiglie</i>) 0–3 years; Playgroups (<i>Spazi Gioco</i>) 18–36 months; other educational and social and settings, such as social-care services (across the lifespan), residential care for minors, international cooperation, etc.</p> <p><i>Route 2</i></p> <p>Entry requirements: 5-year university degree in Primary and Pre-primary Education (<i>Scienze della Formazione Primaria</i>) (equivalent to Master’s degree)</p> <p>Professional studies: An additional 1-year postgraduate module in Early Childhood Education.</p> <p>Award: Postgraduate diploma in Early Childhood Education (<i>Educatore della prima infanzia</i>)</p> <p>ECTS credits: 300 (degree in Primary and Pre-primary Education) + 60 ECTS credits (module in Early Childhood Education)</p> <p>EQF level: 7</p> <p>ISCED 2011: 74</p> <p>Main ECEC workplace: Nursery centres (<i>Nidi</i>) 0–3 years; Spring section (<i>Sezioni Primavera</i>) 2–3 years; Integrative services such as Centres for children and families (<i>Centri per bambini e famiglie</i>) 0–3 years; Playgroups (<i>Spazi Gioco</i>) 18–36 months; Pre-primary schools (<i>Scuole dell’infanzia</i>) 3–6 years.</p>

Table 4

Italy: Pre-primary Education Teacher

Job title in Italian: <i>Insegnante di scuola dell’infanzia</i> Profile: Pre-primary and Primary Education Professional
<p>Entry requirements: General university entrance qualification (<i>Diploma di istruzione secondaria superiore</i>); individual university selection procedures. Criteria for access (number of students and tests) are decided each year by the Ministry of Universities and Research.</p> <p>Professional studies: 5-year university route in <i>Scienze della Formazione Primaria</i> (degree in Primary and Pre-primary Education)</p> <p>Award: <i>Diploma di laurea magistrale a ciclo unico per insegnante di scuola dell’infanzia e primaria</i> (5-year university degree equivalent to Master’s degree)</p> <p>ECTS credits: 300</p> <p>EQF level: 7</p> <p>ISCED 2011: 74</p> <p>Main ECEC workplaces: Pre-primary schools (<i>Scuole dell’infanzia</i>) 3–6 years.</p>

Italy: Auxiliary Staff

Job title in Italian: <i>Ausiliario/ausiliaria or operatore/operatrice</i>
<p>The following qualification route is the usual <i>current</i> requirement for auxiliary staff in ECEC settings and may vary from municipality to municipality.</p> <p>Entry requirements: Completion of primary school</p> <p>Professional studies: Compulsory education: lower secondary school (before 2003), or (after 2003) at least the first 2 years of upper secondary school.</p> <p>Award: Compulsory school leaving certificate (<i>Diploma di scuola dell'obbligo</i>)</p> <p>ECTS credits: not applicable</p> <p>EQF level: not applicable</p> <p>ISCED 2011: 2 or 3</p> <p>Main ECEC workplace: Nurseries (<i>Nidi</i>) 0–3 years; Spring section (<i>Sezioni Primavera</i>) 2–3 years; Integrative services such as Centres for children and families (<i>Centri per bambini e famiglie</i>), 0–3 years; Playgroups (<i>Spazi gioco</i>) 18–36 months; Pre-primary schools (<i>Scuole dell'infanzia</i>) 3–6 years.</p>

Table 7

Italy: School Head of state-maintained pre-primary schools

Job title in Italian: <i>Dirigenti scolastici</i>
<p>Centre Heads of state-maintained pre-primary schools are recruited from among former teachers who have worked in pre- primary, primary or secondary schools for <u>at least five years</u>. The following qualification route is the usual current requirement for the role of school head.</p> <p>Entry requirements: General university entrance examination (<i>diploma di istruzione secondaria superiore</i>), individual university selection procedures.</p> <p>Professional studies: 5-year university degree in <i>Scienze della Formazione Primaria</i> (Primary and Pre-primary Education) or Master's degree in Education, Psychology, or other human or scientific sciences.</p> <p>Award: Master's level degree in <i>Scienze della Formazione Primaria</i> (Primary and Pre-primary Education) or Master's degree in Education, Psychology or other human or scientific sciences. Qualified Teacher Status for pre-primary, primary or secondary education.</p> <p>ECTS credits: 300</p> <p>EQF level: 7</p> <p>ISCED 2011: 74</p> <p>Main ECEC workplaces: Primary and lower secondary schools (<i>Scuole primarie e scuole secondarie di primo grado</i>) 6–13 years; Pre-primary schools (<i>Scuole dell'infanzia</i>) 3–6 years.</p>

Table 8

Italy: Pedagogical Coordinators 0–6 sector

Job title in Italian: <i>Coordinatore pedagogico</i>
<p>The following qualification route is the usual current requirement for the Pedagogical Coordinators of municipal nurseries (<i>nidi</i>), integrative services (<i>Centri per bambini e famiglie</i> and <i>Spazi gioco</i>), Spring sections (<i>Sezioni primavera</i>) or pre-primary schools. They can also be recruited among former Pre-primary Teachers or Educators (with a Bachelor's degree in Education, Psychology, Sociology, etc.) who have many years of professional experience in working in nurseries or pre-primary schools.</p> <p>Entry requirements: General university entrance qualification (<i>diploma di istruzione secondaria superiore</i>); individual university selection procedures.</p> <p>Professional studies: Three options are possible: (1) 5-year university degree in <i>Scienze della Formazione Primaria</i> (Primary and Pre-primary Education); (2) Master's degree in Education, Psychology, Sociology, Social work; (3) Bachelor's degree in Education, Psychology, Sociology, Social work plus a Professional Master qualification specifically aimed at training Pedagogical Coordinators of educational services 0-3 years and pre-primary schools.</p> <p>Award: See the three options above.</p> <p>ECTS credits: 180/300 EQF level: 6/7 ISCED 2011: 64/74</p> <p>Main ECEC workplace (it depends on qualification held): Nurseries (<i>Nidi</i>) 0–3 years; Spring sections (<i>Sezioni Primavera</i>) 2–3 years; Integrative services such as Centres for children and families (<i>Centri per bambini e famiglie</i>) 0–3 years, Playgroups (<i>Spazi gioco</i>) 18–36 months; Pre-primary schools (<i>Scuole dell'infanzia</i>), 3–6 years; Primary and secondary schools (<i>Scuole primarie e secondarie</i>), 6–13 years</p>

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Educators (*educatori/educatrici*)

The 3-year Bachelor's degree in Educational Science (*Laurea Triennale in Scienze dell'Educazione*) with a specific pathway in Early Childhood Education

As stated above, with the approval of Law Decree 65/2017 from 2019–2020, a 3-year Bachelor's Degree in Educational Science (*Laurea Triennale in Scienze dell'Educazione*) with a *specific pathway in Early Childhood Education* became a mandatory requirement for working in ECEC centres for children aged 0–3 years.

By Ministerial Decree DM 378/2018, the Ministry of Education, University and Research defined that the *specific pathway in Early Childhood Education* should consist of at least 55 ECTS credits on specific content concerning early childhood articulated as follows:

- at least 10 ECTS credits in general and social education (*pedagogia generale e sociale*)
- at least 10 ECTS credits in the methodology of education
- at least 10 ECTS credits in psychology (with a specific focus on early childhood)
- at least 5 ECTS credits in sociology (with a specific focus on early childhood)
- at least 5 ECTS credits in medical and health sciences (with a specific focus on early childhood)
- at least 5 ECTS credits in workshops connected with the above subjects
- 10 ECTS credits in internship/*tirocinio*.

The pathway is inscribed within the 3-year university course in Educational Science (*Laurea triennale in Scienze dell'Educazione*) aimed at training a socio-educational educator (*Educatore professionale socio-pedagogico* – see *Chapter 8*), who is qualified to carry out educational work in settings aimed at people of all ages, primarily in the following areas: educational and training; school; social welfare and health, limited to the socio-educational aspects; childhood, parenthood; cultural; judicial; environmental; sports and motor; integration and international cooperation. The course lasts three years and it provides for 180 ECTS.

Competences: The general course in Educational Science (*Scienze dell'Educazione*) is aimed at developing students' knowledge and competence in the areas of education methods/didactic approaches, educational and communication dynamics within an educational setting, teaching and learning processes, in order to prepare professionals to work with people of all ages and at all life stages, whether in conditions of 'normality', disadvantage, marginalisation, vulnerability or cultural diversity. Interdisciplinary activities and practical workshops are key coursework components (the workshops are designed to help students translate theory into practice). The basic goal underpinning the course is to foster the development of a professional with the ability to transfer and adapt a multidisciplinary approach to educational practices in different contexts (Mantovani 2007).

The degree course in Educational Science provides a *specific pathway* in Early Childhood Education.

The competences that graduate students are expected to have acquired through this *pathway* to become *educatore* in educational services 0–3 years are the following: cultural and psychopedagogical competences (knowledge about the pedagogical, sociological, psychological, anthropological, historical, philosophical and institutional aspects of the early education of children aged 0–3 years and their parents' needs); methodological competences (such as programming, observing, documenting and evaluating ECEC quality); technical and professional competences (setting up the environment, schedule and play materials according to children's developmental needs and capabilities, etc.); relational competences (for example listening and communicating empathically with children and parents or promoting children's well-being); and reflexive competences.

Curricular areas: The 3-year course is mainly focused on the human sciences (education, psychology, sociology, philosophy, intercultural education, anthropology, etc.), which are taught alongside the relevant curricular disciplines (languages, history, music, technology, etc.). Modules in special education and the psychology of disability and inclusion are also provided. A minimum level of competence in a foreign language (English, French, German or Spanish) is an obligatory entry requirement.

Pedagogic–didactic approaches: Coursework comprises lectures, workshops and internship (*tirocinio*) aimed at integrating theory and practice. Internship (*tirocinio*) is obligatory for all students and is carried out during the second and third years. The number of hours dedicated to this activity and their distribution over the years are established by the individual university. The practical work may take place in a variety of social and educational settings addressed to people of all ages. According to Decree DM 378/2018, which regulates the content of the *specific pathway in Early Childhood Education*, a minimum of 10 ECTS credits must consist of internship and at least half of its hours must be carried out in educational services 0–3 years.

The additional 1-year Module in Early Childhood Education (60 ECTS credits) for graduates with a degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*)

To work in educational services 0–3 years, graduates who hold a 5-year university degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*) can integrate their initial

training by obtaining 60 ECTS credits in Early Childhood Education. Through Decree DM 378/2018, the Ministry of Education, University and Research defined the content and articulation of this module:

- Between nine and 12 ECTS credits in education of early childhood (pedagogical, sociological, anthropological, historical, philosophical and institutional aspects of the early education of children from 0 to 3 and their parents' needs, etc.)
- Between nine and 12 ECTS credits in methodological approaches (methodologies of play and inclusion, procedures of programming, observing, documenting and evaluating ECEC quality, etc.)
- Ten ECTS credits in psychology (child development, families' relational dynamics, etc.)
- Two ECTS credits in the sociology of childhood and families
- Two ECTS credits in medical and health disciplines (paediatrics, health education, etc.)
- Two ECTS credits in sciences concerning children with special needs
- Between ten and 12 ECTS credits interdisciplinary workshops on various topics, such as welcoming practices in educational services 0–3 years, planning care and play activities, relationships with families, observing and documenting children's experience in the ECEC context, evaluating the quality of ECEC settings and so on
- Nine ECTS credits in direct and indirect internship (*tirocino*) in educational services 0–3 years
- Two ECTS points in a final work project.

This module has not yet been initiated in any Italian university due to a lack of applications from postgraduates in Primary and Pre-primary Education, who seem to prefer to be employed in pre-primary and primary schools rather than 0–3 services (Restiglian 2021).

Pre-primary Teachers (*insegnanti*)

The 5-year university degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*)

Since 2010, teachers working in pre-primary schools are obliged to hold a single-cycle 5-year university degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*) that makes them eligible to teach in either pre-primary (3–6 years) or primary schools (6–11 years).

Competences that graduate students are expected to acquire by the end of this course are:

- Cultural pedagogical and psychological competences (knowledge in the field of educational science, with a focus on psycho-pedagogic and methodological competencies as well as didactic competences)
- Multidisciplinary competences related to pre-primary and primary education
- Basic knowledge related to children with learning disabilities and their welcoming into the school environment, with a focus on personalised didactic approaches and intervention
- Informatics/technological competences.

This course seeks to develop teachers with all-round professional competence who are capable of fostering children's motivation, creativity and identity development while constructing flexible and complex learning programmes for the different subject areas, with a strong emphasis on transversal learning objectives. Students also receive training in the contents and methods of teaching of the subjects listed in the National Curricular Guidelines for Pre-primary and Primary Schools (*Indicazioni Nazionali per il Curricolo della Scuola dell'Infanzia e del Primo Ciclo di Istruzione and Indicazioni Nazionali e Nuovi Scenari*, Ministerial Decree DM 254/2012, MIUR 2018b).

Curricular areas: The course offers advanced theoretical and practical training in the areas of pedagogy, history of pedagogy, didactic, special pedagogy, developmental and educational psychology, teaching methodologies, technology and research, which together make up the professional profile of Pre-primary and Primary School Teachers. The curriculum balances the human sciences (education, psychology, sociology, anthropology and pedagogy) with relevant curricular disciplines (languages, history, geography, mathematics, sciences, art, music, etc.). Candidates also receive training and specific preparation for the inclusion of students with disabilities. The curriculum requires participation in workshops and internships. During the workshops (or lab work), students are usually split into small groups to share practical learning experiences and simulations of their plans for their teaching practice internships. The internship begins in the second year and lasts for a total of 600 hours (equivalent to 24 ECTS credits) divided between the years. The individual university decides how to distribute the hours over the years.

As specified in the current legislation (Ministerial Decree DM 249/2010), the following components are an integral part of initial professional education:

- a) English language competence – at least Level B2 in the Common European Framework of Reference for Languages adopted in 1996 by the Council of Europe. To qualify as teachers, undergraduates must either sit an examination or present certificates to prove that they have attained the required level of proficiency.
- b) Digital competence as outlined in the Recommendation of the European Parliament and of the Council, 18 December 2006. It is particularly important that teachers possess the ability to use multimedia languages to represent and communicate knowledge and to create simulated environments and virtual laboratories.
- c) Educational/didactic competence in fostering the inclusion of students with disabilities, in line with the provisions of Law 104/1992 and its subsequent modifications and additions.

Pedagogic–didactic approaches: The professional study routes for student teachers developed in recent decades are characterised by a multidisciplinary approach; the integration of theory and practice; and partnerships with pre-primary/primary schools. Experienced teachers play an active part in the delivery of these studies. The overall goal is to promote the development of all-round knowledge of the curriculum for pre-primary and primary practitioners.

At the end of this university route, there is also a final exam, known as VIVA, which consists of a written dissertation and oral defence about a teaching project carried out in a host school. Successful completion of the VIVA exam means that candidates have earned qualified teacher status for pre-primary and primary schools.

Special Needs Teachers (*insegnante di sostegno*)

To work as a Special Needs Teacher in pre-primary schools, graduates with a 5-year degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*) are required to attend an additional 1-year postgraduate course in Special Needs Education (60 ECTS credits).

Competences: The course content is specific to either pre-primary or primary school education, as relevant, and is aimed at helping teachers to develop the educational competences required to foster the inclusion of children with special needs (children with cognitive, sensorial or learning disabilities). In particular, students attending this course are expected to acquire the following competences:

- Managing a class group that includes children with special needs
- Planning the “individual educational plan” (*PEI – Piano Educativo Individuale*)
- Legal/juridical knowledge related to the integration of children with learning disabilities

- Using cooperative methods
- Psychological and psycho-pedagogical knowledge related to disabilities (neuropsychiatry)
- Relational competences (with children and families).

Curricular areas: The course includes lectures in different disciplines aimed at covering interdisciplinary professional preparation (for example, students are expected to attend lectures on the pedagogy of supportive relationships; child neuropsychiatry; metacognitive and cooperative teaching methods; and school legislation); nine workshops/education laboratories (also focused on how to use technologies when working with children with special needs); and an internship (at least 300 hours, for which 12 ECTS credits are awarded). A project is also included to obtain the title of “Special Needs Teacher”.

4.3 Alternative entry and qualification routes, system permeability

Until the beginning of 2000, Italy was one of the few countries in the European Union that did not offer standard university-level pre-service training to Educators and Teachers at all levels of the school system. Up to 2003, the basic professional education of Pre-primary and Primary School Teachers was at the upper secondary level. A school-leaving diploma in an occupationally relevant area of study (a diploma from a vocational secondary school specialising in primary teaching training – *istituto magistrale* – or in education/human sciences – *liceo psicopedagogico*; *liceo delle scienze umane*) was the only qualification required to teach at these levels.

Similarly, up to 2017, the initial professional education for Educators working in educational services 0–3 years was the same vocational secondary school diploma as described above or a shorter vocational course of studies (such as the 3-year vocational school programmes entitled *tecnico dei servizi sociali* or *assistente di comunità infantile*).

For these reasons, a significant number of Educators and Pre-primary teachers who already held permanent posts prior to the changes, who nowadays work in educational services 0–3 years or in pre-primary schools, have a qualification at the upper secondary level and over the years have upgraded their knowledge and competences through professional development courses.

Educators in educational services 0–3 years with a Bachelor’s degree in Educational Science can enrol in the third year of a 5-year degree in Primary and Pre-primary Education to obtain the qualification of Pre-primary Teacher, while Pre-primary Teachers can extend their initial training by obtaining an additional 60 ECTS credits in Early Childhood Education, enabling them to work in educational services 0–3 years as well (see *Chapter 4.2*). This means that, to obtain both the qualification of Educator and that of Pre-primary School Teacher, students need to study for a total duration of 6 years.

There are no alternative pathways to the required university degrees described above (see *Chapters 4.1* and *4.2*) for working as an Educator in educational services 0–3 years or as a Pre-primary Teacher.

The only type of progression in the career path of an Educator or Pre-primary Teacher is linked to the length of service, which is evaluated in competitive exams to become a School Head (at least 5 years) or a Pedagogical Coordinator. In state-maintained pre-primary schools, the teacher with the highest level of seniority may be appointed Referent for coordination at the discretion of the school head.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Internship (guided workplace experience) is viewed as a key component of the initial professional education of Italian ECEC core practitioners. The number of hours devoted to internships is defined nationally for the 5-year degree programme in Primary and Pre-primary Education (*Scienze della Formazione Primaria*), while it varies locally for the Bachelor's degree in Educational Science (*Scienze dell'Educazione*). The following describes the current situation concerning workplace-based learning in the IPE routes of ECEC core practitioners.

Educators (*educatori/educatrici*)

Practica/internships within the 3-year Bachelor's degree in Educational Science (*Laurea Triennale in Scienze dell'Educazione*) with a specific pathway in Early Childhood Education

Regulation

For the 3-year degree course in Educational Science (*Scienze dell'Educazione*), workplace experience (referred to as *tirocinio*/internship) is obligatory for all students and is carried out during the second and third years of study. It is the responsibility of individual universities to organise these work placements.

Aims and goals

The goals of the internship are the following: promoting the integration of the theoretical knowledge that the student is gradually acquiring with hands-on experience of workplace settings; ensuring a healthy balance between theory, practice and reflection on experience; training students in the use of observation and documentation tools; and providing students with a framework for reflecting on practice.

Length of time spent in the workplace and number of ECTS credits

As Ministerial Decree DM 378/2018 states, students who choose the 3-year degree course in Educational Science (*Scienze dell'Educazione*) with a specific pathway in Early Childhood Education must obtain at least 10 ECTS credits in internships (*tirocinio*) and at least half of the hours must be spent in educational services 0–3 years.

Each university establishes the number of hours that students must spend in relevant workplace settings and the distribution of hours among the three years.

Structure of time blocks

The structure of time blocks varies across universities; for the most part, internship includes direct and indirect activities. The indirect (or preparatory) activities usually include formative group meetings and analysing the students' professional interests and aptitudes, identifying the setting in which they will carry out their internship and setting up an agreement between the university and the host organisation. Direct activities are those that are carried out by the students in the workplace setting (under the guidance of their supervisor, who will meet them periodically to discuss how the practicum is proceeding and encourage them to analyse and reflect on the practical experience gained to date). During the internship, students alternate observation, documentation and participation in the everyday functioning of the host organisation/service, with reflection and discussion with other students/interns and the supervisor.

Supervisors/mentors

Supervisors play a crucial role in the internship experience for all undergraduate students. For each degree programme, an internship board defines the criteria for selecting and recruiting supervisors. No "standard" criteria have been provided at the national or the local level, nor

have any minimum requirements been established (Lichene, Molina, Restiglian, and Sannipoli 2020).

Each supervisor could be responsible for a group of students whose number may vary from university to university. Group sessions alternate with individual meetings between student and supervisor. Supervision focuses on the students' observations and documentation and on analysing the practices that they have implemented in the field.

Self-evaluation and external evaluation

The methods used to evaluate the internship are also at the discretion of the individual university. However, assessment is usually continuous and generally involves both 'external' evaluation provided by the supervisor and critical evaluation and analysis on the part of the students themselves, such as self-evaluation based on the analysis of learning outcomes, self-observation and own appraisal of practical teaching experience. This formative evaluation model (*valutazione formativa*, Bondioli and Ferrari 2004) foregrounds the active involvement of the student.

As recent research promoted by the *Gruppo Nazionale Nidi e Infanzia* has highlighted (see *Chapter 9*), the quality of direct and indirect internship and of supervision activities is strictly related to the capability of each university to build significant relationships with local socio-educational services. In particular, the recent implementation of the specific pathway in Early Childhood Education within the 3-year course in Educational Science, as well as the module of 60 ECTS credits in Early Childhood Education for Pre-primary Teachers, raised the issue of how to construct ongoing relationships between universities and educational services 0–3 years that could foster meaningful and fruitful exchanges for both institutions. In Italy, this issue is part of the current debate on the initial professional education of Educators for 0–3 year-olds.

Pre-primary Education Teachers (*insegnanti*)

Practica/internships within the 5-year university degree course in Primary and Pre-primary Education (*Scienze della Formazione Primaria*)

Regulation

Since 2010 (Ministerial Decree DM 249/2010, Art. 3), in the context of an overall redefining of IPE requirements for teachers, the government has made internship an obligatory part of the 5-year degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*).

Aims and goals

The goals of the internship are to promote the integration of the theoretical knowledge that the students are gradually acquiring with hands-on experience of workplace settings; to ensure a healthy balance between theory, practice and reflection on experience; to train students in the use of observation and documentation tools; and to provide students with a framework for reflecting on practice.

Length of time spent in the workplace and number of ECTS credits

Internship experience begins in year two and lasts a total of 600 hours (corresponding to 24 ECTS credits) over years 2–5. National legislation requires the placements to be designed to earn a progressively higher number of ECTS credits in each successive year up to the final year. Each university decides how to distribute these hours over the years.

Structure of time blocks

Guided workplace experience comprises direct and indirect activities. Direct activities are carried out in pre-primary and primary schools, and student teachers are supervised by experienced Pre-primary or Primary School Teachers. There is an orientation phase, an observation phase in schools, a phase for the preparation of a specific project and a final phase for the implementation of the project. The host teacher in the primary or pre-primary school cooperates with the

university tutor in supervising and evaluating the teaching practice. Thus, the curriculum is implemented in collaboration with schools: each university is responsible to work with schools in the surrounding area. School teachers and principals therefore work directly with students; they are assigned part time or full time to universities to supervise students in planning, carrying out, analysing and discussing their teaching practice assignments.

Supervisors/mentors

Supervisors are recruited via a selection process to work at the university for a few years. There is approximately one supervisor per 20–25 students. The relevant Ministerial Decree DM 178/2011 distinguishes between three different tutorial positions: Trainee Tutors (*tutor dei tirocinanti*) and Coordinating Tutors (*tutor coordinatori*), who both play the role of supervisor, and Organising Tutor (*tutor organizzatori*), with no hours of actual supervision. Article 11 states that those appointed as “supervisor tutors” must have worked for at least five years as teachers or head teachers within the Italian national school system. The appointment (role) must be either reconfirmed or terminated each year by the board of the university department employing the tutor. The posts of Coordinating Tutor may only be assigned for a 4-year period, may not be reassigned immediately to the same person and may be extended for a maximum of one additional year. The university department employing the tutors is responsible for selecting and recruiting them. In the course of their everyday duties, tutors/supervisors report to the degree programme board.

The function of Trainee Tutors (*tutor dei tirocinanti*) is to monitor the students’ teaching activities during their periods of teaching practice and to help them manage their teaching processes. Coordinating Tutors (*tutor coordinatori*) are responsible for guiding and managing the regular tutors, assigning the students to classes and schools, formally drawing up a teaching practice plan for each student, catering for the training needs of the group of students under their supervision, monitoring and assessing the teaching practice placements and guiding the student teachers in writing their final reports. Organising Tutors (*tutor organizzatori*) organise and manage the relations between the university, schools and school heads and supervise all the administrative procedures involving the coordinating tutors and the regional education authorities. They also have responsibility for assigning a group of students to each coordinating tutor.

In general – independent of the supervisors’ specific role – their job is to make sure that student teachers receive an adequate amount of feedback and guidance when carrying out their specific teaching practice assignments. Supervisors also help students to reflect on and organise their own knowledge, to appreciate the relationship between theory and practice, to apply formal learning to occupational roles and to become familiar with the running of schools and the different activities and practices implemented in the classroom.

With regard to remuneration, tutors are subject to the contractual conditions laid down by the relevant national wage agreement.

Evaluation

Evaluation and monitoring throughout the internship are the basis for intermediate and final assessments. At the end of each year of the internship, students submit project documents, including teaching materials, and a final report.

Special Needs Teachers (insegnante di sostegno)

Regulation

Ministerial Decree DM 249/2010 defined the *Linee Guida Nazionali Ministeriali* (National Ministry Guidelines) for the teaching practice component of the 1-year postgraduate course in special needs education that may be completed by graduates in Primary and Pre-primary Education (*Scienze della Formazione Primaria*) or by recognised Primary Teachers.

Length of time spent in the workplace and number of ECTS credits

Students must complete 300 hours of internship experience (12 ECTS credits). Individual universities are free to decide how these hours will be distributed as long as they meet the national requirement for the teaching practice to take place in primary or pre-primary schools over a period of no longer than 5 months.

Content structure of time blocks

The placement comprises both indirect and direct components. The indirect component involves critical analysis of the teaching practice experience by the student teachers themselves and the design of interactive teaching activities for implementation with children with disabilities. The practical activities include the application of digital technologies (ICTs) to special needs education. The exact type of teaching experience provided can vary and is defined by the local university in collaboration with the host schools.

Supervisors/mentors

During the direct activity phase of the placement, the student is supervised by a practicum tutor (*tutor dei tirocinanti*) chosen from among the teaching staff of the host school, who must have at least seven years' teaching experience.

Evaluation

Assessment of the teaching practice is both external and internal (self-evaluation). The former is based mainly on tutors' evaluation of students' performance/progress during the placement. This is followed by the students' own critical assessment of their practical teaching experience at both the personal and the professional level.

6. Continuing professional development (CPD) of ECEC staff

Legislation and regulation

In Italy, the CPD provision for ECEC staff working in the Integrated System 0–6 varies according to the ECEC provider.

CPD for ECEC staff working in municipal provision

Continuing professional development for ECEC staff working in municipal and subsidised educational services 0–3 years or in municipal pre-primary schools is planned and implemented by local authorities with the support of regional governments and varies significantly across the country (there is a large gap between northern and southern regions).

CPD for teachers working in state-maintained pre-primary schools

CPD for teachers working in state-maintained pre-primary schools is regulated at the national level. A national framework and new guidelines for the CPD of pre-primary, primary and secondary school teachers were drawn up following the approval of Law 107/2015. The Law (Art. 1 paragraph 124) defined CPD as “compulsory, permanent and structural” and specified that in-service training activities should be planned by each school according to the priorities indicated in the National Teacher Professional Development Plan (*Piano per la Formazione dei Docenti*) elaborated every 3 years by the Ministry of Education (Ministerial Decree DM 797/2016, Ministero dell'Istruzione 2021). The law introduced an annual €500 bonus for teachers called

‘Teacher’s Card’ (*Carta del docente*). This card must be used exclusively to purchase accredited CPD courses, to cover the expenses of training activities and/or to buy books.⁴

Towards a common framework for CPD in the Integrated System 0–6

With the implementation of Law Decree 65/2017, the Italian government acknowledged – including in economic terms – its crucial role in promoting and sustaining CPD activities to ensure the full professional development of ECEC staff across the 0–6 sector. To overcome the lack of a common framework for CPD provision and guarantee equal opportunities for ECEC staff across the country, Law Decree 65/2017 – which explicitly states that the CPD of *all ECEC staff* working in the Integrated System 0–6 is a strategic goal for qualifying the system (Art. 4 paragraph 1.f) – defines the tasks to be performed by the state, regional governments and local authorities in the field of CPD:

- The State has the task of implementing actions aimed at promoting the CPD of all ECEC staff of the Integrated System 0–6 in line with the framework of the National Teacher Professional Development Plan (Art. 5 paragraph 1.c).
- Regions define guidelines for supporting the professionalism of ECEC staff of the Integrated System 0–6 at the regional level in line with the framework of the National Teacher Professional Development Plan (Art. 6 paragraph 1.b).
- Local authorities plan and implement the CPD initiatives for ECEC staff of the Integrated System 0–6 in their areas in line with the framework of the National Teacher Professional Development Plan (Art. 7 paragraph 1.f).

As detailed in *Chapter 8*, the implementation of Law Decree 65/2017 is supported by a National Multiannual Implementation Plan (*Piano di Azione Nazionale Pluriennale per la Promozione del Sistema Integrato di Educazione e Istruzione*), which defines actions for and allocates financial resources to developing and qualifying the Integrated System 0–6. The most recent 5-year National Implementation Plan (2021–2025) established that each region should devote at least 5% of the resources to promoting CPD initiatives addressed to ECEC staff and/or local pedagogical coordination (DCM 706/2022).

Main forms

The main forms of CPD for ECEC staff (Educators, Teachers, Pedagogical Coordinators and School Heads) are workshops, conferences, local seminars, research projects (action research, intervention research, participatory research, etc.) and exchange programmes. In the best Italian ECEC experiences, CPD is aimed at fostering critical thinking and reflexive practices and encouraging shared learning and ‘learning by doing’ within communities of practice and of learners (Lave and Wenger 1991), rather than transmitting theoretical knowledge that is scarcely connected with practice.

It is important to stress that, since 1970/80, the administrations of some northern and central regions – such as Lombardy, Emilia-Romagna, Tuscany and Umbria – have consistently and systematically invested in CPD initiatives for ECEC staff (Musatti, Picchio, and Mayer 2016; Bove, Jensen, Wysłowska, Iannone, Mantovani, and Karwowska-Struczyk 2018) that have contributed not only to improving the quality of ECEC provision at the local level but also to developing and spreading a “culture of early childhood” across the country within a “situated systemic framework” (Mantovani 2010).

⁴ The Plan provides for an investment of 325 million euros for in-service teacher training plus 1.1 billion euros for financing the Teacher’s Card, amounting to a total of 1.4 billion euros over the period 2016–2019.

These administrations set up partnerships with universities or research institutes aimed at developing a consolidated set of professional practices based on action research, practices of teamwork or co-constructed project work focused on working with families and the community (*partecipazione*). Participatory processes, the involvement of Pedagogical Coordinators, the designing of experiential learning processes, the focus on community-based learning, the role of documentation and the partnership with universities and research centres have been key elements in the implementation of high-quality CPD (Lazzari, Picchio, and Musatti 2013).

Collegiality is also a main feature of continuing professional development in Italy. Indeed, CPD is conceptualised as a collegial process aimed at constructing and implementing shared knowledge and practice at the team level and within the wider ECEC professionals' community. Collegiality is the context in which ECEC professionals have the opportunity to analyse and discuss the processes that take place in educational contexts and the impact of their practices on children's and parents' experience and to discuss their points of view on challenges that arise in their daily work. From this perspective, collegiality is the process by which the attitude towards research and reflexivity, now widely recognised as an essential component of ECEC professionalism, is nurtured (Picchio, Giovannini, Mayer, and Musatti 2012).

Most CPD initiatives are based on the use of procedures of observation and documentation aimed at connecting the pedagogical reflection to concrete matters and supporting the analysis of practices (Rinaldi 2001, 2006).

In some municipalities (e.g., Milan, Reggio Emilia and Pistoia), CPD is based on the synergy between staff meetings at educational services 0–3 years and pre-primary schools and broader training opportunities provided at the local, national and international levels. Moreover, bottom-up networks have traditionally played a crucial role in the CPD of Italian ECEC staff (see *Box 3*).

Box 3

Italy: Example of an influential professional network

The *Gruppo Nazionale Nidi e Infanzia* (GNNI), founded in 1980, is a large network whose members are researchers, managers, decision makers, Educators, Teachers and Pedagogical Coordinators from different regions. It plays an important role in the development of quality educational services 0–3 years and pre-primary schools, promotes advocacy initiatives and periodically organises conferences and workshops on early childhood education at the local and national levels, which are attended by a large number of delegates. Today, the GNNI is one of the most authoritative voices in the Italian ECEC sector.

<http://www.grupponidiinfanzia.it/>

All the components of CPD described above reflect the broader Italian discourse on in-service professional development (*formazione-in-servizio*), which is particularly strong in municipal educational services 0–3 years and municipal pre-primary schools.⁵

CPD providers

Local authorities are the main providers of CPD activities targeting ECEC staff working in municipal – and often subsidised – educational services 0–3 years and in municipal pre-primary schools. They fund and plan CPD activities – usually on an annual basis – and negotiate the contents and modes of organisation with universities, research centres and external training agencies or use internal resources. CPD activities are carried out within a collegial framework. All

⁵ It is important to stress that the term '*formazione*' conveys a very different meaning from the English word 'training'. It comes from *forma* (structure, shape) and means 'taking rather than being given a form' (Nigris 2007, 1146). This requires investment at many levels and a bottom-up participatory perspective on professional development as a dynamic, multimethod approach of reviewing practices within a community of learners.

ECEC staff of the educational services 0–3 years or pre-primary schools are involved on a team basis.

At the local level, some city/town administrations (e.g. Reggio Emilia, San Miniato, Pistoia and Modena) have set up other types of institution (e.g. documentation centres), which provide professional development activities for Educators and Pre-primary Teachers.

The Ministry of Education and external training agencies are the main providers of CPD targeting teachers of state-maintained pre-primary schools through funds allocated to schools and used for financing the annual “Teacher’s Card”. Each school draws up a professional development plan. Teachers can individually choose activities among a range of training courses accredited by the Ministry of Education.

According to Law Decree 65/2017, the private sector, which runs educational services 0–3 years and pre-primary schools, should guarantee CPD activities for their ECEC staff. However, the opportunity for staff to benefit CPD depends on the allocation of paid non-contact time (see *Chapter 7.4*).

Leave entitlement, access to CPD and funding support

Traditionally, in municipal ECEC provision, CPD has been considered both a “right” and a “duty” of Educators (0–3) and Pre-primary Teachers (3–6). Both professions have been guaranteed between 120 to 200 hours per year to attend professional development initiatives, collegial meetings with or without the supervision of Pedagogical Coordinators and meetings with parents and to carry out documentation activities.

In order to promote a sharing reflection on daily practices, in some municipalities, auxiliary staff participate in CPD initiatives together with Educators, Teachers and Pedagogical Coordinators.

In state-maintained pre-primary schools, regulations allow 80 hours per year to be devoted to teamwork planning, meetings with parents and CPD activities. Regional Ministry School Offices (*Uffici Scolastici Regionali*) may be more or less stringent in terms of monitoring how these hours are actually invested, allowing a lesser or greater proportion to be used for *auto-aggiornamento* (self-organised professional development), which may include individual study. A rough estimate of the time devoted annually to CPD is between 12 and 15 hours.

In the private sector, the access to CPD opportunities for Educators (0–3) and Teachers (3–6) varies significantly according to working contract agreements. For example, two leading providers – the PAN (a consortium of social entrepreneurship networks) in the 0–3 sector and the FISM (*Federazione Italiana Scuole Materne*) in the 3–6 sector – guarantee a minimum of 12 paid working hours per year for CPD activities, while, in other cases, the amount of paid working hours is fully absorbed by the work with children.

CPD and career advancement

Participation in CPD activities is not formally recognised in terms of career advancement.

Options for supplementary/additional study routes

Educators (0–3) and Teachers (3–6) who decide to pursue supplementary study routes or training courses are required to pay for these courses themselves. All employed Teachers and Educators have the right to benefit from paid study leave (*diritto allo studio* – the right to education), pending on the formal approval by the School Head/Pedagogical Coordinator. Recognised further study routes include PhD programmes, Master’s degree programmes and so on. The amount of paid time available for achieving these additional formal qualifications depends on the contract of employment (public versus private, etc.). Despite the differences, it usually corresponds to an average of 150 paid hours per year.

Key content focus of CPD for core practitioners

In municipal ECEC provision, topics of CPD activities are defined at the local level, taking into account the needs of ECEC professionals working in the local ECEC system. In state ECEC provision, each pre-primary school defines the topic of CPD activities autonomously. However, in recent years a number of shared topics have emerged:

- Constructing a unitary and holistic approach to early childhood education across the 0–3 and 3–6 sector (Bondioli, Savio, and Gobetto 2018; Lazzari, Pastori, Sità, and Sorzio 2020). In a recent note (Ministero dell’Istruzione 2022b), the Ministry of Education requested all Regional Ministry School Offices (*Uffici Scolastici Regionali*) to promote joint professional development initiatives addressed to both Pre-primary Teachers and Educators of educational services 0–3 years, in collaboration with local authorities, aimed at discussing the Pedagogical Guidelines of the Integrated System 0–6 (*Linee Pedagogiche per il Sistema Integrato Zerosei*, Ministerial Decree DM 334/2021) and the National Guidelines for Educational Services 0–3 (*Orientamenti Nazionali per i Servizi Educativi per l’Infanzia*, Ministerial Decree DM 43/2022) (see *Chapter 8*). These initiatives are also meant to deepen issues related to educational continuity between the educational experiences offered to children from the first months of life to their entry into primary school at the age of 6 years, such as relationships with families, organisation of inclusive educational contexts, role of digital technologies for the healthy growth of children in educational and family contexts, observation, planning, documentation, evaluation and self-evaluation.
- Rethinking and promoting parents’ participation in ECEC services, even considering needs expressed by parents during the pandemic period and the growing social, cultural and economic changes in communities (Bove 2020; Mantovani, Bove, Ferri, Manzoni, Cesa, Bianchi, and Picca 2021).
- Outdoor education (Malavasi 2019; Schenetti, and Guerra 2018), which has become a widespread topic within the initiatives because of the experience of the pandemic.

Research

At the national level, no large-scale research projects on the CPD of ECEC staff have received funding over the last 5 years, even taking the pandemic into account. However, in the following, we report a significant example of a study on the CPD of ECEC staff in Italy carried out in the last decade.

Italian case study in innovative PD practices in ECEC services in Europe – European CARE project

Source: Bove, Jensen, Wysłowska, Iannone, Mantovani, and Karwowska-Struczyk 2018 (see *References* for further details).

Aims: The Italian case study on “Innovative practices in the in-service professional development of ECEC practitioners” is part of the Curriculum Quality Analysis and Impact Review of the European Education and Care (CARE <https://ecec-care.org/>) project, funded by the European Union under the Seventh Framework Programme. The Italian case study was part of the work package on Professional Development – Impact and Innovation and involved in-depth exploration and analysis of two innovative approaches to professional development at the city level, which could act as models for PD at the national level. These were the cases of “Reggio Emilia: a model of diffused pedagogy” (Giudici and Castagnetti 2016) and “Milano: fostering innovation in a big city. Continuity and change” (Mantovani, Bove, Cescato, and Braga 2016).

More specifically, the aims of the study were to describe how innovative frameworks for the CPD of ECEC practitioners at the macro (city) level, typical of both the selected case studies, are transferred and further implemented at the micro (school) level; to explore which types of professional development are most effective in enhancing the quality of ECEC; to analyse how practitioners perceive and interpret the impact of innovation on their educational practices and on ECEC quality; and to investigate teachers' perceptions, views, ideas and beliefs about developing their professional competence within a qualitative–ethnographic framework.

Procedures: The research was designed as a 'Holistic Case Study' (Yin 2009) with embedded sub-case studies at both sites. After a preliminary narrative review of the concepts of "innovation" and "innovative PD practices in Early Childhood Education and Care", the case study was conducted by combining multiple and diverse sources of data. Existing/documentary data and new/empirical data were both viewed as the key to contextualising and analysing the two case study sites and their embedded sub-case studies in depth. In Milan, three sub-case units were involved: two nursery centres 0–3 and a pre-primary school 3–6; in Reggio Emilia, two sub-case units were involved: a nursery and a pre-primary school.

A total of 30 semi-structured interviews were conducted with a range of informants (stakeholders, Educators, Teachers, Education Coordinators and Researchers). In addition, three focus group discussions were conducted in Milan with Educators from the educational services 0–3 years involved in the study.

The interviews and focus group discussions were audio recorded and fully transcribed. The data were analysed qualitatively using content analysis methodology (Berg and Lune 2012), combining categories drawn from the literature with "bottom-up categories". Documentary sources (PhD and Master's theses, publications, documentation, etc.) on the history of the ECEC settings and their staff's in-service PD were analysed and compared with the interview data.

Findings: The results suggested a high level of consistency between the macro and the micro level, represented by the existing/documentary sources and the interviews with participants, respectively. More specifically, continuing professional development was not conceptualised as an optional extra but as "embedded in the services/in place". The accounts of Teachers/Educators, coordinators and stakeholders all reflected a shared perception of how innovation occurs in practice. The key themes concerning innovation and efficacy in PD are a good balance between theory and practice; the connection between research and PD; the impact (of PD) as "change in action"; the importance of workshops and opportunities for "learning by doing"; the need for reflexivity and opportunities for shared learning/teamwork; the key role of the education coordinator as a "driver of innovation"; and the use of new technologies (ICT) as a component of innovation.

In addition, there was widespread interpretation of innovation in PD as a participatory process, which not only includes workshops, action research, analysis of practice and video observations but also involves parents and children where possible. As a 'catalyst for adults to meet' (New, Mallory, and Mantovani 2001), CPD is viewed as a key means of developing a shared vision of early years education.

The study contributes to developing insights/perspectives for the future: the need for a better balance between pre-service and in-service PD practices; the need to reduce both intergenerational differences among staff and the rigid use of human and financial resources that is typical of the Italian public administration system; the need to bridge multiple perspectives within ECEC (by creating and combining real and virtual communities of learners); the need to invest in the training of key figures as multipliers of innovation; and the need to promote collaboration be-

tween policymakers, practitioners, researchers and parents to develop a common understanding of PD. In a word, there is a need to keep the rights of children in view as the compass ultimately directing our action.

Current debates

The current debates in Italy regarding the continuing professional development of ECEC staff include the following main issues:

- Reserving a portion of the new financial resources devoted to ECEC provision in the last years (Gruppo CRC 2021) for guaranteeing equal CPD opportunities for ECEC staff working in the Integrated System 0–6 across the country, reducing the gap between the quality of the ECEC services and capitalising the CPD best practices developed in municipal ECEC provision since the 1970s
- Planning and implementing systematic and sustainable joint CPD activities aiming to attract both 0–3 Educators and 3–6 Teachers through close cooperation between state, regions and local authorities to promote a common culture and a shared holistic approach to early childhood education and support practices of horizontal and vertical continuity
- Strengthening the role of local pedagogical coordination (*coordinamenti pedagogici territoriali*) in planning, promoting and monitoring CPD initiatives at the local level
- Revising employment contracts, in particular in the private sector, to ensure that all Educators and Teachers have an appropriate number of paid hours allocated to CPD activities
- Creating opportunities for inter-generational professional exchanges between newly recruited and senior ECEC practitioners
- Introducing new contents/topics into the CPD initiatives to meet the challenges of an increasingly diverse, complex and intercultural society that requires inclusive practices
- Encouraging inter-professional CPD initiatives to increase the capacity of ECEC professionals to act systemically in collaboration with other professional figures working with children and families (networking and multi-sectorial collaboration).

7. Working conditions and current workforce issues

7.1 Remuneration and working hours⁶

In Italy, the salaries and working conditions of Educators of 0–3 year-olds and Pre-primary Teachers vary significantly according to the setting providers (Mari 2016, 2021).

Educators of 0–3 year-olds and Pre-primary School Teachers working in municipal provision fall under the C category of workers under the terms of the National Wage Agreement/regional and local authorities and are entitled to an annual gross⁷ salary of €22,039 per year for 36 working hours per week (usually 30 working hours with children and 6 hours devoted to collegial meet-

⁶ Sources: National collective contract AGIDAE 2022; National collective contract ANINSEI 2022; National collective contract FISM 2016; National collective contract relating to the staff of the local functions sector, three-year period 2016-2018; National collective contract for staff in the education and research sector, three-year period 2016-2018; European Commission/EACEA/Eurydice 2021.

⁷ It should be considered that ECEC professionals pay taxes of about 25% on their remuneration.

ings, meetings with parents, documentation activities and attendance at professional development initiatives). However, both the salary and the working conditions vary across cities/towns and across Regions as a function of local wage agreements.

The annual gross salary of teachers working in state-maintained pre-primary schools – who are in the direct employment of the Ministry of Education – is €24,297 for 25 weekly working hours with children.

The salaries and working conditions of Educators of 0–3 year-olds or Pre-primary Teachers working in subsidised or private educational services 0–3 years or in private or recognised pre-primary schools vary according to the national agreement applied by the providers (FISM, AGIDAE, ANINSEI social cooperatives, private health enterprises, etc.). The gross salaries amount to a minimum of €17,680 and a maximum of €21,526 per year and the weekly working hours vary between 31 and 38.

The remuneration and working conditions of Pedagogical Coordinators also vary according to the type of provider and the number of hours worked per week. Full-time employed Pedagogical Coordinators can earn a gross salary between €20,709 (in private, subsidised or recognised early educational services 0–3 years and private and recognised pre-primary schools) and €24,895 (in municipal ECEC provision) per annum, while Heads of state-maintained schools may earn from €69,700 upwards according to the whole school size.

It is difficult to say in “absolute and general terms” whether it is possible to live on the salary of an Educator/Teacher in Italy today. The relationship between salary and standard of living is influenced by many factors (such as the average cost of living in one’s city or region of residence, family circumstances, age, number of children, etc.). The economic crisis and the effects of the pandemic certainly had a strong impact on the purchasing power of ECEC professionals. Furthermore, it should be considered that the salary of ECEC professionals varies according to their length of employment by the same provider, though significantly long periods are needed to achieve modest salary increases.

ECEC professionals employed in the public sector enjoy long-term economic security, and this contributes to the perception of these occupations as being of a better quality. This is especially the case at the present time, when the long-term jobs and permanent positions previously expected by young graduates are become extremely difficult to attain. Educators, Teachers and Pedagogical Coordinators working in private ECEC provision not only face more variable working conditions but also enjoy less job security over the long term. Most of them are employed on the basis of fixed-term or discontinuous contracts and, even in state-maintained pre-primary schools, some teachers are employed temporarily (15.6%) (Ministero dell’Istruzione 2022a).

7.2 Full-time and part-time employment in ECEC provision

As described above, the number of working hours of full-time ECEC professional staff varies according to the type of agreement applied. All professionals (Educators 0–3, Pre-primary Teachers and Pedagogical Coordinators) in municipal educational services 0–3 years and municipal pre-primary schools work 36 hours per week, while professionals in private or subsidised educational services 0–3 or private or recognised pre-primary schools work from 31 to 38 hours. Instead, teachers working in state-maintained pre-primary schools work 25 hours.

There are no data available concerning the number of part-time employees in either the 0–3 sector or the 3–6 sector.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

A probationary year for novice qualified Pre-primary Teachers and School Heads of state-maintained pre-primary schools is required.

The probationary period – defined by Ministerial Decree DM 850/2015 – is considered as part of newly qualified Teachers’ ongoing training and professional development. During this period, Teachers are engaged in specific training activities: workshops and visiting innovative schools (12 hours), peer-to-peer meetings (12 hours), collegial meetings (6 hours) and individual online training activities (20 hours) for a total of 50 hours. During the probationary year, novice teachers are assigned to a Teacher Tutor, who plays an active and specific role in the training process and provides a final evaluation (which has to be submitted to the School Head) at the end of the year. The tasks of Teacher Tutors are welcoming, supporting, tutoring and supervising new entrants as well as evaluating their competences.

A similar path is provided for newly employed School Heads. It consists of a probationary year, during which they have to spend 25 hours on peer tutoring and 50 hours on training activities, such as workshops, case studies, analysis of practices, problem-solving activities and so on. They are assigned to a school Head Tutor, who makes a qualitative assessment of the competences acquired by the novice at the end of the probationary period (Ministerial Decree DM 956/2019). Similar programmes are also implemented for Educators working in municipal educational services 0–3 years, but these measures are defined at the local level. For example, in Milan, newly recruited Educators are required to complete a 6-month probationary programme before being definitively employed (as established by the National Wage Agreement). During these six months, would-be employees work alongside the other Educators of the service and their work is observed by them. At the end of the probationary period, the Pedagogical Coordinator of the service is required to produce a full evaluation report.

At the national level, Law 107/2015 introduced new suggestions by stressing the relevance of a greater emphasis of *on-site mentoring* in schools. It defines the new role of “mentor-teachers” (chosen by the school’s internal evaluation committee), who are required to conduct evaluations, coordinate training and peer tutoring, supervise the training of their colleagues and provide support for interns.

Some training programmes implemented in municipal educational services and pre-primary schools – for example the Milano-Bambini (MIBA) project (Bove et al. 2018; Premoli and Zaninelli 2020; see *Chapter 9*) – are also examples of how to develop, at the local level, innovative forms of *on-site training* that alternate in-service professional development with in-service supervision and are based on the professional knowledge of experienced ECEC staff.

7.4 Non-contact time

Educators and Pre-primary Teachers working in municipal provision (both educational services 0–3 years and pre-primary schools) are paid for an important amount of non-contact time (120 to 200 hours per year) to be spent on planning, staff meetings, meetings with parents, documentation and continuing professional development.

Teachers in state-maintained pre-primary schools have 80 hours per year of non-contact time. The Regional Educational Departments have stricter or looser policies concerning how these paid hours may be spent.

Non-contact time for Educators and Teachers working in educational services 0–3 years and pre-primary schools managed by non-public providers varies greatly according to their employment agreement (from 25 to 100 per year).

7.5 Current staffing issues

During the last decade, the Italian ECEC system has faced a major turnover in staff due to the retirement of professionals who entered the ECEC system during its years of expansion, and a similar upheaval is expected in the next decade. This poses a further challenge for the professional development of ECEC professionals.

Two main critical issues in the recruitment of ECEC staff are emerging: the very limited number of graduates who to date have the specific qualification required by the regulations for working in educational services 0–3 years (see *Chapter 4*); a shortage of Pre-primary Teachers – especially in the central and northern regions, where pre-primary provision is more widespread – due both to the established annual limited number of places on 5-year university courses in Primary and Pre-primary Education provided by universities and to the predominant choice of many graduates to work in primary schools rather than pre-primary schools (Gruppo CRC 2022).

In the coming years, these critical issues are bound to become dramatically more relevant in connection with the expected increase of ECEC provision for children aged 0–6.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Two core national policy reforms relating to ECEC staffing are highlighted in this chapter.

(1) Law 107/2015 and Law Decree 65/2017

As elaborated in *Chapter 1*, the National Law 107/2015 introduced a set of guidelines for a comprehensive reform of the Italian school education system at all levels (ECEC, primary, middle and high school). The main reform goals referred to:

- The introduction of merit-based components for teacher salaries
- Teacher recruitment (on a permanent basis)
- School autonomy
- The curriculum
- Digital and language skills
- Work-based learning
- Continuing professional development; and the previously mentioned
- Integrated System of education from birth to six years of age.

Teachers' professionalism is being taken seriously and new funds have been allocated to support the CPD of all teachers across the education system.

Two points are particularly relevant to the ECEC sector:

- The guarantee of “compulsory, permanent and structural continuing professional development for teachers at all school levels”
- The development of the “Integrated System of education from birth to six years” (Law 107/2015, Article 1, paragraph 181) that aims at overcoming the previous split system between the provision for children under 3 years of age (0–3) and the pre-primary sector (3–6).

In 2017, the Italian Parliament approved Law Decree 65/2017, which regulates the implementation of the integrated system in detail. The Law Decree does not aim to achieve uniform management, organisation procedures or educational practices but rather intends to bring all the

provision into an integrated system unified by shared standards of acceptability in terms of organisational and educational quality. It provides for the redefinition of roles and responsibilities among the regional and local authorities, the setting up of “hubs for 0–6 year-olds” (*poli per l’infanzia*) and the introduction of a new financing system based on co-funding by the state, regional governments and local authorities. Moreover, in line with most European countries, the Decree introduced – for the first time at the national level – the upgrading of initial professional education to a university degree for 0–3 Educators. Additionally, it sustains the development of a more inclusive system of early childhood and education and equal educational opportunities for all children and families by extending the ECEC provision across the country, enhancing the quality of educational services through CPD for both Educators and Pre-primary teachers and developing a system for monitoring and evaluating the quality of the ECEC system.

The main elements of the Decree are summarised in *Box 4*.

Box 4

Italy: Law Decree 65/2017: Establishment of an Integrated System of education from birth to 6 years

1. Ensuring equal educational opportunities, overcoming economic and cultural barriers to access (Art. 1, paragraph 3.b), encouraging inclusion (Art. 1, paragraph 1) and in general ensuring more accessible services for all families, especially the most vulnerable ones
2. Encouraging educational continuity between educational programmes for children aged 0–3 and 3–6 (Art. 1, paragraph 3.a)
3. Enhancing the quality of educational services 0–3 years by ensuring adequate initial professional education for ECEC professionals working in these services. Tertiary-level education is required: either a Bachelor’s Degree in Educational Science with a specific pathway in Early Childhood Education or a 5-year degree in Primary and Pre-primary Education, supplemented by a 60 ECTS credits module in Early Childhood Education (Art. 4, paragraph 1.e)
4. Ensuring continuing professional development opportunities for all ECEC staff (Art. 1, paragraph 3.g) and delivering targeted in-service training programmes for ECEC staff working within the Integrated 0–6 years system (Art 4, paragraph 1.f; Art. 5, paragraph 1.b)
5. Defining criteria for monitoring and evaluating the quality of the educational programmes provided within the Integrated system 0–6 (Art. 5, paragraph 1.d)
6. Ensuring the pedagogical coordination of educational services 0–3 years and pre-primary schools at the local level (Art. 1, paragraph 3.g)
7. Establishing *poli per l’infanzia* (hubs for 0–6 year-olds), which unite educational services 0–3 and pre-primary schools in the same building (or in the same area) to enable more coherent local planning of the Integrated System 0–6 and ensure pedagogical continuity (Art. 3)
8. Consolidating, expanding and improving accessibility to educational services 0–3 years to ensure coverage of 33% of children under 3 and at least 75% of Italian municipalities (Art. 4, paragraphs 1.a and 1.b)
9. Defining multi-level governance of the Integrated System 0–6 (see *Chapter 1*) based on an articulated framework of interaction and cooperation between the state, regional governments and local authorities (Art. 5, Art. 6 and Art. 7)
10. Defining the National Pedagogical Guidelines of the Integrated System 0–6 and National Guidelines for Educational Services 0–3 (coherently with the existing National Curricular Guidelines for pre-primary and primary schools)
11. Establishing an Expert Committee, appointed by the Ministry of Education, with counselling tasks (Art. 10)
12. Establishing a National Multiannual Implementation Plan defining the distribution of the available financial resources for consolidating, expanding and enhancing the Integrated system 0–6 (Art. 8)
13. Setting up a National Fund for the development of the Integrated System 0–6 via investment in constructing, renovating and maintaining educational services 0–3 years and pre-primary schools, providing CPD for ECEC staff and establishing local pedagogical coordination (Art. 12)
14. Defining an upper limit to the contribution that may be asked of families to cover the cost of running educational services 0–3 years (Art. 9, paragraph 1) and prompting local authorities to offer reduced fees, fee exemptions and economic incentives to families with a low income.

The implementation of Law Decree 65/2017, as stated in *Chapter 1*, is supported by the National Multiannual Implementation Plan (*Piano di Azione Nazionale Pluriennale per la Promozione del Sistema Integrato di Educazione e Istruzione*), which defines actions and financial resources – the National Fund for the Integrated System (see Gruppo CRC 2021) – for developing and qualifying the Integrated System 0–6 (Art. 8). The fund is assigned to municipalities following the directions of regional governments, which are mandated to match the funds at an established rate as well as to programme the extension of ECEC provision in their area and interventions for its qualification (Art. 12).

The National Fund is dedicated to:

- Building and qualifying structures of both educational services 0–3 and pre-primary schools
- Covering part of the management costs of educational services 0–3 as well to reduce families' fees
- Expanding and consolidating the provision of municipal and subsidised private pre-primary schools
- Supporting the qualification of ECEC staff through CPD initiatives and promoting local pedagogical coordination.

The most recent 5-year National Implementation Plan (2021–2025) (DCM 706/2022):

- Specifies that regional co-financing should not be less than 25% of the resources allocated by the state and that at least 20% of the whole Fund⁸ will be allocated to those regions where the availability of places in educational services in relation to the population of children under 3 years of age is lower than the national average
- Increases the number of the spring sections to counteract the early enrolment of children under the age of 3 in pre-primary schools (which is particularly widespread in southern regions where the provision for under 3 year-olds is still lower than the national average)
- Establishes that each regional government should devote at least 5% of its resources to the implementation of CPD initiatives addressed to Educators and Pre-primary Teachers, in line with the framework of the National Professional Development Plan (see *Chapter 6*), and/or promote local pedagogical coordination.

During the past two years, as required by Law Decree 65/2017 (Art. 10), the Expert Committee appointed by the Ministry of Education developed two important pedagogical documents:

- Pedagogical Guidelines of the Integrated System 0–6 (*Linee Pedagogiche per il Sistema Integrato Zerosei*, Ministerial Decree DM 334/2021)
- National Guidelines for Educational Services 0–3 (*Orientamenti Nazionali per i Servizi Educativi per l'Infanzia*, Ministerial Decree DM 43/2022).

The Pedagogical Guidelines of the Integrated System 0–6 define both the cultural and the pedagogical framework of the system, proposing a unitary and holistic approach to the education of children from birth up to 6 years of age, and the institutional and organisational framework of the system, describing the responsibilities and tasks of the state, regional governments and local authorities. The guidelines emphasise the key role of CPD and local pedagogical coordination in implementing the Integrated System 0–6 (Cerini and Spinosi 2021). The guidelines outline the basic elements of the educational competences of all professionals (Educators, Teachers and Pedagogical Coordinators) coherently with the existing National Curricular Guidelines for Pre-

⁸ The fund consists of 307 million euros for the year 2021 and 309 million euros for the years 2022 and 2023, respectively.

primary and Primary Schools (*Indicazioni Nazionali per il Curricolo della Scuola dell'Infanzia e del Primo Ciclo di Istruzione* updated with *Nuovi Scenari* – Ministerial Decree DM 254/2012, MIUR 2018b).

The National Guidelines for Educational Services 0–3 years represent the first national pedagogical framework for the 0–3 sector. The guidelines were inspired by the “culture of childhood” (*cultura dell'infanzia*) elaborated in municipal educational services 0–3 years over many years. The guidelines provide a framework for planning and implementing high-quality educational contexts for children under 3 years of age. They are an open document aimed at promoting reflections and discussions on children’s care and education in the first 3 years of life by all the actors involved in the 0–3 sector. In this document, the relevance of appropriate initial and in-service professional development of ECEC staff is also stressed.

Before being approved by the Minister of Education both documents were submitted to a broad consultation involving a great number of stakeholders: regional governments and local authorities, private providers, trade unions, ECEC professionals, professional associations and universities.

(2) Law 205/2017 (paragraph 594, 601) 29 December 2017

Law 205/2017, which was approved in 2017 and came into force on 1 January 2018, defines – in line with European and international standards – the occupations of Professional Educator (*educatore professionale*) and *pedagogista* and specifies the professional identity, academic qualifications and lines of work of both professionals.

The knowledge, skills and competences of Professional Educators correspond to EQF Level 6. More specifically, the law provides for two different types of Professional Educator: (1) Professional Educator - healthcare sector (*educatore professionale socio-sanitario*), who is eligible to work in healthcare contexts, and (2) Professional Educator – social and education sector (*educatore professionale socio-pedagogico*), who is eligible to work in educational and socio-educational services such as schools, social care services (across the lifespan), residential care for minors, family support, international cooperation and so on. Educators working in educational services 0–3-years are included in the second type of Professional Educator.

The former must hold a Bachelor’s degree (3 years’ full-time study) in the area of Health and Healthcare and the latter a Bachelor’s degree in Educational Science. As described in *Chapter 4*, a Bachelor’s degree in Educational Science plus a specific pathway on Early Childhood Education became a mandatory requirement for working in educational services 0–3 years.

The knowledge, skills and competences of a *pedagogista* correspond to EQF Level 7. They must hold a Master’s degree (Planning and Management of Educational Services, Lifelong Learning Education, Educational Science or Theories and Methodologies of e-Learning and Media Education). Their role is to design, plan, organise and coordinate educational services from birth to adulthood and to manage, monitor, evaluate and supervise the educational quality of public and private education and training systems. In this perspective, their profile does not include either mainly or exclusively professionals working as pedagogical coordinators. *Pedagogisti* may also act as supervisors, teachers' trainers, consultants and so on, at all levels of education.

9. Recent country-specific research focusing on ECEC staff

InTrans – Sustaining inclusive transitions across the early years

Sources: Lazzari, Balduzzi, and Serpioni 2022a; Lazzari, Balduzzi, and Serpioni 2022b (see *References* for full details).

Aims: In the context of the reform on the Integrated System 0–6 (Law 107/2015), the continuing professional development (CPD) of Educators, Pre-primary Teachers and Pedagogical Coordinators has gained renewed attention. As educational services 0–3 years and pre-primary schools in Italy previously fell under the responsibilities of different Ministries at national level – and were regulated and funded by different bodies at regional and local levels – institutional splits as well as differences in pedagogical approaches and educational practice across the 0–3 and 3–6 services are posing major challenges to the implementation of the reform. In such a fragmented landscape, investing in CPD initiatives aimed to foster inter-professional learning communities across the 0–3 and 3–6 sectors – as well as across state-maintained, municipal and private provision – has become paramount for sustaining the development of a unitary pedagogical vision, promoting the continuity of educational approaches and practices from 0 to 6 (Law Decree 65/2017). Against this background, the research and development initiatives undertaken within the Erasmus+ KA3 project *InTrans – Sustaining Inclusive Transitions across the Early Years* (2020–2022) in the Italian context aimed to support the process of reform implementation by influencing the ECEC systemic conditions so that innovative educational continuity practices could be disseminated and upscaled.

Procedures: As part of the *InTrans* consortium⁹, the research and development initiatives carried out in the Emilia-Romagna region by the University of Bologna (Department of Education) included the design, piloting and roll-out of an intensive CPD programme that involved approximately 50 participants, including Pedagogical Coordinators working in municipal and private ECEC services as well as pedagogical leaders operating in state-maintained pre-primary schools. The CPD programme, which was developed in collaboration with regional and local authorities, included both a theoretical and a practical component. The first was focused on raising awareness about the importance of sustaining inclusive transitions by drawing on international research findings. The latter was focused on providing participants with methodological tools to review critically the strengths and weaknesses of the transition practices implemented in their services by targeting their reflection on the experiences of children and families in transitions. At the end of the programme participants were asked to co-design small-scale transition projects to be piloted in their local context. To facilitate the implementation and follow-up of such initiatives, CPD activities were carried out mostly in “mixed groups” representing state-maintained, municipal and private provision on a territorial basis.

Findings: The results from focus groups carried out with participants after 6 months revealed that the successful outcome of experimentations was related both to the characteristics of the

⁹ The *InTrans* project was coordinated by VBJK - Centre For Innovation in the Early Years, the University of Ghent (Centre for Diversity and Learning and Department of Social Work and Social Pedagogy) in Belgium; the University of Bologna (Department of Education) in Italy; Tampere University (School of Education) in Finland; the Education Research Institute (ERI) in Slovenia; the Danish Union of Early Childhood and Youth Educators (BUPL) in Denmark; and the International Step by Step Association (ISSA). The Ministry of Education and Culture (FI), the Ministry of Education, Science and Sport (SL), the Ministry of Education & Training and the Child & Family Agency (BE), as well as the Emilia-Romagna Regional government (IT) were involved as associated partners in the project.

CPD programme (i.e. developing a shared pedagogical vision by combining research and practice; sustaining the development of inter-professional networks at local level) and to the characteristics of the local context (i.e. support provided by school heads and/or local authorities to ensure the sustainability of experimentations; the possibility to rely on established pedagogical coordination networks to upscale innovative practice).

Implications: In this sense, the findings from the *InTrans* project reveal that joint CPD initiatives can contribute significantly to sustaining the process of reform implementation from a grass roots perspective, but only if they are combined with policy advocacy initiatives influencing the systemic conditions in which ECEC educational services 0–3 years and pre-primary schools operate at the local level.

The role of internship in the initial professional education of Educators working with 0–3 year-olds

Sources: Cecotti and Sannipoli 2021; Garbarini, Terzi, and Campioni 2020; Lichene, Molina, Restiglian, and Sannipoli 2020; Marchesi and Vassuri 2020 (see *References* for full details)

Aims: Following the enactment of Law Decree 65/2017, the *Gruppo Nazionale Nidi e Infanzia* (GNNI) promoted working groups and in-depth studies on various aspects concerning the implementation of Integrated System 0–6, including exploratory research on the internship in initial professional training for Educators for 0–3 year-olds, which is considered to be a fundamental element for harmonising codified knowledge on early childhood and the reality of educational services 0–3 years. The aim of the study was mainly to analyse the connections between universities and providers of educational services and to investigate how direct and indirect internship are organised.

Procedures: A computer-assisted web interviewing (CAWI) survey was carried out through the Google Forms function by administering two questionnaires (February–June 2019) with structured and semi-structured questions that, despite the specificity of the two target groups (university and providers), would allow data comparison.

Questionnaires were sent to Italian universities in which the *specific pathway in Early Childhood Education* was implemented within the Educational Science course (*Scienze dell’Educazione*) (39 out of 51). A total of 17 questionnaires (44%) were collected by universities located in different areas of the country, and 18 questionnaires were collected by educational services 0–3 years located in the centre and north of Italy and managed by different providers (municipalities and the private sector). A focus group was conducted in the city of Bologna to gather the voices of students, Educators and Pedagogical Coordinators involved in the internship experience with different roles.

Findings: Some main issues emerged from the data collected. The procedures for planning and accompanying students’ internship, as well as the number of hours dedicated and their distribution during the three years, vary significantly across universities. Although indirect internship is not implemented by all universities, it is gaining ground alongside direct internship and is designed for supporting students in developing knowledge of educational contexts and accompanying reflection on their experience. The supervising tutor emerges as a key figure for scaffolding students during their internship. It is important that universities invest in this role and define the criteria for recruitment, which are not set by regulations as in the course of Primary and Pre-primary Education (*Scienze della Formazione Primaria*). Internship is viewed as a key component of the initial training of Educators by both students and providers as well as ECEC professionals who are already working in educational services 0–3 years, who consider internship as an opportunity to reflect on their practices.

Implications: Internship represents an important opportunity for universities and the ECEC sector to enter into dialogue and construct a shared view on the professionalism of educators of children up to 3 years of age.

Promoting shared reflection and collegiality among ECEC professionals through observation, documentation and evaluation practices

Sources: Picchio and Giandomenico 2021; Di Giandomenico and Picchio 2022 (see *References* for full details)

Aims: Law Decree 65/2017 calls for new attention to be paid to the issue of ECEC quality evaluation. The decree explicitly states that local authorities have the responsibility for both monitoring and assessing the quality of all educational services 0–3 years located in their area and for promoting their continuous improvement. Sharing evaluation activities provides an important opportunity for networking ECEC services managed by different providers in the same area and for promoting the Integrated system.

Quality evaluation projects, which have been carried out since the 1990s by some regional and local governments in cooperation with research agencies, showed that ECEC professionals should be considered the main actors of ECEC quality evaluation. This activity should be integrated into their current professional practice, taking into account their specific stance on direct participants in the educational context.

From the same perspective, an action research project financed by the Region of Tuscany was carried out by the Institute of Cognitive Sciences and Technologies – National Research Council (ISTC-CNR) in collaboration with the Municipality of Pistoia between January 2019 and January 2021. The project involved 140 professionals (Educators and Pedagogical Coordinators) of 35 municipal and private educational services 0–3 years located in a district of Tuscany (which includes seven municipalities) and aimed at implementing professionals' competences in observing, documenting and evaluating the quality of children's experience during daily life in ECEC services; supporting ECEC professionals' reflexivity and promoting it within collegial meetings that brought together professionals from different services; and promoting the elaboration of a common educational approach between professionals working in both municipal and private ECEC services.

Procedures: In the action research project, the educational team of each ECEC service was requested to use procedures for observing, documenting and analysing children's experience during daily life in ECEC services, taking into account their different aspects (well-being, sociality and participation in play and care activities) and their evolution over the months; to produce written narrative documentation systematically integrating photos; and to evaluate jointly the impact of their educational practices on the quality of children's experience.¹⁰

The documentation and reflections produced by each team were presented and discussed with Educators from other ECEC services, researchers and Pedagogical Coordinators within periodical meetings organised at different levels of collegiality (between professionals working in municipal and private ECEC services of the same municipality, between professionals working in municipal and private ECEC services located in different municipalities and between all the ECEC professionals involved in the project).

¹⁰ These procedures were validated in previous action research initiatives in other Italian sites and were contextualised by taking into account the documentation practices and collegial work modalities usually implemented in the ECEC services involved (Picchio, Di Giandomenico, and Musatti 2014).

A total of 36 meetings were held, and the discussions among professionals during these meetings were recorded and fully transcribed. The transcriptions and documentation produced periodically by each team of professionals were analysed by researchers to verify whether and how the procedures proposed sustained professionals' reflexivity, collegiality and the improvement of educational practices and reinforced the network between ECEC services in the district.

Findings: The study highlighted that the systematic use of procedures of observation and documentation enhanced ECEC professionals' competences in grasping and understanding the complexity of children's experience and the ongoing processes that take place over time during daily life in ECEC services. Narrative documentation provides a useful tool for anchoring discussions to concrete matters, sharing judgements within and between ECEC services on the impact of current professional practices on children's experience and, accordingly, identifying elements that would improve them. In particular, during the pandemic, these procedures supported ECEC professionals in sharing reflections on the impact of practices implemented to maintain meaningful relationships with both children and parents during the lockdown period and then in introducing innovations into the procedures of *ambientamento* – that is, the children's gradual transition from home to ECEC service (Bove 2007) – on the reopening of the ECEC services in September 2020.

Implications: Sharing reflection among ECEC professionals at different levels of collegiality can be an important opportunity for empowering professional competences, improving daily practices and reinforcing feelings of belonging to an ECEC system.

Reforming the 0–6 educational system through research-training projects with children and adults: the case of Milan (Lombardy)

Source: Premoli and Zaninelli 2020 (see *References* for full details).

Aims: Since 2012, to date, the Research Centre on Intercultural Relations of the Catholic University of the Sacred Heart of Milan (under the supervision of Milena Santerini), and the Research group of ECEC pedagogy of the University of Milan-Bicocca (under the supervision of Susanna Mantovani) have designed and managed two large research-training projects – called *Milano-Bambini* (Milan-Children) and *Didattica Inclusiva e Flessibilità* (Inclusive and flexible education. From teaching for a few to teaching for all) - for the ECEC's sector of the Municipality of Milan. Both projects were financed with funds pursuant to law 285/1997 (with public competitive process), and each lasted two years and were then extended for a further year for a total of six years (2012/13-2018/19). They were managed in the form of a temporary Association of Purpose (ATS), with the two Universities of Milan (Catholic University and Bicocca University) alternately in the role of leader. In the second three-year period, six social enterprises and local associations were also part of the ATS (Aldia Social Cooperative, CIDI association, Social Consortium ConOpera, the Orsa Cooperative, Pianeta Azzurro social cooperative, Social Consortium SIS). A group of researchers were involved in the two projects. Among them, Silvio Premoli, Monica Amadini, Alessia Todeschini (Catholic University); Francesca Zaninelli, Agnese Infantino, Giulia Pastori, Piera Braga (Bicocca University).

Procedures: Within the first project (Milano-Bambini, MIBA) a joint proposal was submitted which went beyond the traditional forms of ECEC professional development in Milan to include laboratories/workshops that were piloted and implemented in schools and open to families, as well as other forms of innovation such as the production of materials and the activation of participatory processes with the involvement of parents and children. Five sub-projects were funded within the city's ECEC settings over the years of the programme (2011-2013). Each covered the need for CPD of a significant number of ECEC professionals and produced a wide range

of documentation, which is of ongoing value at a number of levels. The programme involved 36 municipal ECEC services (educational services 0-3 years, pre-primary schools, integrative services) spread across the city of Milan, 300 ECEC practitioners and 12 coordinators, plus an additional 252 educators who took part in seminars conducted during the second year. The main actors in the project were Milano City Council (0-6 system), the Catholic University of Milan, Milan-Bicocca University and ECEC practitioners. Families and children were involved in the workshop phase of the project, based on experiential learning.

The second project (*Didattica Inclusiva e Flessibilità*) involved 150 ECEC services, with the additional involvement in transversal activities of almost all ECEC practitioners (3300) employed in the Milan's municipal services. In addition, a number of actions involved the pedagogical coordinators of all the ECEC services in Milan.

The main goal was to promote innovation at a methodological, pedagogical, didactical level through research training actions on key issues such as: intercultural education and family's participation in the first project (Milano-Bambini); inclusive education, with a focus on pedagogical continuity, well-being, parent-educator co-responsibility, and documentation in the second project (*Didattica Inclusiva e Flessibilità*).

Findings: Both projects have promoted innovative work logics through research-training courses and learning by doing processes, aimed at introducing and experimenting new activities with children who attend an ECEC services in Milan. Basically, action research interventions were activated and applied as a main professional development strategy, through the use of reflexive approaches for the exploration of implicit pedagogies/practices and theories. This approach highlighted the importance of recognising existing research studies and potentials as a starting point to promote innovation and to open spaces of possibility and change in working with children and with families. A main result is the impact of pedagogical research as a key tool to promote innovation and update practitioner's skills and competences, and the role of Pedagogical Coordinators as key figures. A huge investment was devoted to the involvement of the Pedagogical Coordinators as key figures or "*multipliers*" of the innovative actions introduced in the ECEC's settings (Bove, Mantovani, et al. 2016; Bove, Jensen, et al. 2018).

Among the results are:

- (1) The *Linee di Indirizzo Pedagogiche dei Servizi all'Infanzia 0-6 del Comune di Milano* (Pedagogical Guidelines for Milan's ECEC services) written and established at the end of the first project through a participatory process involving all professionals involved in the ECEC services (Mantovani and Premoli 2020). The pedagogical guidelines are founded on the history and tradition of the City and at the same time aim to introduce pedagogical innovation.
- (2) A tool for self-assessment of the quality of infant-toddler centres and pre-primary schools (Pastori, Morgandi, and Ripamonti 2020) developed and tested during the second project through a research-training (2018) on the quality of ECEC service. 78 Pedagogical Coordinators plus four central coordinators were involved in the participatory construction of the tool for the observation and improvement of educational quality.

An in-depth description of all the research-intervention projects developed at a city level is included in the Special Issue, METIS (Premoli and Zaninelli 2020).

Zero to six (*Zerosei*) in the face of the COVID emergency: experiences, research and pedagogical reflections

Source: Falcinelli and Mignosi 2022 (see *References* for full details)

Aims and background: The pandemic has had a significant impact on ECEC services in a number of ways; however, despite the incredible difficulties and challenges caused by the pandemic, in

most cases, Educators/Teachers and Pedagogical Coordinators in Italy acted as key responders in the crisis and “not only displayed a noteworthy capacity to keep the education system alive (an ability that has also been defined as “collective agentic action”, Campbell 2020, 340)” (cited in Bove 2021) but also tried to transform these challenges into resources or lessons learned.

Procedure: In so doing, they reacted as a community of practice, developing small research projects (mainly qualitative or small-scale quantitative studies) in their settings, often in collaboration with local universities, with the goal of creatively re-inventing their practices to face the many challenges introduced by the pandemic. Examples of these studies are included in the book edited by Falcinelli and Mignosi (2022); they are local, mostly qualitative or quantitative studies using small samples and mainly concern issues emerging from the field, for example:

- New forms of parent–teacher communication, introducing flexible modes of remaining in touch despite the challenges involved in educating children remotely
- Innovative solutions for caring relationships with children despite the limitations due to the pandemic (LEAD – Educational Connections at Distance)
- Children’s experience during the lockdown
- New media education
- Inclusion.

In addition, the book includes a national survey regarding the experience of the re-opening of educational services 0–3 years and pre-primary schools after the pandemic emergency promoted by the *Gruppo Nazionale Nidi e Infanzia* (Garaffo, Lichene, Molina, Porcheddu, Sannipoli, and Savio 2022).

Findings: Among the main findings are the following:

- The great commitment of all ECEC professionals in coping with the emergencies by guaranteeing children the possibility to continue attending the ECEC services
- Increased attention to everyday routines such as sleep and meals
- Different ways of dealing with the sizes of groups of children.

10. Workforce challenges – country expert assessment

As in other European countries, a growing consensus in Italy on the importance of investing in the professionalism of ECEC staff and general acknowledgement of their role in supporting the quality of ECEC is emerging among ECEC professionals, policy makers and researchers (Bove et al. 2018; Peleman *et al.* 2018; Vandebroek, Urban, and Peeters 2016).

As we have shown, following Law Decree 65/2017, a major process of change is underway to implement an integrated system of education from birth to 6 years of age. The changes concern aspects of governance, educational quality and continuity, and workforce qualification. This process is posing some major workforce challenges that need to be faced in the near future and from a long-term perspective:

- (1) Developing a more coherent and unified approach to the initial professional education of Educators (0–3) and Pre-primary School Teachers (3–6).** The IPE for educators of 0–3 year-olds has been upgraded from the secondary to the tertiary level through the introduction of a Bachelor’s Degree in Educational Science with a specific pathway in Early Childhood Education. Although this was an important step in qualifying the professionalism of the

ECEC workforce, a major gap remains regarding the qualification required for Pre-primary Teachers, that is, the 5-year degree in Primary and Pre-primary Education (*Scienze della Formazione Primaria*), the curriculum of which emphasises a narrow subject-oriented approach to teaching over a broader pedagogical approach to learning and which makes graduates eligible to teach in both primary and pre-primary settings (see *Chapter 4*).

The current splitting of the two IPE routes risks enlarging the traditional gap between the professional profiles, identities and perceived and actual professional status of Educators 0–3 and Teachers 3–6. It might also hinder the development of a shared educational approach that could ensure a smooth transition and continuity in children’s experience in ECEC from birth to 6 years of age (Balduzzi, Restiglian, and Zaninelli 2021).

The professional profile of ECEC core practitioners working in the Integrated System 0–6 emerging from the Pedagogical Guidelines of the Integrated System 0–6 (*Linee Pedagogiche per il Sistema Integrato Zerosei*) recently approved by the Ministry of Education (Ministerial Decree 334/2021) provides a reference for reconsidering the IPE pathways of both university courses.

- (2) Developing a common framework for CPD for ECEC professionals of both sectors (0–3 and 3–6) and ensuring equal CPD opportunities across the country through close cooperation between the state, regional governments and local authorities.** In the coming years, systematic and sustainable joint CPD initiatives including both 0–3 Educators and 3–6 Teachers working in ECEC provision managed by different providers need to be implemented to promote a common culture and a shared holistic approach to early childhood education between ECEC professionals, support practices of horizontal and vertical continuity, and provide coherent responses to the new needs of children and their families in contemporary society by ensuring quality and inclusive education (Child Guarantee 2022). These initiatives might be driven by the CPD best practices and organisational expertise developed in municipal ECEC provision over the years (collegial work, peer learning exchanges, the use of observation and documentation, analysis of practices and collaboration with universities and research centres). However, this perspective needs to reconsider the conditions, procedures and content of CPD provided to teachers of state-maintained pre-primary schools (currently the choice of CPD activity is left to the individual teacher) to increase their participation in systematic shared CPD activities and promote opportunities for dialogue and cooperation between different pre-primary schools (see *Chapter 6*).
- (3) Reviewing the employment agreements applied by ECEC providers** to reduce inequality between ECEC professionals’ salaries and working conditions (stability, contact and non-contact time, paid hours specifically allocated to CPD activities, etc.). Often such differences tend to have negative effects on their professional development and living conditions, as well as on the quality of ECEC provision (Mari 2021). It should be noted that over the years, the difference in salaries between the public and the private sectors have led many local authorities to outsource the management of educational services 0–3 years rather than opening and managing services directly, with the consequent risks of lowering the educational quality of ECEC provision and weakening their governance of the local ECEC system as a whole (see *Chapter 7*).
- (4) Institutionalising and spreading a system of territorial pedagogical coordination (*coordinamenti pedagogici territoriali*) across the country.** As presented in *Chapter 2.4*, the crucial role of Pedagogical Coordinators and local pedagogical coordination (a stable network of Pedagogical Coordinators at regional, district or municipal level) in promoting and supporting the quality of ECEC services, as well as the whole ECEC local system, is widely recognised. However, to date, Pedagogical Coordinators are mostly present in the central

northern areas, where local authorities have traditionally invested in quality ECEC provision (such as in the Umbria, Emilia Romagna, Tuscany and Lombardy regions), and this important role is not yet defined in state-maintained pre-primary schools. Law Decree 65/2017 (see *Chapter 8*) states that establishing and expanding territorial pedagogical coordination – a team that will include Pedagogical Coordinators of municipal and private educational services 0–3 years and municipal, private and state-maintained pre-primary schools working in the same area – are strategic actions for implementing and qualifying the Integrated System 0–6 across the country. Some major challenges need to be faced: defining the competence profile of Pedagogical Coordinators; providing pre-service and in-service training in order to support their qualification; promoting their dissemination in local ECEC systems across the country; and identifying ECEC professionals who may function as coordinators in state-maintained pre-primary schools.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of ECEC provision are: **nursery** (*nido* 0–3) and **pre-primary school** (*scuola dell'infanzia* 3–6)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Italy

1828	First childcare centre (<i>asilo</i>) founded in Cremona by the priest Ferrante Aporti to educate and care for children from 2 to 6 years in poverty or affected by health problems. Aporti's ideas spread rapidly in some northern regions in Italy, in particular in Lombardy and Tuscany. Nearly 20 years later, Aporti reports that 178 <i>asili infantili</i> have been established.
1840	First vocational schools established with a three-year programme for the training of childhood assistants, who could work in nurseries, children's orphanages, children's hospital wards and any other childcare institution.
Late 1850s	Several kindergartens based on Froebelian principles are founded. Resistance within the Catholic Church to the new educational ideas.
1861	Unification of Italy
1862	Childcare institutions are brought together with other public welfare institutions under the authority of the Ministry of the Interior. Provincial educational authorities are responsible for the suitability of staff and inspections. ECEC settings remain institutions provided mainly by private or religious associations and charities, but not as state-run educational institutions.
1895-1917	Rosa and Carolina Agazzi initiate a fusion of Aporti's infant school and Froebel's kindergarten in Mompiano near Brescia and produce a prototypical Italian school for young children (<i>scuola materna</i>) with a family-like atmosphere. They call for a broad expansion of educational services with state participation.
1907	Opening of first Montessori kindergarten (<i>Casa dei Bambini</i>) in Rome
1910-1920	Reggio Emilia is a pioneer among Italian cities, founding the first municipal nurseries.
1920s	Establishment of ONMI [<i>National organisation for the protection of mother and child</i>], public services for destitute families, under the auspices of the Ministry of Interior (Law 227/1925)
1923	<i>Scuola materna</i> recognised as a pre-primary educational institution.
1933	First upper secondary schools of education established with a three-year programme for the training of pre-primary teachers. Apart from some slight modifications, these schools remain in operation until 2001.
1963	First municipal preschool/kindergarten opened in Bologna and Reggio Emilia.
1968	Integration of the <i>scuola materna</i> into the state education system (Law 444/1968)
1969	Publication of the first National Guidelines for educational activities in the state <i>scuola materna</i> (<i>Orientamenti per l'attività educativa nella scuola materna statale</i> – Decree n. 647/1969)

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Italy, in compliance with Italian legislation and regulations, the authors of this report have chosen the age formats: **0–3** years for children up to 3 years of age and **3–6** years for those attending pre-primary settings.

1970s	Establishment of nurseries, childcare services for infant and toddlers of working mothers. Nurseries are defined not as universal provision, but as an individual service on demand in support of women's employment. Municipalities and private entities are responsible for providing them (Law 1044/1971).
1980s	The project <i>Tempo per le Famiglie</i> is initiated in Milan by the city council and the Bernard Van Leer Foundation – a precursor to the later integrative services for under-threes and their families (<i>Centri per bambini e famiglie</i>). Research on the dissemination of these centres shows that in 2013, 423 such centres were in operation, the majority in central and northern Italy.
1990s	<ul style="list-style-type: none"> – Publication of new pedagogical guidelines for pre-primary education (<i>Nuovi Orientamenti dell'attività educativa per la scuola materna</i> – Decree 3 June 1991) – Services for the under-threes start expanding, accompanied by increasing collaboration between research agencies and ECEC services. A culture of Early Education begins and new professional organisations are established, such as the <i>Gruppo Nazionale Nidi Infanzia</i> (founded by Loris Malaguzzi). – Establishment of a special national fund for local administrations to use for actions supporting children and young people – Expansion of integrative services for under-threes such as <i>Centri per bambini e famiglie</i> (Centres for Children and families) and <i>Spazi Gioco</i> (Playgroups) (Law 285/1997) – Establishment of four-year university degree in Primary and Pre-primary Education that makes teachers eligible to teach in pre-primary (3–6) and primary (6–11) schools (DM 26 May 1998) – A growing number of studies, most of them action-research projects, are conducted in collaboration between researchers and practitioners and are closely related to practice and methodological innovation.
2004	National Guidelines for “individualised educational activities” in the <i>scuola dell'infanzia</i> (<i>Indicazioni per i piani personalizzati delle attività educative alla scuola dell'infanzia</i> – DM 59/2004).
2007	National Curricular Guidelines for pre-primary and primary cycle of education (<i>Indicazioni Nazionali per il curricolo della scuola dell'infanzia e del primo ciclo di istruzione</i> – DM 31 July 2007)
2010	Establishment of a single-cycle 5-year university degree in Primary and Pre-primary Education (DM n. 249/ 2010)
2012	Revised version of the National Curricular Guidelines for pre-primary cycle (<i>Indicazioni Nazionali per il curricolo della scuola dell'infanzia e del primo ciclo di istruzione</i> – DM 254/2012)
2015	Education Reform Act (Law 107/2015) outlines a “Reform of the national education and training system and mandate to reorganise existing legislative provisions” at all levels, including early childhood education and care.
2017	Law Decree 65/2017 (<i>Istituzione del Sistema integrato di educazione e istruzione dalla nascita sino ai 6 anni</i> – Establishing an integrated system of education from birth to six years) comes into force, introducing a series of implementation measures for the new unitary system.
2018	Update of the National Curricular Guidelines for pre-primary and primary education (<i>Indicazioni Nazionali e Nuovi Scenari</i> – MIUR, 1 March 2018)
2019/20	Bachelor's degree in Educational Science with a specific pathway in Early Childhood Education becomes obligatory for educators working with children under 3 years of age.
2021	National Guidelines defining both the cultural and pedagogical framework of the integrated system zero-to-six issued (<i>Linee guida pedagogiche per il sistema integrato zero-sei</i> – DM n. 334, 22 November 2021)
2022	National Guidelines for educational services 0–3 years (<i>Orientamenti nazionali per i servizi educativi per l'infanzia</i> , DM 43/2022)

ECEC system type and auspices²

The ECEC system in Italy has been changed by law from a split-sector to an integrated system recognised as the first stage of the national education system. In 2015, the Education Reform Act (107/2015) was adopted. Two years later a Law (65/2017) established the framework for an integrated ECEC system from birth to six years of age. Not only pre-primary schools (*scuole dell'infanzia*) for 3 to 6 year-olds and so-called 'Spring sections' (*sezione primavera*) for 2 to 3 year-olds now come under the auspices of the Ministry of Education (*Ministero dell'Istruzione*), but also educational services for children under three years of age (*servizi educativi per l'infanzia*).

Italy has a three-tier system of ECEC governance. Besides the Ministry of Education at the national level, the 20 Regions of Italy are responsible for the regulatory framework for educational services for under-threes and the administrative body may be either the education or the social policy department. At the local level, services for under-threes are provided by municipalities or the private sector while *scuole per l'infanzia* are provided by the state, municipalities and the private sector.

General objectives and legislative framework

Key legislative frameworks and declarations regarding children's right to education in an ECEC setting are the Italian Constitution, which emphasises the state's commitment to redress inequalities and promote the full development of all citizens; the UN Convention on the Rights of the Child; and relevant European Union documents. Overarching goals of early childhood education are to support children's identity building, autonomy and competence development, as well as laying the foundations for an understanding of civic values.

The Education Reform Act 107/2015 ("Reform of the national education and training system and mandate to reorganise existing legislation") and the related Legislative Decree 65/2017 ("Establishing an integrated system of education from birth to six years") provide the framework for a fundamental reform of the Italian education system. As described in the previous section, the two previously separated sectors of early childhood education and care are to be integrated into a unitary system.

ECEC entitlement and compulsory attendance

There is no legal entitlement to a place in an ECEC setting for 0 to 6 year-olds; nevertheless, high enrolment rates are the norm in pre-primary schools, including 3 year-olds. Attendance in all kinds of ECEC provision for 0 to 6 year-olds is voluntary.

Statutory schooling begins at age 6.

² The Eurydice country report on ECEC in Italy-provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

Main types of provision

Nurseries (*nidi*) provide care and education for children aged 0–3 years. Children with special educational needs are prioritised in admissions policies. Opening hours range between 7:30 and 9:00 in the morning to between 16:00 and 18:00 in the afternoon (Musatti and Picchio 2010).

According to national statistics (ISTAT 2023a), in 2021/2022 there were 11,618 nurseries, mini-crèches, and Spring sections in Italy, of which 4,282 (=37.2%) had a public provider. Of the total of 326,660 places available, about half (163,927) were public. In total, 57.9% of the Italian municipalities provided nurseries. At the end of 2021, the Lombardy Region had the most nurseries and mini-crèches (1,850). Overall, the largest number of settings (nurseries, mini-crèches and Spring sections combined) was in Lombardy (2,399), Lazio (1,283) and Veneto (1,135) (ISTAT 2023a).

Integrative centres/services (*servizi integrativi*) are also available for the under threes. They were initiated in the 1980s within a family policy framework (*Tempo per le Famiglie*). At the end of 2021, there were 1,900 of these services, of which 697 were playgroups; however, these settings are found in only 12.7% of municipalities and the attendance rate (0 to under 3 years) accounts for only 0.7% (ISTAT 2023a).

‘Spring sections’ (*sezioni primavera*) for 2 to 3 year-olds are aimed to smooth the transition between nurseries and pre-primary education. They may be located in either kind of setting, depending on the local circumstances. ‘Spring sections’ were first established in 2007 as an experimental form to meet the growing demand of families. In 2021, there were 2,679 Spring sections (ISTAT 2023a).

In total, at the end of 2021 in Italy, there were 13,518 facilities for under-threes with 350,307 places, almost half of which (48.8%) had public providers. Only 11.2% of the places are found in the southern regions (ISTAT 2023a), even though more than one third of all children under 3 years of age live there (CRC 2022).

In 2021/2022, 85.4% of available places for under 3 year-olds were in nurseries (*nidi*), 13.6% in Spring sections and 7.2% in integrative services, which include playgroups and centres for children and families (ISTAT 2023a, and own calculations).

Pre-primary schools (*scuole dell’infanzia*) are the regular form of provision for 3 to 6 year-olds. In general, these are state-maintained. However, in the larger cities with well-developed municipal provision the children often attend a municipal pre-primary school. Children must usually be at least 3 years old by the 31st December in any one year to attend. If places are available, younger children can also be accepted. *Scuole dell’infanzia* are open for eight hours daily, from 8:00/9:00 to 16:00/16:30 (Musatti and Picchio 2010). Municipal and private pre-primary schools often offer longer opening hours if there is a need. They are closed in July and August for the summer break.

According to national statistics, in 2021 there were 22,476 *scuole dell’infanzia* with 1,338,067 children attending, 72.9% of them in public pre-primary schools. 2.4% were children with disabilities and 11.5% were children with a non-Italian background (ISTAT 2023c).

A number of 2 year-olds, that is in advance of the planned starting age of 3 years, access *scuola dell’infanzia* and are included in the same groups of older children. This is the case in areas where the provision of ECEC services for children under 3 is scarce, such as in southern regions.

Provider structures

Nurseries and integrative services for the under 3 year-olds are usually run by municipal or private providers. Local authorities can also commission private agencies to establish nursery settings, or they may be provided by cooperatives or companies for their employees (Bove and Cescato 2018).

In 2021/2022, 4,606 of all (13,518) settings (nurseries, integrative services, Spring sections) were public (=34.1%), as were 48.8% of the available places. Regional variations are considerable: in Calabria, only 20.8% of the settings had a public provider whereas in Molise 59.2% were public (ISTAT 2023a, own calculations). Particularly in the larger cities, the proportion of publicly run settings is significantly higher, whereas in the southern parts of the country, some municipalities do not offer any kind of service.

The majority of Spring sections (83.1%) and of the integrative services (82.9%) were private in 2021/2022 (ISTAT 2023a).

Pre-primary schools (*scuole dell'infanzia*) may be run by the state, the municipalities or private (mostly church-affiliated) providers. Some pre-primary classes are in private independent schools which, under certain circumstances, have a status similar to that of state schools (*scuole dell'infanzia paritarie*). Regional disparities in the distribution of providers are considerable. In the southern parts of the country there tend to be more state-run pre-primary schools than in the north. As far as 0–3 services are concerned, public sector provision dominates in most of the northern and central Italian cities as well as on the outskirts of Bologna, Florence and Milan (ISTAT, Università Ca' Foscari and MIPA 2022, 14).

Overall, in 2021, more than half (58.8%) of pre-primary schools were public, nearly one third (32.2%) were private and 9.1% were run by municipalities. 72.9% of all children under the age of 6 attend a public pre-primary school. However, there are clear regional differences: While in Valle d'Aosta 83.1% of children are enrolled in a public setting, this is only the case for only just over half of children (58%) in Lombardy (ISTAT 2023c).

Table 1

Italy: Number and share of pre-primary schools and children by provider type, 2021

Provider	Number of schools	Share of schools, in %	Number of children	Share of children, in %
Public (state)	13,205	58.8	841,394	62.9
Public (municipal)	2,042	9.1	133,411	10.0
Private	7,229	32.2	363,262	27.1
Total	22,476		1,338,067	

Source: ISTAT 2023c, own calculations

Participation rates in regulated provision

The overall enrolment rate of 0 to 3 year-olds in nurseries, mini-crèches and Spring sections at the end of 2021 was 15.2%. Considerable differences in the enrolment rates remain between northern and southern Italy –22.9% in the North-East and only 6.6% in the southern regions. The highest participation rates were in Trento (32.1%), Emilia Romagna (30.9%), and in Friuli (30.5%), while in Calabria these rates were only 4.5% and in Campania only 4.3% (ISTAT 2023a).

25% of under 3 year-olds participated in centre-based provision in 2005, by 2022 this proportion has increased to 30.9%. The larger majority of children between 3 years of age and school entry attend some form of ECEC provision, although overall participation increased marginally from 91% in 2005 to 92.1% in 2022.

Table 2

Italy: Participation rates according to duration of attendance in centre-based settings 2005-2022

Year	Weekly attendance	0 to under 3 years, in %	3 years up to minimum compulsory school age, in %
2005	1 to 29 hours	9	21
	Over 30 hours	16	70
	No enrolment in ECEC	79	9
2010	1 to 29 hours	6	17
	Over 30 hours	16	70
	No enrolment in ECEC	78	13
2015	1 to 29 hours	10.4	23.3
	Over 30 hours	16.9	62.6
	No enrolment in ECEC	72.7	14.1
2022	1 to 29 hours	10.8	21.0
	Over 30 hours	20.1	71.1
	No enrolment in ECEC	69.1	7.9

Source: Eurostat 2023b

The participation rates for 3 to 6 year-olds are much higher: between 87% and 92% in 2021, whereas only 12.7% of the 2 year-olds attend an ECEC setting (see Table 3).

Table 3

Italy: Number and enrolment rates of children in centre-based ECEC settings, by age, 2021

Age	Number of children in ISCED 01 settings	Enrolment rates in ISCED 01 settings, in %	Number of children in ISCED 02 settings	Enrolment rates in ISCED 02 settings, in %
Under 2 years	n.d.			
2 year-olds	56,503	1.7		
3 year-olds			404,923	87.2
4 year-olds			441,498	91.9
5 year-olds			428,794	86.9
6 year-olds			6,349	1.3

Source: Eurostat 2023h, i

In 2020/21, the overall attendance rate of the over 3 year-olds was 88.7%. Especially in the southern regions and on the islands the groups also include some 2 year-olds (21.7% and 16.9% respectively) (CRC 2022, 127).

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 0.56% of GDP in 2019: 0.1% on provision for under 3 year-olds and approximately 0.5% on provision for 3 to under 6 year-olds (OECD 2023).

The Ministry of Education is responsible for the allocation of financial resources to the regional authorities, which provide guidelines for promoting the integrated system at the local level.

Nurseries and other ECEC services for under 3 year-olds are fee-paying for parents - in 2020 the national average comprised 12.7% of the total costs; compared to 2019 it fell by almost 6 percentage points (ISTAT 2023b, 3). The fees vary according to the family income, with considerable regional differences (CRC 2021). However, the Legislative Decree 65/2017 introduced an 'upper limit' to the contribution of families for covering the costs of running ECEC services.

State-maintained **pre-primary schools** are fully publicly funded: salaries by the state and buildings and meals by the municipalities. Municipal ECEC pre-primary schools working according to the national guidelines receive part-funding by the state, while buildings and staff salaries are financed by the municipality. Apart from a small sum for meals and transport, public pre-primary schooling is free of charge. Low-income families do not have to pay for meals and transport. There are no available data regarding the fee levels of private *scuole dell'infanzia*, which are established by the provider).

Staff to child ratios and group size

In **nurseries** and other settings for under 3 year-olds, children are mostly allocated to same-age groups, sometimes to mixed-age groups. The Regions decide on the required group size and staff to child ratios. There are no national regulations. The staff to child ratio varies between 1:5 and 1:10 according to the children's age and the region.

In **pre-primary schools**, groups are also usually organised according to the children's age. However, for some activities children of different ages are brought together in order to strengthen relationships between the older and younger children. In state-run provision, group size varies between a minimum of 18 and a maximum of 26 (under certain circumstances this may be 29). If children with special educational needs are enrolled, the group size is reduced accordingly. Each full-time class has two teachers who alternate and work individually in the morning or afternoon. During the midday meal, both teachers are present. In many municipal pre-primary schools, the co-presence of two teachers is also provided during other times of the day in order to divide the group of children into small groups. The staff to child ratio, taking as a reference the maximum limit of children for each section, is 1:26. In 2021, 19.7 children were enrolled in public settings, 19.1 in private settings, i.e. 19.5 on average (ISTAT 2023c).

Curricular framework

In 2021, Pedagogical Guidelines for the Integrated System 0–6 (*Linee Pedagogiche per il Sistema Integrato Zerosei*) were adopted by the Ministry of Education. They define both the cultural and the pedagogical framework of ECEC services, proposing a unitary and holistic approach to the education of children from birth up to 6 years of age.

In 2022, National orientation guidelines for educational practice in ECEC services attended by children **under 3 years of age** (*Orientamenti nazionali per i servizi educativi per l'infanzia*) were issued by the Ministry of Education. The guidelines provide a framework for planning and implementing a high-quality educational environment which supports children's agency and the development of their cognitive, social and communicative competences – through play, exploration, relationships with peers and adults, respecting each child's needs and rhythms of growth.

Centre programmes include various activities (e.g. times for play and rest, mealtimes, health care); sometimes family members (e.g. grandparents) are involved in parts of the everyday programme. Activities aim to foster the children’s socialisation and learning at the individual and group level.

Since 2013/14, **pre-primary schools** are required to work according to the “National Curriculum Guidelines for Pre-primary Institutions and the First Cycle of Education” (*Indicazioni nazionali per il curricolo della scuola dell’infanzia e del primo ciclo di istruzione 2012; Indicazioni Nazionali e nuovi scenari 2018*) issued by the Ministry of Education in line with key competences for life-long learning adopted by the European Parliament. They are also binding for private pre-primary settings with equal status to state schools (*scuole paritarie*).

The curriculum is structured according to five key areas of experience and learning: (1) The self and others, (2) Body and movement, (3) Pictures, sounds and colours, (4) Language and words, (5) Knowledge of the world. Catholic kindergartens develop their own area of learning regarding religious education. The guidelines include competences which children are expected to have acquired by the end of their time in pre-primary schools, e.g. to be able to express their feelings, to enter into relationships with others, to convey experiences through language, to think about different meanings, or to show an understanding of rules. ‘Civic education’ has been a compulsory, cross-curricular subject in schools since 2020 (Ministerial Decree 35/2020). At the pre-primary level the focus is on identity development, respect, health, and well-being. ‘Reading literacy’ is not specified as a learning area in the National Guidelines (European Commission/EACEA/Eurydice 2019, 99).

Although staff are free to choose their preferred teaching methods, they are expected to ensure that the children experience a balanced curriculum between routine procedures and new learning; to be aware of the importance of active and discovery-oriented approaches; to organise the rooms in an aesthetically stimulating way; to feel responsible for the children’s overall spatial experiences; and to offer them support when needed.

Digital education

The Ministerial Decree 35/2020 for all stages of the education system states that children should be introduced to digital devices in an age-appropriate way. Besides experiencing positive examples, teachers should also help children to become aware of the related risks.

Monitoring – Evaluation

In Italy, there is currently no nationally regulated or mandated system of evaluation of children’s individual achievements, while national assessment procedures of pre-primary schools were recently introduced (Eurydice 2023; European Commission/EACEA/Eurydice 2019).

Child-related assessment

In both **nurseries** and **pre-primary schools** no formal or testing assessment takes place. According to the Pedagogical Guidelines for the Integrated System 0–6 (*Linee Pedagogiche per il Sistema Integrato Zerosei*), observations and narrative documentation of children’s experience in everyday life of ECEC service provide the basis for tracing, analysing and understanding the development of this experience over time at the individual and group level in order to share it with parents and children and plan improved educational practices.

Centre-level assessment

There are no national regulations for internal evaluations at the centre level in **nurseries**. However, some Regions are developing self-evaluation instruments to qualify for accreditation procedures for nurseries.

Pre-primary schools have recently been included in the national educational quality assurance framework. Each pre-primary school is required to submit a Self-Evaluation Report (*RAV Infanzia*) following a set format developed by the National Institute for the Evaluation of the Education System (INVALSI).

External evaluation

Regional and municipal authorities are responsible for inspections in **nurseries** and other provision for under 3 year-olds. These monitoring and evaluation procedures focus mainly on the structural quality of provision and compliance with the regional regulations.

External evaluations in **pre-primary schools** take place through the Regional Education Office of the Ministry of Education, but not necessarily on a regular basis. Beyond inspecting the rooms, equipment and compliance with safety regulations, staffing quality, curriculum implementation and the children's progress are also the focus of such evaluations. Inspections are not conducted according to a standardised instrument. The *scuole dell'infanzia paritarie* are checked for compliance with regulations every three years, when they reapply for accreditation.

Inclusion agenda

The principle of inclusion is enshrined in the Italian Constitution. Legislation and policy for inclusive education is cross-sectoral to ensure the efficient co-ordination of services, as well as clearly defining roles and responsibilities (EASNIE 2021).

Children with special educational needs and disabilities

In Italy, legislation adopted in 1992 ("Framework Law for the assistance, social integration and the rights of persons with disabilities") requires that children with disabilities and other special educational needs are included as far as possible in mainstream provision, both in nurseries and in pre-primary schools. Relevant guidance was issued by the Ministry of Education in 2009. Individual educational plans are developed for these children and they receive special support measures which may include additional specialist staff. Segregated pre-primary schools no longer exist. In a small number of schools that are considered "bilingual", deaf children are included in regular groups where both they and their peers without a hearing impairment learn sign language as a second language.

A Special Needs Teacher is usually employed in a pre-primary school if a child with special needs is enrolled. Their role is to support the individual child, but also to promote processes of inclusion and integration within the group of children. If a child with special needs is enrolled in an educational service 0–3 years, employing a Special Needs Teacher is not a requirement, but either the number of children in the group is decreased or the number of educators is increased (Picchio and Bove 2023).

In 2021, children with disabilities accounted for 2.4% of the total number of children enrolled in pre-primary schools, 2.8% of those in public and 1.2% of those in private settings (ISTAT 2023c).

No data are available for nurseries.

Children with a migration background

In 2021, 11.5% children with a non-Italian background were enrolled in a pre-primary setting, 13.2% in public, 6.9% in private settings (ISTAT 2023c).

In 2022, 8.5% of the population in Italy held a non-Italian citizenship. More than two-thirds of them (72.4%) came from countries outside the EU-27 (2020). In the group of children under 5 years, 14.1% had a non-Italian background and three-quarters (75.4%) of them were from non-EU countries (Eurostat 2023c).

Parental leave arrangements³

Compulsory **Maternity leave** (*congedo di maternità*) lasts five months. At least four weeks of these can be taken before the expected birth date. During this period, monthly payments are based on 80% of previous earnings (no upper limit).

Employed fathers have to take ten compulsory days **Paternity leave** (*congedo di paternità*) in the period from two months before the birth to five months after the birth; they are fully paid with no upper limit. A further one day of optional Leave is available if the mother transfers part of her Maternity leave.

Each (employed) parent can be granted up to six months of **Parental leave** (*congedo parentale*), three months are non-transferable. It may be taken in different time blocks and also simultaneously at any time up to the child's 12th birthday. Parental benefit is paid for three months for mother and father each, as well as three additional months for one of them. If the father takes at least three months, parental leave is extended to 11 months. While the children are still under 6 years of age, parents receive 30% of their earnings; once the child is older, leave is unpaid. After nine months, an income-related allowance is paid if the income is less than 2.5 times the amount of the minimum pension (2021: €515.28).

Parental leave, which lasts about 15–16 months (depending on the bonus months of the father), is only well paid for about five months, but ECEC provision for children under 3 is fee-paying and availability varies considerably from region to region, resulting in a significant gap between leave entitlement and access to childcare services.

In 2021, 21% of employees making use of Parental leave in the private sector were men. On average fathers took 25 months of parental leave – compared to 61 months taken by mothers.

Current challenges for the ECEC system in Italy

Country expert assessment by Mariacristina Picchio and Chiara Bove

As already described in the Italian *ECEC Workforce Profile*, an important reform of the Early Childhood Education and Care system is in progress in Italy. In relation to the approval of the national law 107/2015 and the subsequent Law implementation Decree 65/2017, which legislates the “institution of the integrated system from birth to six years”, a process of gradually establishing this system is in progress.

Main challenges are:

³ The brief information in this section is based mainly on the country note for Italy by Tindara Addabbo, Valentina Cardinali, Dino Giovannini, and Sara Mazzucchelli in the *International Review of Leave Policies and Research 2023* (see *References*).

1. Redefining and implementing regular State financing or co-financing of ECEC services through one source, namely the Ministry of Education (MIUR)
2. Earmarking state funding for local services according to minimal standards
3. Progressively redefining ECEC governance to guarantee greater homogeneity and basic requirements through negotiations in a Standing Committee (*Conferenza Unificata*) comprising representatives of the state, the regions, the provinces and the municipalities
4. Ensuring more accessible services for all families, especially for the most vulnerable ones; increasing provision for children up to the age of three (overcoming inequalities and cultural barriers – Decree 65/2017, Article 4 (h))
5. Developing high quality integrated centres for the education of children aged 0–6 years (*Poli per l'infanzia*) and encouraging training programmes that involve 0–3 Educators and 3–6 Teachers
6. Progressively reconceptualising the 0–3 services as no longer being services provided according to individual demand. This process will include reduced fees for families.
7. Establishing educational continuity across the ECEC sector, integrating ECEC services both horizontally (among different providers, i.e. state, municipalities, associations, private providers) and vertically (0–3/3-6)
8. Clarifying the various possible professional profiles, qualifications, functions, roles and in-service training of the Pedagogical Coordinators to ensure that they can act as a *key figure* in the local integration of the 0–3 and 3–6 sectors, according to the specificities of the region
9. Developing a national system for monitoring ECEC quality, for sustaining the expansion and improvement of ECEC services within the integrated system, and for reducing disparities and differences between Regions
10. Developing an *updated* professional profile for ECEC Educators and Teachers, capable of working within a more flexible and integrated 0–6 system
11. Reviewing the University curricula required for working in a 0–3 service: Bachelor degree in Educational Science with a specific pathway in Early Childhood Education, the additional course of 60 ECTS credits following a five-year degree in primary and pre-primary education required for teachers of *Scuola dell'Infanzia* to enter the 0–3 profession
12. Designing new integrated opportunities for CPD (as envisaged in Law 107/2015 and Legislative Decree 65/2017), by encouraging a strong commitment through Universities and local agencies.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Italy totalled 59,030,133. This represents a steady growth over the past 20 years; however, from 2020 it has been falling (2000: 56,923,524; 2010: 59,190,143; 2020: 59,641,488) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13).⁴ At 1.25, Italy is well below the EU27 average (Eurostat 2023d).

Children under age 6

Table 4

Italy: Children under 6 years of age, 2022

Age of children	Number of children
Under age 1	400,626
1 year-olds	407,634
2 year-olds	425,183
3 year-olds	444,638
4 year-olds	464,753
5 year-olds	478,684
Total 0 to under 6 year-olds	2,621,518

Source: Eurostat 2023a

In 2022, children under age 3 accounted for 2.5% and children under 6 years of age for 5.2% of the total population. Since 2000, these percentage rates have been consistently lower than the EU average.

Table 5

Italy: Children under 6 years of age – share in total population from 2000 to 2022, in %*

Year	Comparison Italy /EU	Under 3 year- olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Italy	2.8	2.8	5.5
	Ø EU15 ⁵	3.2	3.2	6.
2005	Italy	2.8	2.8	5.6
	Ø EU25	3.1	3.1	6.2
2015	Italy	2.5	2.8	5.3
	Ø EU28	3.0	3.2	6.2
2022	Italy	2.1	2.4	4.4
	Ø EU27(2020)	2.7	2.9	5.7

⁴ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

⁵ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Single households with children under age 6

In 2022, 82.5% of households with children under age 6 were couple households. Single parent households accounted for 3.1%, whereby these were almost exclusively single mother households (2.9%).

Table 6

Italy: Households with children under age 6, 2022

Household type	Total households	Total households, in %*
Households – total	4,537,100	
Couple households	3,743,400	82.5
Other types of households	653,200	14.4
Single households, total	140,500	3.1
Single households, women	132,800	2.9
Single households, men	7,700	0.2

Employment rates of parents with children under 6 years of age

In Italy, in 2022, the overall employment rate for men (15-64 years) was 74.6% and for women 56.4% (Eurostat 2023j).

In 2022, 52.6% of women and 87.2% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers corresponded with the EU-average (87.2%); those of mothers were significantly lower (average 63.6%) (Eurostat 2023e, own calculations).

Table 7a

Italy: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers in %	Fathers in %
Italy	51.8	88.8
Highest rate of employment in 27 EU countries ⁶	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2021	
	Mothers in %	Fathers in %
Italy	52.6	87.2
Highest rate of employment in 27 (2020) EU countries ⁷	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Source: Eurostat 2023e

For the SEEPRO-3 countries that were not part of the EU27(2020) in 2021/2022, data are displayed in *Table 7b*.

⁶ AT, BE, BG, CY, CZ, DK, DE, EE, EL, ES, F, FI, IE, IT, HU, LV, LT, LU, MT, NL, PL, PT, RO, SE, SI, SK, UK

Children at risk of poverty or social exclusion⁸

In 2022, 26.8% of children under 6 were at risk of poverty or social exclusion. This proportion was above the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population also was 24.4% (EU: 21.6%). 5.4% of children under 6 and 6.1% of the total population suffered from severe material deprivation in 2020 (EU average 6.1% and 4.3% respectively) (Eurostat 2023f, g).

⁸ 'At risk of poverty or social exclusion' refers to the situation of people either at risk of poverty (threshold set at 60% of the national median equivalised disposable income after social transfers), or severely materially deprived or living in a household with a very low work intensity. Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-eqf>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the author

Inese Šūpule, Dr.sc.soc. in sociology, is a researcher at the Baltic Institute of Social Sciences (BISS) and the University of Latvia. Since 2004, she has worked at BISS as a senior researcher, responsible for general guidance in elaboration of methodology and in the process of data analysis, preparation of reports and publications. Her fields of expertise are migration, societal integration, and education.

Note from the editors: In official translations of government documents, ECEC settings in Latvia are invariably described as *Pre-school education institutions* and core practitioners as *Pre-school education teachers*. The preferred terms in the SEEPRO-3 reports for countries with an integrated ECEC system are *ECEC centre* and *ECEC Teacher*. The distinction is made because the term ‘pre-school’ is often used internationally to mean ‘pre-primary’ education, referring to the two or three years prior to school entry only. Since there is an official trend in Latvia to move away from the term ‘pedagogue’ to the term ‘teacher’ (associated in Latvia with a higher level of IPE and higher societal status), the terms *Early Childhood Education and Care Teacher* or *ECEC Teacher* are used interchangeably throughout this report.

Introductory note on methodology

The methods used for preparing the report on the early childhood education and care (ECEC) workforce in Latvia are analyses of relevant statistical data, laws and regulations as well as expert interviews. Three interviews were carried out with the following experts: Ļubova Jakovele, a senior expert at the National Centre for Education (date of the interview 10.01.2022); Rasma Purmale, a principal of an ECEC institution in Riga and a lecturer in the University of Latvia, education programme “Early Childhood Education and Care Teacher” (date of the interview 13.01.2022); and Inese Seipule, Ministry of Education and Science, Department of Education, Deputy Director in the field of general education (date of the interview 17.01.2022). All interviews were audio recorded and transcribed. References to expert statements are included in the text.

1. ECEC governance in Latvia

Latvia has a unitary system of early childhood education and care for children up to statutory school age at 7 years, organised in two stages. Both ECEC provision for children up to age 5 and pre-primary education for 5 to 6 year-olds come under the auspices of the Ministry of Education and Science (*Izglītības un zinātnes ministrija*). The Ministry of Education and Science has overall auspices of the ECEC institutions for children aged 1½–6¹ years, including the development of regulatory and curricular guidance. At the local level the municipal authorities are responsible for providing public ECEC facilities. The Ministry of Education and Science is responsible for the remuneration of ECEC Teachers working with children aged 5–6 years, while municipalities are responsible for the remuneration of ECEC Teachers working with the younger age groups. In general, all ECEC provision has two sources of funding: the state (for the salaries of teachers working with 5 to 6 year-olds) and municipalities (except for private ECEC settings). The small number of private ECEC centres is obliged to adhere to the same regulatory framework as the public institutions.

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to 3** years of age and **3–5** years for 3, 4 and 5 year-olds. In Latvia, with a school starting at age 7, the corresponding formats are **1½–5** and **5–6** years.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The main staff categories working directly with children in Latvian ECEC institutions are:

- Early Childhood Education and Care Teachers
- Teacher Assistants
- Early Childhood Music and Sports Teachers
- Speech Therapy Teachers
- Special Needs Pedagogues.

Minority ECEC institutions, where the language of instruction is not Latvian, may also employ a Latvian Language Teacher. Administrative staff categories are: Centre Heads (responsible for management tasks), Deputy Centre Heads (responsible for the educational programme), and Early Childhood Education Methodologists². Technical staff categories include: teacher assistant, cooks, cleaners. In some institutions a Psychologist and/or a Nurse may also be employed. Music, Sports and Special Needs Pedagogues may be employed as permanent staff members of an ECEC centre and work on a daily basis with the children, but in the case of small ECEC institutions they may work part time and move from centre to centre.

Table 1 gives a brief overview of the main staff categories and also categorises the core practitioners (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at the end of this chapter).

Table 1

Latvia: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ³ ECTS credits EQF level ISCED level
Early Childhood Education and Care Teacher <i>Pirmsskolas izglītības skolotājs</i> <i>Profile:</i> Early Childhood Pedagogy Professional	<i>Pirmsskolas izglītības iestāde</i> ECEC centre / kindergarten 1½–6 years	Core practitioner with group responsibility	1½–7 years	Tertiary-level qualification in pedagogy and professional award as Early Childhood Education and Care Teacher or Tertiary-level qualification in pedagogy and professional award as Primary School Teacher plus a 72-hour B-programme ⁴ on early childhood pedagogy

² ‘Methodologists’ in Latvia are senior Early Childhood Education and Care Teachers responsible for professional support in organising the educational work in ECEC institutions; one of his/her responsibilities is monitoring the staff needs for continuing professional development.

³ Cabinet of Ministers 2018a.

⁴ See Chapter 3 on IPE for a clarification of ‘B-Programme’.

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ³ ECTS credits EQF level ISCED level
				<p>Or</p> <p>Second level professional higher education (Bachelor) in pedagogy plus a 72-hour B-programme on early childhood pedagogy</p> <p>or</p> <p>Higher education degree (Bachelor's or Master's or Doctoral degree) in early childhood pedagogy</p> <p>ECTS credits: 108–240 EQF Level: 5 and higher ISCED 2011: 5 and higher</p>
<p>Teacher Assistant <i>Skolotāja palīgs</i></p>	<p><i>Pirmsskolas izglītības iestāde</i> ECEC centre / kindergarten 1½–6 years</p>	<p>Responsible for children's care needs and supporting the teacher in educational and play activities</p>	1½–7 years	<p>There are no official minimum requirements for education and qualification. It is recommended that candidates have first aid training and attend courses on children's rights protection. Some municipalities may organise a preparatory course on child psychology and development.</p>
<p>Early Childhood Music/Sports* Teacher <i>Pirmsskolas izglītības mūzikas/ sporta skolotājs</i></p> <p><i>Profile depends on qualification route:</i> either Pre-primary and Primary Education Professional with additional specialist qualification or Early Childhood</p>	<p><i>Pirmsskolas izglītības iestāde</i> ECEC centre / kindergarten 1½–6 years</p>	<p>Main responsible person for children's music/ sports activities</p>	1½–7 years	<p>Second level professional higher education degree in pedagogy with</p> <ul style="list-style-type: none"> • additional qualification as Music Teacher <p>or</p> <ul style="list-style-type: none"> • additional qualification as Sports Teacher <p>or</p> <p>ECEC Teacher qualification requirements (see <i>above</i>)</p>

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ³ ECTS credits EQF level ISCED level
Pedagogy Professional				ECTS credits: 108–240 EQF Level: 5 and higher ISCED 2011: 5 and higher
Speech Therapy Teacher <i>Logopēds</i> <i>Profile:</i> Pre-primary and Primary Education Professional with specialist qualification	<i>Pirmsskolas izglītības iestāde</i> ECE centre/ kindergarten 1½–6 years	Main responsible person who works with children with speech problems	1½–7 years	Second level professional higher education degree in pedagogy <i>PLUS</i> a postgraduate qualification as Speech Therapy Teacher ECTS credits: 108–240 EQF Level: 7 ISCED 2011: 5 and higher
Special Needs Pedagogue** <i>Speciālais pedagogs</i>	<i>Pirmsskolas izglītības iestāde</i> ECEC centre / kindergarten 1½–6 years	Main responsible person who works with children with special needs	1½–7 years	Second level professional degree in special needs education (Bachelor's or Master's) <i>or</i> ECEC Teacher or Primary School Teacher professional qualification <i>plus</i> a 72-hour B-programme on special education approaches in ECEC. ECTS credits: 240 and higher EQF Level: 6 and higher ISCED 2011: 6 and higher

* In some ECEC institutions there is not a designated post for a sports teacher. ECEC Teachers also prepare and lead sports activities for children.

** Special Needs Pedagogues (sometimes called Special Needs Teachers) work with children with complex needs both in regular ECEC settings and in special kindergartens. This staff position is not common in all ECEC institutions.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)

- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

In Latvia, the right to work as a head of an educational institution, including ECEC centres, is determined by Regulation 569 of the Cabinet of Ministers of the Republic of Latvia (2018a). These rules apply to all schools and ECEC centres and the requirements are the same. Article 13 of these regulations stipulates that a person whose education meets one of the following requirements is eligible to work as a Centre Head, Deputy Head and Educational Methodologist of an educational setting:

- Higher education (except for the 2-year first-level professional higher education) in pedagogy or educational sciences (see *Table 3 – Route 1*)
- Higher education and a part of the study programme related to pedagogy has been learned within the framework of the higher education study programme for at least two ECTS credits or at least 72 hours.

Article 50 of the Education Law states that the heads of educational institutions must not have a criminal record.

Regulation 618 of the Cabinet of Ministers of the Republic of Latvia (2020b) on assessment of the professional performance of educational setting managers stipulates that the performance of the head is evaluated after a certain period of time, not less than once every six years. It is evaluated by the State Quality Service of Education. A first-time head of an educational setting is evaluated within two years, but not earlier than six months after taking up the position. This gives new heads time to familiarise themselves with the specific setting context.

ECEC Centre Heads are hired by the municipalities, where their contracts are concluded. Job duties are determined more specifically by each municipality.

An interview with the Director of an ECEC centre in Riga revealed that to become a Centre Leader, three years of experience in pedagogical work with children or in methodological work are required. The candidate must have knowledge of at least one foreign language and know how to work effectively with information technologies. According to this interviewee, a professional development centre for young ECEC leaders/ managers has been operating in Riga for five years or more, where young directors have the opportunity to improve their pedagogical, administrative, and financial management skills, as well as work with staff (Purmale, expert interview, January 13, 2022). This professional development centre was established and financed by Riga municipality.

The main leadership tasks are primarily administrative, however the teachers' salary regulations (Cabinet of Ministers of the Republic of Latvia 2018a), which also apply to ECEC Teachers, state that the Head and Deputy Head of the educational institution can work up to seven hours in addition to their basic workload. Therefore, in addition to the basic workload of 40 hours a week, directors can work an additional seven hours a week which may include working with children. Most often, the ECEC Principals work only at times when a teaching post is vacant and there is no one to fill these positions or a temporary replacement is needed. Secondly, there are Principals who wish to maintain their teaching experience and demonstrate their teaching skills in a real-life situation. Principals also need to be present in the everyday pedagogical work process, to understand what is happening in the classroom (Seipule, expert interview, January 17, 2022).

2.3 Centre-based posts of responsibility

The specialisation of employees depends on the specific ECEC centre and municipality, as the municipality provides personnel funding. In addition, there is a salary bonus for teachers for working with the children of asylum seekers. For this, a separate contract is concluded with educational institutions and a state budget is allocated (according to the number of children in the institution).

2.4 Co-ordinating and supervisory staff

Most ECEC centres in Latvia have a co-ordinating staff member called a “Methodologist”. Methodologists are senior Early Childhood Education and Care Teachers responsible for professional support in organising the educational work in ECEC centres. One of his or her responsibilities is monitoring the staff needs for continuing professional development, but they also have a counselling, coaching and support role in the ECEC setting. They may also organise on-site or regional continuing professional development activities. A person who has a higher pedagogical education (excluding a first-level pedagogical higher professional education), is entitled to work as an Educational Methodologist.

Supervisory functions are performed by the employees of the municipal education administration, which coordinates the professional development of teachers at the municipal level, as well as by the State Quality Service of Education, which in their inspections examines and verifies cases where there have been complaints about the quality of education.

Relatively recently, the National Centre for Education of the Republic of Latvia has launched the Learning Consultants Expert programme. The purpose of the programme is to promote the introduction of a new teaching and learning approach in the educational process. The main task of the consultant is to provide the ECEC Teacher with practical support in the work environment. Prospective Learning Consultant Experts are required to complete a certain number of CPD courses and then demonstrate the acquired skills. They study three levels of courses over a period of three years and are awarded 160 ECTS credits (this takes place alongside regular teaching work). In the second year, they are awarded the status of a learning expert; in this capacity they have the right to consult ECEC Teachers (Jakovele, expert interview, January 10, 2022). On 01.02.2021, there were 72 ECEC Learning Consultant Experts across the country, fully trained by the National Centre for Education (National Centre for Education 2021). Since 2017, six consulting centres have been operating in Riga, where attention has also been paid to ECEC settings. The consulting centres are staffed by specialists whose work is focused on support in organising the learning process and raising the quality of education (Purmale, expert interview, January 13, 2022).

2.5 Specialist support staff

Regulation 716 of the Cabinet of Ministers of the Republic of Latvia on “national preschool education guidelines” (2018b) stipulates that, taking into account the working hours and the number of groups of the educational setting, the local government which is provider of the ECEC centre ensures the necessary number of teachers and teacher support staff (including Speech Therapists) for the implementation of the ECEC educational programme. Therefore, in general, it is the municipality’s responsibility and decision which specialists to involve in ECEC work.

Regulation 447 of the Cabinet of Ministers of the Republic of Latvia on national preschool education guidelines (2016a) about the state budget targeted grant for teachers’ wages (article 8.5) envisages state funding for the salary of Speech Therapists employed to work with children from the age of 5 until the start of primary education. The ratio is set at one position for 200 children. For children up to the age of 5, the Speech Therapist's salary is paid by the municipality whereas

the state pays the salaries of those working with 5 and 6 year-olds. In Riga, there are Speech Therapists in all ECEC centres. In other municipalities, it depends on the size of the setting, the attitude of the municipality and the availability of specialists (Purmale, expert interview, January 13, 2022). In a study by the Latvian Speech Therapist Association (2021), it was found that one quarter of municipalities in 2021 did not receive the necessary state grants in full. Using the ratio set by the state in the calculations, the authors of the study show that the funding allocated by local governments for younger children to ensure the work of a Speech Therapist is even more insufficient. This confirms the widely known fact that Speech Therapist services are only available in a segment of the ECEC settings in Latvia. It should be noted, however, that children can also receive state-paid Speech Therapist consultations in medical institutions through a family doctor or a medical specialist.

Special needs staff work only in ECEC institutions that implement a special education programme (in total, there are 28 municipal special ECEC centres in Latvia). In Latvia, special education is for children with visual, hearing, language and learning impairments, severe somatic illnesses, movement and support apparatus impairments, mental health illnesses and learning disabilities (among young children, mixed developmental disabilities). Special education centres or groups are fully financed by the state, and the funding is determined by Regulation 477 of the Cabinet of Ministers of the Republic of Latvia on the financing procedure for special education classes (groups) in both special and regular education settings (2016b). Specialists in these ECEC institutions are engaged according to the children's needs and disorders. The ECEC principal interviewee states that teachers receive bonuses of 10-20% for work with special groups (Purmale, expert interview, January 13, 2022). If the help of an assistant is needed, the municipality or the state covers the wages, depending on the child's age.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

In 2020/2021, 11,499 teachers were employed in ECEC centres in Latvia. 90.7% of these worked in municipal settings and 9.3% in ECEC centres established by legal entities or individuals. There are no data available on the technical staff (assistants, cleaners, cooks) who work in ECEC institutions.

8,282 or 72% of the pedagogical staff in ECEC institutions worked directly with the children as Early Childhood Education and Care Teachers, 10.2% were engaged in management duties (5.4% were employed as Centre Heads, and 4.8% worked as an Education Methodologist or Deputy Centre Heads).

7.2% of teachers were employed as early childhood Music Teachers, 4.4% as Sports Teachers and 6.5% of staff were Speech Therapists.

32.9% of the pedagogical staff in ECEC centres are teachers working for the mandatory preparation of children for school from the age of 5.

88.4% of teachers working in ECEC institutions have a tertiary-level professional qualification and the greater majority (84.7%) a specialisation in pedagogy (there are no available data on whether these teachers have a specialisation in early childhood pedagogy). 3.7% had a tertiary level education in another field. 13.3% of the staff with a specialised higher education degree have a Master's degree in pedagogy. 11.6% of teachers working in ECEC institutions have a qualification below tertiary level. Of these, 3.5% had a secondary vocational education and 8.1% a

general secondary education. 68.7% of this group of teachers with a secondary-level education (either vocational or general) are studying for a tertiary-level degree in pedagogy.

The available data show that 15.3% of staff working in ECEC institutions do not have a relevant qualification. In this group there are staff with a general secondary education, a secondary vocational education and with other (non-pedagogical) higher education.

In Latvia, the personnel working in ECEC institutions are mainly women (99%). Of all teachers working in ECEC institutions, only 0.84% or 97 persons are male. The majority of male teachers worked as sports teachers (58 persons or 59.8%) or music teachers (16 persons or 16.5%), 6 persons or 6.2% of all male staff were heads of institutions.

4.3% of teachers are younger than 24 years, 18.5% are in the age group 25-34 years and 21.9% are in the age group 35-44 years. More than half (55.3%) of the teachers working in ECEC centres are over 45 years of age. 29.9% are aged 45-54 years, and 25.4% are 55 years of age or older. In general, 6.2% of teachers working in ECEC institutions have reached retirement age.

Data on ethnic background or nationality within the ECEC workforce are not collected in Latvia. In 2020/2021, of all ECEC institutions registered in Latvia (in total, 643), 74.7% were with Latvian as the language of instruction, 7.6% with Russian, 17.4% were bilingual with both Latvian and Russian as the language of instruction. Teachers can work in any ECEC institution regardless of their ethnic background or nationality.

Table 2

Latvia: Structural composition of ECEC* workforce in Latvia, 2020/2021**

Staff categories	Number of staff and proportion of workforce	
Total staff with higher education degree (or tertiary-level professional qualification) (ISCED 5 and above)	10,166	88.4%
Staff with a higher education qualification in pedagogy	9,739	84.7%
<i>of whom the following have a Master's degree in pedagogy</i>	1,534	13.3%
Staff with higher education qualification in another field	427	3.7%
Staff with upper secondary or post-secondary IPE:	1,333	11.6%
– secondary vocational (ISCED 3)	398	3.5%
– general secondary (ISCED 3)	935	8.1%
<i>the majority of whom are currently studying for a higher education degree in early childhood pedagogy</i>	915	68.7%
Staff with non-specialist qualification (both higher and secondary)	1,760	15.3%
Unqualified staff	No data available	
Specialist support staff	977	8.5%
– Speech Therapists	744	6.5%
– Special Education Teachers	34	0.3%
– Special Needs Pedagogues	100	0.9%
– Educational Psychologists	99	0.9%
Male staff:	97	0.8%
– Sports Teachers	58	0.5%
– Music Teachers	16	0.1%
– Principals	6	0.05%
– Other	17	0.15%
ECEC Teachers in the mandatory preparation of children for school from the age of 5	3,783	32.9%
Staff with a background of migration	No data available	

* The data include only the pedagogical staff in ECEC institutions.

** Ministry of Education and Science 2021 (personal communication). Data were provided directly by a ministry official. Not available on ministry webpage.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

During the last five years, the process of ECEC Teacher education in Latvia has been improved and some programmes have been modified, but the system has not fundamentally changed. Therefore, the information compiled in this chapter largely endorses the information in the previous report (Šūpule, Bebriša, and Jansone 2018).

The higher education programme ‘Early Childhood Education and Care Teacher’ is offered by four higher education institutions in Latvia: University of Latvia (*Latvijas Universitāte*); University of Liepaja (*Liepājas Universitāte*), Rezekne Academy of Technologies (*Rēzeknes Tehnoloģiju akadēmija*) and Daugavpils University (*Daugavpils Universitāte*). Previously there was also the Riga Teacher Training and Educational Management Academy (*Rīgas Pedagoģijas un izglītības vadības akadēmija*; a non-university institution) offering this education programme. However, in 2017 the latter was reorganised and attached to the University of Latvia.

First-level higher professional education in early childhood education is provided at the four universities mentioned. Graduates of the first-level professional higher education study programme can obtain a Bachelor’s degree in education by continuing to learn the content of the professional Bachelor study programme ‘Primary Education Teacher’.

Primary School Teachers (grades 1-4) wishing to work in an early childhood institution, or Early Childhood Education and Care Teachers wishing to work in a special ECEC institution are obliged to follow a requalification course known as a ‘B-programme’. These programmes are of 72 hours’ duration and cover issues of early childhood pedagogy, particularly didactics. They are developed and conducted by the higher education institutions which offer study programmes in pedagogy.

Table 3

Latvia: Early Childhood Education and Care Teacher

<p>Job title in Latvian: <i>Pirmsskolas izglītības skolotājs</i> Profile: Early Childhood Pedagogy Professional</p>
<p>Route 1: First level professional higher education programme Entry requirements: Certificate of general secondary education or vocational secondary education (ISCED 34 and 35) Professional studies: 2 years (2 years and 6 months for external studies) of professional higher education Award: Professional status (diploma) as Early Childhood Education and Care Teacher ECTS credits: 120 EQF level: 5 ISCED 2011: 55 Main ECEC workplace: ECEC centres/kindergartens (1½–6 years) Graduates with a Bachelor's degree can study further to gain a Master’s or a higher education degree.</p>

Job title in Latvian: <i>Pirmsskolas izglītības skolotājs</i> Profile: Early Childhood Pedagogy Professional
<p>Route 2: Professional Bachelor's degree programme Entry requirements: Certificate of general secondary education or vocational secondary education Professional studies: 4-year (4 years and 6 months for external studies) university/higher education study programme – sub-programme 'Early Childhood Education and Primary School Teacher' Award: Professional Bachelor's degree in educational sciences/professional qualification as Teacher ECTS credits: 240 EQF level: 6 ISCED 2011: 65 Main ECEC workplace: ECEC centres/kindergartens (1½–6 years) N.B. Graduates with a Bachelor's degree can continue their studies in Master's programmes and professional education programmes.</p> <p>Route 3: Second level short professional higher education programme Entry requirements: Higher education degree in pedagogy/Bachelor of educational sciences Professional studies: 2 years of part-time studies affiliated to a university/higher education institution Award: Professional qualification as Early Childhood Education and Care Teacher ECTS credits: (240) +108, total 348 EQF level: 7 ISCED 2011: 65 Main ECEC workplace: ECEC centres/kindergartens (1½–6 years) N.B. Holders of the professional post-graduate qualification can follow further studies to gain a Master's degree.</p>

Note: Since the required qualification routes of Early Childhood Music Education Teachers and Sports Teachers are similar to those of Early Childhood Education and Care Teachers (2nd level professional higher pedagogic education plus additional qualification as Music/Sports Teacher) and since Early Childhood Education and Care Teachers are eligible to fulfil the duties of Music/Sports Teachers, these IPE programmes are not described in more detail.

Table 4

Latvia: Speech Therapy Teacher

Job title in Latvian: <i>Logopēds</i>
<p>Route 1: Professional Bachelor programme 'Special Education and Speech Therapy Teacher' or 'Speech Therapy Teacher' Entry requirements: Certificate of general secondary education or vocational secondary education (ISCED 3 and 4) Professional studies: 4 or 4½ years of professional higher education Award: Bachelor's professional degree in Education/professional status as Special Education Teacher and Speech Therapy Teacher. ECTS credits: 240 EQF level: 6 ISCED 2011: 65 Main ECEC workplaces: ECEC centres /kindergartens (1½–6 years) <i>Additional workplaces include:</i> primary schools, special education institutions, art schools, school management institutions, study centres N.B. 4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

As there are different study programmes for different staff categories, the main focus here is on the IPE programmes for Early Childhood Education and Care Teachers⁵. The main pedagogic didactic approach in the IPE programmes is a holistic and child-oriented approach. In the curriculum, Latvia is in the process of implementing a competency-based approach which allows pupils, based on their ability, to master a skill or competency at their own pace regardless of the specific learning environment.

Early Childhood Education and Care Teacher (*Pirmsskolas izglītības skolotājs*)

Route 1: First level professional higher education programme

Competency specifications:

- Understands the most essential concepts of early childhood education and the guidelines for the professional activity of an ECEC Teacher
- Justifies the choice of learning techniques, methods and technologies, according to the individual development of children and the achievable learning results
- Understands the principles of planning and implementation of a child-centred learning process in early childhood settings
- Knows the techniques of self-analysis, self-evaluation and self-reflection in the teacher's pedagogical activities.

Curricular areas:

- General education courses (for example, early childhood pedagogy)
- Specialisation courses (in pedagogy, psychology, physiology, study methods)
- Practical experience in an ECEC setting
- Preparing and presenting qualification thesis.

Route 2: Professional Bachelor's degree programme

Competency specifications:

- Understands the basic concepts of the field of educational sciences and the guidelines of professional activity, which are necessary to perform the basic tasks and duties of a teacher's professional activity
- Understands the principles of planning, implementation and evaluation of the pedagogical process, the possibilities of their application in practical pedagogical activities
- Is familiar with the content of subject areas, core competences, intermediate competences and methodology
- Knows the techniques which are necessary for the improvement of professional competence, e.g. self-analysis, self-evaluation and self-reflection.

Curricular areas:

- Theoretical courses in pedagogy and psychology
- Courses of specific psychological development features of young children, methods of promotion of children's creativity, specific tasks of home tutors
- Pedagogical practical experience in ECEC institutions
- Preparation of thesis.

⁵ The information is gathered from descriptions of study programmes of different higher education institutions.

Route 3: Second level short professional higher education programme

Competency specifications:

- Being able to practically use knowledge of early childhood pedagogy and study methods, taking into account their previous pedagogic education and work experience
- Being able to plan and organise pedagogic processes with certain goals.

Curricular areas:

- Theoretical courses related to the field (for example, early childhood pedagogy, playing in theory and practice)
- Courses of professional specialisation (for example, bilingual education in ECEC settings, sports in ECEC settings, music in early childhood pedagogy and others)
- Freely chosen courses
- Practical use of theory
- State examination.

4.3 Alternative entry and qualification routes, system permeability

During the last five years, the requirements on entry for working as an Early Childhood Education and Care Teacher have not changed significantly, only in one aspect. The information in this chapter therefore largely endorses the information already collected in the previous report (Šūpule, Bebriša, and Jansone 2018). The minimum requirement for working as an ECEC Teacher in an ECEC institution is a higher pedagogy-related education and a specific qualification. According to the relevant legislation, the only possibility for working without having these specific requirements is for students who are undertaking initial professional studies in pedagogy (Cabinet of Ministers 2018a). Experts still admit that it is common practice for students to start working during their studies and it has become one of the options to solve staff shortage problems in ECEC settings (Purmale, expert interview, January 13, 2022). Regulation 569 of the Cabinet of Ministers of the Republic of Latvia (2018a) also stipulates that after qualifying as an ECEC Teacher the pedagogue should work under the guidance of a teacher mentor for two years.

Almost anyone can work as an Early Childhood Teacher Assistant regardless of their education and qualification, the only requirement is a completed secondary education. However, according to legislation, when hiring a person, the ECEC setting provider is obliged to request information from the Punishment Register to make sure that a person has not been convicted of criminal offences that are related to violence or threats of violence, of criminal offences against moral and sexual inviolability (Latvijas Republikas Saeima 1998a) or of other crimes not permitted for those working with children.

An Early Childhood Education and Care Teacher has both vertical and horizontal career opportunities in ECEC institutions. A teacher can participate in the application process for vacant positions and become the Centre Head of an ECEC institution, a Deputy Centre Head for education work or a Methodologist. An ECEC Teacher can also make horizontal career moves. He/she can gain a specialist qualification and work as a Speech Therapist or a Special Needs Pedagogue. Teacher Assistants can only become an ECEC Teacher by following the required education and qualification routes.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Guided workplace experience in the form of a practicum is given great importance during the IPE programmes for the preparation of future Early Childhood Education and Care Teachers. It is an opportunity for students to test their theoretical knowledge and to improve their pedagogical skills. Workplace-based learning is implemented according to an agreement signed by both the higher education institution and the service provider/employer offering the work placement. The agreement includes the goals and tasks of the practicum, as well as its planning, evaluation procedures and the duties and responsibilities of both co-operating institutions. However, in most cases students currently have to find a suitable placement themselves – frequently it is an ECEC centre close to the student’s home or the one where the student already works alongside his/her studies.

During their practicum students need to develop and improve their skills of observation, to note and evaluate the individual development of each child, to develop skills for the independent planning of learning processes (including goal-setting and tasks), and to learn to choose appropriate pedagogic-didactic and organisational approaches in order to promote the individual development of each child. Students make regular notes of observations of daily practices and these are included in the overall evaluation of the practicum: “A student has to write an internship report, an internship diary based on theoretical knowledge. The diary is evaluated by the university supervisor and also by the Head or Methodologist of the ECEC institution. In the diary, students describe how they have prepared the lessons and how they have conducted them. At the end, there is the practicum exam; a model lesson is filmed and then watched by the assessment commission and evaluated. Contact with children is assessed, as well as how they have used theoretical knowledge and selected materials in relation to specific children” (Purmale, expert interview, January 13, 2022). The representative of the co-operating ECEC institution (Centre Head, Deputy Centre Head for education work or Methodologist) and the HEI supervisor of the field practice assess the student’s performance together. Evaluation also includes a presentation by the student in their higher education institution.

In terms of a centre-based mentor or support person for the students, this role can be fulfilled by an ECEC Teacher as well as by a Centre Head, a Deputy Centre Head for education work or a Methodologist. Each ECEC setting makes this decision according to the tasks a student has to fulfil during the field practice.

According to field experts, a mentor or support person in the ECEC institution should be specially prepared in order to support students during the field practice. Several higher education institutions in Latvia offer relevant courses in their professional development programmes for teachers. As a preparatory course for this role has not been set as a requirement, some experts report that a Centre Head or Deputy Centre Head for education work who has 20 or more years of work experience can perform the duties of mentors without special preparation. Usually, the ECEC staff do not receive additional payment for fulfilling the tasks of a mentor or support person.

The number of ECTS allocated to workplace experience in the professional study routes for core practitioners is 20. The ECEC principal and lecturer at the University of Latvia, Rasma Purmale, characterised the workplace-based learning of students in this way: “One practicum is in the first year, when a student goes to an ECEC setting and watches how an experienced teacher works. A second practicum takes place in the second year, in groups-with children aged 1½–3 years, when the students are given practice assignments – ...] In the second year, they may also lead different aspects: organising play sessions, games and walks. In the case of teachers who study

for only two and a half years, then before the end there is a qualification practicum period lasting for more than a month. By this time the student will be organising the daily schedule as a teacher. The qualification practice ends with the qualification exam, where the assessment committee evaluates the student's teaching practice" (Purmale, expert interview, January 13, 2022).

6. Continuing professional development (CPD) of ECEC staff

Regulatory frameworks, rights and duties: According to the relevant legislation, continuing professional development is mandatory for all teachers, including those working in ECEC institutions. Each teacher is responsible for undertaking professional development of not less than 36 hours within a period of three years (Cabinet of Ministers 2018a). The Education Law (Latvijas Republikas Saeima 1998b) states that a teacher has the right to 30 days over three years for his/her professional development and that this can take place during working hours, maintaining the salary. Whereas ECEC Teachers are responsible for their professional development, its planning takes place in cooperation with the ECEC leadership.

The professional development of technical staff (for example, Teacher Assistants) working in ECEC settings is not regulated at the state level. It is up to the municipality or the specific ECEC institution to decide whether these employees need professional development. There are possibilities for professional development training designed especially for this target group provided in the big cities.

Providers: CPD courses are developed and offered by higher education institutions, state and municipal institutions, non-governmental organisations and private institutions. Some examples: the 'Latvian Language Agency', and the 'Education and Information Services of Riga City (RIIMC)' which are education support institutions established by Riga municipality; the organisation 'Early Childhood Education Association', the 'Education Development Centre', the 'Latvian Early Childhood Music Education Association' and many more, as well as higher education institutions such as Daugavpils University, the Latvian Academy of Sports Education, the University of Latvia, Liepaja University, and Rezekne Higher Education Institution.

Main forms: CPD for Early Childhood Education and Care Teachers is mainly conducted in the form of training programmes and study courses. The course provider is responsible for coordinating the programme with the municipal education board. Less often, professional development may take place through participation in workshops and conferences and may also include a study period in another country.

In recent years, a new form of professional development has been launched in Latvia – professional development based on the work environment. This means that the professional development of the ECEC Teacher takes place on-site, in the ECEC institution, focusing on a specific topic of current importance for ECEC Teachers. The topicality is determined either by the Centre Head or by the Methodologist. A Methodologist observes play-based activities and the learning environment in individual groups and provides feedback to teachers. Observations are discussed with the teacher, strong points are emphasised and suggestions for improvement are made. Then they agree on activities that the teacher can undertake. After some time, another meeting is arranged and the learning consultant again observes activities and the learning environment to understand what professional development the teacher needs.

Recent topics: The topics of CPD offers are diverse and broad. This was one of the findings in a study by Šķestere (2020), who analysed the options offered by the Latvian Local Government Training Centre. The programme included the following courses: internet use for preschool children; practical methods and techniques for preschool language development in the context of the competence approach; methods and techniques for forming mathematical concepts; implementing the competence approach; competence-based curriculum planning and organisation in younger age groups in ECEC centres; implementation of a competence-based curriculum; features of communication in working with children with autistic spectrum disorders; mathematical fairy tales and stories - a means of learning mathematical ideas within the competence approach in preschool.

Access, costs: The availability of different courses is satisfactory and many are provided free of charge. In the case of fee-paying courses, sometimes the ECEC institution or the municipality reimburse costs from their budgets. One of the interviewed experts pointed out that currently the most relevant courses are about improving the digital literacy of ECEC pedagogues, and these courses are offered at the expense of the state (Jakovele, expert interview, January 10, 2022). In her opinion, the three most relevant topics of professional development courses in ECEC are digital skills, children's rights and competence-based education.

Research, debates: Large-scale research projects on the continuing professional development of ECEC personnel have not received funding over the past five years. CPD has not been an issue in current debates in the field, in comparison with topicality of such issues as salaries and requirements for vaccination of ECEC Teachers against COVID-19.

7. Working conditions and current workforce issues

7.1 Remuneration

In general, the Ministry of Education and Science is responsible for the remuneration of ECEC Teachers working with children aged 5–6 years from the state budget, while municipalities are responsible for the remuneration of ECEC Teachers working with the younger age groups. As of September 1, 2021, the lowest monthly-salary for ECEC Teachers was set at €872 (in 2020/2021, it was €790). This is the pre-tax amount. The final salary of ECEC Teachers is calculated according to their workload and work with special groups.

The site that collects information about the amount of pay in various professions reports that the average net monthly salary of ECEC Teachers in Latvia is between €580 and €952 (<https://www.algas.lv/algu-informacija/izglitiba-zinatne-petnieciba/pirmsskolas-skolotajs>). To live on this salary without additional support (e.g. living as a single parent with one child in a major city) is rather difficult and it provides a very low standard of living.

In general, ECEC Teachers are paid less than Primary School Teachers. For posts of responsibility, ECEC employees receive a slightly higher salary. Remuneration does not increase proportionally with the job requirements and responsibilities. The remuneration of ECEC staff differs from municipality to municipality. For example, the municipal authorities in large cities frequently pay additional money to employees in ECEC institutions. Remuneration also differs between public and private ECEC institutions, with a tendency to higher salaries in private settings..

7.2 Full-time and part-time employment in ECEC provision

The workload of a ECEC Teacher is 40 hours in total, of which 36 are contact hours and four hours are for other duties (preparation and so on), while the workload of a Primary Teacher is 30 hours a week. There are no data available about the relative proportion of the full-time and part-time working patterns of staff in ECEC settings in Latvia.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Support measures in the workplace for newly qualified staff are the responsibility of each ECEC institution. Usually, newly qualified ECEC Teachers almost always work together with a more experienced colleague, who fulfils the duties of a mentor. The work of a new teacher is also supervised by the Deputy Centre Head or a Methodologist, who observes the teacher at work and judges whether he/she can organise the learning environment and educational processes independently. According to a new Regulation, provision of the mentor is now an obligation (Cabinet of Ministers 2020a).

7.4 Non-contact time

In Latvia, there are no available data on the amount of time ECEC Teachers actually spend on planning, staff meetings, cooperation with parents, networking in the community and other activities. However, the weekly workload of an ECEC Teacher is 40 hours in total, of which 36 are contact hours and four hours are for such other duties.

7.5 Current staffing issues

The workforce shortage in the education sector, especially in preschools and schools, has been an ongoing problem for years in Latvia. The Latvian Education and Science Employees' Union (LIZDA) updates the information on this issue regularly. Their survey of the heads of educational institutions conducted in November 2021 on the current vacancies and the crisis caused by the shortage of pedagogues in the sector, reveals that there were 819 vacancies in 575 educational institutions at the end of November (LIZDA 2022). Data gathered by the Latvian Association of Local Governments (*ibid.*) shows that Latvian municipalities currently lack around 2,030 teachers – 700 in ECEC institutions and 1,330 in general education schools. The main reason for staff shortages in ECEC centres continues to be the low remuneration for the work, which has consequences for the societal prestige of the ECEC Teacher profession. Although higher education institutions prepare the specialists for this work, only a small proportion of them choose to work in ECEC institutions at the end of their studies. Young people prefer, for example, to choose an administrative job or a job in the field of human resources.

Solutions to the staff shortage in ECEC institutions are sought in various ways. Firstly, teachers are permitted to work more than one work load (40 hours per week in one institution). Secondly, teachers may acquire additional qualifications in order to occupy posts reserved for various specialists, such as a Speech Therapy Teacher. Thirdly, it can happen that ECEC Teachers take on the duties of the specialists who are lacking. For example, if there is no Sports teacher, ECEC Teachers may organise sports classes for their group of children. The fourth option is that ECEC institutions may recruit students of pedagogy programmes to take on a post as an ECEC Teacher.

Finally, it should be stressed that the amendments to the Regulations No 569 on the Required Education and Professional Qualification for Pedagogues and System of Improving Professional Competencies of Pedagogues (Cabinet of Ministers 2020a) make it easier for teachers to work

in different positions and open up different solutions in professional development, including learning in the work environment (see also *Chapter 8*).

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Amendments to the Regulations No 569 on the Required Education and Professional Qualification for Pedagogues and System of Improving Professional Competencies of Pedagogues adopted in 2020 (Cabinet of Ministers 2020a) provide that, from December 1, 2020, the academic staff of colleges and universities will be able to work in schools and ECEC centres without additional pedagogical education, as well as those students who obtain a teacher's qualification in the new work environment-based study programme⁶. The ECEC institutions are now obliged to provide a Mentor for ECEC Teachers who obtain or have obtained first-level higher pedagogical education. This will promote support for young educators, develop cooperation skills and a more successful application of acquired knowledge in daily work. In general, these changes make it easier for those who have already worked at one level of education to move to work at another level of education or area of specialisation, including working in ECEC institutions.

9. Recent country-specific research focusing on ECEC staff

During the last five years no state or municipality commissioned research projects directly focusing on ECEC staffing issues have been conducted in Latvia. However, the professional education/training of personnel and their work has been analysed in student research projects. For example, a Master's degree student, Laura Šķestere, prepared and defended her Master's thesis on the continuing education of ECEC Teachers (Šķestere 2020). The findings are compared with the results of the TALIS study in Latvia (OECD 2020).

Opportunities for continuing professional development for ECEC Teachers in Latvia

Source: Šķestere 2020 (see *References* for full details)

Aims: The research aims to investigate the following questions: What opportunities for continuing professional development are available for ECEC Teachers in Latvia? What tendencies can be observed, what obstacles and necessities?

Methods: Survey of 166 ECEC Teachers in 50 ECEC institutions in Latvia

⁶ This is implemented within a project (co-financed by the European Social Fund Nr. 8.2.1.0/18/l/004) called "The innovative, research-based education and pedagogy study programme" of the University of Latvia and the second-level professional higher education programme "Teacher". This education is intended for those who have a university education, but in a field other than the education sector. Every year, in the "Mācībspēks" project (<https://macitspeks.lu.lv/>), 100 selected candidates have an opportunity to obtain a teacher's qualification during one study year and continue professional development during the second year to become a teacher in one of Latvian schools or ECEC settings.

Selected findings: The findings are compared with the results of the OECD TALIS study 2018 (OECD 2020) conducted in Latvia among ECEC Teachers. The main conclusions are that there are various opportunities for teachers, including ECEC Teachers, to engage in continuing professional education in Latvia. The majority of ECEC Teachers evaluated the professional development courses as useful for their work (89%). Information about different courses is easily available on various websites, it is possible to apply or register for professional development events, and many of them are online. The most requested ECEC CPD course topics in 2017-2018 were: child development; promoting creativity and problem solving; promoting children's play. The interviewed ECEC Teachers felt the need for knowledge in working with children with special needs and with families. The main obstacle in professional development is the lack of replacement staff during their absence.

Implications: Each ECEC Teacher has their own needs in continuing professional development. Therefore, it is necessary to improve the opportunities for teachers to choose suitable professional development courses. According to the research results, there are teachers who have low motivation to improve professionally, and there are also difficulties balancing their working time with courses. At the level of municipalities and ECEC institutions, more attention needs to be paid to ensuring professional development opportunities are made accessible for teachers.

Another study is focused on the salaries of Speech Therapists working in ECEC centres.

Remuneration and workload of Speech Therapists in ECEC

Source: Latvian Speech Therapist Association 2021 (see *References* for further details)

Aims: To investigate the salaries of Speech Therapists working in ECEC.

Methods: Survey of 136 Speech Therapists of ECEC institutions in 84 municipalities; Survey of 102 Speech Therapists at schools in 76 municipalities in Latvia.

Selected findings: The target grant from the state budget allocated to municipal ECEC institutions for the salary of teachers' Speech Therapists is not being allocated in accordance with the regulatory framework, and it is not sufficient to provide speech therapy classes for all children who need them. The regulatory framework does not include the ratio of children with speech disorders per one teacher's Speech Therapist. In ECEC institutions, Speech Therapist teachers work with different numbers of children for the specified salary. When working with a large number of children with inadequate remuneration, the Speech Therapist has limited possibilities to provide quality services and to achieve the necessary results.

Implications: Speech Therapists work with too many children with speech disorders for inadequate pay. This makes it significantly more difficult to provide qualitative services.

10. Workforce challenges – country expert assessment

In 2021-2022, new challenges in ECEC institutions were related to the **COVID-19 pandemic** and the requirement to vaccinate ECEC staff. Among the employees in ECEC centres, there was a higher number of opponents to vaccination than in schools and universities. For example, data of Ministry of Education and Science on 16.08.2021 (Mammām un Tētiem 2021) showed that only 56% of ECEC staff had been vaccinated against COVID-19 compared with 69% in schools

and 82% in universities. This meant that many municipalities were faced with considerable resistance among ECEC staff. In all municipalities of Latvia, there were some ECEC Teachers who left their jobs due to the vaccination requirement, causing temporary difficulties in providing the necessary ECEC staff. (It should be noted that as of July 1, 2022, the requirements set for the education sector regarding the need for a vaccination or infection certificate were cancelled.)

Challenges that have been ongoing for a long time are related to **ECEC staff remuneration**. Although the ECEC staff salary has been increased in recent years, it still cannot be called competitive, and it should also be taken into account that in Latvia, as elsewhere in Europe, inflation and the cost of energy prices have significantly increased. Due to the low salaries, the work of teachers in ECEC institutions does not enjoy high societal prestige and for a long time has faced a gender misbalance with its almost all-female workforce.

Another challenge related to staffing in ECEC institutions concerns the readiness of teachers to deal with **ethnic heterogeneity** in ECEC institutions. In 2022, this issue was especially relevant in connection with **Ukrainian refugees in Latvia**. On October 1, 2022, there were 36,600 Ukrainian nationals who left their country due to hostilities and had registered their place of residence in Latvia (Central Statistical Office 2022). Among them, 3,500 were of preschool age (9.5% of all citizens of Ukraine in Latvia). According to information provided by Riga municipality in May of 2022, there were 730 Ukrainian children admitted in ECEC institutions of Riga municipality. During the year, this number changes all the time, because there is a continuous migration of Ukrainian refugees - some refugees return to Ukraine, some migrate to another country, new refugees arrive, and some remain. In some ECEC institutions, where there were such opportunities, Ukrainian persons have been hired as teachers and teacher assistants. In May 2022, there were seven groups with Ukrainian ECEC Teachers in Riga, and only Ukrainian children were admitted to these groups.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the general term used in this report for centre-based ECEC provision is **ECEC centre** (*pirmsskolas izglītības iestādes, 1½–6/7*), comprising **kindergarten** (*bērnudārzs, 1½–5*) and **pre-primary group/s** (*pirmsskolas izglītības vadlīnijas, 6-7*)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Latvia

1910	The first childcare facilities are established by unions, churches and the State.
1950–1980	Expansion of ECEC provision under the Soviet system
1991	Following the political changes in Europe, many settings are closed as a result of high costs, a low birth-rate and low participation rates.
Since the end of the 1990s	The number of available places in ECEC settings no longer matches local demand.
1999	A new General Education Act comes into force.
2002	Pre-primary enrolment is made obligatory for 5 and 6 year-olds.
Since 2004	Most pre-primary buildings are included in renovation programmes financed by the municipalities and EU structural funds.
2011	Children aged 1½ up to statutory school age (7 years) are entitled by law to a place in an ECEC setting.
2012	National curricular guidelines are introduced for the ECEC sector (pilot programme for pre-primary education - <i>Noteikumi par valsts pirmsskolas izglītības vadlīnijām</i>).
2013	<ul style="list-style-type: none"> – Possibilities for becoming a home-based childcare worker are extended as a measure of dealing with the lack of available places. – Municipalities have to bear at least part of the costs of attending a private facility if there are no public places.
2019/2020	New regulations come into force regarding the national curricular guidelines for the ECEC sector, including home-based ECEC settings.

ECEC system type and auspices²

At the national level, early childhood education and care in Latvia comes under the jurisdiction of the Ministry of Education and Science (*Izglītības un zinātnes ministrija*), which is responsible for developing guidelines for the early education sector. At the local level, public ECEC settings for children aged 1½ to 7 years are the responsibility of the municipalities under the supervision of the Ministry of Social Affairs (*Labklājības ministrija*). Private ECEC settings are also bound by

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In Latvia, with a school starting at age 7, the corresponding formats are **1½–5** and **5–6**.

² The Eurydice country report on ECEC in Latvia provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

the regulations of the Ministry of Social Affairs. Thus, Latvia has a partially integrated ECEC sector, with age-integrated early childhood education centres and a unified curricular (and staffing) framework, but differing responsible bodies for other aspects of the system.

General objectives and legislative framework

The overarching focus of early education in Latvia is on a child's right to develop and learn, based on the premise that every child has equal rights and opportunities. Overall, the education system gives everyone, according to their needs, the opportunity to develop their moral, aesthetic and intellectual potential as well as to acquire skills in various fields, such as humanities, social, natural or technical, in order to participate in the life of the community as an independent person. From a legal point of view, the General Education Act (*Vispārējās Izglītības likums*) of 1999 (with amendments until 2021) and the Guidelines of the Council of Ministers for Early Childhood Education and Model Programmes for Early Education (*Noteikumi par valsts pirmsskolas izglītības vadlīnijām*, 2012) form the basic framework. In addition, the regulations of the respective institutions have to be observed.

Local government legislation (*Par pašvaldībām*) obliges the municipalities to ensure that children from 1½ years of age in their catchment area can access a place in an ECEC setting.

ECEC entitlement and compulsory attendance

Children over 1½ years of age have a legal right to a free place in a public ECEC centre. Latvia is currently one of the few European countries to guarantee a place from such a young age (European Commission/EACEA/Eurydice 2019, 45). If a municipality cannot provide a place in a public facility, it has a duty to cover the costs of enrolment in a private ECE setting.

Attending an ECEC setting is compulsory for 5 and 6 year-olds, and voluntary for younger children. The number of hours of early education to be attended is not stipulated by law.

Primary school attendance begins at age 7. A proposal by the Ministry of Education in 2018 to reduce the statutory school starting age to 6 years was not approved by parliament.

Main types of provision

ECEC centres (*pirmsskolas izglītības iestādes*) for 1½ to 7 year-olds consist of **kindergartens** (*bērnudārzs*) and **pre-primary groups** (*pirmsskolas izglītības grupas*). For children aged 4 and younger, attendance is voluntary whereas 5 and 6 year-olds attend a compulsory two-year pre-primary programme which takes place either in an ECE centre or within a school (*pirmsskolas izglītības grupas pie skolām*). ECEC centres are either self-contained or integrated into school premises.

As a rule, ECEC centres are closed for one month during the summer. However, depending on the needs of the parents, flexible opening times can be arranged. Most ECEC settings are open from 7:00 or 7:30 until 18:00 or 18:30. Some also have 24-hour groups where children can stay overnight.

Subsidised **home-based ECEC** settings (*bērnu uzraudzības pakalpojuma sniedzēji / aukles*) were introduced in 2013 as a measure to reduce the shortage of places.

In 2022, there were 631 early childhood educational settings attended by 98,031 children (OSP 2023a).

Provider structures

In 2021, the majority of children attended a public early childhood educational setting: 90.7% of the children over 3 years of age and 80.5% of those under 3 years (see *Table 1*). Most private facilities are located in Riga or other larger cities, where there is often a lack of places in public ECEC settings (OECD 2016).

Table 1

Latvia: Children in ECEC centres by provider type, 2021

Provider type	Number of under 3 year-olds	Proportion, in %	Number of children from 3 years to statutory school age	Proportion, in %
Public	14,044	80.5	75,149	90.7
Private, non-subsidised	3,395	19.5	7,704	9.3
Total	17,439		82,853	

Source: Eurostat 2023e

Participation rates in regulated ECEC settings

According to Eurostat data, the proportion of children under 3 years of age attending an early childhood educational setting has doubled: from 17% in 2005 to 34.5% in 2022. In the 3–6 age group, the participation rate rose from 79% in 2005 to 89.7% in 2022. In particular, the proportion of children attending a setting for more than 30 hours a week increased from 59% (2005) to 88.4% (2022).

Both under 3 year-olds and older children spend a relatively large amount of time in ECEC settings (see *Table 2*).

Table 2

Latvia: Participation rates in ECEC centre-based settings by age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years in %	3 years to minimum compulsory school age in %
2005	1 to 29 hours	2	7
	Over 30 hours	15	59
	No enrolment in ECEC	84	34
2010	1 to 29 hours	2	6
	Over 30 hours	16	60
	No enrolment in ECEC	82	34
2015	1 to 29 hours	0.9	3.1
	Over 30 hours	22.0	79.2
	No enrolment in ECEC	77.2	17.7
2022	1 to 29 hours	2.3	1.3
	Over 30 hours	32.2	88.4
	No enrolment in ECEC	65.6	10.3

Source: Eurostat 2023b, deviations in the sums due to rounding

According to national statistics, very few children under 1 year of age (0.1%) attended an ECEC centre in 2022/23. The overall attendance rate of under 3 year-olds was just one third (33,1%).

Over three quarters (75.7%) of 3 to over 7 year-olds were enrolled in an early childhood educational setting.

Table 3

Latvia: Number of children and enrolment rates in ECEC centres by age, 2022

Age	Number of children in ECEC settings	Population, beginning of 2022	Enrolment rates in %
Under 1 year	18	17,273	0.1
1 year-olds	3,472	17,500	19.8
2 year-olds	14,243	18,782	75.8
Under 3 years	17,733	53,555	33.1
3 year-olds	17,615	19,374	90.9
4 year-olds	18,772	20,861	90.0
5 year-olds	20,794	22,005	94.5
6 year-olds	21,098	22,005	95.9
7 year-olds and older	2,019	21,819	9.3
3 to over 7 year-olds	80,298	106,064	75.7
total	98,031	159,619	61.4

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 0.80% of GDP in 2019, 0.2% of which for the childcare sector (OECD 2023).

The General Education Act stipulates that public (state or municipal) early childhood education centres are financed through the state or municipal budget. Municipalities finance staff salaries, equipment and building maintenance; the salaries of staff working with 5 to 6 year-olds are paid from the state budget. Private settings operating under the National Curriculum receive state subsidies for staff salaries and set their own fees for parents.

Parents – also those with children under 3 years of age – therefore only pay for meals in public institutions (approx. €44 per month; Eurydice 2023, 3.3), and for any additional services such as language classes or dance lessons. Since 2013, if a municipality cannot provide enough places in public institutions, it has to pay at least part of the costs of attending a private institution (OECD 2016).

The costs can be reduced for low-income parents. In private, government-independent facilities, fees average €300 per month. If parents have to enrol their child in a private setting because there are no places available in the public ECEC centre, they are entitled to state and municipal subsidies.

According to Riga City Council's information in 2022, the municipality paid a co-financing of €307.85 per month for each child from 1½–4 years of age in a private setting, while the co-financing was €229.27 per month for children of compulsory education age. Municipal co-financing for home-based ECEC providers was €181.09 per month. In 2023, the municipality pays a subsidy of €328.54 per month for each child from 1½–4 years old, while the co-financing is €242.48 per month for children of compulsory education age (Riga 2023). The state support programme for the co-financing of private preschool educational institutions and home-based childcare providers (nannies) ended on May 31, 2016.

In 2022, a couple with two children spent 0% of net household income on childcare costs³ (OECD.Stat 2023).

Staff to child ratios and group size

There are no binding regulations regarding staff to child ratios (except for special education settings). However, hygiene regulations as well as the size of the group rooms must be taken into account, for which there are mandatory guidelines: 2.5m² for each child under 3 years of age and 3m² for each child over 3 years of age. As a rule, one ECEC Teacher and two Assistants work in a group. Children may be grouped in same-age or mixed-age groups (Eurydice 2023, 4.2).

Curricular framework

2019/2020 saw the start of the implementation of new, mandatory curricular guidelines for early childhood educational settings developed by a group of experts known as Skola 2030. Based on the “Regulations Regarding the State Guidelines of the Council of Ministers for Early Childhood Education and Model Programmes for Early Education”, a template was developed for centre-specific education plans, which also includes recommendations on assessment and evaluation. This template provides guidelines and support for teachers, methodologists⁴ and lead staff.

The content is based on cross-cutting competences that promote knowledge, understanding and basic skills in different contexts and learning areas. Seven learning areas are highlighted: language; social and civic aspects; cultural awareness and artistic expression; science; mathematics; technology; health and motor activities.

The National Centre for Education structures the specifications for learning processes and intended outcomes into three levels corresponding to the age of the children: (1) from 1½ to 3 years, (2) from 3 to 5 years and (3) from 5 years to school entry. However, the staff are expected to also take into account the individual development of the children when planning the learning activities. They can choose the methods that seem most appropriate for their purposes, but are encouraged to use play as the main pedagogical approach (OECD 2016). In cooperation with experts, they are expected to implement the curriculum as an integrated learning process.

Digital education

In the 2018 curriculum guidelines, the development of digital skills is mentioned as one of the goals of early education). The mandatory content of early education is that a child should learn to distinguish between the virtual and the real world and to understand the role of digital technologies. In addition, they are expected to understand the rules to be observed when using digital devices or information media (Ministry of Education and Science 2015).

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

⁴ Methodologists are responsible for deciding on pedagogical approaches to be used in the ECEC centres.

Monitoring – evaluation

Child-related assessment

Within the framework of the national curricular guidelines, assessment is an integral part of the learning process. Diagnostic, formative and summative assessment procedures are all used for planning and evaluation purposes. A main goal is to involve the children in the evaluation of their own learning as well as that of other children. Towards the end of each curricular stage (see chapter on *Curricular Framework*), learning outcomes are summarised.

At the end of the time in pre-primary education, the professional assesses the child's achievements on a four-point scale: (1) has started to learn but still needs support, (2) has partially achieved the intended outcomes but they are not yet stable, (3) has fully achieved the intended outcomes and can apply them in other situations, (4) can independently apply and justify the outcomes in various situations.

The professionals prepare a written report on the child's achievements for the parents. The experts (Skola 2030) who designed the 2018 curriculum also provide support materials for professionals.

Centre-level self-evaluation

ECEC institutions are required to prepare a self-evaluation report and a development plan. Both are included in the external evaluations. Every two years, the self-evaluation reports are sent to the responsible body, which then assesses the institution (European Commission/EACEA/Eurydice 2019, 128).

External evaluation

The State Agency for Education Quality is responsible for safeguarding quality in education. According to the Education Act, all educational institutions must be officially accredited. This certification (external evaluation) must take place within the first five years following the establishment of the institution. The educational plan of each early childhood educational setting is reviewed during the two years following publication, after that at least once every six years. The professional activities of the staff are also evaluated.

The external evaluations are carried out by a specially trained team of experts approved by the Ministry of Education. Seven areas are evaluated: curriculum, teaching and learning, children's achievements, children's support, environment, resources, work organisation, and management and quality assurance. A total of 22 criteria are assessed and result in a final report.

Inclusion agenda

The Latvian National Development Plan 2014–2020 identifies inclusion as a particularly important aspect. In general, an inclusive education policy is in place that emphasises taking into account the individual needs of all children. According to these “Education Development Guidelines 2014–2020”, approved by the Council of Ministers, the target groups are mainly children with developmental or health risks, with a socially vulnerable or minority community background such as Roma children.

Children with special educational needs and with disabilities

The 2018 amendments to the General Education Act stipulate that from September 2020, children of nursery age with learning or language difficulties, physical disabilities or long-term illnesses should attend mainstream institutions.

Children with delayed language development will be supported in the compulsory pre-primary programme with an adapted preparation programme for primary school (European Commission/EACEA/Eurydice 2019, 113).

However, there are also special education settings for children who, despite additional measures, cannot attend a mainstream institution and who have a diagnosis from a national or municipal educational-medical commission. In 2019/20, there were 28 such public support facilities (Eurydice 2023, 2.8).

Children with a migration background and from ethnic minority groups – children from Roma communities

In Latvia, persons from minority groups are identified either (1) by their ethnic background (ethnicity) or (2) by their nationality (citizenship).

The project "TOY for inclusion" focuses primarily on younger children from Roma families, from families with a migration background or from ethnic minorities. It aims to find flexible solutions to reach these families and their children through low-threshold meeting centres (European Commission 2020, 92). In order to integrate more Roma children into early education programmes, training modules for professionals and parents are available in Latvian under the Khe-taun project (European Commission 2020, 139).

Although there are groups in some ECEC settings where only one minority language is spoken, Latvian is compulsory in all centre-based settings from the age of 5 (OECD 2016).

In 2022, 86% of children in ECEC institutions were taught in Latvian, 13.1% in Russian, 0.2% in Polish and 0.7% in other languages (OSP 2023a, own calculations).

Table 4 shows data on persons with a non-Latvian ethnic background. In 2022, these persons made up 37.6% of the total population. Persons with a Russian background comprise the largest group at 23.7%. Also among the under 4 year-olds and the 5 to 9 year-olds, a quarter and more than a quarter, respectively, came from a family with a migration background.

Table 4

Latvia: Number and share of persons with a Latvian and non-Latvian ethnic background, 2023

	Total		0 to 4 years		5 to 9 years	
	Number	Share, in %*	Number	Share, in %*	Number	Share, in %*
Latvia, total	1,883,008		90,245		109,480	
Ethnic backgrounds:						
Latvia	1,175,902	62.4	68,120	75,5	78,230	71.5
Russia	445,612	23.7	10,229	11,3	16,643	15.2
Ukraine	56,675	3.0	1,533	1,7	2,310	2.1
Belarus	55,929	3.0	368	0,4	589	0.5
Poland	35,446	1.9	428	0,5	777	0.7
Lithuania	20,530	1.1	259	0,3	359	0.3
Roma	4,677	0.2	217	0,2	266	0.2
Estonia	1,478	0.1	15	0,0	21	0.0
Other backgrounds	86,759	4.6	9,076	10.1	10,285	9.4

Source: OSP 2023b, *own calculations

According to Eurostat data, the share of non-Latvian citizenship in the population looks somewhat different because the data are based on citizenship rather than ethnicities. In 2022, 13.1% of the total population had a non-Latvian citizenship. Of these, almost all (97.2%) came from non-EU27 countries. In the age-group of under 5 year-olds, only 0.9% had a non-Latvian citizenship, of which 86.4% were from countries outside the EU. For the age-group of the 5- to 9 year-olds, these shares were 11.7% and 88.3% respectively (Eurostat 2023c).

Parental leave arrangements⁵

Maternity leave (*grūtniecības un dzemdību atvaļinājums*), which is optional, lasts 56 days before the due date and 56 days after the actual birth date of the child. 80% of the average salary for which insurance contributions were paid for 12 calendar months is remunerated. In 2021, this was an average of €2,257.96 per month for the first part and €1,960.19 for the second part of the leave.

Under the same conditions, fathers can take 10 days of **Paternity leave** (*atvaļinājums bērna tēvam*) during the first six months of the child's life.

Parental leave (*bērna kopšanas atvaļinājums*) can be taken by either parent for a duration of 18 months per parent, either in one block or in parts, up to the child's eighth birthday. But only one parent may receive payment. There are three types of allowances:

(1) *Parental benefit*, which can only be claimed by parents with social insurance. In this case, either 60% of the previous earnings are paid for 13 months until the child is 1 year old (in 2022 this was on average €725.11 per month) or for 19 months 43.75% of the previous earnings until the child is 18 months old.

(2) *Childbirth benefit*: This lump sum of €421.17 is paid to all parents (including uninsured parents) for six months from the child's first day of life.

(3) *Childcare allowance*: A lump sum of €171 per month is paid up to the age of 18 months and a lump sum of €42.69 per month is paid up to the age of 24 months. In addition, a parent is entitled to a state family allowance of €25 for one child (€100 for two children, €225 for three and €100 per each child from four children). This allowance is paid until the child is 16 years old (or 20 years old if the child is still in education).

In terms of the take-up of parental leave, in 2022 it was mostly women (83,9%) who chose to do so – although most of the working parents who received parental benefits were men (77% in 2022). In 2022, the proportion of fathers taking paternity leave decreased by 7% compared to 2021.

Current challenges for the ECEC system in Latvia

Country expert assessment by Inese Šūpule

Potential challenges that Latvia is likely to face in the near future are related to a gradual transition within three years to **tuition in the national language** (i.e. Latvian) at all levels of education, as envisaged in the amendments to the Education Law prepared by the Ministry of Education and Science. Currently, at the secondary school stage, minority students are learning all subjects in Latvian, except minority language and culture and other languages, but in grades 1–

⁵ The brief overview in this section is based mainly on the country note for Latvia by Inese Upite in the *International Review of Leave Policies and Research 2023* (see *References*).

6, students learn only half of the curriculum in Latvian (another half in a minority language, which may be Russian, Ukrainian, Polish, Lithuanian, and Hebrew; however, for the majority it is Russian) while from 7th to 9th grade - at least 80%. These are formal requirements and practices tend to vary. ECEC institutions have a system of two streams: Latvian language groups and Russian language groups. Often in practice, despite the existence of the appropriate language proficiency document (the Education Law requires knowledge of the national language at C level 1), teachers do not know the national language at the highest level. This policy change is based on the conclusion that the current approach to the language of instruction in minority education programmes has not fully ensured high-quality learning of the national language. However, the shortage of teachers who can qualitatively hold classes in the Latvian language creates a significant risk for a successful transition. According to the data available in the State Education Information System, in the school year 2021/2022, 15,553 children were involved in minority ECEC institutions, and 195 educational institutions provided pre-primary education programmes in minority languages. This constitutes 17% of the total number of ECEC institutions (Laganovskis 2022). The largest number of minority settings are in the biggest cities Riga and Daugavpils. Although there are no comprehensive statistics on the level of Latvian language skills among minority ECEC Teachers, usually the young teachers do not have a problem with the national language skills. The government has planned support measures for teachers by offering Latvian language and methodological improvement courses to ECEC Teachers, as well as experience exchange events.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Latvia was 1,875,757. For about 20 years, the population has thus continuously decreased (2000: 2,381,715; 2010: 2,120,504; 2020: 1,907,675) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries was in France (1.84), and the lowest in Malta (1.13). At 1.57, Latvia was slightly above the EU27 average (Eurostat 2023d)⁶.

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Children under age 6

Table 5

Latvia: Number of children under age 6 in the population, 2022

Age	Number of children
Under 1 years old	17,273
1 year-olds	17,500
2 year-olds	18,782
3 year-olds	19,374
4 year-olds	20,861
5 year-olds	22,005
Total 0 to under 6 year-olds	115,795

Source: Eurostat 2023a

In 2022, 2.9% of the total population were children under the age of 3, and 6.2% were children under the age of 6 who were not yet in school. Thus, the shares of under 3 year-olds were slightly, those of 3–6 year-olds more clearly above the EU average. In the last seven years the shares of the under 3s fell while those of the older children rose.

Table 6

Latvia: Share of children under 6 years compared with the EU averages, 2000 to 2022, in %*

Year	Comparison Latvia/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Latvia	2.3	2.7	5.0
	Ø EU15 ⁷	3.2	3.2	6.4
2005	Latvia	2.7	2.8	5.3
	Ø EU25	3.1	3.1	6.2
2015	Latvia	3.1	2.9	6.1
	Ø EU28	3.0	3.2	6.2
2022	Latvia	2.9	3.3	6.2
	Ø EU27(2020)	2.7	2.9	5.7

Single households with children under age 6

About half (50.7%) of households with children under 6 in Latvia in 2022 were couple households. Single-parent households accounted for 11.2% - the majority of which were single mothers (9.1%).

Table 7

Latvia: Households with children under age 6, 2022

Household type	Total households	Share of all households, in % ⁺
Total households	208,900	
Couple households	105,900	50.7
Other types of households	79,500	38.1

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Household type	Total households	Share of all households, in % ⁺
Total single households	23,500	11.2
Single households, women	19,000	9.1
Single households, men	4,500	2.2

Employment rates of parents with children under 6 years of age

In Latvia, in 2022, the overall employment rate for men (15-64 years) was 79.1% and for women 74.5% (Eurostat 2023i).

In 2022, 65.4% of women and 82.3% of men (18-64 years) with children under 6 were employed. Among the 27 EU countries (2020), the shares of employed fathers were thus above the average (EU-average 87.2%) and those of mothers only slightly above (63.6%) (Eurostat 2023f).

Table 8a

Latvia: Employment rates of parents with children under 6 compared with other EU countries, 2010 and 2022

	2010	
	Mothers in %	Fathers in %
Latvia	60.5	74.8

Children at risk of poverty or social exclusion¹⁰

In 2022, 18.9% of children under 6 were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 26% (EU: 21.6%). In 2020, 13% of children under 6 and 11.5% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023g, h).

About the authors

Eigirdas Sabaliauskas was a researcher at the Public Policy and Management Institute (PPMI) in Vilnius from December 2021 to August 2022. His areas of expertise included quality and equity of ECEC and school education, as well as education for sustainable development (with a focus on learning for environmental sustainability).

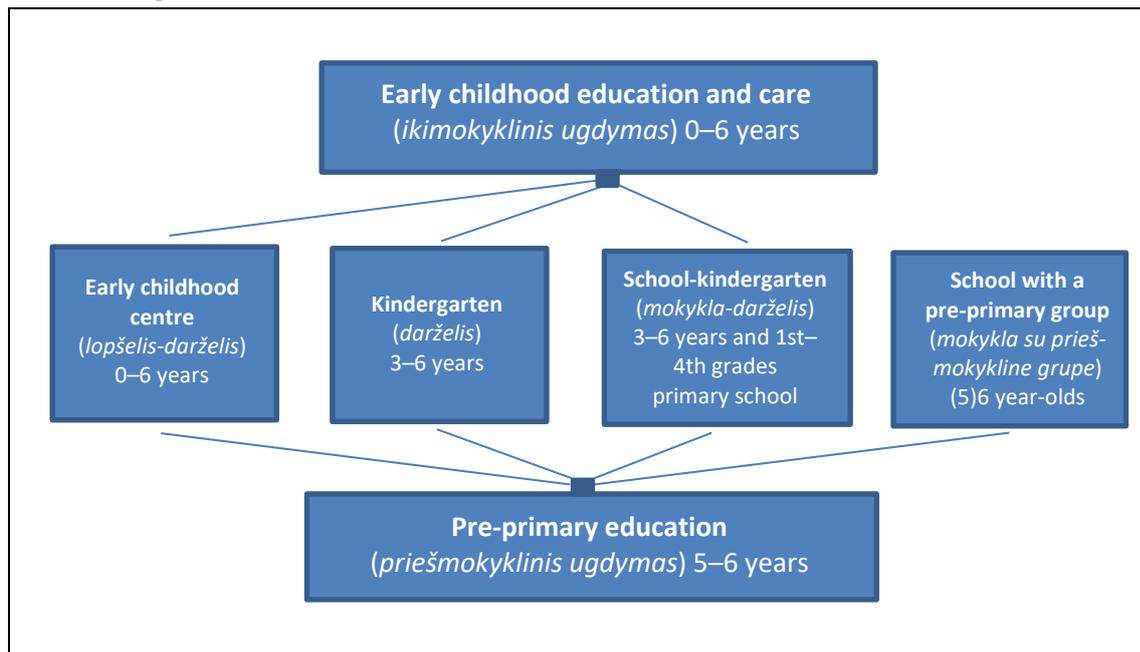

Hanna Siarova is Research Director at the Public Policy and Management Institute (PPMI) in Vilnius. She has more than ten years of experience in research and evaluating policy areas such as equity and inclusion in and through education (specialising in ECEC and school education), gender equality and intersecting inequalities. In addition, she was a Deputy Scientific Coordinator of NESET (Network of experts on the social dimension of education and training) and EENEE (European expert network on economics in education), ECEC and school education and youth policies being one of the central themes of both networks.

1. ECEC governance in Lithuania

In Lithuania, early childhood education and care (ECEC) is classified as non-formal education. It is organised for children up to statutory schooling at the age of 7 as a unitary system in two stages and comes under the auspices of the Ministry of Education, Science and Sport (MoESS). **Early childhood education**¹ (*ikimokyklinis ugdymas*) in Lithuania is not compulsory except when a child is considered to live in a socially at-risk family. It is organised for children from birth up to age 6 or, in some instances, up to the age of 5. **Pre-primary education** (*priešmokyklinis ugdymas*) has been compulsory since 2016, and is organised as a preparatory class focusing on ‘school readiness’ for 6 year-olds and, in some instances, for 5 year-olds. The education system in Lithuania is decentralised, with the state and municipal levels working closely together. Both stages of ECEC are granted partial public funding for up to 20 hours per week. The Ministry of Education is responsible for developing and implementing educational policy and curricula. All ECEC provision comes under the responsibility of the municipal authorities. Therefore, admission to pre-primary education is processed either by the educational institution or centralised through a registration system developed by the municipality.

Figure 1

Lithuania: Organisation of ECEC

¹ **Editors’ note 1:** In government documents in Lithuania, the first stage of ECEC is referred to as “pre-school education” and the second stage as “pre-primary education”. However, since there is no clear distinction between the terms in English, in this report “pre-school education” will be referred to as **early childhood education** and “pre-school pedagogues” as **Early Childhood Pedagogues**.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

There are two kinds of core practitioners in Lithuanian ECEC provision:

- **Early Childhood Pedagogues** (*ikimokyklinio ugdymo pedagogė -as*), who work in early childhood centres, kindergartens and school-kindergartens, and
- **Pre-primary Pedagogues** (*priešmokyklinio ugdymo pedagogė -as*), who work in schools with a pre-primary education group. A co-worker with a professional training certificate generally assists the core practitioners. Pre-primary Pedagogues are entitled to an Assistant if there are more than 20 children in the group and there is no chance to create a sub-group.

Pedagogue Assistants in Lithuania (*ikimokyklinio ugdymo pedagogo padėjėja -as*) must have a secondary school leaving certificate and a professional training that lasts four months to be able to take care of children independently and support pedagogues in educational activities. Therefore, most staff hired in ECEC institutions have a pedagogical qualification that enables them to work with groups of younger or older children (MoESS 2015a).

Table 1 gives a brief description of the staff working in centre-based settings in Lithuania and also categorises the core practitioners (i.e. staff with a group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO-study (see Box 1 at the end of this chapter).

Table 1

Lithuania: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age-range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Early Childhood Pedagogue <i>Ikimokyklinio ugdymo pedagogė -as</i> Profile: Early Childhood Pedagogy Professional	<i>Lopšelis-darželis</i> Early childhood centre 0–6 years ² <i>Darželis</i> Kindergarten 3–6 years <i>Darželis-mokykla</i> School-kindergarten 3–6 years	Core practitioner with group responsibility	0–6 years	Professional Bachelor's degree or Bachelor's degree ECTS credits: 180 or 240 EQF: Level 6 ISCED 2011: 6

² **Editors' note 2:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Lithuania, the main relevant formats are **0–6** (early childhood centre) or **3–6** years (kindergarten/school-kindergarten) since compulsory primary school starts at age 7.

Job title	Main ECEC workplace settings and age-range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Early Childhood or Pre-primary Pedagogue's Assistant <i>Ikimokyklinio ugdymo pedagogo padėjėja -(as)</i>	<i>Lopšelis-darželis</i> Early childhood centre 0–6 years <i>Darželis,</i> Kindergarten 3–6 years <i>Darželis-mokykla,</i> School-kindergarten 3–6 years	Minimally qualified co-worker supporting the learning process and care duties	0–6 years	The requirements may vary but are usually a completed upper secondary school education and/or vocational training course lasting between 4 months to around a year, usually 6 months) + first aid courses and hygiene training. <i>Award: Vocational Certificate</i> ECTS credits: at least 35, usually 45 EQF: Level 4 ISCED 2011: 4
Pre-primary Pedagogue <i>Priešmokyklinio ugdymo pedagogė – (as)</i> <i>Profile:</i> Pre-primary Education Professional	<i>Lopšelis-darželis,</i> Early childhood centre 0–6 years <i>Darželis,</i> Kindergarten 3–6 years <i>Darželis-mokykla,</i> School-kindergarten 3–6 years <i>Mokykla su priešmokyklinio ugdymo grupe</i> School with a pre-primary education group 6 year-olds	A core practitioner with group responsibility	0–6 years	Professional Bachelor's degree or Bachelor's degree ECTS credits: 180 or 240 EQF: Level 6 ISCED 2011: 6

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)

- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

In Lithuania, the leader of an early childhood centre (as for all educational institutions) is seen as the person with the most decision-making powers and responsibility. It is a hierarchical position rather than a collaborative one. It is expected that the leader will have sufficient management competencies and encourage the whole institution to strive for better results (NŠA 2021a). In addition, there is no requirement to work with children directly regularly. Therefore, the leadership role is more administrative than pedagogical.

The head of a state or municipal early childhood centre is appointed through a public tender. Applicants for the post of Centre Leader is expected to meet the following requirements and possess the required competences:

Table 2

Lithuania: Required competences for the Centre Leader

Requirements	General competences	Leadership competences
University degree or equivalent education	Personal efficiency	Strategic governance of the educational institution
An impeccable reputation	Strategic thinking and change management	Pedagogical leadership (teaching process)
General and leadership competencies, and have no less than one year of experience managing a group of people.	Ability to continue learning	Knowledge of the structures of educational institutions, processes and resources management
Be able to work with information technologies.	Efficient communication and information	Leading partnerships between educational institutions and cooperation initiatives
Have a good command of Lithuanian and know at least one of the European Union working languages (English, French, German) at level B1 or higher		
Alternative requirements include a Pedagogue qualification, work experience and educational degree.		

2.3 Centre-based posts of responsibility

In ECEC in Lithuania, there are no specifically designated positions for specialised pedagogical work across the ECEC centre (e.g. with a focus on working with the parents of migrant children or on students completing a practicum), except for experienced and practising pedagogues sometimes acting as mentors for student pedagogues during their internships in ECEC institutions.

However, Early Childhood and Pre-primary Pedagogues are rewarded for particularly complex educational work according to the criteria laid out below (Eurydice 2023c):

5-10% salary increase	– If two or more pupils in the group have <i>medium</i> special educational needs due to congenital or acquired disorders, or one to three pupils have <i>significant or severe</i> special educational needs due to genetic or acquired disorders
------------------------------	--

	<ul style="list-style-type: none"> – If one or more children with a migration background or with Lithuanian citizenship have come to live in Lithuania and do not speak the state language are educated in the group for the first two years after beginning schooling in Lithuania.
5-20% salary increase	<ul style="list-style-type: none"> – If the teacher works in an early childhood centre (group) for children with <i>significant or severe</i> special educational needs due to congenital or acquired disorders – If teaching children for whom home schooling is intended due to illness or a pathological condition.

2.4 Co-ordinating and supervisory staff

In Lithuania, there are no legal provisions for **coordinating** staff with a counselling, coaching or support role who are responsible for a number of early childhood settings in a certain region with a focus on team and centre improvement. However, in the case of social pedagogical assistance to learners, the early childhood education institutions collaborate with social assistance providers, healthcare and law enforcement institutions, and offer consultations to children’s parents and teachers. This is regulated by the General Regulations on Provisions of Social and Pedagogical Assistance (Eurydice 2023b).

The Ministry of Education, Science and Sport is responsible for the state supervision of education providers’ activities. The supervision of education institutions, including early childhood education institutions, are performed by the owners, institutions that implement the rights and obligations of the owners, and municipal executive institutions, with the help of external evaluators, if needed. External evaluations are performed regularly, initiated by the same actors. The external evaluation procedures are established and regulated by the Minister of Education, Science and Sport. The National Education Agency, an evaluation institution operating at the national level, is responsible for preparing external evaluators for all educational institutions throughout Lithuania. A single assessment system is used across all types of institution, including early childhood centres. However, there are no specialist supervisory staff specifically for the ECEC sector, only for general education institutions (Eurydice 2023d).

2.5 Specialist support staff

Specialist support staff include Psychologists, Social Pedagogical Assistants, and Public Health Consultants. Psychologists are in early childhood centres and kindergartens on a regular basis. They provide counselling and support for children, organise psychological tests, contribute to didactic materials, and work with children with special needs. Social Pedagogical Assistants also have a permanent working space in schools and early childhood centres. Their task is to ensure the child’s safety at education institutions and cooperate with social assistance providers, parents, and guardians. Health Care specialists' working space is also based in education institutions. They are responsible for primary health care and methodological assistance providing health care and consultations on health improvement activities to teachers, learners, and parents. Language coaches and Special Needs staff can work with up to 30 and 24 children accordingly both on a demand basis or regularly in ECEC institutions.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

The ECEC workforce in Lithuania is rather homogenous. Most of the professionals working as ECEC educators are women with a specialist higher education degree or vocational qualification. This gender imbalance may be influenced by existing stereotypes about the teaching profession and ECEC sector and limited recognition of the profession. The ethnic composition of the ECEC workforce is unknown as such statistics are not available. Most of the staff in ECEC sector are the core practitioners, meaning general educators, and only slightly more than 10% of staff are other pedagogical or support staff, such as psychologists, special teachers, art instructors, and others. This may be a result of an integrated and holistic approach to early childhood education, where general educators are responsible for different subjects and development activities, including arts and socio-emotional competences.

Table 3

Lithuania: Structural composition of ECEC workforce, 2021

Pedagogical staff categories	Percentage
Pedagogical staff with a specialist three-year (or longer) early years higher education degree (<i>Aukštasis išsilavinimas</i>) in Total / urban / rural areas	74.9 / 74.8 / 76
Pedagogical staff with a specialist vocational qualification: post-secondary education (<i>Aukštesnysis išsilavinimas</i>) in Total / urban / rural areas	19 / 19 / 19.2
Pedagogue Assistants (primarily unqualified) with only secondary education (<i>vidurinis išsilavinimas</i>) in Total / urban / rural areas	4.4 / 4.4 / 4.1
Specialist support staff who work on-site regularly Total / urban / rural areas	Core practitioners: 77.3 / 79.8 / 81.4 Art instructors: 4.2 / 4.5 / 3 Special teachers: 0.7 / 0.4 / 0.4 Speech therapists: 4.1 / 4.4 / 3.3 Psychologists: 0.6 / 0.6 / 0.2 Other pedagogical staff: 4.6 / 4.6 / 5.6
Leading staff Total / urban / rural areas	Principals: 3.9 / 4.1 / 3.3 Deputy director: 3.6 / 3.8 / 2.6
Male staff in the ECEC workforce	Less than 1%
Staff with a background of migration	No national data available

Source: Statistics Lithuania 2022

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Since 2009, pedagogues employed in early childhood centres and pre-primary institutions must have a higher education degree at Bachelor's level.³ Up to 2009, the requirement was a post-secondary specialist qualification; up to 1995, an upper secondary specialist qualification (MoESS 2005). **Early Childhood Pedagogues** have a degree either awarded from attending a study programme specialising in early childhood education or from a study programme specialising in education and who have then acquired a supplementary teaching qualification. **Pre-primary Pedagogues** have a degree from a study programme specialising in early childhood or pre-primary education and have completed a 40-hour course on work in pre-primary groups (or a similar course) during their studies.

In addition, all ECEC pedagogues are required to complete courses in special pedagogy and special psychology (*specialiosios pedagogikos ir specialiosios psichologijos kursas mokytojoms - (ams)*; MoESS 2007b). These courses have to be completed within one year after starting work as an Early Childhood/Pre-primary Pedagogue if comparable courses (of 2 ECTS credits or 60 hours) have not been followed before or during their initial professional education. Such requirements do not apply to teachers who completed special pedagogy or special psychology study programmes. Moreover, ECEC pedagogues have to complete a certificate of competence in computer literacy (*Reikalavimai mokytojų kompiuterinio raštingumo programoms*, MoESS 2007c).

Initial professional education (IPE) for future Early Childhood and Pre-primary Pedagogues are integrated into respective university or college study programmes at both Bachelor and Master levels. Students enrolling to study early childhood education usually have to provide the IPE institution with three different kinds of university entrance examination results (*Brandos egzaminas*) and participate in a motivation assessment. In some institutions, high-school exam results are sufficient to receive a state-funded scholarship for Bachelor's studies. Master study admissions are often based on previous academic achievements and an admission exam.

The duration of a Bachelor's study programme varies between three and four years: in most cases, full-time pre-school/pre-primary education studies (or childhood pedagogy) taking place at colleges are of three years' duration (180 ECTS), whereas university courses usually take four years (240 ECTS) to complete. Based on individual learning, writing and exams (and including professional practice), part-time studies can take up to 50% more time (MoESS 2015b).

In a recent 2020 study carried out by PPMI (2020), interviewed educational experts agreed that professional education in colleges is less demanding, and the requirements to secure a study place are significantly lower in comparison to universities. Also, universities attract professors and tutors with more experience and higher qualifications. Therefore, experts agree that pedagogues graduating from colleges could have a lower overall capability than those studying at university.

A Master's degree course in pre-school or pre-primary education often provides students with knowledge on curriculum formation, education strategies, and other higher-level educational issues.

³ Qualifications obtained abroad are also accepted upon request to the Centre for Quality Assessment in Higher Education (*Studijų kokybės vertinimo centras*).

Lithuania: Early Childhood Education / Pre-primary Pedagogue's Assistant

Job title in Lithuanian: <i>Ikimokyklinio ugdymo pedagogo padėjėjas -(a)</i>
Entry requirements: Secondary education
Professional studies: A course of up to 1 year (from 4 months to a year, usually around 6 months) at a vocational secondary school
Award: Vocational education certificate as an Early Childhood /Pre-primary Pedagogue's Assistant
ECTS credits: At least 35, usually 45
EQF level: 4
ISCED 2011: 4
Main ECEC workplaces: Early childhood centre (<i>Lopšelis-darželis</i>), 0–6 years; Kindergarten (<i>Darželis</i>), 3–6 years

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Competence specifications for early childhood/pre-primary education studies in Lithuania are outlined in the *Standards Regulation for the Training of Early Childhood and Pre-primary Age Pedagogues (Ikimokyklinio ir priešmokyklinio amžiaus vaikų pedagogo rengimo standartas)*. Three main areas of competence are outlined in the document (see Table 6; QVETDC 2008).

Table 6

Lithuania: Competence specifications in early childhood/pre-primary education studies (IPE)

Areas of competence	Competences
1. Getting to know the child and recognising their individuality	1.1. Recognising general and individual characteristics of child development 1.2. Combining general goals of early childhood/pre-primary education with the individual needs of children 1.3. Recognising symptoms of illness, providing first aid
2. Designing the content of education	2.1. Individualising and integrating educational content 2.2. Planning, organising, evaluating, analysing and documenting children's behaviour in an interactive pedagogical process 2.3. Creating an environment to stimulate children's physical and intellectual abilities 2.4. Actively including the children's families in pedagogical interactions
3. Continuing professional development	3.1. Adopting a reflective stance and participating in life-long learning 3.2. Using tools of information and communication technologies 3.3. Using the Lithuanian language correctly in real and virtual professional environments

In addition to the Standards Regulation, key competences for ECEC staff are outlined in the Description of Competences for Pedagogues (*Pedagogo profesijos kompetencijų aprašas*). These include (1) personal improvement and learning; (2) cultural knowledge; (3) ability to use new technologies and work with information; (4) professional communication (MoESS 2015a). Additional competences include (1) recognising children's differences and capabilities/giving support while learning/motivating children; (2) creating a learning environment with varieties in content and stimulation; (3) achieving goals and supporting development; (4) evaluating children's achievements and progress. In addition to the mentioned list of competencies, the Ministry of

Education also offers a framework of intercultural competences- (*bendrakultūrinės kompetencijos*) for teachers of all education levels (MoESS 2007a).

These competence requirements aim to help pedagogues develop curricular content, apply different methods, and ensure that educational strategies match new developments in the respective area of learning and include the latest achievements in science or technology (MoESS 2015a). All study programmes in Lithuania are shaped by autonomous higher education institutions and have a variety of courses such as child psychology, physical culture, language and communication, multicultural education, social development, etc.

4.3 Alternative entry and qualification routes, system permeability

Several alternative pathways exist for becoming an ECEC pedagogue. Partly, the variety of ways has been driven due to a need to re-orientate pedagogues from secondary education to early childhood and pre-primary education in the face of demographic issues. Policy reforms in the ECEC sector, such as introducing compulsory pre-primary education and the expansion of early childhood education provision, are leading to increased ECEC participation levels and thus to a growing need for more pedagogues.

In 2009, the Ministry of Education, Science and Sport announced that pedagogues without a specialist qualification in ECEC and pre-primary education have to obtain the pedagogue qualification within two years. In the following cases, individuals are considered as having a pedagogue qualification if they:

- Have a post-secondary award (pre-2009) or a specialist secondary award (pre-1995), have no less than eight years of pedagogical work experience, and have completed no less than 320 hours (or 12 ECTS credits) of pedagogy, psychology and didactics courses; *or*
- Have a higher education degree, have no less than six years of pedagogical experience, and have completed no less than 240 hours (9 ECTS credits) of pedagogy, psychology and didactics courses; *or*
- Have a higher education degree awarded by a university, have no less than five years of pedagogical experience, and have completed no less than 160 hours (6 ECTS credits) of pedagogy, psychology and didactics courses; *or*
- Have a higher education degree and have completed 1600 hours (60 ECTS credits) of pedagogy, psychology and didactics courses during full-time or part-time studies and have passed all exams in these courses.

In this respect, there is a possibility for current school teachers and graduates in education, the humanities or social sciences to change their profession and qualify as early childhood or pre-primary pedagogues. For instance, primary or secondary school teachers with a completed Bachelor's degree can gain an additional qualification in ECEC by attending a particular module (90 ECTS credits) provided by higher education institutions. For those applying for a modular course in a pedagogical specialisation (*Pedagoginės specializacijos modulių studijos*), the University accepts up to 30 ECTS credits for previously completed similar studies (in terms of content and duration).

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Learning in the early childhood workplace is not regulated in detail through national or regional guidelines. The only requirement for the IPE institutions is to dedicate at least 30 ECTS credits to learning in the ECEC education environment (MoESS 2012). How higher education institutions or post-secondary schools arrange placements/practica within the professional curriculum is the responsibility of each IPE institution.

Students are prepared for their future work as pedagogues during the programme and learn how to apply theoretical knowledge in practice. Work placements/internships are organised in ECEC institutions. The skills and competences which students are expected to develop during their field-based studies are as follows: learn how to provide professional education support to children, evaluate the quality of education and children's achievements, and reflect on and plan a child's progress. During the internship, student pedagogues are assigned a Mentor. A Mentor is an experienced and practising pedagogue who supports students during their pedagogical practice in ECEC institutions. According to the Regulation of Pedagogue Preparation (*Pedagogy rengimo reglamentas*), Mentors should have five years of pedagogy experience. The quality of the student's completion of the scheduled tasks during the practicum, students' activities, and their contribution to the educational programme are discussed between the IPE supervisor, the mentor, and the student.

Lastly, at the end of the placement period, the institution's principal, the centre team, the Mentor, the IPE supervisor and the students discuss the results of the work placement together. Mentors spend up to 60% of the total placement time with the student. Remuneration for the task of mentoring is agreed upon on an individual basis, as are all additional assignments carried out by ECEC pedagogues. The table below provides an overview of workplace-based learning offered in different initial professional education programmes.

Table 7

Lithuania: Workplace-based learning in different IPE study programmes

6. Continuing professional development (CPD) of ECEC staff

The National Education Agency is an educational support institution founded in 2019 by merging five institutions governed by the Ministry of Education, Science and Sport of the Republic of Lithuania. Besides policy implementation measures, the centre also provides information, counselling, qualification improvement and education environment building assistance, conducts education-related monitoring and educational research, develops curricular content and coordinates its implementation.

After graduation from college or university, legislative frameworks require a compulsory probationary year in the workplace, considered the start of professional development. This is organised by the higher education institution in cooperation with ECEC institution. Usually, the experienced practising mentor is assigned for easier integration into the educational institution after the newly-qualified professionals gain a higher level of competence and can work independently.

Under Lithuanian Education Law (2011), core practitioners are entitled to five days per year for their professional development; however, they are not obliged to use this opportunity. As with other issues, there is no specific regulation for the professional development of Pedagogue Assistants since they are not considered part of the core educational staff. Pedagogues do not have to pay for continuing professional development. Costs are covered either by the ECEC institution where the pedagogue is employed or by the state (through the National Education Agency).

The Teachers' Professional Development Concept (2012) outlines multiple ways of using the professional development days and other free time to raise professional competence:

- Individual learning (including scientific activities and research, and professional publications)
- Collegial knowledge sharing (participation in methodological groups and associations of subject teachers, demonstration and reflective supervision of lessons and other educational activities, coaching, mentoring and consultation)
- Specialised events (seminars, courses, projects, internships, training)
- Public activities (social activities, cultural activities, artistic expression)
- Academic studies (higher degree studies, studies in another study field, study programmes aimed at retraining which do not award a degree, etc.).

According to the regulation applicable to all higher education programmes in Lithuania, the state financially supports participation in further study routes such as Master-level studies. Depending on their previous study achievements and an admission test and competition in the study area, students can receive complete funding from the government.

The National Education Agency provides the list of accredited institutions offering teachers' professional development. In 2022, there were 71 institutions, including methodological centres at schools, municipal teacher education centres, and non-governmental organisations (NŠA 2022a). In addition, there are 13 higher education institution departments focusing explicitly on the CPD of teachers.

In 2022, the National Education Agency acknowledged 16 professional development programmes for the teachers (NŠA 2022b). These types of CPD are formally recognised in terms of promotion and career advancement. Some of these programmes are aimed at ECEC Teachers:

Table 7

Lithuania: Examples of accredited CPD programmes for (ECEC) pedagogues in 2022

Name of the programme	Applicable dates	Total hours
Choosing to be a leader of the educational institution – relevant competencies and tools	From 2022-02-07 to 2023-02-06	52
Raising ICT competences in pedagogues	From 2021-09-22 to 2024-09-21	80
The individual progress of schoolchildren: monitoring, achievements, self-evaluation	From 2021-12-22 to 2024-12-21	40
How to successfully implement the reformed early childhood education programme?	From 2022-03-16 to 2025-03-15	40

There are other types of CPD, which include professional development events, short courses, and weekend programmes. Teachers can contact people responsible for teachers' appraisal and continuing professional development in their education institution or directly at the regional teacher education centres. The municipal education authorities and regional teacher education centres regularly provide information about the plans for continuing professional development programmes, seminars and other events.

In 2021, a large-scale state-funded research project on pedagogue CPD improvement was published. The data for the indicators were collected in 2019-2020 in nine municipalities covering all education institutions providing CPD and teacher education centres. Findings show that in nine municipalities, on average, only 68% of teachers use the five-day CPD opportunity. It is demonstrated that pedagogues are well informed about the CPD opportunities at the municipality and state levels. The recommendations include increasing CPD programmes over 40 hours in duration and extending these programmes to early childhood, pre-primary and primary education teachers and also to administrative staff (NŠA 2021b).

Currently, governmental institutions, teachers' trade unions and the media do not portray CPD for ECEC staff as an issue.

7. Working conditions and current workforce issues

7.1 Remuneration

Remuneration is still a topic under heavy debate in society and especially among pedagogues themselves. Although there were no more large-scale strikes and demonstrations in the past five years (as was the case 5–10 years ago), teachers are still generally unhappy with their salaries, exacerbated through rising inflation and living costs, especially in the major cities of Lithuania. However, the expression of this dissatisfaction initially led to a gradual increase in their salary. Since 2018, the remuneration of educational staff in general in Lithuania has been continually increasing after the Ministry of Education, Science and Sport introduced full-time equivalent pay instead of workload-based pay. Government Strategic Analysis Centre conducted thorough research after the reform and concluded that in 2018 remuneration grew by 13.6% (STRATA 2018), and in 2019 by 10% (STRATA 2019). However, Early Childhood and Pre-primary Education Teachers still had lower remuneration than other teachers. Therefore, this increase was significantly lower for ECEC pedagogues. Finally, in 2020 the income was equalised for both ECEC and primary and secondary staff. Thus, that year the wage increased for school teachers by 10% on average, while Early Childhood Pedagogues received a salary increase of over 46%

and Pre-primary Pedagogues an increase of over 30% (svietimonaujienos.lt 2020a). In 2021 and 2022, remuneration was increased by approximately 10% for all teachers.

In the last quarter of 2021, the average monthly salary of teachers working at all levels of public sector education was €1034.40 net and €1636.80 gross (Statistics Lithuania 2022), which means that the average salary of teachers (all grades) caught up with the average national monthly wage of €1679.30 gross. No national data is available on the average wages of Early Childhood and Pre-primary Pedagogues. Remuneration differs greatly, based on working experience, qualification, and working time (full-time equivalent). *Table 9* presents the base remuneration coefficients for core practitioners (including Special Pedagogues, Speech Therapists, Psychologists and others) and centre leaders.

Table 9

Lithuania: Salary coefficients for ECEC Teachers and Centre Leaders

Salary coefficients for core practitioners (pre-primary and early childhood education)			
Qualification category	Length of working experience		
	0–2 years	5–10 years	25+ years
Teacher	7.99	8.02	8.17
Senior teacher	-	8.21	8.66
Teacher-methodologist	-	8.74	9.28
Teacher-expert	-	9.94	10.45
Centre leaders			
Student count	Length of working experience		
	0–10 years	10–15 years	15+ years
Up to 200	12.54	13.00	13.31
201–400	13.70	13.82	13.83
401–600	13.75	13.84	13.88
601–1,000	14.75	14.78	14.81
1,001+	14.78	14.80	14.85

Source: Statistics Lithuania 2022

7.2 Full-time and part-time employment in ECEC provision

The working week of an Early Childhood and Pre-primary Pedagogue is 36 hours. Of these, 32 hours are devoted to working directly with children, and four hours are dedicated to indirect work— planning, preparing documents related to education, cooperating with other teachers and parents (guardians) on educational issues, etc. However, over 65% of teachers do not reach the full-time equivalent of working time, according to the state audit conducted in 2020 (AAI 2020). There are no national-level statistics specifically for ECEC pedagogues.

In addition, the Centre Leader is no longer the only person to approve teachers' workloads. Workloads are coordinated with the setting's work council. If no such committee exists, workloads are coordinated with the employee-level trade union (Eurydice 2023c).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Before 2018 there was neither an on-site mentoring system in Lithuania nor a formal induction programme for newly qualified teachers. This can be explained by the lack of young pedagogues in early childhood education institutions and the requirement for higher education institutions

to organise field-based studies during their IPE programmes; therefore, induction programmes are not deemed necessary at the policy level.

Since 2018, the National Education Agency has tested the EU funded project “TĖSK”, which supports the ECEC Teachers by providing an internship for the first year of their professional career (NŠA 2022c). This is organised by the higher education institution in cooperation with the ECEC institution. An experienced practising mentor is assigned for the whole period, providing five hours of their time each month towards helping to draw up an internship plan and supporting ad-hoc questions. During the internship, various events and integration activities are envisaged in close cooperation with educational institutions.

7.4 Non-contact time

Core practitioners working on a full-time basis in municipal early childhood institutions have 34 hours weekly to fulfil their regular duties with children. In addition to that, four hours of non-contact time are granted for complementary work such as planning or working with parents.

The regulation differs for Pre-primary Pedagogues. The principal of an early childhood institution or a school with a pre-primary education group prepares a specific description of the Pre-primary Pedagogue’s workload. The number of hours to be spent on each activity is set down according to the pre-primary education organisation model approved by the municipality.

7.5 Current staffing issues

In 2021, the Government Strategic Analysis Centre assessed the future demand for pedagogues in the Lithuanian education system. The relative shortage of teachers will gradually evolve to a lack of teachers in almost all specialities and qualification levels (STRATA 2021). The government is trying to solve the staffing issues in several ways: for example, by increasing scholarships for students at university, by funding travel costs for travelling to work and by enabling flexible working schedules to combine pedagogy with other commitments. However, to this day, the tendency of a rising shortage of ECEC staff continues to be a problem. Strategic actions will need to be taken during the coming years in order to bridge the gap.

In terms of gender distribution, the workforce is heavily dominated by women. According to data of the Ministry of Education, Science and Sport, 87.5% of teachers in schools and ECEC centres in Lithuania are female. The overall share of male teachers across the country is inadequate; moreover, the number of male pedagogues in early childhood education institutions is even lower than in other levels of the education system and accounts for less than 1% of the workforce (MoESS 2016). For example, there were 1,116 ECEC pedagogues in total in the city of Klaipėda, with only one male amongst them. Similar tendencies can be observed in other municipalities, too, so ECEC pedagogy is overwhelmingly female-dominated (atviraklaipėda.lt 2020). This can be partly explained by the somewhat unfavourable and biased views towards male Early Childhood Pedagogues amongst the general population.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Pedagogue forecasting model

In 2018, the Science and Studies Monitoring and Analysis Centre (MOSTA) developed a pedagogue forecasting model that aims to create preconditions for more accurate planning of teachers and persons admitted to studies providing pedagogical qualifications, taking into account the changing needs of the economy, the labour market and the education system. The model provides opportunities to provide evidence-based public policy recommendations to match the supply and demand of teachers. The reports are generated annually by the Government's Strategic Analysis Centre (svietimonaujienos.lt 2018).

Expansion of Lithuanian language teaching in ethnic minority schools

From January 1st 2019, all ethnic minority schools working at early childhood and pre-primary education levels will provide no less than five hours per week of Lithuanian language teaching. In the fourth quarter of 2018, there were 7,000 children in early childhood education and 2,000 in pre-primary education. Although part of the early childhood education programme is available in Lithuanian, research and practice confirmed that without allocating specific hours and the necessary finances, education in Lithuanian usually does not occur even if the parents express a desire for their children to receive such education. Parents who regularly send their children to national minority schools want a specific number of hours dedicated to the Lithuanian language. However, the providers of these schools do not always take this into account and often do not have the financial means to do so. The Ministry of Education, Science and Sport therefore confirmed a legislative proposal to increase the teaching of the Lithuanian language by one hour in minority schools (MoESS 2018).

Reorganisation of higher education institutions

On 13 January 2018, the Parliament of Lithuania ruled that Aleksandras Stulginskis University (ASU) and the Lithuanian University of Educational Sciences (LUES) would be integrated into Vytautas Magnus University. After this change, Vytautas Magnus University became a university with the widest range of very different study programmes in Lithuania, taking over the educational programmes from LUES in the context of reputation and funding issues over the past few years. The reorganisation affected the prestige of the educational programmes. On a positive note, more emphasis was given to inclusive education in ECEC programmes (svietimonaujienos.lt 2019).

Pre-primary education can last up to two years

In 2020, the Minister of Education, Science and Sport adopted changes in pre-primary education, enabling an individualised learning approach for children which allows them to start school from age 5 for up to two years continuously (MoESS 2020a). After assessing the child's education and support needs and progress in the procedure established by the Minister of Education, Science and Sport, pre-primary education may be provided to a child when they reach the age of 5 in the calendar year before the 1st of September and can last for two years instead of one. Early childhood education is still available on a voluntary basis for children of two years of age until they are ready for pre-primary education. Mandatory early childhood education is still in place

for children living in poor socioeconomic conditions (according to 2020 data, there are over 4,000 such children).

Updated recommendations for Pre-primary Pedagogues working with children with autism spectrum disorders

In August 2020, new recommendations were developed, envisaging an individual support plan for children which would supplement the usual teaching plan in pre-primary education. It provides a perspective on the child's learning, expected changes in behaviour, forms and methods of providing educational support, behaviour prevention and intervention methods, and social skills development activities. The guidelines also provide advice on adapting to the learning environment at school. For children with autism, it is recommended to designate a permanent place for educational activities, if necessary, to use walls and screens to help focus during lessons. It is recommended that the school provides as much noise-isolated space as possible in the classroom, group, or another place where the children can rest quietly during breaks or during a state of emotional instability. In addition, it is proposed that the educational setting hosting the pupil organises a meeting with the "school welfare commission" no later than seven working days before the start of the school year. It is envisaged that the child, together with their parents, external pedagogical and psychological specialists and the relevant teachers would be able to participate in the meeting and discuss how to educate the child and how to assist the family (MoESS 2020b).

A monthly stipend for participation in pedagogy studies

In order to increase participation in professional bachelor or bachelor programmes in pedagogy, the Lithuanian government, since September 2020, has provided a €300 monthly grant for students. This support was extended in 2021. In 2022, students who sign a contract with a specific educational setting agreeing on their employment after completion of their studies are awarded a €500/month stipend. This targeted support is much higher than the usual basic grant in other study programmes of €42 per month for the highest achieving students in all other EQF 6 programmes (LRT 2021).

Additional support for children from disadvantaged backgrounds to participate in early childhood education

From September 2021, the government adopted new financial aid for children with disadvantaged backgrounds to increase their participation in pre-primary education. It is estimated that there are around 4,000 such children, but only 100 of them participate in the programmes. The main reason is the low incentive for parents to bring the children to school, especially if they have to support the transportation. Therefore, additional funding of €1,3 million for all municipalities will ensure access to transport, healthy food and proper care (MoESS 2021).

ECEC Teachers' remuneration rate unified with primary and secondary teachers' pay

In September 2020, ECEC Teachers' wages increased dramatically, and they became equal to those of other teachers in the education system. In 2020 alone, the average salary for school-teachers increased by 10%, while Early Childhood Teachers received a salary increase of over 46% and Pre-primary Teachers an increase of over 30% (svietimonaujienos.lt 2020a). These changes were adopted in the context of frustration expressed by pedagogues who undergo a similar length and complexity of university studies (compared to primary and secondary education) but until now have received significantly lower salaries.

9. Recent country-specific research focusing on ECEC staff

The development of distributed leadership in Lithuanian early childhood education institutions

Source: Dambrauskiene and Liukineviciene 2018 (see *References* for full details)

Aims and methods: The article aims to analyse the theoretical literature and other sources (strategic documents, legislation, statistical information) and reveal the possibilities of distributed leadership development in Lithuanian early childhood education institutions.

Selected findings: The current context in the Lithuanian education system is favourable for developing the ideas of distributed leadership both in general and early childhood education institutions. According to the theoretical research, the institutional development and staff-specific contexts in Lithuanian ECEC settings are favourable for developing distributed leadership. At the same time, the national cultural context and the different communities of education institutions can pose difficulties in implementing the ideas of distributed leadership.

Implications: The theoretical material and legal framework analysis reveal the need to conduct empirical research on distributed leadership in Lithuanian early childhood education institutions to uncover the challenges and particularities of its implementation and reveal good practices.

Factors demotivating the choice of the teaching profession in early and pre-primary education

Source: Pikturnaite and Tamašauskiene 2021 (see *References* for full details)

Aims and methods: To find out what demotivating factors determine the reluctance to choose the teaching profession in early and pre-school education. Methods were the analysis of research literature and a questionnaire survey. Participants were 421 students studying preschool education and early childhood education and care as well as 111 graduates of such programmes, who are now the professionals working in the field.

Selected findings: Theoretically and empirically analysed factors negatively affecting the choice of teaching in early and pre-school education can be classified into three groups: (1) the general political and socio-cultural situation in the field of education; (2) working conditions in ECEC institutions; (3) person-related characteristics, previous experience, and the lack of career advancement possibilities. The most critical demotivating factors were the low prestige, status and image of the teaching profession in the political and socio-cultural context, negative feedback about stress at work, disagreements with colleagues and competition. Moreover, the possibility for improvement was insufficient for beginner teachers.

Implications: Analysis of the demotivating factors for entering the ECEC teaching profession enhances understandings of the current situation and provides a basis for adopting necessary institutional and legislative changes to improve education.

Experiences of pre-primary education teachers in assessing children's achievements and progress in distance education during the Covid-19 pandemic

Source: Norvilienė et al. 2021 (see *References* for full details)

Aims and methods: The research aims were to investigate the views of Pre-primary Education Teachers about their experiences of distance learning in assessing children's achievements and progress during the first lockdown in the Covid-19 pandemic. Methods included an analysis of

the research literature and policy documents, semi-structured interviews with 15 pre-primary teachers who worked remotely in the spring of 2020, and qualitative content analysis.

Selected findings: Organisation of distance education after the declaration of lockdown in Lithuania posed new challenges for all participants in pre-primary education: the administrators of educational institutions, teachers and parents. However, the teachers managed to master digital software and information flows quickly, cooperate with colleagues and parents of children, maintain the continuity of pre-primary education, and individually consider each child's situation.

Implications: The research provides a basis for studying the views of primary school teachers working with first graders about the impact of distance learning in pre-primary settings on pupils' educational results.

10. Workforce challenges – country expert assessment

Beyond historically low salaries, difficult working conditions due to an excessive number of children in the group, the challenging work and psychological stress and the dim prospects of CPD, there is also the problem of the **perceived low status of the teaching profession**, which has proved to be a significant problem for many years. Recent research by Pikturnaite and Tamauskaite (2021) on demotivating factors in choosing the ECEC pedagogue profession revealed that the most demotivating factor is the low prestige, status and image of the teaching profession. The Ministry of Education, Science and Sport report notes that 17 higher education institutions had at least one study programme for initial teacher education before the reform. This dispersion of resources was one of the reasons that led to a decline in the quality of initial teacher education. It was inevitably connected to the diminishment of the prestige of the teaching profession (Varanauskas 2020).

Lithuanian early childhood and pre-primary education programmes have an internal quality assurance system based on voluntary self-assessment. However, there is no comprehensive quality assurance system which would be widely applicable and would generate data that sheds light on the quality of education and children's achievement at the national level. The education analysis centre of the Ministry of Education, Science and Sport developed a research paper on this issue and concludes that the assessment of achievement and planning of education is one of the weakest areas within the education system. Therefore, it is essential to strengthen teacher competence related to assessing children's educational achievements and progress, especially in areas such as children's self-assessment skills, involvement of parents (guardians) and children in the assessment process, and use of assessment results for educational planning and improvement. Recommendations have therefore been issued to teacher training centres, focusing on initial teacher training and/or continuing professional development, to consider modern assessment trends, monitoring and research developments and other skills related to better evaluation outcomes. Experts estimate that in five years, more thorough national reporting will be developed. Therefore, current teachers may face difficulties in adapting to these changes (MoESS 2022).

Poor ICT skills among the older pedagogue cohort are already a substantial problem affecting pre-primary education. Recent research on the COVID-19 impact highlighted challenges related to competences and infrastructure. Even though in some cases the teachers managed to adapt

rather quickly and improve their competences, existing digital infrastructure, specifically the lack of it, presented serious challenges for teachers and early childhood education institutions when introducing distance learning. Educators lacked support from management, adequate equipment, training, and time to prepare for activities. Distance learning eliminated the possibility of direct, “live” communication with children and complicated the processes of motivating students and assessing achievement. The lack of teachers’ self-confidence and low motivation to participate in the distance learning process became apparent.

Research shows that adequate qualifications are essential for the child’s development and learning and for working towards the curriculum goals. In Lithuania, there is a problem of **staff lacking relevant professional or formal education** both in early childhood and pre-primary education institutions. Between 2016 and 2019, the proportion of non-qualified pedagogues increased from 22.1% to 33.7% in early childhood education and from 10.7% to 16.5% in pre-primary education institutions (MoESS 2020c). In 2018, a thorough evaluation of 101 ECEC institutions (kindergartens) was carried out in the capital city of Vilnius⁵. One of the major problems regarding staff was the qualification of pedagogues, especially in early childhood education. It was estimated that over 50% of pedagogues do not qualify for ECEC education as they have a primary or secondary education degree. In some cases, the staff have not received comprehensive teacher training and attended only a 40-hour pre-primary teacher training course, while having academic background and degree in different field, such as logistics, law and similar (tavovai-kas.lt 2018).

Moreover, the decreasing number of qualified workforce in some regions, specifically more rural regions, and a growing number of children with special educational needs proves to be a complicated problem to tackle in the long term. The 2020 report on education in Lithuania estimates that one particular support staff member has over 38 children to take care of in rural areas compared to 25 in urban areas (MoESS 2020c). This means an additional burden for early childhood and pre-primary education pedagogues, who lack support to work with children with special educational needs, further diminishing the attractiveness of the specialisation. In addition, there are over 1,500 children who learn in separate special education institutions for early childhood education, according to 2019–2020 data. According to the law passed in 2021, a national integration of these children will start in 2024 September (svietimonaujienos.lt 2020b). That means an additional influx of children with particular needs will be apparent in most municipalities, and the current challenges will be exacerbated unless a specific focus and appropriate funding are allocated.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the term used in this report for the main form of centre-based ECEC provision is **early childhood education centre** (*ikimokyklinis ugdymas, lopšelis-darželis*, 1–5), comprising **nursery groups** (*lopšelis*, 1–2) and **kindergarten groups** (*darželis*, 3–5). Compulsory **pre-primary groups** (*priešmokyklinio ugdymo grupės*, 6–7)¹ are located in both ECE centres and schools. Any additional forms are described where appropriate.

Historical milestones in ECEC in Lithuania

1847	First educational establishment for young children opened in Klaipėda.
1936	Kindergartens included in national legislation for the first time.
1938-1990	During the Soviet era, access to education, including early childhood education, was an important policy focus, both to strengthen political ideology and to enable parents, particularly women, to enter the employment market.
Until 1990	Steady expansion of ECEC provision
1990–1997	Two alternative programmes for early childhood education are introduced: (1) Guidelines for Early Childhood Education: a Curriculum for Teachers and Parents, and (2) the Kindergarten Programme <i>Vėrinėlis</i> .
1998–2002	Parliament approves pre-primary education for 5 and 6 year-olds.
2003–2012	Access to early childhood education is expanded, in particular for children from socially disadvantaged communities.
2011	<ul style="list-style-type: none"> – Introduction of state funding for four hours of pre-primary education – Ministry of Education approves "Criteria for the early education programme".
2013	National education strategy for 2013–2022 sets out a goal to achieve 90% ECEC attendance among 4 year-olds by 2017 and 95% by 2022.
2014	The Education Act is amended to accommodate a needs-related approach in ECEC.
2015	Adoption of „Description of the achievements of preschool-aged children“ (<i>Ikimokyklinio amžiaus vaikų pasiekimų aprašas</i>) and the “General curriculum framework for pre-primary education” (<i>Priešmokyklinio ugdymo bendroji programa</i>)
2016	One-year compulsory enrolment in a pre-primary group comes into force.
2018–2022	Project on the development of guidelines for the external evaluation of ECEC settings is launched.
2019	A new mixed-funding model is introduced for early education.
End of 2020	<ul style="list-style-type: none"> – Amendments to the Education Act provide the framework for a step-by-step entitlement to universal early education by 2025 for 4, 3 and 2 year-olds. – Other amendments included: allowing parents to choose whether their child should start compulsory pre-primary education at age 5 or 6; and transferring responsibility for compulsory ECEC for children of at-risk families from the state to the municipalities.

Sources: Oberhuemer, Schreyer, and Neuman 2010; Siarova and Buinaukas 2017; Malinauskienė 2020; Eurydice 2023

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for pre-primary settings in countries with a primary school entry age of 6 years. In the case of Lithuania, where primary school starts at age 7, the relevant formats are **0–5** (early childhood centre) or **3–5** years (kindergarten) and **6–7** years (pre-primary group).

ECEC system type and auspices²

In Lithuania, the system of early childhood education and care for children up to primary school entry at age 7 is uniformly regulated and organised in two stages. Both **early education** in ECE centres (*ikimokyklinis ugdymas*) for 0 to under 6 year-olds and **compulsory pre-primary education** (*priešmokyklinis ugdymas*) for 6 to 7 year-olds are part of the education system and are the responsibility of the Ministry of Education, Science and Sports (*Švietimo, mokslo ir sporto ministerija*). Both stages are classified as non-formal education.

The education system in Lithuania is decentralised, with the State and municipalities working closely together. For example, while the Ministry of Education, Science and Sports is responsible for the development and implementation of education policy, the municipalities or other early education providers are responsible for the admission procedures of children. In terms of management, educational content and pedagogy, the ECE institutions have a relatively high degree of autonomy.

General objectives and legislative framework

Education has high political priority in Lithuania and is supported and funded by the State. Overarching goals are set out in the national ten-year education strategy 2013–2022, with particular emphasis on access to education for all children, high quality provision and structural financing strategies.

The 2011 Education Act (*Lietuvos Respublikos švietimo įstatymas 2011*, with amendments from 2020) sets out the basic principles of the education system: humanistic and democratic values, human rights and individual freedom. The objectives include: developing persons with a sense of responsibility; supporting communication and language skills as well as creative and cognitive competences; having regard both for national and ethnic cultural values; and the acquisition of skills and abilities needed to become a responsible citizen of the Republic of Lithuania, in Europe and in the global community.

ECEC entitlement and compulsory attendance

Until very recently, there was no universal entitlement to a place in ECEC provision in Lithuania. Although each municipality was required to have a network of ECEC providers, they were not obliged to ensure a place for every child. However, amendments to the Education Act adopted at the end of 2020 provide for the step-by-step introduction of universal early education: from September 2023 for 4 year-olds, from 2024 for 3 year-olds and from 2025 for 2 year-olds.

In general, attending an early education institution is not compulsory in Lithuania. However, there are exceptions, for example: if child's family is considered "socially vulnerable"; if the child does not attend the setting despite being enrolled; if a child's special educational needs cannot be met by the family; or if the parents live in difficult conditions. Provision is then free of charge.

In September 2016, one-year compulsory enrolment in a pre-primary group for 6 to 7 year-olds came into force, with an obligation to attend for at least 20 hours per week (or 640 hours per year). Since September 2021, attendance may last two years if this is deemed necessary. From September 2024, pre-primary group enrolment is to start at the age of 5.

Primary school starts at age 7 and this will be lowered to 6 years of age in September 2024.

² The Eurydice country report on ECEC in Lithuania provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

Main types of provision

Early education for children under 3 years of age in Lithuania is classified as ISCED 01, and pre-primary education for children aged 3 and over as ISCED 02, although ECEC centres are not generally organised on an age-segregated basis.

Early education (0–5/6 years)

Early childhood education centres (*ikimokyklinis ugdymas, lopšelis-darželis*) for children from the age of 1 to 5 years are the regular form of educational provision. They are age-integrated facilities that cater for under 3 year-olds in nursery groups (*lopšelis*) and 3 to under 6 year-olds in kindergarten groups (*darželis*). Most centres offer full-day provision, but opening hours may vary and can be 12 hours, 9 to 10½ hours, 5 to 6 hours or 3 to 4 hours or have opening times that are negotiated with parents according to their specific needs for combining family and work duties. In addition, there are also a number of round-the-clock facilities

Pre-primary education (6–7 years)

Pre-primary groups (*priešmokyklinio ugdymo grupės*): Attendance at a pre-primary group in the year before school enrolment for a minimum of 640 hours (including holidays) has been compulsory since September 2016. The main aim is to provide targeted preparation for school. An increasing number of 5 year-olds are also attending these groups (see *Table 1*). Pre-primary groups are located both in age-integrated ECE centres and in schools (*priešmokyklinio ugdymo grupė mokykloje*) and, particularly in remote areas, also in other types of institution (see below). Additionally, they may be run by private teachers or other service providers.

Most groups open at 7:30/8:00 for a minimum of four hours daily. Transportation is provided for children living further than 3 km from the nearest facility, but parents have to cover the costs.

In 2022, a total of 46,139 children between the ages of 5 and 7 attended pre-primary groups in ECE settings and 10,450 pre-primary groups attached to schools (OSP 2023a – see *Table 1*).

Table 1

Lithuania: Number of children in pre-primary groups by location, 2022

Age	Children in pre-primary groups in ECE centres	Children in pre-primary groups in schools	Total*
5 year-olds	27,460	1,215	28,675
6 year-olds	18,629	9,205	27,834
7 year-olds	50	30	80
Total	46,139	10,450	56,589

Source: OSP 2023a, *own calculations

Additional forms of ECEC provision

Self-contained **kindergartens** (*darželis*) are a form of all-day setting. Traditionally they were for 3- to 6 year-olds, but today younger children can also be admitted. Kindergartens taking in children younger than 3 years old are normally referred to as kindergarten-nurseries (*lopšelis-darželis*), with groups for children younger than 3 being referred to as nurseries (*lopšelis*) and those for children between 3 and 6 being referred to as kindergartens (*darželis*). In remote areas with few children, kindergarten groups may also be offered in schools. Some kindergartens work according to an explicit educational approach (e.g. Waldorf, Montessori).

School kindergartens (*mokykla-darželis*) combine early education and elements of primary education in one institutional setting for children from 2 or 3 years old until they turn 10. They are mostly to be found in rural areas.

Multi-functional centres (*daugiafunkcinis centras*), which also offer provision for children from the age of 3 years often focus on special education support. Besides providing ECEC, they also offer leisure-time activities and other services (European Commission/EACEA/Eurydice 2019, 181).

Provider structures

In 2022, there were a total of 742 ECEC settings (*ikimokyklinio ugdymo mokykla*) in Lithuania, 542 of which were public and 200 private-independent (Eurydice 2023, 2.8). These figures indicate a tremendous surge in privately-run settings. Whereas in 2013, almost all children up to 7 years of age (93.4%) attended public facilities (OSP 2018, 30), by 2021 the number of children in private facilities had increased significantly, both for under 3 year-olds and over 3 year-olds (Eurostat 2023e) – see *Table 2*.

Table 2

Lithuania: Children in ECEC centres and pre-primary groups by provider, 2013 and 2021

Provider	Number and age of children			
	Under 3 year-olds		3 years to school entry	
	2013	2021	2013	2021
Public	18,299	21,462	91,837	101,060
Private for-profit	719	3,240	1,732	6,741
Total	19,018	24,702	93,569	107,801

Source: Eurostat 2023e

In 2022, 54 ECEC providers had special education and development groups for children with SEN. In 2022 there were in total 15,578 pedagogical staff working in ECEC institutions (OSP 2023a, c, d).

Participation rates in regulated ECEC settings

National statistics show that in 2022, there were 715 ECEC centres in Lithuania offering 134,230 places, with a total of 125,207 children were enrolled in 7,453 groups (OSP 2022a, 2022b). On average, there were 107 places per 100 children in ECEC institutions across the country. However, the number varied between 98 to 140 depending on the region (OSP 2023c).

In 2022, 54.1% of 1 to 2 year-olds attended an ECEC setting, 82.7% of 1 to 6 year-olds and 94.9% of 3 to 6 year-olds (OSP 2023a, 2023b). Most 5 year-olds (92.7%) and 6 year-olds (63.5%) attended pre-primary groups (5–7) located in ECEC centres (OSP 2023a).

Table 3

Lithuania: Number and enrolment rates of 5 to 7 year-olds in pre-primary groups by age and institution, 2022

	Pre-primary groups in			
	ECEC centres		Schools	
	Number of children	Enrolment rate, in %	Number of children	Enrolment rate, in %
5 year-olds	27,460	92.7	1,215	4.1
6 year-olds	18,629	63.5	9,205	31.4
7 year-olds	50	0.2	30	0.1

Table 4

Lithuania: Enrolment rates in ECEC centres by age, 2022

Age groups	Enrolment rates, in %
1 to 2 year-olds	54.1
3 to 6 year-olds	94.9
1 to 6 year-olds and older	82.7

Source: OSP 2023c

Eurostat data from 2022 (Eurostat 2023b) show a marked increase in enrolment rates in centre-based ECEC settings. They doubled for the under 3 year-olds (2005: 11%, 2022: 22,8%), but also increased significantly for the older age group (2005: 57%, 2022: 92.5%, see Table 5).

Table 5

Lithuania: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years in %**	3 years to school entry in %
2005	1 to 29 hours	2	11
	Over 30 hours	9	46
	No enrolment in ECEC	89	43
2010	1 to 29 hours	2	9
	Over 30 hours	12	59
	No enrolment in ECEC	86	32
2015	1 to 29 hours	2.0	5.0
	Over 30 hours	7.7	68.8
	No enrolment in ECEC	90.3	26.2
2022	1 to 29 hours	0.4	11.0
	Over 30 hours	22.4	81.5
	No enrolment in ECEC	77.1	7.5

Source: Eurostat 2023b, deviations in the sums due to rounding

Overall, the ratio between demand for places and supply was relatively balanced in 2022 (107 places per 100 children on average), although this can vary greatly depending on the region (from 98 to 140), with large cities often facing a shortage of places (OSP 2023c).

Financing and costs for parents

In 2022, 0.9% of GDP was spent on ECEC centres (0–5), and 2% on pre-primary, primary and secondary education (OSP 2023e).

Since September 2019, a new mixed funding model (“class basket”) has been in place for ECEC centres and pre-primary groups, linked to the implementation of the national curriculum. The majority of the available funding is calculated for one group and part of the costs are based on the number of children. About 80% of the “class basket” is made available to the institutions (state, municipal and also private) and is used almost entirely for personnel costs. The municipalities receive the rest. The aim of this new principle is to give smaller settings more financial stability. The pedagogy-related costs (i.e. staff needed to implement the curriculum) are covered by the state, the operating costs by the provider. This has made it possible to expand the network of private facilities and thus reduce the shortage of places, especially in large cities. Nevertheless, the decision to include private institutions (especially private non-profit ones) has been and still is a controversial issue.

Both ECE centres and pre-primary groups are free of charge, except for the cost of meals. In pre-primary groups, the state contribution covers 20 hours per week; if a child attends the facility for longer, parents have to pay for the additional hours. Municipalities often charge less to families from disadvantaged backgrounds or families with more than three children. Some municipalities that cannot provide enough places in public facilities compensate parents for a partial fee in a private facility (€100 per month, European Commission/EACEA/Eurydice 2019, 58).

Private ECEC institutions can charge the parents fees that are set individually by each institution. The prices may vary between a few hundred to up to around 1,500€ per month. Parents can apply for a subsidy of 100€ per month to cover part of the private kindergarten fee. The subsidy is financed by the municipalities.

In 2022, a couple with two children spent about 5% of net household income on childcare costs. The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included (OECD.stat 2023).

Staff to child ratios and group size

Early education (0–5/6 years)

In Lithuania, the number of professionals per group is regulated by the Hygiene Standard (HN 75:2016), which is approved by the Ministry of Health. In addition to the required number of core professionals (see *Table 6*), other staff members also work in the groups. The children are usually placed in same-age groups. Children with a disability count as two children. Special groups in which only children with disabilities are cared for are smaller.

Table 6

Lithuania: Maximum number of children per group by age and required core practitioners per group

Age group	Maximum number of children in a group	Minimum number of core practitioners in a group
Under 1 year	6	2
1 to 2 years	10	1
2 to 3 years	15	1
Under 3 years	8	2
3 to 7 years	20	1
Under 7 years	10	2

Age group	Maximum number of children in a group	Minimum number of core practitioners in a group
1 to 7 years	12	1
2 to 7 years	16	1

Source: Eurydice 2023, 4.2

Pre-primary education (6–7 years)

A pre-primary group consists of a maximum of 20 children. If the group also includes a child with a disability, the maximum number decreases by one. If the children speak a language other than Lithuanian, the number is reduced to 15. If a group consists only of children with disabilities, group size depends on the type of disability, ranging from 3 to 10 children (Ministry of Education, Science and Sport 2022b).

Curricular frameworks

All early education institutions and pre-primary groups in Lithuania are required to follow guidelines issued by the Ministry of Education and develop a centre-specific programme based on them which reflects local needs. There is a national, approved, detailed curricular framework for the compulsory pre-primary year.

Early education (0–5/6 years)

In 2011, "Criteria for the early education programme" (*Ikimokyklinio ugdymo programų kriterijų aprašo*) were approved by the Ministry of Education, describing six stages to track children's development. This was followed in 2014 by "Methodological Recommendations" (*Rekomendacijos Ikimokyklinio ugdymo programai rengti*) and, in 2015, the "Description of the achievements of preschool-age children" (*Ikimokyklinio amžiaus vaikų pasiekimų apraša*). The latter describes 18 learning areas (e.g. physical activities, expression of emotions, spoken and written language, aesthetic perception, creativity) and related skills that a child should have achieved at a certain age. However, the document is viewed as curricular guidance and not as a required national standard.

Each centre-specific programme is required to adhere to the guidelines and, for example, reflect universal human rights in its objectives. Objectives and materials are to be age-appropriate and methods for evaluation included. The early education curricular framework is not divided into specific subjects or time units; it is expected that the learning areas are integrated into everyday life in the setting through play-based activities.

Pre-primary education (6–7 years)

In 2015, the "General Curriculum Framework for Pre-primary Education" (*Priešmokyklinio ugdymo bendroji programa*) was adopted for the one to two-year pre-primary groups.

The curriculum is based on five basic principles: socio-cultural orientation; individualisation; integrity; contextuality; interactions. The content and activities emphasise health care, knowledge, communication and artistic education as well as the development of emotional intelligence. These activities are transmitted through a holistic approach and not as separate elements in at least 700 minutes per week (for half-day settings) or at least 1,260 minutes per week for full-day settings, which corresponds to approximately four hours per day.

Professionals choose their own materials and are expected to ensure ongoing development of the curriculum, opening up opportunities for children to make their own choices, satisfy their curiosity, solve problems and express their own opinions.

Digital education

Digital competence is included in the pre-primary curricular framework. In the framework digital competence is defined as a motivation and ability to use digital technology to complete various tasks, study, solve problems, work, communicate and cooperate, manage information, and safely, properly, critically, independently and ethically create and share digital content. According to the framework, children in pre-primary groups should be able to use digital technologies with the support of a teacher and to partially understand topics such as digital safety or ethical communication through digital technologies (Ministry of Education, Science and Sport 2022c). The early education curriculum suggests that children use digital materials to gather and assess information (European Commission/EACEA/Eurydice 2019, 100).

Monitoring – evaluation

Child-related assessment

– Early education (0–5/6 years)

The group leaders observe the children regularly and discuss the results with the parents. In the "Description of the achievements of preschool-age children" (see also *Curricular Frameworks*), there are six levels, of which the first three serve to evaluate the achievements of under 3 year-olds and the other three of 4 to 6 year-olds. If a 6 year-old child has not yet reached the sixth level, the corresponding focal points are continued in the pre-primary group.

– Pre-primary education (6–7 years)

Evaluation requirements as well as the handling of their results are laid down in the "General Curriculum Framework for Pre-Primary Education". The children are assessed at the beginning and at the end of the year by the respective core practitioner using preferred methods (e.g. observation, conversations, children's work). A written report is used to inform the primary teacher. The child's performance is also discussed with the parents at least twice a year.

Centre-level internal evaluation

Municipal education departments select the methods for self-evaluation and quality assurance, analyse the results and make recommendations for improvement. ECE centres carry out their self-evaluation according to the "Methods for the internal auditing of early education settings" (*Dėl ikimokyklinio ugdymo mokyklos vidaus audito metodikos*, 2005). Criteria include the support of children and their families and the management of the institution.

General education schools perform self-evaluation themselves. The School Head initiates the self-evaluation. The school council chooses the area of self-evaluation of the school's activities and the methodology. The self-assessment is performed by a group formed of the school staff.

External evaluation

For ECE centres there is no established procedure for external evaluation; each municipality can decide this for itself. As a rule, the education departments of the municipalities are then responsible for this. In 2018, however, only five of the 60 municipalities had carried out external evaluations.

A project conducted by the National Agency for Education (2018-2022) is focusing on the "Improvement and development of evaluation and self-evaluation in non-formal education (early education and pre-primary education) and general education". The aim is to test methods for (self-)evaluation, to train professionals in these methods and to develop an online system for self-evaluations. The Ministry of Education has therefore committed itself to creating a system for the external evaluation of ECEC centres by 2022 and in June 2022 a law defining external evaluation of schools providing early childhood and pre-primary education was published (Ministry of Education, Science and Sport 2022a).

Inclusion agenda

Children with special educational needs and disabilities

The Education Act (most recent amendment 2020) states that the responsibility to provide a safe and supportive environment for children with special educational needs lies with the Child Welfare Committee. It organises and coordinates the adaptation of curricula to the needs of children. It is also responsible for the initial identification of children with special needs. These children can either attend a mainstream institution in a special group located there, or a separate support setting.

Integrative preschool groups are smaller than the groups in mainstream settings. Depending on the severity of the disability, there are 4 to 12 children in a group. Educational plans and materials are adapted accordingly to the needs of the children.

In 2022, there were 54 ECE settings, in which 1,109 children were cared for in special needs groups, these were most frequently children with language-related developmental delays (564) and children with complex medical conditions (400). 24,740 children with special educational needs were integrated into regular groups (OSP 2023a).

Children with a background of migration

In 2022, only 1.2% of the total population held a non-Lithuanian citizenship, the majority of whom (89.2%) came from countries outside the EU27(2020). In the age group up to 5 years, these shares were 0.4% and 94.3% respectively (Eurostat 2023c). According to Busygina and Onishchenko (2019; 47, 55), persons of Polish and Russian origin make up the largest ethnic minorities (around 6% and 5.8% respectively in 2018 – but each only 0.05% of the total population).

National minorities have a legal right to use their family language in ECEC centres and schools (Department of National Minorities 2018).

In 2020–2021, Lithuanian was spoken in 634 ECEC centres, Russian in 10 and Polish in 6. In 55 settings, more than one language was spoken, e.g. Lithuanian and Russian (23) or Lithuanian and Polish (21) or Lithuanian, Russian and Polish (18), Russian and Polish (5) (Ministry of Education, Science and Sport 2021).

Since September 2021, it is a requirement that activities in Lithuanian should take place in ethnic ECE centres for at least five hours per week.

Parental leave arrangements³

Maternity leave (*nėštumo ir gimdymo, motinystės atostogos*) is 18 weeks, of which 70 are before the birth and 56 after. During this period, 77.58% of the net salary (without an upper limit), at least €294 per month, is paid. The payment of social security contributions for at least 12 months during the last two years is required.

Under the same conditions, fathers receive 28 calendar days of **Paternity leave** (*tėvystės atostogos*) in the three months following the birth of the child.

Parental leave (*vaiko priežiūros atostogos*) can be taken as a family entitlement until the child is 3 years old. Each parent is entitled to two individual, non-transferable and fully paid months. For the remaining time, parents can choose between two options: (1) They receive 77.34% of the net salary until the child is 18 months old, with a cap equal to the national average salary (in 2023: €2,929.11 per month), but at least €294 per month. (2) They receive 58% of the net salary until the child is 12 months, with a ceiling of €2,050.53, and 38.67% of the net salary until the child is 24 months, with a ceiling of €1,171.57. The remaining time until the child is three years old is not paid. If parents decide to work while receiving allowances, the amount is reduced accordingly.

According to the Social Insurance Fund Board (SODRA) data, all working mothers take Maternity leave; in 2022, 75.6% of mothers and 24.4% of fathers took Parental leave.

Current challenges for the ECEC system in Lithuania

Country expert assessment by Hanna Siarova and Radvilė Bankauskaite

Quality of ECEC

Following the transfer of responsibility for the curriculum from the central to the local (pre-school education institution) level, combined with a lack of clear guidelines on how overall principles and recommendations for the content of pre-school education could be operationalised, the pre-school establishments and pedagogues face challenges on ensuring quality in pre-school education and responding to each child's specific needs. Many practitioners were used to working under structured and rigid curricula, and have not received adequate professional preparation on how to design curricula according to local needs or how to implement national guidelines effectively. For many, it is difficult to recognise different levels of pre-school children's achievements, to create an evaluation framework, to individualise the educational approach and to connect it with the real needs of children (UNICEF 2021).

Beyond this, the current work organisation of Early Childhood Pedagogues leaves very limited time for non-contact work, which could be dedicated to quality improvement (e.g. methodological work, self-reflection, cooperation with colleagues and other ECEC institutions) (Supreme Audit Institution 2019). Another important aspect affecting the professionalism of ECEC Pedagogues is the lack of attractiveness of the profession due to low salaries, challenging working conditions, and a lack of opportunities for further professional development. Nevertheless, there are also some improvements taking place such as a salary raise. Since 2020, ECEC Pedagogues (early childhood and pre-primary education) are paid the same amount of money as Primary School Teachers (UNICEF 2021). A shortage of learning support staff in ECEC centres (especially in rural areas) is also reported.

³ The brief overview in this section is based mainly on the country note for Lithuania by Ruta Braziene and Sonata Vysniauskiene in the *International Review of Leave Policies and Research 2023* (see References).

The evaluation and monitoring system of early childhood education and care also needs to be improved. There is no evidence as to whether the results of self-assessments are actually used by ECEC institutions for the improvement of their performance. Moreover, in some cases recommendations provided in self-assessment reports are not implemented in practice due to a lack of external supervision on how internal audit results are applied.

Funding of ECEC

The growing number of children participating in early childhood/pre-primary education is not proportionate to the much slower increase of financing levels for ECEC, despite the introduction of the so-called pre-schooler's basket. Recent debates regarding this issue urge the Ministry of Education to change the current pre-school basket of four hours daily to eight hours daily, using EU Structural Funds, government funding and education sector savings.

Municipalities also do not have budgets to offer transportation (shuttle service) for children living in remote locations to attend ECEC.

Starting in September 2021, compulsory ECEC for children living in at-risk families was introduced and additional financing granted to the municipalities for this purpose (Ministry of Social Security and Labour 2021). Children from families at social risk are provided with transport, free meals, learning equipment, families' monitoring by The Child Welfare Commission and parental counselling about the benefits of ECEC.

Accessibility and inclusiveness of ECEC

There is a huge disparity between children's participation rates in ECEC in cities and rural areas. Whereas there is a shortage of places in early childhood and pre-primary education groups in cities, the number of children attending such groups in smaller towns and rural areas is minimal. The data show that children in rural areas more often tend to experience poverty and social exclusion. Attending ECEC is therefore especially important in reducing negative socio-economic impacts on a child's development and academic achievements, as research shows that ECEC improves socio-economic competences and cognitive abilities among those children who attend.

Even though the overall number of private pre-school establishments has increased, they are not affordable for many population groups (UNICEF 2021).

For children aged 0–5 years there is no guarantee of a place in publicly funded ECEC (Eurydice 2023). A low participation rate can be observed among children under 3 years of age. In this regard, Lithuania ranks as the country with the fifth-lowest take-up in the EU after Bulgaria, Latvia, Slovakia, and Hungary (Ministry of Education, Science and Sport 2019).

There is also need for greater flexibility of the programmes on offer. Too little attention is paid to diversity within ECEC and settings are not adequately prepared to deal with multilingual children, or those from families at risk, or those with special education needs. There are no guidelines and support for ECEC staff on how to organise good quality learning for these children and to ensure their holistic development and the realisation of their fullest potential. ECEC centres lack both adequately prepared professionals as well as educational tools and methodology to work with immigrant children. Moreover, there is an insufficient number of psychologists who would be able to help children to cope with trauma (UNICEF 2021).

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Lithuania was 2,805,998. Until 2020, the population continuously decreased slightly, since 2021 it has been increasing again (2000: 3,512,074; 2010: 3,141,976; 2020: 2,794,090) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27(2020) was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries was in France (1.84), and the lowest in Malta (1.13). At 1.36, Lithuania was significantly below the EU27 average (Eurostat 2023d)⁴.

Children under age 6

Table 7

Lithuania: Number of children under age 6 in the population, 2022

Age	Number of children
Under 1 year	23,395
1 year-olds	23,733
2 year-olds	25,447
3 year-olds	27,206
4 year-olds	28,267
5 year-olds	29,625
Total 0 to under 6 year-olds	157,673

Source: Eurostat 2023a

In 2022, 2.6% of the total population were children under 3, 5.6% were children under 6. The proportions are thus roughly in line with the EU27 average, with those under 3 slightly below and those 3 to 6 slightly above.

⁴ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>)

Table 8

Lithuania: Share of children under 6 years compared with the EU averages, 2000 to 2022, in %*

Year	Comparison Lithuania/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Lithuania	3.1	3.4	6.5

Single households with children under age 6

71.4% of all households with children under 6 in Lithuania in 202 were couple households. Single-parent households accounted for 13.3% – mostly single mothers (10.5%).

Table 9

Lithuania: Households with children under age 6, 2022

Household type	Total households	Share of all households, in % ⁺
Total households	259,300	
Couple households	185,100	71.4
Other types of households	39,800	15.3
Total single households	34,400	13.3
Single households, women	27,300	10.5
Single households, men	7,000	2.7

Employment rates of parents with children under 6 years of age

In Lithuania, in 2022, the overall employment rate for men (15-64 years) was 79.2% and for women 78.1% (Eurostat 2023j).

In 2022, 75.5% of women and 90.5% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were thus well above the EU-average (87.2%) as were those of mothers (EU-average 63.6%) (Eurostat 2023g).

⁵ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 10a

Lithuania: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers in %	Fathers in %

Children at risk of poverty or social exclusion⁸

In 2022, 19.3% of children under 6 were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 24.6% (EU: 21.6%). 3.3% of children under 6 and 5.4% of the total population suffered from severe material deprivation in 2020 (EU average 6.1% and 4.3% respectively). While the share of under 6 year-olds was significantly below the EU average, that of the total population was slightly higher than the EU average (Eurostat 2023h, i).

About the authors

Frederick de Moll was a postdoctoral researcher at the Institute of Education and Society at the University of Luxembourg from 2019 to 2022. Since 2022, he has been Professor of Educational Science specialising in Childhood and Youth Studies at Bielefeld University. His research focuses on social inequalities and their impact on the educational opportunities of young people and how public discourse and social policies shape parenthood, childhood, and family life.

Valérie Kemp is a qualified primary school teacher and completed a Master's degree in Learning and Communication in Multilingual and Multicultural Contexts at the University of Luxembourg. Since 2020, she is a PhD student at the University of Luxembourg and the University of Hamburg. As part of the COMPARE project (Collaboration with parents and Multiliteracies in ECE in Luxembourg), she conducted field research in three daycare centres in Luxembourg. Her focus is on literacy, meaning-making and multilingualism.

Kevin Simoes Loureiro, PhD, obtained his doctoral degree from the University of Luxembourg in the field of Social Sciences in 2023. His dissertation centred around the implementation of a plurilingual education policy within the non-formal early childhood education and care sector in Luxembourg, with a particular emphasis on the salience of reducing educational inequalities. His research interests encompass a wide range of topics, including educational policy implementation, educational inequalities, institutionalism, multilingualism, and early childhood education and care.

Andreas Hadjar has been Professor of Sociology, Social Policy and Social Research at the University of Fribourg (Switzerland) since 2021. From 2010 to 2024, he has held a professorship in Sociology of Education at the University of Luxembourg, where he coordinated the Horizon2020 project PIONEERED. He publishes on inequalities in educational attainment, the labour market, and other areas of life, subjective well-being, values, attitudes, and political participation.

Claudine Kirsch has been Professor in Language Didactics and Literacies at the University of Luxembourg since 2012. Her research interests include multilingualism, language learning and teaching in formal and non-formal settings, family language policy, literacies, and professionalisation. Since 2012, she has led several national and international research projects on innovative multilingual or digital teaching practices in day-care centres and elementary and secondary schools.

1. ECEC governance in Luxembourg

In Luxembourg, national policies aim to place children’s social and educational rights and needs at the centre, while considering the multilingual and multicultural nature of the Luxembourgish society (MENJE and SNJ 2021; MENJE 2022). The Luxembourgish system of ECEC for children up to the age of 6 comprises **formal** and **non-formal** educational institutions. Formal education – with compulsory schooling at preschool level starting at the age of 4 – is organised within the official school system, while non-formal education occurs in out-of-school educational settings (MENJE and SNJ 2021). This chapter will briefly discuss both sectors.

Since 1963, all municipalities in Luxembourg have been required to provide voluntary early childhood education and care (*jardins d’enfants, Spillschoul*) for children aged 4 and 5 years (MEN 1963). In 1976, preschool education (*éducation préscolaire*) became compulsory for children aged 5, and in 1992 for children from the age of 4. Furthermore, in 1998, the government introduced a year of non-compulsory early education for children aged 3 (*éducation précoce*). One of the aims was to increase opportunities to learn Luxembourgish, especially for children of lower socioeconomic status and with a non-Luxembourgish mother tongue, to ease the transition to compulsory schooling (Honig, Schmitz, and Wiltzius 2015).

The 2009 Schools Act integrated “early education” (*éducation précoce*) and preschool (*éducation préscolaire*) into formal schooling (*école fondamentale, cycle 1*). As a result, all Pre-primary Teachers must follow the national curriculum that specifies competences for pre-primary education with children at the ages of 4 and 5 (MENFP 2009a). Teacher trainees no longer need to complete a specific training to work in pre-primary education, instead, they follow the general teacher training for primary schools.¹ In addition, since then, all municipalities are required to provide *éducation précoce* from 2009/2010 (Kneip 2009, 710; Oberhuemer, Schreyer, and Neuman 2010, 295). The *éducation précoce* has a unique position in Luxembourg’s education system. There are various important aspects to consider: (1) In terms of administration, *éducation précoce* is part of the basic education system (*enseignement fondamental*), and its staff are Primary School Teachers. (2) Early education is offered free of charge. (3) There is no obligation to attend *précoce*, meaning that the first year of basic education in *Cycle 1* is optional. Therefore, *éducation précoce* is a link between school and non-school educational contexts. Indeed, many 3 year-olds in Luxembourg who go to a *crèche* (non-formal education) during one part of the day attend *éducation précoce* during the other part. Thus, the 3 year-olds navigate complex and diverse education and care arrangements that structure families’ everyday lives (Bollig, Honig, and Nienhaus 2016).

In 2013, the administrative and political responsibility for out-of-school and early childhood care facilities (non-formal education) was transferred from the Ministry of Family Affairs (*Ministère de la Famille, de l’Intégration et à la Grande Région, MFI*) to the Ministry of Education, Childhood and Youth (*Ministère de l’Éducation nationale, de l’Enfance et de la Jeunesse, MENJE*). At the same time, new regulations transformed the childcare sector into an independent and uniformly regulated *non-formal education* sector for children and young people to define it separately from the organisation of *formal education* in schools. In this process, the clear distinction between formal and non-formal education gradually replaced the difference between education

¹ Nevertheless, the first cycle of education in elementary education is defined in Art. 1 of the Schools Act as *éducation précoce* and *éducation préscolaire*, i.e., as *early education and pre-school education in school*.

and care. This process had consequences for the educational and social governance of Luxembourg's ECEC provision. Different types of institutional settings were created (*crèche, maison relais pour enfants, foyer de jour, garderie, assistants parentaux*). Distinct regulations apply to each institution, depending on its organisational form: for-profit, non-profit and municipal and those with or without a contractual agreement.

Later, all settings were regrouped under the *Services d'Éducation et d'Accueil pour enfants (SEA)* (Bollig 2018; Bollig, Honig, and Nienhaus 2016). The SEAs are different organisations that children can attend depending on their age and the number of hours they already spend in formal education settings². 3 year-olds, for instance, can attend early education as well as SEA, one institution in the morning and the other in the afternoon. School children may attend a *maison relais* to have lunch or do schoolwork. Being classified as *non-formal education* is not just a case of adjusting terminology but also introducing a new understanding of 'education', which includes early childhood and out-of-school provision (MFI 2018).

The Ministry of Education, Childhood and Youth (*MENJE*) governs each sector with different jurisdictions and responsibilities. The ministry is responsible for policy implementation in the formal education sector and enabling the non-formal sector to reach policy goals. In the latter sector, this is ensured by granting operating licences (*agréments*) and entering into contractual agreements (*conventions*) with private (non-profit and commercial) providers. However, some municipalities assume responsibility for implementation. The proportion of publicly run ECEC settings is relatively tiny compared to the much larger number of private settings, both non-profit and commercial³. The expansion of ECEC for the under 4 year-olds was accompanied by defining the goals of early childhood education in the 'curriculum framework for non-formal education' and by developing corresponding practices across the different care providers.

This report builds on the previous SEEPRO Workforce Report for Luxembourg (Honig and Bock 2017) and was partially rewritten and updated with the latest information on new regulations and data.

2. Who belongs to the early years workforce?

The early years workforce in Luxembourg comprises professionals working in the two sectors of early education and care. The Ministry of National Education, Childhood and Young People (*MENJE*) controls both sectors. There are separate pathways of professionalisation depending on whether personnel qualify for the formal or non-formal education sector.

- (1) Professionals working in **formal education** have undergone training as Primary School Teachers, certified by a university degree at Bachelor's level (French: *Bachelor professionnel*). In

² The term "ECEC settings" in the context of this report refers primarily to the *services d'éducation et d'accueil (SEA)* for children under age 4; they are defined in the so-called SEA Regulation issued in 2013, modified in 2018 (MFI 2018). The term also includes the *éducation précoce* classes, which can be understood as non-compulsory preparatory classes for primary schools).

³ The relationship between the state and private providers of educational and therapeutic support services is regulated by the 1998 ASFT Act (amended in 2011, see Le Gouvernement du Grand-Duché de Luxembourg 1998). The act is the codification of a Luxembourgish variant of the subsidiarity principle in Germany and forms the basis of the legislation and regulations, which propelled the transformation of day care services into a sector of non-formal education.

addition, childhood Educators with a vocational qualification (*éducateur/éducatrice diplômé(e)*) assist teachers in the first non-compulsory stage of formal ECEC.

- (2) The **non-formal education** sector is less unified and regulated than the formal sector and employs a diverse workforce. Some have been trained as Social Workers/Social Pedagogues, graduating with a Bachelor's degree in social and educational sciences (Fr. *Bachelor en sciences sociales et éducatives*); others have undergone vocational training graduating with a state diploma. Depending on the type of qualification, educators can work with specific age groups. They may work in *crèches* (children of ages 0–3)⁴, *garderies* (0–8 year-olds), the new *mini-crèches* (0–12 year-olds), *foyers de jour* and the *maisons relais* (school children of ages 4–12) (Kneip 2009).

Until the founding of the country's first university in 2003, Luxembourgish staff with a university degree were predominantly educated and trained abroad (Germany, France, Belgium, Switzerland), while many were trained in pre-university educational programmes in Luxembourg resembling short-cycle tertiary or applied tertiary education. Therefore, the diversity of qualifications in ECEC settings is particularly pronounced in Luxembourg.

Language requirements and educational criteria further restrict access to the education and care sector. The following chapters provide an overview of the different qualifications required to work in formal and non-formal education and care and show the current demographic composition of the workforce.

2.1 Regular contact staff in ECEC provision

Employment in the **non-formal sector** of ECEC in Luxembourg mainly depends on specific formalised qualifications and language requirements. Since the sector comprises various ECEC provisions, different pathways qualify for employment as an educator. Over the past decades, the non-formal ECEC workforce has changed due to new developments in the professionalisation of educators, increasing demand for early care and education, and changes in the legal situation and formal degree requirements. Today, the early childhood workforce consists of personnel with different levels of qualification across the various types of ECEC institutions, catering to different age groups of children and parental needs.

The **public education** system, with its *éducation précoce* for 3 year-olds, employs Primary School Teachers with university degrees and Educators with vocational degrees. Both work in a team. Primary School Teachers are employed in preschools (*préscolaire*) attended by 4 to 5 year-olds. Staff in the formal education sector are state employees.

Home-based ECEC providers (Luxembourgish: *Dageselteren*) are responsible for up to five children aged 0 to 12 years. Their tasks and responsibilities are regulated by a law passed on November 30th, 2007 (MFI 2007) that introduced rules for their accreditation. However, home-based ECEC providers are not an official part of Luxembourg's public education and care system. Above and beyond the formalised qualifications needed by ECEC personnel in the non-formal education sector and in home-based ECEC provision, language requirements for accreditation usually include sufficient knowledge of at least one of the official languages (Luxembourgish, French, German).

⁴ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to 3** years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Luxembourg, the formats may vary, depending on the kind of setting (non-formal or formal) in focus, but generally they are **0–3** years and **4–5** years.

In the non-formal sector, proficiency in multiple languages is required in publicly funded ECEC institutions because of the plurilingual education programme introduced in 2017. The programme requires educators to develop children’s skills in Luxembourgish or French, familiarise them with French or Luxembourgish (depending on the institution), and value their home languages (Kirsch and Seele 2020). These language requirements and selective admission procedures make it difficult for residents who immigrated to Luxembourg and cross-border workers to work in public ECEC institutions. Nevertheless, given the recognition of various qualifications in Luxembourg, cross-border workers who commute daily from neighbouring countries can work in the commercial sector, where only one of the official languages is required. However, SEAs need to have staff speaking several languages if they offer plurilingual education. Due to the high number of commuters from France, French has become the dominating language in commercial ECEC institutions. Portuguese is highly prevalent in home-based care, especially in regions with a sizeable Lusophone population (Bollig 2018; Kirsch and Aleksić 2021). As a result of language policies, professionalisation and credentialisation, the staff in public institutions and formal education are more homogenous in origin and qualifications than the workforce in the non-formal sector and privately-run ECEC settings. Teachers in the formal sector must be proficient in Luxembourgish, German, and French.

Table 1 provides an overview of the different types of ECEC staff in Luxembourg, their qualifications and possible workplaces. There are three types of staff: Teachers, Social Pedagogues/Social Workers, and Educators. Home-based ECEC providers make up another growing group of child-care workers. Significant differences and inequalities exist in how these staff categories are distributed across the formal and non-formal education sectors and settings. Furthermore, core professionals (i.e. persons with a group or centre responsibility) are classified according to five profiles adapted from previous SEEPRO studies (see Box 1).

Table 1

Luxembourg: ECEC staff in centre-based settings (formal and non-formal education sectors)

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)

⁶ In the non-formal education sector, educators (*éducateur/éducatrice diplômé(e)*) can also be employed as Centre Head, see Article 7 in the 2016 law modifying the 2008 law on young people (MENJE 2016).

⁷ See footnote 6.

- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

Professional profiles of staff and legal regulations: In the *formal education sector*, the professional profiles of teachers and educators are regulated by law. The core professional with class responsibility is a (Pre-primary and) Primary School Teacher. Educators (*éducateurs/éducatrices*) are employed as support staff, i.e., as teacher assistants (MENFP 2009c, Art. 1). Only teachers with a Bachelor’s degree may be employed as core professionals. The teachers in *éducation précoce* classes have been trained to teach young children, although they are not specialised in working with 3 year-olds. Supporting staff have obtained vocational and upper-secondary qualifications in social pedagogy. One Primary School Teacher and one Educator are assigned to each *éducation précoce* class.

In the *non-formal education sector*, staffing is regulated by a quota system which defines which category of staff may work and in which function for how many childcare hours. The qualifications required for granting an operating licence (*agrément*) are laid out in Article 7 of the Regulations on the Restructuring of the Educational and Social Services (*SEA-Règlement*⁸, MFI 2013, 2018). Staff work according to the ‘curriculum framework for non-formal education in childhood and youth’ (MENJE and SNJ 2021), which follows a process-oriented rather than an outcome-oriented approach. A wide variety of staff is employed in these settings. Social Pedagogues and Social Workers (mainly lead staff), Educators and Care Workers may also work as core pedagogues or support staff. In these mixed qualification profiles and levels, the proportion of staff with a Bachelor’s degree is smaller than in the formal education sector.

The SEA-regulations also define the tasks assigned to staff. The general staff mainly does necessary coordinating work regarding day-to-day activities. In addition, the staff are responsible for the direct pedagogical work with the children, preparing educational activities, participating in staff meetings, and communicating with the parents and teaching staff in schools. Participation in professional development activities is also one of their duties (*SEA-Règlement*; MFI 2018, Art. 11).

2.2 Centre leader

Unlike all other staff types, the centre heads do not typically have regular contact with the children. In the non-formal sector, the head must have completed initial professional studies in the psycho-social or socio-educational field (*SEA-Règlement*; MFI 2018, Art. 8).

To be promoted to lead a non-formal ECEC institution, sufficient prior work experience in ECEC provision is a crucial requirement. In recent years, extended studies in education and social services at the Master’s level have become essential to take on a leading role in an ECEC institution. The head’s tasks are regulated by the *SEA-Règlement* and include the organisational development of the centre, compiling a dedicated educational programme that is applied by the centre’s personnel and supervising the staff in its implementation.

⁸ The SEA (*services d’éducation et d’accueil pour enfants*) regulations are an extension of the so-called ASFT law (MFI 2011) passed in 1998. This legislation regulates the relation between the State and private providers of human services in Luxembourg and defines minimum standards for social and therapeutic work.

2.3 Centre-based posts of responsibility

Pedagogical and administrative responsibility at ECEC institutions is distributed among the centre staff depending on their formal qualifications. In SEA care facilities, 60% of the total hours of childcare must be carried out by staff with a recognised professional qualification in a psycho-social, educational, or socio-pedagogic profession awarded by a state-recognised vocational school or a university. Up to 40% of the total hours provided at a childcare facility may be carried out by staff with music, arts, or physical education qualifications. Paediatric nurses may work in childcare, which is reminiscent of the French childcare system rooted in healthcare. Up to 20% of the total childcare hours may be provided by care (or literally: life) assistants with a *Diplôme d'aptitude professionnelle (auxiliaire de vie)* or who have obtained a certificate as an *aide éducatrice* (educational helper) after attending 100 hours of training. Their role in ECEC centres is complementary, and they may work in *crèches* with children from 0 to 3 years old and in *maisons relais* for children aged 4–12.

In addition to these qualification-oriented responsibilities, each centre designates a specialist for multilingual education (*référent(e)s pédagogiques pour l'éducation plurilingue*) and a specialist for inclusive education (*référent(e)s pédagogiques "inclusion"*). Their task is to address pedagogical issues in their area of specialisation and to coordinate the implementation of multilingual and inclusive education, respectively.

2.4 Co-ordinating and supervisory staff

Generally, the main daily coordinating work and supervision is done by the head of each ECEC institution. Pedagogical evaluation, through which *process and orientation quality* are assessed, was introduced by the Youth Act of 2016 (MENJE 2016).

ECEC providers are required to develop a pedagogical concept showing how the centre intends to address the curricular goals laid out in the national framework. The concept needs to be updated every three years and is assessed by the *agents régionaux* appointed by the Ministry of Education, Childhood and Youth. The *agents régionaux* are experts who evaluate the institutional concepts and check whether they comply with the national framework.

To guarantee the quality of work, the educational staff must participate in professional development offers aligned with the national educational framework. Continued professionalisation is monitored by a commission that coordinates staff professional development and approves educational measures. On top of that, staff need to engage in permanent self-evaluation.

2.5 Specialist support staff

There are no specialist support staff, such as therapists and special needs staff working in ECEC settings aside from the pedagogical specialists for multilingual and inclusive education selected among the regular staff. Currently, no data are available on how many children receive therapeutic support based on recommendations made by the regular ECEC staff.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

The composition of Luxembourg's ECEC workforce is becoming more and more diverse compared to the predominantly female staff of Luxembourgish origin in the past. In 2018, new regulations relaxed the entry requirements for educators and teachers interested in working in this

sector (European Commission 2019). Changes in the recruitment process had become necessary to combat the staff shortage in ECEC. The education reform addressed the need to increase the ECEC workforce following heavy investments in the ECEC sectors over the past decade, which roughly tripled the number of childcare places. Since 2010, the government has increased the budget for SEA facilities by about five times (Hekel and Simoes Loureiro 2021; MENJE 2020). In addition, during the 2010s the number of home-based childcare providers (*assistants parentaux*/*“Dageselteren”*) almost doubled (Neumann 2018).

The data on the qualifications of the workforce employed in both sectors of Luxembourg’s ECEC system are incomplete (OECD 2022). The most current data on the workforce’s sociodemographic composition are still based on an online survey by the Ministry of Education, Childhood and Youth (MENJE) in 2016. Before 2016, the National Youth Service (SNJ) collected survey data in 2013 (SNJ 2020). There are no continuing data collections regarding the personnel employed in the non-formal sector.

A considerable proportion of staff obtained their qualifications abroad. The required qualifications range from ISCED level 3 (Care Assistant) to level 7 (Master’s degree), where staff with the lowest qualification typically work with the youngest children. The SNJ data show that in 2013 a total of 3,403 people were employed in ECEC facilities, of which 92% were women and 8% men. Other researchers report a considerably higher number of 13.5% male staff (Krabel et al. 2018). The most recent study that included information on the childcare staff’s gender composition is the PerSEALux project (Hadjar et al. 2021). 522 people fully completed the study’s questionnaire. About 91% of these people are female, which aligns almost exactly with the 2013 government data and reveals little change in the gender composition.

Furthermore, the 2013 data show the age composition: 14% are younger than 25 years old, and another 23% are between 25 and 30, indicating a relatively young workforce. Only 30 people were older than 60.

According to the 2016 survey that already informed the previous SEEPRO report, the ECEC personnel is overall quite heterogeneous in terms of language: About 62% are Luxembourgish, 10% Portuguese, 9% French, 8% Belgian, 5% German and 5% of different origin. French is the most widespread language, with 91% of the staff being proficient. Luxembourgish is spoken by 77% of staff and German is known by 73%. About 16% of the staff speak Portuguese as well. However, these figures do not draw on a representative survey and differ by the type of ECEC centre, whether public or commercial. As one would expect, public institutions have personnel which is more proficient in all three of the country’s official languages. Meanwhile, the private centres employ a relatively large proportion of French speakers.

In relation to nationality, the PerSEALux survey reveals that among the male ECEC staff, Germany and Belgium are (in relative terms) the largest groups of origin aside from the almost 80% men from Luxembourg. About 60% of the female staff are native Luxembourgers. The remaining women are from France, Belgium, and Germany, with around 10% each. The small but significant proportion of Portuguese staff is entirely female.

The relatively low response rates to the voluntary surveys limits valid conclusions and, therefore, the surveys can only give a hint of the current workforce composition in the Luxembourgish ECEC sector. Again, the numbers on qualifications stated in this report are not based on representative data collections but on a relatively small online sample.

The PerSEALux survey also asked staff about their qualifications but included all staff from *crèches* to the *maisons relais* and differentiated between men and women. Overall, 10.4% of male staff and 14.8% of the female workforce report the lowest qualification (*aide éducateur/éducatrice*). The *auxiliaires de vie* make up 5.3% of the women and 2.1% of the men in the sample. The *éducateurs diplômés* comprise 43.8% of the male and 39.9% of the female ECEC

staff, while 31.3% of men are *éducateurs diplômés* and 27.8% of women. In addition, men have more often graduated with a Bachelor's degree (31.3%) than women (26.8%). Given that lower qualifications are needed to work in a *crèche*, it is not surprising that 49.2% of the women in the sample work in a *crèche* compared to 22.9% of the men. However, men frequently work at the *maisons relais* (70.8% of men, 44.1% of women). No differences are reported for the *foyers de jour* and *foyers scolaires*.

The following tables provide more details about the workforce's level of education in both the formal (Table 2) and the non-formal ECEC sector (Table 3).

Formal early childhood education sector

The table shows that a high proportion of staff have obtained a degree requiring at least three years of training. However, graduates with a social sciences and education degree (*Bachelor en sciences sociales et éducatives*) do not generally work in the formal education sector. Overall, the proportion of male staff is low: well over 90% of staff in *éducation précoce* classes are female.

Table 2

Luxembourg: Structural composition of the workforce in the formal ECEC sector (*éducation précoce*), 2016 (latest available data)

Staff categories	Proportion, in %
Staff with specialist higher education degree	72.8 → 71.2% BA <i>sciences de l'éducation</i> → 1.6% BA <i>sciences sociales et éducatives</i>
Staff with generalist vocational qualification, ISCED level 4 (<i>éducateur/éducatrice diplômé(e)</i>)	27.1
Staff with non-specialist qualification	n/a
Staff with no formal IPE	n/a
Specialist support staff (e.g. Speech Therapists)	No data available
Male staff	7.1
Staff with residence outside Luxembourg (cross-border workers) ⁹	1.4

Non-formal education sector

Table 3 shows the summarised data for the communal, private non-profit and private for-profit settings in the non-formal education sector.

Table 3

Luxembourg: Structural composition of workforce in the non-formal education sector (*services d'éducation et d'accueil pour enfants*), 2016 (latest available data)

Staff categories	Year/Proportion, in %
Staff with a relevant higher education degree	23 → 16% lower tertiary degree → 7% university degree

⁹ For the formal sector, there are no data on immigrant background. Based on the online survey in the non-formal sector, it refers to place of residence, nationality, and language(s).

Staff categories	Year/Proportion, in %
Staff with relevant vocational qualifications (post-secondary)	37
Staff with relevant vocational qualifications (upper secondary)	See footnote ¹⁰
Staff with other non-specialised qualification (so-called “low skilled”)	26 → 17% <i>aide éducatrice</i> → 9% <i>auxiliaire de vie CAP/DATP</i>
Staff with no formal IPE ¹¹	4
Specialist support staff	No data available
Male staff	7
Staff with an immigrant background (non-Luxembourgish nationality), non-Luxembourgish residency and first language:	
<i>nationality:</i>	LU 62 % → other: 37% (BE 8%, DE 5%, FR 9%, PT 10%, others 5%)
<i>place of residence:</i>	LU 79% → outside Luxembourg: 20% (BE 7%, DE 5%, FR 8%)
<i>language:</i>	LU 77% FR 91% DE 73% PT 16%

Source: [MENJE and SEA 2017] Ministry of Education, Childhood and Youth and *Services d'éducation et d'accueil*. February 2017. Online survey in early childhood settings (available upon request).

In non-formal settings, the proportion of female staff is similarly high to that in the formal education sector – over 90% – but this is the only significant similarity between the two early education sectors.

The figures suggest that the proportion of staff with a higher education degree in the non-formal early childhood sector is not nearly as high as in the formal sector (*éducation précoce*). Staff with a post-secondary vocational qualification (37%) comprise the largest group; the proportion of lower qualified staff is comparable to that of staff with a higher education degree. Around 60% of staff have Luxembourgish citizenship; accordingly, the proportion of French- and Portuguese-speaking staff is high.

The summarised figures demonstrate some of the critical *differences between the private non-profit and the private for-profit* sectors. The proportion of staff with Luxembourgish nationality and place of residence is higher in the state-subsidised settings than in the commercial care centres. Thus, the three official languages of Luxembourg (with a dominant role of Luxembourgish at this early stage) are more strongly represented (85%) in state-subsidised centres. In contrast, the proportion of French- and Portuguese-speaking staff is higher in the private for-profit centres, particularly in the southern part of the country, which shares borders with Belgium and France. French is the primary language in these settings. Around 50% of staff in private for-profit institutions speak Luxembourgish and German. Portuguese is the native language of 21% of

¹⁰ In Luxembourg, legislation does not permit the employment of staff with a non-relevant upper secondary vocational qualification in the non-formal ECEC sector for under 4 year-olds. In the online survey, several settings indicate that they do in fact employ staff with an upper secondary vocational qualification; these persons are often staff from another country. No exact figures are available; it could well be that these persons have special competences that were not catered for in the survey questionnaire.

¹¹ Luxembourg legislation does not permit the employment of unqualified staff in ECEC settings. The proportion shown in the table presumably refers to staff who have qualifications acquired in another country and which are difficult to categorise within the classifications provided by the Luxembourg qualifications grid.

staff, 8% more than in the state-subsidised settings in the non-formal sector. A high proportion have the *diplôme d'aptitude professionnelle* (DAP/DAPT) qualification. They are low-paid workers who often speak several languages and thus fulfil two necessary conditions for the commercial providers: profitability and staff coverage.

4. Initial professional education (IPE)

For many years, the initial professional training for practitioners in early childhood education in Luxembourg was influenced by the absence of a university in the country. Before the foundation of the University of Luxembourg in 2003, teachers and educators in Luxembourg used to have only post-secondary degrees. Since 2003, the University of Luxembourg has offered two practice-oriented professional Bachelor programmes for future teachers and educators: the *Bachelor en sciences de l'éducation* (BScE) for future teachers in primary schools and the *Bachelor en sciences sociales et éducatives* (BSSE) for prospective educators and social workers. Not all teachers working in the state education system are trained in the BScE and only around 60% of graduates of the BSSE make up the workforce in the non-formal early education sector, along with employees of other lower or less relevant qualifications.

The following chapters will present the initial professional education routes for Teachers, Educators, and Social Workers in Luxembourg. The workforce in the non-formal ECEC sector is much more diverse, as many Luxembourgish practitioners choose to obtain their initial professional education abroad. In addition, many cross-border commuters from Germany, France, and Belgium work in Luxembourg's ECEC sector.

4.1 Initial qualifying routes (higher education and vocational)

Since 2005, the initial professional education for Pre-primary and Primary School Teachers has remained the same. Graduates of the Bachelor's in educational sciences (*Bachelor en sciences de l'éducation, BScE*) are not only qualified to teach in primary schools. They can also choose to work with a qualified educator in an "early education" class (*éducation précoce*), the non-compulsory year of pre-primary education. Until 2020, the entrance exam for the BScE included language tests in the official languages of the country: Luxembourgish, French and German. The study programme aims to foster pedagogical and didactical skills, focusing on practice and developing a reflective stance. In addition, it delivers a competence-oriented and child-centred teaching approach. The BScE does not specialise graduates for working in early childhood education. In 2021, the university admitted around 100 students to the programme, which is expected to rise.

Table 4

Luxembourg: School Teacher (Pre-primary, primary and lower secondary)

<p>Title in French: <i>Bachelor en sciences de l'éducation (professionnel)</i> Profile: Pre-primary and Primary School Teacher</p>
<p>Admission requirements: General university entrance qualification (<i>diplôme de fin d'études secondaires</i>) or a diploma recognised as equivalent; entrance exam (until 2020); proficiency in the three languages of Luxembourg</p>
<p>Professional studies: 4 years / 8 semesters, including a mandatory semester abroad</p>

Title in French: <i>Bachelor en sciences de l'éducation (professionnel)</i> Profile: Pre-primary and Primary School Teacher
Award: Bachelor in educational sciences (<i>Bachelor en sciences de l'éducation – professionnel</i>) ECTS credits: 240 EQF level: 6 ISCED 2011: 655 Main workplaces in ECEC: early education in the formal education sector, <i>éducation précoce</i> (children aged 3 to 4) and preschool (children aged 4 and 5).

The Bachelor's degree in social and educational sciences (*Bachelor en sciences sociales et éducatives, BSSE*) provides initial training for education and social work professionals. Different subjects, including early childhood pedagogy, can be chosen as a focus during the studies. Contrary to the BScE, students' language competencies are not tested before admission to the programme or play less of a role during the studies. In recent years, the BSSE has contributed to the growth of educators with an academic degree in the ECEC sector in Luxembourg.

Table 5

Luxembourg: Social Pedagogue / Social Worker (*Bachelor en Sciences sociales et éducatives – professionnel*)

Title in French: <i>Éducateur gradué / éducatrice graduée</i> Profile: Social and Childhood Pedagogy Professional
Admission requirements: General university entrance qualification (<i>Diplôme de fin d'études secondaires classiques</i> or <i>secondaires générales</i>), or a certificate recognised as equivalent; good command of the course languages (minimum B2 level for French and German and minimum B1 for English) Professional studies: 3 years / 6 semesters, including a mandatory semester abroad Award: Bachelor in Social and Education Sciences, <i>Bachelor en sciences sociales et éducatives – professionnel</i> ECTS credits: 180 EQF level: 6 ISCED 2011: 655 Main workplaces in ECEC: early education in the formal education sector, <i>éducation précoce</i> (children aged 3 to 4); diverse settings in the non-formal education sector, e.g. <i>crèches</i> or <i>maisons relais</i> with the possibility of assuming leading positions in child welfare settings and services

Initial professional studies for the *éducateur / éducatrice diplômé(e)* are offered at the general (technical) secondary school for educational and social occupations (*Lycée technique pour professions éducatives et sociales, LTPES*). Since 1990, this school has also provided specialised training at the tertiary vocational level. Students earn the general university entrance qualification (*diplôme de fin d'études secondaires techniques*) or are awarded a three-year vocational qualification as a state-recognised educator. The diploma opens the way to a broad spectrum of educational and social occupations and provides the entry requirement for university studies.

Table 6

Luxembourg: Educator

Title in French: <i>Éducateur / éducatrice diplômé(e)</i> Profile: Social and Childhood Pedagogy Professional
Admission requirements: 11 years of general schooling, including successful completion of 5 years of upper secondary classical education (<i>éducation secondaire classique</i>) or secondary general education (<i>éducation secondaire général – social or paramedical section</i>), or equivalent

Title in French: <i>Éducateur / éducatrice diplômé(e)</i> Profile: Social and Childhood Pedagogy Professional
Professional studies: 3 years (or 6 years part-time) at a tertiary-level vocational college for the education and social occupations (<i>Lycée technique pour professions éducatives et sociales</i>) Award: State-recognised Educator, <i>diplôme d'état d'éducateur / éducatrice</i> ECTS credits: n/a EQF level: 4 ISCED 2011: 454 Main workplaces in ECEC: Generalist qualification for social pedagogical work with all age groups in various settings and services, e.g. early education in the formal education sector, <i>éducation précoce</i> (children aged 3 to 4); non-formal education sector, <i>services d'éducation et accueil</i> (0–12 years), e.g. <i>crèches</i> (0–4 years); child and youth welfare settings and services (0–27 years).

The vocational course for prospective Care Workers/Care Assistants (*auxiliaire de vie*) is a three-year long programme, combining one year of full-time school with two years of alternating attendance at school and work in a care service. The diploma for successful programme completion is a 'Diploma of professional competence' (*diplôme d'aptitude professionnelle*, DAP). *Auxiliaires de vie* are part of the low-qualified staff who, according to law, may make up 20% of the staff capacity in non-formal education and care settings. The diploma holders also work in other social care services, such as those providing care for the elderly or persons with disabilities.

Table 7

Luxembourg: Care Assistant/Care Worker

Title in French: <i>Auxiliaire de vie</i>
Admission requirements: Successful completion of 9 years of compulsory schooling Professional studies: 3 years of vocational school, including one year of full-time attendance and two years of alternating weeks of school and internship Award: Upper secondary vocational diploma <i>Diplôme d'aptitude professionnelle : auxiliaire de vie</i> ECTS credits: n/a EQF level: 3 ISCED 2011: 353 Main workplaces in ECEC: Assistance in diverse socio-pedagogical and social care services, e.g. in the non-formal education sector, <i>service d'éducation et accueil</i> (0–12 years); children's centres, <i>maison relais pour enfants</i> (4–12 years); child and youth welfare settings and services (0–27 years)

4.2 Competences, curricula, and pedagogic-didactic approaches in IPE programmes

School Teacher (Pre-primary, primary and lower secondary) *Bachelor en sciences de l'éducation – professionnel*

The study programme of the Bachelor's degree in education (*Bachelor en sciences de l'éducation professionnel*, BScE) at the University of Luxembourg includes a mandatory semester abroad and an extensive time of internships in all cycles of basic education (*école fondamentale*). Following the Coronavirus pandemic in 2020, the entrance exam for potential candidates has been replaced by an online admission procedure. Therefore, since 2021, applicants must write a motivation letter, complete an online questionnaire about, among others, their personality traits, and submit two letters.

Competence requirements: The BScE prepares teachers to work with children from a range of age groups: children aged 3–12 years attending the four levels of the *école fondamentale*, students aged 13–15 years enrolled in the lower level of secondary education/ *régime préparatoire*, and children of special needs of all ages in the *éducation différenciée*. The BScE students will develop the pedagogical and didactic skills necessary to recognise and meet the multiple challenges of their future work environment in a highly multilingual and multicultural context.

Curricular areas: The study programme of the BScE has three axes (pedagogy, research, and professionalization) and foregrounds the pedagogical competence of the prospective teachers. Students develop knowledge of teaching and learning theories and carry out projects in various subjects (e.g. language learning, mathematics, science, arts and aesthetics, sports, and health). They also do internships each semester and can spend one semester at a university abroad, enhancing mobility prospects. While students follow introductory courses and can spend a semester abroad in the first two years of their studies, they have a mix of mandatory and optional courses in the remaining two years. In the last year, they write their Bachelor's thesis. The written and oral evaluations of the student's achievements are based on reports, presentations, essays, and pedagogical projects.

Pedagogic-didactical approaches: A close link between theory and practice, active participation, problem- and project-based learning and reflexivity characterise the BScE. Students are encouraged to implement individual and collective projects during their courses and internships in schools or out-of-school settings. During the four years, the students collaborate with teachers, school committees, administrative staff, and parents. Throughout the programme, they have support from a personal tutor and reflect on their development in a personal portfolio.

Social Pedagogue / Social Worker (*Bachelor en sciences sociales et éducatives – professionnel*)

The initial professional education for the degree in social and educational sciences (*Bachelor en sciences sociales et éducatives – professionnel, BSSE*) is wide-ranging, combining elements of social pedagogy and social work. Students can choose between optional courses and two specialisations and will be awarded either the degree of a pedagogue or a social worker (*assistant/e social/e*). Graduates of the BSSE may work in the government sector, in public institutions or in private enterprises. In the non-formal education sector, graduates can work as directors or core pedagogues. Finally, students can access subsequent studies in full-time or part-time Master's programmes.

Competences: The study programme aims to help students develop essential theoretical, practical, and didactical competencies necessary for social pedagogy and social work. Students are to become generalist practitioners; they develop practical skills and theoretical knowledge, learn to plan and implement prevention, advisory, educational or care programmes, and design projects in education and social contexts.

Curricular areas: The programme looks at social issues on different levels, combining people's perspectives as individuals, members of social groups and participants in society. Students learn about historical context, laws and regulations, theoretical concepts, and ethical considerations of social work. Thematic areas include inclusion, poverty, violence, diversity, and social inequalities. Course topics cover all life phases, from early childhood to old age.

Pedagogic-didactical approaches: Inter-disciplinarity through a combination of different research disciplines and promotion of self-organisation are fundamental didactic principles of the study programme. It, therefore, offers a broad spectrum of topics and subjects for specialisation.

Internships in potential workplaces are essential in moulding a close relationship between theory and practice. At the same time, the study programme in social work aims to present itself as a research-oriented discipline and introduces students to the corresponding research methods.

Educator (*Éducateur / éducatrice diplômé(e)*)

The three-year initial professional education course to become a state-recognised *educator* (*éducateur/éducatrice diplômé(e)*) is delivered in secondary general education, the vocational-technical secondary school for educational and social professions (*Lycée technique pour professions éducatives et sociales, LTPES*). During the first two years, the curriculum offers introductory courses in psychology, education, and the social sciences. The third year focuses on the professional preparation of Educators with social pedagogy, childhood, and special needs profile. Graduates from the LTPES can choose to continue their studies at the university level (e.g. BSSE).

Competences: Initial professional studies aim to qualify for work in a wide range of occupational fields in social education. Certificate holders gain competencies for working with young children and school children. With these skills, they work in early intervention, residential care settings, youth clubs, and special education settings. In addition, they are qualified to work with and support children of all ages, persons with special needs, the elderly, and persons with different psychological or social issues.

Curricular areas: The curriculum is organised according to three overarching principles: providing a general theoretical knowledge base, a balanced field-based approach for acquiring practically relevant competencies in everyday learning situations and contributing to students' personal growth (LTPES 2022). In the final year, students can specialise in three areas: social and educational pedagogy, sports, and cultural activities; educational approaches and developmental processes; and organisation and coordination within educational and social teams.

Pedagogical-didactical approaches: The initial professional studies include basic and optional courses, seminars, and practical time in social and cultural institutions in Luxembourg or abroad. The main aim is to link general theoretical learning at the LTPES with practical experiences from occupation fields. Staff members in the field setting and a tutor from the LTPES guide the students.

Care Assistant / Care Worker (*Auxiliaire de vie*)

Care Assistants or Care Workers (*auxiliaires de vie*) are part of multidisciplinary teams in health or socio-educational settings. They are mainly concerned with accompanying, guiding, and assisting persons of all ages in supporting their physical and psychological well-being (Berufer.anelo.lu 2022a, b). The three-year initial professional training can be compared with an apprenticeship and is completed by a secondary vocational qualification (*Diplôme d'aptitude professionnelle, DAP*).

Competences: Care assistants are qualified to work with people of all ages in different socio-educational settings. They can be employed in non-formal early education and care institutions (*crèches, garderies*), socio-pedagogical services (*centres d'accueil, foyers de jour*), care facilities for the elderly and in the home assistance sector (*aide à domicile*).

Curricular areas: The course transmits basic notions of assistance and care. Core content includes practical aspects of personal care and hygiene, preparing meals, household work, and accompanying persons who need appointments or during leisure-time activities.

Pedagogical-didactical approaches: The training focuses mainly on practical learning in work settings. During the first year, students complete the school-based part in one of five lycées in

Luxembourg which offer the training. The remainder of the course in the second and third years takes place in socio-educational settings.

4.3 Alternative entry and qualification routes, system permeability

Primary School Teachers, as a prominent part of the workforce in pre-primary education in Luxembourg, can also study for their degrees in Belgium or Switzerland. A reform of educational studies in Belgium is being undertaken to enhance the profession's status and improve the initial professional education. It includes an emphasis on language competence in French and foresees a four-year-long curriculum with the possibility of extending the studies through a Master's degree. Contrary to the studies in Luxembourg (BScE), the Belgian Bachelor's study programme in educational sciences separates pre-primary and primary school teachers' qualifications. In Switzerland, the initial studies do not include a specialisation in early childhood education.

To teach in Luxembourg, all prospective teachers, regardless of the country of study, must pass the state eligibility examination to be employed in the public elementary school system (*école fondamentale*), including the early education classes (*éducation précoce*). Candidates who do not pass the exam may be employed as contract teachers (*chargés*) and are paid a lower salary. Recently, it has become possible for some people with specific higher education degrees to complete a four-week internship and become substitute teachers in primary school. Substitute teachers are employed ad hoc (e.g. if a teacher is on sick leave) or in cases of staff shortages.

Since the academic year 2021/22, a governmental pilot project has tried to counteract the staff shortage of educators by speeding up qualifications and access routes into employment. The highly debated project allows students who graduated from a social sciences section of secondary school (*section sciences sociales, SO*) to immediately access the final year of tertiary-vocational studies at the LTPES. Therefore, students from this section can now become state-recognised Educators after one year of training instead of three.

The most common way of accessing employment in social pedagogy or social work in Luxembourg is by acquiring an equivalent degree in another country. Many Luxembourgish students earn a degree in social pedagogy in one of the three neighbouring countries and return to work in Luxembourg. In addition, many cross-border commuters from Germany, France, or Belgium work in the non-formal education sector of ECEC. Graduates with degrees from universities or other higher education institutions from countries other than Luxembourg may apply for recognition of their diplomas (*Validation des acquis*). This includes officially recognising relevant previous work experience of three or more years. However, many commercial early education and care providers have difficulties recruiting Luxembourgish staff, contrary to the public institutions. Therefore, many staff in the non-formal education sector have foreign qualifications and use French as their primary language in everyday communications. Therefore, many private ECE facilities are francophone and have staff with very different qualifications and levels of experience.

Another possibility to enter the socio-educational work field is to attend the national school for adult education (*École nationale des adultes, ENAD*). This institution offers a part-time course of studies for prospective Educators (*éducateur / éducatrice en alternance*). The ENAD is aimed at young adults aged over 21 years who are already working in the socio-educational sector but have not completed secondary school and therefore do not have a vocational qualification or access to professional development courses. The courses combine principles of school and vocational training. Students can finish their secondary education in two years (*Diplôme de fin d'études secondaires*) or obtain a degree as a state-recognised Educator (*Diplôme d'éducateur / éducatrice*) in one year (ENAD 2022).

It is more likely for Educators in the non-formal education sector to be employed through an alternative entry or qualification route than for teachers or educators in the formal education sector. In addition to the options mentioned above, the legislation allows 40% of staff in a non-formal ECEC centre to have a professional qualification in the arts, music, or sports. Half of this group may comprise low-qualified staff (see *Chapter 2.1*). After a 100-hour professional development course, these persons without a relevant basic qualification in a social or educational area can enter employment in the non-formal sector.

Finally, as part of the non-formal ECEC sector, adults with socio-educational or healthcare training or initial studies in related fields can offer childcare services as self-employed home-based providers (*assistants parentaux*). To obtain the necessary accreditation, applicants must speak at least one of the three official languages, French, German, or Luxembourgish and have completed a pre-training course offered by the Ministry of Education, Children and Youth. The *assistants parentaux* can offer childcare services in their own homes for up to five children, from birth to 12 years old (no more than two children may be under two years old). In addition to regular training and supervision sessions (at least 20 hours per year), the *assistants parentaux* must submit a development plan (*projet d'établissement*) describing their offer and the pedagogical concept of their childcare. In 2021, there were approximately 430 accredited *agents parentaux* in Luxembourg (Lifelong-learning.lu 2022).

5. Guided workplace experience (practicum) in the IPE of core professionals

Guided workplace experience is an essential component of all the initial professional education for practitioners in ECEC in Luxembourg. While the initial professionalisation of the Care Assistant (*auxiliaire de vie*) is entirely based on workplace-based learning, study programmes of the University of Luxembourg or other training institutions offer alternation between theoretical studies and practical learning experience (internship). Graduates should experience their future work environments over an extended period, focusing on becoming familiar with the different types of institutions and potential workplaces. Through their workplace experience, students are encouraged to reflect and evaluate their practices and determine their personal and professional development aims. Tutors from the education/training or study institution collaborate with practitioners from the respective workplaces to mentor and support the students in their field studies. Students are generally free to choose from possible workplaces in and around Luxembourg for their internships.

As described above, early childhood education is only one of many elements for most initial study programmes for potential ECEC employees. Students are therefore not obliged to spend their workplace-based learning time in an ECEC institution. They might choose to do this in other socio-educational settings, for example, in working with older children, disabled people, or senior citizens. Practical experience and reflection of the framework for non-formal early childhood education are therefore not mandatory for the graduates and potential ECEC employees. This possible shortcoming of initial professional education needs to be compensated for by professional development after entering the workforce.

The following describes the workplace-based learning arrangements for the three study programmes offered by the University of Luxembourg and the LTPES.

School Teacher (Pre-primary, primary and lower secondary) (*Bachelor en sciences de l'éducation – professionnel*)

The modalities of guided workplace-based learning in the BScE were reformed in the academic year 2021–2022. Throughout their studies, students of the BScE have seven periods of teaching practice in schools (internships), one per semester except during the semester abroad. Students must do an internship in each cycle of basic education (cycle 1, cycle 2, cycle 3 and cycle 4). From the third year on, students can choose to continue working in primary school classes during their internships or gain practical experience in other educational domains and potential workplaces. This includes classes of secondary education that prepare students for vocational training (*régime préparatoire*), facilities for children with special needs (*éducation différenciée*), and public international schools. During the first two years of their studies, students complete three internships, each for three weeks (accredited with 5 ECTS). In the third year of studies, the internships last for four weeks (accredited with 7 ECTS), and in the final year of studies, they last for five weeks (accredited with 10 ECTS). Before each internship, the students are expected to observe the school environment for at least three days to familiarise themselves with the teachers, children, and the resources to adapt their practical activities to the context. During the internships, students plan, organise and carry out school lessons and activities in all subjects.

Furthermore, they write weekly self-reflections and participate in exchanges with professors, tutors, and other students to connect their practical experiences with pedagogical theory. Students experience working in different school settings throughout their internships and are accompanied by different mentors. During each of the internships, they are accompanied by a teacher (*formateur/-trice de terrain*) and a tutor from the university. Their role is to introduce the student to the work environment and explain pedagogical concepts and practices. Furthermore, the *formateur/-trice* supports the student in planning and organising activities and gives constructive feedback.

Regarding workplace-based learning in an ECE setting, students of the BScE can therefore conduct at least one internship in cycle 1 of basic education. This comprises the *classe de précoce*, the first year of formal elementary education for children of 3 to 4 years.

Social Pedagogue / Social Worker (*Bachelor en sciences sociales et éducatives – professionnel*)

Students of the BSSE complete two internships during their studies, one in the third and one in the sixth semester. During the workplace-based learning phases, students are mentored by qualified and experienced practitioners from their respective fields and academic representatives from the study programme.

The internships in the third semester consist of around 220 hours of work, of which 125 are spent in a potential work environment, and the rest consist of courses at the university. The students choose the internship place and actively participate in all aspects of daily work life, including team meetings, planning and organisation of pedagogical activities. In addition, students write a short report about their work-based learning experiences. The aim of the first internship is to get to know different areas of work, its organisational and historical development, and field-specific practices and concepts. The internship is evaluated through a subsequent oral debriefing.

Over the sixth semester, the students do a more extended internship, consisting of around 450 hours of practical work in the field and 50 hours in courses at the university (in total, accredited with 18 ECTS). Students choose and contact the workplace for this more extended internship,

depending on their potential work aspirations. Like the internship in the third semester, students prepare, carry out and reflect on their workplace-based learning. The focus lies on methodological and ethical reflections and developing a professional attitude. Students are expected to analyse their practices critically and develop professional relationships with other actors in the field. The evaluation of the second internship is based on an extensive written report.

Educator (*Éducateur/éducatrice diplômé(e)*)

Future state-recognised Educators must do four internships each year of their four-year-long initial professional education. The internships take place in different pedagogical, social, or cultural institutions and aim to prepare the applicants for their diverse potential work environments.

The first internship serves as a professional orientation and has a duration of nine weeks (34 hours per week). The students can expand and deepen their practical knowledge during the second internship of six weeks (34 hours per week). The third internship of ten weeks (34 hours per week) is a completion of the students' practical skills and preparation for entering the job market. The fourth internship in the final year of the IPE to become a state-recognised Educator is part of the entry exam to the profession, which is regulated by law. The school (LTPES) and the facility of the trainee's internship sign an agreement (*convention*). They determine the work domains of the internship, its organisation and the tasks and responsibilities of the trainee. Facilities that agree to offer internships to potential educators receive a monthly indemnity of €180.

The aim of the workplace-based learning experience is for students to acquire transversal skills and to be able to apply the knowledge they develop during their theoretical studies in daily work-practice.

A teacher from the school (LTPES) and a tutor working in the internship facility support and mentor the trainee during workplace-based learning. The evaluation of the internships is based on a reflective paper.

6. Continuing professional development (CPD) of ECEC staff

Continuing professional development (CPD) is included in the relevant legislation and regulations for the formal and non-formal education sectors as a statutory duty.

Formal sector

In the formal sector, Primary School Teachers who work in the *éducation précoce* classes are required to attend eight hours of CPD annually. The wide range of courses are conceptualised and planned by the *Institut de Formation de l'Éducation Nationale* (IFEN) with the participation of schools and according to staff needs (INFPC 2022). Educators working in the *éducation précoce* must attend 40 hours of CPD each year (MENFP 2009b, Art. 4; MENFP 2009c, Art. 4).

Non-formal sector

In the non-formal sector, CPD is coordinated at the national level by the *Service National de la Jeunesse* (SNJ)¹², the tasks of which are regulated by the Young People's Act (*Loi modifiée du 4*

¹² SNJ hosts the internet home page www.enfancejeunesse.lu (*Enfance Jeunesse* 2017).

juillet 2008 sur la Jeunesse, Art. 7; Loi du 24 avril 2016 portant modification de la loi modifiée du 4 juillet 2008, Art. 5) (see MENJE 2016). The SNJ is a public service developed in the context of policies for young people.

Some of its assignments are to ensure the pedagogical quality in centre-based and home-based childcare settings, to support the continuing professional development of staff in institutions for children and young people, and to develop appropriate pedagogical material to work with children (*Enfance Jeunesse* 2017). Apart from the SNJ, the primary providers of CPD are the large non-governmental agencies responsible for non-formal education (*Croix-Rouge*, *Caritas*, *Focus*) and the *Entente des Foyers de Jour* (EFJ). The *Entente des Foyers de Jour* is a non-governmental umbrella association of the providers of children's services in Luxembourg. Its members are largely associations and communes who provide nurseries (*crèche*, *foyer de jour*) and out-of-school facilities (*maisons relais*) (EFJ 2017).

- The *Croix-Rouge* (Red Cross) is one of the largest providers in the non-formal education sector in Luxembourg, with numerous childcare centres in different communes. The Red Cross also has its CPD organisation and offers regular CPD activities (Croix Rouge 2017).
- *Caritas* focuses on social inclusion. One of the numerous services provided by the organisation is a quality development programme in the non-formal education sector. In addition, Caritas offers a broad selection of CPD activities focusing on critical topics in the sector (curricular framework, health and nutrition, leadership, and cooperation with parents) (Caritas 2017).
- *Focus* is the CPD organisation of *Arcus*. *Arcus* is a non-governmental association bringing together charities based on Christian ideals that have shared a commitment toward social, educational, pedagogical, and therapeutic work with children, young people, and families for more than 60 years (Arcus 2017a). *Focus* provides a wide-ranging programme of CPD courses related to childcare and educational and social work professionalisation. The courses are related thematically to the national curricular framework for non-formal education (Arcus 2017b).

Article 11 of the decree on the reorganisation of children's services (MFI 2018) regulates the number of hours that staff are expected to spend attending CPD activities. No distinctions are made between core pedagogues, lead practitioners and assistants. Staff employed full-time are required to complete 32 hours of CPD within two years (at least 8 hours annually); requirements for part-time staff are adjusted according to their work hours. The CPD must relate to the *Curriculum Framework for Non-formal Education in Childhood and Youth* (MENJE and SNJ 2021), a national-level requirement for the providers of children's services.¹³ However, this does not mean that staff may not participate in CPD courses on other topics. Courses related to the curricular guidance must be reviewed and certified by the Commission for Continuing Professional Development (*Commission de la formation continue*).

Since the implementation of the plurilingual education programme – *Programme d'Éducation Plurilingue* (Le Gouvernement du Grand-Duché de Luxembourg 2017a) –, staff in non-formal education settings are required to do eight hours of CPD within two years on the topic of 'language development in early childhood'. The law also stipulates that each SEA must name a pedagogical specialist (*réfèrent(e)s pédagogiques*) responsible for implementing the plurilingual programme in early childhood. Furthermore, to be recognised as a plurilingual education professional, the

¹³ The University of Luxembourg research group *Early Childhood: Education and Care* has developed a CPD programme together with the *Entente de Foyers de Jour* within the framework of the 32-hour budget for supporting the implementation of the guidelines in terms of the programme development in ECEC settings for children up to age 4 (Neumann 2014).

designated person must attend a 30-hour CPD organised by the *Service national de la Jeunesse* (MENJE and SNJ 2018).

Expenses incurred by the state-subsidised and commercial providers of non-formal education for the compulsory CPD courses are reimbursed by the State. In addition, the providers regulate the leave arrangements for these compulsory hours of attendance on an internal basis. Therefore, being granted leave for participation in CPD and reimbursed for the compulsory CPD activities is not a significant problem for most of the early childhood settings. Regulations, however, vary according to the setting in terms of meeting the costs for CPD courses that exceed the compulsory amount or go beyond the thematic framework; in most cases, they are partially reimbursed.

Basic vocational courses for low-qualified adults and early school leavers

Since the turn of the century, programmes have been developed that offer low-qualified persons seeking employment (frequently over 40 years old) a dual qualification route into the childcare field. These 'flexi-programmes', which were introduced subsequently under the names *Fogaflex* in 2001, *Qualiflex* in 2001, and *Valiflex* in 2013 were developed and carried out by the *Confédération Caritas Luxembourg* with the support of the European Social Fund (for an assessment of the various measures of managing the quality of care in Luxembourg's ECEC institutions see, for example, Achten et al. 2009). The programmes aim to support re-entry into employment through qualifying options, enhance personal development, increase motivation and competence development (Caritas 2008, 2013), and recruit staff for the expanding childcare services in Luxembourg.

Based on these projects, an advanced modular course has been developed since April 2003 which is recognised by the *Ministère de l'Éducation nationale et de la Formation professionnelle* and seeks to integrate and validate personal and professional work experiences (see *Table 8*). This 100-hour basic training opens employment perspectives in the childcare field for low-qualified applicants (*aide éducatrice* – other job titles are *formation de base de l'éducation et de l'accueil d'enfants*, *formation aide socio-éducative*). The qualification course is provided in various models by different CPD providers up to 130 hours, not only for adults but also for school leavers. In addition, the training is available for communes and public-sector institutions in the *Institut national d'Administration Publique* (INAP) for persons without an initial professional qualification. It is also offered by the *Entente des Foyers de Jours*, *Arcus asbl* and *Caritas asbl*. To ensure consistent quality across courses, this essential qualification's constituent modules and contents are the same.

Table 8

Luxembourg: Educator's Assistant in the non-formal education sector

Title in French: <i>Aide éducatrice/ éducateur</i>
Admission requirements: None (see Caritas 2016)
Professional studies: 100 hours of basic vocational course in six modules
Award: Certificate of attendance
ECTS points: n/a
EQR level: 3
ISCED 2011: n/a
Main fields of work: Settings in the non-formal education sector/ <i>Services d'éducation et d'accueil</i> (0–12 years), including infant-toddler centres/ <i>crèches</i> (0–4 years), childcare centres/ <i>Maison Relais pour Enfants</i> (4–12 years)

Home-based childcare providers: Due to the high demand for childcare and limited availability of centre-based places, so-called ‘parental assistants’ (*assistants parentaux*) – childminders who take care of children in their own home – were given a political-legal framework that also imposed a state agreement (MFI 2007) to combat a black market of quasi-familial care services that had existed in the Luxembourgish childcare system for years (Wiltzius and Honig 2015). Since 2017 (Le Gouvernement du Grand-Duché de Luxembourg 2017b), parental assistants have been part of the SEA structures. After a professional development course of 100 hours and a minimum of 40 hours of internship within a SEA setting, parental assistants must regularly attend CDP and supervision sessions for at least 20 hours per year to obtain a yearly state agreement.

Leadership qualifications for Centre Heads. There are no specific qualifying courses for the lead staff in non-formal education settings; the only requirement in Article 8 of the SEA Regulations (MFI 2018) is that lead staff must have completed at least three years of work experience. However, since 2011 the University of Luxembourg has been offering a part-time Master’s study programme (original title in German: *Master in Management und Coaching im Bildungs- und Sozialwesen, MAMACO*), which targets this subgroup of the workforce. It aims to provide personnel with leadership and group responsibilities in the educational and social fields with critical competencies to cope with the specific changes in these areas. Participants should be able to question their professional experiences systematically and research and develop, analyse, and lead projects. Degree holders of the Master’s programme can describe and explain the conditions, processes, results, and effects of social interventions; they can also develop and organise such processes and are prepared to shape reform processes with colleagues and institutions and create target-oriented ways of dealing with everyday problems. They should also be able to cope with leadership assignments in their field (Uni.lu 2022c).

7. Working conditions and current workforce issues

Luxembourg is known for its high salaries for teachers, which are well above the OECD average, and constitute the highest salaries in the European Union at all levels of the education system. The wages of (early childhood) teachers and centre heads are the primary expenditures in the formal sector (OECD 2021). However, there is still a shortage in educational staff, partly due to the language requirements, which include command of Luxembourgish, German, and French (European Commission 2019).

This chapter provides an overview of differences in remuneration, working hours and conditions between the formal and the non-formal childcare sectors. Teaching and educating children make attractive occupations. However, there are differences in salary, status, and working hours between the Primary School Teachers and the Educators employed in the formal sector and between Social Pedagogues/Social Workers and non-university educated Educators and Care Workers in the non-formal sector. In addition, the state encourages career changes for people who initially have been trained for a different occupation to meet the growing demand for personnel. This development creates differences regarding staff’s qualification and remuneration. Open and subtle hierarchies among the staff might result from those differences in the multi-disciplinary teams of the *éducation précoce* (SNJ 2020).

Most Primary School Teachers and Educators are women. In contrast, a similar number of men and women work at secondary schools.

7.1 Remuneration

Generally, Primary School Teachers receive higher salaries than staff working in the non-formal sector. Within the non-formal sector, publicly funded institutions pay better than commercial childcare centres. The different wages are mainly a result of contractual differences. Staff in the publicly subsidised SEAs are paid via the collective bargaining agreement. In contrast, staff in commercial day-care centres are not subject to the collective bargaining agreement.

Formal education sector

Primary School Teachers working in the *éducation précoce* are civil servants and are remunerated accordingly. The starting salary of (Pre-)Primary School Teachers in Luxembourg is 69,076€ and gradually increases after 10 years in service (OECD 2023).

Non-formal education sector

The differences within the non-formal sector are profound. Private for-profit institutions (*non-conventionnés*) pay considerably less than private providers that are not-for-profit (*conventionnés*). The differences between the sectors and within the sectors have resulted in a segregated workforce in ECEC. Luxembourgish residents and citizens who meet the language requirements can seek employment in better-paying institutions. Commuters from Belgium, France and Germany usually take the less well-paid jobs at the for-profit centres because they are still better paid than similar jobs at ECEC institutions in their countries of residence. While foreign qualifications are recognised and do not impede employment, the language requirements in public institutions work as a barrier for foreigners seeking employment in Luxembourg's ECEC system, steering them away from the highest-paid jobs.

To sum up, the remuneration paid by private not-for-profit (*conventionnés*) providers is laid out in the contractual agreement between the state and the provider based on the collective bargaining agreement. In contrast, the salaries paid by commercial, for-profit providers (*non-conventionnés*) are solely determined by the contract between the provider and their personnel.

The differences in remuneration also result in differences in working hours. The lower pay in the non-formal for-profit institutions makes it necessary for the employees to work full time to earn a sufficient salary. Since these people are mainly commuters from neighbouring countries, the additional commuting cost certainly requires maximising the potential income. Staff shortages in the for-profit sector also play a role. Staff from Luxembourg working in not-for-profit settings can afford to work part time more easily.

7.2 Full-time and part-time employment in ECEC provision

The working hours of the ECEC workforce are difficult to estimate as there are no official and representative statistics for each sector. Indeed, for the formal sector, no data are available. At the same time, numbers for the non-formal sector are based on the non-representative sample drawn in the online survey conducted by the government for the previous SEEPRO publication. Therefore, the numbers reported here reflect the situation of 2016. *Table 9* shows the percentages of staff in the non-formal sector working full time and part time.

Table 9

Luxembourg: Staff in full-time and part-time employment in not-for-profit and commercial ECEC settings, 2016

	Private not-for-profit providers (with contract)	Private for-profit providers (without contract)
Staff in full-time employment (35.5 hours or more)	36.5%	93.5%
Staff in part-time employment	63.5%	6.5%

Source: Honig and Bock 2018

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Multiple measures support staff beginning to work at the different ECEC institutions in the formal and non-formal sectors.

Formal education sector

Newly qualified graduates of the *Bachelor en sciences de l'éducation* enter an induction programme taking a maximum of three years at a specific primary school that is coordinated and supervised by the *Institut de Formation de l'Éducation Nationale* (IFEN 2017). The IFEN is a subsidiary institution of the Ministry of Education and works with Primary and Secondary School Teachers in the Luxembourgish education system. The induction programme is a type of internship that comprises three components that link theoretical and practical training:

- (1) Practical introduction to the school setting
- (2) Completion of a general modular course of 108 hours
- (3) Mentoring.

Non-formal education sector

Support for newly employed non-formal staff is much less formalised. As there is no educational route preparing specifically for employment in the non-formal ECEC sector, the institutions must invest time and financial resources in newly hired staff. For example, the centre might assign a mentor to beginners or provide a professional exchange, guidance and learning materials to new staff. In addition, new staff may attend courses offered by providers of continuing professional development to learn about the government's early childhood curriculum.

7.4 Non-contact time

Working hours are assigned differently to the various tasks in the formal and non-formal sectors.

Formal education sector

The working hours of Pre-primary and Primary School Teachers (MENFP 2009b) and Educators (MENFP 2009c) are regulated by law. Article 4 of the *Règlement grand-ducal du 23 mars 2009 fixant la tâche des instituteurs de l'enseignement fondamental* specifies that teachers should spend 60 hours a year on meetings with educational staff and staff in childcare centres, 40 hours on cooperation with parents, 18 hours on administrative work and eight hours on professional development (MENFP 2009a, Art. 4). On average, over a 50-week year, this amounts to roughly 2.5 hours of non-contact time per week (own calculation).

The same regulations apply to the Educators (*éducateurs/éducatrices* diplômé(e)s) who work as Teacher Assistants in the *éducation précoce*. However, the time allocated for professional development is more extensive (40 hours).

Non-formal education sector

Article 11 of the *règlement grand-ducal* on the restructuring of ECEC that established the *services d'éducation et d'accueil* (SEA) (MFI 2018) specifies that full-time employees in childcare services must spend 103 hours annually of their total working hours on team consultations and the preparation of educational activities; this regulation applies both to personnel in contracted and non-contracted services. The number of hours is adjusted proportionally for part-time staff. On average, over a 50-week year, this amounts to roughly 2.1 contact-hours per week (own calculation).

7.5 Current staffing issues

Overall, staff shortages are an ongoing issue across the ECEC sectors in Luxembourg. While pre-primary (*éducation précoce*) and primary institutions can deal with the problem by recruiting career changers and substitute staff, the non-formal sector faces more severe issues revealed in the government's online survey of 2016.

In particular, the for-profit centres have more difficulties finding qualified staff, partly due to the lower salaries compared to the not-for-profit and publicly funded institutions. Since the non-formal sector cannot rely on a pool of substitute staff or provide its system with measures to recruit and train career changers, the primary way of addressing the problem is to require the existing team to work full-time and overtime. In addition, mandatory staff-to-child ratios always make it necessary to keep a minimum number of staff present at the centre, which can result in overtime and merging groups of children in order to comply with the ratio requirements.

Moreover, problems arise from a labour market that does not provide enough applicants with the necessary qualifications and experience in ECEC. As quality and CPD requirements increase, recruitment issues may also arise. The growing misalignment further exacerbates these issues in the linguistic diversification of the population. A decreasing proportion was born and raised in the country, thus speaking all three official languages, and quickly meeting the professional language requirements. As the immigrant population is growing and more languages are spoken in the country in many spheres of daily life, such as English and Portuguese, fewer people will be fluent in the official languages. This development will likely result in increasing staff shortages or more difficult recruitment procedures. In addition to language requirements, limited-time contracts are a common issue in ECEC services, making the job less attractive for people who want to build their future.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

National Framework for Non-Formal Education in Childhood and Adolescence

Following the modifications of the Youth Act in 2016 (MENJE 2016) in which several mechanisms of quality development and monitoring have been established (see MENJE 2022), Luxembourg introduced its first official curriculum for the non-formal sector – the National Framework for Non-Formal Education in Childhood and Adolescence (*Nationaler Rahmenplan zur non-formalen*

Bildung im Kindes- und Jugendalter / Cadre de référence nationale sur l'éducation non-enfants et des jeunes) (Le Gouvernement du Grand-Duché de Luxembourg 2017c), which was first published in 2018 (see for the latest version: MENJE and SNJ 2021). This framework is a mandatory curricular requirement for all state-subsidised and commercial services in the non-formal education sector in Luxembourg which means that ECEC professionals may have to develop a different understanding of their profession. Rather than offering mere “care” to children, they have to offer education. Furthermore, the framework defines pedagogical goals and guidelines regarding the work with children in the non-formal sector. It also conceptualises legislative and administrative initiatives to improve structural and process quality. A commission comprising representatives of the MENJE, the communes, the providers, the parents, and scientific experts examine and revise it every three years.

Plurilingual education programme

The *Programme d'Éducation Plurilingue* (Le Gouvernement du Grand-Duché de Luxembourg 2017a) acknowledges the language diversity in Luxembourg in the formal and non-formal education sectors. The programme has three pillars: language education, collaboration with parents and networking. It aims to familiarise children at an early age with Luxembourgish and French and values children's home languages, among others, through close cooperation with the parents. All ECEC centres must implement the three pillars in their centres and indicate in their action conception how this will be done. The guidelines for implementing the plurilingual programme in the general action conception (CAG) were first published in a separate document, “*Guide pour la réalisation d'un concept local de l'éducation plurilingue pour jeunes enfants*” in 2018. As of 2021, the guidelines are part of the national framework (MENJE and SNJ 2021). Each centre also needs to document the daily language practices.

Since 2018, the *mini-crèches* have opened a pathway for home-based childcare providers (‘parental assistants’) to offer plurilingual education (Le Gouvernement du Grand-Duché de Luxembourg 2018). The main requirement to run a multilingual *mini-crèche*, which must be set up outside the staff's home, is that one of the two professionals can speak Luxembourgish and the other one French. The *mini-crèches* are small-scale childcare facilities and aim to tackle the growing need for places in ECEC.

Within each ECEC setting, there must be at least one pedagogical member of staff with a C1 level in Luxembourgish and a C1 level in French. Providers only benefit from childcare vouchers (*chèques-service accueil*) if they implement the programme. In addition, the legislation aims to ensure equal educational opportunities for children from different language backgrounds, a challenge with special significance for Luxembourg with its multilingual population (Brachmond, Günnewig, Kirsch, and Seele 2015).

9. Recent country-specific research focusing on ECEC staff

Since 2009, the Luxembourgish government has a contractual agreement with the university regarding research, development, and consultation in national ECEC policies. Within this framework of cooperation, several expert reports have been produced which analyse the Luxembourg system of early childhood education and care (e.g. Honig and Haag 2011; MENJE/Université du Luxembourg, Unité de recherche INSIDE 2015; Wiltzius and Honig 2015); further studies focus

on curricular concepts and programme development (e.g. Bollig, Honig, and Mohn 2015; Brachmond, Günnewig, Kirsch, and Seele 2015), some of which were published in a brochure series issued by the Ministry of Family Affairs (later Ministry of Education). In addition, the Ministry of Education, Childhood and Youth has established its own Research and Development department (SCRIPT) and the SNJ published educational guidance on early multilingual education in the Luxembourg context (SNJ 2017). Beyond this, the university has conducted independent research projects focusing on issues particularly relevant to Luxembourg, which provide links to the international debate on early childhood education and care. All refer directly or indirectly to the role of early childhood personnel in ECEC settings.

Developing multilingual pedagogies in early childhood (MuLiPEC)

Source: Université du Luxembourg (Uni.lu 2022a) (see *References* for further details)

Research team: Claudine Kirsch (PI), Katja Andersen, Simone Mortini, Laurence Di Letizia, Gabrijela Aleksić (from September 2017)

Duration: May 2016–April 2019

Funding: *Fonds National de la Recherche, Ministère de l'Éducation nationale, de l'Enfance et de la Jeunesse*

Aims: The project MuLiPEC addressed the need for the development of multilingual pedagogies in early childhood education in Luxembourg. To this end, the research team offered a professional development (PD) path to Pre-primary Teachers (formal education sector) and Care Assistants working with 2 to 5 year-olds in the non-formal education sector (e.g. *crèches*). The aims of the research project consisted of analysing the influence of the PD programme on the practitioners' attitudes, knowledge, and practices; comparing practices across settings; and investigating the influence of multilingual practices on children. Simone Mortini, the PhD candidate within the project team, focused on the children in the four institutions and investigated the 'linguaging' practices and the agency of eight children over one academic year.

Procedure: The project used quantitative methods (i.e., a survey done before and after the PD) and qualitative ones (i.e., observations, video recordings, interviews, and documentation). The researchers also asked the professionals to video-record activities and regularly interviewed the practitioners. The analysis of the quantitative data drew on content analysis, paired samples *t*-test and correlational analysis, whilst the qualitative data were analysed with thematic analysis and a socio-cultural perspective of conversation analysis.

Findings: The findings from the questionnaires before and after the PD, show a positive influence of the training on the participants: the practitioners had developed knowledge about multilingualism and language learning, changed attitudes towards 'translanguaging' and home languages, and became more interested in organising activities in children's home languages. The longitudinal study in the schools and ECEC centres provided further details. The findings indicate that the professionals implemented activities in languages other than the institutional ones and developed a positive stance towards 'translanguaging'. Furthermore, their flexible language use facilitated communication and promoted participation, language learning, and well-being. The professionals of the various settings differed, however, in how they designed their multilingual learning environment and used multiple languages. These differences could be explained by their perspectives on multilingualism, their own experience of multilingualism, language ideologies, qualification, and their ability to monitor children's linguistic needs.

Implications: The findings had concrete implications for the design and the content of professional development courses as well as for the content of some courses in teacher education. For instance, some teacher educators focused more on strategic translanguaging and translanguaging pedagogies (i.e., stance, design, shift).

Collaboration with parents and multiliteracy in early childhood education (COMPARE)

Source: Université du Luxembourg (Uni.lu 2022b) (see *References* for further details)

Research team: Claudine Kirsch (PI), Gabrijela Aleksić, Sascha Neumann (January–March 2020), Valérie Kemp, Laura Colucci, Džoen Bebić-Crestany

Duration: January 2020–December 2023

Funding: *Ministère de l'Éducation nationale, de l'Enfance et de la Jeunesse, Service National de la Jeunesse, Fonds National de la Recherche*, University of Luxembourg

Aims: This project examines the multiliteracy practices in day care centres and partnership building in Luxembourg. To help educators develop their understanding of the importance of diverse literacies and collaboration, design productive activities, and enhance collaboration, the team offered a professional development programme to 30 childcare centres. The project aims to examine, firstly, how educators, parents and children engage in multiliteracy activities and adults establish home–*crèche* collaboration and, secondly, the influence of the multiliteracy practices and collaboration on the actors' attitudes and literacy engagement.

Procedure: The mixed-method study used questionnaires with educators and parents as well as interviews and observations in three ECEC centres over the academic year 2020-21.

Findings: The findings show that about half of the parents and three-quarters of the educators reported in surveys that they read or told stories daily and that many used several languages, mainly French and Luxembourgish, but also English, German, and Portuguese. Results from the fieldwork confirm that reading and telling stories did not occur daily in all day-care centres and that singing happened more frequently. The 3 year-olds were also frequently observed looking at books on their own. Speaking with children about symbols and scripts was rare.

Furthermore, the questionnaire data of the educators as well as the observations in three childcare centres, indicate that the professionals regularly exchanged in daily communication and

organised seasonal feasts. However, these practices were strongly affected by the COVID-19 pandemic. Activities where educators and parents jointly engaged children in the three observed day-care centres depended on the centres and the parents. On such occasions, parents offered literacy activities in their home languages. These collaborative events influenced the communication between parents and educators. This latter result was confirmed in the questionnaires that showed that goal-directed communication was predicted by the educators' attitudes, according to the educators, and the parents' satisfaction, according to the parents.

Implications The findings address research gaps in relation to partnership building at the micro-level, the engagement in multiliteracy activities of 3 year-olds, their parents, and educators, and, finally, the influence of collaboration and multiliteracy on attitudes and engagement. The results were disseminated in conferences, workshops, a parent guide as well as peer-reviewed papers.

10. Workforce challenges – country expert assessment

Early childhood education and care in Luxembourg have experienced continuous organisational and conceptual changes over several years, the latest ones being the national curricular framework, the programme of multilingual education, and different ways of training and qualifying educators and teachers. Staff in the formal and non-formal education sectors are under considerable pressure to implement new policies and regulations and would benefit from more training and guidance. Although the formal and non-formal education sectors are under the Ministry of Education, Childhood and Youth, they remain very different. As a result, the professionals who must implement the multilingual education programme, for instance, receive different training.

Below are several challenges identified by the authors of the report:

1. The tasks of ECEC professionals continue to multiply and become more complex in highly heterogeneous Luxembourg; therefore, it is essential to guarantee that all staff are well-qualified. Unfortunately, there are neither study programmes for teachers to become early years specialists nor for educators to develop this specialist profile.
2. Luxembourg is a multilingual country, but more and more staff members in ECEC settings seem to lack the necessary pedagogic and language competencies to address diversity and deliver a multilingual programme. The issue is particularly prominent in large commercial centres where many staff members commute daily from neighbouring countries to work in Luxembourg. They speak predominantly French and these centres, which offer lower wages,

find it challenging to recruit staff who speak Luxembourgish and can deliver a multilingual programme. There is some indication of a tendency to introduce children to English, a global language, rather than Luxembourgish.

3. The ECEC system in Luxembourg is highly diverse and encompasses the formal and non-formal sectors, compulsory and non-compulsory elements as well as public and private providers. Standardisation seems to be an issue, particularly regarding public and private providers. The lack of standardisation regarding the educators' and teachers' skills as well as resources in ECEC institutions that go beyond material equipment and may involve language resources and education styles, may drive early inequality.
4. With the growing language diversity in Luxembourg, it is not only necessary to be able to communicate in several languages but, even more, to be open to all parents and children with ethnic minority backgrounds and create inclusive environments. While recent studies have shown that language practices in ECEC centres have become more diverse, they have also pointed to existing language hierarchies.
5. To guarantee and improve the quality of the provision, early childhood staff need continuous guidance and training. There have been recent moves by the Ministry of Education to coordinate the CPD programmes in the non-formal sector, as the quality differed considerably. While continuing this effort, it is crucial also to train the trainers and regional coordinators (*agents régionaux*).
6. The issue of providing ongoing coaching and consulting for staff in the non-formal sector has not yet been answered adequately. In particular, the numerous small settings at the local level need coordinated support at the regional level. A further challenge is the need to include the growing number of commercial CPD providers in a conceptually and administratively coordinated system of quality development.
7. Many staff commute from neighbouring countries and work for commercial childcare providers for low wages. It is therefore possible to talk of two classes of professional staff in the *services d'éducation et d'accueil* (SEA). The transformation of childcare into a field of non-formal education, therefore, needs to find effective ways of involving the commercial providers.
8. Home-based childcare providers, primarily female, represent a special category of early childhood personnel. They are not the subject of this report, but they play an essential role in Luxembourg in what is essentially an ethnically segregated childcare market. Therefore, if ECEC is to contribute to social inclusion, the position of these home-based carers must be clarified and regulated within the system.

Early childhood education and care (ECEC)

Please note:

In alignment with country-specific terminology, this report refers to non-formal education settings for children under 4 in general as **ECEC services** (*services d'éducation et d'accueil pour enfants*). Specific setting types are described where relevant. For formal education settings the terms used are **early education group** (*éducation précoce*, 3 to under 4 years) and **pre-primary class** (*éducation préscolaire*, 4 to under 6 years)¹.

Historical milestones in ECEC in Luxembourg

Around 1850	First custodial institutions (<i>écoles gardiennes</i>) established through caritative foundations and commercial enterprises
Approx. 1860	First public kindergartens established
1963	First legislation on early childhood education (<i>jardins d'enfants</i> , later; <i>éducation préscolaire</i>), specifying the role of the communes
1976	Compulsory preschool enrolment (<i>éducation préscolaire</i>) for 5 year-olds
Early 1980s	First state subsidised centre-based childcare settings
1992	Compulsory preschool enrolment for 4 year-olds
1998	<ul style="list-style-type: none"> – Introduction of non-compulsory early education groups (<i>éducation précoce</i>) – ASFT Act comes into force, regulating the relationship between the state and private providers of educational and therapeutic services, and also the organisational and funding framework for childcare provision.
2005	The first <i>maisons relais pour enfants</i> (MREs) – children's centres – are established.
2007	Home-based childcare is regulated by law.
2008	Youth Act (<i>loi sur la jeunesse</i>) comes into force.
2009	<ul style="list-style-type: none"> – New Education Act and restructuring of the primary schooling system into cycles: <i>éducation préscolaire</i> is included in the 1st cycle. – Entitlement for 3 year-olds to a place in <i>éducation précoce</i> – The communes are required to provide outside-school-hours care (<i>encadrement périscolaire</i>) for school children. – Introduction of childcare service vouchers (<i>chèques-service accueil – CSA</i>)
2013	<ul style="list-style-type: none"> – The Ministry of Education, Children and Youth takes over responsibility from the Ministry of Family Affairs for all provision outside the school system as well as for formal education settings. – The SEA Regulation (implementation decree, ASFT Act 1988, amended 2012) introduces common requirements for all centre-based and home-based settings for children in the non-formal education sector (<i>services d'éducation et d'accueil pour enfants</i>). The Regulation specifies the criteria for the contractual agreements (<i>agrément</i>) – staff-child ratios, staff qualifications, maximum capacity, size, etc. – Framework plan for non-formal education for children and young people comes into force.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In the case of Luxembourg, the formats may vary, depending on the kind of setting (non-formal or formal) in focus.

2016	Amendments to the Youth Act, regulating among other things quality assurance in all non-formal education settings
2017	Renewed amendment of the Youth Act and introduction of multilingual early education (<i>éducation plurilingue</i>) for 1 to 4 year-old children in SEA facilities
2018	<ul style="list-style-type: none"> – Subsidising childcare costs through vouchers is regulated by law. – Introduction of <i>mini-crèches</i> as a new form of childcare

ECEC system type and auspices²

Until the end of 2013, early childhood education and care in Luxembourg was organised on a bi-sectoral basis, with separate ministerial responsibilities for ECEC and out-of-school services (Ministry of Family Affairs) and pre-primary education (Ministry of Education). Since 2013, the Ministry of Education, Children and Youth (*Ministère de l'Éducation nationale, de l'Enfance et de la Jeunesse, MENJE*) has overall responsibility for all forms of provision for children up to primary school.

ECEC services are now formally understood as settings with an educational mandate. Accordingly, a distinction is made between a non-formal and a formal education sector.

The **non-formal sector** includes (1) publicly subsidised, non-profit education and care services as well as private-commercial settings for children under 4 years of age; (2) out-of-school forms of provision for 4 to 12 year-olds; and (3) home-based childcare services.

The **formal sector** in this report refers to the compulsory classes for 4 and 5-year olds in primary schools (*éducation préscolaire*) as well as the non-compulsory school classes for 3 year-olds (*éducation précoce*).

The state has implementation responsibility for the formal sector and guarantee responsibility for the non-formal sector; it exercises this responsibility by issuing operating licences (*agrément*s) and through service agreements (*conventions*) with private providers. The Ministry of Education is responsible for legislation in the field of education, the provision of educational opportunities in the formal and non-formal sector, as well as for curricula and personnel. Municipalities must ensure the necessary infrastructure and equipment. Management is the responsibility of 15 regional directorates of the Ministry of Education and the local school committees. In addition, each institution has a school committee elected for five years, which makes proposals regarding organisation and financial budgets (University of Luxembourg 2018).

The divide between the non-formal/formal and the private/public education sectors means that Luxembourg can be described as a part-integrated ECEC system: while governance has been unified, sectors and setting types remain split.

General objectives and legislative framework

The system of early childhood education and care in Luxembourg is oriented towards family and social policy goals. These include supporting parents' participation in the labour market, gender equality and work-life balance. The provision of flexible, high-quality and affordable childcare services is given high priority, e.g. through benefits such as free childcare service vouchers or low fees for low-income families.

² The Eurydice country report on ECEC in Luxembourg provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

Another general objective is the promotion of children's development according to each child's potential. The Coalition Agreement of 2018–2023 sets out a holistic approach to the education of children and young people, providing equal access to educational opportunities for all, taking into account growing diversity and putting the child at the centre.

With regard to its educational policy objectives, the Luxembourg government considers the non-formal and the formal ECEC sectors as complementary. Overarching goals or principles in the **non-formal sector** are: To perceive children as competent persons, each with an individual biography, who learn in interaction with and from others and are to be seen as members of society with their own rights.

The ASFT Act of 1998 (*Loi du 8 septembre 1998 réglant les relations entre l'Etat et les organismes oeuvrant dans les domaines social, familial et thérapeutique*, modified on 28 July 2011) regulates the relationship between the state and non-state providers. An implementing regulation (2013) of the ASFT Act, the so-called SEA regulation (*services d'éducation et d'accueil pour enfants*, SEA), sets out the framework for the non-formal sector.

The modifications of the Youth Act 2016/17 and the corresponding law for home-based child-care services set out pedagogical measures as well as a national framework plan for the non-formal sector (University of Luxembourg 2018, 19).

In the **formal sector**, the 2009 Education Act (*Loi du 06.02.2009 portant organisation de l'enseignement fondamental with modifications*) restructured the Luxembourg school system. Since then, the 9-year basic/primary school (*enseignement fondamental*) has been organised in four cycles. The first cycle includes *éducation précoce* (for 3 year-olds) and *éducation préscolaire* (for 4 and 5 year-olds). The Education Act refers exclusively to formal education. At the same time, it contains a mandate for the municipalities to provide out-of-school services for children of school age (*encadrement périscolaire*). In order to further promote cooperation between schools and out-of-school education and care services, since 2012 every municipality has had to draw up a so-called out-of-school care plan (*Plan d'encadrement périscolaire*, PEP).

ECEC entitlement and compulsory attendance

For under 3 year-olds, there is no legal entitlement to a place in an ECEC setting in the **non-formal sector**. For children between 3 and 4 years of age, attendance is voluntary; however, if enrolled, regular attendance is expected. All municipalities must ensure that children in their catchment area are offered a place.

Legal rights or obligations exist only in the **formal sector**. Since 2009, children between 3 and 4 years of age have been entitled to a free place in the first cycle of the primary sector for 36 weeks a year (*éducation précoce*). Compulsory education in pre-primary classes (*éducation préscolaire*) begins when a child has turned 4 by 1st September and is compulsory for 26 hours per week (European Commission/EACEA/Eurydice 2019, 48, 67).

After two years of *éducation préscolaire*, mainstream schooling begins at age 6 (European Commission/EACEA/Eurydice 2019, 182).

Main types of provision

Non-formal education and care sector

The non-formal sector includes various types of **ECEC services** and after-school services. These fall under the SEA regulations (*Services d'éducation et d'accueil pour enfants*) and follow its provisions. They include *maisons relais*, *crèches*, and *foyers scolaires* (University of Luxembourg 2018, 19). ECEC settings are required to have an operating licence (*agrément*) under the ASFT law. Some (the majority of services for 4 to 12 year-olds) conclude a service agreement (*convention*) with the state. However, these service agreements are not obligatory. It is also possible that facilities are run only on the basis of an operating licence.

Children's houses: The *maisons relais pour enfants* for 4 to 12 year-olds, sometimes also for under 3 year-olds, were introduced in 2005 as a link between family, school and community and offer services for children during non-school hours and over lunch. The predecessors of the *maisons relais* are the *foyers de jour pour enfants*, which offer school children lunch and homework supervision. However, the range of services offered by the *maisons relais* is much broader; they are also aimed at children who are not yet of school age. Accordingly, their pedagogical goals are very broad in the sense of non-formal education, linking socio-pedagogical activities and the promotion of education.

Nurseries (*crèches*) usually cater for children up to 4 years of age.

Mini-crèches became legal in 2018 and came into force as a new childcare model from January 2019 (MENJE 2023b, 19). In these *mini-crèches*, children up to 12 years of age are catered for in a small setting by two social pedagogy professionals. They are mainly offered in less populated areas and have very flexible opening hours adapted to the needs of parents. The facilities must be accredited and offer multilingual education for 1 to 4 year-olds; they are therefore eligible for the state-funded CSA voucher scheme (see below), which provides 20 hours of free childcare. This was a significant reason for the doubling of available places in the non-formal sector in the last ten years (SNJ 2020).

ECEC services for under 4 year-olds are required to be open for at least 46 weeks a year; the exact opening hours are determined by the provider of the facilities (between 5:00 and 23:00). In addition, under 3 year-olds can also be cared for by self-employed **home-based childcare workers** (*assistance parentale*) in their homes.

From the age of 3, children can either remain in the existing facilities or attend an optional year in primary school (*éducation précoce*, ISCED 02).

Formal education sector

The voluntary **early education groups** for 3 to 4 year-olds (*éducation précoce*) and the compulsory **pre-primary classes** for 4 and 5 year-olds are part of the first cycle in the school system. They are open 36 weeks a year, each with 26 hours of educational activities per week. They are usually open Monday, Wednesday and Friday from 8:00 to 12:00 and from 14:00 to 16:00, Tuesday and Thursday mornings only. They are closed during school holidays. During this time, the extracurricular SEA settings provide non-formal education services. In the first year of the 1st cycle, children spend a minimum of three and a maximum of eight half days in the institution. The two pre-primary years for 4 and 5 year-olds are organised according to the primary school timetables.

For the 1st cycle, there are also alternative types of provision such as *Eis Schoul* or the *École Jean Jaurès* with a focus on inclusion, or all-day schools. For 4 and 5 year-olds there is also the option of attending an international school with different languages of instruction or private-commercial schools.

On 1 September 2023, there were 165 public institutions offering 1st cycle education, as well as ten private and two international settings (Men.lu 2023).

Provider structures

Non-formal education and care sector

Types of settings that belong to the non-formal sector can be operated either by municipalities or by private non-profit or private for-profit providers.

According to the ASFT Act (1998, modified 2011), all providers need an operating licence (*agrément*) from the state. Non-profit providers that conclude a service agreement (*convention*) with the state receive public funding (OECD 2022a). Among the contracted providers, many are non-profit, but the majority are for-profit organisations. The providers also have their own admission criteria. For example, public *crèches* often give priority to children under 3 years of age living in the respective municipality. For children over 3 years of age, the municipalities are obliged to provide a place. The providers are bound by the conditions laid down in the ministerial accreditation, which includes, for example, the staffing ratio.

Since the introduction of service vouchers for parents in 2009 (*chèques-service accueil*, see also section *Financing*), the supply of private-commercial providers in the non-formal education sector has increased considerably. This development is a significant structural change that was not intended by political measures, but was accepted. Almost two-thirds of places for under 4 year-olds are provided by these commercial providers.

Table 1 shows the distribution of ECEC settings according to whether they have concluded a (non-mandatory) service agreement with the state or not. In centres with an agreement to provide *éducation plurilingue*, parents are eligible to receive 20 hours of free education for their child. The prerequisite is that these centres use plurilingual education in the fields of language education, in cooperation with parents and in their networks. Furthermore, they are required to employ a pedagogical coordinator (*réfèrent pédagogique*, with 30 hours of training). All staff are obliged to attend eight hours of CPD within a period of two years and one member of staff must have C1 level³ in Luxembourgish, another the C1 level in French. If these conditions are met, the centres may employ 10% more staff than is the case in regular settings. The families are eligible to use the CSA vouchers (see *Financing and costs for parents*) in these settings.

There is a trend towards very young children being more likely to attend ECEC settings run by commercial providers, and older children being more likely to attend non-profit facilities. Overall, the number of available places has increased considerably between 2009 and 2019: Places in contracted facilities have more than doubled, and in non-contracted facilities they have even increased fivefold (OECD 2022a). Drawing on *Table 1*, 92.4% of the settings for children over 4 years of age have a contractual agreement with the state while this applies only to 27.1% of settings for under 4 year-olds.

³ Language proficiency level according to the *Common European Framework of Reference for Languages: Learning, Teaching, Assessment (CEFR)*

Table 1

Luxembourg: Number of places in non-formal ECEC settings with/without a service agreement with the state, 31.12.2022

	Number of available places for under 4 year-olds	Number of available places for over 4 year-olds (Children in primary education up to age 11/12)	Total number of places	Number of ECEC settings with an operational licence
ECEC settings with a contractual agreement with the state <i>Services d'éducation et d'accueil conventionnés</i> (Mostly private non-profit)	4,994	40,724	45,718	355
ECEC settings without a contractual agreement with the state <i>Services d'éducation et d'accueil commerciaux</i> (Mostly private for-profit)	13,392	3,368	16,760	491
Total	18,386	44,092	62,478	846

Source: MENJE 2023b, 18

In addition, there were 1,924 places provided by 395 home-based child carers in 2022 and 22 places in *mini-crèches*. Of the 2,133 children cared for, 601 were under 3 years of age (MENJE 2023b, 18f).

Formal education sector

Formal education institutions for 3 to 6 year-olds in the first cycle of primary education are almost exclusively state-run as part of the school system. Private schools are the exception in Luxembourg. Among them, there are private schools that follow the national curriculum, private schools that apply their own curriculum, and international schools.

In 2021/22, 4,587 3 year-old children attended early education (*précoce*) institutions and 203 private and international settings. 12,699 four and five year-old children were enrolled in public pre-primary schools and 1,400 in private and international settings. Approximately 10.3% of children aged 3–6 years are in private ECEC schools (MENJE 2023a, 10).

Participation rates in regulated ECEC settings

Non-formal education and care sector

Most places in non-formal education are to be found in conventional state education and care services for young children and for school children while places in *mini-crèches* and in home-based provision are relatively rare (see *Table 2*).

Table 2

Luxembourg: Number of places in non-formal ECEC settings by contract type, 2022

Settings (age range)	Number of places
<i>Mini-crèche</i> (0–12 years)	22

Settings (age range)	Number of places
Home-based providers (<i>Parental assistants</i>) (0–12 years)	1,924
Services with a contractual agreement	45,718
Commercial ECEC services	16,760
Total	64,424

Source: MENJE 2023b, 18

While in 2005 only just under a quarter of under 3 year-olds were enrolled in institutions, by 2022 this figure had risen to over a half. The proportion significantly increased for the over 3 year-olds: from 59% in 2005 to 91.4% in 2022 (see *Table 3*).

Table 3

Luxembourg: Enrolment rates in ECEC centre-based settings according to age and duration of attendance, 2005-2022

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	14	48
	Over 30 hours	8	11
	No enrolment in ECEC	78	41
2010	1 to 29 hours	1	42
	Over 30 hours	8	66
	No enrolment in ECEC	91	21
2015	1 to 29 hours	16.9	27.0
	Over 30 hours	34.9	54.9
	No enrolment in ECEC	48.1	18.1
2022	1 to 29 hours	18.2	26.8
	Over 30 hours	36.5	64.6
	No enrolment in ECEC	45.3	8.6

Source: Eurostat 2023b, Slight deviations from 100% due to rounding

On average, under 3 year-olds spend approximately 32 hours in a centre-based setting, over 3 year-olds 35 hours. The latest report of the Ministry of Education indicated that children below 1 year of age spent on average 28 hours a week in a *crèche*. By contrast, they were enrolled for 30 hours in 2017 and 33 hours in 2012. The Ministry explains this drop through the introduction of parental leave in 2016, as a result of which children are now older when they first enrol in a *crèche*. Children under 4 are found to spend less than 30 hours a week in an ECEC service (MENJE 2023c). Finally, between 2015 and 2022, 52% and 59% of children aged 4–12 attended a *Maison Relais* 15 hours weekly (MENJE 2023c, 3-5). The number of hours has not increased significantly although the *Maison Relais* have been free of charge since September 2022 (MENJE 2023c, 6).

Formal education sector

Broken down by age, 2.6% of 2 year-olds were enrolled in a centre-based setting in the formal education sector in 2021, over two-thirds of 3 year-olds, and almost all 4 and 5 year-olds (see *Table 4*).

Table 4

Luxembourg: Number and enrolment rates of children in centre-based ECEC settings, by age, 2021

Age	Number of children in ISCED-02 settings	Enrolment rates in ISCED-02 settings, in %
Under 2 years	n.d.	
2 year-olds	176	2.6
3 year-olds	4,593	67.9
4 year-olds	6,700	99.6
5 year-olds	6,364	93.8
6 year-olds	406	5.8

Source: Eurostat 2023f, k

Table 5 shows the development of enrolment figures in **formal education institutions** (cycle 1, 3 to 6 year-olds). Over the last ten years, the proportion of 3-year-olds attending a non-compulsory early education group (*éducation précoce*) increased slightly. In 2017, over 87% of 3 year-olds were enrolled in an early education group (OECD 2022a). Due to compulsory education, it can be assumed that 100% of the 4 and 5 year-olds attended an early education group or pre-primary class respectively.

Table 5

Luxembourg: Number of enrolments and enrolment rates in formal ECEC settings

School year	Cycle 1			
	<i>Éducation précoce</i> Early education groups for 3 year-olds		<i>Éducation préscolaire</i> Pre-primary groups/primary school classes for 4 to 6 year-olds	
	Number	Share of 3 year-olds in %	Number	Share of 4 to 6 year-olds in %
2010/2011	3,961	67.8	10,195	100 (= statutory schooling)
2015/2016	4,183	64.5	11,027	100 (= statutory schooling)
2021/2022	4,587	67.4	12,699	100 (= statutory schooling)

Source: MENJE 2023b, 127

Drawing on survey data completed by parents on their first graders' ECEC enrolment between 2009 and 2019, a LUCET report of the University and the MENJE found that 53% of the children had attended early education (formal education) in addition to a *crèche* (non-formal education), 29% had only attended *crèche*, and 17% had only attended early education. Only 0.6% had attended no institution (Hornung et al. 2023, 33).

Financing and costs for parents

A total of 0.94% of the gross domestic product was spent on the early education sector in 2019 (OECD 2023).

Since their introduction in 2009, CSA vouchers (*chèques-service accueil*) entitle parents to three hours of free childcare, music or sport per week, regardless of their income. This contributed significantly to lowering parents' childcare costs and increasing demand. Since 2016, this entitlement has also applied to cross-border commuters and to institutions abroad if they meet the same quality standards as in Luxembourg. In addition, the free childcare hours were increased to 20 hours for 1- to 4-year-old children. The vouchers are valid for institutions that are recognised by the Ministry of Education as CSA service providers and are valid until the end of primary

school. These services are also used to supplement early education attendance for 3 to 4 year-olds. More than 60 hours per week per child are not subsidised and the state subsidy is a maximum of €6 per hour, plus a maximum of €4.50 per meal.

Through the 2018 amended law on *mini-crèches*, the state also subsidises childcare costs for children up to 12 years of age through the CSA vouchers. In addition to the state subsidy, *mini-crèches* receive an additional €0.71 per child per hour for participating in multilingual education sessions.

In 2022, a total of 55,593 children up to 12 years of age participated in the CSA model, with an additional 3,301 from border areas (MENJE 2023b, 20).

In ECEC settings in the **non-formal sector**, some types of facilities are subsidised by the state up to 75%, others up to 100% of the operating costs. The differences depend on various factors, including who paid for the buildings (state or municipality). Differences are covered by the municipality or the respective provider.

Private ECEC settings are financed through the CSA vouchers only; all other costs have to be covered by the setting providers. For low-income parents, costs for additional care are reduced. Since the introduction of childcare vouchers, take-up has increased considerably, especially in non-formal facilities without a contract with the state. Nevertheless, especially in these facilities the costs can be very high, as the fees are not regulated.

From 2022, out-of-school hours spent in non-formal facilities have been free of charge for parents between 7:00 and 19:00 (OECD 2022a).

According to the Ministry of Education, the system of CSA is an important instrument of social justice as the risk of poverty of children decreased by about 6% (STATEC 2019). However, the number of hours that children spent in a *Maison Relais* has not increased significantly albeit them having become free of charge since September 2022 (MENJE 2023c).

Formal educational settings (*précoce*) are free of charge for parents of children over 3 years old, except for meals. Municipalities bear the costs of public primary schools and receive state funding, mainly for salaries. Private schools receive some state subsidies, even if they do not operate according to the national framework plan, but in this case they are calculated differently. Parents pay fees that are set by the institution and are usually much higher than in public institutions. Costs for infrastructure and equipment are borne by the municipalities; the state contributes to the financing with annual budgets and personnel costs.

In 2022, a couple with two children spent about 6% of net household income on childcare costs⁴ (OECD.Stat 2023).

Staff to child ratios and group size

Staff to child ratios depend on the age of the children (see *Table 6*).

In *mini-crèches*, a maximum of 11 children under 12 years of age may be enrolled at the same time, with a maximum of four children under 1 year of age.

Home-based child carers can look after five other children in addition to their own, with a maximum of two children under 2 years of age.

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Table 6

Luxembourg: Staff to child ratios and maximum group size in non-formal ECEC settings

Age	Max. number of children per group	Max. number of children per team member	Max. number of children per core practitioner
Under 2 year-olds	12	6	6
2 year-olds	16	8	8
3 year-olds	20	10	20
4 and 5 year-olds	24	24	24

Source: Eurydice 2023, 4.2

In the voluntary *éducation précoce*, the maximum is 20 children per core practitioner and one assistant; in the compulsory *éducation préscolaire*, there are on average 16 children per qualified staff member (SNJ 2020, 3).

Curricular frameworks

The curricular frameworks for both sectors in Luxembourg emphasise children's agency and view children as co-constructors of knowledge, identity, culture and values. Both take a plurilingual approach, recognising all children's multilingual potential (OECD 2021, 61f.).

Non-formal education and care sector

In 2017, the national framework for the non-formal sector for children under 3 (*Cadre de référence nationale sur l'éducation non formelle des enfants et des jeunes*) was issued with four annexes. It is mandatory for all state-subsidised institutions as well as for home-based childcare workers participating in the CSA voucher system. In 2018, a further addendum was added with guidelines for multilingual education. This is intended to give children contact with different languages at an early age and to facilitate language learning. Great emphasis is placed on regarding children as individuals with a unique educational background, on seeing them as social and cultural beings and as equal members of society. Educational work is seen as competence-oriented and aims to promote children's self-determination, participation and responsibility. The main characteristics of non-formal education are, among others, learning by doing, process-oriented and cooperative learning, openness to the needs of the children and participation. Areas of development and learning include social relationships, motor activities, gender education, languages, communication and media, creativity, environment and technology, values, democracy and interculturality.

In the 2021 revision, the individual parts became more closely aligned and more emphasis was placed on participation, children's rights and transitions. Furthermore, multilingual education has been integrated into the main document as multilingualism is considered a transversal mission of non-formal education. Unlike in the formal sector, however, the focus here is not on competences to be achieved.

The National Youth Service (*Service National de la Jeunesse* SNJ) is responsible for the development and implementation of the plan (OECD 2022a).

Institutions for children under the age of 3 draw up their own education plan on the basis of this national framework (European Commission/EACEA/Eurydice 2019, 97).

Formal education sector

Educational guidelines for children from the age of 3 (*plan-cadre pour l'éducation précoce*) and in the 1st cycle of primary school are set out in a compulsory framework plan (*Plan d'études*

pour les quatre cycles de l'enseignement fondamental, 2011) which specifies the skills to be achieved at the end of each cycle.

The 1st cycle of primary school includes the following learning areas: logical and mathematical reasoning, languages (Luxembourgish, French), discovering the world with all the senses, body expression and health, creative expression and community life. Cross-cutting (learning dispositions, attitudes to relationships and emotions, media literacy) and especially linguistic competences are also defined here. The main objective is to develop multilingual and multicultural awareness and to improve knowledge and skills in different languages, including those that are not languages of instruction.

Digital education

From September 2021, the strategy for the development of digital competences in school education ("*einfach digital – Zukunftskompetenze fir staark Kanner*") presented by the Ministry of Education in 2020 has also been implemented in the 1st cycle. The task of the professionals is to introduce children to digital media in an age-appropriate way. In doing so, the key competences of the "5Cs" are to be observed: Critical thinking, Creativity, Communication, Cooperation, Coding/programming (*kritescht Denken, Kreativitéit, Kommunikatioun, Kooperatioun, Kodéieren*). The children should be guided to research independently, to look for solutions and to assess information. They should learn to discuss with one another and learn together with the help of digital media. The best approach is seen as one that promotes playful learning, independence, active participation and the enthusiasm of the children. This comprehensive approach proposed by the Ministry of Education follows the guidelines of a so-called media compass (*Guide de référence pour l'éducation aux et par les médias*) and offers practical support to professionals. The guide includes 16 competences based on the "5Cs", which can be used to build media and digital literacy step by step throughout the course of education (MENJE 2021).

Monitoring – evaluation

Child-related assessment

Only formative assessment is used for children below the age of 3.

In Cycle 1, children are formatively assessed on a quarterly basis (*bilans intermédiaires*), then summatively at the end of the cycle (*bilan de fin de cycle*). Formative evaluation is based on observation and documentation of children's development and learning and is designed to improve performance. The teacher or class team members evaluate the children's work and learning progress in relation to the competences and objectives set out in the national curriculum. Parents are also involved in this exchange about learning progress. At the end of the 1st cycle, it can then be shown that the basic competences have been achieved. The children receive a personal evaluation portfolio. To support the pre-primary teachers, the Ministry of Education has issued an observation instrument and guidelines on formative assessment.

The pre-primary setting usually decides on whether the child is ready to start primary school. If parents have a different opinion on this, the final decision is made by the regional director of education (European Commission/EACEA/Eurydice 2019, 107).

Centre-level internal assessment

For the formal sector, school development plans (*plans de réussite scolaire*) are drawn up every four years as part of self-evaluation procedures. A setting analysis is prepared, based on the

recommendations of the district school director (previously called “inspector”) and the quality agency as well as the specifications of the ministry. In addition to providing quantitative data on finances, equipment and infrastructure, they also describe the strengths and weaknesses of the respective setting.

Institutions that receive state funding are obliged to carry out self-evaluation. A new self-evaluation tool developed by the SNJ is currently being tested in a pilot project. It is planned that the self-evaluation results will also be included in the external evaluations (OECD 2022a).

The results of the self-evaluations, which also take into account the children's views and experiences, are also used to review the institution's pedagogical plan (European Commission/EACEA/Eurydice 2019, 103f, 128).

External Evaluation

– Non-formal sector

Supervision and quality monitoring at all levels of the education system is the responsibility of the Ministry of Education. The Ministry also organises the accreditation of providers, which is regulated by law.

The National Youth Service (*Service National de la Jeunesse, SNJ*), created in 1964, together with the ministerial Department for Children (*Direction générale du secteur de l'enfance*), ensures the control and monitoring of the quality of education in the non-formal sector (OECD 2022a). In 2016, they decided on two main criteria for the evaluation of non-formal institutions: structural quality (e.g. staffing ratio, group size, infrastructure) and process quality (pedagogical approaches, activities, child and professional interactions). The structural quality of non-formal settings is also regulated by the previously mentioned ASFT Act of 1998. Measures for pedagogical, structural and process quality assurance are anchored in the Youth Act (*Loi sur la jeunesse*, 2008, with amendments from 2016): Private providers of ECEC settings that are allowed to accept service vouchers or receive public funds on the basis of a service agreement with the state are obliged to develop a centre-specific conceptual plan on the basis of the national framework. This should describe the implementation of pedagogical goals, measures of self-evaluation and the CPD plans of the professionals and be published on the setting's website. The conceptual plan is valid for three years. In addition, a so-called logbook (*journal de bord*) is required which contains daily and weekly documentation, but also describes the distribution of tasks in the facility as well as the activities with the children and the participation of the professionals in CPD. Professional staff are required to participate in at least 32 hours of CPD over a period of two years (if employed full-time).

The external evaluation of ECEC settings is carried out twice a year by about 30 regional coordinators (*agents régionaux*). They also check the logbook and the CPD participation of the professionals and whether the objectives set in the curriculum for non-formal education are met. Non-formal settings only qualify for state subsidies if they can explain their quality assurance measures, have a general conceptual plan and implement the national framework.

On the basis of these visits, the regional coordinators draw up written reports, which also include comments from the provider. Since the end of 2021, indicators have been developed on the basis of which the regional coordinators are to write their reports within the framework of six quality dimensions (staff, infrastructure and equipment, interaction with children, pedagogical offer, relations with parents, management) (OECD 2022a).

– Formal education sector

For the formal sector, a quality agency (*Service de Coordination de la Recherche et de l'Innovation pédagogiques et technologiques – SCRIPT*) was established in 2009. Among other things, it

supports primary schools in evaluating their performance and in drawing up a conceptual plan for quality development. The agency is integrated into the Ministry of Education and works closely with the University of Luxembourg. External evaluations of the compulsory pre-primary groups are carried out at least twice a year. The overarching supervision lies with the Department of Primary Education (*Direction générale de l'enseignement fondamental*) (OECD 2022a). Since 2018, there is also an independent national school quality observatory (*L'Observatoire national de la qualité scolaire, ONQS*) for the entire school system. A national report is published every three years.

Primary schools have been required since 2017/18 to draw up a school development plan (*plan de développement de l'établissements scolaire, PDS*) with six areas. National targets are set for each of these areas. 15 teachers specialised in school development are assigned to the quality agency SCRIPT to review the PDS and focus on the following areas: Quality improvement of learning, support for children with special needs, organisation of pedagogical support, cooperation with parents, integration of information and communication technologies and cooperation with the relevant education and care service.

The quality of education provided by private, state-subsidised institutions is monitored by national authorities. At the regional level, 15 directorates are responsible for the pedagogical supervision of the schools, the administrative management and the implementation of the school development plans (SNJ 2020).

Inclusion agenda

Children with special educational needs and disabilities

In the **non-formal sector**, since 2009, children with special needs have a legal entitlement to attend a public educational institution and participate in education according to their individual needs. Only 1% of children attend a separate support institution. In 2017, this entitlement was extended to ensure that children receive the support they are entitled to as quickly as possible. To this end, multi-professional teams can provide support and centres that specialise in the needs of these children (European Commission 2021, 103).

In the **formal sector**, the law stipulates that children with special educational needs receive all the support they need and are only offered a place in a support facility if this is not sufficient. This means that whenever possible children are admitted first to a mainstream institution. In some cases, special needs facilities are integrated into the buildings of the regular facilities. The group size in the facilities depends on the respective needs of the children.

At the municipal level, staff from the multi-professional service for special education (*service d'éducation différenciée*) also provide mobile support. A regional commission for school inclusion (*Commission d'inclusion scolaire*) draws up a diagnosis for each child according to his or her needs and, in cooperation with the teacher and parents, an individual education plan (*plan d'éducation individualisé*), which describes goals and further development steps.

Since 2017, inclusive institutions (in the non-formal and formal sector) receive financial support. In addition, different support modalities exist at national level (eight centres of excellence for different impairments and a national inclusion committee), regional level (15 directorates with a coordinating director) and local level (support teachers working with class teachers) (SNJ 2020).

In 2018, in addition to the five existing centres, four new specialist centres in educational psychology (*centres de compétences en psycho-pédagogie spécialisée*) were established to provide

further support and monitoring and are part of the government's strategy for inclusion in education. The focus of the new centres includes learning and behavioural difficulties, and giftedness.

Children with a background of migration

Luxembourg has three national languages: Luxembourgish, French and German. Multilingualism is therefore an important part in all areas of life and needs also to be given a high priority in early childhood. A holistic, child-centred approach in the formal sector aims to introduce children to other languages through play, supported by pedagogical coordinators (*référent:e pédagogique pour l'éducation plurilingue*) who are fluent in Luxembourgish, French or German. A multilingual education programme was also launched in the non-formal sector in 2017 (OECD 2022a).

In 2022, almost half of the total population held a non-Luxembourgish citizenship (47.1%), as well as children under 5 (47.2%). The majority (80.8%) of these persons came from other EU countries, with a similar proportion (77.1%) in the under-5s group (Eurostat 2023c).

Broken down by country of origin, according to national statistics, more than three quarters (78.4%) of the total population in 2023 were EU citizens. Of these, 37.5% were from Portugal, 20% from France and 7.8% from Belgium. Persons from Ukraine made up 1.7% of the foreign population and were the largest group of immigrants in 2022 (4,268), ahead of persons from Portugal (3,633) and France (3,107). In total, there were 180 nationalities in Luxembourg in 2023, eight of which came from the EU. The largest groups from non-EU countries are people from Ukraine and India (Le Portail Statistique 2023a, b).

In 2021/22, 55.8% of the children attending *cycle 1 – précoce* spoke Luxembourgish as their first language followed by 10.3% speaking Portuguese and 8.5% speaking French as their first language. In the same year, Luxembourgish was the first language for 54.6% of children enrolled in *cycle 1 – préscolaire* followed by 14.3% speaking Portuguese and 6.3% speaking French (MENJE 2023a, 22, 27). However, the linguistic repertoires vary considerably if the children's home languages are added rather than focusing on their first languages only (see section on *Current Challenges*).

For immigrant parents and their children, there is information in several languages and the possibility of using an intercultural mediator. On account of the relatively high proportion of Portuguese children (according to Eurostat data 2022, 11.5% of under 5 year-olds), a family language assistant can be present in the class for a certain number of hours. Furthermore, some teachers switch to children's family languages when teaching. In many studies, translanguaging is suggested as a strategy to incorporate the family language and cultural background, as this contributes to the development of the whole semiotic repertoire. Professionals switch spontaneously between languages during play, storytelling or reading aloud (see also Kirsch 2021 and the research section of the ECEC Workforce Profile for Luxembourg, De Moll et al. 2024). Other teachers use children's home languages to value and further develop them as it is understood that mastering the first language facilitates learning the language of instruction. The respect of the family language is part of the programme of multilingual education that resulted from the amendment to the 2016 Education Act. Since 2017, all children are introduced French as a second language and potentially encounter their peers' family languages (European Commission/EACEA/Eurydice 2019, 116f; SNJ 2020).

Finally, teachers can use two language support programmes developed mainly for Portuguese-speaking pre-primary children. The first language development programme MOLLY (Mother-tongue Oral Language and Literacy for the Young) lasts 30 weeks and promotes, among other

things, the vocabulary, narrative and phonological skills in the children's first language. The reading support programme LALA (*Lauter lëschtteg Lauter*), which was developed especially for multilingual children, is primarily intended to support children who show a risk of reading or spelling difficulties in the first cycle before entering primary school. The aim is not to pre-empt reading skills, but to awaken the anticipation of reading (University of Luxembourg 2018, 133f).

Parental leave arrangements⁵

Compulsory **Maternity leave** (*congé de maternité*) lasts 20 weeks, eight of which must be taken before the birth, 12 after the birth. A sum of €12,541.18 (equivalent to five times the minimum wage of an unskilled worker) is paid per month. The condition is that the mother must have been a member of a social insurance scheme for at least six months during the year preceding the birth.

Paternity leave (*Pappecongé, congé extraordinaire*) amounts to ten working days, of which the first two days are paid in full by the employer. For the remaining days, the employer receives reimbursement from the state based on a maximum of €12,541.18 per month.

Parental leave (*congé parental*) is granted for four to 20 months per parent (depending on the hours worked and the option chosen). It is an individual, non-transferable entitlement. Full-time employed parents (40 hours per week) can choose between different options in terms of duration and payment: (1) take four or six months of full-time parental leave, (2) choose eight or 12 months of part-time parental leave, (3) four months within a maximum period of 20 months, or (4) one day per week for a maximum of 20 months. For parents working part-time (20 hours per week), the first two options are available. Parents who work 10 hours a week or are in training can choose option 1. Both parents can take parental leave at the same time. The pay depends on income, average hours worked in the last year before parental leave and the option chosen. For example, full-time employees who choose option 1 receive between €2,508.24 and €4,180.39 per month. The prerequisite is that the parent has worked continuously for at least one year before the start of parental leave.

Since 2016, the number of fathers taking parental leave has been increasing and exceeded the number of mothers (7,160 fathers vs. 5,529 mothers) in 2022. However, mothers and fathers took different parental leave options: 68% of mothers chose the full-time version, 21% the part-time version and 11% options 3 and 4. In contrast, 30% of fathers took full-time parental leave, 22% the part-time version and 48% options 3 and 4.

Current challenges for the ECEC system in Luxembourg

Country expert assessment by Claudine Kirsch

Since the last SEEPRO report, the Luxembourg population has grown more and more diverse with **monolingual children now a minority**. This complex and ever-evolving cultural and linguistic diversity poses considerable socio-political and educational challenges for Luxembourg and the ECEC system (ONQS 2022). These will be outlined following a brief consideration of the current situation, which differs considerably from that in other European countries. While the following paragraph focuses on children's plurilingual repertoire, it is clear that language diversity

⁵ The brief overview in this section is based mainly on the country note for Luxembourg by Frédéric Berger Ioana Salagean and Marie Valentova in the *International Review of Leave Policies and Research 2023* (see *References*).

is only one of many characteristics of children’s heterogeneous experiences and living conditions.

A recent survey of 8,342 parents of 10,090 children aged 0–4 shows that the most frequently spoken languages at home are Luxembourgish (54.1%), French (15.8%), and Portuguese (12.0%), with most children speaking two languages (SNJ 2023a). Two-thirds of the parents claimed they spoke two or more languages with their children, most frequently combining Luxembourgish and French or French with English. According to the parents, however, the children did not always use the same language(s) with the parents as the parents use with them. When speaking to siblings, two-thirds of the children used only one language, in the main Luxembourgish or French. About 15% of the siblings were reported to communicate in Luxembourgish although their parents did not speak this language. The linguistic profiles become even more diverse and complex when one considers children’s exposure to books, music, and television as the role of German and English grows considerably. Finally, given that 61% of children attended early childhood institutions in 2019 (Hornung et al. 2023) and that these centres have a multilingual policy, children have additional opportunities to encounter and develop languages⁶. According to Hornung et al. (2023), children encounter much Luxembourgish and some French in *crèches*, listening to the languages either separately or in combination. This finding helps us understand why 73.9% of parents reported in the SNJ survey that their children were exposed to Luxembourgish on account of the languages used at home and in ECEC. The role of ECEC settings in familiarising children with Luxembourgish is thus significant as only 55.7% of children were exposed to Luxembourgish at home (SNJ 2023a). Similarly, 61.5% of children are reported to encounter French (and 17.0% German) at home, but 74.3% (and 23.0%) were in contact with French (and German) in ECEC centres (SNJ 2023b, 30). A survey with parents of first graders aged 6 shows similar findings, indicating that about half of the children encountered Luxembourgish at home when they were 3 years old, although only a third of them spoke it as their first language (Hornung et al. 2023). Luxembourgish appears to be the main language of communication among first graders who enter a multilingual education system where they develop literacy in German, continue to develop oral French, and are taught in German or Luxembourgish, depending on the subject. This multilingual education system is highly challenging and does not offer the equal opportunities the Ministry of Education aims for. Each year, evaluation reports show that children of families of lower socioeconomic status, migration background, or children whose home languages differ from the instruction languages, do not reach the required minimum standard in German reading and comprehension and in mathematics in cycle 3 (Hoffmann et al. 2018; Hornung et al. 2021). Based on the vision that “every child has a right to a high-quality education”, the Education Ministry recently took several measures to strengthen equal opportunities (MENJE 2023c). For instance, non-formal education is now free of charge, all children have free meals, and a national network of resource centres and a national plan for help with homework have been instituted. Furthermore, there are currently six state-run European international primary schools, some with preschools, and six state-run European international secondary schools that offer tuition through the medium of English, French, Portuguese or German. Perhaps as a consequence of the programme of multilingual education and the dominance of French, the Ministry launched a pilot project in 2022 to help children to become literate in French and to teach maths in French.

Next, we outline some challenges particular to the ECEC system in Luxembourg.

⁶ Since the introduction of *the éducation plurilingue* in 2017, practitioners in both the formal sector (early education and pre-primary) and the non-formal sector have to familiarise children with Luxembourgish and French and value their home languages.

1. An evaluation of the ECEC system (Hornung et al. 2023) shows that children benefit academically if they attend an ECEC setting. The findings are based on tests in Luxembourgish and German listening comprehension, early literacy, and maths, which children took in year 1, a few months after having finished pre-primary education. The results show that children scored highest in these tests when they had attended both early education (*précoce*) and an ECEC service. Their scores were slightly lower when they attended either early education or a childcare setting and lowest when they did not attend any ECEC institution. Children from a Luxembourgish-speaking background and from families with higher socio-economic backgrounds outperformed other children. Performances were mostly influenced by family background variables (e.g., socioeconomic status, home language) and child-related variables (e.g., age, gender). The results confirm that not all children benefit equally from ECEC and that the Education Ministry needs to continue to invest in equal opportunities.
2. To improve the effectiveness of ECEC provision, it is necessary to increase continuity between the formal and non-formal sector with a view to reflecting on similarities and differences between pedagogical approaches in both domains. Apart from helping children develop and learn, the discussion contributes to the current debates on the meaning of “non-formal education” and the potential “schoolification” of the non-formal sector. It may also encourage professionals from both sectors to collaborate. According to the National Observatory of Educational Quality (ONQS), professionals do not show the necessary respect for other ECEC institutions and are not willing enough to consider other viewpoints and integrate them in their own work (ONQS 2022).
3. In relation to the programme of multilingual education, more continuity between the formal and non-formal sectors could guarantee that language skills and positive attitudes towards languages developed in ECEC are built upon in primary schools (MENJE 2023c).
4. Home-based childcare providers, primarily female, represent a special category of early childhood personnel and play an essential role in Luxembourg in what is essentially an ethnically segregated childcare market. Therefore, if the ECEC system is to improve social inclusion, the position of these home-based carers must be clarified and regulated within it.
5. Standardisation appears to be an issue, particularly regarding public and private providers in the non-formal sector. The lack of standardisation regarding the professionals’ skills and the diversity of human and material resources in ECEC institutions may be instrumental in creating early inequality.
6. According to the OECD (2022b), the quality of the ECEC services varies greatly and this diversity makes it difficult to define national criteria to monitor, evaluate and improve quality.
7. In the last years, the SNJ has instituted several measures to monitor and evaluate quality in ECEC: the national framework; the statutory requirement to write a pedagogical concept every three years that is validated by the regional coordinators; the statutory requirement to document pedagogical activities in a logbook; the statutory requirement for all staff to take 32 hours of CPD over two years. A recent survey with educators in the non-formal sector, parental assistants, and regional coordinators indicated that they all agreed that the quality of the pedagogical practice has improved (MENJE 2023c). The survey results furthermore showed that there is a need for a simplification of the national framework and of the structure of the logbook, for more guidance on how to write the pedagogical concept, as well as for more CPD. The SNJ is addressing all these issues

and, as a consequence, one could expect more monitoring and higher quality in the years to come.

8. On account of the split ECEC system (formal versus non-formal; state versus private), the very different working contexts and conditions (e.g. languages of children and staff, expectations) and the various organisational and pedagogical orientations, the multilingual education programme is implemented in different ways both in the formal and the non-formal sector and within institutions of the non-formal sector. There is a need to research the outcomes of the programme in the formal sector. Some studies in the non-formal centre provide insights into the implementation and the language use in the organisations. While studies (Kirsch and Aleksić 2021; Kirsch and Bergeron-Morin 2023) have shown that language practices in ECEC centres have become more diverse, they have also pointed to existing language hierarchies. Furthermore, they confirm that some professionals continue to be unsure of how to implement the programme and some report lacking competences in Luxembourgish. This is particularly the case in large commercial centres where many French-speaking professionals commute daily from the neighbouring countries to work in Luxembourg. These centres, which offer lower wages, find it challenging to recruit Luxembourgish-speaking staff who communicate or offer activities in this language. These findings show that the policy remains difficult to implement in similar ways in all settings. Furthermore, the differing conditions make it difficult to give professionals guidelines on how best to implement the programme.
9. The multilingual education programme aims to contribute to equal opportunities by giving all children better starting positions. The policy has, however, been criticised for its vague and unclear goals as well as for the absence of instruction in German which would help prepare all children for literacy development in primary school (Hornung et al. 2023). The current focus on Luxembourgish and French in ECEC could legitimise existing language hierarchies and privilege Luxembourgish as well as Luxembourgish-speaking children (Simoes 2023). It seems that a clarification of the goals of the multilingual education programme is necessary. This may also contribute to ease of implementation.
10. On account of the high language diversity, it is difficult to identify “the best” way to take account of and build on children’s language repertoires in the formal and non-formal sectors. While individualisation and differentiation are key principles in non-formal education (MENJE and SNJ 2021, 23), there is a need to help professionals systematically observe and document children's language practices to offer differentiated linguistic support (SNJ 2023a).
11. Inclusion is an important aim in the formal and non-formal sectors. In the latter, it is hoped that ECEC institutions develop inclusive practices with the help of the pedagogical coordinators in the forthcoming years, similar to the implementation of the programme of multilingual education. Given that the tasks of the ECEC professionals continue to grow, it is essential to guarantee that all staff are well-qualified and have access to continuous guidance and training. This is even more crucial in Luxembourg where the workforce is highly heterogeneous in relation to their social, linguistic and cultural backgrounds, qualification, country of qualification, citizenship, and country of residence (Honig and Bock 2018).
12. As seen above, the quality of initial professional education is important. There are, however, currently neither study programmes for teachers to become early years specialists nor for educators to develop this specialist profile. Furthermore, as in many other European countries, Luxembourg is currently experiencing challenges in the recruitment and retention of staff.

13. There was little consistency in the quality of CPD programmes. As a consequence, the National Youth Service now coordinates its quality. While continuing this effort, it is crucial also to ‘train the trainers’ and regional coordinators (*agents régionaux*).
14. Over the last years, the quality of ECEC has begun to be researched and monitored. There are, however, still few qualitative and quantitative studies of the non-formal sector and there is a need for a national database including all sectors, to guarantee sustained monitoring and contribute towards high-quality provision (Hadjar et al. 2021; Honig et al. 2015; Hornung et al. 2023).

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Luxembourg was 645,397. Population numbers have increased steadily over the last 20 years (2000: 433,600, 2010: 502,066, 2020: 626,108) (Eurostat 2023a).

Total fertility rate

In 2021, the average total birth rate in the EU27(2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries (EU27+6) was in France (1.84), the lowest in Malta (1.13). At 1.38, Luxembourg was below the EU27 average (Eurostat 2023d)⁷.

Children under age 6

Table 7

Luxembourg: Number of children under age 6 in the population, 2022

Age	Number of children
Under 1 year	6,671
1 year-olds	6,670
2 year-olds	6,724
3 year-olds	6,803
4 year-olds	6,857
5 year-olds	6,832
Total 0 to under 6 year-olds	40,557

Source: Eurostat 2023a

The proportion of children under 3 years of age in the total population was 3.1% in 2022, and that of children under 6 years of age was 6.3%. These shares were well above the EU average in

⁷ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Single households with children under age 6

81.7% of households with children under 6 were couple households in Luxembourg in 2022. Households with single parents accounted for only 2.2% – the majority of them single mothers (1.5%).

Table 9

Luxembourg: Households with children under age 6, 2022

Household type	Total households	Share of all households, in % ⁺
Total households	66,700	
Couple households	54,500	81.7
Other types of households	10,700	16.0
Total single households	1,500	2.2

Employment rates of parents with children under 6 years of age

In Luxembourg, in 2022, the overall employment rate for men (15-64 years) was 76.4% and for women 70.4% (Eurostat 2023e).

In 2022, 81.9% of women and 90.4% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were thus above the EU EU-

⁸ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

average (87.2%); those of mothers were the highest in the EU27 (average 63.6%) (Eurostat 2023g).

Table 10a

Children at risk of poverty or social exclusion¹¹

In 2022, 22% of children under 6 were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 19.4% (EU: 21.6%). In 2020, 2.4% of children under 6 and 1.6% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023h, i).

About the author

Valerie Sollars is a full-time professor and resident academic at the University of Malta within the Faculty of Education Department of Early Childhood and Primary Education. A former Dean of the Faculty, she was appointed Pro-Rector for Strategic Planning and Sustainability in July 2023. She has various research interests in ECEC but has been particularly involved in policy development and quality issues which impact early years services.

Introductory note: Overview

Administrative responsibility for childcare services catering for under threes was transferred from the Department for Social Welfare Standards, within the then Ministry for the Family & Social Solidarity, to the Ministry for Education and Employment on July 1st 2016. This was a laudable move which brought all services associated to early childhood education and care under one entity. However, thus far this has resulted in it being merely an administrative shift, where childcare services have been added on to the responsibilities of staff within various departments at the Ministry for Education.

Shifting the administration of childcare settings to the Ministry for Education was in part motivated by the National Curriculum Framework (NCF) (MEDE 2012) which foresaw an early years cycle that promotes the education and care for 0 to 7 year-olds. Bringing all services under one ministry had also been a recommendation in policy documents (MEDE 2013) in line with one of the OECD (2001) conclusions. However, in what appears to be an absence of a conceptual understanding of what the early years cycle implies in relation to the potential benefits of high-quality settings requiring highly trained staff skilled in managing, leading and working with young children and families, a decade later the ECEC services in Malta still comprise three distinct stages, namely:

1. Non-compulsory childcare services for under threes
2. Non-compulsory kindergarten settings for 3 to 5 year-olds and
3. The first two years of compulsory school, for 5 to 7 year-olds, traditionally and currently still part of the six-year compulsory primary cycle¹.

The distinct nature of the three stages is reinforced by policies and practices which contribute to fragmentation, making it difficult to establish a unified early years sector.

1. No single directorate is explicitly tasked with all matters related to ECEC.
2. Regulations for licensing a childcare setting are different to those which apply for kindergarten settings. Licences to operate a kindergarten are identical to those applied to schools.
3. Unlike childcare settings, most kindergarten settings are located within primary schools and this has had an impact on how kindergartens are perceived and how they operate. Despite childcare and kindergarten services being non-compulsory, the latter has been and continues to be perceived as a downward extension of compulsory school. In addition, the length of the 'school day', holidays, certain practices and routines, the sharing of physical resources (such as playgrounds), pedagogies associated with 'schoolification' and academic work and expectations about what kindergarten children should achieve before compulsory school, have all impacted the functioning of kindergartens.
4. Staff qualifications and working conditions are another example of the dissonance across the early years provision. Qualified, graduate teachers (EQF 6 and EQF 7) are recruited to work with children from the age of 5 whereas in childcare and kindergarten, EQF Level 4 qualifications are the norm. As will be illustrated elsewhere in this chapter, minimum qualifications required of staff within kindergarten settings are beginning to improve with an EQF Level 5 qualification being the minimum expected since 2021. An EQF Level 6 qualification in early

¹ For the purpose of this report, attention will be given to the workforce engaged with the under 5 year-olds. Where necessary and to help readers contextualise and position the information about childcare and kindergarten practitioners, salient differences between the non-compulsory and compulsory sectors of the Early Years Cycle will be included.

years is also available for kindergarten educators (KGEs) but this is not recognised as a teaching qualification and therefore salaries for staff employed at kindergarten, even with an EQF Level 6, are lower than those who have an EQF Level 6 teaching qualification.

5. Top-up courses offered by different entities are providing practitioners already in employment the opportunity to improve their qualifications. Such improvements lead to mobility away from childcare settings towards kindergarten and even primary school, where working conditions, salaries and career path mobility are more attractive.

The rapid growth in the number of childcare settings for under threes which has occurred in the last decade is set to continue. The introduction of the Free Childcare Scheme in April 2014 targeted children and families where parents were working or studying. This was explicitly motivated by labour force demands and the need to increase female participation in the work force. In reporting to the Parliamentary Committee for Family Affairs (2023b), the CEO of JobsPlus claimed that the desired increase has definitely been achieved: from 51.7% of 20–64 year-old women in employment in 2014, there are currently 75.2% of women in the labour market, leading to a situation where not only has this 23.5% growth been achieved in just under ten years, but Malta currently surpasses the EU27 average by over 5% points. Free childcare provision is expected to be available for everybody. One of the electoral proposals made by the Labour Party in its March 2022 manifesto (MLP 2022, 68) relates to making childcare freely available to any child, irrespective of parents’ economic activity. Once again in the history of early childhood education services in Malta, the sector will experience a situation where primary consideration is given to availability and accessibility of services without due attention being given to the quality of the learning experiences being offered or to ensuring that highly qualified staff are available.

Retrieving data about the staff and the qualifications of Childcare and Kindergarten Educators (KGEs) remains a challenge since relevant data are maintained by different entities. Within the childcare system, where staff turnover is a regular feature, there is no obligatory reporting system in place for staff mobility or termination of employment. Data about childcare employees are collated by the managers ahead of the annual external audit and reviewed by Education Officers (EOs) within the Education Review Section (ERS) at the DQSE during their visit. Data about KGEs are collected by the Education Resources Department within the Directorate for Educational Services (DES). Information is collected annually at the beginning of each scholastic year from the State and the two non-State sectors (Church and Independent (Private) schools) to compile the School Statistical Returns (SSR) report. Schools must provide information about all employees, irrespective whether they are new or continuing members of staff.

Most of the data used for this report were obtained between May 2021 and July 2022 and were made available upon request. The assistance offered by staff from several departments and entities is gratefully acknowledged (see Chapter *Acknowledgements* at the end of this report).

1. ECEC governance in Malta

The Ministry for Education, Sport, Youth, Research and Innovation (MEYR) has overall responsibility for educational direction, policy development and decision-making. Within the Ministry, directorates relevant for ECEC include:

1. The Directorate for Educational Services (DES) which, among others, includes a department for Educational Resources and a department for National School Support Services (NSSS). The latter includes psycho-social services and inclusive education support. These services are available for children of all ages and their families in any education sector (Church, State and Independent schools); and
2. The Directorate for Quality and Standards in Education (DQSE) which acts as the regulatory body for all educational institutions (State, Church and Independent) at all levels of education, from childcare and kindergarten through compulsory primary and secondary school (0–16) and is responsible for establishing quality standards. This Directorate comprises two sections relevant to the early years, namely the Regulatory and Compliance Section (RCS) and the Education Review Section (ERS) (DQSE 2023a).

Childcare services

According to the latest list of childcare settings (January 2024) there are currently 191 settings for under threes including 11 registered and 180 licensed settings which can cater for a maximum of 7,815 children (DQSE 2024). By the end of October 2023, 188 settings could cater for 7,825 children but only 5,500 children were reported to be making use of these services (Jobsplus)². Elsewhere, staff from DQSE reported that a total of 5,744 children were attending

² CEO of JobsPlus reporting to the Family Affairs Committee, Parliament of Malta, 5th December 2023

childcare centres in 2023 (Parliament of Malta, Family Affairs Committee 2023a). The list of settings is updated regularly as is the status of the settings which are given their license by the DQSE. With the implementation of the Education Act Cap 605 in 2021 (Ministry of Justice 2023*), childcare centres are now recognised as educational institutions. Legislation has finally made it mandatory for all childcare services to be licensed and therefore be regulated by the DQSE Standards, irrespective of whether settings benefit from the Free Childcare Scheme. 13 childcare settings, of which 12 are currently in operation, are government subsidised and managed through the Foundation for Educational Services (FES 2023). Five settings operate within workplaces where priority is given to the children of the employees. Five operate through public-private partnerships (DQSE to the Parliament of Malta, Family Affairs Committee 2023a). The remaining childcare settings (N=169; 88.5%) are privately-owned and managed. These settings are respectively referred to as ‘work-based’ and ‘centre-based services’ where the premises are equipped and solely used for childcare (MFED 2021a, 10). In 2023, there were 3,529 new entrants into childcare services. By the end of October 2023, 8,627 children had used childcare services during this year (JobsPlus to the Parliament of Malta, Family Affairs Committee 2023b). Setting up a childcare setting involves two separate processes: an application with the Planning Authority (PA) followed by the Registration Process with the DQSE (2024). Consultation between the PA and DQSE ensures that proposed plans are according to the *National Standards for Early Childhood Education and Care Services (0–3 years)*³ (MFED 2021a) and the *Registration Criteria for Early Childhood Education and Care Services (0–3 years)* (MFED 2021b). A temporary licence is given to settings where an initial on-site visit does not result in full compliance. This becomes a provisional licence when pending issues are addressed and resolved to the satisfaction of the DQSE. According to information communicated to operators of childcare settings via a letter circular (DQSE 2022), “*the new Education Act Chapter 605 Articles 21–31, published in September 2021 states that all childcare centre providers are to be in possession of a valid licence to operate. To this effect, from 2022 a licence to operate childcare facilities will be issued/renewed by the DQSE, following the outcomes of external review process/es based on both Quality Area 1 and Quality Area 2 of the National Standards for Early Childhood Education and Care Services (0–3)*”.

Kindergartens

The DQSE is also responsible for the regulation of all **kindergarten services** irrespective of whether these are within State, Independent or Church schools.

1. The State sector is the largest of the three as kindergarten settings are attached to every primary school. State primary schools are available in every town/village in Malta and the island of Gozo. There are 68 state primary schools, organised within ten Colleges⁴, 64 of which offer KG services, together with the first three years of compulsory primary school for 5 to 8 year olds (MEYR 2023). The remaining primary schools offer education services for the final three years of compulsory primary education (8 to 11 year-olds). Kindergarten

³ This will be referred to as the National Standards in this document.

⁴ Government schools have been organised into College networks since 2005. There are nine State Colleges in Malta. Each College consists of approximately 4 or 5 primary schools from villages/towns in relatively close proximity together with the middle and secondary schools which children from the cluster of primary schools in the College will attend as they progress through the education system. The 10th College is the Gozo College which constitutes all 11 primary schools and the two secondary schools.

settings which cater for children between the ages of 2 years 9 months to 5 years 6 months⁵, have been under the responsibility of the Ministry of Education since 1987⁶.

2. Kindergarten provision is available in 19 Independent (private) schools. Among the Independent sector, ten settings started out as childcare services, gradually extended their operation to include kindergarten services. In the remaining independent settings, kindergarten services are established within schools which also offer compulsory education (DQSE 2023b).
3. Among the Church schools with kindergarten facilities, most welcome children from the age of four rather than at the age of three. There are 18 Church schools in Malta and five in Gozo with kindergarten services (Archdiocese of Malta 2022a, b).

According to data from the Education Strategy and Quality Assurance Department, at the end of February 2024, the proportion of kindergarten children attending state and independent schools amounted to 73.6% and 15.7% respectively; 10.7% attended church schools. 3 year-olds accounted for most children in state and independent schools, whereas in church schools, children were mostly 4 and 5 years old. 9,523 children were attending kindergarten settings during academic year 2023/2024.

Table 1

Malta: Distribution of children in kindergarten by age and sector

Class level	Academic year 2023–2024			
	State	Church	Private	Total
Kindergarten 1 (3 year-olds)	4,108	299	797	5,204
Kindergarten 2 (4 year-olds)	1,897	721	701	4,319
Total Pre-Primary Level	7,005	1,020	1,498	9,523

Source: personal email communication of the Research Unit at the Office of The Director General, Education Strategy and Quality Assurance Department, 23 February 2024

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Two main categories of staff work directly with children within the non-compulsory early childhood education and care settings: **Childcare Educators**⁷ are the core practitioners working with

⁵ Compulsory education starts in the year a child turns 5. Children are admitted to school at the start of the scholastic year, end of September/beginning October.

⁶ Between October 1975 (when State kindergarten settings were introduced across the island) and 1987/88, responsibility for kindergarten shifted twice between the Ministries of Social policy and Education.

⁷ The main carer used to be referred to as a “Childcare Worker” or “Childcare Assistant”. The term changed to “Childcare Educator” with the *National Standards for ECEC (0–3 years)* (MFED 2021a). Since “this is an official document which was launched nationally the new title is recognised” (email communication with Director QA, 9th June 2022).

the under 3 year-olds in childcare settings; and **Kindergarten Educators**⁸ (KGEs) work as core practitioners in kindergarten settings with 3 to 5 year-olds.

Other staff in childcare settings acknowledged in the National Standards (MFED 2021a) include the ‘Legally Responsible Person’ (LRP), ‘Centre Managers’ and ‘Childcare Assistants’. Although responsibility for ensuring structural, process and outcomes quality in an ECEC centre rests with the LRP, the day-to-day running of centres is often delegated to a Centre Manager. In some small settings, one person takes on multiple roles.

In **kindergarten** settings, in addition to the KGE, there may also be ECEC teachers and KGEs employed as relievers or supply staff. There are also Learning Support Educators (LSEs) who are assigned to statemented children. LSEs do not have any specific training or qualification in early years. They may be responsible for individual children or assigned more than one child depending on the needs of the children.

Staff in childcare settings⁹

Although the National Standards (MFED 2021a) refers to the LRP, the Centre Manager and the Childcare Educator, the updated National Occupational Standards (NOS) (MFHEA March 2022a, b) address the knowledge and skills expected of Childcare Educators with an MQF Level 4 qualification and the knowledge and skills expected of Centre Managers, who, in some settings are referred to as supervisors or co-ordinators and who are expected to be in possession of a MQF Level 5 qualification. *Table 3* summarises the broad criteria identified in the NOS for the main staff working in childcare.¹⁰

Table 2

Malta: National Occupational Standards for Childcare Educators and Centre Managers (MFHEA, March 2022a, b)

NOS for Childcare Educators MQF Level 4 (MFHEA 2022a)	NOS for Childcare Centre Managers MQF Level 5 (MFHEA 2022b)
Understanding child development	Understanding child development
Protecting and promoting children’s rights	Protecting and promoting children’s rights
Engaging in quality interactions and developing positive relationships	Developing and maintaining a safe, secure, and healthy environment
Implementing child-centred, inquiry, and play-based learning and care programmes	Collaborating with all stakeholders
Meeting physical development and care needs to support healthy development	Working in partnership with parents
Reflecting on practice and developing professional competences	Leading to enhance the quality of learning and care
Promoting positive behaviour	Promoting the centre’s inclusiveness in the social, physical, and learning environment
Embracing diversity	Establishing ongoing professional growth
Supporting inclusive early childhood education and Care	Implementing and monitoring an internal review process

⁸ Staff working with 3 to 5 year-olds were referred to as Kindergarten Assistants since the introduction of State KG in 1975. This was a misnomer as kindergarten staff never assisted anyone. It was rectified with the Government-MUT sectorial agreement (MEDE 2017).

⁹ Details about the roles of staff in childcare are taken from the *National Standards for ECEC (0–3 years)*

¹⁰ The publication of these revised NOS was communicated to all service providers via an email and an announcement uploaded to the MFHEA website (MFHEA 05/2022; 14th March 2022) which states that with immediate effect, courses and programmes of study for staff should reflect these NOS (MFHEA 2022c).

NOS for Childcare Educators MQF Level 4 (MFHEA 2022a)	NOS for Childcare Centre Managers MQF Level 5 (MFHEA 2022b)
Working in partnership with parent ¹¹	Meeting regulatory requirements
Developing and maintaining a healthy, safe, and secure environment	
Meeting and maintaining regulatory requirements	

Childcare Educators working within the centre are expected to contribute to the day-to-day running of the centre, implement policies and procedures that reflect high quality provision of learning experiences. Childcare Educators are expected to plan, monitor, assess and respond to children’s interests and needs, by interacting with children and providing a language-rich environment which promotes both English and Maltese. Finally, they are expected to collaborate with parents, other members of staff and other stakeholders.

Childcare Educators are expected to be at least 18 years or over and in possession of a minimum MQF Level 4 qualification with at least 60 ECTS in Early Childhood Education and Care; a pass at MQF Level 3 in Maltese or Maltese as a Foreign Language and English; a valid Certificate in Paediatric First Aid and a valid Food Handling Certificate.

Childcare Assistants

The National Standards (MFED 2021a) allow for the employment of Childcare Assistants. They are expected to (a) work in collaboration with the Centre Manager, the Childcare Educator being assisted as well as parents; (b) assist and support the Childcare Educator in the provision of care, learning and play; and (c) ensure that the children are in a safe and comfortable environment and receive the personal attention required to promote learning, respectful care, and children’s holistic wellbeing. Childcare Assistants were initially introduced to childcare settings in January 2018, at a time when managers and owners complained that they were unable to recruit suitably qualified staff and had therefore been informed that anyone over the age of 25 could be employed as an ‘assistant’ to manage a group of children. However, the revised National Standards (MFED 2021a) expect Assistants to be 23 years or over and show evidence of enrolment with an accredited institution licensed with MFHEA to offer training in childcare theory and practice at MQF Level 3 with at least 30 ECTS that is specifically organised for the Assistant to the Childcare Educator. They need to be able to communicate effectively in Maltese and English and have a valid Certificate in Paediatric First Aid and a valid Food Handling certificate. This requirement goes some way to modifying and addressing the introduction of ‘assistants’ in the workforce.

Data held by the DQSE (2022) recorded a total of 1,260¹² employees across the childcare settings in operation classified in the following way:

- 15% (N=189) as Centre Managers, supervisors, co-ordinators, assistant managers;
- 81% (N=1,023) as Childcare Educators of which 15% (N=188) are identified as ‘childcare educators in training’;
- 2.3% (N=29) as helpers/cleaners; and
- 1.3% (N=17) as the LRPs, owners or directors.

¹¹ Refers to any primary caregiver

¹² The data are reviewed and updated regularly. Some records were eliminated from the original data file where notes indicated that individuals had moved within or away from the sector but whose mobility had not been traced.

Staff in kindergarten settings

With some exceptions, **Kindergarten Educators (KGEs)** work within a school structure and in these circumstances, KGEs are the sole persons responsible for a group of children assigned to their classroom. The Head of School has the overall responsibility for the kindergarten setting in addition to overseeing the management and leadership of the primary school where the kindergarten is located. In large schools, an Assistant Head of School is frequently assigned the responsibility of overseeing the kindergarten section. This delegation of responsibility depends on the school population and the distribution of roles determined by the Head. Neither the Head nor the deputy/assistant Heads of schools are expected to have any qualifications specifically related to the early years and most of them would have had a teaching career and experience in a primary or secondary school. Within kindergarten settings which operate independently of any school, a Kindergarten Manager with the role of setting head does not require any qualifications but only a clean police conduct and the POMA (Protection of Minors Applications) clearance.

KGEs are responsible for working directly with the children. State and Non-state schools follow the same rules and procedures for the engagement of Educators. The *Collective Agreement between the Government and the Malta Union of Teachers (MUT)* (MEDE 2017) for State schools and the *Collective Agreement between the Church Authorities and the MUT for Education Grades in Church Schools and in the Secretariat for Catholic Education* (Archdiocese & MUT 2018)¹⁴ entertain the possibility of an Early Years Teacher.

¹³ The nomenclature in some instances is not officially recognised (example "Senior Childcare Practitioner" or "Senior Childcarer") and would have been flagged in the official database maintained by the DQSE.

¹⁴ Independent schools have separate Collective Agreements with the Union or no Collective Agreement with any Union. In this chapter, subsequent references to these documents, will refer to the Collective Agreements 2017/2018).

“The parties agree that Kindergarten education will be covered by the grade of teachers as per clauses in section 26. In the absence of a sufficient complement, Kindergarten education may be provided by Kindergarten Educator III” (Article 25.2, 30).

Individuals eligible for employment as kindergarten teachers would have a teaching qualification in ECEC (EQF Level 6) which would have included at least one practice placement in the compulsory education years (with 5 to 7 year-olds), thus making them eligible for a teaching warrant in accordance with the Education Act. For a relatively short period of time (2009–2017), the University of Malta (UM) offered a B.Ed. (Hons) in ECEC aimed at applicants who in line with the NCF (MEDE 2012)-would want to work as qualified teachers with kindergarten children or with 5 to 7 year-olds in the first two years of compulsory education¹⁵. This qualification would have put staff in kindergarten on a par with teachers in primary and secondary schools. However, most of the graduates from the B.Ed. (Hons) in ECEC were deployed to work in primary schools rather than with the non-compulsory kindergarten years and bar a couple of exceptions, this practice persisted. Since October 2016 the Faculty of Education at UM discontinued all its B.Ed. (Hons) programmes replacing it with a Master’s degree in teaching and Learning (MTL) for prospective teachers wanting to teach at primary or secondary level. Ministerial direction at the time was to introduce a BA (Hons) in ECEC for prospective KGEs. The BA (Hons) is currently the highest non-teaching qualification for practitioners wanting to work with kindergarten children. However, it is not mandatory for prospective KGEs to have an EQF Level 6 qualification to gain employment in kindergarten settings.

The Collective Agreements (MEDE 2017, Archdiocese and MUT 2018) do not provide a specific description for a “kindergarten teacher” but the description for a ‘teacher’ (Article 26) is collated under one section irrespective of the age group of children the individual would be responsible for.

The duties of KGEs are described as follows in the Collective Agreements.

“... to provide appropriate, relevant, stimulating and engaging learning experiences for all learners under his/her care at kindergarten level as part of the Early Years Cycle. The KGE is expected to collaborate with other educators who may be supporting this endeavour within or beyond the classroom, under the leadership of the school’s Senior Management Team, also by engaging in the development of a Community of Professional Educators, including through School Development Planning. ... the KGE is to:

- (i) keep abreast of developments in the Early Years Cycle, including but not limited to curriculum, pedagogy and recording/reporting of developmental progress*
- (ii) create optimal conditions which facilitate a child’s holistic development according to guidelines provided by the national and local designated authorities*
- (iii) plan, create and evaluate a stimulating, enjoyable and positive environment conducive to learning through a variety of experiences, striking a balance between educator and learner led activities, which predominantly include structured learning through play, and informal creative play strategies*
- (iv) assist, record and report children’s language, physical, emotional, cognitive, social and spiritual development by planning relevant and stimulating, challenging but achievable experiences and activities that meet the individual learners’ needs*

¹⁵ The course was initially offered as a 180 ECTS five-year part-time programme to attract practising KGEs (2009–2016) and between 2013–2017 it was offered as a 240 ECTS four-year full-time programme. EQF Level 5 graduates from MCAST were allowed to join the BEd (Hons) course for a max of 120 ECTS. In all, 131 individuals graduated from this BEd (Hons) (ECEC) programme (data provided by the University of Malta 2022).

- (v) *broaden the child's knowledge and understanding of the world around him/her and the ability to respect diversity, also through the creation of opportunities for communication and establishment of social routines*
- (vi) *give full attention to children's language and literacy efforts and arranging environments which are symbol rich and interesting.*" (Para 25.1, 30)

Despite identical roles and duties, KGEs have a designation of KGI or KGII or KGIII. The different designations are associated to the initial professional qualification and correspondingly imply different salary scales. Staff designated as KGI have a qualification pegged at EQF Level 5 with 30 ECTS; KGII staff have a qualification at EQF Level 5 with 60 ECTS and KGIII refers to staff who have an EQF Level 6 (BA (Hons) qualification) of 180 ECTS. These are the minimum qualifications expected since 2021. As will be shown elsewhere in this section, most KGEs in employment have an EQF Level 4 qualification, this being the minimum qualification requirement until 2020.

Within the State sector, apart from the regular KGEs with a full-time appointment, 147 KGEs are employed as Relievers. The latter take over a group of children when the regular KGE is away from school; or when there is non-contact time/curriculum time. KGE Relievers are sent to every College and in turn, Colleges assign Relievers to a school according to needs. All state schools can make use of the services of KGE Relievers. The qualifications of Relievers are identical to those of the regular KGEs. Responsibilities for kindergarten classrooms are assigned according to seniority. Senior educators (having longer years of service) are assigned classes whilst the junior KGEs take up roles as Relievers. A senior educator can work as a Reliever by requesting this via a deployment circular. Where the school has a considerable population, Relievers may be attached to one school. In small schools, KGE relievers are usually shared between two schools.

There are no Relievers employed with the non-state sector¹⁶.

In addition to the ECEC Teachers, KGEs and Relievers, there are currently three Supply KGEs in the State sector. Within the State sector, the call for supply KGEs has not been issued for some time. This is in sharp contrast with the situation in Independent schools where close to 39% are supply staff. These could include supply graduate teachers (individuals with a university qualification not in ECEC) or Supply KGEs who do not possess any qualification or whose pre-university qualifications are not associated to ECEC.

Table 4

¹⁷ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: In the case of Malta, the relevant formats are **0–2** and **3–4** years, since children usually start school when they are 5 years old.

¹⁸ Until 2022/2023, MCAST provided a level 5 course (120 ECTS) entitled *Higher Diploma in Advanced Studies in The Early Years* which qualified students as Kindergarten Educators OR to join the 3rd year cohort at university to complete a BA degree. However, MCAST is now offering its own BA (ISCED 6, 180 ECTS credits).

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Centre Managers are responsible for the day to day running of the childcare service. In line with the NOS, the National Standards document (MFED 2021a) emphasises that managers are responsible for the overall organisation and management of the childcare setting; to oversee the children’s learning and well-being; liaise with parents and other stakeholders; manage staff members and matters linked to professional development.

Centre managers are expected to be at least 21 years of age, have a minimum of one years’ work experience as an Educator in the early years. They must be in possession of a minimum MQF Level 5 qualification with at least 60 ECTS in Early Childhood Education and Care, including pedagogy, leadership and management; a pass at MQF Level 3 in Maltese or Maltese as a Foreign Language and English; a valid Certificate in Paediatric First Aid and a valid Food Handling Certificate.

The Legally Responsible Person (LRP): Despite not needing specific formal qualification requirements, according to the National Standards (MFED 2021a) “ensuring structural, process and outcomes quality in an ECEC centre rests with the LRP”. However, the LRP “may delegate responsibilities at a day-to-day level to the Centre Manager” (p. 12). The document only states that *it is desirable that the LRP has some knowledge about ECEC theory and practice*. In reality, in several

entities, the LRP is quite far-removed from the childcare setting with the responsibilities being delegated to the Centre Manager.

The responsibilities of the LRP are associated broadly with the smooth running of the childcare setting and the National Standards document defines the role of the LRP as follows:

The LRP must be 18 years or over (and over 21 years of age, if the LRP is also the Centre Manager), and in possession of a valid and clean Police Conduct Certificate. The LRP is to ensure that the:

- *Functions of the centre are in line with national strategies, policies, and legislations and subsequent updates*
- *Physical premises are in compliance with national standards, legislations and any subsequent updates*
- *Members of staff recruited meet the eligibility criteria.*

They must:

- *Assume legal responsibility for the provision of children’s learning and care, as prescribed by the national standards, national strategies, policies, legislation and any subsequent updates; represent the registered childcare centre and has the power of attorney*
- *Assume accountability for the proper management of finances*
- *Oversee that the centre performs effective internal review processes*
- *Oversee that the recommendations identified by the DQSE are being implemented.*

There are no Centre Leaders in kindergarten settings. For kindergarten settings which are located within primary schools, the Head of School is responsible for the compulsory age groups as well as the running of the kindergarten.

2.3 Centre-based posts of responsibility

Some childcare settings employ **Senior Childcare Educators**. This person would be a childcare educator who has completed or is in the process of completing an EQF Level 5 course and who, from time to time, could take over the responsibility for the childcare setting if/when the manager cannot be present. For example, Senior Childcare Educators are being appointed in childcare settings which are offering extended hours of service and where the appointed Childcare Manager cannot work beyond contractual hours.

There are no centre-based posts of responsibility in kindergarten settings.

2.4 Co-ordinating and supervisory staff

As indicated in *Chapter 2.1*, Centre Managers are responsible for co-ordination and supervisory duties in childcare settings.

In kindergarten settings attached to schools, the Head of School in smaller schools or a delegated Assistant Head of School in bigger schools would be responsible for all matters associated to the administration and management of the kindergarten section in the school.

2.5 Specialist support staff

Specialist support staff within childcare and kindergarten varies.

The National School Support Services (NSSS) is responsible for Educational Services in all school sectors, that is State, Church and Independent. Church schools have their own service such as counsellors, psychologists and an autism spectrum support team but they can resort to NSSS on a consultative basis should further support be required.

There are two departments within the NSSS: the *Educational Psychosocial services* and the *Inclusive Education Support*. Child Safety Service is the only service offered by the psychosocial

team at kindergarten. With regard to *Inclusive Education*, services for the hearing impaired, the visually impaired and Early Intervention support are provided to children from birth. The Early Intervention service offers support services for children with developmental disabilities and/or delays in the first five years of their life (NSSS 2023). Children up to the age of 3 years, and their families, are supported either in their home or in the childcare centre they attend. Early Intervention Teachers visit children in settings. Where children are being followed by the Child Development Assessment Unit (CDAU), specialists from this Unit could visit centres or refer cases to the Early Intervention team. If the preschool child is spending most of the day in childcare then the Early interventionist (not necessarily a teacher) provides support at the childcare setting, with the parents' consent. Visits by specialist staff, such as Speech Therapists, Psychologists or Paediatricians tend to be carried out on a needs basis. Unless coming via the Early Intervention service or CDAU, visits of support staff to settings could be financed directly by the parents. Within the 12 **childcare settings** managed by FES, an Inclusion Co-ordinator is available to support the children, families and staff in these settings with all matters associated to inclusion. The support could relate to difficulties in child development; challenges which arise with cultural differences and language barriers as well as social difficulties which include abuse, poverty, racism and neglect.

In the **kindergarten** years, Early Intervention practitioners adopt a whole school approach, supporting educators in the planning and implementation of their educational programme with regard to the inclusion of all the children in class, and more specifically with the Individual Educational Programme of the child who is experiencing developmental difficulties. In class, support to children who are experiencing significant challenges is given when needed. Children in State, Church and Independent educational institutions are supported by the Early Intervention team. The team is made up of KGEs and Education Support Practitioners, Senior Education Practitioners and Principal Education Practitioners, with these categories of practitioners mostly coming from the field of Education, Psychology and Speech and Language Pathology. Parents who visit specialists privately would foot the bill where follow-up visits are conducted in kindergarten.

Teaching support or specialist staff focused on the curriculum or curricular subject areas are not found in kindergarten settings in State schools because peripatetic teachers were trained to teach primary and/or secondary school students. In the state schools, the Physical Education unit has recently offered physical education lessons to kindergarten classes, delivered by subject teachers who accepted to take on this role. In Independent schools, the situation varies: in some schools the KGE is responsible for the entire programme offered, whereas in others the services of specialist teachers for some curriculum areas may be arranged. In Church schools, there are subject teachers who also work with kindergarten children. These could be teachers for music, drama, ICT and/or STEAM (Science, Technology, Engineering, Arts, Mathematics). The subject teachers employed in Church schools vary – different schools may have different subject specialists. Subject teachers who do give input in kindergarten settings would not generally have initial professional education in early years.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Gender and ethnicity in the ECEC workforce

The presence of men in both childcare and kindergarten settings is negligible. Early childhood education and care is overwhelmingly staffed by females. Of the 1,260 members of staff included in the childcare staff data (DQSE 2022, May 2022), 14 men (1%) and 1,246 (99%) females make up the workforce. JobsPlus, which is responsible for managing the Free Childcare Scheme, indicated that by the end of October 2023, there were 1,875 (93.3%) female and 135 (6.7%) male Childcare Educators across the childcare settings. In addition, there were 144 (91.1%) female and 14 (8.9%) male childcare managers (Parliament of Malta, Family Affairs Committee 2023b).

Similarly, men employed in kindergarten settings are in the minority. Of the 178 members of staff in the non-state sectors (Church and Independent sectors), only 3 men are on record.

Table 6

Malta: Staff employed in State Kindergarten settings (June 2022)

Sector type	Females	Males	Totals
State	770	6	776
Church	72	1	73
Independent	103	2	105
TOTAL	945 (99%)	9 (1%)	954

Source: Education Resources Department (email communication 13/14 July 2022)

Whilst there are no data about the nationality of staff working within kindergarten settings, according to the DQSE (2022) records, 15% (N=184) of the workforce in childcare settings is made up of persons with a non-Maltese nationality.

Table 8

Malta: Nationalities of staff employed in childcare settings

Nationality	No. of staff members	Nationality	No. of staff members
Albanian	3	Lithuanian	2
Armenian	2	Macedonian	6
Brazilian	3	Maltese	1,076 (85%)
British	33 (2.6%)	Nepalese	2

Latvian	2		
And 1 each of the following nationalities: Bosnian, Canadian, Chinese, Croatian, Dutch, Egyptian, Ethiopian, French, Georgian, German, Greek, Icelandic, Irish, Israeli, Japanese, Korean, Maltese/English, Mexican, Romanian, Russian, Slovakian, Slovenian, Sri Lankan, Thai.			

Source: DQSE May 2022

This is particularly important considering that the National Standards (MFED 2021a) expect Childcare Educators to “provide a language-rich environment, ensuring the balanced provision of both Maltese and English” and simultaneously “support children and their families who are bilingual, multilingual or whose preferred language is not Maltese or English.” (p. 18). According to the National Standards, even the Assistants to the Childcare Educators are expected to have a working knowledge of Maltese and English (p. 19); like the main Childcare Educators, Assistants are expected to have the “ability to communicate effectively in Maltese and English”.

Most of the staff with a non-Maltese nationality are employed as Childcare Educators (N=122) or Educators in training (N=33); ten are attendants/cleaners/helpers and 16 are Childcare Managers, one of whom was in training at the time data were collected.

Qualifications of staff in childcare settings¹⁹

According to the data from DQSE (2022), 21.9% (N=276) of staff working in childcare settings do not have qualifications relevant to their roles. 55.5% (N=699) have an EQF Level 4 qualification and 17% (N=215) have an EQF Level 5 qualification relevant to their roles. Some members of staff are in possession of higher qualifications. Several employees and employers in childcare settings are in possession of qualifications which are not relevant or related to early years²⁰. However, the data available are rather sketchy and not reliable. The Director at DQSE claimed that the turnover of staff employed in childcare is very high with the sector being described as ‘very fluid’ (Parliament of Malta, Family Affairs Committee 2023a). At the time, the DQSE reported 231 qualified managers and 24 people in training who were following a Level 5 in childcare. There were 1,179 Childcare Educators with an EQF Level 4 qualification and a further 468 people who were still in training.

The minimum requirement of qualifications with 60 ECTS at EQF Level 5 for Childcare Managers and 60 ECTS at MQF Level 4 for Childcare Educators has been set by the National Standards (MFED 2021a). An implementation plan to ensure that everyone has these minimum qualifications is still to be discussed at ministerial level (Director DQSE, email communication, 17th June

¹⁹ Data need to be interpreted with caution in the absence of any rigorous manner of collecting it. Data collection is based on the reporting which is initially collated and provided by Centre Managers ahead of external audits. The data are subject to verification by EOs at the time of the audit and transferred to a spreadsheet for the scrutiny, review and checking of staff from ERS and RCS. The inevitable time-lapse and regular turnover of staff make this a laborious and, in the long run, an unsustainable activity.

²⁰Data from the DQSE database (DQSE, May 2022) indicate diplomas in hairdressing; health and social care; gender studies; undergraduate degrees in Computing, Management, European Studies, Nursing

2022). To date any EQF 4 or 5 course deemed relevant to the field, irrespective of the amount of ECTS has been accepted as appropriate for employability purposes.

Table 9

Malta: Qualifications relevant to roles of staff employed in childcare settings (N=1,290; May 2022)

Qualification (by EQF/MQF Level)	Number	Per cent
Level 3 qualification	24	2
Level 4 qualification	699	55.5
Level 5 qualification	216	17
Level 6 qualification	24	2
Level 7 qualification	15	1
Insufficient information	2	0.2
No relevant qualifications	276	21.9
TOTAL	1260	100

Source: DQSE May 2022

Among staff with relevant qualifications, six have a BA (Hons) in Early Years from the University of Malta. Other relevant qualifications at EQF Level 6 and 7 were obtained from higher education institutions in Mexico, Colombia, England, Italy, Spain and Greece²¹. Among the EQF 5 and EQF 4 qualifications, several are home-grown courses but others are designed by foreign entities²². Details about several courses will be provided in a subsequent section of this report.

Table 10

Malta: Main qualifications of staff in childcare settings²³

Title of qualification/award	No of holders of award	Entity offering qualification
BTEC National Diploma in Children's Care Learning & Development	14	MCAST ²⁴
BTEC National Diploma in Children's Play, Learning & Development	18	MCAST ²⁵

MCAST Advanced Diploma in Childcare, Learning & Development	55	MCAST
Diploma in Child Development, Education & Care Studies (0–5 years)	20	CDEC ²⁶
Award in childcare, well-being, development and learning	17	Outlook Coop

²¹Qualifications from foreign institutions include the University of Cassino and Università di Palermo in Italy; University of Ioannina, Greece; Universidad El Bosque, Colombia; University of the Basque country and Rey Juan Carlos University in Spain; Universidad Católica Andres Bello in Venezuela; University of Sheffield, Leeds Beckett University in England.

²² Among its roles, the Malta Further and Higher Education Authority (MFHEA) provides accreditation to further and higher educational institutions and programmes or courses of studies at further and higher education levels.

²³ Other qualifications not listed included undergraduate and post-graduate qualifications from UM and foreign institutions. In addition to the 'blank' entries, there were also entries for no qualifications or inappropriate qualifications (i.e. not relevant to childcare). It was also difficult to record some data because of the vague entries about the title of the qualification.

²⁴ MCAST (The Malta College of Arts, Science and Technology) is a vocational education and training institution in Malta which was established in 2001.

²⁵ Having staff with BTEC qualifications from MCAST reflect the introductory courses offered when MCAST was first established. BTEC courses were gradually replaced with home-grown courses.

²⁶ Centre for Child Development, Education & Care Studies (CDEC) was a small private institution which ceased to operate in 2022.

Title of qualification/award	No of holders of award	Entity offering qualification

Advanced Levels – no specialist qualification	4	14	2
TOTAL		707	100

Source: Education Resources Department (email communication 13/14 July 2022)

Although the available data does not provide specific information about the qualifications which most KGEs have, the majority is in possession of an EQF Level 4 qualification. This is not surprising considering that this was the minimum entry requirement for KGEs until 2021. On the other hand, considering that the first cohort of graduates with a BA (Hons) in ECEC graduated in 2019, it is encouraging to note that within the State sector, 13% of the staff have an EQF Level 6 qualification.

²⁷ Master in Teaching and Learning

²⁸ The MQF Level 5 MCAST–BTEC Higher National Diploma in Advanced Studies in Early Years was replaced by the home-grown MCAST Higher Diploma in Advanced Studies in the Early Years from 2016 onwards.

Kindergarten staff in the non-state sector: Church school settings

There are 23 Church schools which provide kindergarten facilities (Archdiocese of Malta 2022a, b), employing 67 KGEs, 4 ECEC teachers, one graduate supply teacher and one supply teacher²⁹ for a total of 73 Educators working directly with children. *Table 13* illustrates the qualifications of the staff employed in kindergarten settings within Church schools.

Table 12

Source: Education Resources Department (email communication 13/14 July 2022)

Kindergarten staff in the non-state sector: Independent school settings

19 independent institutions are licensed to offer kindergarten services³¹. The kindergarten classrooms in nine of these institutions are housed within schools which offer primary and secondary education too. The remaining ten settings started out as childcare centres and are now accepting kindergarten aged children. Just over 100 members of staff are employed in kindergarten across all 19 settings.

Table 13

Within the sector, not only are the majority of employees qualified with an EQF Level 4 certificate but the qualifications are identical to those obtained by individuals working or following courses leading to employment in childcare, making them eligible to work with under threes. The data clearly illustrate how the somewhat better conditions in kindergarten settings, lures people away from childcare.

Having 22% of the childcare employees with minimal, no or unrelated qualifications (*Table 10*) and not knowing details about the EQF Level 4 qualification of the majority of staff in state kindergarten settings (*Table 12*) are challenges which need to be addressed.

4. Initial professional education (IPE)

Changes are underway with the initial professional education courses and the qualifications considered appropriate for staff working with the under threes in childcare settings and for staff seeking employment in kindergarten. Concerns about these changes will be shared in *Chapter 10* of this report.

To date, Childcare Educators were expected to be in possession of a relevant qualification at EQF/MQF Level 4 whilst Supervisors/Managers should be in possession of a qualification at EQF/MQF Level 5. The challenges thus far have been two-fold:

- (i) Ensuring that there is a minimum number of ECTS both across Level 4 and Level 5 qualifications which are considered appropriate for employability. There were discrepancies in the number of ECTS associated with available programmes and qualifications.
- (ii) Having to resort to employing staff without any (relevant) qualifications. In the National Standards (MFED 2021a), reference is made to “a minimum of MQF Level 5 qualification with at least 60 ECTS in Early Childhood Education and Care, including pedagogy, leadership and management” (p. 16), for childcare managers and “a minimum of MQF Level 4 qualification with at least 60 ECTS in Early Childhood Education and Care or comparable” (p. 18) for Childcare Educators. Both roles also require a pass at MQF Level 3 in Maltese or Maltese as a Foreign Language and English.

With regard to KGEs, since 2021 and as a result of the Collective Agreements (MEDE 2017, Archdiocese and MUT, 2018), the EQF Level 4 qualification is no longer considered appropriate for prospective KGEs. The minimum requirement is EQF Level 5 (30 ECTS) for a KGI designation and EQF Level 5 (60 ECTS) for a KGII designation. Staff are appointed at the level of KGE III when in possession of an EQF Level 6 (180 ECTS) qualification relevant to the early years. *Table 15* outlines the eligibility requirements for KGEs and progression within respective salary scales.

Table 14

Malta: Eligibility requirements for KGEs, pre and post 2021

Eligibility Requirements – 2019 till 2020 and progression	Eligibility Requirements – 2021 onwards
In possession of a recognised full qualification (Degree) at MQF Level 6 or higher (subject to a minimum of 180 ECTS/ECVET credits, or equivalent, with regards to programmes commencing as from October 2003) in Early Childhood Education and Care or a comparable professional qualification – KGE III – Salary Scale 10 progressing to Salary Scale 9 on completion of 5 years’ service in the grade of KGE III	In possession of a recognised full qualification (Degree) at MQF Level 6 or higher (subject to a minimum of 180 ECTS/ECVET credits, or equivalent, with regards to programmes commencing as from October 2003) in Early Childhood Education and Care or a comparable professional qualification – KGE III
In possession of a recognised full qualification (Diploma) at MQF Level 5 (subject to a minimum of 60 ECTS/ECVET credits, or equivalent, with regards to programmes commencing as from October 2003) in Early Childhood Education and Care or a comparable professional qualification – KGE II – Salary Scale 12 progressing to salary Scale 10 on completion of 5 years of service in the grade of KGE II	In possession of a recognised full qualification (Diploma) at MQF Level 5 (subject to a minimum of 60 ECTS/ECVET credits, or equivalent, with regards to programmes commencing as from October 2003) in Early Childhood Education and Care or a comparable professional qualification – KGE II
In possession of a recognised award at MQF Level 5 (subject to a minimum of 30 ECTS/ECVET credits or equivalent), in Early Childhood and Care or a comparable qualification. Provided that a full qualification (Diploma) at MQF Level 4 (subject to a minimum of 120 ECTS/ECVET credits or equivalent), in Early Childhood Education and Care or a comparable qualification shall also make candidates eligible for application into the grade of KGE I. For the purposes of paragraph 4.1 (v), the Childcare Training Programme (0-3 years) together with the Certificate of Competence (0-5 years), or the Vocational Education and Training Award in Childcare (0-5 years), are considered as equivalent to the Diploma, at MQF level 4, in Early Childhood Education and care. – KGE I Salary Scale 15 progressing to salary Scale 14 on completion of 5 years of service in the grade of KGE I and progress further to Salary Scale 13 after another 5 years of service in the grade.	In possession of a recognised award at MQF Level 5 (subject to a minimum of 30 ECTS/ECVET credits or equivalent), in Early Childhood and Care or a comparable qualification – KGE I Progression is the same as in 2019/2020 since from same agreement.

Source: HR Recruitment, Strategy & Support Department (email communication June 2021 & June 2022)

Information about EQF Levels 4, 5 and 6 courses available at the time this chapter was drawn up is provided in subsequent chapters.

4.1 Initial qualifying routes (higher education and vocational)

There are two further and higher education entities which offer professional courses for prospective early years educators. Courses are offered on a full and part-time basis. Programmes targeting 16 year-old school leavers are offered by MCAST whilst the University of Malta recruits 18 year-olds who have completed EQF Level 4 education and are eligible to join University³². Mature students are also accepted upon turning 23 on the basis of a successful interview process to ensure that the student would be able to follow the course beneficially. Information about courses was obtained from the prospectus of the institutions, both of which are self-accrediting.

Table 15a

Malta:-Kindergarten Educator

Job title in English: Kindergarten Educator Profile: Pre-primary Education Professional
<p><i>Route 1:</i></p> <p>Kindergarten Educator III (KGE III)</p> <p>Entry requirements: University of Malta general requirements for admission as specified in the Admissions Regulations of the University, in possession of a pass at Advanced Matriculation Level at Grade C or better in any one subject. Mature students and others who are accepted via RPL are also accepted. Students are also accepted for the 3rd year of the UM programme if they are from MCAST and have successfully completed the Higher Diploma in Advanced Studies in the Early Years (a top-up year).</p> <p>Professional Studies: 3 years' full-time study at University leading to an undergraduate degree. In addition to courses in educational theory, early years pedagogies, critical issues, reflective practices, there are opportunities to for weekly classroom visits and tutorials as an induction to life in schools followed by two teaching practice study units.</p> <p>Award: BA (Hons) (ECEC)</p> <p>ECTS credits: 180 ECTS</p> <p>EQF level: 6</p> <p>ISCED 2011: 6</p> <p>Main ECEC workplaces: Kindergartens for 3 to 5 year-olds (youngest entry age 2 years 9 months), located in State, Church-affiliated or Independent (private) schools or Independent kindergartens.</p> <p><i>Route 2:</i></p> <p>Kindergarten Educator III (KGE III)</p> <p>N.B. This qualification route is available from the academic year 2023/2024.</p> <p>Entry requirements: MCAST Advanced Diploma in Children's Care, Learning and Development or 2 A-Level passes and 2 Intermediate Level passes. Two subjects from Mathematics, English or Maltese are compulsory at either Advanced or Intermediate level. A pass at SEC/O-Level in the subject that is not presented at Advanced or Intermediate level is also compulsory.</p> <p>Professional Studies: 3 years' full-time study at MCAST leading to an undergraduate degree (MCAST 2023). Learners cover different components of the required learning to become practitioners with further specialisation in more specific areas. Placements are included to progressively become adept at working with a group of children using the emergent curriculum approach.</p> <p>Award: BA (Hons) (ECEC)</p> <p>ECTS credits: 180</p> <p>EQF level: 6</p> <p>ISCED 2011: 6</p>

³² Compulsory education is from 5 to 16. Successful completion earns students the school-leaving certificate (EQF 3). Students planning to pursue further studies may follow a further two-year programme (post-secondary) and successful completion leads to the Matriculation Certificate (EQF 4). University also accepts mature students (who have reached the age of 23) and adult students who apply for RPL (recognition of prior learning).

Job title in English: Kindergarten Educator

Profile: Pre-primary Education Professional

Main ECEC workplaces: Kindergartens for 3 to 5 year-olds (youngest entry age 2 years 9 months), located in State, Church-affiliated or Independent (private) schools or Independent kindergartens.

Route 3 (phased out from end of academic year 2022/23):

Kindergarten Educator II (KGE II)

Entry requirements: MCAST Advanced Diploma in Children’s Care, Learning and Development **or** 2 Advanced Level passes and 2 Intermediate Level passes. For compulsory Advanced Level or Intermediate Level – 2 subjects from Mathematics, English, Maltese. Applicants need to be in possession of a pass at SEC/Ordinary Level in the subject that is not presented at Advanced or Intermediate Level.

Professional studies: 2 years. Study units are designed to provide a strong link between theoretical concepts and hands-on practice during internships. Lectures focus on guiding the undergraduates on how to make learning for young children stimulating and fun, in a safe and healthy environment (MCAST 2021a, 128).

Award: Higher Diploma in Advanced Studies in the Early Years offered by MCAST

ECTS credits: 120

EQF level: 5

ISCED 2011: 5

Main ECEC workplaces: Kindergartens for 3 to 5 year-olds (youngest entry age 2 years 9 months), located in State, Church-affiliated or Independent (private) primary schools or Independent kindergartens.

Note:

Students who successfully complete the 120 ECTS can be admitted to UM to join the 3rd year of the BA programme (top-up course) and therefore if successful, graduate with a BA (Hons) in ECEC.

Route 4 (Universität Malta 2014–2019):

ECEC Teacher

Note: This programme is no longer offered by the University of Malta. Only 4 of the 131 students who graduated with this EQF 6 teaching qualification between 2014 and 2019 are employed in kindergarten settings in the Non-State Sector.

Entry requirements: General university entry requirements or, in the case of mature students, interviews to assess work experience, motivation, attitude and any qualifications. Proficiency in Maltese and English is required of all students. At the time the course was available, ECDL³³ was also a requirement.

Professional studies: 4 years’ full time (or 5 years of part time) study at University leading to an undergraduate degree. The programme included three teaching practices (TP), each of six weeks’ duration. One TP session was held in kindergarten and at least one TP was held with 5 to 7 year-olds in the first two years of compulsory education. Students also conducted research and presented a dissertation in their final year of the programme.

Award: B.Ed. (Hons) (ECEC)

ECTS credits: 240 ECTS for the full-time programme; 180 ECTS for the part-time programme

EQF level: 6

ISCED 2011: 6

Main ECEC workplaces: The first two years of compulsory education (5 to 7-year-olds) and Kindergartens for 3 to 5 year olds (youngest entry age 2 years 9 months), located in State, Church-affiliated or Independent (private) schools.

³³ European Computer Driving Licence (ECDL) is a computer literacy certification programme, now known as IC DL (<https://www.icdleurope.org/>)

Table 15b

Malta: Childcare Educator

Job title in English: <i>Childcare Educator</i> Profile: Social Care/Health Care Professional
<p>Entry requirements: MCAST Diploma in Health and Social Care or MCAST Diploma in Sport or MCAST Diploma in Performing Arts or MCAST Diploma in Art and Design or 4 SEC/O-Level/SSC&P (Level 3) passes Compulsory: English Language, Maltese, Mathematics. Post-secondary students can enrol at MCAST when compulsory education is completed at the age of 16.</p> <p>Professional studies: 1 or 2 years' full time (see note re award at exit after one year) at MCAST.</p> <p>Award: Advanced Diploma in Children's Care, Learning and Development (MCAST 2021b, 2021c) <i>or</i> BTEC Award in Children's Care, Learning and Development</p> <p>ECTS credits: 120 ECTS <i>or</i> 60 ECTS</p> <p>EQF level: 4</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: Childcare settings, 0–3 years</p> <p>Note: On successful completion of the first year of the course, students can be awarded an MCAST Award in Children's Care, Learning and Development Level 4 (ECVET 60) which would enable learners to work in a professional capacity with children between 0 to 3 years old within a childcare centre. This award provides the skills, knowledge and understanding required for one to work effectively within a childcare environment.</p>

Table 15c

Malta: Childcare Manager

Job title in English: <i>Childcare Manager/Coordinator</i> Profile: Social/Health Care Professional
<p>Entry requirements: MCAST-BTEC National Diploma in Children's Care, Learning and Development and SEC/O-Level passes in Mathematics, English and Maltese <i>or</i> MCAST-BTEC National Diploma in Children's Play, Learning and Development and SEC/O-Level passes in Mathematics, English and Maltese <i>or</i> 2 A-Level passes and 2 I-Level passes Compulsory A-level or I-level: 2 subjects from Mathematics, English, Maltese.</p> <p>Professional studies: 2 years full-time study at MCAST.</p> <p>Award: MCAST Higher Diploma in Advanced Studies in the Early Years (MCAST 2021d, 2021e)</p> <p>ECTS credits: 120</p> <p>EQF level: 5</p> <p>ISCED 2011: 5</p> <p>Main ECEC workplace: Childcare settings, 0–3 years <i>or</i> Upon successful completion of the programme, students with this qualification can join UM and join the BA (Hons) (ECEC) cohort of students in their 3rd and final year of the programme to graduate with an EQF 6 qualification.</p>

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Tables 16a to 16n highlight the competencies, curricular areas and pedagogic approaches for EQF Level 3, 4, 5 and 6 courses for (i) Assistants to Childcare Educators, (ii) Childcare Educators, (iii) Childcare Managers and (iv) KGEs respectively. Information has been compiled from websites in the public domain. The information includes courses offered by UM, MCAST and a host of private entities licensed by the MFHEA and which have had their programmes of study accredited. Apart from UM and MCAST, there is currently another private institution accredited by

MFHEA which offers Level 6 programmes in early years (MLI 2023)³⁴. UM was the first institution to offer a top-up programme for EQF 5 MCAST students who wanted to proceed to EQF 6, thus earning a BA (Hons) (ECEC). However, since January 2022, and following a memorandum of understanding between MCAST and the Institute for Education (IfE), another 60 ECTS top-up qualification at Level 6 is available (MCAST 2021f, 2021g; IfE and MCAST 2021).

Table 16a

Malta: Competences, curricular areas and pedagogic approaches for Level 6 IPE

Provider: University of Malta (2022a); Qualification: BA (Hons) (ECEC)

Competences	Curricular areas ³⁵
<ul style="list-style-type: none"> – Understanding the diversity of young children's growth and development – Developing an awareness of the impact of the social, cultural and life experiences on children's learning and development – Broad pedagogical knowledge to understand how young children learn – Ability to plan, develop and implement developmentally appropriate activities based on their interests through the most effective way, thus applying theory to practice – Awareness of a range of professional issues which impact directly on the management of and relationships amongst a group of learners – An array of skills, attitudes and dispositions to become competent and committed professionals through the practical aspects of the course – Awareness of the ethical issues implicit in the professional role – Commitment to social justice and democratic participation in an education where children's rights, voices and an ethics of care are valued – Understanding that teaching and learning are complex processes that involve working with multidisciplinary professionals, parents and multiple practitioners – Acquisition of specialised knowledge of early childhood education-related aspects in psychology, pedagogy, professional practice, creative activity and professional issues. 	<p>1st Year:</p> <ul style="list-style-type: none"> – Child development (6 ECTS); – Emergent curriculum in early years: planning and implementation (4 ECTS) – Becoming an Early Childhood Educator (4 ECTS) – Young children exploring their physical and human environment (6 ECTS) – Introduction to early years settings: observation and experience (6 ECTS) – Children in society (4 ECTS) – Pedagogies of early childhood education (4 ECTS) – Quality matters in ECEC (4 ECTS) – Academic reading and writing in English (2 ECTS) – Play and its contribution to early years development (4 ECTS) – Psychological perspectives on children's learning in the early years (4 ECTS) – Music in the early years (4 ECTS) – Movement & Physical activity in early years (4 ECTS) – Health and Well-being for Children (4 ECTS). <p>2nd year:</p> <ul style="list-style-type: none"> – The reflective professional (4 ECTS) – Enabling environments: using indoor and outdoor spaces, resources and materials (4 ECTS) – Language, literacy and communication development in young children (4 ECTS) – Sharing responsibilities with families and pluralistic communities in early childhood education (8 ECTS) – <i>L-Użu tal-Lingwa Maltija fis-Snin Bikrin</i> [The Use of the Maltese Language in the Early Years] (4 ECTS) – Field placement in ECEC 1 (6 ECTS) – Observation, assessment and children's participation in early years settings (4 ECTS) – Nurturing the spiritual, moral and religious dimensions (4 ECTS) – Enjoying English in the early years (4 ECTS) – Children's early experiences of mathematics (4 ECTS) – Tapping on funds of knowledge (4 ECTS) – Becoming symbol literate (4 ECTS) – Creativity and arts-based pedagogies in early childhood (6 ECTS).

³⁴ The info on the MLI website shows 0 students for the undergrad course in ECEC which it promotes.

³⁵ Where available, the number of ECTS for each study unit/module is included.

Competences	Curricular areas ³⁵
	<p>3rd Year:</p> <ul style="list-style-type: none"> – Using digital technologies to promote 21st century learning in ECE (4 ECTS) – Leadership in early years settings, (4 ECTS) – High potential, emerging abilities and giftedness in young learners, (4 ECTS) – The emergent curriculum in action (4 ECTS) – Including learners with developmental disabilities in early years (4 ECTS) – Children’s understanding of the world through environmental education (4 ECTS) – Second field placement in ECEC (8 ECTS) – Addressing diversity in early years (4 ECTS) – Critical debates in early childhood education and care (4 ECTS) – The early childhood practitioner (4 ECTS) – Transitions in the early years (4 ECTS) – Implications of children's rights and legal issues for early years practitioners (4 ECTS) – Social issues in early education (4 ECTS) – Promoting positive behaviour in the early years (4 ECTS).
<p>Pedagogic approaches: A variety of methods, including lectures, workshops, tutorials, observations, fieldwork and practical field placements, where students will have the opportunity to experience first-hand working with young children in school contexts.</p>	

Table 16b

Malta: Competences, curricular areas and pedagogic approaches for Level 5 IPE

Provider: MCAST (2021e); Qualification: Higher Diploma in Advanced Studies in the Early Years

Competences	Curricular areas
<ul style="list-style-type: none"> – Innovative underpinning knowledge, understanding and skills for success in employment within the early years sector – Experiences to link theory to practice in order to develop skills and competences as well as personal qualities and attitudes essential for an early years’ professional – Engagement in pedagogical critical discussions and field internships which will help with leadership skills thus providing young children with the appropriate opportunities in their development – Conduct research in the Early Years sector – Maintain health and safety standards in child 	<p>1st year:</p> <ul style="list-style-type: none"> – Sociology of childhood (3 ECTS) – Philosophical issues in early years pedagogy (3 ECTS) – Development of young children (6 ECTS) – Communicating values and leadership in an early years environment (3 ECTS) – Emergent curriculum 1 (6 ECTS) – Nurturing a practice of imagination (3 ECTS) – Multimodality in young children (3 ECTS) – Designing spaces conducive to Learning 1 (Work placement) (6 ECTS) – Research methods in early years education (3 ECTS) – Early years mathematics (6 ECTS) – Physical education in the early years (3 ECTS) – Documenting the narratives of young children (3 ECTS) – Continuing professional development (3 ECTS) – Developing play in the early years curriculum (3 ECTS) – Designing spaces conducive to learning 2 (work placement) (6 ECTS). <p>2nd year:</p> <ul style="list-style-type: none"> – Research project in early years education (3 ECTS); Creative arts in ECE (6 ECTS) – English for young learning (Key skill) (6 ECTS) – <i>Il-Malti għat tfal iż-żgħir</i> [Maltese for young children] (Key skill) (6 ECTS) – Childcare management (3 ECTS)

Competences	Curricular areas
care and kindergarten settings – Enhance managerial and pedagogical competences – Provide an adequate educational environment for young learners.	– Designing spaces conducive to learning 3 (work placement) (6 ECTS) – Promoting positive relationships within families and the community (3 ECTS) – Positive behaviour in early years settings (3 ECTS) – Contemporary issues in child health (6 ECTS) – Promoting language development (6 ECTS) – Promoting knowledge and understanding of the world (6 ECTS) – Designing space conducive to learning 4 (work placement) (6 ECTS).
Pedagogic approaches: The study units provide a strong link between theoretical concepts and hands-on practice during internships. Lectures focus on guiding the undergraduates on how to make learning for young children stimulating and fun, in a safe and healthy environment.	

Table 16c

Malta: Competences and curricular areas for Level 6 (top-up course)

Provider: University of Malta (2022b); Qualification: BA (Hons) (ECEC) Top-up degree

Competences	Curricular areas
– The ability to plan, develop and implement developmentally appropriate activities based on children’s interests – Applying theory to practice – An awareness of a range of professional issues which impact directly on the management of and relationships amongst a group of learners – An array of skills, attitudes and dispositions to become competent and committed professionals through the practical aspects of the course – An awareness of the ethical issues implicit in the professional role and a commitment to social justice and democratic participation in an education where children’s rights, voices and an ethics of care are valued – An understanding that teaching and learning are complex processes that involve working with multi-disciplinary professionals, parents and multiple practitioners.	3rd Year: – Leadership in early years settings (4 ECTS); The emergent curriculum in action (4 ECTS) – Third field placement in ECEC (8 ECTS) – Children’s understanding of the world through environmental education (4 ECTS) – Critical debates in early childhood education and care (4 ECTS) – Transitions in the early years (4 ECTS) – Implications of children’s rights and legal issues for early years practitioners (4 ECTS) – Promoting positive behaviour in the early years (4 ECTS) – Using digital technologies to promote 21st century learning in ECE (4 ECTS) – High potential, emerging abilities and giftedness in young learners (4 ECTS) – Including learners with developmental disabilities in early years (4 ECTS) – Fourth field placement in ECEC (6 ECTS) – Addressing diversity in early years (4 ECTS) – Nurturing the spiritual, moral and religious dimensions (4 ECTS) – The early childhood practitioner (4 ECTS) – Social issues in early education (4 ECTS).
Pedagogic approaches: A variety of methods, including lectures, workshops, tutorials, observations, fieldwork and practical field placements, where students will have the opportunity to experience first-hand working with young children in school contexts.

Malta: Competences, curricular areas and pedagogic approaches for Level 4 IPE

Provider: MCAST (2021c); Qualification: Advanced Diploma in Children's care, learning and development

Competences	Curricular areas ³⁷
<ul style="list-style-type: none"> – Plan activities for babies, toddlers and children in the early years – Maintain health and safety standards in early years settings – Implement activities and construct resources for children – Monitor and record the development of children. 	<p>1st year:</p> <ul style="list-style-type: none"> – Positive relationships for children's care, learning and development (6 ECTS) – Positive and safe environment for children's care, learning and development (3 ECTS) – Promoting children's development (3 ECTS) – Supporting children's language, pre-literacy and numeracy skills 0-3 (6 ECTS) – Safeguarding and promoting children's rights (6 ECTS) – Children's learning activities and play (6 ECTS) – Meeting additional requirements for children's settings, learning and development (6 ECTS) – Planning and reflecting on developing practice and children 1 (9 ECTS) – Developing and managing a registered childcare service (3 ECTS) – Malti (6 ECTS) – English (6 ECTS). <p>2nd year:</p> <ul style="list-style-type: none"> – Diet, nutrition and cooking activities for children (6 ECTS) – Physical activities for children (3 ECTS) – Psychological perspectives on children's behaviour (6 ECTS) – Environmental science for the early years (3 ECTS) – Design and technology for the early years practitioner (6 ECTS) – Contemporary issues in early years (6 ECTS) – Supporting children's language, literacy and numeracy Skills 3-5 (6 ECTS) – Planning and reflecting on developing practice for children 2 (9 ECTS) – Introduction to the emergent curriculum (6 ECTS) – Creative arts for the early years (3 ECTS) – Employability and entrepreneurial skills (4 ECTS) – Community social responsibility (2 ECTS).
<p>Pedagogic approaches: Students are exposed to the most innovative teaching techniques and are also trained on observation techniques required to monitor the development of children. There is a major emphasis on the practical components carried out in this course. The course includes placements in early years settings.</p>	

Table 16g

Malta: Competences, curricular areas and pedagogic approaches for Level 4 IPE

Provider: Learning Works (2023); Qualification: Award in Child Care (0–3 years)

Competences	Curricular areas
<ul style="list-style-type: none"> – Understand child development in children aged 0 to 3 years including physical, intellectual, language, social and emotional development – Be fluent with relevant national legislation and regulatory requirements with a focus on protecting and fostering children's rights and following health and safety procedures – Develop an awareness of the need to develop positive relationships and partnerships with children and their families 	<ul style="list-style-type: none"> – Health and safety at the workplace and the outdoor environment (4 ECTS) – Teamwork and communication (4 ECTS) – Communicating with parents and carers of children (4 ECTS)

³⁷ The first 60 ECTS listed in the curricular areas pertain to the MCAST Award in Children's Care, Learning and Development Level 4, ECVET 60.

Competences	Curricular areas
<ul style="list-style-type: none"> – Plan and implement meaningful learning experiences that enable optimal development in babies, toddlers and young children – Identify and meet the diverse needs of children with additional needs to cater for cultural, linguistic, learning or physical differences – Adopt a reflective practice approach to their daily work to continually improve their own practice for the benefit of children’s outcomes – Apply child development theories into practice – Work collaboratively in a team and promote positive relationships between all stakeholders – Plan, develop and facilitate play and learning experiences for children aged 0 to 3 years – Provide care of children’s daily needs including those with additional needs; Support and communicate with parents/legal guardians within an inclusive environment that celebrates diversity and welcomes all families – Maintain a healthy and safe environment where children can be cared for and educated respectfully and safely – Report and document the daily occurrences, incidents and interactions as required for the safe upkeep and running of a childcare centre according to the National Standards – Work and behave responsibly and professionally with the integrity and respect needed to adequately care for young children – Follow and uphold the policies, procedures and standards of a child care setting and work in collaboration with the management and the staff for a smooth running of the centre – Create and maintain positive relationships with children, their families and the staff at the centre for the benefit and optimal development of children under their care – Increase awareness and understanding of the need for care that is of high quality, non-discriminatory and inclusive – Develop critical reflective skills to engage in reflective practice as part of own professional development. 	<ul style="list-style-type: none"> – Value of play and recreational activities for children (4 ECTS) – Children's development and learning (14 ECTS) – Work placement/Portfolio of evidence (30 ECTS).
Pedagogic approaches: Lectures, group activities and discussions	

Table 16h

Malta: Competencies, curricular areas and pedagogic approaches for Level 4 IPE

Provider: AVANZA (2022); Qualification: Award in Early Years development, education and care

Knowledge, skills, competences	Curricular areas ³⁸
<p>Knowledge: Students will be exposed to the theoretical and practical features of early years child development, early years learning and forms of best practice. Students will learn factual and theoretical knowledge on how to implement, maintain and sustain early years learning and development within a <i>high-quality</i> early years childcare provision.</p> <p>Skills: Students will master a range of developmental, cognitive and practical skills to provide solutions to day-to-day specific issues in early years settings.</p>	<ul style="list-style-type: none"> – National Childcare Standards, health and safety at work (6 ECTS) – Safeguarding children, child protection and rights (6 ECTS) – Infant/child development and learning (6 ECTS) – The holistic child and importance of play (6 ECTS) – Early years language, literacy numeracy acquisition (6 ECTS) – Fostering prosocial positive attachment behaviour (4 ECTS) – Equality, diversity and inclusive practice (4 ECTS)

³⁸ Where available, the number of ECTS for each study unit/module is included.

Knowledge, skills, competences	Curricular areas ³⁸
<p>Competences: Students will be able to exercise self-management within the context of early years provision. Students will be able to implement specific strategies, conducive to the needs of young children under their care. They will be competent and fully aware of the importance of providing a responsive, caring, safe and nurturing environment, whereby the educational activities on offer for children will be age appropriate and designed to scaffold early years learning and development.</p>	<ul style="list-style-type: none"> – Early years assessment and observation (4 ECTS) – Effective communication, colleagues and parent partnership (4 ECTS) – Professional reflective practice (2 ECTS) – Registered Early Years Service, responsibilities and legal requirements (2 ECTS) – Work placement (10 ECTS) <p>All modules are mandatory to qualify for this MQF Level 4 Award.</p>
<p>Pedagogic approaches: During the course, students will be encouraged to engage in pedagogical critical and reflective discussions, whilst work-based learning experience will help students to acquire the required leadership skills needed to provide young children with the appropriate developmental opportunities.</p>	

Table 16i

Malta: Competences, curricular areas and pedagogic approaches for Level 4 IPE

Provider: Outlook COOP (personal communication); Qualification: Award in Childcare, Well-being, Development and Learning for Early Years

Competences	Curricular areas
<ul style="list-style-type: none"> – Demonstrate personal and interpersonal qualities and skills required for caring in relation to the needs of young children aged between 0 and 3 years – Understand the importance of the role of the child care worker – Study children’s rights and improve key competences in relation to diversity – Examine health aspects as part of the holistic wellbeing of children – Study psychology and its relevance to childcare work – Study relevant laws and regulations to childcare work – Establish safe practice consistently – Have a solid knowledge and ability to recognise the needs of children – Evaluate the contribution of different professional experiences related to child care work – Be affirmed as a child care worker in an interdisciplinary professional team – Evaluate one’s own learning through the use of reflective practice. 	<p>Module 1: Child Development and Learning</p> <ul style="list-style-type: none"> – Principles of early education – Children’s developmental milestones – The role of play in children’s learning – Child study and observation – The childcare worker. <p>Module 2: Child Protection, Safety and Well-being</p> <ul style="list-style-type: none"> – Equal opportunities / disability issues – Nutrition, hygiene and food handling – Child welfare – Multi-agency networking – Health and safety – First aid – Focus on the child care worker.
<p>Pedagogic approaches: Lectures delivered in an interactive manner to encourage student participation. Theory presented in an applied manner, including examples from practice. Opportunities to engage in group discussions and team work. The practical placement is a major learning opportunity.</p>	

Table 16j

Malta: Competences and curricular areas for Level 4

Provider: Jobsplus (2020), Qualification: VET Diploma in Childcare 0–3

Competencies	Curricular areas
No specific information is provided in the course material but the module titles and competences identified for each follow the National Occupational Standards for childcare educators published by MFHEA. <i>Learners are expected to acquire all the competences enlisted in the National Occupational Standards for Childcare Educators</i> ³⁹ .	<ul style="list-style-type: none"> – Child development (88 hours)⁴⁰ – Development of Communication, Imagination and Creativity (62 hours) – Physical care of the child (67 hours) – Nutrition and hygiene (32 hours) – Health and safety (33 hours) – Children’s rights, equality and inclusion (38 hours) – Supporting a child with disability or individual educational needs, (50 hours) – Report writing (18 hours) – The child-led approach (30 hours) – Self-reflection, self-development and placement (512 hours – including 500 hours for placement); – First aid (16 hours) – Paediatric first aid (9 hours).
<p>Pedagogic approaches: Mainly through lessons delivered by the trainer, who will engage learners in class discussions and role-play activities. To facilitate the learners’ apprehension, the trainer will also use PowerPoint presentations.</p> <p>Learners will be undergoing practical training that will be carried out in a licensed childcare centre. During the practical training, learners have to prove their competence in putting the theory learnt into practice. They will have to follow the policies adopted by the respective childcare centre.</p>	

Table 16k

Malta: Competences and curricular areas for Level 4

Provider: Future Focus (Future Focus 2022a; NCFE CACHE 2022a); Qualification: CACHE Level 3 Diploma for the Early Years Workforce

Competences	Curricular areas
No information is provided about the overall competencies expected to be addressed and achieved by students who register for this short course.	<ul style="list-style-type: none"> – Support healthy lifestyles for children through the provision of food and nutrition – Support healthy lifestyles for children through exercise – Support physical care routines for children – Promote children’s emotional well-being – Understand how to support children who are unwell – Understand legislation relating to the safeguarding, protection and welfare of children – Use legislation relating to the health and safety of children – Follow legislation relating to equality, diversity and inclusive practice – Working in partnership – Engage in professional development – Understand the value of play in Early Years – Plan, lead and review play opportunities which support children’s learning and development – Promote enabling play environments – Developing children’s emergent literacy skills; Developing children’s emergent mathematical skills – Support children’s transition to school – Develop children’s cognitive skills

³⁹ Confirmed via email 11th August 2022⁴⁰ Hours indicated on the course documentation sheet show that these hours associated to each module include one or two hours for assessment. Module 10 which includes the placement is an exception.

Competences	Curricular areas
	<ul style="list-style-type: none"> – Promote children’s speech, language and communication – Promote children’s physical development – Promote children’s personal, social and emotional development – Support children with additional needs – Use observation, assessment and planning to promote the development of children – Use longitudinal studies to observe, assess and plan for children’s needs.
<p>Pedagogic approaches: Participants participate in a diverse programme that includes theory, hands-on-learning, small group work, observation and field based practical experience.</p>	

Table 161

Malta: Competences and curricular areas for Level 4

Provider: Apex Academy (2023), *Qualification: Pre-tertiary certificate in Early Childhood Education & Care*

Competences	Curricular areas
<ul style="list-style-type: none"> – Describe the main roles and responsibilities of a child carer to assist children in their learning and development from early years childhood – List and discuss the different health and safety practices to be taken into consideration when working within childcare – Recall the various theories of learning, development and play which are crucial knowledge for the child carer – Identify the need and the importance of promoting inclusion, anti-discriminatory practice and equality of opportunity at the childcare centre – List and describe various requirements and need to be able to care effectively for children under the age of 3 – List various recreational activities and discuss how these are important and crucial to assist children in development and learning – Recall the importance of promoting positive behaviour – Describe the role of reflective practice in childcare – Identify the importance of safeguarding, child protection issues and procedures and legislation – Demonstrate ability to assist children in their development and learning experience – Plan for and mitigate risks regarding health and safety which are relevant for children aged 0–3 years – Demonstrate understanding of different theories of learning, and development and the different stages of development of children – Prepare recreational activities, play and experience for children to support development and learning – Promote independence in basic needs of children such as potty training, nutrition, and others – Practice effective child caring techniques for basic requirements of children including nutrition, nap times, play times and others – Apply effective reflective practice techniques to always ensure high quality service and experience 	<ul style="list-style-type: none"> – Roles and responsibilities of child-care worker (6 ECTS) – Health and safety practices in a childcare centre (6 ECTS) – Theories of child development and learning (6 ECTS) – Promoting inclusion and anti-discriminatory practice (6 ECTS) – Caring for babies and children (0–3 years) (6 ECTS) – Promoting professionalism and positive behaviour at the workplace (6 ECTS) – Theories of play and recreation in early years (6 ECTS) – Reflective practice in childcare (3 ECTS) – Work placement (15 ECTS)

Competences	Curricular areas
<ul style="list-style-type: none"> – Communicate effectively with different stakeholders including children, their parents/guardians and other fellow child carers – Promote positive behaviour at the place of work – Prepare for and implement an inclusive practice. 	
<p>Pedagogic approaches: Face-to-face lectures and hands-on practice. This programme aims to equip learners with the necessary skills and knowledge to effectively work within a childcare setting, providing children between the ages of 0–3 with the most effective quality care. Learners will be exposed to different theories and different skills that they need to acquire to work effectively within the sector, as well as being provided with a placement opportunity to further learn and put theory to practice.</p>	

Table 16m

Malta: Competences and curricular areas Level 5 IPS

Provider: Future Focus (2022b); Qualification: CACHE Level 5 Diploma in Leadership for Health and Social Care and Children and Young People’s Services (England); Children’s and Young People’s Management (NCFE CACHE 2022b)

Competences	Curricular areas
<p>This qualification provides learners with the skills and knowledge needed to manage practice and lead others in health and social care and children and young people’s services.</p>	<ul style="list-style-type: none"> – Safeguarding and protection – Managing care services – Supporting development and partnership working – Contributing to broader activities such as change programmes and recruitment – Complying with quality systems and continuously improving quality – Developing and carrying out policy – Promoting and developing best practice – Care management.
<p>Pedagogic approaches: No information provided</p>	

Table 16n

Malta: Competences and curricular areas Level 3 IPE

Provider: Institute for Education; Qualification: Award in Assisting the Childcare Educator (IfE 2023)

Competences	Curricular areas
<ul style="list-style-type: none"> – Use child development theories to understand children’s needs – Care for children’s physical needs – Implement learning experiences that sustain children’s’ progress – Actively sustain inclusive learning environments – Follow all pertinent Health and Safety regulations – Employ positive behaviour management systems – Encourage parental involvement in children’s learning and assessment – Foster collaboration and healthy working relationships with all stakeholders – Reflect on one’s daily practices – Implement sustainability concerns in children’s learning experiences. 	<ul style="list-style-type: none"> – Understanding child development and caring for children’s physical needs (4 ECTS) – Creating learning experiences that sustain progression (4 ECTS) – Sustaining inclusive learning environments in the early years (4 ECTS) – Health and safety in early years settings (4 ECTS) – Core themes in early years education (4 ECTS) – Practice placement in the early years (10 ECTS).
<p>Pedagogic approaches: Most lectures are held online with some face-to-face sessions. Forum discussions, portfolios, reflection and practical assignments are included in the assessment procedures of the modules. A practicum of 200 hours is also included.</p>	

4.3 Alternative entry and qualification routes, system permeability

Alternative routes refer to any IPE for the early years workforce personnel offered at MQF/EQF Level 3, 4, 5 and 6 by institutions which have been licensed/approved by MFHEA⁴¹. These programmes are accredited according to the MQF level rating. MFHEA maintains a register of accredited further and higher educational institutions in Malta through a database⁴². This includes detailed information of the licenced education providers and of those who are self-accrediting⁴³. Achieving recognition and thus approval to be employed without formal qualification is possible through the Trade Testing System (Jobsplus 2022). Trade Testing was set up in order to assess individuals who have acquired knowledge, skills and competences in a particular occupation but do not possess a formal qualification. A trade test therefore validates non-formal and informal learning. Through trade testing, a person is assessed by an interview, a theoretical and a practical test. Successful candidates are awarded a certificate in a particular occupation. In order to sit for these assessments, a candidate must be proficient in written English. With regard to childcare, there are two Trade Tests, one focusing on Childcare Educators and another test for childcare managers/supervisors. The validation process is regulated by MFHEA, however Jobsplus carries out the assessment on behalf of the Sector Skills Unit. Over the past ten years, 340 females and three males were awarded the EQF/MQF Level 4 qualification as Childcare Educators through the Trade Test whereas 125 females and six males were awarded the EQF/MQF Level 5 qualification as Childcare Managers (JobsPlus CEO at the Parliament of Malta, Family Affairs Committee 2023b).

Table 17a

Malta: IPE for KGEs via a further education institution

Job title in English: <i>Kindergarten Educator</i> Profile: Pre-primary Education Professional
Kindergarten Educator (KGE III) Entry requirements: MATSEC Level in English, Maltese, Maths and a fourth (4th) subject (which might also be the ECDL or equivalent or a proficiency test equivalent to MATSEC in the three subject areas (MQF Level 3) – (all minimum Grade 5); and Advanced Matriculation Level (minimum grade E) (MQF level 4) in one subject – or equivalent including VET qualification; (MQF level 4, 120 ECTS) and a valid First Aid certificate. Professional studies: Malta Leadership Institute 3 years part-time Award: Bachelor of Education (Honours) in Early Years – (MLI 2023) ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: Kindergarten settings 3–4 years

⁴¹ In 2021, the National Commission for Further and Higher Education (NCFHE) was re-established as the Malta Further and Higher Education Authority (<https://mfhea.mt/overview>), to seek to promote and develop further and higher education in Malta by means of regulation and by the promotion of best practices.

⁴² Database maintained in accordance with Subsidiary Legislation 607.03 on Licensing, Accreditation and Quality Assurance.

⁴³ The University of Malta, for programmes up to and including level 8 of the MQF, the Malta College of Arts, Science and Technology (MCAST) for programmes up to and including level 7 of the MQF and the Institution of Tourism Studies (ITS) for programmes up to and including level 5 of the MQF are self-accrediting institutions by virtue of the Subsidiary Legislation 607.03.

Table 17b

Malta: Childcare Educator alternative entry qualifications

Job title in English: <i>Childcare Educator</i> Profile: Social Care/Health Care Professional
<p><i>Route 1</i></p> <p>Entry requirements: Candidates must be 18 years of age and in possession of a relevant MQF Level 3 accredited award related to childcare or have at least 5-years' experience as a childcare worker assistant in a Childcare centre, including a school leaving certificate. Candidates must be able to communicate in English and Maltese. A proficiency numerical and literacy skills test together with a Police Conduct Certificate will also be required. Should the students have qualifications or equivalent evidence in Numeracy and Literacy then they will be exempt from the required tests. Candidates are also required to obtain a paediatric first aid certificate prior to the start of this course programme. This is a prerequisite for Module 1: 'Health and Safety at the Workplace and Outdoor Environment'. Candidates may apply for recognition for prior learning (RPL) for up to 40% of the total credits of the award. The Maturity Clause will apply for those over 23 years of age, but such prospective students will be required to go through an interview. Candidates with foreign qualifications ...must get their qualification validated through MQRIC at NCFHE (Learning Works 2023).</p> <p>Professional studies: Includes 200 placement hours in childcare settings (12 ECTS). Placements are done over 8 weeks, 5 hours per day. The course, which is held over one year includes online and face-to-face sessions, held at the 'Learning Works' premises.</p> <p>Award: Award in Childcare (0–3 years) – Learning Works</p> <p>ECTS credits: 60</p> <p>EQF level: 4</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: Childcare settings, 0–3 years</p>
<p><i>Route 2</i></p> <p>Entry requirements: 16+ years of age and possess either – Minimum of 5 SEC O level subjects of which must include Mathematics, English (Lang or Lit), Maltese at Grade 5 or better and any other 2 O Level subjects at Grade 7 or better or Successful completion of a related MQF Level 3 Foundation/Certificate Qualification (for example, Health & Social Care/ Art & Design / Sports or Performing Arts) or Mature students (+23 years at the start of the academic year applied for), subject to proficiency and/or aptitude tests as directed by the Academy</p> <p>Professional studies: offered as a one-year full-time course. Includes a work-based learning placement within a registered 0–3 ECEC centre for a total of 250 hours.</p> <p>Award: Award in Early Years Development, Education & Care – AVANZA</p> <p>ECTS credits: 60</p> <p>EQF level: 4</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: Childcare settings, 0–3 years</p>
<p><i>Route 3:</i></p> <p>Entry requirements: Individuals who are at least 18 years of age and who show an aptitude towards working with young children; a clean Police Conduct and hold two MQF level 3 passes (grades 1 to 5) in either Mathematics, English or Maltese. Applicants who are mature in age (over 23 years) may be considered under the Maturity Clause if they can provide satisfactory evidence (such as previous experience in this field and testimonials of care giving) of their ability to pursue successfully the programme of study. An Assessment board will be set up to help determine whether each applicant has the right aptitude or not for the job. This will be done during a standardised interview prior to registering for the Award in Child-Care.</p> <p>Professional studies: Offered as a one-year part-time course, held entirely face-to-face at Outlook Coop's premises.</p> <p>Award: Award in Child Care, Well-being, Development and Learning for Early years – Outlook Coop</p>

Job title in English: *Childcare Educator*
Profile: Social Care/Health Care Professional

ECTS credits: 60

EQF level: 4

ISCED 2011: 4

Main ECEC workplace: Childcare settings, 0–3 years

Route 4:

Entry requirements: 16 years of age or older; an MQF Level 2 qualification in Mathematics, English and Maltese and a clean Police Conduct Certificate. In the absence of an MQF Level 2 qualification, individuals can apply if in possession of other qualifications or relevant experience⁴⁴.

Professional studies: This course is of 945 hours' duration and consists of twelve modules; 500 hours are allocated for placement in Module10.

Award: Vocational Education and Training Diploma in Childcare (0–3 years) – Jobsplus

ECTS credits: 60

EQF level: 4

ISCED 2011: 4

Main ECEC workplace: Childcare settings, 0–3 years

Route 5:

Entry requirements: There are no entry requirements for this course but students are expected to have a good working knowledge of English.

Professional studies: offered as an 8-month part-time course; 360 hours of work experience/ practicum

Award: NCFE CACHE Level 3 Diploma for the Early Years workforce (Early Years Educator) – advertised by two local entities, Future Focus (2022a) and The Playhouse Institute (2022)

ECTS credits: 30

EQF level: 4

ISCED 2011: 4

Main ECEC workplace: Childcare settings, 0–3 years

Route 6:

Entry requirements: 3 years of work experience with children in a childcare facility catering for children from 0–3 years in line with the L.N. 295 of 2012 which regulates the Validation of Informal and Non-formal Learning. These candidates need to present a reference letter by an employer, confirming the number of hours of this experience; a portfolio including a description of the responsibilities of a Childcare Educator, a description of the contributions the candidate made at the childcare centre where employed, testimonials of any formal and/or informal training undertaken and any certificates in relation to childcare and a CV

Professional studies: Process of validation of informal and non-formal learning. Assessment consists of a written test, a 4-hour practical test and attending an interview, besides submitting an activity plan during the practical examination. Candidates will be assessed on the criteria laid down in the NOS issued by the MFHEA.

Award: Award as Childcare Educator – Trade Test administered by Jobsplus (Jobsplus and MFHEA, 2022a)

ECTS credits: not applicable

EQF level: 4

ISCED 2011: 4

Main ECEC workplace: Childcare settings, 0–3 years

⁴⁴ VET Diploma in Childcare 0–3 years Top up Level 4 (7 ECTS) is offered to holders of the VET Award in Childcare (0–3 years) offered by Jobsplus from year 2017 onwards, or those who completed the VET Award in Childcare (0–5 years), which was offered by Jobsplus from year 2014. Students following the top-up courses follow the new modules (Modules 8, 9, 11 and 12) only.

Job title in English: <i>Childcare Educator</i> Profile: Social Care/Health Care Professional
<p><i>Route 7:</i></p> <p>Entry requirements: 4 SEC Subjects including Maltese, English, Mathematics, and any other subject. Proficient in English and Maltese; Clean Police Conduct; at least 18 years of age at start of the programme</p> <p>Professional studies: Offered as a full-time 60 ECTS course, starting in October 2023, this course includes 7 modules of 6 ECTS each; one 3 ECTS module and the 300-hour placement module worth 15 ECTS.</p> <p>Award: Pre-tertiary certificate in Early Childhood Education and Care – APEX</p> <p>ECTS credits: 60</p> <p>EQF level: 4</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: Childcare settings, 0–3 years</p>

Table 17c

Malta: Childcare Manager (alternative entry qualifications)

Job title in English: <i>Childcare Manager/Coordinator</i>⁴⁵ Profile: Social/Health Care Professional
<p>Route 1</p> <p>Entry requirements: Preference will be given to students who hold the CACHE level 4 diploma certificate or equivalent irrespective of age. Students who completed the Future Focus Level 3 certificate and wish to proceed directly to level 5 must be at least 23 years on date of application. Students who do not have a level 4 can apply if they are 23 years old plus have at least 3 years of continuous experience working as a child carer or as an LSE.</p> <p>Professional studies: 8 months; part time and generally online.</p> <p>ECTS credits: 45</p> <p>EQF level: 5</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: Childcare settings, 0–3 years</p> <p>Route 2</p> <p>Entry requirements: Level 4 in Childcare</p> <p>Professional studies: 8 months + 50 hours work placement in a kindergarten setting; part time.</p> <p>Award: NCFE CACHE Level 5 Diploma for the early years senior practitioner – CACHE through Future Focus (2022c)</p> <p>ECTS credits: 45</p> <p>EQF level: 5</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: Childcare settings, 0–3 years⁴⁶ or kindergarten settings⁴⁷</p> <p>Route 3</p> <p>Entry requirements: A Level 5 Diploma for the Early Years Senior Practitioner which carries 45 ECTS. Both courses together will make up for the required 60 ECTS to progress to KGE II.</p> <p>Professional studies: 15 weeks; part-time, online synchronous lectures for 5 modules and one module of 50 hours is allocated to practise in the kindergarten setting where the student is already employed.</p> <p>Award: Diploma ECEC Top-up – CACHE through Future Focus</p> <p>ECTS credits: 15 (this is a top-up programme and must follow from the 45 ECTS diploma)</p>

⁴⁵ Some of the courses listed in this table are promoted as appropriate for KGEs.

⁴⁶ On its own, this course will no longer be a valid qualification when the National Standards (MFED 2021a) requirement of a minimum Level 5 with 60 ECTS for Managers becomes mandatory

⁴⁷ This qualification can be topped up with another 15ECTS programme for students to have 60 ECTS total leading to KGEII (Future Focus 2022c).

Job title in English: <i>Childcare Manager/Coordinator</i>⁴⁵ Profile: Social/Health Care Professional
EQF level: 5 ISCED 2011: 4 Main ECEC workplace: Kindergarten settings
Route 4 Entry requirements: Hold a valid First Aid Certificate that is recognised nationally. Be registered with the Food Safety Commission as a Food Handler. Have at least 3 years' experience in management of Child Care/ pre-school settings, catering for children from 0-3 years in line with the L.N. 295 of 2012 which regulates the Validation of Informal and Non-formal Learning. Be well aware of the relative legislature and regulations. <i>These candidates will also need to present the contact details of two referees that can confirm their experience and endorse skills claimed to the Assessment Board, prior to being assessed.</i> Candidates will need to present to the Assessment Board a Portfolio including a description of the responsibilities of a childcare worker, a description of the contributions made at the childcare centre where employed, testimonials of any formal and/or informal training undertaken and any certificates awarded, for any formal training in supervision, management and or related areas with regard to child care. A CV is also to be submitted. Professional studies: Process of validation of informal and non-formal learning for Childcare Managers and Supervisors in childcare centres. Assessment is composed of three components: written test; interview; and portfolio Award: Certificate of Competence MQF/EQF Level 5 and endorsed by the MFHEA (Jobsplus & MFHEA, 2022b) ECTS credits: not applicable EQF level: 5 ISCED 2011: 4 Main ECEC workplace: Childcare settings, 0–3 years

Formal opportunities for moving up the sector

UM and MCAST both offer top-up courses leading to an EQF 6 qualification (see *Chapter 4.2*). These top-up courses primarily target practitioners or students who would have completed the EQF 5 programme and have the possibility to progress in their studies or simultaneously continue their studies whilst in employment. The top-up course at UM is offered both as a one-year full time programme and as a two-year part-time programme.

Table 18

Malta: Top-up courses leading to EQF 6 BA degree in early years

Job title in English: <i>Kindergarten Educator</i> Profile: Pre-primary Education Professional
Kindergarten Educator (KGE III) Route 1: Entry requirements: (i) Higher Diploma in Advanced Studies in Early Years (MCAST) or any other comparable and equivalent recognised qualification; (ii) passes at SEC level at Grade 5 or higher in English Language, Maltese and Mathematics; (iii) passes in proficiency tests in English and Maltese, approved by the Faculty. Professional studies: Two-years of part-time study (University of Malta 2022b). Award: BA (Hons) (ECEC) ECTS credits: 60 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: Kindergarten settings 3 to 5 year-olds

Job title in English: <i>Kindergarten Educator</i> Profile: Pre-primary Education Professional
<i>Route 2:</i> Entry requirements: A Higher Diploma in Advanced Studies in Early Years (MQF Level 5, 120 ECTS), or equivalent; <i>or</i> MCAST-BTEC MQF 5 Early Years Learning and Development; <i>or</i> MCAST-BTEC Higher National Diploma in Advanced Studies in Early Years Professional studies: 18 months part-time, blended approach (MCAST and IfE, 2021g) Award: Bachelor of Arts (Hons) Early Years, Learning and Care (Top-Up) ECTS credits: 60 ECTS EQF level: 6 ISCED 2011: 6 Main ECEC workplace: Kindergarten settings 3 to 5 year olds

Assistants to Childcare Educators

As mentioned earlier (*Chapter 2.1*), managers were formerly allowed to employ unqualified staff as Childcare Assistants. In light of the requirements for a minimum level of training according to the National Standards (MFED 2021a), letter circular (IfE45/2022) sent to childcare settings on August 1st 2022 by the Institute for Education⁴⁸, an invitation has been extended to these Assistants to follow a 30 ECTS EQF 3 programme for ‘Assisting the Childcare Educators’. The programme ran from October 2022 to mid-July 2023.

Table 18a

Malta: EQF Level 3 Award for Assistants to Childcare Educators (Institute for Education)

Job title in English: <i>Assistant to the Childcare Educator</i>
Entry requirements: Be 23 years of age; currently employed in a childcare setting Professional studies: 8 months; delivered online – IfE portal Award: Award in Assisting the Childcare Educator, Institute for Education ECTS credits: 30 (part-time) EQF level: 3 ISCED 2011: 3 Main ECEC workplace: Childcare settings

According to the MCAST prospectus (MCAST 2023) a one-year diploma in early years will be available for prospective assistant childcare educators from October 2023 and seeks to prepare students who are interested in working in childcare settings. This course has attracted 94 students (MCAST reporting to Parliament of Malta, Family Affairs Committee 2023a).

⁴⁸ The Institute for Education was originally setup in April 2015 by virtue of Legal Notice 140 of 2015 as amended by Legal Notice 240 of 2015. The Institute was reconstituted as an agency by virtue of Legal Notice 243 of 2017. The Institute provides initial teacher training and professional development that inject 21st century skills and competences into the educators at all levels of leadership and infuse equity and social justice within all programmes. It aims to develop accredited programmes which are flexible and can be provided through different modes of delivery such as face-to-face lecture, online and blended learning. The Institute for Education is licenced by the Malta Further and Higher Education Authority (MFHEA) as a Higher Education Institution in accordance with the Second Schedule of Subsidiary Legislation 327.433.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Workplace/practice placements are not nationally regulated but are determined by the providers of the various programmes available. As illustrated in the subsequent sections, the amount of time students spend at kindergarten and childcare settings whilst following their initial professional studies varies. Similarly, the processes relating to the assessment of the practicum vary: some institutions have their own specifically-appointed examiners, others rely on staff at the childcare settings to monitor and supervise the students. To date, none of the staff employed or appointed for supervisory duties follow any mentoring course to prepare them for the role. Externally appointed assessors appear to have different roles as a number of institutions report that their assessor consults regular staff employed within the settings. These arrangements are applicable in particular to the EQF 4 courses which address Childcare Educators' qualifications and courses offered by private, independent institutions rather than the more established, government funded institutions which are nationally acknowledged as leading further and higher education.

Table 19

Malta: The professional practice component in EQF 4 programmes

Learning Works	Avanza Training Academy	Outlook Coop	Jobsplus	Future Focus	MCAST	Apex Academy
200 hours 12 ECTS	250 hours 10 ECTS	400 hours	500 hours	360 hours (NCFE CACHE Level 3 Diploma for the Early Years Workforce)	<i>Planning and Reflecting on Developing Practice and Children 1</i> (9 ECTS) and <i>Planning and Reflecting on Developing Practice for Children</i>	300 placement hours 15 ECTS Assessed through Observation

hours a day.	with mentoring support from the respective Centre Owner/Manager	During the hours of placement, each student will have visits by the Centre Manager for assessment purposes.			2 (9 ECTS). In the first study unit, no mention is made of the number of hours but the study unit description refers to two placements... <i>how to plan and implement activities with babies (0–14 months) and toddlers (14–36 months)</i> . In the second study unit, learners must attend a minimum of 150 hours of placement with children aged 2–3 years.	(40%) and Reflection Course documentation indicates 30 hours for supervised placement and practice.

Additional information about the examination procedures concerning the practicum, together with any procedures linked to mentoring was obtained directly from the training institutions which offer the IPE courses.

Learning Works⁵⁰

The Course Tutor responsible for the modules *Child Development and Learning* and *Work Placement, Portfolio of Evidence and Reflective Report* is also the person currently responsible for the placements and the assessment of students. This programme of studies has not been established for any length of time, and thus far one person with experience in educational settings has been responsible for supervising, examining and mentoring students during their practicum. Students are visited twice during the practicum with the possibility of a third visit if the supervisor/mentor/assessor is not satisfied with the outcome. The Course Tutor is remunerated for each visit.

Other assessments during the practicum consist of

- A Portfolio of evidence, including the setting of childcare, personal philosophy about 'Child care education', weekly plan, 2 activities planned by the student
- A *Placement evaluation form* which includes information about programme development, professionalism, work with children, family engagement and professional development. This form is completed by the Centre Manager where the practicum is taking place.
- A reflective journal consisting of two topics such as *Adopting a play-based pedagogy* or *Partnerships with parents and families*. The choice of topic is discussed with the mentor.
- Child observations.

⁵⁰ Information via email August 4th 2022

Outlook Coop⁵¹

There is one examiner who has several years of experience in the early years sector who assesses and examines students during the practicum. Each student gets two assessment visits over the 400-hour practicum duration – one visit for each of the 200-hour block practices. The examiner is remunerated for these visits.

On a day-to-day basis, students are supervised by Centre Managers or by their appointees. However, the training institute does not get involved in who, within the childcare centre is appointed or takes on the role of mentoring/supporting the students doing their practicum.

Jobs Plus⁵²

During the practical module, learners are required to write 15 journal entries highlighting what they have learned in class and how this was applied at the childcare centre. These can be observations made (for example during play time) or even things which they organised (for example an activity). They also need to highlight how they can further improve the activities (reflective practice). These journal entries are then corrected by a Jobsplus trainer, and the learners need to obtain a pass mark in order to pass from this module.

Learners are given a handbook through which they have to highlight the skills they practised at the childcare centre. The Centre Coordinator is responsible to grade the performance of the learner in each specific skill according to their performance during the placement. Placement monitoring visits are carried out by the Training Design and QA Unit and generally three visits are conducted so that Jobsplus gathers feedback at the beginning of the placement, halfway through the placement and towards the end.

It is up to the Centre to determine who should supervise the students during their practicum. Mentoring or coaching provided by the Centre is not remunerated as the agency sees this as something which ultimately the childcare settings will benefit from. Many of the students following this programme are offered a job before completing their placement. During monitoring visits, referred to earlier, feedback is sought from the students doing the practicum and the Centre Coordinators. The latter are reminded that students cannot merely observe but they must do the job. If there are instances where it is evident that either the trainee is not adhering to the Centre's policies or the Centre is not offering enough practical exposure to the learners, the training entity reserves the right to terminate the placement.

Practicum for EQF 5 IPE: Future Focus

With MQF5 courses that require a practicum, Future Focus allows learners to seek a placement within the related area of study. Once this is approved by the institution, the learner will conduct a specific number of hours of practice placement within the real-life setting. The practicum is internally supervised (by the particular Centre) and externally assessed by Future Focus on the place of work or via a professional discussion (depending on restrictions as per Covid measures). In both instances, Future Focus appoints a specialized tutor to assess the learner and draw up a report.

Level 5 Diploma in Leadership for Health and Social Care and Children and Young People's Services (England) Children's and Young People's Management (45 ECTS) includes 120 practice placement hours in a programme.

Level 5 Diploma ECEC TopUp course (15 ECTS) 1 module of the 6 modules is a practicum. Students need to conduct 50 hours in the role of KGE. Practice placement is conducted at the place of

⁵¹ Information via email August 1st 2022

⁵² Information via email August 8th 2022

work, hence within the school where they are already employed as KGEs. The learner will be expected to be in full-time employment within this setting and will be required to validate 50 hours of practice for this mandatory placement (Future Focus 2022c). No further information is provided about the assessment of the practicum.

MCAST EQF 5 and EQF 6 Top-up courses

Practicum study units are included in both the first and second year of the 120 ECTS EQF5 programme. There are two 6 ECTS study units in the first year and a further two 6 ECTS study units in the second year for a total of 24 ECTS. Students following this programme of studies are assessed by examiners appointed by MCAST itself.

Although the programme of studies for the MCAST/IfE joint degree top-up refers to a placement (IfE and MCAST 2021) none of the individual study unit descriptions indicate a specific period for the practicum. One 10 ECTS study unit, *Emergent Curriculum in Practice*, refers to practice placements which the students would have undertaken in their EQF 5 programme of studies. Also, considering that the literature for this programme explicitly states that preference is given to applicants who are already employed as KGEs, it would seem that any reference to placements may refer to students trying out specific activities with a more reflective and critical stance.

Undergraduate course at the University of Malta (UM) (University of Malta 2022a)

Within the BA (Hons) (ECEC) programme offered at UM, students are introduced to life in schools and classrooms in the first year of the programme. This is done through weekly visits where students are assigned to a classroom and where they spend initial weeks observing the regular Kindergarten Educator. These visits are accompanied by weekly, small-group tutorials and from time to time, students are expected to plan, prepare and conduct specific activities with the children they would have been observing. Towards the end of this study unit, students have a three-week practice placement where they take over the classroom independently. This entire study unit is worth 6 ECTS with the final assessment equally shared to students' responses to focused tasks followed during the year-long tutorials and the practicum, which assessment takes into consideration the planning and documentation associated to the actual practice.

There are 6 ECTS in the first block teaching practice for the students following the full-time BA (Hons) in early childhood education and care at UM. This takes place in the 2nd year of the programme. Another 8 ECTS teaching practice study unit takes place in the 3rd year of the programme. University-appointed examiners with experience in early years visit students at least twice during their placements in a kindergarten setting. Teaching practice is assessed against a number of criteria. There is no formal mentoring programme but casual staff (i.e. not full-time resident academic members) who accept to participate in teaching practice have the opportunity to discuss the processes, criteria and documentation associated to teaching practice and its assessment. Casual part-time members of staff appointed to conduct TP visits are remunerated for each visit.

For students following the 60 ECTS top-up undergraduate course, a practicum is included in their studies irrespective of whether the students opt for the full or part-time course.

Undergraduate course offered by the Malta Leadership Institute (MLI 2023)

There are three practice placements for a total 20 ECTS of the 180 ECTS part-time course. Cumulatively these placements account for 435 hours: 150 hours for 7 ECTS in the first and second year of the programme and 135 hours for the 6 ECTS third year study unit. Each of these three study units has the same general learning outcomes and the same modes of assessment. Mode of assessment is divided to include 50% placement observations; 25% portfolio; 25% teaching practice file.

6. Continuing professional development (CPD) of ECEC staff

According to the European Commission publication on *Structural indicators for Monitoring Education and Training Systems in Europe* (European Commission/EACEA/Eurydice 2022, 13), Malta is one of nine countries where CPD is undertaken among staff working in pre-primary settings such as kindergartens but where there is no such requirement for staff working with the under threes in childcare settings. This is in sharp contrast with 22 countries where CPD is a professional duty or necessary for promotion for all who work in settings across the entire phase of ECEC, from birth to compulsory school age.

CPD for Childcare Educators

Where CPD is undertaken in **childcare settings**, this is done through the initiatives and arrangements within settings themselves. For example, Childcare Educators and Co-ordinators (Centre Leaders) employed with the 12 state-funded childcare settings managed by the FES have their own CPD sessions. Compulsory staff training seminars are organised twice yearly with more training sessions organised throughout the year for both groups. Training for Centre Coordinators has included seminars about General Data Protection Regulations (GDPR) matters, principles for inclusion and health matters affecting babies. Childcare Educators have had PD sessions to address proficiency in spoken and written English.

Education Officers for Early Years have started visiting childcare settings for training where the DQSE has asked for such support⁵³.

Among the responsibilities that define the role of the Childcare Manager and based on the NOS, the National Standards for ECEC (0–3 years) (2021) expect the manager to “*provide and/or facilitate continuous professional development opportunities for staff members on a regular basis*”. (p. 16). As stated elsewhere, the implementation and follow-up of these standards, especially where new practices are being brought in, will be done gradually.

CPD for Kindergarten Educators

Regulation: For staff working within the State and Church **kindergarten** sectors, professional development/in-service training is regulated by the Collective Agreements (MEDE 2017; Archdiocese and MUT 2018). In lieu of the in-service training days, which used to be held at the beginning or at the end of a scholastic year, staff were given more leeway to have a say in their own professional development.

“... greater emphasis is placed on schools and individuals to seek the most appropriate professional development which best respond to the contextual, national and international needs with a particular focus on the respective communities’ learners, educators, and educational leaders. The concept of CPD is being widened to encompass all development opportunities that nourish the creation of a Community of Professional Educators (CoPE), which includes all initiatives that facilitate professional discussion and growth amongst community members, such as school development planning sessions, continuous professional development and links with the internal and external community” (MEDE 2017, 30).

Obligation/leave entitlement: In addition to the 40 compulsory hours of CoPE sessions, organised and managed by the school leadership/management team, members of teaching grades

⁵³ Email communication 1st July 2022

are encouraged to participate in self-sought CPD which may be followed during or outside normal school working hours. A maximum 80 hours of self-sought professional development can be claimed for career advancement. This can include a variety of activities which must be endorsed by the Head of school.

Despite the obligations for CoPE, sessions can be somewhat sporadic. Guest speakers may be invited to conduct presentations about their area of expertise and according to the needs perceived by the administration. However, when such presentations are not followed up and are reduced to awareness raising, or providing ideas and suggestions to try things out, and where the practitioners have not been given the opportunity to suggest where they would like more support, it is more challenging to engage with the practitioners or to follow-up on any subsequent development.

CPD providers: Compulsory CoPE sessions may consist of school based and national/central training which would be offered to all settings. CPD associated to school-based sessions can be quite diverse in the way the sessions are organised and conducted. The content, delivery, nature of the presentations and attendees for the sessions can vary. The school leadership team may be entirely responsible for organising PD depending on particular issues, projects or the vision for the school. PD sessions would also complement the school's School Development Plan for the specific scholastic year or cycle of two years and would have been included in the school's action plans. Since action plans lead to changes, be it curricular or structural, training is always imperative. PD sessions could include external interventions and presentations by, for example, staff working at University or within the Education Directorates who would be invited to address staff about specific issues of relevance. Issues vary and could focus on national innovations, curricular changes, the promotion or introduction of methodologies, school policies etc. The topic and content for school-based PD sessions could be decided exclusively by the school management team or arising from suggestions made by members of staff and which could be relevant to educators working with specific age groups or for the entire staff. At a time when the emergent curriculum and a learning outcomes framework are being promoted in early years settings, particularly kindergarten and the first two years of compulsory school, the three EOs responsible for the early years sector have focused their CoPE commitments on these topics. EOs can avail themselves of a maximum of 15 of the 40 hours and have organised three CoPE sessions per term in recent scholastic years. Training has been offered to teachers working with 5 to 7 year-olds whereas KGEs have continued to follow training and be monitored through curriculum time, at the request of the school leadership team. Some schools request specific PD session for their Educators, which EOs provide accordingly.

CoPE sessions are also held for staff in Church and Independent schools.

Irrespective of who takes any initiative for CPD, these initiatives should be considered within a wider context of actual practice with children and therefore be relevant to specific settings. In the absence of a wider strategy or vision, CPD activities risk becoming repetitive, or lack coherence and fail to lead to growth, change and development. Ideally, an infrastructure needs to be set up to enable and facilitate monitoring and support: it is futile to invite staff to attend CPD and expect participants to rapidly interpret, understand, adopt and adjust their practice and activities without further support, feedback or opportunities to reflect on their practice.

Content and quality assurance: Although nobody obliges schools to follow or choose the content or format of PD, schools are held accountable for PD sessions which are organised. A list of such sessions must be submitted to the quality assurance department, and the church school secretariat in the case of church schools, for review purposes. When school-based PD sessions are organised it is the responsibility of the Head of School, aided by the SLT members, to plan enough sessions in the year which would cover the required 40 hours. Evidence of each session

must be maintained, along with signed attendance sheets; the evidence is usually asked for during an external review visit from QAD auditors. Certification to denote attendance/participation could be given when professional development meetings, lectures, workshops and/or courses are followed. However, such CPD would be followed through the initiative of individuals and not part of the CoPE sessions.

Funding: Self-sought courses may be funded by the individuals who are following them. Upon completion, holders of the qualification could be entitled to rebates through the *Get-Qualified* scheme (Malta Enterprise 2021, 3): "*The scope of this incentive is to support the personal development of individuals who aim to achieve qualifications and certifications required by industry. The incentive is applicable to students following a course of studies leading to a certification, diploma, degree or post-graduate degree courses. On successful completion, the student will benefit from a tax credit, hence recovering part of the costs incurred*".

Career advancement: CPD which forms part of the CoPE sessions are not accredited as they do not reach established criteria of ECTS values and corresponding number of hours in training; neither would there be any assessment involved. On its own, CPD is not used as a tool for career advancement and whilst attending professional development courses and corresponding, relevant certification where applicable are generally listed in individuals' personal curriculum vitae and included in their portfolio in response to job applications, there is no system in place where such courses can replace or top-up the formal qualifications which are required.

Research, debates: To date, there are neither research projects focusing on the CPD received by ECEC personnel, nor has there been any funding allocated over the past five years to review issues associated to access, motivation or impact of CPD on practice, participation or professional engagement of practitioners. CPD for early years practitioners is not an issue which has arisen in any debate about early childhood education.

7. Working conditions and current workforce issues

7.1 Remuneration

Early childhood educators were once described as the poor relatives of primary school teachers (Ayers 1989), considered an appendage, outside the teaching profession and unworthy of any particular attention. Although this may be a dated summary of perceptions about early years educators, it is certainly still reflected in the salaries and remuneration of staff employed in kindergarten and more so in childcare settings in Malta.

Childcare Educators

Information about salaries paid to Childcare Educators is rather sketchy. There are no national data available. Since most of the settings are privately owned, salaries are negotiated with the carers seeking employment. Some random requests sought from different sources yielded the following information.

Table 20

Malta: Information about employment conditions in childcare settings

Setting A	Setting B	Setting C	Setting D	Setting E	Setting F	Setting G
Staff are employed on a full-time basis – a 40-hour week. With an EQF 4 they have a starting salary of €15,853 per annum (Scale 15). Over a number of years and depending on their performance, this increases gradually to Scale 13 (€18,074-€20,087).	The manager and carers are employed on flexible hours depending on their family arrangements and commitments. The Childcare Educators are paid €8 an hour and the managers are paid €8.50 an hour before any tax deductions.	Staff work on a full-time, 40-hour week basis. A max of 30 hours is direct contact time with children. Ten hours of non-contact time is expected for preparation and is available weekly. A manager earns a minimum of €20,889 up to a maximum of €31,211. Childcare Educators have a starting salary of €14,134 which goes up to a max of €22,438.	Two full-time and 3 part-time staff are employed. Working hours are 8 hours a day and remuneration is less than €10 an hour. Paid non-contact time is available.	Staff are on a full-time or full-time (reduced hours) contract. Staff work 5 to 8.5 hours a day. Paid on a monthly basis at the rate of €7.05 per hour (revised annually). Non-contact time is available for 2-3 hours a week and is allocated on certain days. Staff choose whether to plan together during non-contact time or use personal time for planning.	Staff work full time, for 5.5 hours a day. There is no allowance for non-contact time. Staff working with the under threes earn €1038 monthly.	Employs two Childcare Educators on a full-time basis; a helper works parttime. They work 4 hours a day (08.30 – 12.30). They are paid monthly, and are on salary scale 15, starting at €15,717. The Childcare Helper is on an hourly rate basis and gets €7/hour, depending on the number of hours worked. Not paid in July, August and September.

Kindergarten Educators

The starting salary at the various grades applicable to staff in kindergarten settings is presented in *Table 21*. KGEs have salaries ranging from scales 15 (supply) to 9 (KGE III). Primary teachers' salaries range from scales 9 starting at €23,353 per year to scale 7 with a starting salary of €26,438. Thus, Primary school teachers earn considerably more than KGEs.

Table 21

Malta: Salaries for KGEs

Designation	Starting Salary ⁵⁴	Increments
KGE III EQF 6	€21,950 with increments of €407,67	Salary Scale 10 upon entry; progressing to Salary Scale 9 upon completion of five years of satisfactory service in the grade.
KGE II EQF 5 60 ECTS	€19,323 with increments of €354	Salary Scale 12 upon entry; progressing to Salary Scale 10 upon completion of five years of satisfactory service in the grade.
KGE I ⁵⁵ EQF 5 30 ECTS	Scale 15: €15,717 with increments of €298 Scale 14: €16,865 with increments of €316.83 Scale 13: €18,074 with increments of €335.50	Salary Scale 15 upon entry; progressing to Salary Scale 14 upon completion of five years of satisfactory service in Salary Scale 15 and to Salary Scale 13 after a further five years of satisfactory service in Salary Scale 14.

As with childcare settings, some information sought randomly from five private/independent settings yielded the following information.

Table 22

Malta: Information about working conditions for KGEs in five private settings

Setting A	Setting B	Setting C	Setting D	Setting E
KGEs employed on a full-time basis earn €1,280 per month (before taxes). They have four and a half hours of daily, direct contact with the children and an additional daily two hours of non-contact time.	KGEs work full time, with five hours of direct contact time with the children daily (08:00-13:00) and with a monthly salary ranging from €1079.67 – €1225.75 gross (this is revised yearly to reach government wages according to qualification). Non-contact time to be used for preparation, is an hour every day after the children leave.	KGEs working on a full-time basis work from 08:00-13:30 or 09:00-14:30. The monthly salary is worked out according to their qualifications. Non-contact activities are normally done during school hours, i.e. preparation during a free lesson, talking to parents after school, staff meetings are held once a term, on a half day. Weekly meetings with colleagues from same year	KGEs employed on a full-time basis for 5.5 hours a day. Paid €1,173 monthly. No non-contact time is available for preparation.	KGEs are employed on a full-time basis. Working hours are from 08:30-14:00, five and a half hours daily. Salaries vary, depending on the qualifications. Starting salary for KGE is at scale 15, i.e. €15,717 per annum in 2022 with annual increments of €298 per annum (depending on the number of years employed at the setting).

⁵⁴ Collective Agreement for Employees in the Public Service 1st January 2017 – 31st December 2024 (Government of Malta 2017)

⁵⁵ A full qualification at MQF Level 4 in early childhood education and care recognised by the competent authorities shall also make candidates eligible for application into this grade, up to end of year 2020 (Article 25.4: p. 41; MEDE 2017).

		group are held together with the Senior Management Team (SMT)		The highest salary for a KGE is scale 9, which in 2022 was at €23,353 per annum with annual increments of €447.33 per annum.
--	--	---	--	--

Across all settings it is customary for professional development/staff meetings and parents' days to be carried out on days when children are asked not to attend. These would be considered working days for staff.

It is worth noting that another electoral proposal in the March 2022 Malta Labour Party manifesto (MLP 2022, proposal 252, 76) refers to better salaries and working conditions in the forthcoming collective agreement for Childcare and KGEs.

7.2 Full-time and part-time employment in ECEC provision

The data available (DQSE May 2022) indicates that 62% (N=775) of the **staff in child care** are working full time and a further 31% (N=391) are employed on a part-time basis. Another 5% (N=63) are recorded as “full time – reduced hours”. Others are listed as “casual” staff or working “flexible hours”.

Kindergarten staff within school settings who are employed on a full-time basis work 5½ hours a day or a 27½ hour week including mid-morning break. This applies from the fourth Monday in September to the 31st of May. Between the 1st of June and the 6th of July, the school working hours are 3¾ hours per day or an 18¾ hours week, including mid-morning break (DES 2010).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

There are no formal measures available either for induction or for mentoring and supporting newly-qualified staff. This applies to practitioners working in kindergarten settings as well as staff in childcare settings.

7.4 Non-contact time

In childcare settings operated by FES and in accordance with the Collective agreement with UHM, Childcare Educators work on a full-time basis. Of the 40-hour week, 10 hours a week are allocated for non-contact time. They are not obliged to spend these hours at the setting. Duties expected of Childcare Educators during non-contact time were initially specified in an appendix of the Union’s Agreement (FES-UHM⁵⁶) and some modifications have been made to reflect the pedagogical shift being promoted with the introduction of the emergent curriculum. Besides attending team meetings every three months and monthly meetings with the Coordinator other non-contact time duties of Childcare Educators include:

- Assessing the children for whom they are directly responsible
- Compiling learning journals accompanied with photos of children’s activities
- Developing the objectives to be achieved by the children and planning daily activities
- Evaluating the activities and seeking ways to improve them
- Drawing up a report on a prescribed template, about each child before s/he progresses to a kindergarten setting

⁵⁶ Union Ғaddiema Magħqudin – Voice of the workers

- Proposing actions for improvement of service to be discussed and agreed to with the Co-ordinator during the mentoring time as well as inform other colleagues at the setting
- Seeking professional training in addition to the bi-annual sessions, directly by FES
- Meetings with parents every six months.

In the privately-owned and managed **childcare settings**, non-contact time is at the discretion of the owners. Some allocate non-contact time for their staff but this does not seem to be widespread. For example, one setting reported that the Childcare Educators are with the children all the time; another setting offers Educators 4 hours a week of non-contact time which is divided over two occasions each of two hours’ duration.

In **kindergarten settings**, following the Collective Agreement (MEDE 2017) arrangements had been planned for non-contact time. “For non-compulsory schooling years, all KGEs and Teachers serving at Kindergarten level, shall be entitled to 60 minutes per week of non-contact/curriculum time as from scholastic year 2018/2019 to reach a maximum of 90 minutes per week of non-contact/curriculum time from scholastic year 2019/2020. This time shall be covered by Learning Support Educators or KGE Relievers (who may include Students performing practicum as part of further and higher education studies in a related area).” Although some schools tried to adhere to these arrangements when/where possible, because of COVID-19 pandemic, non-contact time was put on hold because Relievers were assigned duties to replace regular staff who were on sick leave.

Church schools were encouraged to maintain non-contact time even during the pandemic. Some schools found it more efficient to accumulate the non-contact time for monthly rather than weekly meetings when children would not be in school. Weekly non-contact hours were more challenging to adhere to in the absence of Relievers or suitable replacements as approved of by the Union agreement.

7.5 Current staffing issues

Whilst there are no official data about shortage or ease of recruitment, within **childcare settings** there continues to be a steady turn-over. Childcare providers claim to have difficulties in employing qualified Childcare Educators since staff prefer to work in kindergarten settings where working conditions are better. This claim seems to be reinforced by teaching staff at MCAST who reported (Parliament of Malta, Family Affairs Committee 2023b) that despite the possibility of Childcare Educators to be accredited with an EQF Level 4 after their first year of the two-year Advanced Diploma, most students pursue the second year of studies. The current EQF Level 4 cohorts (2023–2024) include 76 first year and 43 second year students.

When vacancies arose within KG settings, Childcare Educators understandably saw this as an opportunity for a better salary and improved job security. The extent to which this mobility and trend will continue remains to be seen. On the one hand, the move away from being a Childcare Educator with an EQF 4 qualification to becoming a Kindergarten Educator with the minimum of EQF 5 (30 ECTS) or EQF 5 (60 ECTS) may still be perceived as a good opportunity worth investing in. For Childcare Managers, the enticement to move to kindergarten is going to be greater since an EQF 5 with 60 ECTS is the minimum requirement for managers and for KG II educators. However, the stumbling block might actually be the saturation of the kindergarten market. As mentioned earlier in this report, within the state sector Relievers are identified from the same pool of qualified KGEs. The older/more experienced practitioners are assigned a group of children while the younger ones are Relievers. This implies that the younger graduates are increasingly less likely to find a full-time position at kindergarten level with responsibilities for their own group of children. MCAST staff reported that despite a healthy intake of students for their 180

ECTS, EQF Level 6 Bachelor degree (early years) programme, the market is saturated and vacancies/calls for Kindergarten Educators are absent (Parliament of Malta, Family Affairs Committee 2023b). MCAST officials believe that many of their students will pursue further studies and apply for the two-year, 120 ECTS Masters in Teaching and Learning (MTL) offered for Primary School Teachers at the Faculty of Education, University of Malta.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

One reform which has come about follows from the Collective Agreements (MEDE 2017; Archdiocese and MUT 2018) about the organisation of kindergarten staff as KGE III, KGE II and KGE I. Categorising KGEs in this way has led to a raise in the minimal level of entry qualification for KGEs from EQF 4 to EQF 5 from 2021. KGE III are holders with a BA (Hons) (ECEC) who started graduating from UM in 2019; and KGE II and KGE I are expected to have an EQF 5 with 60 ECTS or 30 ECTS respectively. This therefore implies that EQF 4 programmes, which were previously and until recently the minimal level of qualification for KGEs, are no longer accepted. Being in possession of EQF 5 or 6 qualifications and the corresponding designation of KGE I, II or III is reflected in the salary scales and progression. There is no distinction in duties amongst KGEs, irrespective of their initial professional education and subsequent qualification. According to the European Commission publication on *Structural indicators for Monitoring Education and Training Systems in Europe*, of the 35 countries which were reviewed, Malta is one of only eight countries with no compulsory requirement for at least one member of staff to have a tertiary (Bachelor-level) qualification in education sciences (European Commission/EACEA/Eurydice 2022, 13).

At the time of writing this report, a second reform which is still awaiting Ministerial discussion and confirmation refers to the excerpt in the *National Standards for ECEC (0–3 years)* (MFED 2021a) which seeks to establish that Childcare Educators and Childcare Managers have an EQF Level 4 and 5 respectively with a minimum of 60 ECTS. If this position is accepted and implemented, having Childcare Educators with an EQF 4 qualification consisting of 60 ECTS will actually promote shorter courses than previous EQF 4 qualifications which were offered over two years of full-time study for a maximum of 120 ECTS.

9. Recent country-specific research focusing on ECEC staff

There are no national or large scale projects planned, commissioned or driven by the Ministry of Education or the DQSE which focus on the workforce, or the professional needs of the workforce in the sector. Small-scale research which included ECEC staff as the main participants has shed light on some crucial issues, even where workforce issues may not have been the main focus.

Reflecting on ‘quality’ in early childhood education: practitioners’ perspectives and voices

Source: Sollars 2022a (see *References* for full details)

Aims: Participants were invited to reflect upon, discuss and define quality.

Methods: Data included responses from over 400 practitioners from Malta and Gozo employed as KGEs in 34 State, Church and Independent settings, together with Childcare Educators and some Managers from 16 childcare settings via semi-structured interviews or focus group discussions.

Selected findings: Data indicates that the practitioners themselves, the work they do and the potential impact their professional relationships and experiences have on children are not characteristics which feature prominently in the participants’ considerations about quality issues.

Implications: Practitioners do not acknowledge themselves or their professional work as central to the quality of services offered in early years settings. This suggests a lack of awareness about the potential impact which their professional and/or pedagogical knowledge and competences, have on the quality of the learning experiences. Such findings are of concern in light of earlier research which resulted in significant correlations between higher teacher education and qualifications with higher quality ECEC environments including the programme structure (Manning, Wong, Fleming, and Garvis 2019).

“There’s always room for improvement”: Practitioners’ perspectives on challenges to quality in ECEC settings

Source: Sollars 2022b (see *References* for full details)

Aims: Participants were invited to identify challenges they face when attempting to offer quality services.

Methods: Data were collected from 460 practitioners across Malta and Gozo who were employed as KGEs in 34 State, Church and Independent settings, together with Childcare Educators and some Managers from 16 childcare settings via semi-structured interviews or focus group discussions.

Selected findings: Responses given by practitioners yielded three broad categories of challenges: work-related; challenges arising from the nature of the relationships with stakeholders, including children, parents, colleagues and the leadership staff; and professional challenges which arose from the practitioners’ perceptions about their profession and other issues associated to pedagogies and practices.

Implications: Practitioners cannot address work-related challenges single-handedly. Systemic shortcomings need to be strategically addressed, especially to give staff the confidence to make them articulate and assertive when discussing, defending and deciding what constitutes quality early years programmes and environments. A disheartened workforce which perceives itself as a voiceless profession requires professional support and development, adequate resources and facilities which collectively would contribute towards a concerted effort to improve quality services in the early years.

Introducing curricular changes in Maltese kindergarten settings. A comparison of stakeholders’ perspectives

Source: Portanier 2022 (unpublished Master’s dissertation) (see *References* for full details)

Aims: Data were collected in 2018–2019 at the time when the emergent curriculum was being introduced and professional development sessions were organised for the senior management/leadership teams and the KGEs across all settings.

Methods: The inquiry was conducted with two Education Officers, four Assistant Heads with responsibilities for the kindergarten setting in their State school and thirteen practitioners working with 3 to 4 year-olds. Through interviews, participants were asked to discuss what they knew about (i) the learning outcomes framework (DQSE 2015) which had been developed for the early years following the publication of the National Curriculum Framework (MEDE 2012) and (ii) the emergent curriculum which they were expected to adopt and implement during that scholastic year.

Selected findings: Thematic analysis of the qualitative data led the researcher to conclude that *“rather than being informed about the curricular changes and implementing decisions taken by external sources, practitioners at the coalface need to be involved at the development stage of any policy in order to own the process and implement it effectively”*.

Implications: The researcher noted that there was a gap between the intended curriculum and the enacted curriculum and the differences in the views expressed by the participants indicated that stakeholders, *“did not appear to have been adequately prepared to adopt or translate it to best practice and appropriate pedagogy”*.

COVID-19 and education in Malta (Cov-EM) study

Source: Bonello, Camilleri, Deguara, Milton, and Muscat 2022 (see *References* for full details)

Aims: A research report focusing on the impact of COVID-19 on the personal and professional lives of kindergarten educators, childcare educators and learning support educators during the first and second waves of the pandemic (2019/2020; 2020/2021).

Methods: Data were collected through two online surveys, which included open-ended questions. 201 kindergarten educators, 30 childcare educators and 29 learning support educators participated in the first survey and 58 kindergarten educators and 11 learning support educators took part in the second survey.

Selected findings: Early years pedagogies for the under-fives were reshaped within online and off-line environments. In addition to the uneven start to online learning, early years practitioners did not use daily online interactive, live sessions creating a sense of detachment among parents and young children. Shifting to online activities had some benefits (such as more parent engagement) but did not come without its challenges shedding doubt on the extent to which online learning environments are successful learning spaces for young children.

Implications: Among the recommendations proposed in the report, the researchers propose strengthening the technological preparedness of early years educators for online learning spaces to capitalise on children’s learning. They also advocate for increased curriculum time for early years educators to promote collaborative, critical, reflective practices and professional growth; increased monitoring and support for educators and early years leaders.

10. Workforce challenges – country expert assessment

Malta continues to face several challenges in relation to the early years workforce including initial professional education (IPE) and continuing professional development (CPD); monitoring and support of practices during IPE and in employment; and recording, maintaining and evaluating data about the settings, the services and the work-force.

Initial professional education of Childcare and Kindergarten Educators

The issues around IPE, qualifications and CPD are multifaceted. In the first decade of the 21st century the primary challenge focused on ensuring that early years educators have a qualification at a time when unregulated childcare settings were beginning to flourish. A two-year full-time course was one of the first to be introduced in 2001 when MCAST was set up. This BTEC course was offered before home-grown programmes became available. It targeted students seeking employment in childcare settings but, with some additions to what was referred to as the ‘extended practice placement’, it gradually replaced the two-year full-time course for KGEs which used to be offered by the Education Department between 1993–2003. Simultaneously, private institutions and public entities such as the Employment Training Corporation (ETC)⁵⁷ introduced a variety of courses directed at women seeking to (re)join the labour market. The duration of the programme, number of ECTS and depth of content covered was somewhat sporadic but courses received their EQF rating once the National Commission for Further and Higher Education (NCFHE) was set up in 2012 with a specific mission to oversee ‘the regulation of the Further and Higher education sector in Malta, making sure that the Malta Qualifications Framework is respected throughout’ (NCFHE and MEDE 2016, 5).

Gradual changes and adjustments have been introduced in a piecemeal fashion. The focus has been on the EQF level irrespective of the variation in the number of ECTS attributed to courses considered as appropriate, formal qualifications. Little consideration seems to have been given to the content of these courses. Task permeability has been allowed merely by virtue of accredited EQF 4 courses and with the lure of better working conditions in kindergarten settings. Staff initially trained to work with under threes have been employed in kindergarten settings without much consideration attributed to the different roles and responsibilities assigned to an early years workforce engaging with very young children at different stages of development. The content of the courses offered by various institutions, together with the philosophy and didactic-pedagogic practices promoted, need to be reviewed at the same time as taking initiatives to harmonise and strengthen the early years initial and continuing professional development.

As mentioned earlier, the EQF 4 course offered by MCAST has always included 120 ECTS. However, in the ongoing process of establishing standardised minimal qualifications at both EQF 4 and 5 levels, courses having a minimum of 60 ECTS are now the qualifications required for employment for Childcare Educators or Managers respectively (MFED 2021a), and an EQF 5 worth 30 ECTS is now the minimum required qualification for KGEs. There are several concerns arising from these changes:

1. Despite the attempts to harmonise the minimum qualifications of staff, the duration of the mandatory initial qualification is being curtailed, transmitting a message that getting qualified to work in ECEC is a relatively short journey. If EQF Level 4 and 5 60 ECTS courses are acceptable qualifications what motivation would students have to pursue a longer programme of studies? Top-up courses are already underway for holders of a EQF5 with 120 ECTS to proceed to an undergraduate degree. This in itself is praiseworthy but the downside of this upgrading is that qualified personnel continue to be drawn away from working with the youngest children.

⁵⁷ The Employment and Training Corporation (ETC) was established in August 1990 through an act of Parliament entitled the Employment and Training Services Act. Its primary functions were those of providing a public employment service and training persons to improve their skills to find employment. Its training function focused on the provision of training courses and the management of apprenticeship schemes. In June 2016, an act of Parliament brought about the change in name from Employment and Training Corporation to Jobsplus (2023).

2. With a reduction in the length and therefore duration of the course content, students will have less opportunity to engage with key, critical issues affecting their practices in early years settings. New recruits in both childcare and kindergarten settings will have less background knowledge and fewer theoretical insights.
3. Since the EQF 5 worth 60 ECTS is now the minimal qualification for Childcare Managers and this coincides with the necessary qualification to be employed as a Kindergarten Educator (KGE II), when programmes of study will be again considered interchangeable to admit individuals to either professional role, irrespective of the content of the programme, it seems evident to conclude that staff may not be adequately trained to address the roles and responsibilities they will be assigned⁵⁸.
4. If working conditions remain unchanged, working in childcare settings will continue to be the introductory stepping stone in one's career and consequently, the least qualified staff will remain in childcare with an EQF 4 of 60 ECTS.
5. The NOS for Childcare Educators and Managers present criteria against which to address the content of the IPE courses applicable to staff at childcare but there are no established criteria for staff in kindergarten settings and which could offer a common framework for programme accreditation.
6. A mapping exercise needs to be undertaken to ensure that the expectations of the NOS are actually being addressed and met with programmes developed for childcare staff; a similar exercise needs to be done to compare the skills, knowledge and understanding which prospective KGEs are offered in their IPE. In the absence of criteria which would allow for comparisons, IPE programmes will continue to be developed and promoted without any shared vision, underlying philosophy, theoretical understanding or professional insights prospective practitioners would have acquired about ECEC and which they would be expected to promote through their practices.
7. Having KGEs qualified to various EQF levels, without any distinction in the assigned roles when employed in kindergarten settings (differences in designations are reflected in the salary of KGE I, II or III), does not motivate individuals to improve their understanding, development and theoretical perspectives; nor does this situation help to promote a sense of collegiality among staff. Educators with higher qualifications are not assigned tasks to lead and support their colleagues when/as needed. In a context where Educators with an undergraduate qualification are not assigned leading roles, where the immediate support of the school leadership team could also be absent, and when three EOs for the entire early years sector in Malta are unable to meet the needs of the staff, not investing in KGE III personnel to share their insights and knowledge is sadly a wasted resource.
8. The absence of any national and/or longitudinal study to investigate the impact which early years services and the early years workforce are having on children's short, medium and long term achievements is long overdue. There are concerns about achievements in children's later school years: both PISA (2018) and PIRLS (2016) reports about Maltese students reading achievements indicate that Maltese students' reading levels are well below the international

⁵⁸ Compiled information about IPE indicates that several recent (no longer available) and current courses serve/d as initial qualification routes for the ECEC workforce. The qualifications of the workforce as identified in *Chapter 3* illustrates that despite programme documentation claiming to prepare participants for either childcare or kindergarten, courses initially introduced for childcare, have been accepted as an appropriate qualification for kindergarten, irrespective of the content or the occupational roles and responsibilities. Judgement of the suitability of a qualification for employability was/is based on the EQF level, the number of credits and the professional practice placement component with little consideration about the content of the modules/study-units.

average. Malta still ranks among the top six EU countries having higher numbers of early school leavers than the average EU target (Eurostat 2021), although inroads have been registered and the number of early school leavers has been reduced over the past years. A document entitled *Framework for the Education Strategy for Malta 2014-2024: Sustaining Foundations, Creating Alternatives, Increasing Employability* (MEDE 2014a) seems to have been shelved despite the promise of ‘a strategic document which will outline the plan for the next 10 years, starting from early childhood education and care...’ (p. 8). Another document – *A Strategic Plan for the prevention of early school leaving in Malta*, had recommended that “MEDE to monitor the nationwide provision of free childcare to ensure that it is a quality experience for staff, children and parents, and that it contributes to the children’s development as they prepare themselves to get into early childhood education” (MEDE 2014b, 21). Eight years on, this recommendation has not been taken up. Moreover, this recommendation betrays a misunderstanding of ‘early childhood education’ and suggests that childcare is some ‘preparatory’ phase before early childhood education!

A review of IPE programme content could also shed light on requirements for CPD. If CPD is to have maximum impact on the workforce and their practices, the content needs to be directed at the identified needs and gaps which Educators would demonstrate in their practices and in their abilities to reflect and discuss the work they do with children, families and colleagues.

Continuing professional development for Childcare and Kindergarten Educators

CPD for Childcare Educators and managers is limited and offered upon request. The EOs within the DES have started offering CPD to childcare settings which are flagged by DQSE. CPD for KGEs within schools is somewhat more organised. One challenge concerns the relevance of the CPD sessions for staff working with kindergarten-aged children. The dilemma arises whether to do CPD sessions specifically for KGE or invite KGE to follow CPD identical to/with primary school teachers simply because they are located within a primary school and therefore kindergarten staff would feel that they belong and are an integral part of the educational system rather than simply an appendix to the primary school setting. However, KGEs often complain that the professional development sessions dedicated to discussing and agreeing on action plans which the school sets out for the subsequent scholastic year are driven by the needs of the primary school and its expectations about achievements of older children. Some suggest that this impacts the work they are expected to do with kindergarten children in preparation for primary school. The content of the CPD would also be expected to be more relevant where educators are invited to suggest, identify and participate in decisions about their CPD rather than simply attend sessions because the rest of the school has PD days (in the case of KGEs working within schools) or when the CPD time is taken up by issues identified as being of national priority or where the school administration determines what the school priorities are with minimal consideration about how this is relevant and applies to kindergarten staff and children.

The work-based components of any IPE are crucial for the students and are a vital learning experience when appropriately supervised and mentored. Currently, there is no programme for mentors who are monitoring, supporting and assessing students during their practicum. Especially in childcare, there seem to be very few appropriately qualified and experienced examiners/supervisor/assessors or mentors who can follow students and assist them in their professional development. In situations where Managers of childcare settings, may find themselves mentoring and supervising students on their work placements despite having minimal qualifications, practice and understanding or work experience with children, the placement experience would be reduced simply to a matter of clocking up hours.

The importance of carefully monitored and assessed practice placements during IPE courses becomes more crucial in the absence of any induction, mentoring or support for newly qualified staff either in childcare or kindergarten settings. Induction periods, mentoring and support measures need to be addressed to ensure that responsive and sensitive carers plan, prepare and deliver appropriate activities and experiences for children.

Monitoring and support systems need to be established especially when newly qualified staff are recruited and where placement supervision during IPEs may be weak. Staff who mentor, monitor, support and have a lead role in early years settings, should have a clear vision about early childhood education and care and its benefits for children and families and should themselves be well-informed about pedagogical approaches which can best be adapted to suit young children. Monitoring and support cannot be offered by colleagues who have limited knowledge, insights and understanding about early years education or the challenges faced by the educators.

Recording, maintaining and evaluating data about settings and services

The Directorates which are responsible for the childcare and kindergarten settings require data collection procedures and systems which ensure that vital information about all members of staff employed in early years settings together with their employment history can be easily traced. Upon employment, staff should be bound to provide accurate information about their qualifications as well as be obliged to inform the appropriate sources of their termination and/or engagement of duties elsewhere within the sector. Having incomplete or inaccurate data does not capture the true strengths of the workforce.

Service providers and personnel involved in recording data about qualifications need to be instructed and assisted to ensure that information is reported accurately and thoroughly. Having to go through individual files to retrieve data pertaining to the initial professional qualifications or trying to make sense of data inputted independently by the administrative staff from every school or setting makes this process cumbersome and subject to inaccuracies, therefore becoming less reliable.

Concluding remarks

Despite repeated discourse about the importance of early childhood education and care, the increase in services and the continued attempts to make settings more affordable, there has not been any attempt to take stock of the situation from a holistic perspective and to address the crucial issues, namely how the quality of children's learning experiences impact their achievements and progress in later years through the contributions of highly qualified staff.

Raising the profile of the early years workforce is a delicate balancing act: the entry requirements expected when accepting students for IPE; the depth of knowledge and understanding acquired through the IPE; support through induction and mentoring together with opportunities for CPD; employability prospects; decent conditions of work and the reduction of staff turnover are interlinking challenges which have to be addressed. Resolving the different aspects satisfactorily requires a well-researched and well thought out policy which includes an equally insightful strategy to ensure its successful implementation.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of ECEC provision are **childcare centre (0–2)** and **kindergarten centre** (kindergarten, pre-primary class, a two-year programme starting as early as 2 years 9 months)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Malta

1827 - 1964	British colonial rule on the Maltese islands, initially showing little proactive interest in advancing a state-funded education system. Between the mid-19 th and early 20 th centuries, many schools are established by the Roman Catholic Church and its Religious Orders and will have a lasting impact on the education system, including pre-primary schooling.
1837	The British Home and Colonial Infant School Society recommends establishing infant schools, but this is a slow process. Over the ten decades to follow, up to 1944, some 375 applications (petitions) are submitted, mostly by women hoping to earn a living by providing a safe environment for neglected and destitute working-class children. Even illiterate applicants are granted a license if they are considered to have the necessary moral attitudes and practical skills.
1845	First fee-paying school opened by nuns for 4 and 5 year-old girls; poor children are not required to pay.
1869	Strategic military importance of Malta heightened by the opening of the Suez Canal – followed by an increasing formalisation of the education system
1870	Maltese becomes the language of instruction during the first two years of school, otherwise English replaces Italian as the formal language of the education system.
1899	First curricular guidelines for elementary schools, including infant and preparatory classes, are issued.
1904-1907	The first crèches are opened by Religious Orders, with few regulatory requirements beyond basic issues of hygiene.
1914	Provision for ‘infant schools’ predominantly through private entities due to inadequate public school accommodation
1923	‘Infant’ schools are an integral part of ‘elementary’ schools. The infant syllabus included English, arithmetic, writing, religious instruction and drill.
1924, 1927, 1946	Compulsory school attendance Act for pupils of elementary schools, which included two years in infant stages and six elementary ‘standards’. School-leaving age was initially 12 years, later raised to 14 years. ‘Elementary’ schools became known as ‘Primary’ schools.
1936	In the annual education report for 1935/1936, the then Education Director refers to the ‘Montessori’ school and argues that ‘for the present, we must limit ourselves to following Montessori principles in the education of children up to the age of 6½ and afterwards proceed to more formal teaching...’.
1975	Introduction of the first state-funded kindergarten provision for 4 and 5 year-olds, i.e. at a late time in history compared with other European countries

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. The SEEPRO-3 editors have chosen the following age-inclusive format for countries where primary schooling starts at age 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Malta, the relevant formats are **0–2** and **3–4** years, since children start primary school in the year when they turn 5. Locally, 0–3 and 3–5 are the age group parameters generally referred to.

1987	Kindergartens come under the auspices of the Ministry for Education, having been the responsibility of the Department of Social Services within the Ministry for Labour and Social Services until this time.
1988	Kindergarten provision extended to include 3 year-olds.
1996	The University of Malta playschool is one of the first settings at the workplace, welcoming 2 to 4 year-olds, thus addressing the needs of employees and university students. The state general hospital and a secondary hospital also offer some form of childcare services for their employees.
1997–1999	A feasibility study on the introduction of public child day care centres is conducted following a request by the Parliamentary Secretary for Women’s Rights. A post-implementation audit was conducted in 1999 to identify shortcomings which had led to the lack of uptake. Apart from poor market research, entrusting children to strangers rather than resorting to family support and having guilt feelings about using childcare contributed to the very low attendance.
2001	A <i>Child Care Task Force</i> was set up on the initiative of the Co-operatives Board. Since settings were totally unregulated, some 15 existing private day care centres/nurseries were identified through adverts on the media and phone directories (yellow pages).
2006	Publication of the first <i>National Policy for Early Childhood Education</i> and publication of <i>National Standards for Child Daycare Facilities</i>
2009	Introduction of an optional Bachelor-level qualification for core practitioners working in kindergarten centres/pre-primary classes in schools which entitled holders to a teachers’ warrant
2012	Publication of the <i>National Curriculum Framework for All</i> – the first document to acknowledge the early years as a distinct cycle of education (<i>Early Years Cycle</i>) for 0 to 7 year-olds
2013	Publication of <i>ECEC in Malta: The way forward</i> . This document summarises the development of ECEC in Malta and makes recommendations towards promoting high quality provision across early years services in light of the Government’s 2013 electoral manifesto proposal to extend services through free child-care services.
2014	Free childcare services introduced for parents in employment or pursuing studies utilising registered childcare centres (<i>Free Childcare for All</i> scheme).
2016	Publication of the <i>Professions in Education Act</i> (July 2016) – one of the proposals for the amendments to the Education Act identifies an MQF Level 4 qualification in early childhood education as the minimum required level in order to obtain a license to practise the profession of Kindergarten Educator. This undermines earlier initiatives to introduce an MQF Level 6 qualification in the field. Childcare centres come under the auspices of the Ministry of Education.
2017	The Government – MUT agreement organises kindergarten educators into three tiers: KG III for staff with an EQF 6 Bachelor degree; KG II and KG I for staff with EQF 5 qualifications for 60 ECTS or 30 ECTS respectively. Duties of staff are identical irrespective of qualification.
2018	The promotion of the emergent curriculum in the early years is launched with kindergarten educators (2018/2019) through 10 hours of training but without a clear plan for on-going support or monitoring.
2019	Amendments to the Education Act (1988)
2021	Publication of the second <i>National Policy for Early Childhood Education</i> and publication of <i>National Standards for Child Daycare Facilities</i> . The 'standards' are organised around structural and process factors. It also established the minimum level of qualifications for staff in childcare retaining a low-level qualification for both childcare educators and managers.
2021	Publication of the <i>Early Childhood Education and Care - National Policy Framework for Malta and Gozo</i> . This framework is presented as a precursor to the eventual designing of a strategic action plan.

2023	<p>The number of childcare settings over the past decade rises considerably. In May 2023, there were 180 settings (licensed or registered). By comparison, in 2016 there were about 93 settings.</p> <p>Participation of children aged 3 and older in ECEC sees one of the greatest decreases in the EU to 89.1% in 2020 from 96.9% in 2015.</p>

ECEC system type and auspices²

Following the Council of the European Union’s Recommendation on ECEC in May 2019, a National ECEC Policy Framework for Malta and Gozo was published in 2021 (DQSE 2021a). The stated aims are to address the need for a multi-sectoral approach embedded within an integrated ECEC system.

Currently, the system of early childhood education and care can be described as only partially integrated. Overall responsibility lies with one top-level authority, the Ministry for Education, Sport, Youth, Research and Innovation (MEYR), and regulatory mechanisms apply to all ECEC settings for children up to statutory school age (5 years). However, the settings themselves are not unitary, but separated between mostly privately-owned childcare centres for under 3 year-olds and mostly state-maintained kindergarten centres/pre-primary classes for 3 and 4 year-olds. Both kinds of setting were initially located in the social welfare sector: whereas childcare centres came under Social Welfare authorities until 2016, state kindergarten centres were the responsibility of the Ministry for Labour and Social Services when first introduced in 1975. However, the kindergarten centres came under the auspices of the Ministry for Education in 1987.

Although the first stage of the education system is described in the National Curriculum Framework (2012) as the *Early Years Cycle (0–7)*, it comprises not only childcare and kindergarten settings, but also the first two years of primary schooling (MEDE 2012). There is no unifying ECEC curricular framework across settings, but two binding sets of guidelines. Also, staffing qualifications within the three stages of the *Early Years Cycle* differ in that a lower level of qualification (ISCED 4) is required for work within the non-compulsory sector (0 to 4 year-olds) compared to the university qualification (ISCED 6) necessary to work with 5 to 7 year-olds (Sollars 2018a). Thus, early childhood education and care is not as yet a fully unitary ECEC system.

Within the MEYR, the Directorate for Quality and Standards in Education (DQSE) is responsible for the regulation of non-compulsory ECEC settings, including (since July 2016) childcare provision. The 12 childcare centres which are state-funded and managed by the *Foundation for Educational Services (FES)* are located adjacent to the state primary school of the town or village, with an entirely separate administration. However, most childcare centres are privately owned and managed (Sollars 2018a).

General objectives and legislative framework

The general objectives of the *Free Childcare for All scheme (FCS)* introduced by the Maltese government in April 2014 for parents in employment or education are to provide equitable early childhood education and care irrespective of the family’s financial means and social background and to increase women’s participation in the labour market.

² The Eurydice country report on ECEC in Malta provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the *references*.

The two currently binding regulatory frameworks are subsidiary legislation of the 1988 Education Act (most recently amended in 2019). These are the

- *National Minimum Curriculum (Pre-Primary Level) 1989*, which sets out the main curricular objectives for pre-primary classes for 3 and 4 year-olds (see chapter on *Curricular Frameworks* for details of the more recent National Curriculum Framework 2012).
- *Registration of Childcare Facilities as Educational Establishments 2008*, which provides framework regulations for setting up provision for children under 3 years of age (MFED 2021c).

The objectives of the recently issued *National Standards for Early Childhood Education and Care Services (0–3 years)* (MFED 2021a) are to: reflect recent developments in the ECEC (0–3) field within a Maltese context; be in line with ongoing ECEC research and practice for under 3 year-olds; develop and strengthen a more socially just and active labour market in Malta by sustaining availability and accessibility to quality ECEC services; and ensure that the standards, focused on ECEC services for 1 to 3 year-olds, are consistent with the overall framework for the Early Years Cycle (0–7 years) within the National Curriculum Framework (MEDE 2012). They replace the 2006 National Standards for Child Day Care Facilities.

General objectives of the recent *Early Childhood Education and Care National Policy Framework for Malta and Gozo*, issued in 2021, are to “maximise young children’s development which will profoundly impact on children’s future learning, health and earning potential which can perpetuate intergenerational benefits” (DQSE 2021a). The framework is also seen as contributing towards the 2016 G20 Action Plan on the 2030 Agenda for Sustainable Development. Five policy goals and dimensions are addressed: access to ECEC; the workforce; curricular issues; monitoring and evaluation; governance and funding (MFED 2021b).

ECEC entitlement and compulsory attendance

There is no universal legal entitlement or guarantee to a place in ECEC provision in Malta. Attendance is voluntary. Through the Free Childcare Scheme (FCS) introduced in 2014, a targeted legal entitlement from the age of 3 months is available for parents/guardians in employment or education (European Commission/EACEA/Eurydice 2019, 184). From the age of 2 years 9 months, kindergarten enrolment is free of charge, irrespective of whether the parent is economically active or not, and enrolment rates are high (see *Participation rates in regulated provision*).

Compulsory schooling begins early compared with most other European countries. The official school starting age in Malta is 5. Since children are enrolled during the year they reach their fifth birthday, and the scholastic year starts in late September, some children may be as young as 4 years 9 months when they enter the first class of primary school (ISCED 1).

Main types of provision

Childcare centres (sometimes known as Childcare and Family Support Centres) are available for children from three months up to 3 years of age and are owned, managed and organised by mostly private entities. By the end of January 2024, there were 191 centres registered with the DQSE: 11 were licensed and 180 were registered. Of these, 12 (6.3%) were state-funded, managed through the Foundation for Educational Services (FES) and registered with DQSE; two (1.4%) were organised by the local council for the town/village; three (2.1%) were managed by

the church and a five (2.6%) were run on a private/public partnership basis, where the Government supports a private entity by hiring the premises; two (1.4%) were set up by corporate entities which give priority to the children of employees of the entity before admitting children from the wider context and three (2.1%) were located in higher education institutions

The state-maintained centres are open between 07:30 and 16:00 although in six of the 12 settings, longer hours are available (06.00am–18.00) (FES 2023). Private centres have varying opening/closing times, ranging from as early as 06:00 to as late as 20:30 hours.

Kindergarten centres (kindergartens; pre-primary classes) are available for children from 2 years 9 months up to school entry age. Most are located either in state-maintained schools (64 in 2022/2023), or affiliated to grant-aided Catholic Church schools (23), or run by independent schools (9). These kindergarten centres thus come under the organisational regime of the school. The primary school head is formally head of the pre-primary classes. Children are grouped in same-age classes called ‘Kindergarten I’ (3 year-olds) and ‘Kindergarten II’ (4 year-olds). There are also 10 kindergarten settings which operate independently and are not affiliated to schools but have extended their services from childcare settings (Government of Malta 2023, own calculations).

Pre-primary classes are typically open from Mondays to Fridays from 08:30 to 14:30 (i.e. opening hours do not necessarily match parents’ employment hours) and closed during school holidays. Where larger independent schools offer the full range of educational provision – nursery, kindergarten, primary and secondary - the hours for nursery and kindergarten are rather short (8:30 to about 12:30/13:00). However, the parents have the option of making use of extended hours against additional payment. Schools belonging to five religious orders welcome boys and girls at pre-primary/primary level but others are single-sex. All state-run provision and most of the private/independent schools are co-educational.

Provider structures

Childcare centres

Most under 3 year-olds in **childcare centres** attend privately-run provision. Of a total of 180 settings by the end of May 2023, only 12 were state-funded (FES 2023). Providers offering childcare services include corporate entities, the Church, local councils, and individuals investing in their private business. The small number of Government childcare centres are managed by the Foundation for Educational Services (FES) and are registered with the Directorate for Quality and Standards in Education (DQSE). They follow the 2021 National Standards for Early Childhood Education and Care Services (0–3). An individualised service is offered, most particularly to children at risk of social exclusion (MFED 2020). In April 2014, the FCS was introduced and settings registered with the Ministry for Education are entitled to participate thus becoming eligible to receive subsidies (see chapter on *Financing and costs*).

Kindergarten centres/pre-primary classes

Kindergarten centres are run by three different providers and may be state-maintained, church-affiliated or private/independent. The largest provider is the state sector, followed by the independent and church school sectors. In 2023–2024, a total of 9,523 children aged 3–4 years were enrolled in kindergarten provision (Education Strategy and Quality Assurance Department 2024). *Table 1* shows the distribution according to provider type.

Table 1

Malta: Number of children enrolled in kindergartens by setting provider, 2023–2024

	State maintained	Church-affiliated	Private/Independent	Total number of children in kindergarten
Kindergarten 1 (3–4 year-olds)	4,108	299	797	5,204
Kindergarten 2 (4–5 year-olds)	2,897	721	701	4,319

Source: personal email communication from the Research Unit at the Office of The Director General, Education Strategy and Quality Assurance Department, 23 February 2024

*Depending on the date of data collection there might be slight variations in other statistics regarding the age or the year group of the children

In the school year 2022/2023, there were a total of 106 kindergarten centres. Of these, 64 were state-run (11 located in Gozo), 23 were run by Church schools and 19 by Independent/private schools (Government of Malta 2023).

Participation rates in regulated provision

Childcare centres

By the end of June 2022, a total of 6,518 children were benefitting from the FCS at any point in time between January and June 2022: 1,913 children joined a childcare setting in 2022, whereas the remaining 4,605 children were in childcare in previous year/s and were still registered in the system in 2022³. By the end of October 2023, 8,627 children had benefitted from the FCS at any point in time during this year. There had been 3,529 new entrants in 2023⁴. Table 2 illustrates the uptake of childcare services from the time it was introduced up to 2019.

Table 2

Malta: Number of children benefitting from Free Childcare Scheme, 1st April 2014 till 31st December 2019

Year	Period	Number of children benefitting from scheme for first time	Total number of children benefitting from the scheme
2014	1 Apr - 31 Dec	3,856	3,856
2015	1 Jan - 31 Dec	2,843	5,852
2016	1 Jan - 31 Dec	2,767	5,335
2017	1 Jan – 31 Dec	3,025	5,939
2018	1 Jan – 31 Dec	3,343	6,737
2019	1 Jan – 31 Dec	3,579	7,341

Source: DQSE 2019/20, 12

The FCS helped to significantly increase the proportion of children below the age of 3 in formal childcare between 2005 (5%) and 2022 (43.1%) (see Table 3).

³ Data were provided by JobsPlus via email communication on July 11th 2022.

⁴ CEO from JobsPlus at the meeting of the Family Affairs Committee, Parliament of Malta, Session no. 14 held on December 5th 2023.

Kindergarten centres/pre-primary classes

The proportion of children over 3 years of age also increased from 2005–2022, although not to the same extent as with the under-threes (from 58% to 91%, see *Table 3*).

Table 3

Malta: Enrolment rates by duration of attendance in centre-based settings and age, 2010-2022

Year	Weekly attendance	0 to under 3 years, in %	3 years up to minimum compulsory school age, in %
2005	1 to 29 hours	4	32
	Over 30 hours	1	26
	No enrolment in ECEC	95	43
2010	1 to 29 hours	6	26
	Over 30 hours	3	46
	No enrolment in ECEC	91	28
2015	1 to 29 hours	10.7	34.6
	Over 30 hours	7.2	53.8
	No enrolment in ECEC	82.1	11.6
2022	1 to 29 hours	19.5	26.6
	Over 30 hours	23.6	64.4
	No enrolment in ECEC	56.9	9.0

Source: Eurostat 2023e

In 2021, the overall share of children attending pre-primary education amounted to 72.5% in state-run settings, 17.2% in private/independent and 10.3% in church settings (NSO 2023, 49). Eurostat statistics of age-disaggregated data (*Table 4*) indicate that in 2021, the vast majority of the 4 and 3 year-olds were enrolled in a centre-based setting.

Table 4

Malta: Number of children in centre-based ECEC settings and enrolment ratios according to age, 2021

Age	Number	Share in %
Under 2 years	No data available	No data available
2 year-olds	795	16.6
3 year-olds	4,030	83.6
4 year-olds	4,445	88.5
5 year-olds	46	0.9

Sources: Eurostat 2023b, f

There has been a decrease in participation rates in early childhood education: In 2020, the proportion of children over 3 years was 89.1% compared to 96.9% in 2015 (European Commission 2023b, 57). This could possibly be related to the COVID pandemic and/or the drop in the fertility rate which currently is the lowest in Europe (Eurostat 2023d).

Financing and costs for parents

In 2021, 5.5% of total general government expenditure was on education, 1.4% on pre-primary and primary education (Eurostat 2023k). No specific information is available for the childcare sector.

Since April 2014, parents who are in education or employment and whose children attend any of the childcare settings registered with the Ministry for Education do not pay fees. The providers of childcare settings registered in the FCS receive €4.80 per hour per child for children under the age of 12 months and €4.55 for children between the ages of 13 to 36 months (JobsPlus 2022).

Private childcare centres for children under age 3 and where parents are not eligible for the FCS set their own fees. Variations in fees reflect the diverse services, including whether the childcare setting is operating independently or whether the 'nursery' is part of a school. The former are open all the year round and may offer two, three or five-day a week packages and rates but services within independent private schools tend to follow the school timetable in some respects, such as school holidays. Fees in the private settings vary. Information provided by various settings suggests that every three months, parents pay anything from €650 to over €900 (various email communication, May 29th 2023; Sept 21st 2023).

Fees in state-subsidised childcare centres are means-tested and may be as low as €2 a day for low income earners where the service is used once a week and range overall from €8 to €150 per month (personal email communication, May 28th 2023).

Attendance in state-maintained kindergarten provision is free of charge. Places in grant-aided church-run kindergarten centres are also free of charge, although parents are encouraged to give donations to help with institutional expenditure. Independent schools charge tuition fees for which parents receive a tax rebate. Parents whose children attend church-run and independent schools with pre-primary classes pay registration and administration fees and must also purchase books and other requisites. Provision of textbooks is free of charge for children in state schools and there are no registration fees.

Staff to child ratios and group size in centre-based settings

Childcare centres

The *National Standards for Early Childhood Education and Care Services (0–3) 2021* recommend the following ratios of qualified staff to children:

- 1:3 for infants under 12 months of age,
- 1:5 for children aged 13 to 24 months, and
- 1:6 for children aged 25 to 36 months.

In the case of mixed-age groups, the recommended ratio is 1:6, although only one child under 18 months may be in such a group.

Kindergarten centres/pre-primary education

Irrespective of the service provider, all pre-primary settings are required to provide a standard ratio of

- one staff member for a maximum of 14 3 year-olds and
- one staff member for a maximum of 19 4 year-olds

The respective maximum group size (14 for Kindergarten I and 19 for Kindergarten II) may not be exceeded (MEDE and MUT 2017; Archdiocese of Malta and MUT 2018).

At present, staff to child ratios in kindergarten settings are as follows:

- Kindergarten 1 classes have a maximum of 14 pupils per class (this being reduced to 12 if the group includes a pupil with a statement of needs);
- Kindergarten 2 classes have a maximum of 19 pupils per class, reduced to 16 if the group includes a child with special education needs.
- In the event of shared classes (two classes in one room), children shall not exceed 22 pupils for Kindergarten I, and 30 for Kindergarten II (Eurydice 2023).

Curricular frameworks

ECEC in Malta (childcare and early education) is not guided by a co-ordinated curriculum document. The National Curriculum Framework, although explicitly for the age-range 0 to 7 years, makes no provision for educational activities with under 3 year-olds. However, the more recent *Educators’ Guide for Pedagogy and Assessment: Using a Learning Outcomes Approach* (DQSE 2015) promotes learning for under 3 year-olds by “being active, exploring and investigating, playing, using language and interacting with others”.

Activities in the **childcare centres** are loosely guided by the *National Standards for Early Childhood Education and Care Services (0–3) 2021* and two sets of *National Occupational Standards* for the Childcare Worker and the Childcare Manager respectively. Both documents refer to areas of child development, and helping children to develop their potential through inclusion and participation in a range of stimulating activities reflecting non-stereotypical roles and the diversity of race, culture and religion (MFHEA 2022a, b). The daily programme provides a variety of play activities to stimulate learning.

The **kindergarten centres** are included in the *Early Years Cycle* of the National Curriculum Framework (NCF) for schools (MEDE 2012). The policy document is binding. For the early years, five broad learning outcomes are defined: a strong sense of identity; a positive self-image; social competence; communicative competence; positive attitudes towards learning in order to become engaged and confident learners. However, no discrete learning areas are proposed. Both the *Educators’ Guide for Pedagogy and Assessment* (2015) and the NCF promote a vision of an ECEC curriculum grounded in children’s rights and view children as competent, able and having unlimited potential. Staff are expected to adapt their teaching approaches to meet children’s individual needs (Eurydice 2023).

Digital education

Digital education was set as a policy priority early on in Malta, to sustain a strong digital economy. Several national policies and programmes have been put in place to develop digital competences from an early age (European Commission 2020). The new National Standards 2021 refer to a ‘digital learning environment’ in childcare centres which includes services and tools that enable learning, support administration and improve communication, thus enhancing the quality of childcare programmes. The National Curriculum Framework (2012) for schools refers in general to ‘digital literacy skills’ as key competences that enable pupils to move up the ladder of society’s economic and social opportunities, but these are not specifically mentioned for the Early Years Cycle.

Monitoring – evaluation

There is no national agency or specific entity focusing on the monitoring and evaluation of early childhood education.

Child-related assessment

There are no formal assessment requirements for childcare centres. The staff observe and record notes on individual children's progress during their daily activities, as indicated in the *Educators' Guide for Pedagogy and Assessment: Using a Learning Outcomes Approach* (2015).

The National Curriculum Framework states that children will not be formally assessed in the Early Years Cycle. However, their development and progress are to be recorded and reported to parents at least twice a year. Formative assessment is advocated for this Cycle and the learning programmes developed are to lead to the stated learning outcomes (see section on *Curricular frameworks*) (National Curriculum Framework, MEDE 2012).

Centre-level assessment

There are no requirements for centre-level assessment for the **childcare centres**. For the **kindergartens/pre-primary classes**, internal quality assurance is the responsibility of each school. In most cases, an internal evaluation of the kindergarten centre is carried out annually and leads to a new development plan (European Commission/EACEA/Eurydice 2019, 128).

External evaluation

External evaluation of ECEC settings, irrespective of the provider, is the responsibility of the Directorate for Quality and Standards in Education in the Ministry for Education.

Childcare centres are externally reviewed annually by a team which includes a compliance officer from the Regulatory and Compliance Section (RCS) and an EO from the Education Review Section (ERS). Both departments are located within the QAD (*Quality Assurance Department*). During the visit, the review team conducts meetings with the legally responsible person (LRP) and/or the centre manager, reviews centre documentation, conducts observations, informally discusses the outcomes of observations and provides final feedback. The outcomes of the visit are included in a report which is sent to the LRP. The outcome of the process will determine the registration status for the subsequent calendar year.

A letter circular from the DQSE (QAD 01/2022, April 2022) informed childcare settings that gradual changes to the audits will be taking effect as a result of the new *National Standards for Early Childhood Education and Care Services (0–3 Years)* (MFED 2021a), *The Registration criteria* (MFED 2021c) and the *Early Childhood Education and Care National Policy Framework for Malta and Gozo* (MFED 2021d). Ahead of the external audit, settings are required to compile a wide range of health and safety documents.

Monitoring and inspection of **kindergarten centres** for 3 and 4 year-olds varies across providers. Church-affiliated and independent schools with kindergarten centres organise and manage their own monitoring. Early Years Education Officers from the Department of Curriculum Management (DCM) visit Church and/or Independent kindergarten settings upon invitation by the Secretariat for Catholic Education or the invitation from the senior management team of the independent school respectively.

The state kindergarten centres are monitored by Early Years Education Officers within the Department of Curriculum Management at the Ministry for Education. Kindergarten Educators are supported on a regular basis starting from a year before they need to be confirmed in the Public Service. The frequency and intensity of these observation visits before and after confirmation

depends on the level of support required, as determined by the Education Officers. In addition to monitoring visits, kindergarten centres are inspected by Education Officers (QAD) as part of broader school audits.

Apart from support and confirmation visits, Early Years Education Officers also conduct routine visits. These can be organised and structured according to:

- Requests made by the Head of School through the College Principal and Director- DCM
- Requests made by the Council for the Teaching Profession, and
- Evaluation of current performance of staff who have been newly recruited or transferred to a different kindergarten setting.

Although the Early Years Education Officers are considered to be fully qualified to be appointed Education Officers, they are not necessarily in possession of academic qualifications specifically in early childhood education but may have accumulated years of service or experience in a range of settings or appointments, even in the primary and secondary school sectors.

Inclusion agenda

Children with special educational needs and disabilities

Malta ratified the UN Convention on the Rights of Persons with Disabilities in 2013 (EASNIE 2020). National policy emphasises the importance of an inclusive approach from an early age. For the **childcare sector**, Standard 10 of the National Standards for Child Day-Care Facilities is dedicated to equal opportunities and children with special needs. Early intervention services managed by the Directorate for Educational Services are also provided to children at risk of or diagnosed with learning difficulties or disabilities. Assessment is carried out by a multi-disciplinary team at the Child Development Assessment Unit and then referred to the early intervention service. The service is given to these children in their own home setting, in the childcare centre and, eventually, in kindergarten.

Children diagnosed as having special educational needs (256 children in public **kindergartens**) in 2020/21 (EASNIE 2023) are usually admitted to mainstream kindergarten centres, a decision which is taken by the parents. The staff are required to refer children needing extra support to the relevant professionals. Such referrals are processed by the Statementing Moderating Panel. Furthermore, the Child Development Assessment Unit (CDAU) works in close collaboration with the Inclusive Education Network to provide early intervention for children born with a disability or one detected in the early months. In state-run pre-primary classes, a Learning Support Educator is allocated to give either one-to-one or small group support, depending on the specific educational need. The Directorate for Educational Services sponsors professional development for supply staff to work with special needs children as support staff. Church-run and independent pre-primary classes receive state support for staff. In terms of Learning Support Educators (LSEs), in 2022/2023, 459 were employed in state-maintained (236 in KG 1 and 223 in KG 2), 66 in church-affiliated and 103 in private-independent kindergarten centres, responsible for one child or having shared duties if supporting more than one child with special educational needs (email communication through Director of NSSS, May 31st 2023).

LSEs may be employed without any formal training. They are required to follow a 70-hour course and subsequently another 140-hour course whilst already in employment. Several follow a two-year part-time Diploma in Facilitating Inclusive Education at University. More recently, a 210-hour course leading to a Level 5 Higher Certificate in Inclusive Education has been introduced and offered by the Malta College of Arts, Science and Technology (MCAST). LSEs are not trained to work with a specific age-group or a particular disability. They may be assigned duties to any child, irrespective of the child's age or whether s/he is in kindergarten, primary or secondary

education. LSEs' responsibilities can range from one learner with full time one-to-one support to three learners on shared support depending on the assistance required according to the recommendations of the Statementing Moderating Panel (SMP) (Sollars 2018a).

Children with a migration background

Foreign-born children attending pre-primary settings (under 5 year-olds) in Church and Independent schools in 2021-2022,⁵ as reported by the Directorate for Research, Lifelong Learning and Employability, accounted overall for 0.7% (N=338) and 20.1% (N=330) of the pre-primary population respectively; in state settings for 18.2% (N=1,226). The top five countries of origin in state kindergarten settings in 2021-2022 included children from Italy (177), Syria (147), Serbia (100), UK (79) and Bulgaria (65). Within Independent schools, foreign-born children came from Italy (55), England (41), France (24), Germany (19), Sweden (17) and Spain (16). Within Church schools, the number of foreign-born children was very low, with 4 coming from Pakistan and 1 each from Belgium, Italy, Sudan, and Ukraine.

Children with a migration background are defined as those where both parents are born and raised outside Malta.

In 2021–2022, 776 foreign-born children in state kindergartens came from countries outside the EU27, i.e. 11.5% of all children (6,731) in state kindergartens. In the same scholastic year, 151 foreign-born children in non-state kindergartens came from countries outside the EU27, i.e. 5.6% of all children (2,713) in non-state kindergartens.

According to Eurostat, in 2022, 20.6% of the overall population held a non-Maltese citizenship, more than half of them (58.1%) came from countries outside the EU27. In terms of children under age 5, 24.3% did not have a Maltese background, with almost two thirds (64.1%) of them coming from outside the EU27 (Eurostat 2023c).

Traditionally, Maltese was the predominant language in state settings, with English being the predominant language in private and in church school settings. With the influx of foreign children in schools, a shift in favour of English across all school sectors is becoming evident. The Ministry of Education's *Language Policy for the Early Years* (2016) promotes a heterogeneous model of bilingual education to encourage children's language development, in which professionals switch between the two languages according to the children's needs, based on their own experience and knowledge (Mifsud and Vella 2020, 4f, 9).

Parental leave arrangements⁶

Maternity leave is obligatory during the six weeks immediately following the birth of the child. A further eight weeks can be taken either before or after birth. 14 weeks are covered 100% by the employer (no upper limit), followed by a flat-rate payment for a further four weeks during which mothers receive €175.84 per week in alignment with the statutory minimum wage.

Fathers working as public sector employees are entitled to ten, fully paid days of **Paternity leave** which have to be taken during the 15 days immediately following the child's birth. In the private sector, the days have to be taken immediately after birth.

Parental leave in the public sector is granted for 12 months per family if the parent has been working for at least a full year and is unpaid. If both parents work in the public sector they have

⁵ Data for Church and Independent schools obtained from the Directorate for Research, Lifelong Learning and Employability (email communication, 23 March 2023).

⁶ The brief overview in this chapter is based mainly on the country note for Malta by Frances Camilleri-Cassar in the *International Review of Leave Policies and Research 2023* (see References).

to divide this time between them, but cannot both be on leave at the same time. Leave may be taken in one continuous period or in blocks of four, six or nine months. Four months can be split in blocks of one month, up to the child's 10th birthday. Parental leave in the private sector is four months per parent. For eight weeks, parents are paid 50% of previous earnings for children under 4 years and 25% of previous earnings for children 4–8 years. The leave can be taken in blocks of one month, up to the child's 8. birthday. The requirement of at least one year of continuous employment applies here as well.

The most recent data are from 2019: In the public sector, 814* mothers took up the 14 weeks paid Maternity leave entitlement, but only 624* took the remaining low-paid four weeks of leave. In 2019, only 145* fathers in the public sector took Paternity leave. In 2018, regarding the uptake of the unpaid Parental leave, the mother's share was 97%. There are no available data for the private sector (* own calculations).

Current challenges for the ECEC system in Malta

Country expert assessment by Valerie Sollars

One of the key challenges facing ECEC concerns the absence of an entity or directorate with an explicit focus on and responsibility for early years policy development, promotion, guidance and implementation. The absence of such an entity (a) is an indicator of the minimal importance attributed to early childhood education; (b) perpetuates a situation where the sector is sometimes directed by inappropriate policies which fail to acknowledge the specific needs of early years or to show an understanding about the development of very young children; (c) contributes to a situation where early childhood education and care has no voice; and (d) implies no holistic vision about the sector or a strategy to ensure quality provision of services. Indeed, there is no large scale national research which has yet monitored actual practices either in childcare or in kindergarten and their short, medium or long-term effects or implications on children and their families.

A second challenge faced by ECEC stems from the historical development of the sector. Over the years, responsibility for the kindergarten section swung back and forth between different Ministries before finally becoming part of the Ministry for Education. Similarly, the responsibility for childcare settings was, until June 2016, within the Ministry for Social Policy. Although the Ministry for Education is now responsible for all settings, there is as yet no holistic vision for early childhood education and care. Many of the personnel who are expected to monitor and support the early years sector have themselves minimal academic training or work experiences specifically in ECEC and the much-needed support and guidance especially required because of the low-level of qualifications of the practitioners themselves, cannot be appropriately provided.

A third challenge arises from the generally low-level qualifications expected of staff working in childcare and to a slightly lesser extent, in kindergarten. An EQF Level 6 qualification leading to an undergraduate degree has been introduced for Kindergarten Educators, but this is not compulsory and the majority of KGEs have lower qualifications. The latest standards document (DQSE 2021b) establish a 60 ECTS Level 4 qualification for Childcare Educators and a 60 ECTS Level 5 qualification for managers. Whilst initiatives and services have increased rapidly, thus addressing availability and accessibility, there was never any vision or strategy which should have accompanied the spread of services and nurtured a highly-educated workforce.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Malta totalled 520,971. The population has been rising steadily over the past 20 years (2000: 388,759; 2010: 414,027; 2020: 514,564) (Eurostat 2023a).

Total fertility rate

In 2021, the average of the total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate in the 33 SEEPRO-3 countries was in France (1.84); Malta had the lowest rate (1.13) in the SEEPRO-3 countries (Eurostat 2023d)⁷.

Children under age 6

Table 5

Malta: Children under 6 years of age, 2022

Age	Number of children
Under age 1	4,400
1 year-olds	4,588
2 year-olds	4,514
3 year-olds	4,847
4 year-olds	4,849
5 year-olds	5,025
Total 0 to under 6 year-olds	28,223

Source: Eurostat 2023a, own calculations, differences due to rounding

In 2022, children under age 6 comprised 5.4% of the total population in Malta, 2.6% of the total population were children under 3 years of age. Those shares were approximately on a level with the EU-average (cf. Table 6).

Table 6

Malta: Children under 6 years of age – share in total population from 2000 to 2022, in %*

Year	Comparison Malta /EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Malta	3.5	3.7	7.2
	Ø EU15 ⁸	3.2	3.2	6.4
	Malta	2.9	3.2	6.1

⁷ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from World Bank Data (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

⁸ For the 2000 data, the then EU15 countries (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK) were taken into account, the 2005 data (EU25) additionally include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK and the basis of the 2015 data are the EU28 countries with additionally BG, RO and HR. The EU27 data (from 2020) include the EU28 countries without UK.

Year	Comparison Malta /EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2005	Ø EU25	3.1	3.1	6.2
2015	Malta	2.9	2.9	5.8
	Ø EU28	3.0	3.2	6.2

Employment rates of parents with children under 6 years of age

In Malta, in 2022, the overall employment rate for men (15-64 years) was 86.2% and for women 72.9% (Eurostat 2023j).

In 2022, 72.1% of women and 94.9% of men (18-64 years) with children under 6 were employed. Among the EU27-countries (2020), the shares of employed fathers were the second highest rate in the EU (EU-average 87.2%); those of mothers were above the EU-average (63.6%) as well (Eurostat 2023g, own calculations).

Table 8a

Malta: Employment rates of parents with children under 6 compared with other EU countries, 2010, 2022

	2010	
	Mothers in %	Fathers in %
Malta	40.6	88.2

Children at risk of poverty or social exclusion¹¹

In 2022, 17.9% of children under 6 years of age were at risk of poverty or social inclusion. This positions Malta slightly better than the EU average (23.3%) for this age-group. The relative share of all persons in the population at risk of poverty or social exclusion was 20.1% compared to 21.6% of the EU average. 2.8% of the children under 6 years suffered from severe material deprivation in 2020, compared to 1% of the total population (EU average 6.1% and 4.3% respectively) (Eurostat 2023h, i).

¹¹ 'At risk of poverty or social exclusion' refers to the situation of people either at risk of poverty (threshold set at 60 % of the national median equivalised disposable income after social transfers), or (severely) materially deprived or living in a household with a very low work intensity. About the authors

Elly Singer[†], PhD, was an associate professor at Utrecht University and the University of Amsterdam. She was the project leader and co-author of the Dutch pedagogical framework for ECEC and for Diversity in childcare settings for 0–13 year-olds. She was a member of the board of trustees of the European Early Childhood Education Research Association. She and her co-workers published widely in peer-reviewed international journals on play engagement, social learning, humour, language development, friendship and group dynamics.

Bodine Romijn, PhD, is an assistant professor at the Department of Development and Education of Youth in Diverse Societies (DEEDS) at Utrecht University. Her work focuses on equality, diversity and inclusion in early childhood and primary education. She studies professionals' intercultural competences and the role organisations play in supporting and facilitating staff in implementing culturally sensitive and inclusive practices. Currently, she is involved in the Dutch National Child Care Monitor (LKK) funded by the Ministry of Social Affairs and Employment.

1. ECEC governance in The Netherlands

Historically, the Dutch childcare context is characterised by a ‘split system’ with two separate sectors for young children, namely, childcare and education, each with its own pedagogical roots (see Bahle 2009; Bennett and Tayler 2006; Singer 2018). Nowadays, the early childhood education and care (ECEC) system is partially unified with the involvement of two ministries.

The Ministry of Social Affairs and Employment (*Ministerie van Sociale Zaken en Werkgelegenheid – SZW*) is responsible for the governance of childcare at the national level (ECEC settings for children 0–3¹ years; after school care, 4–13 years; and home-based childcare, 0–13 years)². The same ministry provides financial support for the costs of childcare to parents that need childcare because of work or study. The childcare sector is organised by private companies.

The Ministry of Education, Culture and Science (*Ministerie van Onderwijs, Cultuur en Wetenschap – OCW*) is responsible for the governance of early education programmes for children from 2½ up to 4 years (*vroeg- en voorschoolse educatie*) and for primary education (*Basisschool*). Primary education starts for most children in the Netherlands at the age of 4 and is compulsory from the age of 5. The Ministry of Education gives financial support to the local authorities, which have to provide at least 16 hours (usually taken on four half-days) of early education per week for children between 2½ and 4 years with non-working and working parents. These local governments have some policy space by making extra funds available for specific categories of disadvantaged children. These categories are defined at the municipal level and generally take into account parental income, education level and migration status.

Coordination, cooperation and integration of the originally split systems of child care and early education have become a matter of urgency. Since the implementation of laws to stimulate child development and quality promotion in 2010 and 2018 (Development opportunities through quality and education, OKE Act – *Ontwikkelingskansen door kwaliteit en educatie, Wet OKE*), and the Childcare Innovation and Quality Act, IKK Act – *Wet Innovatie and Kwaliteit Kinderopvang, Wet IKK, 2018*), both sectors are partly covered by the same laws and regulations for quality and inspection (Veen, Van Daalen, and Blok 2014; SZW 2020). But the financial regulations are still different. Childcare centres often have to take into account two financial systems – SZW, Ministry of Social Affairs and Employment (*Ministerie van Sociale Zaken en Werkgelegenheid*), from 2022 renamed "Netherlands Labour Authority" (*Nederlandse Arbeidsinspectie*) and OCW, Ministry of Education, Culture and Science *Ministerie van Onderwijs, Cultuur en Wetenschap* – as well as two systems of inspection of quality. Moreover, there are differences in educational goals. The childcare sector is focused on child well-being and is legally required to comply with four broad pedagogic objectives: the childcare facility must offer children a safe and caring environment that promotes personal competence, strengthens social competence and transmits norms and values (see Riksen-Walraven 2004). No specific references are made to cognitive development and stimulation of development to prepare for primary education. The inspection agencies of childcare centres are part of the municipal public health services and located at the

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. For the SEEPRO-3 reports we have chosen the following age-inclusive format: **0–2** years for settings for children **up to** 3 years of age and **3–5** years for pre-primary settings in countries with a primary school entry age of 6 years. In the Netherlands the corresponding formats are **0–3** and **4–5**.

² Although this age range reflects the legal basis, in reality – since most children start primary school at age 4 – the overwhelming majority of children finishes at age 12. Those who finish later have usually just turned 13 after a repetition year at school due to poor performance.

level of the municipalities. The inspections are conducted at least annually, during which the childcare inspectors assess whether or not childcare centres meet the national quality requirements as stated in The Dutch Childcare Act (2005).

The goals of early education programmes are also broad, but more focused on cognitive development and language, especially in the case of stimulation programmes for disadvantaged children. The nationally organised Inspection of Education is responsible for inspecting the quality of early education in groups for 3 year-olds attached to the primary school (*Basisschool*); and for inspecting the schools for primary education, including classes for children aged 4 up to 6 years (Education Inspectorate, Ministry of Education, Culture and Science 2021).

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Childcare sector 0–3

In 2022, some 117,000 persons worked in the childcare sector. To cope with the current very high staff shortage, the Minister for Social Affairs is permitting the employment of 50% unqualified staff over the next two years. (Dutch News 2023).

Most of them are core practitioners working directly with children; 23% have a leadership position (manager of the organisation, responsible for quality and innovation and for the coaching of pedagogical workers).

According to one of the branch organisations, the social childcare sector is growing at an average annual rate of 7–9%, despite staffing challenges (BMK 2023).

All Dutch caregivers need a certificate of conduct (*Verklaring Omtrent het Gedrag, VOG*). This is a document through which the Dutch State Secretary for Security and Justice declares that the applicant has not committed any criminal offences relevant to the performance of his or her duties (e.g. sexual child abuse). Obviously, this certificate is not a qualification in the professional sense of the word, but it is a requirement for contact staff in the Netherlands.

Pedagogical Worker

Pedagogical Workers (*pedagogisch medewerkers*) are core professionals in early childhood education and care. They cooperate with one or two colleagues and are responsible for a group of children in children's centres (0–3 years) and in out-of-school care (4–13 years) in same-age or mixed age groups.

The minimum qualification that is required is a 3-year upper secondary vocational course in Pedagogical Work (MBO 3), although in the face of current staff shortages, this requirement has been weakened, particularly in the field of out-of-school childcare where persons with an MBO qualification from a semi-relevant field are now also eligible for employment as a Pedagogical Worker. Beginning in January 2025, all Pedagogical Workers will be required to have a sufficient level of Dutch language skills.

Pedagogical Trainee Worker

Students of MBO 3 or 4 and students following a Bachelor's degree in higher education for the Primary School Teacher profession or to become an academic Pedagogue who meet certain criteria are allowed to be paid wages for working in childcare centres. The current drastic staff shortage has even led to them being counted as qualified staff as long as they have completed

minimal additional schooling (which could be, for example, working a specified number of hours under the supervision of a fully qualified colleague).

Pre-primary education 4–5 years in schools

Teacher in Primary Education (*Basisschool*)

Teachers in Primary Education complete a 4-year higher education degree at Bachelor level (PABO – *Pedagogisch Academie voor het basisonderwijs*). Again, because of staff shortages in schools, lateral entrants with a non-specialised higher education degree (ISCED 6) are allowed to enter the profession through ‘on-the-job training’, i.e. working alongside qualified Primary Teachers after an initial assessment of suitability.

Teachers with a PABO-diploma are allowed to work throughout the entire primary education, including with the youngest children. Students in the third year of the 4-year higher education course at the PABO may choose as a specialisation ‘the young child’. Special guidelines and pedagogical methods are developed for teachers working with 4 to 5 year-olds and for teachers working in the early education classes for 3 year-olds. For instance, the *Stichting leerplan ontwikkeling 2021* [Foundation for curriculum development] states that young children learn through play and that under 6 year-olds mainly learn by doing; therefore, a home corner and concrete material like puzzles, building blocks, beads and wooden numbers and letters should be available. Moreover, the *Stichting leerplan ontwikkeling* states that young children learn best if they are offered meaningful topics with which they are familiar. Think, for example, of researching plants and insects in the park next to the school.

Teaching Assistant

The Teaching Assistant supports the teacher. Two levels of training for a pedagogical support post are available. With an upper secondary qualification at level 3 (MBO 3) in social and community work and a specialisation in primary education, the Teaching Assistant is involved in tasks such as clearing up materials; collecting objects that the teacher needs for working with the children; routine paperwork; support of the physical care of children; or making coffee and lunch. The Teaching Assistant at level 4 (MBO 4) is involved in the guidance and supervision of individual children and small groups; and they assist the teacher in the preparation of and during project work by the children. Teaching Assistants are not allowed to be solely responsible for the class; they work under the supervision of the teacher. For this position there are standard job profiles.

Table 1 distinguishes between different types of contact staff categories and also categorises the core pedagogues (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at the end of this chapter).

Table 1

Netherlands: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Childcare sector				
Pedagogical Worker <i>Pedagogisch Medewerker</i> <i>Profile:</i> Early Childhood Pedagogy Professional	<i>Dagopvang in kinderdagverblijf</i> Childcare centre (including early education – VVE – programmes)) 3 months up to 4 years	Core pedagogue with group responsibility in a same-age or mixed-age group	3 months up to 4 years	3-year upper secondary vocational course in Pedagogical Work (MBO 3) <i>Award:</i> Certificate in Pedagogical Work Certificate for competence in Dutch language at level 3F of B2 (as from 2025) ECTS credits: n/a ³ EQF level: 3 or 4 ISCED 2011: 3 or 4
Pedagogical Worker for babies (under 1 year-olds)	Babies in same-age and in mixed-age groups	Core practitioner – responsible for the children and contact with parents.	3 months up to 4 years and additional specialisation in working with under 1 year-olds	Qualification as Pedagogical Worker plus Certificate 'Working with Babies' (as from 2025 mandatory)
(Pre-) Primary education sector				
Pre-primary / Primary School Teacher <i>Leerkracht</i> <i>Profile:</i> Pre-primary and Primary Education Professional	<i>Basisschool</i> Primary school 4–13 years (including voluntary pre-primary class for 4 year-olds and compulsory pre-primary class for 5 year-olds)	Core pedagogue with group/class responsibility	4–13 years	(1) 4-year higher education study programme (<i>Pedagogisch Academie voor het basisonderwijs – PABO</i>) ISCED 2011: 5 or (2) 5 years higher education at university (<i>academische opleiding voor leerkracht basisschool</i>) ECTS credits: 240 EQF level: 6 ISCED 2011: 6
Teaching Assistant <i>Onderwijsassistent</i>	<i>Basisschool</i> Primary school 4–13 years	Qualified co-worker	4–13 years	3-year upper secondary vocational course in Pedagogical Work

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
	(including pre-primary classes for 4 and 5 year olds)	Teacher's class assistant		ECTS credits: n/a EQF level: 4 ISCED 2011: 3 or 4

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Childcare sector 0–3

Managers in childcare organisations

The management functions in early education and care are diverse. These range from managers of large organisations with over 700 locations attended by over 6,000 children in childcare centres and out-of-school care to the managers of small organisations with only two or three groups of children. In small organisations with a few locations the director also has the task of location manager. In an organisation with only one location the manager combines the leadership function with working directly with children. Roughly two-thirds of centre managers have a Bachelor level qualification.

Pre-primary education 4–5 years in schools

Candidates applying for a post as head or deputy head of a primary school, and thus also being responsible for pre-primary education, must hold a higher education qualification and a certificate of good conduct. Depending on the kind of management duties involved, specific competence requirements must also be met. This also applies if the post includes teaching duties (Eurydice 2023).

2.3 Centre-based posts of responsibility

Childcare sector 0–3

Pedagogical Worker in groups with under 1 year-olds (baby groups)

Pedagogical Workers in baby groups must have a certificate in 'Working with Babies', that will be legally required in 2025 (Berenschot 2022, 21). The focus of the training is on: What does a baby need during a day at the nursery? How can you give each baby enough attention in a group

of babies? Extensive attention is paid to pedagogy, development and care aimed at babies (age category from 0 up to 2 years). At the moment Pedagogical Workers who wish to qualify for working with babies can choose from 43 different courses that are certificated and accepted by the collective bargaining agreement (CAO) parties in childcare 2021 (Kinderopvang werkt 2022). These courses are offered by private companies or large childcare organisations.

Pedagogical Worker for children from disadvantaged families

Childcare centres subsidised by the local government to stimulate the development of 'disadvantaged children' are required to work with an accredited programme for early education for children aged 2½ up to 4 years and/or with children labelled as 'disadvantaged'. Groups that use an accredited programme are required to employ at least one Pedagogical Worker with the certificate for working with that specific programme. This includes having a certificate of proficiency in the Dutch language (3F or B2).

Pre-primary education 4–5 years in schools

Within primary schools, some teachers are appointed with the coordination of a part of the school based on the children's age. These are something like 'age band coordinators' mostly 'lower' (4–8 years) or 'upper' (8–12 years), sometimes also for the two years of pre-primary education (4–6 years). So the 'lower age band coordinator' (*onderbouw coördinator*) is the relevant post of responsibility for pre-primary education. Specific responsibility may differ from school to school, but it usually includes a combination of practical and pedagogical coordination tasks. There are no specific qualification or other requirements for this. The teacher is usually granted a certain amount of hours for this coordinating role.

2.4 Co-ordinating and supervisory staff

Childcare sector 0–3

Since January 2019, childcare organisations are required to provide a Pedagogical Coach and/or a Pedagogical Policy Assistant to the manager of the organisation (SZW 2020).

Pedagogical Coaches (*pedagogisch beleidsmedewerker*) support Pedagogical Workers in their work with children and parents. Full-time staff receive ten hours of coaching per year (Kinderopvang totaal 2023). The coach can help familiarise new colleagues, observe individual children, analyse group dynamics and cooperate in preparing specific activities.

Pedagogical Policy Employees support the leading managers in evaluating, preparing and implementing pedagogical policy issues.

Both have a minimum qualification of MBO 4 (ISCED 3 or 4⁴) plus successfully completed courses to prepare them for their position. In the collective bargaining agreement (CAO, Kinderopvang werkt 2022) both functions are classified at HBO level (*hoger beroepsonderwijs* – higher vocational education, ISCED 6). In smaller organisations one or two Pedagogical Workers can combine the function of Pedagogical Coach or Policy Employee.

Pre-primary education 4–5 years in schools

Inspectors are employed by a (local) authority outside the schools to carry out inspections both of primary schools and childcare centres. There are no specific job requirements for this post.

⁴ To qualify for an MBO 4, this can be done either directly after secondary school (3/4 years, classified as ISCED 3) or by first doing an MBO3 and then a specialist training for MBO 4 (classified as ISCED 4).

However, preferred candidates are those with relevant field experience and/or analytical skills. Inspectors have the same legal status as civil servants.

2.5 Specialist support staff

In the **childcare/early education** sector, there are no legal requirements or regulations governing the responsibility for support and guidance.

In **pre-primary education**, a special needs coordinator (*intern begeleider*) is appointed to support individual children who need additional backing. It is also their role to support the teachers of these children. There are no specific requirements for this job, although many schools require a specialised training before taking on such a role within the school.

Special schools also employ specialist support staff such as Speech Therapists, Physiotherapists and Mobility Instructors.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Level of education

The majority of Pedagogical Workers working in the childcare 0–3 sector have an intermediate level vocational training certificate in childcare (*Pedagogisch Werk* – MBO level 3). In 2015, a third of the Pedagogical Workers were educated at MBO level 4; more recent figures are not available. Since the law on Innovation and Quality in Child Care and Education came into force (Wet IKK 2018; SZW 2020), the employers' organisation of the childcare sector has tried to increase the level of education of Pedagogical Workers with an MBO 4 level vocational qualification (ISCED level 4).

Up to 2024, a maximum of one half of the professionals to be employed at a childcare setting may be not-yet-qualified, that is pedagogical staff on their way to becoming a qualified Pedagogical Worker (student staff members or trainees) (The Holland Times 2022, 26). This is the requirement stated in the Childcare Act regulations. However, since 2020 there is an increasing proportion of not-yet-qualified student-trainees in childcare centres working in the position of a Pedagogical Worker. In 2022, childcare organisations are temporarily (for six months) allowing one student trainee for every qualified Pedagogical Worker responsible for a group of children. This measure is being taken because of the tight labour market and the dire shortage of qualified workers. This temporary measure implies that 50% of the staff is permitted to be in training, i.e. not-yet-qualified.

Data from 2012 state that roughly three-quarters of childcare managers/centre heads had a Bachelor-level qualification (Fukkink et al. 2013). This distribution has been confirmed in the more recent Dutch National Childcare Quality Monitor (Romijn et al. 2023a).

Gender

Staff in the Dutch ECEC workforce are predominantly female. The number of men has always been modest in childcare and has diminished further for work with children under 4 years of age (Van Polanen et al. 2017). In 2021, 12.7% male staff worked in the childcare sector, but half of them in after-school childcare rather than early childhood setting. Males seldom work in baby

groups. Teachers in primary schools are also predominantly female; 12.3% were male in 2021 (Berenschot 2022, 82ff).

Ethnicity

The ethnicity of ECEC staff is mixed, but national data are not registered in the Netherlands; recent figures are therefore not available. In a large scale childcare assessment study (Fukkink et al. 2013), about one in 11 caregivers was not born in the Netherlands. This distribution has been confirmed in the more recent Dutch National Childcare Quality Monitor (Romijn et al. 2023a). Dutch was the home language for 92% of the caregivers. But there is local variation in the composition of staff, which reflects differences in the population between the major cities in the urban part of the Netherlands (Amsterdam, Rotterdam, The Hague, Utrecht) and other parts of the country. For example, Amsterdam and subsequently Rotterdam and The Hague have recently become ‘majority-minority cities’ (Crul, Uslu, and Lelie 2016), where no one ethnic group can be described as a majority group and the superdiversity of these cities is reflected in the child population and staff in these areas.

Age and years of work experience

Staff in the childcare sector are relatively young. In 2021, 49% were under the age of 35. In comparable sectors of care, welfare and education, an average of 37% is younger than 35 years. Only 12% were 55 years or older in the childcare sector. The number of years that employees work in childcare is also relatively low. About half (49%) have been working in childcare for less than 5 years; and about a third (34%) work for ten years or more. The young age is probably related to the fact that childcare is a relatively new sector in the Netherlands. Childcare and out-of-school care have only been offered on a larger scale since 1990 (Berenschot 2022, 83f).

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Childcare sector 0–3

Pedagogical Worker (*Pedagogisch Medewerker*)

The pre-service training requirement for the childcare sector in the Netherlands is a three-year upper secondary vocational course in Pedagogical Work (MBO 3). The training routes for Social Cultural Work (*Sociaal-cultureel werker*, SCW) and Teaching Assistant (*Onderwijsassistent*), both vocational qualifications at intermediate level, also qualify for childcare work. The entry requirement for this education is the pre-vocational track of secondary education or equivalent educational levels. This Pedagogical Work IPE is organised at two levels: EQF/ISCED 3 and 4. The majority of caregivers has a certificate at EQF level 3. At both levels 3 and 4 the qualifying route distinguishes between two learning paths: the school-based pathway or the on-the-job training pathway. In the school-based pathway, learning at school accounts for the largest part of the course (about 60%) and students tend to be younger than in the on-the-job training route. Students combine this with internships, starting from their first year. In the on-the-job training pathway, students work mainly in childcare settings as trainees and they combine this with school experience (about 20%).

There is no certificate at higher educational level (EQF 5 or 6) which is required for employees in the childcare sector. This level is not included in the current childcare regulations for staff and the required qualifications. However, as previously described, a number of higher-level routes

also qualify for ECEC work, although these are barely represented in the childcare workforce. These include a relevant associate degree (pedagogic-educational co-worker, childcare worker, educational support worker) and a Bachelor-level degree (primary school education, pedagogy, social work, cultural-societal work, pedagogical management).

Furthermore, *Pedagogisch Medewerker* as well as assistant staff must have language skills at least at level B2. By 2025, those working with babies need to complete an additional training (Berenschot 2022, 21).

Table 2

Netherlands: Pedagogical Worker

Job title in Dutch: <i>Pedagogisch Medewerker, Leidster</i> Profile: Early Childhood Pedagogy Professional
Entry requirements: Completion of secondary education or equivalent Professional studies: 3-year upper secondary vocational course in Pedagogical Work Award: Certificate in Pedagogical Work ECTS credits: n/a EQF level: 3 or 4 ISCED 2011: 3 or 4 Main ECEC workplaces: <i>Kinderdagverblijf</i> (childcare centre, 0-3 years); <i>Reguliere peuterspeelzaal</i> (regular playgroup, 2½ up to 4 years)

Note: The qualification routes for social cultural work (*Sociaal-cultureel werker.*, SCW) and Teaching Assistant (*Onderwijsassistent*), which have similar qualification requirements, also qualify for working in childcare settings.

Pre-primary education 4–5 years in schools

Teachers in primary education (*Basisschool*) who work with 4 and 5 year-olds have a Bachelor-level qualification (*Pedagogisch Academie voor het basisonderwijs – PABO*) and the course of studies lasts 4 years. In recent years, some IPE institutes in Amsterdam, Utrecht and Nijmegen have been offering, in close collaboration with the university, a new type of teacher education/training which combines a vocational track at higher education level and an academic track in a five-year IPE route (instead of four years). More specifically, the regular teacher education course is complemented with educational, pedagogic and research modules at academic Bachelor level. This type of teacher preparation is referred to as academic teacher education/training (*academische PABO*).

Table 4

Netherlands: Primary School Teacher (pre-primary)

Job title in Dutch: <i>Leerkracht</i> Profile: Pre-primary and Primary Education Professional
Route 1: Entry requirements: University entrance qualification Professional studies: 4 years of study at a vocational higher education institution ('Pedagogical Academy') specialising in pedagogy (<i>Pedagogisch Academie voor het basisonderwijs – PABO</i>) Award: Professional Bachelor's degree ECTS credits: 240 EQF level: 6 ISCED 2011: 6 Main workplace: <i>Basisschool</i> , working with 4–13 year olds Route 2: Entry requirements: University entrance qualification

Job title in Dutch: Leerkracht Profile: Pre-primary and Primary Education Professional
Professional studies: 5 years of study at a vocational higher education institution specialising in pedagogy in close collaboration with the regional university Award: Academic Bachelor (<i>academische PABO</i>) ECTS credits: 240 EQF level: 6 ISCED 2011: 6 Main workplace: <i>Basischool</i> , working with 4–13 year-olds (4–7, 8–13)

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Pedagogical Worker (*Pedagogisch Medewerker*)

Competence requirements: The competence requirements for Pedagogical Workers are organised into ten clusters focused on (1) the primary process (interactions with children and parents) and (2) their functioning as a professional in the specific context and (3) their own professional development (EVC-Branchestandaard 2021).

Table 5

Netherlands: Clusters of competence requirements for Pedagogical Workers

Cluster	Competences
<i>Cluster 1</i> Caring for the emotional and physical well-being of children	<ul style="list-style-type: none"> – Providing emotional support (sensitive responsiveness) – Providing support on a physical level
<i>Cluster 2</i> Ensuring the safety of children	<ul style="list-style-type: none"> – Providing an emotionally safe base – Creating a safe environment for discovery, practice and adventure – Matching the approach to the situation, developmental age and individual needs – Responding to (possibly) unacceptable behaviour toward the child
<i>Cluster 3</i> Following and stimulating the development and learning of children	<ul style="list-style-type: none"> – Monitoring the development and respond to it – Supporting and stimulating competences and talents – Letting children experience, discover, explore and expand – Providing a balance between new and familiar things – Enabling children to learn in a goal-oriented way
<i>Cluster 4</i> Supporting and stimulating play and leisure activities	<ul style="list-style-type: none"> – Supporting play and leisure activities as a basis for development – Enriching children's experiences
<i>Cluster 5</i> Supporting and stimulating autonomy, participation and citizenship	<ul style="list-style-type: none"> – Providing space and respect autonomy – Involving and empower children – Motivating children to engage in social activities and build friendships – Enabling children to connect with society
<i>Cluster 6</i> Influencing the behaviour of and interaction between children	<ul style="list-style-type: none"> – Promoting positive interactions between children – Providing structure and set boundaries – Offering process-based support – Responding to special behaviour/characteristics

Cluster	Competences
<i>Cluster 7</i> Establishing a partnership with the parents	<ul style="list-style-type: none"> – Hearing and seeing the parents – Sharing information with the parents – Collaborating with the parents – Working with the parents on joint responsibility and involvement
<i>Cluster 8</i> Collaborating with colleagues and other professionals in the child's environment	<ul style="list-style-type: none"> – Working on an unequivocal approach/support with direct colleagues – Stimulating each other as colleagues – Collaborating with other professionals – Collaborating in a dynamic environment
<i>Cluster 9</i> Improving the service quality	<ul style="list-style-type: none"> – Maintaining the quality of work – Evaluating and justifying work and actions – Improving the work
<i>Cluster 10</i> Developing in the profession	<ul style="list-style-type: none"> – Continuing to develop – Using acquired expertise – Monitoring one's own working conditions.

Curriculum: The MBO 3 course contains: a) general subjects (citizenship and the ethics of being professional); arithmetic level 2F; Dutch language level 3F; b) subjects to become a competent Pedagogical Worker (communication, play activities, stimulating child development, pedagogy, cooperation with parents, first aid, professional development; c) apprenticeship of at least 570 hours: part time during the 3-year course or full time over a period of several weeks or months.

Primary School Teacher (*Leerkracht*)

The competence specifications for teachers are laid down in the Education Professions Act 2013. Schools are required to keep a record of the competences of each member of the teaching staff, setting out agreements made between the employer and the teacher on, for instance, continuing professional development.

Competence requirements: Seven competences with Dublin Descriptors (knowing, applying, evaluating, communicating, learning to learn) are distinguished in the national curriculum of the teacher education programme for Primary School Teachers: interpersonal; pedagogical; didactic; organisational; team collaboration; collaboration with local community; reflection and professional development (*Stichting leerplan ontwikkeling, 2021*). Specific indicators are distinguished at different levels during pre-service training: qualified for training after year 1 (level 1), qualified for final traineeship (level 2) and qualified to start practising in schools (Bachelor level, level 3).

Curricular areas: The Primary Education Act (1998) sets out the basic principles, objectives and core objectives of primary education. The core objectives describe what a school up to group 8 (oldest children) must offer the pupil. Schools are allowed to shape the teaching and learning processes themselves, i.e. didactic method, teaching materials, distribution over school years. The national teacher education profile distinguishes between seven key learning areas (see above). The (pedagogical) content knowledge includes language, maths, geography, history, physics, biology, music, drama, arts, gymnastics, ethical education or philosophy. Further, teacher education at different higher education institutions may also include complementary curricular areas or a special emphasis (e.g. on urban education, integrated children's centre, science). Core subjects of the primary school are Dutch language, maths and science, world orientation, artistic orientation, physical education and (in group 8) English.

4.3 Alternative entry and qualification routes, system permeability

Childcare sector 0–3

Pedagogical Trainee Worker

Employees who wish to be employed as a Pedagogical Worker but do not have the required diplomas can qualify via a pre-designed route based on their individual competences. These can be employees with considerable practical experience; employees with a different education at EQF levels 3 or 4 (e.g. for work with the disabled, the elderly); employees with a HBO diploma (EQF 5 or 6) that does not qualify for working with young children. For workers in out-of-school care settings, certificates in sports, art or music can be accepted for entry into an Assessment of Prior Learning procedure (*Erkenning Verworven Competencie – EVC*).

The Pedagogical Trainee Workers have to prove that they meet the acknowledged standard for a qualified Pedagogical Worker in childcare during in an EVC procedure. When the employee meets the standards, they no longer need to obtain a diploma to meet the qualification requirement for a pedagogical employee. This procedure may last three years with about 12 hours of training on a weekly basis.

Pre-primary education 4–5 years in schools

Prospective Primary School Teachers may follow a condensed curriculum at the higher education institution for Primary School Teachers (*PABO*) if they have already finished an alternative study route at Professional Bachelor or Academic Bachelor level (lateral entrants – *zij-instromers*). Teaching Assistants in schools may also follow a new study programme to obtain a higher vocational level, moving for instance from MBO level 4 to HBO level. Recently, it has become possible for teachers working in primary schools and with an academic background to apply for a PhD scholarship (*Lerarenbeurs*).

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Childcare sector 0–3

Childcare training routes follow two learning paths: the school-based track (BOL – in Dutch) and the on-the-job track (BBL – in Dutch). However, the latter is not standardised practice.

The duration of the **school-based BOL** route depends on the MBO level aimed for and to a certain extent on the specific school programme. In general, the level 3 course lasts three years, full time, and workplace experience starts after a few months. This either builds up over time (starting with one day per week in year 1 and three days per week in year 3) or is more or less consistent (then usually 2–3 days per week). The competences they are expected to build are described in *chapter 4*.

In terms of the **on-the-job BBL** qualifying route, if the student aims for the MBO 3 level, it usually takes two years to complete. Roughly 80% of the time is spent in the workplace and 20% in the upper secondary school (i.e. generally four days in an ECEC setting and one day at school). For the MBO 4 level qualification, an additional 1-1½ years are needed.

Although the student is to be supported and supervised by an educator from the ECEC institution and by a staff member of an accredited job training childcare centre, there are no standard regulations for this. Little is known about the quality of support or the amount of time spent on supervision.

Job training centres and vocational training centres ('ROC's') may collaborate at a regional level to advance professional development.

Pre-primary education 4–5 years in schools

Work-based learning is a regular part of teacher education programmes for Primary School Teachers (PABO). Students complete an internship in both the lower as well as the middle and upper primary grades. Work-based learning starts in the first year of the PABO and students are placed in a primary school for one or two days per week. Students play an increasingly active role, starting with observing the class, then assisting with part of a lesson, and finally teaching classes for part of the day. In the final year of the Bachelor's degree studies, workplace-based learning takes place during an extensive period of half a year in which the student is responsible for the class and is also a full member of the school team (lio-stage). Workplace learning is supervised by a tutor from the IPE institution and by a staff member of the host school. Whether the supervising teacher receives remuneration for this depends on the school and on other factors related, for example, to the staff member's function within the school, for which they may be on a higher salary, or whether this kind of mentoring is understood as part of the teacher's 'non-contact time'.

Dutch teacher education institutions (PABO) work with primary schools in regional networks to exchange findings and to promote the professional level of the field.

The post of Trainee Teacher (LIO) was introduced in primary schools in August 2000. Students in the final year of their training can be employed part time under a training and employment contract for a limited period (equivalent to no more than five months' full time), provided the school has a vacancy. The Trainee Teacher is supervised by a qualified teacher and does everything a regular member of staff would do. This makes the transition from student to teacher less abrupt and the teacher education institutions are better able to keep abreast of current developments in education (Eurydice 2023, 9.1).

6. Continuing professional development (CPD) of ECEC staff

Childcare sector 0–3

Legislation/regulation: The Dutch Ministry of Social Affairs and Employment has undertaken several measures to promote professional development in the childcare sector. In 2012, the Ministry developed an agenda for improving the pedagogical quality of childcare together with stakeholders, i.e. employer representatives, employees, parents, researchers (BKK 2012). A cornerstone in their approach is the provision of training aimed at the improvement of pedagogical interaction skills, informed by scientific evidence from international and Dutch experimental research, which showed that specialised training can improve the process quality of childcare and the pedagogical quality of interactions between staff and children (see Egert, Fukkink, and Eckhardt 2018). Training courses were developed that are focused on language and interaction skills

(including sensitive responsiveness, respect for autonomy, structuring and limit setting, verbal communication, developmental stimulation, fostering positive peer interactions (see Helmerhorst et al. 2017).

The introduction of the Childcare Innovation and Quality Act in 2018 enhanced the quality debate, in particular through measures relating to ongoing professionalisation through on-site coaches, improved staff to child ratios, raising the level of required language skills (see *chapter 2*) and strengthening the cooperation between the childcare sector and education (*Wet Innovatie en Kwaliteit Kinderopvang – IKK*, SZW 2020). It is a legal requirement that professionals working with the youngest children (0–2) need a special training for this. The service providers therefore pay for these courses and the time needed for them.

Providers: The IKK measures invoked projects on lifelong learning (*Permanente Educatie Pedagogische Professionals*) that aim to stimulate professional development with modules, tests and accreditation of certificates for ECEC staff. Courses for CPD and certification are developed and offered by a multitude of large and small private organisations working at the national or local level. For instance, the website for childcare organisations mentions 23 accredited courses for Pedagogical Workers to obtain a certificate for working with babies (*Kinderopvang werkt!* n.d.(b), n.d.(c).

Access: In 2019, 77% of employees indicated that they had followed some form of training in the past 12 months (Berenschot 2022, 86). Further training is related to the tightening of quality requirements since 2018 (see above IKK measures). Moreover, the collective labour agreement for the childcare sector states that employers have to make a yearly plan for the training and education of staff. Organisations are required to describe what they do to evaluate and promote the quality of the pedagogical work, cooperation with parents and continuing professional education of the staff.

Main forms: The staff can be permitted to follow courses to refresh their capacities, to obtain a higher level of education or to study a specific topic related to organisational innovation, such as ‘diversity’, ‘sustainability’, ‘health and food’, or cooperation between the childcare sector and primary education. The scope, form and duration is entirely a matter for the service providers and little is known how regularly CPD activities take place. However, in-house professional development is regulated: at a minimum of 50 hours coaching and training per setting and a minimum of 10 hours per year per full-time teacher. This has to be facilitated and organised within the ECEC centre. The national labour agreement for ECEC teachers differentiates between necessary CPD (e.g. the baby course mentioned earlier) and additional CPD. Attending CPD sessions beyond the legally required has to be negotiated between staff and centre managers, both in terms of time and payment.

Pre-primary education 4–5 years in schools

Legislation/regulation: As part of collective labour agreements, teachers in pre-primary education have the right to individualised professional development for two hours per week (when full-time employed). These hours are in addition to team-based schooling days. Moreover, schools have on average €500 per FTE (full time equivalent) available for this individual professional development. The directors and participation councils (which consists of teachers working in the school) decide how the budget is allocated.

To improve teachers’ professional development and career prospects, the 2020 Teacher Action Plan introduced various additional measures, including: a teacher development grant (covering course fees and material costs to follow a BA/MA) and the prospect of promotion with higher salaries (Eurydice 2023, 9.3).

Providers: Schools for primary, secondary and special education have their own budgets for in-service training. There are no specific in-service training institutions governed by law. Courses can be provided by institutions within both the public and commercial domain. Many are provided by teacher education institutions (HBO institutions and universities with teacher education departments). They are sometimes organised in cooperation with the school advisory services, one of the national educational advisory centres or experts from outside the education system (Eurydice 2023, 9.3).

Access: In 2022, approximately 70% of employees indicated that they had followed some form of training in the past two years (Arbeidsmarktplatform 2022). The vast majority (92%) feels (somewhat) supported by their management to engage in continuing professional development. There are no national data available about the further extent to which teachers engage in professional development activities.

Main forms: Sometimes course offers are for both Pedagogical Workers and Primary Teachers – for instance, training for interactions with young children, and for the staff working with early intervention programmes. Specific language training has recently been provided on a large national scale to raise the linguistic competences of staff; if teachers are not certified at a certain proficiency level (level 3F, which is equivalent to an ISCED level 5 or Bachelor level), they are not allowed to work in a pre-primary education setting.

One of the themes that has recently received attraction in the Netherlands is urban education and working as a teacher in an urban context (Fukkink and Oostdam 2016). Urban education may be an integral part of the IPE programme, but also plays a role in continuing professional development. For ECEC staff, early intervention programmes for young children are an important topic in urban contexts.

Primary School Teachers may also choose to follow a Master's degree in education. Popular courses are the Master in Educational Leadership, Master in Educational Needs and Master in Pedagogy, which are accredited by the Dutch-Flemish Accreditation Organisation (*Nederlands-Vlaamse Accreditatieorganisati*, NVAO).

7. Working conditions and current workforce issues

7.1 Remuneration

The average gross salary of a full-time worker in the Netherlands was €2,238 in 2023 (Nationaleberoepengids.nl 2023a). The gross salary of a full-time Pedagogical Worker ranges between €1,889 and €2,588 per month, depending on the level of education and length of working experience. The salaries of core pedagogues in childcare settings are, on average, lower than those of Primary School Teachers. The gross average salary of a full-time Primary School Teacher is €4,530, i.e. between €3,001 and €6,059 per month (Nationaleberoepengids.nl 2023b). Whether it is possible to live on a salary of a Pedagogical Worker in the childcare sector depends on where they live in the Netherlands. Housing is very expensive in the big cities, and it will be hard to find affordable housing, both for Pedagogical Workers and Primary School Teachers. This is one of the reasons why it is so hard to recruit them in urban areas. It can be difficult to get by on a salary as a Pedagogical Worker or Teacher.

Since the introduction of a more flexible personnel budget, school boards have more scope to give their teachers a performance-related allowance or bonus. They may decide to do so on the

basis of an assessment. It is up to the school to decide under what conditions bonuses or allowances will be granted, and how much money they are prepared to allocate for them (Eurydice 2023, 9.2).

7.2 Full-time and part-time employment in ECEC provision

Dutch society is characterised by part-time work, especially among women with children. In this respect, the childcare sector and primary education are no exception.

In 2021, professionals in the **childcare sector** worked on average 65% of the possible hours of a full-time job; that is 26 hours per week (Berenschot 2022, 82). As a result, the majority of children under the age of 4 also attend ECEC on a part-time basis (on average 2 days per week).

In the **primary sector** in 2023, more than half (59%) of the Teachers worked on average between 2½ and four days per week (0.72 of FTE), 32% worked (almost) full-time (four to five days, 0.8 FTE) and only 9% worked less than 2.5 days (0.5 FTE) (Ministerie OCW 2023).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Support measures for Pedagogical Workers include the on-site Pedagogical Coach, as described in *chapter 2.3*.

Teachers are appointed by the school board. Each school board is responsible for personnel policies and for supervising, supporting and assessing newly qualified teachers. The necessary funds are included in the school's block grant. The money may be spent on supervising Trainee Teachers, lateral-entry teachers and other new staff members.

Staff assessments are based on two instruments: job performance interviews, in which teachers discuss their performance with their heads, and consider their prospects for the future; assessment interviews, in which the teacher's performance in the period preceding the interview is assessed.

Most schools regularly hold job performance interviews with their teaching staff, in most cases once every two years. Information on a teacher's performance is mainly supplied by the individual concerned. In primary schools, classroom observation is also an important source of information (Eurydice 2023, 9.2).

7.4 Non-contact time

The employers in the childcare sector are required to ensure that at least 50 hours per year are available for non-group work for each full-time pedagogical employee. However, these hours are not an individual right. The employer can decide how to allocate non-group hours among employees. There are no national regulations regarding non-contact time for individual members of the Dutch staff in the child care sector.

The standard number of hours to be worked per year is fixed at 1,659 for all sectors of education. Primary and special school teachers may spend an average of no more than 930 hours a year on teaching duties (Eurydice 2023, 9.2).

Teachers in pre-primary/ primary education have an individual right of 7 days for studying per year if they work full time. According to the collective agreement, Primary School Teachers have to spend 56% of their time in contact with children (PO-raad 2022). The rest of their time is allocated to preparation, checking students' schoolwork, contact with parents, team meetings, etc. Many teachers complain that they have to work more hours per week than they are paid for. But on average teachers have more opportunities for study and collaborative work than the pedagogical staff in the child care sector. These and other differences in the working conditions

of Teachers and Pedagogical Workers are one of the obstacles in the integration of education sector and childcare sector.

7.5 Current staffing issues

The Dutch childcare sector consists exclusively of private companies. Working parents pay these companies for the hours their children spend in the setting. Working parents are financially supported by the the Ministry of Social Affairs and Employment through the tax system. Linking financial support to the number of hours parents work makes the childcare system vulnerable and dependent on labour market fluctuations. In the 2010s, the Dutch economy and childcare market was declining, following a significant drop in demand for places. A shift was observed from the use of formal childcare to informal childcare arrangements (e.g. grandparents taking care of their grandchildren). But in the 2020s, the economy is growing and in 2022 there is a very tense labour market with shortages of employees, staff and labourers in almost every sector, including childcare and education (UWV 2022).

Childcare organisations and primary schools have been struggling with serious staff shortages since 2015. In recent years, they have increased. In January 2022, a quarter of entrepreneurs said they were experiencing problems due to labour shortage (Berenschot 2022, 82). Results from the Dutch National Daycare Monitor indicate a substantial increase in reported labour shortage since 2019. The experienced problems are a combination of market wide labour shortages and an increasing number of staff on sick leave (Slot et al. 2023b). Among other things, these shortages are related to the higher qualification requirements that have been introduced since 2019, reducing the potential number of pedagogical staff who meet these requirements. In addition, the staff-child ratio in the baby groups was changed from 1: 4 to 1: 3 children. More staff are therefore needed for the baby groups.

A number of measures have been taken to solve this labour market problem:

1. In the context of an acute shortage of staff, the government has allowed a temporarily lowering of qualification requirements. Pedagogical Trainee Workers may be included when calculating the required number of employees in a group. It will be easier for people without the required qualifications to enter the field (Rijksoverheid 2021; Kinderopvang werkt! 2022).
2. Most Pedagogical Workers are employed on a part-time basis (Berenschot 2022, 82). Employers are looking for measures to stimulate the staff to work more hours. A survey shows that especially workers in out-of-school childcare are keen to work longer hours. Current working hours for out-of-school care workers are short and fragmented throughout the day and week. Their working hours depend on school hours. The opening hours of many schools date from the time when mothers were at home with their children, with breaks at noon, finishing at 15:30 and closing on Wednesday afternoons.
3. Measures to make the work more attractive and to reduce sick leave and work pressure: The unions are committed to wage increases and better fringe benefits. Private companies can give the workers a rise if the (well-off) parents are willing to pay higher fees. The employers in the childcare sector are also trying to make the work more attractive by emphasising the pedagogical value of working with young children and in out-of-school care.

The organisation of employers in the childcare sector (BMK 2023) fears that the staff shortage will have a negative effect on quality and standards for staff qualifications. On the one hand, there is pressure from parents (and their companies) for more childcare – the waiting lists are currently growing; on the other hand, there is the risk of unqualified personnel and decline in quality.

According to a recent labour market survey, after the considerable staff shortages registered between October 2022 and March 2023, a slight decrease can be seen among the different types of childcare organisations. However, an increase in the shortage is expected in toddler care. To solve the staff shortage, organisations are taking various measures, such as having pedagogical staff fill in or help out (82%), having employees work above their contractual hours (58%), and deploying more trainees (52%) (Kinderopvang werkt! 2023).

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Towards a national pedagogical curriculum: initiatives of stakeholders

Until now, the Dutch government has refrained from establishing a national curriculum for childcare centres. The official ideology is that the government does not interfere with the content of upbringing. The government only provides a broad framework that has to be taken into account by the childcare companies, i.e. the service providers. Various initiatives are being taken to formulate a Dutch pedagogical framework and curriculum; these frameworks or curricula are not recognised by the government. In 2008, the National Platform of Pedagogues in Childcare Centres managed to get a subsidy from the Ministry of Social Affairs for a project that resulted in a pedagogical framework for childcare centres 0–4 years (*Pedagogisch kader kindercentra 0–4 jaar* (Singer and Kleerekoper 2009). Professionals, parents, policy makers and researchers from all over the country participated in discussion groups. Later, pedagogical frameworks for after-school care (Schreuder et al. 2011), home-based ECEC provision (Boogaard et al. 2013) and diversity (van Keulen and Singer 2012) were published.

In 2017, the National Expertise Centre for Childcare (*Landelijk Expertisecentrum Kinderopvang*), also published an educational curriculum for the young child in childcare (*Pedagogisch curriculum voor het jonge kind in de kinderopvang*, Fukkink 2017) and trainings were offered for implementation in private organisations.

The national organisation of companies in the childcare sector (Brancheorganisatie Kinderopvang 2023) has published a discussion paper to develop a shared pedagogical vision on caring for and educating young children in children's centres (Brancheorganisatie kinderopvang 2022). The organisation is an important stakeholder in the privatised childcare sector; 80% of organisations that offer childcare are members of this nation-wide organisation. With the discussion paper of 2021, it is the first time that an organisation of employers expresses its pedagogical view on early education. The paper has a strong focus on the value of and children's need to play which is reflected in the title: *"Space for play". An academic essay on play, playing and space for play, and on how young children are on a melting rock of ice* (Brancheorganisatie kinderopvang 2022). The *Brancheorganisatie* has organised conferences and workshops for managers in the childcare sector to discuss the paper and the opportunities for implementation by companies. The process of implementation is ongoing; it is too early to assess the impact.

Cooperation between professional organisations related to early education and care

Recently, extensive cooperation between schools, teacher education institutions and universities has been taking place in several collaborative field and research projects such as academic workshops (*academische werkplaats or werkplaats*) in Amsterdam, Tilburg and Utrecht with external funding. In these projects, professional development occurs in field-based research and

development projects between a university, the teacher education department of a university of applied sciences and several primary schools (Ploeger and Fukkink 2013).

Several new initiatives are focusing on the integration of the childcare sector and the education sector. For instance, a group of policymakers of diverse municipalities have united to stimulate the development of so-called 'Integrated children's centres' (*Integrale Kindcentra, IKC*), that integrate facilities for childcare, education and youth health care in their municipalities as long as there is no legislation or regulations which provide a framework for this (Veen et al. 2019). The leading group of policymakers is contributing towards making that legal framework possible. Several cooperative projects have been initiated. In 2020, the Platform Children's Centres (*Platform Kindcentra*) was set up. The Platform consists of representatives of employees, sector and parent organisations from childcare and primary education and 'adjacent' organisations that are involved with the young child from the sectors of art, culture, sport, youth care, youth health care, emancipation, science and more. In *chapter 9* research related to the development and impact of integrated children's centres will be discussed.

Another initiative focuses on the transition between ECEC and primary education. Several schools started collaborations in so called "*peuter-kleutergroepen*": groups where toddlers and kindergartners are mixed and supported by the presence of a Pedagogical Worker and Primary School Teacher. An exploratory study on the quality of these groups show that a similar level of quality is provided when comparing them with regular toddler or kindergarten groups (Fukkink et al. 2023). Overall, children's well-being and engagement is considered high, though the results seem a bit more in favour of the kindergartners than the toddlers. Kindergartners seem to have more interactions with peers and teachers and a higher level of well-being compared to the toddlers in the same group. A second important conclusion relates to the collaboration between staff members and role division during the day. These groups require a new way of working for both the Pedagogical Worker as well as the Primary School Teacher. More attention should be given to their collaboration and how this relates to the schools' vision of early child development.

Initiatives for system reform

The current Dutch ECEC system is under pressure and is likely to undergo reform in the years to come. Several societal discourses and events have triggered the drive for innovation. The first relates to the growing legitimacy of ECEC as a formal institution with the potential to narrow early education gaps. This growing understanding of the public role of ECEC raises questions about the privatised and marketised system in the Netherlands that was historically developed as an instrument to increase labour market participation. In addition to this, there is an ongoing debate about the effectiveness of market principles in 'public' sectors and its impact on quality. More specifically, privatisation and marketisation have opened up the sector for private equity which raises the question as to what extent it is ethical to make private profits within a system that is largely funded by the government. A third trigger has to do with the way the system is funded by the government. The Dutch ECEC system is characterised by indirect funding, meaning that childcare providers are not paid by the government directly, but by the parents who receive benefits from the government. These benefits are income dependent, ranging from 33% for high-income families to 96% for low-income families. The indirect benefits system is considered too complex and sensitive to errors. In 2018, it was brought to light that the Tax and Customs Administration that is responsible for the benefits system made false allegations of fraud. Approximately 26,000 parents were wrongfully accused by the authorities, which required them to pay back the entire amount of benefits they had received. For many parents this amounted

to tens of thousands of euros, driving families into severe financial hardship with far-reaching consequences (e.g., parents losing custody over their children).

As a result, several stakeholders have been advocating reforms. Several studies and papers have been written on the topic in the past few years, (e.g., Leseman et al. 2021; Van Eijkel et al. 2023; Van Huizen & Plantenga 2023), some of them commissioned by the government. These publications point out the possible implications of reforms both on a pedagogical level (i.e., quality and equal opportunities for child development) and an economic level. Given the political sensitivity of the topic and the huge economical impact, it is hard to speculate how and when the system will change. Yet the call for a new system has been widely acknowledged.

9. Recent country-specific research focusing on ECEC staff

Integration of child care, early education and youth health care

Source: Doornenbal, J., and A. Kassenberg 2022 (see *References* for full details)

Background: Initiatives to develop integrated services and education for young children. The teacher education department of the university of applied sciences in Groningen (*De Hanze school*) is committed to field research projects to support the development of Integrated children's centres.

Aims: The focus is on field research of 'what works' principles in innovation processes in education. Innovation cannot only rely on the implementation of 'evidence-based' programmes; teachers' day-to-day practice involves working with 'evidence based programmes' only 20% of the time.

Procedure: Several pilot settings ('field labs') were set up to create an inclusive play-learning environment in which every child (from 0 to 6 years) can blossom. They started in 2015, and an evaluation was published in 2017 (Doornenbal et al. 2017). A mixed method design was used: (1) A qualitative case study focused on regularly visiting, monitoring and supporting eight field labs in their development and discussing processes and results. (2) An Interprofessional Collaboration Monitor was set up to analyse quantitatively the nature and degree of interprofessional collaboration: is the collaboration changing and contributing to the aims of the field labs? (3) A survey among project leaders to assess whether more or less children have been referred to youth care and/or special (primary) education compared to the situation before the field labs.

Findings: The following contributory factors in the development of an Integrated Children's Centre (IKC) were found (Doornenbal 2007): (1) Openness: a mixed population of children from different backgrounds; flexibility towards parents and children adapted to the specific needs in the municipality; open for children with disabilities. (2) Learning: a pedagogical climate that offers security, structure and opportunities to explore; supporting a positive identity and self-esteem in children; a balance between cognitive, social and moral learning; professionals who are involved and have the necessary didactic skills and knowledge. (3) Professional Community: moral and visionary leadership; balance between working along planned and systemic lines and space for improvisations; cooperation between professionals of different backgrounds, and between professionals, parents and local policy makers. The increased interprofessional collaboration is striking in all pilot projects. Professionals talk about learning from each other and that a common vision of child development and support arises. The extent to which this leads to better handling of differences and fewer referrals is modest, but certainly not negligible. The field labs show that

the emphasis shifts from curative to preventive and strengthening the pedagogical climate. The integrated children's centres that were most effective had an elaborated pedagogical concept that was shared by all involved professionals. There was a high investment in the quality of the professionals and continuing professional development. They used structured programmes to stimulate the development and education of under 4 year-olds children with less free play; there were more activities to involve the parents and a better embedding in the neighbourhood (Slot and Leseman 2020).

Implications: The field labs of Integrated children's centres and other initiatives aimed to stimulate the collaboration of Pedagogical Workers, Primary School Teachers, professionals in youth health care and parents. The field labs show that there are a number of obstacles to be faced. These are in particular the obstacles caused by the fact that childcare, education and youth health care fall under the responsibility of different ministries, have different legal frameworks and different organisations for inspection. Professionals in the three sectors have different working conditions, including salaries, working hours and rights to further professional training (Doornenbal and Kassenberg 2022).

Overall quality of the childcare system

Sources: Romijn et al. 2023a; Slot et al. 2023b (see *References* for full details)

Background: The Dutch National Daycare Quality Monitor (LKK in Dutch) was commissioned by the Ministry of Social Affairs and Employment. It is a 9-year project (2017-2026), with yearly measurements and reports on the status quo of the country. Due to the COVID-19 pandemic, the scheduled measurement of 2020 was determined and the measurements of 2021 and 2022 were combined in one bigger sample. Quality is determined as a multifaceted construct and as such a wide variety of measures are used to study the process quality, structural quality, curriculum quality and organisational quality of the Dutch ECEC system.

Methods: The study applies a rolling sampling method, using a national database listing all Dutch childcare provisions (at the centre level) as its population. A random sample of different forms of early care and education provisions is drawn every year following a stratified sampling model based on region of the country, degree of urbanisation and size of the organisation. These annual samples result in a large, nationally representative sample over the consecutive years. In the sample up to 2022, $N = 659$ centres are included. The results are based on more than 3500 live observation measures (i.e., CLASS – La Paro et al., 2011; ERS – Harms et al., 1998, 2003), over 2500 observation measures using video recordings (i.e., NCKO-interactieschalen – Fukkink et al., 2013) and more than 1500 surveys completed by staff working directly with children as well as centre managers. Approximately half of the data is collected in centre-based ECEC groups for 0–4 year-olds. The other half consists of centre-based after-school care for 4-12 year olds and home care provisions for 0–12 year-olds.

Selected Findings: The average emotional process quality (i.e., interaction quality of teachers) is considered good. The average educational process quality is considerably lower and considered as mediocre according to the benchmarks of the instrument. A comparison of the care pre and post COVID shows a stable process quality with a small increase in some areas. The governmental effort to increase quality with the new legislation in 2018 (Wet IKK) is a likely explanation for this. Other quality aspects show a slight decrease after the COVID pandemic. This mostly related to the curriculum quality (the extent to which a variety of activities is provided and how the daily programme is structured) and the contact with parents. The pandemic and the increasing staffing shortages are likely explanations for this. Concerning the organisation quality, staff appear to be generally satisfied with their work; however, overall work stress has increased over the

past few years and centre managers also indicate an increase in experienced problems (mostly related to staffing shortage) to maintain their quality.

Implications: The studies suggest that the Dutch childcare system is under pressure. Nevertheless, the recent investments in the quality of the sector seemed to have paid off, especially with regard to process quality. Overall the slight increase in process quality despite the more complex working conditions is a compliment to the sector.

Organisation logics in relation to quality and inclusion

Sources: Romijn et al. 2023b (see *References* for full details)

Background: Research has extensively investigated the relationship between structural quality characteristics on the one hand and process quality on the other hand. However, given limited variation in the Netherlands in structural characteristics (such as group size, staff to child ratios, education level) due to regulations, these characteristics do not sufficiently explain the large variance in process quality. In the current paper we adopt a configurational approach, arguing that organisations are more than just a sum of individual structural characteristics, and that differences we see in quality should raise the question whether some provisions have found more effective organisation forms than others when it comes to creating inclusive, high quality environments. This is especially relevant in the Dutch context, where the ECEC system can be considered hybrid in the sense that the public task of providing high quality early child care, including the reduction of inequalities and the prevention of early education gaps, is nowadays allocated to both private for-profit and not-for-profit organisations (Van der Werf, 2020).

Methods: We drew on data from centre-based ECEC provisions for 2–4 year-olds collected during the first three years (2017–2019) of the National Dutch Childcare Quality Monitor. A latent class analysis was performed on 14 dichotomised organisation characteristics (based on manager surveys) reflecting several organisational logics (i.e., market logic, corporation logic, community logic, profession logic). This led to three organisation profiles which were then compared in terms of quality (process, curriculum, structural) and inclusive practices.

Findings: Three types of organisations could be characterized; engaged professional organisations, commercial service-oriented corporations, and traditional bureaucratic organisations. The engaged professional organisations outperformed the other two types in terms of quality and inclusion. These organisations are considered engaged in the sense that they show a strong connection with their community. They actively reach out to parents, engage in partnerships with local organisations (i.e., schools, community services), and have a clear social mission. They can also be considered professional organisations as they try to create communities of practice and support teachers in their continuous and team-based professional development. Also, professionals and managers are more interconnected as they show lower scores on the corporation logic. Though these organisations are not characterised by strong profit goals or client-centred flexibility, they can be for-profit legal entities and endorse a relatively strong service-oriented profile. In conclusion, they have an eye for the quality of their work (professional logic) and the public goal of childcare to fulfil a meaningful role in the community (community logic), while not losing sight of their position in the market and addressing parents' needs for flexibility (market logic).

Implications: This study stressed the importance of the organisation climate when it comes to practices in classrooms. More specifically, it shows that a strong support for professionalism (i.e., investing in staff and their skills) in the whole organisation and a more interconnected workplace can have a positive impact on children's day to day experience.

Social life of young children and pedagogical innovations

Sources: Singer 2016; Singer and Wong 2019 (see *References* for full details)

Background: Researching peer relations of under 3 year-olds in group settings emerged as a new phenomenon in the 1970s and 1980s and a common focus of educators tended to be peer conflict. A widespread assumption at the time was that only adults – especially mothers – constitute the meaningful environment of infants and toddlers. Related to the rise of children’s centres, researchers in diverse countries carried out explorative studies of groups dynamics among young children and caregivers/pedagogical workers; also in the Netherlands (Singer and De Haan 2007).

Methods: Observation studies with focussed video recordings in natural group situations in children’s centres for under 4 year-olds and interviews with pedagogical workers and parents. Both qualitative and quantitative analyses were used.

Studies were conducted on early social and moral learning in interaction with peers in childcare centres: on how young children make contact and create togetherness; humour in young children and how they make fun and jokes together; conflicts in young children, peace-making and co-construction of social and moral rules; friendship and factors that predict friendship among very young children (Singer and de Haan 2007). In these studies, the impact of peer behaviour and strategies of the pedagogical worker were analysed and discussed with the involved pedagogical workers.

Selected Findings: For instance, the studies of peer conflicts showed that children’s interest in the continuation of joint play is the strongest incentive to use bilateral and prosocial strategies. But Dutch educators often focused on the (alleged) perpetrator of the conflict.

Implications: The study suggests that teachers should value and support peer relations rather than focusing on the perpetrators in conflict situations (Singer, van Hoogdalem, de Haan and Bekkema 2012). Based on these studies, training programmes were constructed, evaluated and implemented.

10. Workforce challenges – country expert assessment

The following workforce challenges are emerging in the field of early childhood education and care in the Netherlands.

Professionalisation: investing in interdisciplinary skills

Coordination between childcare and the pre-primary education system is a topical social issue in the Netherlands; both sectors are currently searching for appropriate forms in terms of organisational governance and pedagogical practice. The current focus of interest is on how professionals from different organisations with their respective specialisms can best work together in a coordinated way (Doornenbal et al. 2017). As indicated above, the differences in regulations, employment conditions and salaries of staff in the childcare, education and youth health care sectors form an obstacle to cooperation.

Investing in professional networks in ECEC practice

The continuing professional development of ECEC staff is currently provided in a course-based format. Other formats may complement this approach. For example, team intervision, supervision, and learning communities are promising complementary approaches for ECEC. Also the

“(academic) workplaces” (a form of learning communities) that already exist for teachers of primary and secondary schools in different places, may offer opportunities for professional development (Kinderopvang werkt! 2022/n.d. c).

This challenge will become even more urgent if the Dutch ECEC workforce becomes more diverse with professionals at ISCED levels 3, 4 and 5/6 and with professionals from childcare, education and youth care. Interdisciplinary networks may support interprofessional practice and collaboration (type 1: multidisciplinary networks), but also key stakeholders from different teams may organise meetings in (peer) supervision groups (type 2: mono-disciplinary specialist networks).

Evidence-informed practice and practitioner research

Scientific research has shown that not all pre- or in-service interventions for ECEC staff are (equally) effective (Egert, Fukkink, and Eckhardt 2018; Werner et al. 2016). Moreover, there are many training modules in the field; however, solid proof for their effectiveness is scarce. It is vital for future professional development that innovative practices are developed and evaluated. Mixed methods evaluation in controlled experimental designs may be helpful in charting the different learning experiences and learning gains, but also pitfalls of the different stakeholders (NCKO 2017).

Practitioners’ research is also under development. Pedagogical coaches and staff at Bachelor's level have a stimulating influence in this. Childcare organisations and schools can tackle urgent issues within their organisation. The impact of practitioners’ research in collaboration with universities of applied sciences and universities is promising (Doornenbal and Kassenberg 2022; Tajik and Singer 2018).

Research into innovation at national and international level

In the Netherlands there is no organisation that can play a leading role in innovation with regard to all sectors involved in early education. The organisations involved in innovation and quality assurance are fragmented and compete with one another. The childcare sector and early education sector are the responsibility of different ministries and systems of inspection. Innovation and professional development in the childcare sector are steered by market forces. Employers are obliged to meet the quality requirements, but are free in the design: regarding the fees, they can stick to the minimum or provide extras if the parents want to pay more. Universities compete for government grants. Moreover, papers on the results of research written in Dutch and accessible for practitioners are not counted as scientific products. This has a negative impact on collaborative research between practitioners and academics (Singer and Wong 2019).

Dutch organisations that offer continuing professional development courses are also steered by the market system. They have to compete in securing assignments. Some of the big non-profit childcare companies do invest substantially in quality evaluation and the coaching of Pedagogical Workers. But it is not the prime task of these companies to invest in the improvement of pedagogical quality of children’s centres in general. For example, no company ever pays for their pedagogical counsellors to participate in international conferences. Dutch representatives of the early education and childcare sectors rarely participate in international organisations like OMEP (*Organisation Mondiale pour l’Éducation Préscolaire*) or international research conferences such as EECERA (European Early Childhood Education Research Association).

Nonetheless, there is a strong ECEC research tradition in the Netherlands. Although research groups have to compete for funding, the government funds ECEC research on a regular basis. Funding opportunities include initiatives to monitor the status quo of the quality of the system

since the early 2000's (e.g., research of Fukkink et al. 2013; Romijn et al. 2023a) to study explanatory factors in differences in quality (e.g., research of Slot et al. 2023a) or to inform the government about system reforms (e.g., research of Leseman et al. 2021). In addition, the research groups on ECEC have strong international connections on the topic. The Netherlands often collaborates in European projects (e.g., Horizon2020) on ECEC quality and is an active member of the research associations connected to the field (EECERA; EARLI, specifically the SIG5 – Learning and Development in Early Childhood).

Reducing staff shortages

Severe staff shortages continue to be a huge challenge for the childcare sector in the Netherlands and suggestions for reducing these are not fully convincing. One is extending the government measure allowing for half of all childcare workers in a setting to be student workers. Instead of concluding in July 2022 this measure has now been extended to July 2024, which means that the composition of the workforce in childcare centres will continue to be unbalanced, with inevitable effects on the quality of relationships. Another is reducing the staff to child ratio – which does not bode well for the individual and small group work needed in a high quality childcare environment. A further suggestion is to give discounts for enrolling on Wednesdays and Fridays, when parents usually work part-time, but this also falls short of expectations for a full-time, accessible system for working parents. More innovative is a proposal at ministerial level to incorporate qualified newcomers to the Netherlands into the childcare sector, including recently arrived persons with valid refugee status and Ukrainian refugees, who can work in reception centres with children and parents speaking other languages (The Holland Times 2022).

At the end of the day, however, what is really needed is not only substantial investment but a reconceptualisation of the system as a whole and not a piecemeal, incremental approach.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based provision are **childcare centre** (*kinderdagverblijf*, 0–3) and **kindergarten class** (*kleuterklas*, 4–5)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in the Netherlands

1850	Increasing maternal employment leads to the establishment of the first institutions for the care of children from the age of 2½ years
During the following decades	Childcare institutions are gradually followed by kindergartens based on the pedagogical approaches of Pestalozzi and Froebel – and later, Montessori
1950s and 1960s	Childcare/nursery settings and playgroups are founded
1985	Kindergartens are integrated into the primary school system
Up to 1986	Significant increase in the number of playgroups for 2- to 4-year olds
1990-1996	Expansion of childcare/nursery settings
Since 1991	Decision to primarily provide for the integration of children with special educational needs into mainstream settings
1996	First national assessment of quality of childcare
1998	First Chair in Childcare established at the University of Amsterdam
2002	Childcare settings for under 4-year olds come under the responsibility of the Ministry of Social Affairs
2005	The Childcare Act comes into force
2007	Childcare settings for disadvantaged under 4-year olds come under the responsibility of the Ministry of Education
Since 2010	Both childcare centres and playgroups come under the same legislation.
2014	Inclusive Education Act comes into force.
2015	Municipalities are made responsible for disadvantaged and vulnerable children in the entire early education sector.
2018	Legislation on "Innovation and Quality of Childcare" and on "Harmonisation of Work in Childcare and Playgroups" comes into force.
2019	For disadvantaged children between 2½ and 4 years of age, attendance at a childcare centre is increased from 10 hours a week to 16 hours.
2022	New childcare funding system is planned (to be in force from 1 January 2025): The government will pay 96% of the maximum hourly rate for childcare directly to the childcare institutions
2023	New law for multilingual day care: From 2024, childcare centres can provide child care in German, French or English for a maximum of 50% of the daily hours.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In The Netherlands, relevant formats are **0–3** and **4–5** years.

ECEC system type and auspices²

The system of early childhood education and care in the Netherlands comprises two separate and partly overlapping sectors (childcare and early education) with different ministerial responsibilities.

The Ministry of Social Affairs and Employment (*Ministerie van Sociale Zaken en Werkgelegenheid* – SZW) has overall responsibility for ECEC settings for under 4 year-olds, for out-of-school childcare provision for 4 to 13 year-olds, and for home-based childcare.

The Ministry of Education, Culture and Science (*Ministerie van Onderwijs, Cultuur en Wetenschap* – OCW) is responsible for ECEC provision for children under 4 years of age who are at risk of language disadvantage and for the pre-primary education of 4 and 5 year-olds in primary school³ (*Basisschool*).

Municipal authorities are responsible for the inspection and monitoring of ECEC settings for under 4 year-olds in term of compliance with legislation and regulations. The administration and management of schools is the responsibility of both the municipalities and the school inspectorate: While the municipalities are responsible for compliance with the law and for allocating budgets, the school supervisory authority is responsible for day-to-day operations (costs, curriculum, staff). This applies to both public and private schools.

General objectives and legislative framework

The overarching goal of ECEC is primarily to ensure continuity of learning and support over time. The underpinning principle is that of lifelong learning, starting at an early age to enable individuals to realise their full potential and respond flexibly to change. In the case of children up to 6 years of age, particular attention is paid to reducing or preventing educational inequalities, particularly by providing support for language development. Further important goals are to support children in acquiring skills that will enable them to make a good start in primary school and to make it easier for parents to reconcile work and family commitments (Slot 2018).

In recent years a considerable transformation has been taking place in terms of the overall conceptualisation of ECEC in the Netherlands, and the sector has been experiencing dynamic changes which are still ongoing. As part of the implementation of the Dutch Childcare Act (*Wet Kinderopvang*, 2005 with amendments from 2020), all ECEC settings are required to work according to specific pre-defined general pedagogical objectives: to provide children with a safe and caring environment, to support the development of their personal and social competences and to transmit cultural norms and values; they are also required to establish a parents' board. In 2018, the Childcare Innovation and Quality Act (*Wet innovatie en kwaliteit kinderopvang*) and the Childcare and Playgroup Work Harmonisation Act (*Wet harmonisatie kinderopvang en peuterspeelzaalwerk*) entered into force. The main purpose of this legislation is to improve the quality and accessibility of childcare. The Childcare Act lays down provisions for various types of childcare for children over 6 weeks, especially with regard to special safety regulations. In addition, since 2010, childcare centres (*dagopvang in kinderdagverblijf*) and playgroups (*peuterspeelzaal*) for children under 4 years of age are covered by the same Education and Quality Act (*Wet ontwikkelingskansen door kwaliteit en educatie*, OKE). For playgroups, the Childcare and Quality Standards for Playgroups Act (*Wet kinderopvang en kwaliteitseisen peuterspeelzalen*,

² The Eurydice country report on ECEC in the Netherlands provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

³ In the Netherlands, it has long been a tradition for 4 and 5 year-olds to attend kindergarten classes in the *Basisschool* before primary school officially starts at age 6.

WKO, 2010) also applies. In addition, the Decree on the basic requirements for quality pre-primary education (*Besluit basisvoorwaarden kwaliteit voorschoolse educatie*, 2010 with amendments from 2018) applies (European Commission/EACEA/Eurydice 2019, 36).

The Children and Young People's Act (*Jeugdwet* 2015) stipulates that since 2015 municipalities are responsible for disadvantaged and vulnerable children and young people. One of the aims of this legislative reform was to create more transparency between different services and to reduce the number of these children (Netherlands Youth Institute 2023).

The Primary Education Act (*Wet op Primair Onderwijs*, 1998) applies to primary schools that admit 4 and 5 year-olds; it describes aspects concerning quality and funding modalities in addition to the relevant learning areas.

ECEC entitlement and compulsory attendance

For children between 2½ and 4 years of age, municipalities are obliged to provide a place (at least 960 hours; approx. 16 hours/week) in a childcare centre if needed, especially for children from disadvantaged families. Attendance is voluntary.

Children from the age of 4 have a legal right to education, which in the Netherlands means a place in a kindergarten class (*kleuterklas*, ISCED 02) of the primary school (*basisschool*). Attendance is compulsory from the age of 5. There are no national regulations regarding the number of hours of this obligation (European Commission/EACEA/Eurydice 2019, 50), although most children attend for 20 hours per week.

Primary school (ISCED 1) starts at the age of 6.

Main types of provision

Childcare sector

In the Netherlands, there are two main types of ECEC settings for children up to 4 years of age: **Childcare centres** (*kinderdagverblijf*) admit up to 185 children from 6 or 8 weeks to 4 years. This option is mainly used on a half-day basis by double income families, as a tax reduction is only granted if both parents work. With morning and afternoon shifts, they may be open for up to eleven hours a day and for 50 weeks a year.

Playgroups (*peuterspeelzalen*) are primarily attended by children with socially disadvantaged backgrounds or children with impending disabilities or developmental delays aged 2½ to 4 years. The children are supported with special educational programmes (*voorschoolse educatie*) (European Commission/EACEA/Eurydice 2019, 185). In most cases, the playgroups are only open half days. Since 2019, the number of weekly attendance hours has been increased from 10 to 16.

Children from 6 weeks of age can also be cared for through regulated **home-based childcare services** (*gastouderopvang*). While in 2018, 18% of the under 4 year-olds were enrolled (European Commission/EACEA/Eurydice 2019, 34), in 2023 this share had decreased to 13% (SZW 2024)

In 2018, there were 4,654 ECEC centres altogether, all privately owned (Eurydice 2023).

Education sector

4 and 5 year-olds usually attend a **kindergarten class** (*kleuterklas*) at the *basisschool* – often in the two months before they turn 4. The groups for 4 year-olds must be open for at least 2.5

hours on four half days. The exact daily opening hours are decided by the schools or the providers. They are usually closed on Wednesday afternoons. The official school year runs from 1 October to 30 September.

Provider structures

As a rule, **childcare centres** and **playgroups** that offer educational programmes for disadvantaged children or children with special educational needs are publicly funded.

However, most of the facilities for under 4 year-olds are privately run and have to compete in a competitive market (European Commission/EACEA/Eurydice 2019, 63) though there is a means-tested public funding for working parents.

In 2022/23, of the **kindergarten classes** at 6,582 primary schools attended by most children over the age of 4, only 30.6% were publicly run. Church sponsors (roughly equally divided between Catholic and Protestant sponsors) accounted for 58.9% of primary schools but are also publicly funded, only 10.5% were run by other private sponsors (CBS 2023a).

According to Eurostat data, 69.9% of children from 3 years up to the first class of primary schools attended public institutions in 2021, 30.1% were in private-commercial settings (Eurostat 2023e). This share likely includes those 3- and 4 year-old children who are enrolled in settings of the private care sector for under 4 year-olds.

Participation rates in regulated ECEC settings

According to Eurostat data, the share of children under 3 years of age enrolled in ECEC settings increased significantly from 2005 to 2022: from 40% to almost three quarters (72.3%). The share of children from 3 years to school entry also increased, but to a lesser extent: from 89% to 95.8%. On average, under 3 year-olds in the Netherlands spend less than 17 hours per week in an ECEC setting, compared to 21 to 22 for children over 3 years of age (European Commission/EACEA/Eurydice 2019, 68).

Table 1

Netherlands: Enrolment rates in ECEC centre-based settings according to age and duration of attendance, 2005-2022

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	36	82
	Over 30 hours	4	7
	No enrolment in ECEC	60	11
2010	1 to 29 hours	44	76
	Over 30 hours	6	15
	No enrolment in ECEC	50	9
2015	1 to 29 hours	41.1	77.5
	Over 30 hours	5.3	13.2
	No enrolment in ECEC	53.7	9.3
2022	1 to 29 hours	61.3	66.5
	Over 30 hours	11.0	29.3
	No enrolment in ECEC	27.7	4.2

Source: Eurostat 2023b, Slight deviations from 100% due to rounding

According to quarterly ministry (SZW) reports (SZW 2024), 67% of under 4 year-olds are enrolled in a centre-based setting, 13% in a home-based setting, but no age-disaggregated data exist.

According to Statista (2023), 72.3% of children under 3 years of age attended a childcare centre for at least one hour a week in 2022. Children in home-based care usually spend 1½ days per week there (SZW 2024). Among the 4 and 5 year-olds, almost all attended a kindergarten class at primary school in 2021 (see *Table 2*), usually for 22 hours per week.

Table 2

Netherlands: Number of children and enrolment rates in school-based ECEC settings by age, 2021

Age	Number of children	Enrolment rates, in %
3 year-olds	146,586	84.9
4 year-olds	167,207	95.0
5 year-olds	173,311	98.8

Source: Eurostat 2023f, k

Financing and costs for parents

In 2019, a total of 0.73% of the gross domestic product was spent on the early education sector (0.4% for the under-threes age group and 0.3% for the 3 to under 6 age group (OECD 2023). The entire education sector accounted for 5.4% of gross domestic product in 2022 (CBS 2023b).

Childcare centres, which are mainly attended by children with language delays, or the municipalities as providers, decide how the state funds are used.

After the introduction of the Dutch Childcare Act in 2005, the funding of the ECEC sector, especially childcare centres, changed from a supply-based to a demand-based funding system. Private facilities are not subsidised by the government. However, parents whose child attends a private facility or is cared for in day care receive tax relief on the cost of childcare. Between 2005 and 2008, parents paid only half of the childcare costs; an increase in costs and budget cuts, especially from 2012 onwards, resulted in a lower attendance rate. Since 2016, the situation has stabilised, but the parents of most children in ECEC settings tend to come from middle- and higher-income groups (Slot 2018).

After the introduction of the Childcare Act, the compensation scheme for parents was extended so that their own contribution decreased. However, as the take-up of childcare increased sharply at the same time, the state costs also increased. Therefore, in 2007, the employer's contribution was made compulsory. This contribution is stable and amounts to 0.5% of the employee's salary (as of 2020) (Berenschot 2022, 69).

Furthermore, in 2022, the Ministry of Social Affairs and Employment planned, jointly with four executive bodies – the Education Executive Agency, the Tax Administration/Benefits, the Employee Insurance Agency and the Social Insurance Bank – a new financing system to come into effect in 2025: Under the new system, the state will cover 96% of childcare costs, which will be transferred directly to the childcare institutions. So parents will no longer be at risk of having to repay part of their childcare allowance (Eurydice 2022/2023).

Fees for childcare facilities for under 4 year-olds are among the highest in Europe (European Commission/EACEA/Eurydice 2019, 11). In 2021, the maximum cost for one hour of childcare was €8.46 (Berenschot 2022, 68). Parents can apply for an income-related childcare allowance (*kinderopvangtoeslag*) to reduce the cost of childcare. Conditions for receiving such an allowance include: both parents are working or studying, they have a contract with a registered institution, they pay part of the childcare costs themselves. For disadvantaged children, fees can be

reduced according to a certain indicator system. This takes into account, among other things, the educational level of the parents or the country of origin (European Commission/EACEA/Eurydice 2019, 61).

In 2022, a couple with two children spent about 19% of net household income on childcare costs⁴ (OECD.Stat 2023).

Primary schools are financed through municipal budgets provided by the government. They receive lump-sum subsidies from the municipalities to cover their staff and operating costs. Additional basic subsidies are provided for equipment and maintenance of the buildings. Since 2012, the schools have received additional funds for special activities such as language learning, the teaching of scientific or technological subjects or for staff professional development. Financial resources for children with special educational needs have no longer been reserved for individual children since 2014, but are distributed to the institutions concerned via a regional pool.

Enrolment in a kindergarten class at school is free of charge for parents. However, they often donate money to the school, which is mostly used for excursions or cultural activities. Schools may also be supported by sponsors.

Private schools can receive state subsidies if they adhere to certain legal requirements such as the number of children per group.

Staff to child ratios and group size

The maximum group size in childcare centres and playgroups for children from 0 to 4 years is 16. For children with special educational needs/language development difficulties, at least two professionals must be present (Ministry of Education, Culture and Science 2014). Since the beginning of 2018, babies up to one year of age are cared for by at least two childcare workers who remain consistent.

Table 3

Netherlands: Staff to child ratio in childcare centres and playgroups by age, 2022

	Max. number of children per core practitioner
0 to 1 year	3 (per 2 core practitioners)
1 to 2 years	5
2 to 3 years	6
3 to 4 years	8
4 to 7 years	10
4 to 13 years	11

Source: Eurydice 2023, 4.2

For **primary schools**, there are no regulations regarding the minimum or maximum number of children per group, but there are regulations regarding the size of the building in relation to the total number of children (usually 3.5 sqm per child). As a rule, primary schools consist of eight grades, of which grades 1 to 4 cover the age range between 4 and 8 years. Schools decide on their own groupings. In most, the children are organised in same-age groups, but there are also schools with mixed-age groups or with groups based on the children's abilities.

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

In support institutions, there are less children in a group, and they may also be mixed-age groups – depending on the developmental stage of the children.

Curricular frameworks

Childcare sector

There is no prescribed national curriculum for work in ECEC settings for under 4 year-olds. However, providers of these facilities are obliged to ensure that each setting creates its own educational programme. In cooperation with the parents' council, a strategy is drawn up with regard to the children's development and learning opportunities. Important components of this are the professionals' interactions with the children, their care, the age distribution in groups, the teaching of rules and values, as well as opportunities for play and outdoor activities. Play is considered the predominant method for learning.

Particularly in special needs settings, a variety of different early childhood education programmes (*voorschoolse educatie*, VVE) are used to promote specific areas of development (European Commission/EACEA/Eurydice 2019, 185). Children are expected to participate in these programmes at least four half days a week. Some are applied nationally, others only locally. Such programmes must meet strict criteria to be approved by the Accreditation Commission for Intervention Programmes (*Erkenningscommissie Interventies*) or the Panel for Welfare and Development Stimulation (*Panel Welzijn en Ontwikkelingsstimulering*). Currently, five programmes are nationally approved: *Piramide*, *Kaleidoscoop*, *Startblokken/Basisontwikkeling*, *KO Totaal* and *Sporen* (Eurydice 2023, 4.3). All these programmes focus on four core areas: language (Dutch as a second language), mathematics, motor and socio-emotional development (Slot 2018).

Education sector

According to the Primary Education Act, primary schools must cover the following areas of learning – including kindergarten classes for 4 year-olds: (1) sensory coordination and physical activity; (2) Dutch language; (3) arithmetic and mathematics; (4) English; (5) electives such as geography, history, religion; (6) expression; (7) self-confidence and (8) healthy living. The number of hours in each area is not specified, only the total number of hours of 7,520 in the eight primary school years. Teaching and learning methods and materials can be chosen by the schools themselves. The government has set certain targets to be achieved by the end of the primary school years. The National Institute for Curriculum Development (*Stichting Leerplanontwikkeling*) has been commissioned by the Ministry of Education to develop further learning objectives with more detailed content and activities. According to the government's wish, more time should be set aside in schools for science and technology.

Digital education

The use of digital media is not regulated by law, neither in primary schools nor in childcare centres. However, in 2018, 98% of the schools had a computer for every 3.5 pupils and 99% of the teachers used digital learning materials in the classroom. In addition, digital media are used by teachers for planning or evaluation. Professionals can get support from expert centres such as *Kennisnet*.

Monitoring – evaluation

Child-related assessment

Children under 4 years of age in childcare centres are evaluated by professionals through observations and checklists. As a rule, different areas of development are assessed three times a year. This information is also shared with other professionals, discussed with parents and summarised and passed on to the primary school. Since 2018, tests are no longer used in this age group.

For disadvantaged children under 4, education programmes place particular emphasis on a good transition to the kindergarten class at school, but do not specify exact measures (European Commission/EACEA/Eurydice 2019, 112).

In the education sector, children's progress is also recorded three times a year. Parents are invited to discuss children's progress and achievements. In some schools, grades are used, in others written assessments.

Centre-level internal assessment

Childcare centres are required to regularly assess their quality through self-evaluation to ensure that they meet all quality standards. These include parental participation, the quality of the programmes offered, the knowledge and skills of the professionals, the learning environment, the responsiveness to individual needs, including the use of an observation system. Parents are involved in the self-evaluation through the parent' council/board (European Commission/EACEA/Eurydice 2019, 131).

The Dutch Consortium for Childcare (*Nederlands Consortium Kinderopvang Onderzoek*, NCKO) has developed a so-called 'quality monitor' (*Kwaliteitsmonitor*) as an example of a self-evaluation tool that allows childcare centres to better assess their quality, strengths and weaknesses (NCKO 2018).

Primary schools decide themselves on their standards and on the methods used. Since 1998, schools have been obliged to draw up a school plan, which is updated every four years and describes the planned steps for quality improvement. Based on this plan, a brochure is produced annually to inform parents and pupils. These two documents and the general results of the self-evaluation are the basis for inspection visits by the Education Inspectorate.

Externe Evaluation

Quality criteria for **childcare settings** for under 4 year-olds are laid down in the Childcare Innovation and Quality Act (2018). Municipalities must ensure that the facilities comply with the requirements of the Childcare Act (2004 with amendments from 2020), which has been delegated to the Municipal Health Services (*Gemeentelijke Gezondheidsdienst*, GGD). In their annual inspections, a pedagogical practice observation tool is used, which was developed in cooperation with the Netherlands Youth Institute. If it is decided that improvements are needed, the Education Inspectorate conducts a follow-up inspection (European Commission/EACEA/Eurydice 2019, 124ff). Two frameworks exist for the inspection of childcare facilities: one is more concerned with an overview of the quality of full-day settings in the Netherlands, the other with inspections of facilities whose quality needs to be improved. The annual results of the evaluations by the Municipal Health Service are included in the Inspectorate's report on the general state of education (European Commission/EACEA/Eurydice 2019, 133).

External evaluations in **primary schools** are carried out by the Education Inspectorate (*Inspectie van het Onderwijs*), a partially independent authority under the Ministry of Education. The Education Inspection Act contains the legal criteria, the respective quality objectives are set by the

schools themselves – and are evaluated in the same way. The Inspectorate conducts a full inspection of the schools every four years and prepares a report. Among other things, the quality of teaching is assessed on the basis of the relevant laws or quality improvements. A framework (2012) serves as a guideline for schools and school inspectorates, setting out the methods to be used, the criteria to be reviewed and the standards that schools must meet. The Education Inspectorate checks whether schools comply with the relevant laws and also focuses on the quality of teaching.

Inclusion agenda

Childcare centres and primary schools in the Netherlands are responsible for creating a suitable learning environment for every child. Particularly since the Act on Inclusive Education (*Passend Onderwijs* 2014) came into force, inclusion has been an important issue. Inclusion is understood as the consideration of diverse and multiple needs, such as having a disability, a different linguistic background, being a member of a minority group or other culture. This “super-diversity” needs to be taken into account in childcare and school settings (Fukkink 2018).

In 2020, the Dutch government allocated 7 million euros to provide children with special educational needs with the support they need (European Commission 2020, 141).

Children with special educational needs and disabilities

For **childcare centres**, the quality standards of support programmes are laid down in the Education and Quality Act (*Wet ontwikkelingskansen door kwaliteit en educatie*, 2010). Especially children from socially disadvantaged families have the opportunity to experience a range of cultural and social activities. Municipalities decide on the implementation of various projects and programmes (e.g. *Piramide*, *Kaleidoscoop*). According to the Youth Act (*Jeugdwet*, 2015), children and young people and their parents also receive support from municipalities in dealing with developmental delays and other problems. In addition, there are various measures for parents of children under 3, such as reduced fees (European Commission 2020, 27f).

In order to identify children with special educational needs as early as possible and to initiate attendance at a mainstream institution, childcare centres cooperate with health services (European Commission 2020, 86, 107).

In the **education** sector, since 1991, children with disabilities or special educational needs are to be integrated as much as possible into mainstream institutions ('Going to school together'). Since 2014, schools have had to ensure that such children receive the support they need. They receive special financial subsidies for this, based on the individual child. Parents can register their disabled child at any school and it is the school's responsibility to ensure the appropriate support is provided.

The Act on Centres of Expertise in Special Needs Education (*Wet op de Expertise centra*, 1998) refers to four types of special schools: (1) for visually impaired children; (2) for hearing impaired children and children with communication difficulties; (3) for physically and/or intellectually disabled children; and (4) for children with mental or behavioural disorders.

Children with a migration background – Children from Roma communities

The *TOY for inclusion* project has tried to facilitate access to early education for children with a migrant background or from Roma communities, mainly through meeting centres. For newly arrived children in the Netherlands, activities are offered either in the respective accommodation or in ECEC settings (European Commission 2020, 92, 125).

So-called bridge classes in primary schools provide children with language difficulties intensive support in small groups (full or half day or as an extended school day).

In 2022, 7.1% of the total population had a non-Dutch citizenship, roughly half of which (51.8%) came from other EU27 countries. The distribution among under 5 year-olds is very similar (7.1%, 50%) (Eurostat 2023c).

Parental leave arrangements⁵

Compulsory **Maternity leave** (*zwangerschapsen bevallingsverlof*) lasts 16 weeks, of which up to six can be taken before the birth. At least four weeks before the birth and six weeks afterwards are compulsory. The period of maternity leave is fully paid up to a maximum of €256.54 per day or 70% of the “daily maximum wage”.

Since 2020, there has been fully paid **Childbirth leave for fathers and partners** (*geboorteverlof*), the length of which corresponds to the number of hours they work per week (e.g. 38 hours = one week's leave). Furthermore, there is an additional time off (*Aanvullend geboorteverlof*), which is equal to five times the weekly working hours (maximum five weeks). The first week is fully paid, with no upper limit; the additional time is paid at a maximum of €256.54 per day. The first week must be taken within four weeks after the birth, the additional time can also be taken within six months after the birth.

Unpaid **Parental leave** (*ouderschapsverlof*) lasts 26 times as long as the number of weekly working hours of each parent. This individual, non-transferable entitlement can be taken until the child is 8 years old. At 38 weekly hours, for example, this is 988 hours, i.e. approx. 26 weeks. Parental leave is an Both parents can also take parental leave at the same time. Since the Flexible Working Time Act (2016), parents can apply for a change in their working hours or, if necessary, also work from home. From August 2022, the first nine weeks will be paid at 70% of daily earnings (maximum €256.54), if taken within the first year of the child's life.

In 2021, 90% of fathers took the Childbirth leave directly after birth – almost all for four days at least. One third of the fathers took five or more weeks.

In 2021, 18% of mothers took an average of 9 hours/week for 14 months, compared to 17% of fathers who took an average of 11 hours a week for 13 months. It was also found that it is mainly better educated mothers and fathers who take parental leave.

Current challenges for the ECEC system in the Netherlands

Country expert assessment by Elly Singer†

Developing a clear and unified political vision on the care and education of young children is a major challenge for the ECEC system in the Netherlands. Who is responsible for what: the government, parents and/or private companies? And how do we want to balance (unpaid) caring activities and paid employment between males, females and professionals in the Netherlands?

There is a growing consensus about the importance of early childhood education. Ideally, this would be organised as a unified system with regulations for settings for 0 to 5 year-olds that would guarantee good quality provision for all children. Stakeholders of early childhood care and education in the Netherlands – local and national authorities, the primary school system, services for care and education, parent organisations, and experts all agree on this. However,

⁵ The brief overview in this section is based mainly on the country note for the Netherlands by Laura den Dulk and Mara A. Yerkes in the *International Review of Leave Policies and Research 2023* (see References).

the current situation does not provide effective links between the child care system and the education sector. This creates problems for parents who need care for their children while working outside the home and for the child's education.

1. Challenges for working parents because of the remains of the mother-at-home policy.

- a. Until recently, the Netherlands had relatively short maternity and parental leaves. The mother was entitled to a maximum of 10 weeks of paid maternity leave and the father to 5 days. This has now improved slightly. Since 2020, paternity leave is on average granted for 5 weeks (at 70% of previous pay); since 2021, fully paid maternity leave is granted for 16 weeks; and since August 2022, paid parental leave (at 70% of previous wage) has been extended to 9 weeks, although this is only for salaried employees, not for self-employed workers (Rijksoverheid 2022). However, these arrangements make full-time work after birth difficult. In addition, low-income parents cannot get by on 70% of their salaries.
- b. School hours are often not geared to the needs of working parents. Many schools have a lunch break during which childcare must be arranged; they close at 15:00 (young children) or 15:30 (older children); and on Wednesday afternoons schools are also closed; childcare has to be arranged during school holidays (Berenschot 2022). Parents with several children may have to deal with differences in school hours. Childcare is faced with the task of filling 'the gaps' in school hours. This causes problems, especially in out-of-school care, to find staff who accept these fragmented and short working hours. This lack of coherent childcare and school times causes a lot of stress for parents and can have a negative impact on the quality of family upbringing.

2. Challenges because childcare is a privatised sector.

- a. In line with neoliberal government policy, the Dutch government chose – through the 2005 Childcare Act – not to be directly responsible for childcare facilities. Childcare must be provided by private companies and parents are responsible for the choice of provision and payment. In theory, the parents would be responsible for the quality: after all, they opt for a certain kind of provision. In practice, however, parents appear to pay particular attention to accessibility, costs and opening times, and not to pedagogical quality (Thijssen, Voorn and Gijssbers 2019). Government supervises the companies via the local inspection of youth health care and the national inspection of education. The government prefers minimal interference with the pedagogical content in the child care sector. Hence there is no national pedagogical curriculum and no strong national institute to stimulate pedagogical discussions and innovations.
- b. Dutch parents are required to pay for the costs of child care. Part of the costs are covered by childcare benefit. The amount of childcare benefit is calculated as a percentage of the hourly rate of the childcare provider ranging from 33.3 to 96.0% depending on the parents' collective income and the number of children. This system has recently resulted in one of the biggest scandals in the history of the Dutch government: the so-called Dutch childcare benefits scandal (*kinderopvangtoeslagaffaire* – Belastingdienst 2023; Trouw 2022). Between 2013 and 2020, authorities wrongly accused over 26,000 parents of making fraudulent benefit claims, requiring them to pay back the allowances they had received in their entirety. In many cases, this sum amounted to tens of thousands of euros, driving families into severe financial hardship and severe stress in the family, related to evictions, divorces and child care placements by child protection services. Moreover, the procedure of the Tax and Customs Administration turned out to be "discriminatory" and filled with "institutional bias" against migrant parents, parents of Islamic faith, parents of colour. The (financial) problems of parents caused by the authorities have still (2022) not been solved.

c. There are serious plans to make the Dutch childcare system free of charge, also for non-working parents. That would prevent another childcare benefits scandal. But there are political obstacles. Free childcare for all children will increase the demand, and there are already large waiting lists due to a shortage of staff. Moreover, childcare is privatised, 15% of the childcare sector is owned by investment companies; they can set the price. A lot of public money would then go to private for profit companies. Moreover, wealthy parents will take the benefit and can use it to buy more expensive childcare for their child.

3. The challenge of working on quality and of the balance between the responsibility of parents, employers and government.

In the Netherlands, like in any other country, there is an abundance of pedagogical potential; many parents and professionals are passionately involved in early childhood education and care. There are many examples of excellence. There are also initiatives at the local and the national level for cooperation between schools and the childcare organisations. The current challenge for the early education and care system in the Netherlands is to coordinate these initiatives, to promote cooperation between practitioners, academics, managers and social politicians, and to mobilise the pedagogical potential in discussions and constructive dialogues. Both Dutch politicians and the broader public have to be convinced that the main purpose of the sector is care and education to support parents in combining work and care for children. Early childhood education should be focused on the well-being of young children and their parents – and also the well-being of the pedagogues, who deserve respect and salaries that are comparable with other sectors in education and social welfare.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in the Netherlands was 17,590,672. For about 20 years the population has been increasing continuously (2000: 15,863,950; 2010: 16,574,989; 2020: 17,407,585) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.62, the fertility rate in the Netherlands was above the EU27 average (Eurostat 2023d)⁶.

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Children under age 6

Table 4

Netherlands: Number of children under age 6 in the population, 2022

Age	Number of children
Under 1 year	179,133
1 year-olds	169,323
2 year-olds	171,226
3 year-olds	171,415
4 year-olds	173,556
5 year-olds	176,741
Total 0 to under 6 year-olds	1,041,394

Source: Eurostat 2023a

In 2022, 3.0% of the total population were children under 3 years of age, 5.8% were children under 6 years. These proportions were slightly above the respective EU27 (2020) average. With one exception, the shares of children under 3 years of age as well as of children aged 3 to 6 years were above the EU averages at the reporting dates 2000, 2005 and 2015, in some cases considerably so.

Table 5

Netherlands: Share of children under 6 years compared with the EU averages, 2000 to 2022, in %*

Year	Comparison Netherlands/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Netherlands	3.8	4.1	7.9
	Ø EU15 ⁷	3.2	3.2	6.4
2005	Netherlands	3.5	3.8	7.3
	Ø EU25	3.1	3.1	6.2
2015	Netherlands	3.3	3.4	6.7
	Ø EU28	3.0	3.2	6.2

Single households with children under age 6

In 2022, the majority (91%) of all households with children under 6 were couple households. Households with single parents accounted for 4.1% – almost exclusively single mothers (3.4%).

Table 6

Netherlands: Households with children under age 6, 2022

Household type	Total households	Share of all households, in %*
Total households	1,479,000	
Couple households	1,346,000	91.0

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Household type	Total households	Share of all households, in %*
Other types of households	72,700	4.9
Total single households	60,200	4.1
Single households, women	51,000	3.4
Single households, men	9,300	0.6

Employment rates of parents with children under 6 years of age

In 2022, the overall employment rate in the Netherlands for men (15-64 years) was 88.3% and for women 81.8% (Eurostat 2023j).

In 2022, 81.3% of women and 94.9% of men with children under 6 were employed. Both shares were thus in third place among the 27 (2020)-EU-countries (EU-average mothers: 63.6%, average fathers: 87.2%) (Eurostat 2023g own calculations).

Table 7a

Netherlands: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Netherlands	76.6	93.7
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2022	
	Mothers, in %	Fathers, in %
Netherlands	81.3	94.9
Highest rate of employment in 27 (2020) EU countries ⁹	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Source: Eurostat 2023g, own calculations

For the SEEPRO-3 countries that were not part of the EU27(2020) in 2021/2022, data are displayed in *Table 7b*.

Table 7b

Employment rates in non-EU SEEPRO-3 countries, 2021/2022/2023

Countries	Parents with children under 6 years		Overall employment rate	
	Mothers in %	Fathers in %	Women in %	Men in %

Children at risk of poverty or social exclusion¹⁰

In 2022, 13.6% of children under 6 were at risk of poverty or social exclusion, which was lower than the EU27 average (23.3%). The share of all persons at risk of poverty or social exclusion in the total population was 16.5%, compared to the European average of 21.6%. 1.4% of the under 6 year-olds and also 1.5% of the total population suffered from severe material deprivation in 2020 (EU average 6.1% and 4.3% respectively) (Eurostat 2023h, i).

About the author

Lars Petter Gulbrandsen, PhD in political science, was employed at Oslo University from 1972 to 1977 and from 1977 to 1996 at the Institute of Applied Social Science. Since 1996 he has been a senior researcher at NOVA – Norwegian Social Research, part of Oslo Metropolitan University since 2013. Main research themes are kindergartens and housing.

1. ECEC governance in Norway

Since 2010, all children in Norway have a right to a place in an ECEC centre from the age of one. All ECEC provision is regulated by the same law, the Kindergarten Act (last amended 2021). All ECEC centres have to follow the national early childhood curriculum (*Framework Plan for Kindergartens*). In 2006, political responsibility at the national level was transferred from the Ministry of Family Affairs to the Ministry of Education. Responsibility for the administration of the sector has been gradually but increasingly transferred from the Ministry to an affiliated agency, The Norwegian Directorate for Education and Training. At the local level, municipalities serve as the government authority responsible for steering and controlling the ECEC centres.

Even if about half of ECEC settings have a private owner and the other half are run by municipalities, the ECEC system as a whole should undoubtedly be characterised as **unitary**.

The qualification requirements for staff across the entire ECEC sector are the same, regardless of the age of the children. All centres, whether publicly or privately run, have to follow the same rules and regulations. The regulation of public financial support is also the same and according to the Day Care Institution Act, private and municipal centres are to receive equal treatment. The bulk of public subsidies are transferred from the state to the municipalities, which then distribute the funds to each centre. If a municipality wishes to give more money to the ECEC centres under their ownership, they are bound through the regulations to increase the funding support for private settings in the same way.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

According to the Kindergarten Act, each ECEC centre should have at least one employee per three children under 3 years and one employee per six children over 3 years. The law defines children as 'older than three years' from the August in the year they turn three. The employees mentioned here are the staff working directly with the children and classified as the core personnel (*grunnbemanning*). The Centre Leaders (*barnehagestyrer*) are not included unless some of their working hours are allocated to work directly with the children. This is often the case in small centres. If a centre employs, for instance, a kitchen assistant or a caretaker, they are not considered to be part of the core personnel.

The undisputed largest group among the main staff are the Pedagogical Leaders. The title Kindergarten Teacher seems now mainly to be used in the official statistics, but in the ECEC centres as well as in the relevant legislation, Pedagogical Leader (*pedagogisk leder*) is still the most common term used. We also find the concept Pedagogical Leader in the rules governing the qualifications. According to these rules, there should be one Pedagogical Leader per seven children under the age of three, and one to every 14 children older than three years. The Pedagogical Leader supervises the other staff in the section and ensures that the centre follows the Kindergarten Act and the Framework Plan in its pedagogical work.

Both Centre Leaders and Pedagogical Leaders must have completed at least a three-year pedagogical education (study programme for Kindergarten Teachers) at Bachelor level at a university or university college (*høgskole*). The EQF level for this education is 6. Some other pedagogical study programmes, such as that of Primary School Teacher, might also be approved if they are supplemented with a one-year additional course in kindergarten pedagogy (60 ECTS credits). The bulk of Centre Leaders have the regular qualification but a wider range of pedagogical professions may be approved for Centre Leaders.

The largest group among the 56,251 other employees are skilled workers with a qualification as Child and Youth Worker. Their total number is approximately 20,750 persons. They follow a specific upper secondary route which is classified at EQF level 5.

Otherwise, Assistants are an important part of the main body of staff. For many years, however, their relative position in the overall staffing of ECEC centres has been decreasing. There are no educational requirements for the position as Assistant. However, many of them have considerable experience of working in ECEC centres.

Table 1

Norway: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Kindergarten Teacher / Pedagogical Leader <i>Barnehagelærer / Pedagogisk leder</i> <i>Profile:</i> Early Childhood Pedagogy Professional	ECEC centre, Kindergarten <i>Barnehage</i> 0–5 years ¹	Core practitioner with group responsibility Centre Leader	0–5 years	3 years at a university or university college (<i>høgskole</i>) <i>Award:</i> Bachelor ECTS credits: 180 EQF level: 6 ISCED 2011: level 6 or Qualification as Primary School Teacher (since 2018 = Master) <i>plus</i> 1 year course in kindergarten pedagogy (60 ECTS credits) for teachers with a 3-year Bachelor’s degree awarded before 2018)
Child and Youth Worker <i>Fagarbeider/Barne- og ungdomsarbeider</i>	ECEC centre, Kindergarten <i>Barnehage</i> 0–5 years	Qualified co-worker	0–18 years	Upper secondary qualification <i>Award:</i> Certificate as skilled worker

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Norway): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
				ECTS credits: n/a ² EQF level: 5 ISCED 2011: 5
Kindergarten Assistant <i>Assistent</i>	ECEC centre, Kindergarten <i>Barnehage</i> 0–5 years	Non-qualified co-worker	n/a	n/a

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre Leader

According to the Kindergarten Act, each ECEC centre should have a recognised pedagogical and administrative leadership. As a rule, each centre has a Centre Leader. According to the *Framework Plan for Kindergartens* (Norwegian Directorate for Education and Training 2017), the Centre Leader has the daily responsibility for running the centre by leading the work in planning, documentation and evaluation as well as developing the content and working approach of the centre and ensuring that all staff participate.

Large centres sometimes have a Deputy Centre Leader. In small centres, however, leadership might be a part-time post, combined with a part-time position as Pedagogical Leader. The owners of many centres, often municipalities, sometimes organise leadership teams covering a number of centres. The most important trade union, *Utdanningsforbundet*, has been against such solutions and prefers to have a leader present in all centres. It might even be the result of such organisation that in December 2021, 5,020 regular centres were registered, but only 4,420 Centre Leaders. The majority of Centre Leaders are educated as Early Childhood Pedagogy Professionals. Additional qualifications are optional.

2.3 Centre-based posts of responsibility

In Norway, there are as a rule no designated posts of responsibility for tasks beyond those of the Centre Leader and Pedagogical Leader. Other needs will usually be met by external specialists who are employed by the municipality or by private firms and who visit the centres.

² n/a = not applicable

2.4 Co-ordinating and supervisory staff

As a rule, there are no specialist advisory and supervisory staff in the ECEC sector in Norway who have a co-ordinating or supervisory role across a number of centres. However, such functions may be assumed by the service providers, i.e. municipalities or private providers who own many centres.

2.5 Specialist support staff

Both the Kindergarten Act and the Framework Plan state that children in need of extra support are to receive the social, pedagogical and physical adaptation they need. Each centre is required to have an inclusive approach which guarantees equality of opportunity. If such needs surpass the regular provision of the centre, the centre will usually have a right to apply for extra staff resources. Staff engaged in this way will often be part of the core personnel, but might also have special duties for one or more specific children with special educational needs.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

At the end of 2021, 96,324 persons were employed in Norwegian ECEC centres. The official statistics describe 4,420 as Centre Leaders, 32,827 were pedagogues with the professional title of Pedagogical Leader or Kindergarten Teacher (*pedagogisk leder* or *barnehagelærer*) and 56,251 were other employees belonging to the main staff (see *Chapter 2.1*). 2,826 persons were described as other employees outside the main staff (not working directly with the children) (Statistics Norway 2022a).

Table 2.1 lists the various qualification levels among ECEC centre staff in December 2021. The obligatory requirements for both Kindergarten Teachers (Pedagogical Leaders) and Centre Leaders are found in the first three rows in the table. Those with an “other higher education” refers to persons with a non-pedagogical IPE who may be employed as Centre Leaders.

Table 2

Norway: Structural composition of ECEC workforce: qualifications, gender, ethnicity

2.1 Norway: Educational background of ECEC centre staff, December 2021

Staff categories	% of all staff	EQF Level
Staff with specialist higher education degree (Kindergarten Teachers)	42.0	6
– Professional education equivalent to Kindergarten Teacher	1.4	6
– Other pedagogical education	1.7	6
– Other higher education	1.8	6
Staff with upper secondary vocational qualification (Child and Youth Workers)	22.2	5
Other skilled worker with upper secondary qualification	5.2	5
Staff with other professional background or no formal qualification	25.8	5 or (generally) lower

Source: Statistics Norway 2022a

Table 2.2 shows the proportion of men in the workforce according to official statistics. 10.7% of the workforce are men. Only a very small group, mainly in jobs outside the pedagogical staff, consist almost only of men, such as caretakers.

2.2 Norway: Distribution of male workers in different positions within centre-based ECEC, December 2021

Position	Total number	Proportion of men, in %
Kindergarten Teachers (Pedagogical Leaders)	32,827	9.1
Centre Leaders	4,420	8.8
Others employees in direct contact with children	56,251	11.0
Other jobs (e.g. technical, administrative)	2,826	96.1
All jobs in early childhood centres	96,324	10.7

Source: Statistics Norway 2022a

In 2021, 9% of Kindergarten Teachers had a minority ethnic background and 1.2% were “Norwegian born to immigrant parents”. Among other staff belonging to the core personnel, 20.5% had a minority ethnic background and 1.2% were “Norwegian born to immigrant parents” (Statistics Norway 2022c).

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

The professional education of Kindergarten Teachers in Norway started in 1935. At first, it was a rather short qualifying course which included much practice. The only entrance requirement was what we could call – for lack of a better translation – the „housewife school”. In the 1960s, the official title was Kindergarten Mistress, but this was changed into the gender neutral term Kindergarten Teacher (probably due to the fact that the first two male “mistresses” started their education in 1969). At this point of time, only 24% of Kindergarten Teachers had completed an upper secondary education. The incidence of such an education was higher among the assistants than among the teachers. From now on, professional education took place as a two-year course at university colleges. In 1971, the job title was changed to Preschool Teacher, a title that existed until 2013 when Kindergarten Teacher once again become the official title for people who had completed this education. Around 1980, three-year study programmes were introduced. This is still the case, whereas since 2018, the initial education of Primary School Teachers has been extended to five years, with a minimum qualification requirement at Master level.

Today, twelve Norwegian universities and university colleges provide professional studies for Kindergarten Teachers. In terms of geographical location, the number is even larger, since for some years now, educational institutions have been merged and the study programmes for Kindergarten Teachers have sometimes continued to be provided at the locations of the former independent institutions.

The regular entry requirement is a completed upper secondary education. However, for about 15 years it has been possible to combine work in an ECEC centre with part-time attendance at a university or university college, usually for four years. Kindergarten Teachers educated in this way have turned out to be a very stable part of the workforce (Gulbrandsen 2015).

Until 2003, Kindergarten Teachers had the opportunity to teach in the first four grades of primary school.

Table 3

Norway: Kindergarten Teacher / Pedagogical Leader

Job title in Norwegian: <i>Barnehagelærer/Pedagogisk leder</i> Profile: Early Childhood Pedagogy Professional
<p>Entry requirements: University entrance certificate</p> <p>Professional studies: 3 years at a university or university college (<i>høgskole</i>) or 1 year studying kindergarten pedagogy (60 ECTS) in the case of Primary School Teachers with a pre-2018 Bachelor's degree</p> <p>Award: Bachelor's degree, which can be followed by a Master's degree (+120 ECTS, EQF-level: 7, ISCED level: 7)</p> <p>ECTS credits: 180</p> <p>EQF level: 6</p> <p>ISCED 2011: level 6</p> <p>Main ECEC workplace: ECEC centres/kindergartens (<i>barnehage</i>), 0–5 years</p>

Table 4

Norway: Child and Youth Worker

Job title in Norwegian: <i>Barne- og ungdomsarbeider/fagarbeider</i>
<p>Entry requirements: 10 years of compulsory schooling</p> <p>Professional studies: Upper secondary qualification (specialised stream)</p> <p>Award: Certificate as skilled worker</p> <p>ECTS credits: n/a</p> <p>EQF level: 5</p> <p>ISCED 2011: level 5</p> <p>Main ECEC workplace: ECEC centres/kindergartens (<i>barnehage</i>), 0–5 years</p>

Table 5 shows all persons living in Norway of working age (67 years or younger) with a professional education as Kindergarten Teacher according to type of occupation in 2000 and 2012 (Gulbrandsen 2015). As the table indicates, between 2000 and 2012 the proportion of those educated as Kindergarten Teachers and working in a kindergarten increased considerably. Since 2012, however, this type of statistics is no longer compiled.

Table 5

Norway: Type of work among people educated as Kindergarten Teachers, 2000 and 2012

	2000	2012
In an ECEC centre (kindergarten)	44.1%	54.0%
In primary school (possible until 2003)	25.6%	16.3%
In other occupations	22.6%	20.9%
Not in employment	7.7%	8.8%
Total in absolute numbers	(27,353)	(46,385)

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

There is a national framework plan (curriculum) for Kindergarten Teacher Education. This is compulsory for all institutions that offer such a course of study. The current framework was introduced in 2013 (Ministry of Education and Research 2012). An important change was that all academic disciplines except pedagogy were removed from the text and replaced by knowledge areas. Pedagogy is to be integrated into all knowledge areas.

The national framework plan for Kindergarten Teacher Education specifies learning outcomes for the student concerning knowledge, skills and general competence. The education focuses on the following six knowledge areas: (1) Children’s development, play and learning; (2) Society; religion, philosophy of life and ethics; (3) Language, texts and mathematics; (4) Nature, health and movements. These four areas are covered during the first two years of IPE (80 ECTS credits). The fifth area – Management, cooperation and development work (15 ECTS credits) – is assigned to the final year. In addition, two areas from the first two years are studied in more depth (40 ECTS). Also in the final year, 30 credits are allocated to a specialisation intended to build on the knowledge areas and contribute to professional progression and increased competence relevant for work in kindergartens. A Bachelor thesis is also completed during the final year (15 ECTS credits).

Table 6

Norway: Competence areas in the qualification route of Kindergarten Teachers

Knowledge area	ECTS credits	Year of study
1. Children’s development, play and learning	20	Years 1 and 2
2. Society, religion, philosophy of life and ethics	20	Years 1 and 2
3. Language, texts and mathematics	20	Years 1 and 2
4. Nature, health and movements	20	Years 1 and 2
<i>Specialisation in two of the areas above</i>	40	Years 1 and 2
5. Management, cooperation and development work	15	Year 3
6. Specialisation	30	Year 3
Bachelor thesis	15	Year 3
Total	180	

Source: Ministry of Education and Research 2012

An ideology which is often called the ‘Nordic Model’ or ‘educare’ pervades the course of study. The model is based on a balance between self-generated play activities and the structured and prepared educational activities of the Kindergarten Teachers. Applying a holistic perspective, teaching, play and care are interlinked in developing children’s cognitive, social and emotional learning (Sheridan, Sandberg, and Williams 2015).

4.3 Alternative entry and qualification routes, system permeability

There is no alternative entry into IPE apart from the one-year kindergarten pedagogy qualification for other persons with a minimum three-year pedagogical education (as was formerly the case for Primary School Teachers).

Certification as a skilled worker (Child and Youth Worker) is normally given on the basis of a successfully completed exam from specific streams at upper secondary school. An unknown

number of people with such a certificate have never been in upper secondary school, and have qualified as Child and Youth Workers by studying alongside their jobs as Assistants.

5. Guided workplace experience (practicum) in the IPE of core professionals

The practicum is an important part of the education of Kindergarten Teachers. A minimum of 100 days, integrated in all six knowledge areas, are distributed, with 75 days during the two first years and 25 days in the final year. This element of IPE is regulated by national guidelines. The students complete their practicum in ECEC centres after the university/university college has entered an agreement with the kindergarten.

Practice supervisors are Kindergarten Teachers who are assigned this function as a supplement to their regular job in the centre. The educational institution is their employer for this function and pays them extra. In 2005, the most important union, *Utdanningsforbundet*, and the Ministry of Education entered an agreement, but this agreement has never been renewed and has in practice been replaced by local agreements between the IPE institutions and the kindergartens in a specific area. This can be illustrated by the agreement between Oslo Metropolitan University, the institution that educates the greatest number of Kindergarten Teachers, and the local kindergartens. A practicum supervisor-teacher is paid a weekly bonus of 1075 NOK (€107.50) for mentoring two students. The Centre Leaders receive 400 NOK (€40,00) per week regardless of the number of students.

The Norwegian Directorate for Education and Training has established a formal course at the national level for student supervisors or for those who have supervisory functions towards newly employed staff. This specialist qualification is awarded 30 ECTS credits. The Directorate gives funding support so that the employee can combine such a qualifying course with their regular job (see, e.g., Jensen, Bråten, and Svalund 2020).

6. Continuing professional development (CPD) of ECEC staff

Formal courses of continuing professional development at the national level are administered by The Norwegian Directorate for Education and Training. The centres apply for places through their owners, who control and send on the applications to The Directorate for final approval. In 2022, the providers of ECEC settings forwarded 1,593 applications and 1,050 Kindergarten Teachers were offered a place from the autumn of 2022. The most important reason for refusal was the popularity of some courses. Here the number of applicants went beyond the number of places.

The CPD catalogue of the Directorate is structured into eight thematic areas. These are offered at 12 universities or universities colleges, with a total of 37 courses in 2022. All of them are certified for the education of Kindergarten Teachers. The most frequently offered topic was that as supervisor for practical training (9 courses). The second most widespread was supervisor education (7 courses) and the third was children's language development and language learning (6 courses). Other topics were: pedagogical leadership and learning environment (5), additional

education in kindergarten pedagogy and physical development and motor activity (both with 3 courses), and special pedagogic and natural science in kindergarten (both with two courses). In terms of the number of applications, the most popular courses were on pedagogical leadership and the learning environment.

The target groups for the courses are Centre Leaders and Kindergarten Teachers. The owners of the centres receive a fixed sum of money per candidate; 70,000 NOK or about €7,000. According to the most recent evaluation rapport, 86% of the participants attended the course on full pay (Jensen, Bråten, and Svalund 2020). Close to 90% of the participants are satisfied with the support they have received. The centre might use some of the money to hire a substitute, but they are not obliged to do so. Such formal CDP-activities normally cover one study year (two semesters).

Even if the political authorities strongly wish and support such CPD activities, attendance is always optional. All courses are attended alongside regular employment. Staff are permitted to leave their jobs to follow courses and lectures and they also use their free time in the evenings or at weekends to study. Most completed courses are credited with 30 ETCS.

Since 2017, the Norwegian Directorate for Education and Training has commissioned yearly evaluations of the national CPD activities. The first report was conducted by the Nordic Institute for Studies in Innovation, Research and Education (NIFU) (Siddiq and Gjerustad 2017), the latter by the applied research institute Fafo (Jensen, Bråten, Svalund, and Talberg 2018 and 2019; and Jensen, Bråten, and Svalund 2020). All reports are in Norwegian, but have summaries in English. Surveys were the main data source for the reports. The vast majority of the survey respondents, both Kindergarten Teachers and Centre Leaders, assessed the CPD programme as good, relevant and interesting; they felt that there was an appropriate mix of theory, reflection and methodology. Learning outcomes were considered to be high, the syllabus 'suitably' demanding and the lectures and teaching sessions were appraised as good (Jensen, Bråten, and Svalund 2020).

The most recent survey showed that most Kindergarten Teachers claimed to share the knowledge they had gained with their co-workers in the kindergarten, but that a hectic work schedule in the kindergartens made it hard to find both the time and arenas for knowledge sharing. As in previous surveys, the educational grant was emphasised as important, both for the individual participants who had their expenses covered and for the kindergartens that could call in staff replacements to cover absence. It appeared that the reimbursement of expenses had been sufficient for most participants.

The number of people following such further education is modest compared to the total number of Kindergarten Teachers. Only about 2% of them attend such a formal course of CPD each year. However, the number of teachers attending these courses every year accounts for more than 50% of the number of newly qualified Kindergarten Teachers.

Most of the IPE institutions which offer study programmes for Kindergarten Teachers also offer a follow-on Master's degree. So far, few graduates with a Master's degree have taken up a post in an ECEC centre. However, the number is increasing and the political authorities welcome this development. In 2022, there was at least one employee with a Master's degree in 20% of the centres. Among the Centre Leaders, 10% had a relevant degree at Master level (Kasin and Gulbrandsen 2022).

In 2017, the Ministry of Education introduced a new Competence Development Model at the regional (county) level (Recomp – Regional Competence Development) for primary schools and kindergartens. This is an arrangement where ECEC centres within a regional unit of Norway can participate in a CPD activity for all staff members of a kindergarten, aiming to achieve systematic setting improvement. The system is organised as a cooperation between the participating centres, the IPE institutions in the region, service providers, and the county governor. Since the

measure is fairly recent, no evaluations for the kindergarten sector are available (for primary schools see OECD 2020).

7. Working conditions and current workforce issues

7.1 Remuneration

In 2010, Statistics Norway published calculations on the expected lifetime income for different educational groups. Among those with the same initial professional education, Kindergarten Teachers came out with the lowest (Kirkebøen 2010). The calculations were based on income statistics from the period 1999-2008. During the following ten years, the income for this group of employees has increased more than those with a comparable qualification and Kindergarten Teachers are no longer a low-paid group within the public sector (Gulbrandsen 2018).

The wages are the results of negotiations at the national level between the provider organisations and the trade unions. The employers' organisation for centres owned by the municipalities is the Norwegian Association of Local and Regional Authorities (KS, *Kommunesektoren*), while a great part of privately owned centres are organised within the National Federation of Private Kindergartens (PBL, *Private Barnehagers Landsforbund*). The most important unions are *Utdanningsforbundet* who organise and negotiate on behalf of Centre Leaders and Kindergarten Teachers and *Fagforbundet*, which represents the skilled workers and assistants.

A newly graduated Kindergarten Teacher in a municipally owned centre will for instance receive a yearly wage before tax of 423,500 NOK (about €42,350), while the same person would receive at least 446,100 NOK (about €44,610) in a privately owned centre with a collective wage agreement. Work experience is very important for the level of wages. After ten years of work as a Kindergarten Teacher, the wage will be 515,200 NOK (about €51,520) in a municipally owned centre and 549,000 NOK (about €54,900) in a private one. Regardless of experience, the wage for Centre Leaders is about 70,000 NOK (about €7,000) higher than for Kindergartens Teachers. All these figures are based on the agreement from June 2021 (Salary explorer 2022).

The wages of Assistants and Child and Youth workers are lower. A Kindergarten Assistant with ten years of experience is guaranteed 379,600 NOK (€37,960), while a skilled worker with a certificate as a Child and Youth Worker is guaranteed 434,100 NOK (€43,410).

In the most recent TALIS Starting Strong Survey, only 30% of the Norwegian staff said they were satisfied with their salary. However, in contrast to the other participating eight countries, a higher salary did not have the same priority among the Norwegian staff as it did in the other participating countries, particularly if their centre had received a moderate increase of the budget (Gjerustad, Hjetland, and Opheim 2019).

Due to the continuing high prices of housing in Norway, particularly in the capital, it has been estimated that a newly qualified member of the nursing profession, for example, can only afford to buy the lowest-price housing at around 2 to 3% of the total housing announced for sale in the capital. In the case of Kindergarten Teachers, the special collective wage agreement for Oslo helps meet their living costs. However, they may also be reliant on financial help from parents (Sandlie and Gulbrandsen 2018) or a well-earning partner.

7.2 Full-time and part-time employment in ECEC provision

According to the Working Environment Act, the maximum number of working hours in a week is 40. However, most collective wage agreements operate with 37.5 hours. All those in paid employment in 2021 had a right to five weeks of paid holidays and for workers older than 60, six weeks. The regular retirement age is 67; the right to receive public benefits other than a pension cease at this age.

In 2021, 67.2% of the main staff in ECEC provision had a full-time employment contract. 22.1% of the staff had a contract between 40 and 99% of a regular week and 10.7% had agreed upon less than 40% (Statistics Norway 2022b).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Since 2009, various agreements have been made to ensure appropriate mentoring support for newly qualified teachers in kindergartens, primary schools and secondary schools. In 2018, a new agreement between the Ministry, the provider associations, the trade unions and the association of education students was signed. The target group is newly qualified entrants into the profession and they receive supervisory support during the two first years of their employment. The advisory support should be given by a qualified mentor who is a teacher with a formal qualification as mentor or with the necessary professional competence and with at least three years of experience as a teacher. The measure is financed by the state and the service providers/owners are responsible for ensuring it takes place. Although the proportion of the target group who received mentoring increased from 55% to 63% between 2016 and 2019, there is still a large number of newly qualified staff who do not receive the agreed advisory support and mentoring. Another problem is that only half of the advisers have the formal competence as mentor as described above (Rambøll 2022).

7.4 Non-contact time

For more than 40 years now, Pedagogical Leaders in municipally owned centres have had a negotiated right to a minimum of four hours weekly for planning, preparations and follow-up work. The privately owned centres do not have this basic right. A survey in 2018 among the members of *Utdanningsforbundet* showed that 25% used less time than allocated and 29% more (Respon Analyse 2018). 93% of the centres had allocated four hours per week as non-contact time.

7.5 Current staffing issues

From the 1960s up to the recent past, the lack of qualified Kindergarten Teachers was constantly very high. The problem during these early years was that a large number of newly educated teachers left the kindergartens and few returned to work. This problem was exacerbated in the first decade of the 2000s through the strong increase in provision for under 3 year-olds, which requires double the number of pedagogues than groups with older children. During this time, the political authorities initiated many attempts to reduce the gap by trying to increase recruitment, encourage employees who had quitted to return and generally to encourage employees to stay (Gulbrandsen 2015).

During the following decade, this shortage of staff gradually disappeared. Today the number of teachers wishing to work in an ECEC centre is sufficient enough even to improve the teacher to child ratios (Gulbrandsen 2015). This change did not come about because former teachers returned to work in kindergartens but rather through an ever-increasing number of qualified staff who stayed in the profession. Whether this was due to the effects of the political measures is

unclear; it probably coincided with other social changes. Compared to the 1970s and 1980s, the recruitment of Kindergarten Teachers changed in terms of social class. An ever-increasing proportion of students came from homes without an academic tradition. For a student with well-educated parents, a job in a kindergarten was probably not in line with the level of parental ambitions and in the best case only a temporary position of waiting and preparing for something else. In contrast, for students with a working class background and without family academic traditions and ambitions, it could mean a rise in social status to become a pedagogue, highly sought after both among centre owners and political parties and authorities (Gulbrandsen 2018).

This increased stability changed the age composition of the staff. Since so few left the profession, the mean age of the staff increased steadily. Since so many of the older teachers had left the centres many years ago, the centres no longer had a retirement problem (see also *Table 7*). Kindergarten Teachers who would by now be approaching retirement age, were no longer working in ECEC (Gulbrandsen 2018).

Table 7

Norway: Age structure among Kindergarten Teachers, 2021

Age	Distribution, in %
Under 29 years	18.8
30–39 years	35.2
40–49 years	26.8
50–59 years	15.0
Over 60 years	4.2

Source: Statistics Norway 2022c

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

The content of initial professional education is important for the competence and quality of the Kindergarten Teachers. *Chapter 4.2* describes the current content of IPE. Although there has been a certain amount of pressure for change for more than 10 years, no decision has as yet been made. In 2010, the entire professional education was evaluated by the Norwegian Agency for Quality Assurance in Education (NOKUT, *Nasjonalt organ for kvalitet i utdanningen*). In 2012, a new Framework Plan was issued, without giving too much attention to the foregoing evaluation. The implementation of the new study programme was followed by an expert group. This group delivered a rather critical report in 2017. As a representative of many critical research contributions, Havnes (2021), for example, wrote that the reduction of 10 disciplinary subjects into 6 integrated “knowledge areas” was not without its problems. In the Autumn of 2020, the Ministry appointed a new expert group that should propose amendments in the Framework Plan for Kindergarten Teacher Education. The proposals from this group are awaiting a response from the political authorities.

Another important question is the length of the course of study. The NOKUT evaluation from 2010 had already discussed an extension from three to five years. The majority of experts was against this, not least because of the great shortage at that time (the shortage gradually disappeared after 2010). Since the IPE of Primary School Teachers has been raised to Master’s level

and five years' duration, a discussion of an extension for Kindergarten Teachers is bound to follow. Closely associated with this question is the number of students who follow a relevant Master level course, building on their Bachelor's degree. Establishing requirements for those with a Master's degree in terms of specific centre-based posts of responsibility, such as Centre Leader, could contribute to such a discussion.

9. Recent country-specific research focusing on ECEC staff

TALIS – Starting Strong

Source: Gjerustad, Hjetland, and Opheim 2019; Gjerustad, Opheim, Hjetland, Rogde, Bergene, and Gulbrandsen 2020 (see *References* for full details)

The Nordic Institute for Studies in Innovation, Research and Education (NIFU) is conducting the Norwegian part of the project. A new round of data collection took place in 2023.

Aims: The aim of the project was to investigate work conditions, views about competence, wages, content of work and work satisfaction as well as views on play, well-being and learning among the children.

Methods: Surveys among leaders and the other members of the core personnel were carried out in the spring of 2018. Participants were 315 centre leaders (response rate 85%) and 1,753 other members of the staff (response rate 88%) from a national representative sample of 305 kindergartens.

Selected findings: The surveys showed a very high degree of well-being among the different groups within the staff. Compared with the staff in the other participating countries, staff in Norway were relatively more satisfied with their wages.

Implications: The findings throw light on why Kindergarten Teachers for some years now no longer quit their workplace. The high degree of work satisfaction might also be valuable for the quality of the provision the centres offer.

Kindergarten Teachers with a Master's degree (*Barnehagelærere med masterutdanning*)

Source: Kasin and Gulbrandsen 2022 (see *References* for full details)

The project is being conducted at Oslo Metropolitan University.

Aims: To describe the incidence of staff members with a Master's degree and the efforts and initiatives taken by the centres to recruit persons with a Master's degree.

Methods: Documentary analysis and a representative survey among all regular Norwegian ECEC centres. The Centre Leaders filled in the questionnaires. The survey was conducted in the winter 2022. The response rate for the survey was 31%.

Selected findings: 20% of the centres have at least one employee with a Master's degree in early childhood pedagogy. 10% of the centres had a Centre Leader with a qualification at this level. An increasing proportion of Kindergarten Teachers now have such an education.

Implications: The authorities have welcomed staff with a Master's degree but have so far done little to realise this. So far, the growth is primarily a result of individual teachers who want to increase their competence. The report will give important input into the work to realise the wish for more formal and certified competence in the centres.

Small, but good. Need for competence in small ECEC centres in Oslo and Viken (*Liten, men god. Om kompetansebehov i små barnehager i Oslo og Viken*)

Source: Gulbrandsen and Os 2022 (see *References* for full details)

The project is conducted at the Oslo Metropolitan University.

Aims: As an important stakeholder in the Regional Competence Development Model (Recomp, see *chapter 6*), concerns have been expressed at the county governor level that small centres are not being reached with these new measures for increasing setting-level competence.

Methods: A questionnaire was sent to the Centre Leaders in all small centres in the two counties. A small centre was defined as a centre in the group comprising the fifth smallest centres according to the number of children enrolled. This gave a sample of 344 centres. The response rate was 51,3%.

Selected findings: The participation of small centres in Recom was quite high and not alarmingly lower than among larger centres. The participants from small centres were also quite satisfied with the competence development activities they had been offered.

Implications: There seems to be no immediate need to implement competence measures specially directed towards small centres. The participants were most satisfied with lectures that presented new knowledge about kindergartens and least satisfied with the cooperation with the universities and the university colleges.

10. Workforce challenges – country expert assessment

Two challenges will be highlighted: keeping the pedagogues in the centres (staff retention) and enhancing the internal organisation of the centres.

The development of qualified staff has been rather good over the past ten years. A very high proportion of newly qualified Kindergarten Teachers have chosen to work in an ECEC centre, and very few have quitted their jobs. It will be a challenge to maintain this positive development in the years to come. A danger signal could be the number of applicants to the Kindergarten Teacher education study programmes, which were 27% lower in 2022 than in the preceding year. All upcoming negotiations about wages and working conditions need to take the effects on recruitment into consideration.

The regulations for pedagogue to child ratios have had important implications for the organisation of the centres. With up to nine children per pedagogue among children under 3 and 18 children per pedagogue among children older than 3, the units very often were organised with these numbers of children, meaning one Kindergarten Teacher and two other members of staff with a lower or with no qualification. With a new pedagogue norm where the figures nine and 18 have changed to seven and 14, all staff members who previously would have worked with a qualification as Kindergarten Teacher can no longer be a leader of the units. This suggests that new posts and work titles and a new division of responsibilities will be necessary to develop and negotiate in near future.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the term used in this report for the main form of ECEC provision is **kindergarten** (*barnehager*, 0–5)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Norway

First half of 19th century	Charities establish the first institutions for poor children (<i>barneasyll</i>).
1840 ff.	Crèches are established for children under 3 whose parents cannot care for them and for poor children of single mothers.
1850 onwards	Froebel-inspired kindergartens are established.
1920-1970	Kindergartens (<i>barnehage</i>) continue to develop against the backdrop of the welfare state era. In 1970, however, the coverage rate was still as low as 3%.
1970s onwards	Employment rate of mothers with under 2 year-olds more than doubles from 1972 to 1991.
1975	The number of kindergartens for children up to age 6 increases and the first <i>Kindergarten Act</i> (<i>Barnehageloven</i>) comes into force. In the years that follow, public interest in kindergartens also increases.
1995 onwards	The Kindergarten Act is amended. The <i>Framework Plan for Kindergartens</i> is issued, regulating the content and tasks of kindergartens. In 1997, compulsory schooling begins in the year children turn 6.
2005/2006	The Kindergarten Act is amended in 2005 and comes into force in 2006, together with a revised version of the Framework Plan.
2006	Responsibility for kindergartens is transferred from the Ministry of Children and Family Affairs to the Ministry of Education and Research. Creating a better transition between kindergartens and primary education and acknowledging the kindergarten's role as the first step in a lifelong learning process are the main reasons.
2009	An individual statutory right is introduced: each child from the age of 1 is entitled to a place in kindergarten.
2011	Amendments to the Kindergarten Act are included in the Framework Plan for Kindergartens.
2016	Introduction of free 20-hour kindergarten attendance for children over 3 years of age from low-income families
2017/18	Further amendments to the Kindergarten Act and the Framework Plan
2019	Low-income families are entitled to 20 hours of free kindergarten attendance for children aged 2 and over.
2021	The Kindergarten Act (§ 42) is amended regarding the avoidance of discrimination.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Norway, the relevant format is **0–5** years, as children start primary school at age 6.

ECEC system type and auspices²

Norway has a unitary system of early childhood education and care. At the national level, the Norwegian Ministry of Education and Research is responsible for ECEC centres (*barnehager* - "kindergartens") for children from the age of one until they start school at age 6 since 2006.

The Norwegian Directorate of Education and Training is responsible for monitoring and supervision. At the decentralised level, regional government agencies (county governors) ensure that national policies are implemented (Engel et al. 2015, 29) and, since 2006, that municipalities fulfil their duties as kindergarten authorities. Municipalities are responsible for directly supervising kindergartens. They also own and run about half of the kindergartens.

General objectives and legislative framework

There are three overarching goals for the education sector in general, including early childhood education and care: All learners participate in an inclusive learning environment; children and young people in need of special support are given appropriate assistance early in order to being able to develop their potential; staff in the education system are highly qualified and competent. The first Kindergarten Act (*Barnehageloven*) in Norway came into force in 1975. According to the current Kindergarten Act, which came into effect in 2006 and was last amended in 2021, children in kindergartens have the right to express their views on the day-to-day activities of the kindergarten and are to be given the opportunity to take an active part in planning and assessing kindergarten activities on a regular basis. "The Kindergarten must be based on fundamental values, such as respect for human dignity and nature, on intellectual freedom, charity, forgiveness, equality and solidarity, values that also appear in different religions and beliefs and are rooted in human rights." (Norwegian Ministry of Education and Research 2006, Section 1).

A prescribed regulatory framework – *The Framework Plan for the Content and Tasks of Kindergartens* (Norwegian Directorate for Education and Training 2017) – sets out the principles, goals and objectives for pedagogical work in ECEC centres (see section on *Curricular framework*).

Both public and private settings are obliged to comply with the Kindergarten Act and the Framework Plan.

ECEC entitlement and compulsory attendance

Since 2009, children from the age of 1 year are entitled to a kindergarten place, which the municipalities are obliged to provide. Attendance is not compulsory. Since paid parental leave lasts until a child's first birthday, few children below that age are enrolled in a kindergarten.

In 1997, the compulsory school starting age was lowered from 7 years and now starts in the year a child turns 6 (Norwegian Ministry of Education and Research 2023a).

Main types of provision

Children up to school age can attend either a kindergarten or a family kindergarten (European Commission/EACEA/Eurydice 2019, 205).

² The Eurydice country report on ECEC in Norway provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

Kindergartens (*barnehager*) are unitary ECEC settings for children until they start school. The respective provider decides on the opening hours. To cover parents' working hours as far as possible, most kindergartens are open at least 41 hours a week (usually from 7:00 or 8:00 to 17:00 or 18:00). Children can attend them either full time or part time.

Family kindergartens (*familiebarnehager*) are located in private homes, where an assistant works with a maximum of five children, usually under 3 years of age. A qualified kindergarten pedagogue provides supervision and support on a weekly basis (Engel et al. 2015).

Both are obliged to comply with the Kindergarten Act.

Open-door kindergartens (*åpne barnehager*) are drop-in parent-child groups run by a qualified kindergarten pedagogue on a sessional basis. They are only open for part of the day.

Table 1

Norway: Number of kindergartens and children enrolled, 2005 – 2015 – 2022

Year	Kindergartens	Children (0 to under 6 years)
2005	6,278	223,501
2015	6,087	283,608
2022	5,420	268,730

Sources: Statistics Norway 2023a, 2023b

Provider structures

The shares of children's groups under and over 3 years of age are distributed almost equally between private and public ECEC settings (Statistics Norway 2023a). In 2022, there were 5,420 kindergartens for children up to school age - just under half (48.3%. 2,606) were public settings, nearly all of them owned by municipalities. In recent years, both the number of facilities and the number of children have decreased (Statistics Norway 2023a, b). This is primarily due to a lower birth rate. The coverage rate has not decreased.

Within the private sector, there are both commercial and non-profit owners. However, it is difficult to draw a clear-cut line between them. An increasing number of the private kindergartens has been integrated into large companies, but the majority is still independent, with the provider owning just one kindergarten.

Private kindergartens are approved and supervised by the local authority. All approved institutions receive the same municipal grants to cover the main part of the running costs.

The responsibility of the provider is to guarantee operation in accordance with the relevant laws and regulations and to ensure quality (Norwegian Directorate for Education and Training 2017).

Table 2

Norway: Settings by provider type and children by age, 2022

Provider type	Kindergartens	0 to under 3 year-olds	3 to under 6 year-olds	1 to under 6 year-olds
Municipal	2,606	49,929	86,152	136,081
County authority/ Government	12	310	396	706
Private	2,802	50,552	81,046	131,598
Total	5,420	100,791	167,594	268,385

Sources: Statistics Norway 2023a, 2023b

Participation rates in regulated provision

In 1963, national statistics on ECEC were published for the first time in Norway. At that time, the attendance rate for children under primary school age was just 2%. The first significant expansion of services took place in the 1970s: attendance increased from 3% in 1970 to 20% in 1980, reaching 62% by 2000 - 37% of children aged 1 or 2 and 78% of the 3 to 5 age group. In the following decade, the attendance rate increased from 37% to 81% for the youngest children and to 97.5% for 3, 4, and 5 year-old children. According to the most recent statistics from 2022, they were 87.7% for 1 and 2 year-olds and 97.2% for 3 to 5 year-olds (see *Table 3*).

In Norway, parental leave lasts until the child's first birthday and therefore relatively few children under the age of 1 attend a kindergarten (2022: 4.6%), but 94.7% of the 2 to 3 year-olds. In 2022, significantly more children under 2 years of age (4,874) were on the waiting list for a kindergarten place than children between 3–5 years (Statistics Norway 2023f).

Table 3

Norway: Number of children in kindergartens and enrolment rates by age, 2022

Age	Number of children	Enrolment rate, in %		
Under 1 years old	2,392	4.6		
1 year-olds	46,506	81.0	87.7 (1–2)	93.4 (1–5)
2 year-olds	51,893	94.7		
3 year-olds	54,666	96.8	97.2 (3–5)	
4 year-olds	55,561	97.2		
5 year-olds	57,367	97.4		
0 to under 6 years	268,385	79.7		

Source: Statistics Norway 2023b, 2023e

Children generally attend kindergarten full time: over 97% of children under and over 3 years of age attended for more than 41 hours per week in 2022.

Table 4

Norway: Number of children in kindergartens by age and weekly hours of attendance, 2022

	Weekly hours of attendance						Proportion attending over 41 hours, in %
	0-8	9-16	17-24	25-32	33-40	over 40	
0 to under 3 years	2	24	210	1,043	1,558	97,954	97.2
3 to under 6 years	4	41	158	957	2,339	164,095	97.9

Source: Statistics Norway 2023b, own calculations

Financing and costs for parents

Alongside Iceland and Sweden, Norway is one of the OECD countries that spends the most public money on the early childhood sector. In 2019, total public expenditure on early childhood education and care amounted to 1.38% of GDP, a significant increase from 0.69% in 2000. Around 0.7% was each allocated to provision for under 3 year-olds and to settings for 3 to 5 year-olds (OECD 2023).

Kindergartens are financed by municipalities (about 85%), with the expenditure in this area covered largely by state transfers as well as fees from parents. In 2004, a regulated maximum fee for parents was introduced (Norwegian Ministry of Education and Research 2015).

In 2011, earmarked transfers for kindergartens were replaced by block grants to municipalities, thus strengthening local self-government. However, it is doubtful whether this reform provided the municipalities with more financial means for fulfilling the right to high-quality *barnehager* for all children (Norwegian Ministry of Education and Research 2015, 9).

Since 2015, all public and private kindergartens receive similar subsidies from the government. National regulations for a free kindergarten place on a universal basis do not exist, but municipalities can issue their own regulations.

In January 2023, parents paid an average monthly fee (including meals) of 2,894 NOK (approx. €255³) (Statistics Norway 2023g). The maximum fee in January 2023 was NOK 3,000 (approx. €265) per month (Eurydice 2023, 4.1).

Since 2015, the fee has been capped at 6% of household income (European Commission/EACEA/Eurydice 2019, 57). Low-income families pay a reduced fee; all families pay a lower amount for siblings. These regulations apply to both private and public kindergartens. Low-income families receive legally regulated, free 20-hour kindergarten attendance for children aged 2 years and older.

In 2022, a couple with two children spent about 5% of net household income on childcare costs⁴ (OECD.Stat 2023).

Staff to child ratios and group size

Kindergartens are usually organised in mixed-age groups, on the one hand for under 3 year-olds and on the other for 3 to under 6 year-olds. The exact arrangement is decided by the provider.

Since 2018, a statutory staffing ratio came into force of one employee for up to three children under 3 years of age and up to six children over 3 years of age. In each group, there must be at least one fully qualified pedagogue member of staff for every seven children under the age of 3 and for every 14 children over the age of 3 (Norwegian Ministry of Education and Research 2023b). There are no regulations on group size.

Rooms must offer at least 5.3 square metres of space per child under 3 years of age, and at least 4 square metres per child over 3 years of age.

Curricular framework

The Framework Plan for the Content and Tasks of Kindergartens (Norwegian Directorate for Education and Training 2017) emphasises humanistic and democratic values and traditions, which are to be implemented in a holistic manner. The Framework Plan states that all kindergartens must work towards the goal of promoting children's development and learning, and stimulate children's linguistic and social competence. Childhood is a phase of life with intrinsic value; kindergartens must be inclusive communities with space for every child. The rights and needs of the individual child should always be taken into account. The pedagogical approach includes outdoor play and physical activities, free play and guided activities. Building good relationships and the age-appropriate participation of children are foregrounded, as is the promotion of language, including sign language and Sami language.

³ Conversion rate December 2023

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

All kindergartens, whether public or private, are obliged to adhere to the principles of the Framework Plan. The provider may adapt the plan according to the local circumstances, but this needs to be described in the ECEC centre's programme. Kindergartens prepare an annual plan that documents the respective decisions and activities and describes how the contents and goals of the Framework Plan are implemented.

In August 2017, a revised version of the Framework Plan came into force. It is organised into nine sections: foundations and values, responsibilities and roles, aims and content, children's participation, cooperation between families and kindergartens, transitions, kindergarten as a pedagogical institution, ways of working in the kindergarten, and seven learning areas (Sadownik and Ødegaard 2018).

The seven learning areas are:

- *Communication, language and text*
Children should explore and develop their understanding of language and learn about different ways of communicating. They should be encouraged to play with spoken and written language and symbols.
- *Body, movement, food and health*
Children should learn about their bodies and needs through various physical activities, gain a positive view of themselves and respect the limits that others may have.
- *Art, culture and creativity*
Children's curiosity, imagination and creative thinking should be stimulated; they should be encouraged to express themselves in different ways and to respect other cultures.
- *Nature, environment and technology*
Children should be able to play outside all the year round in order to experience nature and their environment in a holistic way. They should also have the opportunity to work with different tools and materials.
- *Numbers, spaces and shapes*
Children should learn to understand mathematical concepts, play with numbers and get to know different shapes in their environment.
- *Ethics, religion and philosophy*
Children should learn about basic Christian and humanistic values and explore religions. They should be encouraged to ask questions and develop respect for other points of view.
- *Local community and society*
Children should learn about and respect local traditions, including those of minorities, and develop a sense of belonging to their community. Cultural diversity, different family forms and different ways of living should be equally emphasised.

Special emphasis is placed on learning and play. The concept of *Bildung* (based on the German term) is explicitly considered to be the basis for the core kindergarten values. Children are encouraged to develop into critical citizens with responsibilities towards nature and society (Sadownik and Ødegaard 2018).

The children's transition to primary school is also regulated in the Framework Plan. It states that kindergarten and school "should share knowledge and information to enable them to co-operate on provision for the oldest kindergarten children, their transition to and enrolment in school. The kindergarten must obtain the parents' consent before sharing information about individual children with the school" (Norwegian Directorate for Education and Training 2017, 33).

Digital education

In the *Framework Plan for Kindergartens* (Norwegian Directorate for Education and Training 2017), different working methods are presented to reflect the diversity of content. Among other things, digital practices are mentioned as helping to support learning processes, creativity and play. When using digital tools, which should not take too prominent a place, pedagogues should actively accompany the children and also be aware of copyright issues, data protection and the children's privacy. The children should be supported in reflecting critically on digital media.

Monitoring – evaluation

In Norway, the municipalities are responsible for the supervision and external inspection of the kindergartens. The county governors ensure that the municipalities within their county perform this responsibility correctly. According to the Framework Plan, kindergartens are to carry out their own internal quality assessments.,

Child-related assessment

There is no formal assessment of children at the pre-primary level. However, staff in kindergartens regularly share with parents their observations regarding the child's health, well-being, development and learning.

Centre-level assessment

Pedagogical practice is evaluated regularly, mainly in the form of self-evaluation on the basis of staff reflections (Norwegian Directorate for Education and Training 2017). The frequency is not prescribed, but the results must be recorded in the kindergarten's annual report (European Commission/EACEA/Eurydice 2019, 128f).

When evaluating kindergartens, the children's perspective is also important and, in addition to observations by staff, even the youngest children and their parents have the opportunity to contribute. In addition, staff ensure that they communicate regularly with parents about the children's health, skills and development. This is usually done through informal conversations when the children are brought and picked up (European Commission/EACEA/Eurydice 2019, 20, 130). *RefLex* is a self-assessment tool offered by the Directorate for Education and Training that helps ensure compliance with the Kindergarten Act.

External evaluation

There are no specific procedures for the external evaluation of kindergartens in terms of methods or compulsory use of instruments. However, there are instruments provided by the Directorate of Education and Training for voluntary use, such as parent questionnaires or pedagogical documentation materials.

In most cases, the municipalities and county governors share the duties of external evaluation (Engel et al. 2015, 83). The municipalities are responsible for monitoring and developing the quality of kindergartens, especially with regard to process quality. They can draw on national guidelines issued by the Directorate for Education and Training (Engel et al. 2015, 58, 86). There are no formal regulations for external evaluations, which are the provider's responsibility (European Commission/EACEA/Eurydice 2019, 123f).

The criteria for external evaluations include (1) the quality of the setting (e.g. safety, minimum number of fully qualified staff, working conditions), (2) the quality of the staff (e.g. qualifications,

cooperation with parents, interactions with children) and (3) the development of the children and their achievements through observations and assessments (Engel et al. 2015, 83ff).

Inclusion agenda

Kindergartens must observe the children's right to participate by enabling and encouraging them to express their views on day-to-day life in kindergarten (Sections 1 and 3 of the Kindergarten Act, Article 104 of the Norwegian Constitution, and Article 12, No. 1 of the United Nations Convention on the Rights of the Child). The children must be able to actively participate in planning and assessing the kindergarten's activities on a regular basis. All children have a say concerning what goes on in kindergarten (see section on *Curricular Framework*) (European Agency for Special Needs and Inclusive Education 2020).

Children with special educational needs and disabilities

The Kindergarten Act ensures the right to special needs support below compulsory school age. The Act also states that children with disabilities shall be entitled to priority admission to a kindergarten.

Mostly, children with special needs or disabilities attend a regular facility. Only very few attend separate facilities (2010: approx. 2%).

In 2022, 2.1% of children in municipal kindergartens received special educational assistance; in private kindergartens this applied to 1.5% of the children (Statistics Norway 2023h, own calculations).

Inclusive practice in early childhood education ensures that all children have equal opportunities in terms of development and learning. In Norway, children who cannot benefit sufficiently from mainstream provision are entitled to receive special support. For example, there is support in sign language, but also in individual languages for children from ethnic minorities. Nevertheless, the aim is for all children to attend regular institutions and to be supported there according to their needs. Furthermore, kindergartens are expected to cooperate with health services or educational-psychological services in order to provide the best possible support for each child. For example, White Paper 19 (2015-2016) *Time for play and learning - better content in kindergarten* sets the minimum staffing ratio, calls for a minimum qualification for professionals and presents concrete measures to improve the quality of inclusive practice (Norwegian Ministry of Education and Research 2021). Studies by the United Nations Committee on the Rights of Persons with Disabilities (United Nations 2021) were also incorporated into the White Paper.

Inclusion in the kindergarten also means that the learning environment is geared towards children with special needs and that the staff look for flexible solutions that benefit everyone. This may include using digital media to support children with hearing or visual impairments.

Children with a migration background

In the *Framework Plan for Kindergartens* (Norwegian Directorate for Education and Training 2017), particular reference is made to children with a Sámi background. These children have the right to speak their language in kindergarten and to learn about their culture so that they can develop their own identity. The Sámi language and Norwegian have the same status as official languages of Norway. It is estimated, that around 50,000 to 65,000 Sámi live in Norway, between 1.1% and 1.4% of the total Norwegian population (IWGIA 2023).

In 2021, there were 20 Sámi-kindergartens and 9 kindergartens with Sámi sections in Norway, attended by 800 children (Utdanningsdirektoratet 2022).

Since 2019, children in asylum centres aged 1 year and older also have the right to attend a kindergarten for 20 hours per week free of charge (European Commission 2020, 50).

In 2022, 10.8% of the total population and 12.5% of children under 5 years had a non-Norwegian citizenship. 61.6% and 57.6% respectively of them came from EU27 countries (Eurostat 2023b, own calculations).

According to national statistics, in 2022, 23.2% of children attending kindergarten had a migration background, and 20% were from linguistic and cultural minorities. These two groups overlap considerably: 86.2% of those with a migration background also belonged to linguistic or cultural minorities (Statistics Norway 2023c).

During 2022, 4,919 asylum applications were filed, 206 of them for children under 5 years of age (Statista 2023). Approximately one third (32.2%) were filed by persons from Syria, followed by persons from Ukraine (16.9%) and Afghanistan (10.3%) (UDI 2023).

Parental leave arrangements⁵

Maternity leave (*mødrekvoten*) is part of Parental leave (also termed “mother’s quota”) and covers three weeks before the birth and up to 15 or 19 weeks afterwards depending on payment level. Six weeks following the birth are compulsory, after which the time can also be divided into smaller blocks. Either the full salary continues to be paid for 18 weeks or 80% of it for 22 weeks (up to a maximum of NOK 9,290 (€798.32)). The condition for this is having been employed during six of the last ten months before the birth and a salary that corresponds to at least half the basic national insurance benefit payment over the previous year. Unemployed women receive a one-off payment per child.

Paternity leave (*pappapermisjon*) lasts two weeks which can be taken flexibly. Payment is only made if this is negotiated with the employer. It can be taken at different times and also by other persons who support the mother.

Parental leave (*foreldrepengeperioden*), which also applies to same-sex parents, lasts 46 or 56 weeks (together with the three weeks before the birth 49 or 59), depending on which payment option is chosen. After the birth, 15 to 19 (non-transferable) weeks are provided for each parent. The remaining 16 or 18 weeks are considered family time (*fellesperioden*) and can be taken by either parent (even at the same time). As with Maternity leave, either full pay can be paid for 49 weeks or 80% for 59 weeks. Non-employed women receive a flat-rate payment of NOK 90,300 (€ 7,759.73) per child. After the first six weeks, Parental leave can be postponed until a maximum of three years after the birth or taken part time, also by both partners at the same time. However, the latter option reduces the payments.

Parents with a child between 1 and 2 years of age who do not use a publicly funded childcare place receive a monthly lump sum of NOK 7,500 (€644.50) - this amount is reduced for part-time care.

Regarding Paternity leave, it is assumed that about 89% of fathers make use of it. In 2021, 48% of mothers and 11% of fathers took unpaid leave. Family time is mostly taken by mothers. Trend-wise, it tends to be well-educated mothers and mothers with well-paid jobs who share this time with their partner. However, there is no detailed data on this.

⁵ The brief summary in this section is based on the country note for Norway by Brita Bungum and Elin Kvanne in the *International Review of Leave Policies and Research 2023* (see References).

Current challenges for the system of Early Childhood Education and Care in Norway

Country expert assessment by *Lars Gulbrandsen*

Stability of the pedagogical staff

As stated in the ECEC Workforce Profile (Gulbrandsen 2024), a major challenge for the ECEC system in Norway is the retention of well-qualified pedagogues. After many years of significant staff shortages, the number of pedagogues willing to work in a kindergarten is now sufficient to meet the pedagogue norm, even enough to meet the strengthened staff to child ratio proposed by the government in October 2022. Ways need to be found to maintain the current workforce and to ensure that a high proportion of the newly qualified pedagogues really choose to work in a kindergarten. Moreover, the volume of newly educated candidates needs to remain stable. In this respect, both the organisation and content of the work as well as wages and other forms of recognition of the employees' work, are of great importance. In 2022, there were two strike actions, the first concerning wages, the second concerning pensions. In all negotiations and reforms, the stability of the pedagogical staff should be a central concern.

Governance of the sector and the private-public mix

The kindergartens in Norway are owned either by the municipalities or by private owners (50 – 50). Since this has been the case ever since kindergartens were established in Norway, there has never been any process of privatisation in the sector. However, in recent years the question of ownership has increasingly become a topic of controversial debate, with political parties to the right supporting private owners and the parties to the left generally preferring to re-establish the private centres as centres owned by the municipalities. In 2022, the new government (The Labour party and the Agrarian party) set up an ad hoc committee (“the de-commercialisation committee”) to clarify the issue of commercial owners. The committee was hoping to secure parliamentary support on a broader base and was planning to deliver a White Paper in mid-2024. However, since the competent and experienced civil servant who had been chairing the committee decided to resign in February 2023, it is now unclear whether the committee will continue or not. Whatever the outcome, parents in general express very high satisfaction with their kindergarten, regardless of the owner. At the same time, surveys consistently show that users of private kindergartens tend to be more satisfied than users of municipal kindergartens.

Presence of staff during opening times

As a rule, ECEC centres are open for 9 hours per day. However, the centres do not have sufficient financial resources to meet the required staffing regulations all the time. Therefore, there will often be fewer adults present than the regulations specify, usually at the start and the end of the day. This reduces the amount of time that staff can carry out pedagogical work with the children. The real staff to child ratio across the whole day will therefore often be a result of how the parents use the time they are allowed to use. If many use all the time they are permitted to use, this could reduce the quality of the centre by giving each member of the staff responsibility for more children. The municipality receives the bulk of the funding for kindergartens through framework grants from the state, based on objective criteria. A rich municipality might choose to allocate more money to the centres while, for instance, a municipality which is less rich but has many elderly people needing intensive care, might choose to allocate their extra funds to care arrangements for the elderly. The philosophy behind framework grants is to promote autonomous local government, the result might be kindergartens of varied quality. Since 81 per

cent of the kindergarten costs are staffing costs, there are few possibilities to change this given the current amount of transfers from the state, the current financial situation and other needs of the municipalities, the current amount of user fees and the current opening hours.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population of Norway was 5,425,270. Over the last 20 years it has slowly but steadily increased (2000: 4,478,497; 2010: 4,858,199; 2020: 5,367,580) (Eurostat 2023a)

Total fertility rate

In 2021, the average of the total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). With 1.55, Norway is approximately on EU average (Eurostat 2023c)⁶.

Children under 6 years of age

Table 5

Norway: Children under 6 years of age, 2022

Age	Number of children
Up to 1 year	56,458
1 year-olds	53,674
2 year-olds	55,550
3 year-olds	56,293
4 year-olds	58,065
5 year-olds	60,653
0 to under 6 year-olds, total	340,693

Source: Eurostat 2023a

The proportion of children under 3 years of age in the total population was 3.1% in 2022, and that of children under 6 was 6.3%. These proportions were significantly higher than the EU averages (Eurostat 2023a).

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Table 6

Norway: Children under 6 years of age – share in total population from 2000 to 2022, in %*

		Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Norwegen	4.0	4.1	8.1
	Ø EU15 ⁷	3.2	3.2	6.4
2005	Norwegen	3.7	3.9	7.6
	Ø EU25	3.1	3.1	6.2
2015	Norwegen	3.5	3.7	7.2
	Ø EU25	3.0	3.2	6.2
2022	Norwegen	3.1	3.2	6.3
	Ø EU27(2020)	2.7	2.9	5.7

Source: Eurostat 2023a, * Own calculations, deviations due to rounding

Single households with children under age 6

In 2022, 91% of households with children under 6 were couple households. Households with single parents accounted for only 4.3% - almost exclusively single mothers (4.2%).

Table 7

Norway: Households with children under age 6, 2022

Household type	Total households	Share of total households, in %*
Households – total	500,000	
Couple households	455,100	91.0
Other types of households	23,300	4.7
Single households, total	21,600	4.3
Single households, women	20,900	4.2
Single households, men	700**	0.1

Employment rates of parents with children under age 6

In Norway, in 2022, the overall employment rate for men (15-64 years) was 80.1% and for women 75.4% (Eurostat 2023g).

In 2022, 82.9% of women and 94.3% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), both the shares of employed fathers and mothers were well above the EU-averages (63.6% and 87.2% respectively) (Eurostat 2023d, own calculations).

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 8a

Norway: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Norway (age of the youngest child: 4–5 years)*	82.0	92.0
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2021	
	Mothers, in %	Fathers, in %
Norway	82.9	94.3
Highest rate of employment in 27 (2020) EU countries ⁹	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Source: Eurostat 2023e, *Statistics Norway 2023d

For other SEEPRO-3 countries that were not part of the EU27(2020) in 2021/2022 – like Norway – data are displayed in Table 8b.

Table 8b

Employment rates in non-EU SEEPRO-3 countries, 2021/2022/2023

Countries	Parents with children under 6 years		Overall employment rate	
	Mothers in %	Fathers in %	Women in %	Men in %
***Russia (2021/2022)	67.1 (2021)	k.A.	55.6 (2022)	70.4 (2022)

Children at risk of poverty or social exclusion¹⁰

In 2022, 14.6% of children under 6 were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 16.3% (EU: 21.6%). In 2020, 2% of children under 6 and 1% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023e, f).

About the authors

Małgorzata Żytko, PhD, Professor at the University of Warsaw, Faculty of Education, head of the Department of Early Childhood Education and Teacher Training. Research interests include psychological, pedagogical, and social aspects of early childhood development and early education. Author of numerous publications, and coordinator of research under national and international grants.

Olga Wysłowska, PhD, is assistant professor at the Faculty of Education, University of Warsaw. She has participated in numerous European research and education projects, including CARE, ISOTIS, PARTICIPA, BECERID, QualityMatters and BRIDGING. Her main research interests are in professional development of ECEC staff, ECEC quality and qualitative research methodology.

Marta Pacholczyk-Sanfilippo, PhD, gained her academic experience at the University of Warsaw and the Università del Sacro Cuore in Milan. She is currently the owner and head of a nursery and combines her scientific work with educational practice in early childhood education.

1. ECEC governance in Poland

Early childhood education and care (ECEC) in Poland is split into two stages and sectors. The first stage, covering the provision of children aged 20 weeks to 3 years¹, falls under the Ministry of Family, Labour and Social Policy (*Ministerstwo Rodziny, Pracy i Polityki Społecznej*). The municipalities are responsible for the administration, management and supervision of ECEC provision. The second stage, catering for 3 to 6 year-olds², is officially recognised as the first phase in the education system and falls under the auspices of the Ministry of Education and Science (*Ministerstwo Edukacji i Nauki*). Provisions for this older age group are supervised at the voivodeship level by the Superintendencies of Education (*Kuratorium Oświaty*). These are budgetary units and their tasks include the implementation of state educational policy, i.e. the core curriculum, the allocation of financial resources and the improvement of the quality of education in the voivodeship and the competence of teachers. The 16 voivodships in Poland represent the highest level of administration.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The professional requirements relating to ECEC staff working with children in the two sectors (for children from 20 weeks up to the age of 3 and between 3 and 6 years of age) differ considerably and are regulated through different sets of legislation.

Childcare sector

Centre-based facilities for younger children are: nurseries/crèches (*żłobki*), kids' clubs (*kluby dziecięce*) and day care providers (*punkty dziennego opiekuna*); the latter can also be home-based and can care for up to 5 children.

Since 2011, when the 0–3 sector was initiated in its current form, numerous changes have been made annually to the documents regulating the sector's work. Initially, the organisation of the work of crèches, kids' clubs and day care providers differed significantly due to, for example, the number of opening hours, the age of the children and the training of specialists. Over time, these differences began to blur, and now there are virtually no differences between crèches and kids' clubs, and specialists prepared to work in a crèche can also work as a day care provider by completing an additional 40-hour course. Day Care Providers who have worked in the profession for one year have documented experience in working with children and acquire the right to work in a crèche. Nevertheless, these facilities are still recognised as different type of setting in the legal documents.

All these settings are primarily staffed by **Caregivers**. Some childcare networks, especially public ones such as the Warsaw Public Crèche Network (*Warszawski Zespół Żłobków*), have introduced

¹ In particular cases this may be extended until the end of the (school) year in which the child reaches the age of 4.

² In particular cases, if the setting has available spaces, it can accept a child as young as 2½ years old.

additional internal regulations for ‘junior’ and ‘senior’ Caregivers, allowing for promotion. Unpaid **Volunteers** may also be employed in such facilities and their scope of responsibility is defined individually. In settings attended by more than 20 children, at least one **Nurse** or **Midwife** must be employed. In addition, occasionally there are providers which employ or establish partnerships with specialists such as Psychologists, Physiotherapists or Speech Therapists, but this is regulated at the municipality level in the case of public facilities or at the provider level in the case of private ones.

Education sector

Kindergarten Teachers are the main professionals responsible for children between 3–6 years who primarily attend kindergartens (*przedszkola*). Other types of settings are: pre-primary sections in primary schools (*oddziały przedszkolne w szkołach podstawowych*) and pre-primary centres (*punkty przedszkolne*). Depending on the profile of the setting (e.g. inclusive, special education), its size and the particular needs of the children enrolled, teachers collaborate with different specialists.

From May 2022, one **Specialist Support** person (Pedagogue, Psychologist, Speech Therapist, Educational Therapist or Special Needs Teacher) must be employed for every 100 children (the post can be split between more specialists according to the needs of the children who attend the setting). From 2024 this number will be increased to 1.5 posts. The number of specialists in inclusive settings (those involving about 25% children with special educational needs) and for special education ones, e.g. for children with sight impairment, is higher and depends on its size. Supporting teachers (*Nauczyciele wspomagający*) are employed when a child diagnosed with special educational needs, e.g. behavioural disorders, attends the setting.

A person is qualified to occupy the position of a **Supporting Teacher** if he/she:

- Has completed a university degree (at least BA) in a field that qualifies for working with children with physical or intellectual disabilities or children with challenging behaviour.
- Is qualified to occupy a position of a Kindergarten Teacher and, in addition, has completed postgraduate studies (at least one year with a minimum of 60 ECTS credits) or a qualifying course in a field that qualifies for working with children with intellectual or physical disabilities.

The employment of a **Teacher's Aide** (*Pomoc nauczyciela*) is a decision of the managing body. In practice, they are employed for groups of 3 year-olds and/or for mixed-age groups in which 3 year-olds make up a certain proportion of the group. They must have at least completed eight years of primary school. Duties of a Teacher's Aide are individually defined by the Kindergarten Director and typically involve cleaning and care activities, accompanying the group outdoors, and preparing materials for organised activities.

Table 1 outlines the profiles and minimum qualification requirements of staff working directly with children and also categorises the **core practitioners** according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at the end of this chapter).

Table 1

Poland: ECEC staff in centre-based settings

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level

	<i>Punkt dziennego opiekuna</i> Day care provider 0–2 years			

³ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In Poland the relevant formats are 0–2/3 and 2½/3–5 years and 6–7 years, since primary school may start at age 6 or 7, depending on parental choice.

⁴ n/a = not applicable

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level

				EQF level: n/a ISCED 2011: 2
Educational specialists – Pedagogue, Psychologist, Speech Therapist, Educational Therapist, Special Needs Teacher <i>Specjalista</i>	<i>Przedszkole</i> Kindergarten 3–5 years	Qualified co-worker	All ages	5 years university, Master’s degree specialisation in the field of Pedagogy, Psychology, Speech Therapy, Educational Therapy or Special Pedagogy ECTS credits: 300 EQF level: 7 ISCED 2011: 7

In addition to completing the relevant initial education/training, ECEC employees must meet additional criteria: they must not be deprived of parental authority or have suspended or limited parental authority, the need to fulfil maintenance obligations if imposed by an enforcement order issued or approved by a court, and not be convicted of an intentional crime.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Qualification standards of ECEC leaders in centres for younger and older children differ. The minimum educational requirements for leaders of **centres for under 3 year-olds** are lower than those for directors in kindergartens. More specifically, a leader of a crèche or kids’ club is required to have **either** a university degree (Bachelor’s degree as minimum) and at least three years’ experience of working with children **or** a secondary (vocational) education and five years’ experience working with children. In addition, the leader of a kids’ club may be a qualified Caregiver whereas a **Kindergarten Director** must hold a Master’s or Engineering degree, a pedagogical preparation or qualification course in education management and a qualification to hold a teaching position in a particular kindergarten (see *Chapter 2.4* for a description of supervisory tasks). There are no additional requirements such as attending a specified course for leadership.

2.3 Centre-based posts of responsibility

At the level of national legislation there are no posts of responsibility which the Caregivers or Kindergarten Teachers take on in addition to their regular work for a specifically designated area (e.g. working with migrant parents, mentoring students during their practicum), for which there may be specified time allocation and payment.

At the voivodship or municipal level, it may happen that agreements are made with third parties (e.g. universities) and activities are implemented that provide additional pay, such as mentoring prospective professionals during their internships.

2.4 Co-ordinating and supervisory staff

Tasks concerning the administration of facilities for children **under 3 years of age** are the responsibility of municipalities, which supervise nurseries, kids' clubs and day care providers in terms of the conditions of their operation (confirming compliance with legal requirements). Supervision and coordination of the pedagogical work depends on the organisational arrangements adopted by the municipality.

The pedagogical work of the setting may be regulated internally (the head of the establishment determines the rules of work according to general national guidelines) and/or externally, e.g. the facilities operate in a network that is bound by common operating guidelines.

At the municipal level, territorial units are set up which also coordinate and supervise the work of **kindergartens** and schools. Their tasks include, among others, the establishment, operation, transformation and closing down of centres. Coordination and supervision of the kindergarten's pedagogical work is carried out internally and externally.

The internal process in kindergartens is the responsibility of the Kindergarten Director, who is obliged to develop a pedagogical supervision plan for each school year. The plan of supervision should take into account conclusions from pedagogical supervision exercised in the previous kindergarten year and basic directions of implementation of the national educational policy, including tasks of pedagogical supervision announced annually by the Minister of National Education.

Within the framework of supervision, the Kindergarten Director is obliged to conduct internal evaluation with respect to issues considered crucial in the kindergarten's operation and to use its results for improvement of quality of kindergarten's work; to control teachers' compliance with rules of law concerning education, upbringing and care activities as well as other statutory activities of the kindergarten; to support teachers in the performance of their tasks, taking into consideration a diagnosis of the kindergarten's work, planning developmental actions, including teachers' motivation regarding professional improvement, organisation of trainings and meetings, monitoring of the kindergarten work.

External supervision is conducted by Superintendencies of Education. The forms of pedagogical supervision are control and support and concern: observing, analysing and evaluating the course of education and upbringing processes and the effects of teaching, upbringing and caring activities and other statutory activities of the institutions, assessing the status and conditions of teaching, educational and caring activities and other statutory activities of kindergartens, schools and educational institutions, providing assistance to establishments, as well as to teachers in the performance of their didactic, educational and caring tasks, and inspiring teachers to improve existing or implement new solutions in the education process, using innovative curricular, organisational or methodological activities aimed at developing pupils' competences. The subject of the inspection by the educational superintendent may also include compliance with children's rights and verification of conditions in the kindergarten in terms of safety and hygiene.

2.5 Specialist support staff

All kindergartens are required to employ specialist support staff such as a: Pedagogue, Psychologist, Speech Therapist, Educational Therapist, Special Needs Teacher. Their compulsory presence is something new in Polish ECEC settings. These specialists are hired by the Kindergarten Director. The number and type depends on the size of the centre and the needs of the children. All specialists need to have completed a corresponding higher education programme for their specialisation. They usually work with individual children or small groups in pull-out programmes. They also sometimes provide classes for whole groups, support teachers, conduct consultations with parents and organise more specialist support if necessary.

Psychological-Pedagogical Counselling Centres (*Poradnie psychologiczno-pedagogiczne*) cooperate with kindergartens as independent entities. By virtue of employing a larger number of specialists and having a more extensive resource base and more advanced and comprehensive activities in supporting the development of the child (also through providing support to the family), as well as working with children over a number of years regardless of the setting the child attends. Tasks of the counselling centres are: diagnosing (e.g. developmental disorders), giving recommendations, therapeutic activities (e.g. speech therapy), conducting support groups (e.g. for socioeconomically disadvantaged families), mediation, crisis intervention, counselling, consultations, information and training activities, prevention activities (e.g. distributing preventative materials). Many cities also have teacher support centres – such as the Warsaw Centre for Educational and Social Innovation and Training (*Warszawskie Centrum Innowacji Edukacyjno-Społecznych i Szkoleń*), where various types of teacher support courses are organised.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Despite the wide variety of qualifications that enable them to work with the youngest children, this work is mainly undertaken by women with vocational training. The structural composition of staff in this sector is presented in *Table 2*.

Table 2

Poland: Professionals working in centre-based settings for 0–2 year-olds, 2021

Staff categories	Proportion of workforce, in %
Staff with relevant university degree (Bachelor or Master), of which: <ul style="list-style-type: none">– Caregivers– Nurses– Midwives	19.3 approx. 10 7.6 1.7
Caregivers with a relevant vocational qualification (upper secondary, post-secondary)	71.7
Male practitioners	0.08
Staff with a minority ethnic background or a 'background of migration'	No national data available

Source: Central Statistical Office 2022

Settings for children from 3 up to school entry

In August 2022, there were about 180,000 frontline staff working in kindergartens (teachers: 157,465, specialists: 10,377, supporting teachers: 4,843 and teachers' aides: 5,731), of whom the great majority were women with Polish origins. The structural composition of staff working with children from the age of 3 up to school entry is presented in *Table 3*.

Table 3

Poland: Professionals working in facilities for 3–5 year-olds, 2022

Since 2017, in order to obtain the right to work as a teacher in kindergarten and lower primary schools, a 5-year unified Master's degree must be completed. Teachers who have already obtained a Bachelor's degree remain eligible to teach in kindergarten and lower primary school.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Childcare sector

The right to work as a **Caregiver** in crèches and kids' clubs is granted to a ...

- Qualified professional: Nurse, Midwife, Kindergarten Teacher, Primary School Teacher, Social Pedagogue, or a graduate from a university or postgraduate study programme in a field related to early childhood education and care
- Person who has a university degree in any subject in which the curriculum includes issues related to the care or development of the young child and who has followed an 80-hour specialised training to update and supplement their knowledge and skills

- Person who has at least an intermediate school-leaving certificate and one year of experience working with children up to the age of three directly before starting work at the ECEC centre (no specialised pre-service training required); if the person’s professional experience took place earlier than six months it is required to undertake an 80-hour supplementary training course within six months of starting as a caregiver in order to update and complement their knowledge and skills.
- Person who has at least an intermediate school-leaving certificate and has accomplished 280 hours specialised training including at least 80 hours of work supervised by a fully qualified Caregiver.

The right to work as a **Caregiver in day care provision** is granted to a ...

- Person who has completed 160 hours of specialised training
- Qualified Nurse, Midwife, Nanny, Kindergarten Teacher, Primary School Teacher
- Social Pedagogue who has completed an additional 40 hours training (with Baby and Child First Aid)
- Person who has worked for at least 12 months with children under 3 years of age directly before starting work at the childcare provision (no specialised pre-service training required).

The right to work as a **nanny in a home-based provision** is granted to a person who is not the parent of the child he/she is to care for, is over 18 years of age and will undergo a sanitary-epidemiological examination and will receive a medical certificate of no impediment to work.

Education sector

There are four types of staff mainly responsible for early childhood education and care of 3 to 6 years old children: Kindergarten Teacher, Supporting Teacher, Teacher's Aide and Educational Specialist.

To work as a **Kindergarten Teacher** a person is required to complete a five-year unified Master's degree. This study programme also provides qualifications to work in the lower grades of primary school (the first three years of eight grades primary school). The main responsibilities of the Kindergarten Teacher relate to the day-to-day organisation of the developmental environment of a group of children, while taking care of the individual needs of each child; collaborating with the staff, families and the local community to provide a coherent developmental environment for the children; monitoring and documenting children's activities and development.

Kindergarten Teachers can also work in the childcare sector.

Total			2,800	300

Source: Authors' translation of the Regulation of the Minister of Science and Higher Education, of July 25, 2019 (Ministry of Science and Higher Education 2019)

*Note: Contents for these learning outcomes are not defined by the regulation, but specified by the qualification institution to ensure substantive and pedagogical preparation (psychological, pedagogical and didactic) for teaching in kindergarten or the first three grades of primary school.

The number of ECTS credits that may be obtained through training using distance learning methods and techniques may not exceed 25% of the number of ECTS credits necessary for graduation.

4.3 Alternative entry and qualification routes, system permeability

Currently, there are no alternative paths of entry into the ECEC teaching profession. However, due to staff shortages, various options are being considered, none of which are legally regulated to date.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Childcare sector

Caregivers can enter the profession with a variety of qualifications, but the majority of them (more than 70%) complete a specialist 280-hour training programme of which 80 hours have to be dedicated to practical training. There are no regulations that specifically define how practical training should be organised. Typically, trainees will work for a period of two weeks (five days a week, eight hours a day) in an ECEC setting which the training provider cooperates with, under the supervision of experienced Caregivers. During the practical training trainees may be required to keep practice diaries, complete observational charts or take part in meetings with the mentoring Caregiver to discuss specific issues. Sometimes, however, during the practical training the trainee only observes the work of experienced staff. Private and public training providers are required to submit detailed training programmes to the Ministry for accreditation. Some of these training programmes are organised online but the practicum requirement stays the same.

Education sector

Within the framework of the five-year Master's programme for prospective Kindergarten Teachers, a minimum of 240 hours organised workplace experience is a legal requirement. This is less than 10% of the time available for the degree programme; and the number of ECTS credits a student can earn for this practical training is 10 which is just over 3% of the total number of credits. Students' practicum sessions are carried out in three types of activities.

The first is the mid-year practicum. Its main objective is for the student to learn about the organisation of the kindergarten and school facilities. The specific practicum concept may vary depending on the university and the characteristics of the settings with which the university cooperates. Usually, however, the activities consist of a small group of students visiting the setting, talking with the staff about their roles in the setting, and observing classes. These visits can be accompanied by assignments agreed with the practicum coordinators from the university and the kindergarten (or primary school), e.g. observing and analysing the way in which classes are delivered.

The second type are general pedagogical practices which last up to 30 hours. This is a time when the student can learn about the work of other educational settings, e.g. the local community centre.

The third type of practicum is a full internship, which usually lasts for about two weeks (approx. 60 hours, although the number of hours is not legally specified). It may take place in one block or may be staggered across this time. During these internships, the students may conduct teaching activities independently on the basis of their lesson plans and these may be observed and discussed by a supervisor from the university; sometimes they also participate in meetings with parents. Students learn how to apply acquired knowledge, and to develop both pedagogical and social skills. Importantly, work placements may not be conducted using distance learning methods and techniques.

The quality of the initial professional education of Kindergarten and Primary School Teachers is monitored by the Ministry of Education and Science (*Ministerstwo Edukacji i Nauki*).

6. Continuing professional development (CPD) of ECEC staff

Legislation/regulation: The legislation treats the professional development of ECEC professionals working with children up to the age of 3 and children from 3 up to 6 years very differently. Current legislation relating to the **childcare sector** does not refer in any way to the professional development of Caregivers and time for in-service training is not guaranteed as part of Caregivers' contracts. Nevertheless, in some cases they may have the opportunity to participate during working hours with financial support from the service provider. In both the public and private sectors, this issue is the responsibility of the lead authority (municipality or private owner/provider). The decision whether participation in the training is obligatory or optional is taken at the municipality level for the public settings and by the owners of the facilities for the private ones. If training is mandatory, its cost is covered by municipalities in the public sector and owners in the private sector; if it is not obligatory, the cost is usually covered by professionals.

As the priority related to meeting the accessibility of settings is met in a growing number of municipalities (also due to the demographic decline), the issue of monitoring, evaluation and

improving the quality of services is increasingly being raised among professionals and decision-makers.

The national legislation regulating rights and duties of Kindergarten Teachers and school teachers in the public **education sector** concerning continuing professional development is the *Teacher's Charter* (26 January 1982). The document secures financial resources for CPD at different levels of the education system. At the national level, the Minister of Education is obligated to provide funding equal to the salaries of 5,000 average trainees (the lowest level in the teacher's career advancement process) and to distribute this accordingly. The same amount and its allocation rule applies at the voivodeship level. Moreover, at the municipality level funding equal to 1% of planned annual expenditure earmark for teachers' salaries has to be secured for CPD activities and distribution of these means has to be consulted with the Teachers' Unions.

Main forms: For *Caregivers*, various different forms of professional development are available, e.g. courses or conferences on the open market, often provided online, on a limited-time basis. In municipalities that manage a large number of nurseries/crèches, they are often organised into a network which supports professional development initiatives based on internally developed strategies. For example, in 2020 in Warsaw, where the network includes around 80 public settings, a professional development strategy has been introduced that makes extensive use of the organisation's staff resources. As part of an annual training cycle, network staff with specific competences share their knowledge and experiences with other professionals in the organisation. Another example is an initiative undertaken by the public crèche network in Łódź, which cooperates with universities in the city. Depending on the needs of the staff, different specialists organise training meetings for practitioners. In addition, these two largest crèche networks organise national (often including international speakers) conferences enabling all stakeholders to learn about the latest trends, policies and research findings in ECEC.

CPD for *Kindergarten Teachers* is usually organised as one- or two-day activities such as courses, workshops or conferences.

CPD providers: Despite the lack of legislative solutions to support the professional development of Caregivers in the **childcare sector**, there is a growing number of organisations, mainly private firms, offering various forms of in-service training for this professional group. However, there is no reliable information on the quality of the support they offer. As a result, accreditation of pre-service training programs is the only regulation ensuring quality in the professional preparation of Caregivers.

In the **education sector**, the Centre for the Development of Education (*ORE – Ośrodek Rozwoju Edukacji MEN*) is a public teacher training establishment with a nationwide reach run by the Minister of National Education and Science. Moreover, there are between a dozen and several dozen accredited, public and non-public centres of teacher's professional development in each Voivodeship offering diverse programmes also specifically designed for Kindergarten Teachers. Many teachers also benefit from in-service training programmes funded by the EU.

Leave entitlement: *Caregivers*, due to the lack of time allocated to professional development activities under their contracts, and in the current context of staff shortages, have very limited (in some cases none) opportunities to participate in training sessions during working hours. The situation is slightly better for facility leaders, who, because of the little or no time they spend directly working with children, have more opportunities in this regard.

Kindergarten Teachers are granted 15 hours per week for non-teaching tasks, which also include participation in professional development activities. It is up to the Kindergarten Director to decide how much time is allocated specifically for CPD as well as whether participation is obligatory or optional. Occasionally, the need for specific training in a particular area is decided by author-

ities at the voivodeship or national level; in such cases participation is obligatory for all professionals. Such CPD sessions are usually held when new legislation or new regulations are introduced, e.g. regarding the organisation of activities in the face of the COVID-19 pandemic. Costs of all obligatory forms of training are covered through the national subsidy. Professionals in the public sector may also claim partial or complete reimbursement of costs of optional training from this subsidy. Decisions on reimbursement are dependent on the recommendation of the Director (whether the setting benefits from having an employee with such training) and at the municipal level (whether the available subsidy is sufficient to allocate resources for such a purpose). In some private settings owners of facilities also provide such support for employees; however, this is not a common practice. Similar rules for participation in CPD apply to Directors and Specialised Support Staff. Teacher's Aides working under the rules of the Labour Code and not under the Teachers' Charter, have barely any options to take part in any training.

Contents: Regarding the content of in-service programmes, the decisions may be taken at all levels of the system. Concerning the Kindergarten Teachers, a specific course may be recommended by the Ministry of National Education – Teacher's Charter (1982) Voivodeship Superintendent, the municipality educational supervisor, or be chosen by the Kindergarten Director. Individual teachers may also apply to attend a particular CPD activity within working hours and for (co-)financing to the director of the setting. Many of the training proposals and offers are related to the current geopolitical and pandemic situation. Training offers on distance learning (both related to the technical operation of computer programmes as well as distance learning methodologies) and dealing with the challenging situation of children forced into isolation due to COVID-19 and the social, emotional, physical and cognitive consequences of this situation are proposed closer to the market. Moreover, in connection with the huge wave of refugees from Ukraine who have come to Poland in the context of the Russian invasion of their country, there have been some proposals in recent months for training on supporting children struggling with trauma in a broad sense.

Career advancement: Participation in CPD is not explicitly or formally recognised in terms of the career advancement of Kindergarten Teachers. However, it contributes favourably towards promotion. The promotion of teachers is regulated by the Teacher's Charter specifying three categories in the teaching career: (1) novice teacher, (2) appointed teacher, and (3) certified teacher. All promotions are regulated by law (Ministry of Education and Science 2022). In general, in order to be promoted to a higher grade, a teacher should hold the required qualifications, complete a "probationary period" (the period preceding an application for promotion) and receive a positive assessment of his/her professional achievements during this period (the teacher follows an individual professional development plan during the probation period) and have his/her application for promotion approved by a so-called qualifying board or, in the case of a contract teacher, pass an oral examination before an examination board. This process aims to motivate teachers in their personal and professional development and thus, additionally, to improve the quality of educational institutions.

Research: There is no research or monitoring practice investigating the effectiveness of CPD and its impact on the daily work of kindergartens.

7. Working conditions and current workforce issues

7.1 Remuneration

The rules for calculating the salary and its amount for a Caregiver and a Kindergarten Teacher differ considerably. In general, Kindergarten Teachers earn more and their income is similar to that of primary school teachers. With regard to both professions, the sector in which the core practitioners work (whether private or public) also makes a difference (in favour of the private sector).

An additional and very important factor is the location. Those working in large metropolitan areas tend to have higher earnings, especially in kindergartens. However, regardless of all the characteristics mentioned, independent living off earnings, especially for a Caregiver, may be very challenging and in big cities barely possible.

Caregivers in crèches and kids' clubs and day care provision

Caregivers in the public sector are considered municipality employees, and therefore their salaries depend on the municipality regulations. Remuneration usually starts at the lowest domestic amount. In 2023, this was PLN 3,490 gross salary (PLN 2,709.48 net salary) (The Council of Ministers 2022), which in euros amounts to approximately €784,75 (gross) and €609,24 (net)⁶. It is also typical that municipality employees receive various types of benefits, e.g. "thirteenth salary", or Christmas bonuses. The salaries of municipal employees are made public.

Private sector: Salaries, bonuses and allowances vary widely. Contract arrangements often depend on the level of pre-service training, qualifications and experience. Earnings are usually an internal arrangement between the employer and the employee and are not published.

Nanny

A Nanny's salary depends on the arrangement made between the parents and the Nanny. Typically, it depends on her/his professional background but also on the availability and scope of duties that is expected. Parents can apply for a subsidy of up to 50% of the minimum social security contribution of the nanny they employ.

Kindergarten Teachers

Public sector: Teachers' salaries consist of several components: basic salary, remuneration for overtime and substitute hours, awards and other benefits resulting from the employment contract, e.g. motivation or position.

The level of the basic salary and some of the bonuses are determined at the national level but some of the components including the motivational bonus which in some settings may be quite high, are determined at the municipal level. Detailed information on the rules for calculating teachers' salaries in the public sector is included in the Teacher's Charter (Ministry of National Education 1982), and some additional executive regulations. Most of all, salaries depend on the level achieved within the teaching career. From September 2022, the former four-stage promotion system has been replaced by a three-stage system. The following basic salaries were allocated for each stage from 2023 (gross salary): (Ministry of Education and Science 2023).

Novice teacher – PLN 3,690 (approximately €830)

Appointed teacher – PLN 3,890 (approximately €875)

Certified teacher – PLN 4,550 (approximately €1,023).

⁶ Conversion rate Juni 2023

Private sector: Teachers' salaries are paid in accordance with the Labour Code. Usually teachers in the private earn more than in the public sector; however, their contracts typically foresee more contact hours.

7.2 Full-time and part-time employment in ECEC provision

There are no overall data on full-time or part-time employment in crèches and kindergartens. However, taking into account the specifics of the Polish labour market, it can be hypothesised that the vast majority of Caregivers and Teachers work full-time.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

There is no regulation regarding support for professionals starting careers in settings for the youngest children. Both public and private facilities use individually elaborated strategies in this respect. In kindergartens, novice teachers are assigned a mentor (Appointed or Certified Teacher chosen by the Director) during the first stage of work. This experienced professional is responsible for monitoring and supporting their work. A teacher who is assigned to this role receives a bonus amounting up to 20% of the minimum rate of the teacher's basic salary, taking into account their level of education and degree of professional advancement.

7.4 Non-contact time

According to the Labour Code, full-time Caregivers work eight hours a day, 40 hours a week. If Caregivers can devote part of their working time to other tasks not related to the direct care of children, these are individual cases resulting from specific arrangements with the employer (public or private).

In the public sector, Kindergarten Teachers working with groups of 3, 4 and 5 year-olds are with the children 25 hours a week, and those working with 6 year-olds (the only compulsory kindergarten year intended as a preparatory year for school) for 22 hours. Given that full-time is 40 hours per week, they have 15 and 18 non-contact hours respectively per week. In the private sector, in most kindergartens teachers work 35-40 hours a week with the children.

7.5 Current staffing issues

The current workforce situation in ECEC is problematic. In private and public settings in both the childcare and the education sector, there is a shortage of qualified staff and staff turnover is high. The situation is slightly better in smaller cities, where the labour market is less flexible and career changes are more difficult. The fact that teachers are ageing is also an issue as the average age of a teacher is 47 years (this figure represents the average age of teachers at all stages of education in the country). There are many reasons for this challenging situation, among which the most frequently mentioned are low salaries, the low prestige of the profession (especially in the case of Caregivers), difficult working conditions and pressure due to parents' demanding attitude. In addition, new regulations requiring prospective teachers to complete a unified five-year degree discourage young people from choosing this career path.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

In recent years, there have been no significant changes in the legislation regarding the professionalisation of Caregivers or other staff in provisions for children aged 0–2 years – unlike the sector for older children, where regulations concerning minimum level of pre-service training have been changed as well as career progression paths and salary levels at different career stages. Currently, a unified Master's degree programme is the basic requirement for the initial professional education/training of Kindergarten Teachers, a degree programme that also qualifies for working in the first three grades of primary school. This means that Kindergarten Teachers are entitled to work with children from the age of 20 weeks up to 10 years (as mentioned in earlier chapters of the report, preschool and lower primary school teachers are entitled to work in creches and kinds' clubs). Teachers who have a degree at a lower level do not lose their teaching credentials; they are encouraged (but so far not required) to supplement their education by pursuing individual study paths in Master's programmes for which the subjects completed in the Bachelor's degree are automatically credited and the study takes less time to complete. From September 2022, the career progression path for teachers is also changing. The previous four-stage procedure has been replaced by a three-stage procedure (the first two stages have been merged). Salaries for entry-level teachers have also been increased (junior and senior teachers' salaries are now more differentiated). One more change was to increase and clarify the qualifications of professionals entitled to teach English in kindergartens.

9. Recent country-specific research focusing on ECEC staff

The professional situation of Caregivers and Kindergarten Teachers is not a frequent topic of research in Poland. However, statistical data on professionals' backgrounds is systematically collected by the Ministry of Education and Science as well as the Central Statistical Office, which gives a general overview of the situation of the workforce in the ECEC sector (e.g. age, education, sector) – see *Chapter 3*.

Below three projects are highlighted which were carried out in recent years involving Polish ECEC professionals, focusing on their work and professional development.

Professional development tools supporting participation rights in early childhood education – PARTICIPA

Source: Correia, N. et al. 2020; Wysłowska, O. et al. 2021; PARTICIPA 2022 (see *References* for further detail).

Countries involved: Portugal (project lead: Polytechnic Institute of Porto); Belgium (Odisee); Greece (Hellenic Open University), Poland (University of Warsaw).

Funded by Erasmus+; Grant Agreement No. 2019-1-PT01-KA202-060950)

Aims: To develop four independent but complementary professional development resources: Massive Open Online Course (MOOC), self-assessment tool designed to support teachers, assistants, and coordinators. The tools are intended to strengthen ECEC teachers', assistants', and

coordinators' knowledge on children's right to participate, their positive attitudes regarding the design, implementation, and monitoring of practices that promote children's participation, ability to identify, design, implement, and monitor practices that enhance children's right to participate and ability to work together. The resources are designed to work at multiple levels of the ECEC centre, to identify, use, and sustain the individual and organisational resources needed to increase children's participation.

Procedure: Over 100 ECEC professionals (ECEC teachers, assistants, coordinators) from Belgium, Greece, Poland and Portugal participated in focus groups, questionnaires, individual online and telephone interviews to discuss professional development tools. Another 100 ECEC professionals from the four countries explored the feasibility of the tools by taking part in classroom observations (CLASS pre-k; Involvement and Well-being Leuven Scale, Children Participation Scale) and completing questionnaires.

Selected findings/Implications:

- Involvement of ECEC professionals in the development of PD tools should be integrated into the tool design process from the initial stage of the work, since professionals have specific opinions on what and how they would prefer particular contents to be delivered.
- PD tools for ECEC staff should take into account the different responsibilities of professionals in different positions and structural conditions, since professionals seem to be very sensitive to the adequacy of PD tools for their scope of responsibilities.
- The structure of the tools should allow professionals to use them in a flexible manner (individually vs team) and take into account the diverse structural contexts in which ECEC professionals work (possibilities resulting from rural/urban location).
- Contextual support is a necessary condition for promoting child participation at the classroom and centre level.

Teaching for Holistic, Relational, and Inclusive Early Childhood Education – THRIECE

Source: Nowak-Łojewska, A. 2020; THRIECE 2022 (see *References* for further details)

Countries involved: Ireland (Marino Institute of Education – leader, Dublin), Portugal (University of Porto) and Poland (University of Gdansk); six ECEC facilities (two per country).

Funded by Erasmus + fund -Agreement 2017-1-IE01-KA201-025698

Aims: Elaboration of three online training modules for ECEC and primary school professionals on an alternative view on quality in ECEC that supports inclusion through recognition of the crucial nature of relationships and interactions based on three pillars:

- Holistic education: emphasising the interrelatedness of domains of development, drawing on children's own talents, emotions, cultures, and interests
- Inclusive education: Supporting sociocultural diversity and inclusion, and opposing exclusive, standardised perspectives and methods
- Relational education: Identifying positive interactions and relationships is more important for measuring quality in ECEC than narrow numerical indicators.

Procedure: Triangulation of methods and data (interview, observation, document analysis, etc.). The study used statements of the respondent teachers and children in three preschools, three primary school and four HEIs, observations from meetings and classes, photographs, art works made by the children, and videos. Action research – to discern the current situation in the education of ECEC and early school children, to see the shortcomings, to take action (three pillars holism, relationality, inclusion), with concern for the contribution of theory to practice.

Selected findings: Elaboration in three languages (Polish, English, Portuguese) of three online free of charge training modules:

- Holistic education (supporting children's development in the cognitive sphere: thinking, speaking, creating strategies; emotional: interests, coping with stress, joy of creation; social: cooperation, group communication, conflict resolution)
- Inclusive education (transcending cultural prejudices; popularising inclusive practices, the "Other" is seen as interesting, worth knowing)
- Relational education (the quality of relationships and interactions for children's learning and development, developing empathy, assertiveness, expression, cooperation).

Baby on the net (*brzdąc w sieci*) – the phenomenon of mobile device use among children aged 0–6 years

Source: Rowicka and Bujalski 2021 (see *References* for further details)

Funded by the Polish Ministry of Health (Programme: Scientific, epidemiological research, monitoring, evaluation – supporting scientific research on behavioural addictions as well as tackling the problems associated with them).

Aims: The aim of the survey was to identify the phenomenon of mobile device use by children aged 0–6 years and their parents and to diagnose the risks associated with pre-school children's (and their parents') device use.

Procedure: The study was carried out in a mixed design, consisting of a qualitative and a quantitative part. The qualitative research involved eight group interviews with parents and eight interviews with children aged 5–6 years. To diversify the sample, the qualitative research was conducted in five locations (Warsaw, Tricity-Gdansk, Sopot, Gdynia and Krakow).

A total of 48 parents and 60 children participated in the qualitative study. The quantitative survey was conducted on a representative sample of 2,000 parents of children aged 0–6 years.

Selected findings: The survey found that more than half of children aged 0 to 6 years (54%) use mobile devices such as a smartphone, tablet, smartwatch or laptop. The age of the child is correlated with mobile device use. The older the children, the more of them use mobile devices: this is the case for three out of four children aged between 48 and 72 months. The average age of initiation of mobile device use is 2 years and 2 months. Most children use mobile devices that access the internet (are online) (75%). Children aged 0 to 6 years use mobile devices for more than one hour per day on average. The majority only use content aimed at children (films, cartoons, games, colouring books, etc.) (88%). Almost three out of four children aged 0 to 6 use mobile devices while travelling by car (or other means of transport), one in two during meals and one in nine during the toilet. More than half of parents allow their child to use mobile devices when they spend time with them. Almost two-thirds of parents give their child a mobile device as a reward. Just over 80% of parents give their child a mobile device when children are bored and two-thirds of parents give their child a mobile device when children cry or fuss.

Implications: The results of the research indicate the need to raise awareness among parents of children in kindergarten about the risks associated with the use of digital devices by the youngest children. Supporting parents to spend time with their children in a more varied way is conducive to developing their relationships and communication skills without the mediation of electronic devices.

10. Workforce challenges – country expert assessment

Currently, the Polish early childhood education and care system faces a number of workforce challenges. Here three will be outlined which particularly demand attention due to their potentially far-reaching consequences.

1. **Staff shortage and staff turnover.** The low level of salaries, the low social prestige of the profession, unstable working conditions, e.g. regarding frequent changes in the organisation of the education system, are the reasons for the increasing staff shortages and staff turnover. It is a significant issue throughout the country (especially in large cities), and in both the private and public sectors.
2. **Lack of social inclusion specialists.** Due to the huge number of refugees from Ukraine who have been in Poland since February 2022 (the beginning of Russia's invasion of Ukraine), professionals have been confronted with numerous new tasks related to the integration of new residents, both children and their families, often after extremely traumatic experiences. Until this time, Poland had a low percentage of children with diverse ethnic and cultural backgrounds; now, in this completely different situation, there is a lack of professionals to shape integration policy, but above all a lack of effective support for professionals in their daily work.
3. **Intricacy of legislation and recommendations.** The work of professionals in early childhood education and care centres is regulated by a number of institutions (e.g. educational, sanitation, health) operating at different levels (national, provincial, municipal). In combination with increasing bureaucratic requirements, this creates very frustrating working conditions for teachers, is the cause of misunderstandings and, in some situations, prevents professionals from carrying out their tasks. For example, recommendations from psychologists and nutritionists clearly indicate the benefits of children and caregivers eating together, whereas through some municipal regulations this is prohibited in many public settings.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC provision are **nursery/crèche** (*żłobek*, 0–2/3), **kindergarten** (*przedszkola*, 2½/3–6) and **pre-primary class/group** (5–6/7)¹ in schools (*oddziały przedszkolne w szkołach podstawowych*). Any additional forms are described where appropriate.

Historical milestones in ECEC in Poland

Early 20th century	First kindergartens established
1919	The term <i>kindergarten</i> is used for the first time during the Nation Education Reunion (Teachers' Parliament)
1932	The term <i>kindergarten</i> is included in the Act on School Education.
1940s	Expansion of provision following increased entry in the labour market by women
1961	First Act on School Education issued – aims of early childhood education and basis for curriculum
1970s	Expansion of early education for 6 year-olds (introduction of reading elements, emphasis on preparation for primary school)
1991	Amendments to Act on School Education
1990–1993	Following the political changes, responsibilities for kindergartens are delegated to the municipalities.
Up to 1995	Many ECEC settings are closed down.
1999	Further amendments to Act on School Education – reforms focus on schools.
2008	<ul style="list-style-type: none"> – Early education reform starts – new curriculum for pre-primary education – Introduction of alternative forms of provision: pre-primary education hubs, kids' clubs, playgroups
2009	Entitlement to a place in kindergarten or pre-primary class introduced for 5 year-olds
2011	<ul style="list-style-type: none"> – Kindergarten enrolment made compulsory for 5 year-olds and attending a pre-primary class for 6 year-olds – Act on Care for Children up to the age of 3 comes into force. – Responsibility for provision for under 3 year-olds transferred from the Ministry of Health to the Ministry of Family, Employment and Social Affairs.
2013	Five hours in kindergarten are free of charge for parents; additional hours may not cost more than approx. €0.22 per hour.
2015	Entitlement to a place in kindergarten or pre-primary group introduced for 4 year-olds.
2016	Parents are entitled to decide at what age their child starts school (6 or 7).
2017	<ul style="list-style-type: none"> – Entitlement to a kindergarten place introduced for 3 year-olds – New Act on School Education (<i>Prawo oświatowe</i>) comes into force, with revised curricula for kindergarten and pre-primary education and confirmation that in justified cases children may be enrolled from the age of 2½ years.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4, and 5 year-olds in countries with a primary school entry age of 6 years. In Poland the relevant formats are **0–2/3** and **2½/3–5** years and **6–7** years, since primary school may start at age 6 or 7, depending on parental choice.

2021	The ministries for National Education and for Research and Higher Education are merged and renamed as the Ministry of Education and Science.

ECEC system type and auspices²

The system of early childhood education and care in Poland is organised in two separate sectors. Childcare settings for children under 3 years of age come under the Ministry of Family and Social Policy (*Ministerstwo Rodziny i Polityki Społecznej*, MFSP 2020). ECEC settings for children from 3 years to school entry at the age of 7 are considered the first stage of the school system and are the responsibility of the Ministry of Education and Science (*Ministerstwa Edukacji i Nauki*) (MES 2021). The municipalities (*gmina*) are responsible for the management, maintenance, equipment and administration of ECEC facilities in both sectors. Monitoring and evaluation of pedagogical work of settings for younger children is also carried out at the municipal level; for pre-primary education settings, they take place at both the voivodeship (province) and municipality levels.

General objectives and legislative framework

The most important legislation regarding the **childcare sector** is the “Act on Care for Children under the age of 3” (MFSP 2011 with amendments up to 2023). It indicates that the roles of settings are: care, upbringing and education, nevertheless highlighting the custodial aspects, providing meals and rest times, age appropriate indoor and outdoor activities and health and hygiene. The “Act for Entrepreneurs” (2018) describes the infrastructure and sanitation requirements for nurseries and kids’ clubs. Hygiene and Sanitation Guidelines, updated in 2020, also apply.

For kindergartens/**pre-primary education**, the Act on School Education (*Prawo oświatowe*, 2016) and the accompanying regulations have applied since September 2017. Among other things, these formed the framework for the admission of 2½ year-old children to kindergartens. Overarching goals in the early education of children aged 3 and above are described in the national core curriculum which has been in force from the 2017/18 school year and the relevant Ministry of National Education and Science guidance and regulations (Gazette of the Republic of Poland 2017) as supporting and promoting the intellectual, emotional, social, creative and aesthetic dimensions of children’s development; fostering values; and learning a foreign language. Furthermore, supporting children from minority groups concerning only the minorities defined in the Act on national and ethnic minorities (Ministry of the Interior and Administration 2005) and those with special educational needs are mentioned.

Besides the Education Act (*Ustawa o systemie oświaty*, 1991 with amendments up to 2022), which is the main document framing the work of kindergartens (MES 2022), key legislation relating to the working conditions, rights and obligations of professionals is the Teachers’ Charter (*Ustawa o Karta Nauczyciela*, 1982 with amendments up to 2014, Ministry of National Education 1982).

² The Eurydice country report on ECEC in Poland provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

ECEC entitlement and compulsory attendance

There is no legal entitlement or obligation for children up to the age of 3 to attend an ECEC setting.

Since 2017, 3 to 7 year-olds have a legal right to a place in an ECEC setting for at least 25 hours per week. Attendance is voluntary for 3 to 5 year-olds whereas for 6 year-olds, attendance at a kindergarten or pre-primary class at school has been compulsory since 2017. The legal entitlement was introduced on a staggered basis: in 2009 for 5 year-olds, in 2015 for 4 year-olds and in 2017 for 3 year-olds.

Priority admission to kindergarten is given to: a child from a large family, with disabilities, whose parents or siblings are persons with disabilities, who is being brought up by only one parent, who is being brought up in a foster family. In addition, each municipality may set additional criteria, which may be based on local social needs.

In recent years, there have been a number of changes to the starting age of primary schooling. Currently, primary school starts at age 7. Since December 2015, attendance has been compulsory for 7 year-olds but optional for 6 year-olds. Parents can apply for an earlier start, provided the child has attended kindergarten for at least one year (Ślusarczyk et al. 2018, 43). This means that, since January 2016, parents can decide whether their 6 years old child should remain in kindergarten or attend school. Most parents decide to enrol their children for school when they are 7 years old.

Main types of provision

Childcare sector

Since 2011, municipalities are legally in a position to provide **four** different options for children up to 3 years of age. However, the following types of setting are not a requirement and their provision depends on the local needs and resources.

Nurseries/crèches (*żłobki*) admit children from 20 weeks up to 3 years of age. Children may attend crèches for a maximum of ten hours per day, however this time may be extended in justified cases, which requires submission of an application by a parent. One Caregiver may look after for up to eight children between 1 and 3 years, and five if children under 1 year or with special needs are enrolled. Group size depends on the amount of square meters available. Children may be enrolled up to the end of the school year in which they turn 3 years, meaning that some 4 year-olds also attend the settings. Most children are between 2 and 3 years of age.

Kids' clubs (*klub dziecięcy*) may accept up to 30 children who have to be at least 1 years old.

These two types of facilities, which have a care, upbringing and educational function, must be registered in a municipal register and come under the supervision of the respective municipality. This applies to both public and private settings. They also need positive assessments from fire and health authorities. The availability of places varies greatly from region to region.

Day care providers (*dzienny opiekun*) were originally a form of home-based provision and are now becoming increasingly centre-based. In principle, this form of care was supposed to be more informal, comprising groups of five children (upon parental agreement eight children) from 1 up to 3 years of age or groups of three children when a child below the age of 1 or with special educational needs attends. However, due to lower requirements than in the case of crèches and kids' clubs with regard to pre-service education/training of Caregivers and the structural conditions of operation, facilities that combine several day care providers in one space are increasingly common. In 2021, 1,637 such providers supplied 10,131 places (CoM 2022, 12).

A **nanny** (*niania*) may also be employed by parents in their own home for children aged 20 weeks and above. Salary and social security are paid by the parents, who receive partial reimbursements from the Social Insurance institution (Gov.pl 2023). By the end of 2021, there were 4,900 nannies whose employment was co-financed from the state budget (CoM 2022, 18).

Overall, although the number of settings for under 3 year-olds has increased significantly over the past ten years, in 2021 only just over half of the municipalities had such facilities, and especially in rural municipalities there are usually fewer (36%).

According to national statistics, there were a total of 5,304 ECEC settings for under 3 year-olds in 2022. These included 4,446 nurseries and 858 kids' clubs (GUS 2023b, 1) and, in 2021, 1,637 home- and centre-based day care providers (see *Table 1*), with the greater majority of children attending nurseries. This means that over the past ten years, the number of childcare settings for under 3 year-olds has increased immensely, rising by more than 700% between 2012 and 2021 (CoM 2022, 12, own calculations). Most of these facilities are open between 5 and 10 hours.

Table 1

Poland: Number of childcare settings for children up to 3 years of age, from 2012-2022

Type of childcare setting	2012	2014	2016	2018	2020	2021	2022*
Nurseries/ crèches	791	1,667	2,272	3,155	3,985	4,270	4,446
Kids' clubs	105	384	515	676	795	831	858
Day care provider (home- and centre-based)	30	442	664	1,249	1,576	1,637

Source: CoM 2022, 12, *GUS 2023b, 1

Education sector

There are **four** types of provision available for 3 to 7 year-olds and, in justified cases, for 2½ year-olds (OpenLex 2023).

Kindergarten (*przedszkola*) is the regular form of provision for 3 to 6 or 7 year-olds, with 1,249,173 children enrolled in 13,756 settings in 2022/23 including 7,486 children with disabilities in 350 special education kindergartens (GUS 2023a). Facilities are open all year round, usually for nine hours a day (public settings often have a two-week holiday break when children may be referred to other settings). Same-age groups are the most common form of grouping children in kindergartens, although mixed-age groups may be found in rural areas or in private settings where there are not enough children to form homogenous age groups or because of the pedagogical approach adopted. The children are grouped according to age and sex (mostly in single sex groups); 3 year-olds, sometimes 2½ year-olds (group 1); 4 year-olds (group 2); 5 year-olds (group 3); 6 year-olds (group 4). The final year for 6 year-olds may be organised in primary school and in this case it is called a pre-primary class/group. However, it is organised with same structural characteristics as a group 4 in kindergarten.

Pre-primary/kindergarten units in primary schools (*oddziały przedszkolne w szkołach podstawowych*) are an obligatory form of provision for 6 to 7 year-olds. This one year of preparatory pre-primary provision may be organised in kindergarten or primary school. In 2022/23, 260,235 children were enrolled in 7,305 settings (GUS 2023a). In kindergartens such units usually operate five days a week all year round, whereas in primary schools they follow the regular school year.

Two further forms of ECEC are available, but they are relatively rare:

Pre-primary centres (*punkty przedszkolne*), with a total of 1,399 settings serving 24,140 children in 2022/23; and **Pre-primary education units** (*zespóły wychowania przedszkolnego*), with a total of 45 units serving 664 children (GUS 2023a).

Both types admit a maximum number of 25 children. Mostly they are organised according to different sets of structural regulations or according to simplified criteria in rural regions with limited resources. Pre-primary education units are usually open for at least three hours per day and 12 hours per week. A pre-primary centre, on the other hand, implements activities on all workdays of the week throughout the school year, except for breaks set by the responsible authority. The basic criterion that distinguishes the two forms is the frequency of classes. Opening hours are flexible, depending on local needs, the needs of parents and the number of children. Alternative forms of pre-primary education have become increasingly popular, e.g. forest, farm or foreign language settings (Ślusarczyk et al. 2018, 66).

According to national statistics, in 2022/23 there were a total of 22.505 ECEC settings for children over 3 years of age (GUS 2023a), though an increasing number of 3 year-olds attend settings in the childcare sector. Currently, the demand for places exceeds the available supply.

Provider structures

Childcare sector

Nurseries/crèches and kids' clubs are mostly run by private individuals and organisations. In 2022, there were 4,446 nurseries in Poland, 25,2% of which were public settings providing approximately 40% of all places (indicating that non-public settings are smaller: on average 31 places in private and 61 in public nurseries). Only 18.1% (155) of kids' clubs were run by municipalities (*gmina*). Most (66.2%) of non-public nurseries and kids' clubs were run by legal persons and entities; in the public sector, local governments provided the largest number of nurseries and kids' clubs (96.8%) GUS 2023b, 1, 2).

Education sector

The administration and organisation of kindergartens is usually the responsibility of the municipalities, which must ensure that sufficient places are available for children aged 3 years and older. In the event that a municipality has a shortage of places in public facilities, it can make a request to private providers and give them subsidies equal to the public fees.

In 2022/23, 52.2% (7,181) of the 13,756 kindergartens were run by municipalities, county governments or provincial self-government units (GUS 2023a). In 2021/22, 36.2% (4,884) were owned by private non-profit providers, 6.1% (825) by commercial companies and 3.4% (457) by religious organisations (GUS 2022, own calculation).

Table 2

Poland: Number of children in kindergartens and pre-primary settings for 3 to 6/7 year-olds, 2022/23

	Settings	Children
Kindergartens	13,756	1,472,572
<i>Of which special kindergartens</i>	<i>Of which public: 7,181*</i>	<i>Of which public: 847,224*</i>
	350	7,486
Pre-primary hubs	1,399	24,140
Pre-primary group in kindergarten	45	664

	Settings	Children
Pre-primary units in primary schools	7,305	260,235
Total	22,505	1,534,212

Source: GUS 2023a, *Own calculations

Participation rates in regulated ECEC settings

According to Eurostat data, in the past it was unusual for children under 3 years of age to be enrolled in an ECEC setting. In 2022, only 15.9% of under 3 year-olds attended a centre-based setting, but even this represents an eight-fold increase compared to 2005.

Of children between the ages of 3 and school entry, enrolment rates more than doubled, with 62.8% attended an ECEC setting in 2022 compared to only 30% in 2005.

Table 3

Poland: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005–2022

Year	Weekly hours of attendance	Under 3 year-olds in %	3 years to minimum compulsory school age in %
2005	1 to 29 hours	0	8
	Over 30 hours	2	22
	No enrolment in ECEC	98	70
2010	1 to 29 hours	0	10
	Over 30 hours	2	32
	No enrolment in ECEC	98	58
2015	1 to 29 hours	1.1	7.5
	Over 30 hours	4.2	35.5
	No enrolment in ECEC	94.6	57.0
2022	1 to 29 hours	1.6	18.5
	Over 30 hours	14.3	44.3
	No enrolment in ECEC	84.2	37.2

Source: Eurostat 2023b, slight deviations from 100% due to rounding

Childcare sector

In kids' clubs and nurseries/crèches, children up to the age of 1 were the smallest group (1.2%), followed by the oldest ones from 3 years of age (5.9%) and those from 1 to 2 years of age (39.7%). The largest group of children attending kids' clubs and nurseries/crèches were children aged 2–3 years (53.2%) (GUS 2023b, 2).

Table 4

Poland: Number and enrolment rates of children in nurseries/crèches, kids' clubs and day care provider settings, by age, 2022

Age	Number	Enrolment rate in %*
0 to 1 year-olds	2,156	0.7
1 to 2 year-olds	70,146	19.8
2 to 3 year-olds	94,116	25.1
Under 3 year-olds	166,418	15.8

Age	Number	Enrolment rate in %*
3 to 4 year-olds	10,447	2.7
	176,865	9.6

Source: GUS 2023b, 2 *calculated according Eurostat population data 2022

The number of enrolments in ECEC settings for under 3 year-olds has been steadily growing over the last few years. Nurseries/crèches provided about 178,537 care places, which accounted for about 87.2% of all available places. In addition, a total of approximately 4,900 Nannies were enrolled in health insurance at the end of 2021 (CoM 2022, 18).

Education sector

In 2022/23, 94.9% (GUS 2023a) of children aged 3–6 years participated in various forms of pre-primary education and there were 22,505 registered ECEC facilities, attended by 1,534,212 children. However, participation rates across the country vary substantially from 85% to 95%, depending on the region (GUS 2023a).

Of all children attending ECEC settings in 2022/23, 80.9% were enrolled in a kindergarten and 19.1% in the various other types of preparatory pre-primary facilities (see *Table 5*).

Table 5

Poland: Number of children in ECEC settings by age, 2022/23

Age	Kinder-garten	Pre-primary hub	Pre-primary group in kindergarten	Pre-primary class in school	Total
Under 2 years	21,642	771	16	1,769	24,262
3 year-olds	278,984	6,822	223	28,597	315,542
4 year-olds	320,593	7,683	234	41,957	372,023
5 year-olds	337,324	5,561	164	63,181	407,861
6 year-olds	276,292	2,514	24	120,496	401,327
7 year-olds and above	6,852	789	3	4,235	13,197
Total	1,241,687	24,140	664	260,235	1,534,212
Proportion of children attending specific types of ECEC setting*	80.9%	1.6%	0.04%	17.0%	

Source: GUS 2023a, *own calculations

Age-related enrolment rates according to Eurostat data are shown in *Table 6*. Almost all 5 and 6 year olds attend an ECEC setting, although attendance is only compulsory for 6 year-olds.

Table 6

Poland: Number and enrolment rates of children in ECEC settings, by age, 2021

Age	Number of children	Enrolments rates in %
2 year-olds	22,255	5.7
3 year-olds	309,097	76.2
4 year-olds	346,936	89.5
5 year-olds	360,509	96.3
6 year-olds	373,847	98.9

Source: Eurostat 2023h, I

However, in 2021/22, pre-primary education institutions were attended by a much larger proportion of children aged 3–5 years in urban areas (92.9%) than in rural areas (85.3%). The overall attendance rate was 89.7% (Eurydice 2023, 4.1).

Financing and costs for parents

In 2019, a total of 0.58% of GDP was spent on early education (OECD 2023). According to national statistics, in 2021, 3.7% of GDP was spent on education as a whole, roughly 18% of that for nursery schools and other pre-primary education settings (GUS 2022, 25).

Parents enrolling their children in an **ECEC setting for under 3 year-olds** have to pay a fee and cover the costs for meals. The exact costs are set by the municipality; in the case of private settings, the provider decides on the fees. In some municipalities, such as the city of Warsaw, some private settings are also subsidised and the costs for parents are the same as for the public ones. Fees are lower in the public sector than in the private sector. Since 2018, subsidies for settings providing for under 3 year-olds have also come from the Labour Market Fund.

The salary for a Nanny depends on the arrangement made with the parents. Typically, it depends on her/his professional background but also on the availability and scope of duties that is expected. Parents can apply for a subsidy of up to 50% of the minimum social security contribution of the Nanny they employ.

Kindergartens are financed through public subsidies. In public kindergartens, enrolment is free of charge for five hours a day. Additional hours and meals must be paid for. However, the municipality can determine how many hours are free of charge. Since October 2017, an additional hour may not cost more than PLN 1 (€0.22). Families with low incomes receive concessions. For 6 year-olds, attendance is free regardless of the number of hours. If the institution is more than 3 km from the place of residence, the municipality is obliged to provide free transport. Each municipality can decide on partial or total cost reductions.

Since 2016, child benefit (until the child is 18 years old) has also been granted at PLN 500 (€109.90) per month; in addition, there are various models of tax relief. Since 2019, child benefit is paid regardless of household income.

The costs for private kindergartens are significantly higher than for public institutions and vary greatly – between roughly €150 and €350 per month. They also charge an additional admission fee of €50 to €300. Meals are usually included, but costs of €2.50 to €5 per day for meals may still apply (Ślusarczyk et al. 2018, 66).

In 2022, a couple with two children spent about 5% of their net household income on childcare costs³ (OECD.Stat 2023).

Staff to child ratios and group size

In **nurseries** and **kids' clubs**, a maximum of eight children are cared for by one professional. If a child with special educational needs or a child under 1 year of age is among them, the group size is reduced to five. In nurseries with more than 20 children, at least one nurse or midwife is also employed, sometimes assisted by volunteer support staff.

Group size is only limited by the square meters available (in kids' clubs there may be a maximum of 30 children in the whole setting, even if the amount of space would allow for more). For the

³ The calculation is based on the following fictitious model: two parents working full-time (average income); two 2- and 3-year-old children in full-time care; relevant care allowances included.

first five children 16 square meters are foreseen and it increases by at least 2 m² if the duration of the stay of the children does not exceed five hours per day, and by at least 2.5 m² if the duration of the stay exceeds five hours per day.

Since 2022/23, the legislation provides for an increase in the group size limits in **kindergartens** and **pre-primary units in primary schools** due to the large number of children from Ukraine. In primary schools the limit is 28 children, including three from Ukraine. In public ECEC settings there are two core practitioners per group, one working in the morning and the other in the afternoon (with about one hour of overlap in the middle of the day). In private settings very often only one teacher is responsible. In both public and private settings core practitioners are usually supported by auxiliary staff; their responsibilities are decided by the respective setting. In integrative settings, additional staff with a special education qualification work alongside the core practitioners. In most cases, children in ECEC settings are divided into same-age groups. However, mixed-age groups can also be formed – especially in rural areas when there are sometimes not enough children to set up same-age groups or due to the chosen pedagogical approach.

Curricular frameworks

Childcare sector

There is no national curriculum for work in nurseries and kids' clubs. Staff are expected to create a family-like atmosphere for children's play, with an emphasis on their psycho-motor development and working closely with parents. The Centre Leader is responsible for ensuring compliance with health and hygiene regulations and responding to parents' perspectives.

Recently, there has been increased interest in various methods of working with young children, also in settings for children up to 3 years of age. In the public debate, the topic of preparing an educational programme for establishments working with children under the age of 3 is increasingly being discussed, but no related requirements have as yet emerged. Publications on 'good practice' are on the increase. Due to the lack of legislation in this respect, some settings adapt standards for working with children developed by NGOs. One example is the 'Quality from the beginning' Standards of *educare* for 0–3 year-olds by the Comenius Foundation for Child Development (2019). This document provides the pedagogical framework for nearly 80 settings across Poland established by the Foundation under the SPYNKA program (www.spynka.org) to tackle the crises in ECEC sector resulting from the influx of Ukrainian families with children.

Education sector

All kindergartens follow the National Pre-Primary Education Curriculum (*Podstawa Programowa Wychowania Przedszkolnego dla przedszkoli oraz innych form wychowania przedszkolnego*) (MES 2013), issued by the regulation of the Minister of National Education (February 14, 2017) and the primary school core curriculum. The curricular framework also provides for children with intellectual disabilities (Gazette of the Republic of Poland 2017). Recommendations are provided for promoting the physical, emotional, social and cognitive development of children. 17 tasks of pre-primary education are defined, e.g. to create conditions that allow children to develop and play freely in a safe environment.

ECEC staff are required to develop their own centre-specific educational plan, using the national curricular framework as a reference point. The professionals have a free hand in the choice of methods.

Digital education

No guidelines for supporting digital competence are provided in the Polish national curricular framework for pre-primary education.

Monitoring – evaluation

In the pre-primary education sector in Poland, the term ‘evaluation’ has been replaced with the terms ‘control’ – here referred to as ‘inspection’. This refers to both internal and external pedagogical supervision and assessment.

Child-related assessment

Assessment of process and pedagogical quality regarding the work with **under 3 year-olds** is not required by law. However, professionals consult with parents and provide information about their child on an ongoing basis).

According to the Regulation of the Minister of National Education of 9 August 2017, professionals working with **over 3 year-olds** with special educational needs should keep records based on daily observations. These provide a basis for identifying specific developmental needs, collaborating with parents and cooperating with counselling and healthcare specialists (Ministry of National Education 2017). Otherwise there are no specific regulations for assessing children in kindergartens.

Professionals working with **6 year-old children** in all types of ECEC facilities are obliged to inform the parents in writing by the end of April about their child’s ‘readiness’ for school. This document relates to the child's mastery of the requirements of the pre-primary curriculum in the physical, emotional, social and cognitive areas. It also includes a description of the degree of independence of each child, their developmental needs, predispositions, aptitudes and interests and any further comments the teacher finds important. Parents decide whether they want to share this information with the primary school staff.

Centre-based internal evaluation

There are no national regulations for internal self-evaluation measures in ECEC settings for **under 3 year-olds** (European Commission/EACEA/Eurydice 2019, 126), whereas in the larger municipalities self-evaluation measures are becoming more and more common.

Centre leaders in **kindergartens** are responsible for mandatory annual internal evaluations, both in terms of scope and subject matter. They are expected to review the alignment of the settings’ educational plan with the National Curriculum and document this in an annual report. At the beginning of each school year, these supervision plans are presented to the Teachers’ Council. Parents’ views are also heard (European Commission/EACEA/Eurydice 2019, 128, 131). The results of internal evaluations are included in external evaluations and are intended to contribute to quality improvement. They are not published.

External Evaluation

Municipalities are responsible for the inspection and supervision in terms of organisation and operation of both public and private settings for **under 3 year-olds** (MFSP 2020). The focus is on the structural characteristics of the settings, namely compliance with legal regulations.

The Ministry of Education and Science and the regional education authorities (*kurator oświaty*, REA) are responsible for the professional supervision of all ECEC settings for **3 to 6 year-olds**

with regard to pedagogical aspects. The latter appoint inspectors from their ranks and carry out the inspections.

External inspection is based on legally defined criteria and take place both on a scheduled and ad-hoc basis. As a rule, documentation provided by the ECEC setting is inspected, an on-site visit takes place and a report is prepared. The choice of instruments (e.g. questionnaires, interviews, etc.) is left to the inspectors. According to the current Regulation (Gazette of the Republic of Poland 2021) there are two main areas of control (§ 22 p.2): (a) the teachers' compliance with the statutory provisions on teaching, upbringing and caring activities; (b) the educational and care processes in the school or ECEC institution and their effects.

The results of the external and internal inspections could provide a basis for monitoring quality in early education and initiating discussions on quality improvement.

Inclusion agenda

Children with disabilities and children with a background of migration are explicitly included in the National Pre-primary Education Curriculum (2017).

Children with special educational needs and disabilities

Children with special educational needs may attend either a mainstream setting or a special needs institution. In kindergartens, specific groups can also be created in which these children receive individual support. If necessary, the core curriculum can also be adapted to the respective needs of the children.

In 2022/23, there were 350 special kindergartens (approximately 2.5% of all kindergartens), attended by 7,486 children (approximately 0.9% of all children in kindergartens) (GUS 2023a). In 2022/23, 512 mainstream kindergartens provided integrative groups (3.7% of all kindergartens), 62 mainstream kindergartens had special groups (0.5%) and 45 mainstream kindergartens provided both integrative and special groups (2%) (Eurydice 2023). Children with disabilities who have a corresponding confirmation from a counselling centre can also attend special education facilities where they receive the necessary support.

During 2022, 1,600 children under 3 years with disabilities attended mainstream settings, which represents about 0.5% of this age group. More than a half (59.5%) of facilities for young children were equipped with amenities for children with disabilities (GUS 2023b, 1, 3, own calculation).

Children with a migration background – Children from Roma communities

Members of some national and ethnic minorities are guaranteed State support related to the preservation and development of their cultural identity. One of the requirements for inclusion among the minorities receiving State support is that their ancestors have lived in the present territory of the Republic of Poland for at least 100 years (Ministry of the Interior and Administration 2005). The recognised minorities include persons from Belarus, Czech Republic, Lithuania, Germany, Armenia, Russia, Slovakia, Ukraine and Jewish persons. Persons of Karaite, Lemko, Romani and Tatar origin are considered ethnic minorities.

In 2022, only 1.2% of the total population had a non-Polish citizenship, with a large majority (91.9%) coming from countries outside the EU27(2020). Also, among children under 5 years of age, only 0.9% were of non-Polish origin, 92.3% of those came from countries outside the EU27 (Eurostat 2023c).

Roma are one of the four recognised ethnic minorities in Poland. The Act on Ethnic and National Minorities (2005) stipulates their rights to preserve their cultural and linguistic identity. It is recommended that children from these four ethnic minorities should be supported according to their specific needs and given the opportunity to speak their family language.

At the request of parents, public ECEC settings are obliged to offer groups in "national and ethnic minority languages (e.g. Lithuanian, German, Belarusian, Ukrainian or Kashubian) for children over 3 years of age (European Commission/EACEA/Eurydice 2019, 115).

Since 2017, all children are meant to participate in activities that "prepare them for the use of a foreign language"; this has been introduced in all settings although teachers do not have to meet certain requirements for teaching a foreign language. Language tuition is free of charge.

According to Council of Europe estimates, 12,731 Roma (0.1% of the population) live in Poland (European Commission 2022). The new national strategy for the inclusion of the Roma community in Poland (2021-2030) emphasises, among other things, the goal of ensuring that Roma children have sufficient access to and attend kindergartens and pre-primary settings. The Ministry of the Interior will issue minimum standards for the educational activities of ECEC settings and centres for the integration of children which should to be met in order to maintain their funding. Furthermore, additional groups for Roma children are to be created as the one-year compulsory pre-primary year alone may in some cases be insufficient for bridging the educational gap of Roma children before starting primary school. From 2014 to 2020, an average of 168 Roma children per year benefited from the intervention programme (Ministry of the Interior and Administration 2020, 59).

As of 12 September 2023, the UN reported that 1,681,930 refugees from Ukraine are recorded in Poland – the highest share among the European countries. 134,554 (about 8%) of them were children under age 4 (UN 2023).

The maximum group size in ECEC settings has been increased from 25 to 28 if there are at least three Ukrainian children in the group. Support for Ukrainian children is organised at the municipal or facility level. For example, there are some CPD offers on how to deal with traumatised children and families, or special materials such as books or videos. Nevertheless, many professionals feel left alone in the end. Some NGOs, such as the Comenius Foundation's SPYNKA network, have set up about 80 ECEC settings, mainly (but not exclusively) for Ukrainian children, which also employ Ukrainian refugees (Foundation for Child Development 2022).

Parental leave arrangements⁴

Maternity leave (*urlop macierzyński*) is granted for 20 weeks (or more with a multiple pregnancy), of which up to six weeks can be taken before the birth. 14 weeks after the birth are compulsory. There are two payment options: (1) 20 weeks with 100% of the average income (without upper limit) of the last 12 months. Parental leave is then remunerated with 70% of former average earnings. (2) 81,5% of the average income of the last 12 months and the same proportion during Parental leave. The decision on this must be made 21 days after birth.

Fathers receive two weeks of fully paid **Paternity leave** (*urlop ojcowski*), which must be taken in the first 12 months after the birth, either altogether or in two blocks.

⁴ The brief overview in this section is based mainly on the country note for Poland by von Anna Kurowska, Barbara Godlewska-Bujok and Piotr Michoń in the *International Review of Leave Policies and Research 2023* (see *References*).

Parental leave (*urlop rodzicielski*) is granted for 41 weeks per family and is paid according to the option chosen before Maternity leave. 23 weeks are a family entitlement, 18 weeks are an individual (nine weeks for mother and father each) and non-transferable entitlement. The time can also be taken in (a maximum of five) parts, at most up to the child's 6th birthday. It is possible for both parents to take Parental leave at the same time. It is also possible to work (at most half-time); Parental leave is then extended accordingly.

Up to 36 months of **Childcare leave** (*urlop wychowawczy*), independent of Parental leave, can be taken by persons who have been employed for at least six months up to the child's 6th birthday. 34 months are considered a family entitlement, one month each for mothers only and fathers only. If the household income is less than PLN 674 (€150.60), an allowance of PLN 400 (€89.38) is paid for 24 months. The time can be taken in up to five different parts; both parents can take it at the same time.

To those who are not entitled to a maternity allowance (e.g. students, unemployed), a parental allowance of PLN 1,000 (€223.45) per month is paid.

In 2021, 99% of the beneficiaries of parental leave were mothers. In 2018, fathers took an average of 12.3 days of paternity leave, slightly less than in 2016 (13.2).

Current challenges for the ECEC system in Poland

Country expert assessment by

Małgorzata Żytko, Marta Pacholczyk-Sanfilippo, and Olga Wysłowska

Raising societal awareness of the importance of high quality of ECEC

An increase in societal awareness regarding the crucial role of early childhood education is needed. It is necessary to present the arguments from research and international experience on how the quality of ECEC affects social, educational, economic levels of life in society. For this reason, it is important to assess the main problems of Polish Early Childhood Education, especially the role of education and care in this field, and to prepare recommendations for policy makers, experts, and parents regarding the dimensions of change needed in supporting families with young children.

Creation of a common vision and a system of cooperation in ECEC

It is necessary to integrate the different ideas, ways of thinking, activities and institutions around the main aim – raising the quality of ECEC. We need a clear vision of the social policy makers for parents, teachers, stakeholders and other people interested in early childhood education. Institutional integration of ECEC by the Ministry of Education and systematic cooperation between three services: education, health and welfare could be a significant challenge for the future. The preparation of well qualified, creative people for working in ECEC, ready to engage in educational and social activities is necessary (Brzezińska and Czub 2012).

Organisation of ECEC provision

Access to kindergartens and other forms of ECEC provision varies significantly from region to region. Across the country, there are insufficient places to meet the rising demand, particularly in terms of provision for under 3 year-olds in urban areas. Moreover, the children who would profit most from participation are the least likely to attend. The Ministry of National Education has therefore declared an increase in the participation rates as a priority: since June 2013, all 4

year-olds and since September 2017, all 3 year-olds are entitled to a place in a public kindergarten. The municipalities are required to provide the places needed and receive subsidies for ECEC services for children aged 3 years and above. However, concerning provision for the under-threes, this is a significant challenge, since it is mostly only the larger municipalities who are in a position to comply with this requirement. The greatest organisational challenge, however, is the need to merge the two sectors by including services for the youngest in the education sector. This would be a clear acknowledgment of the importance of early childhood education and care for the holistic development of children.

Social programmes for families

Another challenge is the continuing fall in the birth rate. It has therefore become a government priority to provide a range of support measures for young couples to encourage them in making the decision to have a child. Alongside a year's paid combined maternity leave and parental leave, the parents of each child receive monthly support from the State to the amount of 500 zlotys (the Rodzina 500 plus programme – this is about €104). Despite this, the birth rate was - 3.6 per 1,000 persons in the population in April 2022.

A new programme to support parents of young children is the Family Care Capital. The benefit, introduced in January 2022, is available from the month in which the child turns 12 months old until the end of the month in which the child turns 35 months old. The maximum amount to which the care capital is granted is PLN 12,000 (€2,495) per child. Family care capital is eligible in the amount of PLN 500 (€104) or PLN 1,000 (€207) per month. Parents themselves can indicate whether they want to receive the capital in the amount of PLN 500 for 24 months or in the amount of PLN 1,000 for 12 months. The benefit is available regardless of family income.

However, in April 2022, an additional change was introduced, and if parents have only one child, or the child is already 36 months old and still attending a nursery or kids club, they can receive a subsidy for the child's stay in the chosen type of a setting as part of the family care capital.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022 the total population in Poland was 37,654,247. This has been falling slightly but steadily for more than 20 years (2000: 38,263,303; 2010: 38,022,869; 2020: 37,958,138) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries was in France (1.84), and the lowest in Malta (1.13). Poland was well below the EU27 average with 1.33 (Eurostat 2023d)⁵.

Children under age 6

Table 7

Poland: Number of under 6 year-olds in the total population, 2022

Age	Number of children
Under 1 year-olds	325,293
1 year-olds	354,899
2 year-olds	374,765
3 year-olds	389,709
4 year-olds	406,536
5 year-olds	388,295
Total 0 to under 6 year-olds	2,239,497

Source: Eurostat 2023a

In 2022, 2.8% of the total population were children under 3 years of age, 5.9% were children under 6 years of age. These proportions are slightly above the respective EU27 average.

Table 8

Poland: Distribution of under 6 year-olds in population by age compared with EU averages, 2000 to 2022, in %*

Year	Comparison Poland/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Poland	3.1	3.5	6.6
	Ø EU15 ⁶	3.2	3.2	6.4
2005	Poland	2.8	2.8	5.7
	Ø EU25	3.1	3.1	6.2
2015	Poland	3.0	3.2	6.2
	Ø EU28	3.0	3.2	6.2

Single households with children under age 6

61.2% of all households with children under 6 in Poland in 2022 were couple households. Single parent households accounted for only 2.4% – most of them were single mothers (2.2%).

⁵ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 9

Poland: Households with children under age 6, 2022

Household type	Total households	Share of all households, in % ⁺
Total households	3,826,200	
Couple households	2,340,000	61.2

Employment rates of parents with children under 6 years of age

In Poland, in 2022, the overall employment rate for men (15-64 years) was 79.6% and for women 67.4% (Eurostat 2023j).

In 2022, 59.3% of women and 79.4% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were the second lowest (average 87.2%) and also those of mothers were well below the EU-average (63,6%) (Eurostat 2023e, own calculations).

Table 10a

Poland: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %

Children at risk of poverty or social exclusion⁹

In 2022, 14.1% of children under 6 in Poland were at risk of poverty or social exclusion. This proportion was significantly lower than the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 15.9% compared with the EU average of 21.6% (Eurostat 2023f).

Historically, the proportion of children in Poland classified as at risk of poverty or social exclusion reached a record high of 31.0% in December 2009 and a record low of 15.8% in December 2020 (Trading Economics 2023, based on Eurostat data).

In 2019, 9.2% of children under 6 suffered from severe material deprivation – higher than the then EU28 average of 5.0%. For the total population, it was 7.9% compared with the EU average of 3.7% (Eurostat 2023g).

This proportion of children in Poland classified as being severely deprived decreased from 30.3% in 2009 (the sixth highest level in the EU at the time) to 6.2% in 2020 (the second lowest figure) (Notes from Poland 2022).

⁹ 'At risk of poverty or social exclusion' refers to the situation of people either at risk of poverty (threshold set at 60 % of the national median equivalised disposable income after social transfers), or severely materially deprived or living in a household with a very low work intensity. (https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Glossary:Material_deprivation)

Under the programme “Rodzina 500 plus”, families with dependent children are entitled to a child benefit in the amount of PLN 500 (roughly €104) per child up to the age of 18, regardless of the income earned by the family.
