Foreword

Throughout Europe, early childhood education and care systems are currently subject to constant shifts, undergoing both expansion and consolidation. Reform strategies and innovations characterise the situation in many countries. The staff working in ECEC settings are the key contributing factor in terms of the quality of daily interactions with the children and the quality of their learning environments as well as in terms of supporting their wellbeing and learning. At the same time, a major issue in many countries is the growing shortage of staff, in some cases an acute shortage. In addition, demographic changes and EU funded exchange programmes are influencing the mobility of the ECEC workforce in Europe. This has brought the qualification, competence and task profiles of early childhood staff – leaders, pedagogues and assistants – perhaps more than ever before to the forefront of professional interest and makes it necessary to continuously update the available data.

The **SEEPRO-3** study presented here is the fourth in a series of research projects based at the State Institute for Early Childhood Research and Media Literacy (IFP) in Munich and funded by the German Federal Ministry for Family and Youth Affairs (*Bundesministerium für Familie, Senioren, Frauen und Jugend*). The new SEEPRO-3 study focuses on the 27 European Union states and six non-EU countries – a total of 33 countries. Reports on the early childhood workforce and the ECEC systems in Norway, Serbia and Switzerland are presented for the first time in this context.

In this complete edition, the results of the SEEPRO-3 project, conducted between March 2021 and February 2024, are presented in 33 country chapters, each with two parts.

ECEC Workforce Profiles (country reports) present information on the status quo regarding qualification requirements for ECEC professionals, the composition of the workforce, the systems of initial professional education and continuing professional development, current reform initiatives and research projects, selected working conditions of staff and current challenges relating to staffing issues. Building on a network of longstanding contacts with European universities and research and policy institutes, cooperation partners were recruited through international collegial networks. The initial reports were drafted according to a detailed research specification which the cooperation partners received for comment before compilation of the data. The final versions are based on close and continuous collaboration between the editors and the authors.

Key Contextual Data – a synopsis of the main features of the ECEC system and relevant demographic data. These synopses were compiled by the project team (with the exception of the contextual data for the Russian Federation), reviewed by our cooperation partners and often supplemented with additional data. Main data sources were international reports and European and national statistical sites, using a triangulation approach for cross-checking data.

This publication appears in English and in German, thus providing a resource for a wide audience in Europe and beyond: early childhood teacher educators in higher and vocational education, national and local government administrations, employers and service providers in the ECEC field, researchers, ECEC staff and other interested persons.

The country-specific documents are identical to the individual online documents which can be accessed under www.seeepro.eu/English/Country_Reports.htm on the webpage www.seeepro.eu

About the author

Marisa Krenn-Wache, Director of the Federal College for Early Childhood Pedagogy in Klagenfurt until September 2022. During her professional career she was involved in various national and international activities. These included being a national delegate in the OECD ECEC network and the European Commission ECEC working group and being a consultant for Eurydice. She also worked as a lecturer at the University of Applied Sciences “FH Campus Wien”.

1. ECEC governance in Austria

Austria is a federal republic. According to the Federal Constitutional Law, the legislation and regulatory frameworks for early childhood and out-of-school education and care fall within the competence of the nine federal states or provinces (*Länder*). These are responsible for specifying the general conditions for ECEC institutions. In each federal state, independent structures have been established, some with different names.

Further responsibilities are held by the municipalities, which in many cases also act as legal entities of public institutions, and by private legal entities. This distribution of competences leads to different salary and service regulations as well as to non-uniform structural conditions (e.g. group size, staff to child ratios, non-contact time) for the pedagogical work in the *Länder*.

The federal states and municipalities bear the main burden of funding. In all federal states, there are both age-integrated (up to under 6 years) and age-differentiated settings (separate for under 3 year-olds and 3 to 5 year-olds). These facilities include crèches (also known as toddler centres or toddler groups) for 0 to 2 year-olds, kindergartens for 3 to 5 year-olds¹ and extended-age facilities, which are usually open for children aged from 18 months to 10 or 15 years. In official sources, ECEC settings in Austria are also referred to as "children's day homes" (*Kindertagesheime*). It is only for kindergartens that the employment requirements for core professionals are standardised by a federal basic law (BGBl I No. 185/2021).

According to Statistics Austria (2023a, 5), there were a total of 9,717 institutional ECEC facilities in the reporting year 2022/23, of which 4,602 were kindergartens, 2,650 crèches and toddler care facilities, 898 out-of-school care centres and 1,567 mixed-age care facilities (whereby a five-year comparison shows that the number of crèches and toddler care facilities has increased significantly by 24.9%, while the number of kindergartens has remained stable since 2017).

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Personnel with direct everyday contact to children can be categorised as follows: Core pedagogues, assistant staff, support staff and special educational needs/inclusive support staff. All of these professionals and assistants can work in all types of ECEC centres.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Austria): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

* The formal classification of both higher education courses in early childhood education has not yet taken place.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhüemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Due to the federal structure of the ECEC system in Austria, the legal regulations regarding the professional conditions of employment and the administrative requirements for Centre Leaders differ from state to state. To summarise, it can be stated that all nine federal states have specific employment requirements and job descriptions for ECEC Centre Leaders and that corresponding training courses are offered in different formats. In all federal states, however, several years of relevant professional experience are required. For example, the Viennese Kindergarten Act (LGBl 35/2019) requires management training comprising 110 teaching units of theory, at least 12 hours of peer group meetings and 60 units of self-study to ensure the organisational and pedagogical quality of an ECEC facility. The content of this training covers topics such as quality management, personnel management, team development and team leadership, personality skills, conflict management and complaints management, communication, the legal and business

management framework for running an ECEC centre, cooperation with parents and public relations. Similar training programmes for Centre Leaders are held in all federal states.

ECEC Centre Leaders are responsible for the entire staff, the support staff and the housekeeping and cleaning staff. Depending on the state law, time is available for management activities, depending on the number of groups of children. In Upper Austria (Merkblatt 2021, Educational Directorate Upper Austria 2021), for example, for the management of a three-group facility with an employment level of 40 hours, it is stipulated under employment law that seven hours are to be worked as non-group work time (preparation time), six hours as management time and 27 hours as group work time. The tasks of the management are divided into pedagogical and administrative tasks such as the organisation and steering of quality assurance and quality development measures, team development, personnel development, team coordination, monitoring compliance with general official duties, cooperation with the service provider, cooperation with parents and external partners, coordination of work shadowing and the support of students from vocational colleges who are on field practice. Centre Leaders who do not lead a children's group have to deputise for pedagogical staff in the event of absence due to continuing professional development, illness, etc.

2.3 Centre-based posts of responsibility

Apart from the position of Centre Leader and deputy Centre Leader, other positions for pedagogical tasks are not common. In multi-group centres, subject specialists (see under *Chapter 2.5*) such as pedagogues for inclusive education are responsible for specific activities, depending on the federal state. Their areas of responsibility include, for example, the planning, implementation and documentation of support measures for children with disabilities, supporting the socialisation of children with disabilities in the children's group, the planning and implementation of language assessments and language support programmes in cooperation with the group leader, as well as participation in planning and implementation with regard to cooperation with parents. In the case of appropriate additional qualifications, this activity is remunerated with a salary supplement.

2.4 Co-ordinating and supervisory staff

The positions of specialist advisory and supervisory staff is also regulated at federal state level. Depending on the federal state, the supervisory function takes centre stage more than the advisory function. In general, responsibilities include advising on pedagogical, organisational, personnel, financial and legal issues, the further development of staff professionalism, individual counselling of professionals and teams, the support of young professionals and communication and conflict management in the ECEC settings. There is no standardised, specific training for this role. The requirement profile usually includes a completed training as an Early Childhood Pedagogue, several years of relevant professional experience and additional specialist training.

2.5 Specialist support staff

The most frequently encountered support staff in ECEC centres are Special Needs Kindergarten Pedagogues or Inclusive Early Childhood Pedagogues. Depending on the size of the centre, these specialists work across different groups or with several groups at different locations. The lack of a legal entitlement to inclusion, the partial lack of places for children with disabilities and the often inadequate structural framework conditions are among the criticisms levelled at the Austrian system.

Since the 2019/20 kindergarten year, a standardised nationwide instrument for assessing language skills in German has been mandatory throughout Austria (FMESC 2022). The language

assessments must be carried out by specialists who have completed a six ECTS course in "Early language support" at a university college of teacher education (see, for example University College of Teacher Education Upper Austria 2022a; University College of Teacher Education Styria 2022a). In most cases, speech therapy sessions must be organised externally by the parents.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

In the 2022/23 kindergarten year, a total of 67,319 people were employed in ECEC centres (Statistics Austria 2023a, 97). The annual survey does not show whether the professionals have completed a five-year secondary vocational training programme at a vocational college for early childhood education, a two-year post-secondary *Kolleg* for early childhood education or a university degree programme. The high percentage of staff with other, non-relevant or low qualifications (42.4%) is striking.

Table 2

Austria: Structural composition of the workforce in ECEC centres, 2022/23

Staff	Total	Percentage of workforce overall
All staff in ECEC settings*	67,319	
<i>Of these:</i> Male staff (without differentiation by qualification)	2,014	3.0
Staff with a relevant higher education degree BA/MA	-	No data available
Staff with relevant vocational (short cycle tertiary) qualification	33,308	49.5
Staff with an additional qualification in inclusive/special needs education, support staff	947	1.4
Staff with a non-specialised qualification	4,503	6.7
Staff with no or low-level qualification – varies according to federal state	28,561	42.4
Staff with a migration background	-	No data available

Source: Statistics Austria 2023a, 101, 104 and own calculations

4. Initial professional education (IPE)

Vocational College for Early Childhood Pedagogue Professions

The initial professional education of core specialists (Early Childhood Pedagogues) continues to take place for the most part at the vocational colleges specialising in early childhood pedagogy (*Bildungsanstalten für Elementarpädagogik – BAfEP*). This type of school comes under the responsibility of the Ministry of Education and belongs to the group of "vocational secondary schools" (BHS). Attendance starts after completing the 8th grade and concludes with a school-leaving examination and diploma.

Persons who already have a school-leaving certificate or an equivalent qualification such as a general or subject-related university entrance qualification can attend this programme at a *Kolleg* for early childhood education and complete it with a diploma examination. The programme lasts four semesters and can be extended to five to six semesters in part-time form. *Kolleg* courses can be set up at *BAfEP* institutions.

In 2016, a new curriculum came into force (BGBl II No. 204/2016) and the school name was changed from Vocational College for Kindergarten Pedagogues to Vocational College for Early Childhood Pedagogy. The term “early childhood pedagogy” emphasises the focus on children aged 1 to under 6 years. Whereas the previous official curriculum (BGBl II No. 327/2004) focussed on kindergarten children aged 3 to under 6 years, early childhood education for under 3 year-olds is now included in the standard professional training for all.

In accordance with European Directive 2005/36/EC, Article 11c (European Parliament 2005) and Directive 2013/55/EU (European Parliament 2013), the school-leaving certificate and diploma from a vocational secondary school also open up access to the respective regulated professions in those Member States for which a higher education or university degree of (up to) four years is required in the respective country.

Since 2020, a “Vocational School for Pedagogical Assistant Occupations” can be integrated into the *BAfEP* structures and run 3-year courses for prospective Pedagogical Assistants.

In the 2021/22 school year, there were a total of 33 “Vocational Colleges for Early Childhood Pedagogy Professions” in the nine federal states, of which 17 were run by the federal government, two by municipalities, 12 by the Catholic church and two by other legal entities. Nine locations offered “Vocational Schools for Pedagogical Assistant Professions” and 28 locations offered collegiate courses for early childhood education and care (Statistics Austria 2023b, 84, 86).

4.1 Initial qualifying routes (higher education and vocational)

The following outlines the initial professional education options for core pedagogical staff, assistant pedagogical staff and the qualifying routes for out-of-school pedagogues and inclusion specialists.

Table 3

Austria: Early Childhood Pedagogue / Kindergarten Pedagogue

Job title in German: Elementarpädagogin/-pädagogin, Kindergartenpädagogin/-pädagogin Profile: Early Childhood Pedagogy Professional
<i>Route 1 (regular qualifying route):</i> Entry requirements: Successful completion of the 8th school grade plus aptitude test at the <i>BAfEP</i> in the field of contact and communication skills (from January 2024) Professional studies: 5 years at a vocational college specialising in early childhood education (<i>BAfEP</i>) Award: School-leaving certificate (general university entrance requirement) and diploma in early childhood education /professional license ECTS credits: n/a EQF level: 5 ISCED 2011: 5 Main fields of work: All ECEC settings for 1 to 5 year olds
<i>Route 2 (collegiate course - Kolleg):</i> Entry requirements: General or subject-related university entrance requirement plus aptitude test at the <i>BAfEP</i> in the field of contact and communication skills (from January 2024) Professional studies: 2-year post-secondary collegiate course (<i>Kolleg für Elementarpädagogik</i>)

Job title in German: Elementarpädagogin/-pädagog, Kindergartenpädagogin/-pädagog Profile: Early Childhood Pedagogy Professional
<p>Award: Diploma in early childhood education/professional license ECTS credits: n/a EQF level: 5 ISCED 2011: 5 Main fields of work: All ECEC settings for 1 to 5 year-olds</p> <p><i>Route 3 (postgraduate studies for Bachelor graduates with relevant specialism):</i> Entry requirements: Bachelor's degree in primary school teaching (240 ECTS credits) or in special needs education (180 ECTS) or in pedagogy/educational science; completion of a self-evaluation assessment at the relevant university/university of teacher education; language skills at reference level C1 according to the Common European Framework of Reference for Languages (CEFR) Professional studies: 2-semester higher education study programme (continuing education) Award: Higher education degree and professional license authorisation for the occupational field of early childhood education ECTS credits: 60 EQF level: 6 or 7* ISCED 2011: 6 or 7* Main fields of work: All ECEC settings for 1 to 5 year-olds</p> <p><i>Route 4 (lateral entry for Bachelor graduates with non-relevant degree):</i> Entry requirements: A Bachelor's degree (at least 180 ECTS credits); assessment by the relevant higher education institution; language skills at reference level C1 according to the Common European Framework of Reference for Languages (CEFR) Professional studies: 4-semester higher education study programme "lateral entry early childhood education" Award: Higher education degree with professional license authorisation for the occupational field of early childhood education ECTS credits: 120 EQF level: 6 or 7* ISCED 2011: 6 or 7* Main fields of work: All ECEC settings for 1 to 5 year-olds</p>

* The formal classification of both higher education courses in early childhood education has not yet taken place.

Vocational school for pedagogical assistant occupations

The 2017 Education Reform Act (BGBl I No. 138/2017) enabled the opening of three-year "vocational schools for pedagogical assistant occupations" as a new type of school, opening for the first time in the 2019/20 school year. From an educational policy perspective, one of the aims of this is to specify the job profile of "Pedagogical Assistant", as there have been very different structures for the qualification of assistant personnel in the federal states.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Early Childhood Pedagogue

Route 1: Vocational College for Early Childhood Education (BAfEP)

With the amendment to the School Education Act (BGBl I No. 117/2008), "educational standards" (i.e. specifically formulated learning outcomes that relate to the content of the curriculum of the respective type of school) were enshrined in Austrian school laws. For the vocational education system, the focus is on application-based, action-orientated learning, whereby knowledge, cognitive abilities and skills are to be related to the real world of life and work. In Austria, educational standards are formulated as regulatory standards (medium requirement level) and differentiate between general and subject-related competences (FIERID 2017).

With the Federal Law Gazette II No. 204/2016 of 27 July 2016, the updated curriculum for the IPE institutions for early childhood education from September 2016 basically enables two competence profiles: (1) the qualification as an Early Childhood/Kindergarten Pedagogue (children from 1–5 years) and (2) additionally, from the 3rd grade of the BAfEP, the qualification as an Out-of-school Pedagogue (children from 6–14 years, which is not discussed further in this chapter). The optional opportunity to specialise in working with children aged 1 to under 3 in the 2004 curriculum has been replaced by additional compulsory lessons and practical hours for all students with a focus on qualification for work in the field of early education for under 3 year-olds.

Competences

According to the current curriculum, vocational institutions for early childhood education "have the task of providing students with the professional attitude and the professional knowledge and skills required to fulfil the educational tasks in kindergartens as early childhood educational

institutions for children from the age of one until they start school and to lead them to university entrance".

The curriculum has a comprehensive catalogue of skills; accordingly, the initial professional education must impart general, job-specific, social and personal skills.

Box 2

Austria: Competence specifications – Vocational College for Early Childhood Pedagogy (BAfEP)

Diploma holders are in a position to:

- Address the question of the meaning of life and deal with ethical and social values as well as with the religious dimension
- Be sensitive and open towards philosophical, existential and religious questions, particularly those of the children (and young people) in their care
- Act in a socially responsible, respectful and appreciative manner
- Handle culturally, gender and diversity relevant aspects of upbringing and education sensitively
- Be open for innovations, flexibility and mobility
- Apply a broad spectrum of communication forms (verbal and non-verbal)
- Guide and supervise working and learning contexts in which non-predictable situations occur
- Examine and further develop both their own abilities and those of other persons, particularly of the children (and young people) in their care
- Communicate correctly in speaking and writing both in the language of instruction and in everyday life and, according to the requirements of the situation, also in a foreign language
- Participate in creating culture and in cultural life
- Analyse everyday and professional issues with the help of mathematical procedures, retrieve data and present them in a systematic way; acquire, interpret and present findings with the use of contemporary computer-based information technology
- Address in a critical manner current and relevant societal issues on the basis of a thorough knowledge in the areas of science, technology and entrepreneurship education, as well as knowledge in the arts and social science disciplines
- Review political processes at the national, European and international levels and be sensitive for democratic processes and peaceful cohabitation under consideration of interculturality and diversity, the environment and ecological sustainability
- Use their comprehensive and networked (pedagogical) knowledge in a reflective way in the context of practical experiences in their work and in their personal life situation
- Make full use of their knowledge of occupation-related legislation, particularly in the areas of safety, liability, hygiene, equipment, first aid, traffic education and (sexual) violence, in a manner appropriate to the situation
- Deal with conflicts in a problem-solving and self-controlled way and avoid violence
- Act in a self-critical and cooperative way in teamwork
- View lifelong learning as an intrinsic component of their own life course and career planning and promote appropriate attitudes and competencies in the children and young people under their guidance
- Handle physical and health-related aspects of education and upbringing in a sensitive way
- Handle the area of tension between normative standards and the individual development of learners
- Base their actions on the foundations of ‘scientific evidence’ and ‘reflective tacit knowledge’
- Plan educational processes appropriately on the basis of an inclusive attitude towards children’s individual developmental needs

- Implement a diverse repertoire of situation-appropriate didactic approaches which include various ways of working, communication and presentation
- Initiate situation-appropriate educational partnerships in their professional work and use them in a responsible way
- Assess and select centre-based childcare settings, taking into account ecological and economical aspects, the use of modern technology and methods of quality management (quality development and quality assurance).

Source: Syllabus – Vocational College for Early Childhood Pedagogy (BGBl II Nr. 204/2016)

Curricular areas and pedagogic-didactic approaches

The curricular areas ‘pedagogy’, ‘didactics’ and ‘practice’ are the main subjects for transmitting the core competences needed for independent and autonomous professional work. The curriculum is conceptualised as a spiral model of learning, during which core content is handled and repeated in increasing detail and growing complexity during the five years of initial professional education.

A particular characteristic of the Austrian approach to IPE for work in ECEC settings is the emphasis placed on the creative arts and on movement education. Subject teaching in ‘visual arts education’, ‘handicraft education’, ‘textile design’, ‘music education’, ‘voice training and elocution’ and ‘playing the guitar’ (or piano), ‘rhythm and music education’ and ‘movement education’ takes place throughout the five years and includes both general and occupation-related content and competences.

Beyond these profession-specific areas, general subjects required for completion of the school-leaving examination (university entrance qualification) are also included, such as ‘German’, ‘English’, ‘history, social and political studies’, ‘geography and economics’, ‘applied mathematics’, ‘physics’, ‘chemistry’, ‘biology and ecology’.

Didactic principles specified in the curriculum include learning outcome orientation, systematic and networked competence building, cooperation and coordination between all tutors in any one year in terms of planning, implementation and evaluation of the teaching process; this is considered essential for interdisciplinary thinking and understanding, maintaining an optimal transfer between theory and practice and connecting the content with the real-life situations of the learners.

It is difficult to weight the various curricular areas since, for example, creative arts and movement education include both general education and profession-specific content. Also, subjects such as German (e.g. including children’s literature), English (e.g. including specialist terminology) and mathematics (e.g. with examples related to the occupational field) contribute to the professional goals of the IPE programme.

Table 7

Austria: IPE curriculum Vocational College for Early Childhood Pedagogy (Bildungsanstalt für Elementarpädagogik) – curricular areas and distribution

Main curricular components 5-year initial education programme (excluding supplementary course for out-of-school pedagogy)	Estimated share of total hours
General education studies (excluding religion) German (including elocution, children’s literature) English History, social studies, political education Geography and economics Applied mathematics	40%

Main curricular components 5-year initial education programme (excluding supplementary course for out-of-school pedagogy)	Estimated share of total hours
Physics Chemistry Biology and ecology (including physiological foundations, health, nutrition) Applied sciences Nutrition with hands-on practice Basics of computer science	
Theoretical and field-based studies Pedagogy (including psychology and philosophy) Inclusive education Didactics Practice (15%) Organisation, management and legislation (including scientific work) Communication practice and group dynamics	33%
Creative arts and sport Visual arts education Handicraft education Textile design Music education, voice training, elocution Instrumental studies Music and movement Movement education and sport	27%

Source: Adapted from curricular framework for vocational colleges specialising in early childhood education (BAfEP) (BGBl II Nr. 204/2016)

Route 2: Collegiate course (*Kolleg*) – Vocational College for Early Childhood Pedagogy

Collegiate courses have been offered at all vocational colleges since 1994/95 and the demand for them is increasing. In the 2021/22 school year, collegiate courses in early childhood education were offered at 28 of the relevant vocational colleges throughout Austria (Statistics Austria 2023b, 86). The curriculum was updated in 2017 and the course was renamed "Collegiate course in early childhood education", corresponding to the changed names for the vocational colleges. This post-secondary qualifying route lasts four semesters: it can also be offered as a part-time option and then lasts for five or a maximum of six semesters. The course leads to the same professional qualifications as the vocational college course through a so-called "diploma examination".

Competences

In a course lasting four semesters and according to the general educational goals of the collegiate curriculum (BGBl II Nr. 239/2017), the collegiate course in early childhood education aims to transmit the following general and occupation-specific social and personal competences:

Box 3

Austria: Competence specifications – collegiate courses (*Kolleg*)

Diploma holders are in a position to:

- Address the question of the meaning of life and to deal with ethical and social values as well as with the religious dimension
- Be sensitive and open towards philosophical, existential and religious questions, particularly those of the children (and young people) in their care
- Act in a socially responsible, respectful and appreciative manner

- Handle culturally, gender and diversity relevant aspects of upbringing and education sensitively
 - Be open for innovations, flexibility and mobility
 - Apply a broad spectrum of communication forms (verbal and non-verbal)
 - Guide and supervise working and learning contexts in which non-predictable situations occur
 - Systematically observe and support developmental processes
 - Communicate correctly in speaking and writing both in the language of instruction and in everyday life and, according to the requirements of the situation, also in a foreign language
 - Participate in creating culture and in cultural life
 - Keep informed about political processes at the national, European and international levels and be sensitive for democratic processes and peaceful cohabitation under consideration of interculturality and diversity, the environment and ecological sustainability
 - Use their comprehensive and networked (pedagogical) knowledge in a reflective way in the context of practical experiences in their work and in their personal life situation
 - Make use of their knowledge of occupation-related legislation, particularly in the areas of safety, liability, hygiene, equipment, first aid, traffic education and (sexual) violence, in a manner appropriate to the situation
 - Deal with conflicts in a problem-solving and self-controlled way and avoid violence
 - Act in a self-critical and cooperative way in teamwork
 - View lifelong learning as an intrinsic component of their own life course and career planning and promote appropriate attitudes and competencies in the children and young people under their guidance
 - Deal sensitively with physical and health-related aspects of education and upbringing
 - Review and further develop their own performance and that of the persons they support
 - Organise educational processes on the basis of an inclusive attitude according to each child's individual developmental situation
 - Use a diverse and situation-appropriate repertoire of methods, including different didactic and communicative approaches
 - Initiate situation-appropriate educational partnerships in their professional work and conduct them responsibly
 - Assess and select centre-based childcare facilities, taking into account ecological and economic aspects, the use of modern technology and methods of quality management (quality development and quality assurance).
- In addition, the course should lead to a responsible attitude in dealing with people, with one's own and other cultures and with multicultural societies, as well as to gender and diversity competence.

Source: Adapted from the collegiate curricular framework (BGBl II Nr. 239/2017)

Table 8

Austria: IPE curricular framework of collegiate course (*Kolleg*), vocational college for early childhood pedagogy

Main curricular components 4 semesters, excluding the supplementary course in out-of-school pedagogy	Estimated share of total hours
Religion/Ethics Early childhood education (from under 1 to under 6 years of age) – Theory and practical application Pedagogy (including psychology and sociology) Inclusive education Didactics Field practice (ca. 19%) German (including children's literature)	63%

Main curricular components 4 semesters, excluding the supplementary course in out-of-school pedagogy	Estimated share of total hours
German as an additional language Organisation, management und legislation, academic work Health and nutrition, physiological foundations Media education Communication practices and group dynamics Subject-specific seminar	
Expression, design and movement - artistic-creative domains Art education Arts and crafts education Textile design Music education and voice training Instrumental lessons Rhythmic-musical education Physical education and sport	33%
School-specific areas of free choice English conversation Nature and technology Supervisory support Specialisation in media education Intercultural education Specialisation in early education Gender and diversity Theatre education Voice training Psychomotor skills: specialisation in expression, design	4%

Source: Adapted from the collegiate course curricular framework (BGBl II Nr. 239/2017), own estimations

According to the curriculum, the *Fachschule für Pädagogische Assistenzberufe* (BGBl II 127/2019) has the task of providing students with the professional attitudes, knowledge and skills required to support pedagogical work in kindergartens as early childhood educational institutions for children from the age of 1 until they start school. The curriculum sets out the following general, occupation-specific, social and personal competences:

Box 4

Austria: Pedagogical Assistant Occupations – Competence specifications

<p>Certificate holders are in a position to...</p> <ul style="list-style-type: none"> – Address questions of the meaning of life, ethical and social values and religious dimensions – Act in a socially responsible, respectful and appreciative way – Deal sensitively with cultural, gender-related and diversity-relevant aspects of upbringing and education – Apply a broad spectrum of verbal and non-verbal forms of communication – Guide working and learning contexts – Utilise their own potential and support that of the children (and young people) in their care – Communicate correctly in speaking and writing in everyday and work-related life and communicate in a situation-appropriate way – Participate in creating culture and cultural life – Reflect on political processes and be sensitive for democratic practices, for peaceful cohabitation in a context of interculturality and diversity as well as for environmental and ecological sustainability – Use acquired (pedagogical) knowledge combined with practical work experiences in a situation-appropriate way
--

- Act in a resource-conscious and responsible manner, taking into account social, economic and ecological aspects
- Apply knowledge of professional legal principles, especially in the areas of safety, liability, hygiene, equipment, first aid, road safety education and (sexual) violence, as appropriate to the situation
- Deal with conflicts in a solution-orientated and self-controlled manner and avoid violence
- Recognise the need for development and further training as well as on-the-job learning to continue learning independently
- Act in a self-critical and co-operative way in teamwork
- Deal sensitively with movement and health-related aspects of education and upbringing
- Approach the tension between normative standards and the individual development of learners in a sensitive way
- Have the basic ability to reflect and assess their own performance and act accordingly
- Utilise a diverse and situation-appropriate repertoire of methods, including various forms of work, social and presentation skills
- Support educational partnerships in a responsible way appropriate to the situation.

4.3 Alternative entry and qualification routes, system permeability

Higher education study programme in early childhood education

Since the 2020/21 academic year, an alternative route has been provided for acquiring a professional qualification as a core specialist for the early childhood sector. With the "University course in early childhood education", which can be offered by the university colleges of teacher education, a lateral entry option into the professional field of ECEC has been opened up for groups of people with relevant prior training. This makes it possible for the first time to qualify as a "group-leading Early Childhood Pedagogue" in accordance with the Federal Act on the "Professional Employment Requirements for Kindergarten Teachers" (BGBl I No. 185/2021) for specialists employed in the public sector beyond institutions for early childhood education. Access to the university degree programme is possible via a completed Bachelor's degree in primary education, a teaching degree for special schools or a Bachelor's degree (180 ECTS credits) in pedagogy or educational science. This degree programme is classified as continuing education at universities of teacher education.

The university course is divided into 12 modules with a duration of two semesters, providing theoretical-didactic foundations and practical pedagogical studies. The course comprises a workload of 60 ECTS.

The framework curriculum is specified by the Ministry of Education and can be adapted by the individual universities. The qualifications and entitlements achieved by completing the programme are formulated in the following way:

"The university course builds on a relevant Bachelor's degree and offers a professional, scientific and practice-oriented qualification as an Early Childhood Pedagogue. The aim is to enable graduates to support and guide children from the age of 1 to 7 in their learning and development processes in early childhood settings in a competent way, to shape educational cooperation in a professional way and to make high-quality contributions to organisational development in the respective setting (University College of Teacher Education Styria/Church University College of Teacher Education Graz/Carinthia University College of Teacher Education 2021).

Higher education study programme "Lateral entry – early childhood education"

Since the summer semester of 2023, a further university course has been available. This is designed as a lateral entry opportunity into the occupational field of early childhood education for all graduates of non-subject-related studies. The university course comprises 120 ECTS credits and, building on a completed degree programme of at least 180 ECTS credits, offers a "professional, academic and practice oriented qualification for Kindergarten Teachers, leading to a professional qualification" (BMBWK 2023a).

Career advancement possibilities

The structure of the professional field in early childhood education offers only limited opportunities for advancement. In principle, a field specialist can take over the management of an ECEC centre without any further formal qualifications. However, a variety of further training programmes are offered in all federal states as formal prerequisites for taking on a management role. In some cases, working in one of the "*Praxiskindergärten*" affiliated to all vocational schools for early childhood education is seen as a step up. These kindergartens are a legal part of the IPE institutions and are subject to the school timetable. They serve primarily as a practical training centre for prospective Early Childhood Pedagogues.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Field practice is integrated into the initial professional education programmes. It is part of the studies in all five years of the vocational school courses and in all four semesters of the vocational college courses (*Kolleg*). The practical training is organised in kindergartens, children's groups, crèches and the like (in the case of supplementary training in out-of-school care) as day-long practice or as block practice. Duration and content are laid down in the respective national curricular frameworks and comprise between 15 and 17% of the overall IPE course. The practical sessions can take place weekly or be offered in block form.

The tasks for the practical training are set within the teaching subject 'didactics'. They vary in scope and requirements depending on the year group, and must be prepared and followed up in writing by the students. The group leaders responsible for the trainees in the centres are informed about the requirements and tasks set by the school and assume responsibility for carrying out the practical training in their group of children. An assigned teacher at the vocational school/college is responsible for supervising the trainees.

The curricular frameworks of the vocational school/college define areas of competence for each subject area, which, with increasing requirements in terms of specific practical activities, aim to lead to the acquisition of competences that enable independent work as an Early Childhood Pedagogue. For the subject area 'Field practice', these are: "Orientation towards values and norms, self-management and professional socialisation, communication and language, organisation of development and educational processes".

The trainees are prepared for the requirements of the respective work placements in the various practical subjects. The content requirements are formulated in class as specific work assignments, which the trainees must prepare and follow up in writing. The ECEC centres are informed of these requirements and are expected to support the trainees in achieving the competences to be acquired.

Teachers of the subject "Field practice" visit and advise the trainees on site. They are therefore in direct contact and exchange information with the responsible staff in the ECEC settings and are responsible for the assessment of the trainees. The selection and use of assessment and evaluation tools is the responsibility of the individual school. Individual assessment forms are created in line with the respective requirements of the curriculum. These are completed on site by the specialist staff responsible for the trainees and form the basis for the assessment of the trainees alongside the personal records of the pedagogue accompanying the traineeship.

In most cases, field practice teachers at the vocational school are qualified core pedagogues who come from the occupational field, have often completed a relevant degree programme and also work as teachers of didactics at the vocational schools/colleges. Since the 2019/20 academic year, a Bachelor's degree in a relevant subject is the requirement for teaching didactics and field practice. Depending on the region, these teachers may also have an additional qualification as a mentor.

6. Continuing professional development (CPD) of ECEC staff

Regulations on the requirements and recognition of participation in CPD activities also vary at the federal state level and provider level. They range from 20 hours to two or three days of mandatory training during working hours up to a maximum of five days during holidays. Requirements for assistant staff are regulated by the individual organisations. In most federal states, further training is provided within working hours. The recognition of further training, e.g. when taking over a position, is regulated differently depending on the federal state. There are no standardised regulations for taking over costs. However, many courses are offered free of charge or for a small fee by the relevant CPD organisations in the federal states. These main providers are, for example, the further and continuing education centres of the federal states of Carinthia, Upper Austria, Salzburg, Styria and Tyrol. These centres have drawn up a joint working paper on quality aspects in close cooperation and provide a considerable amount of information online (FWB-Stellen 2013).

The federal state of Upper Austria offers a wide range of over 400 seminars and courses for the kindergarten year 2022/23 as well as in-house CPD courses. Seminar registrations can be made online by Centre Leaders for employees via a dedicated portal.

KIWI (Children in Vienna 2022a), a large private provider in Vienna, organises a very good CPD programme for its professionals. The "KIWI Academy" (Children in Vienna 2022b) offers extensive programmes for managers, educational professionals and assistants in kindergartens and out-of-school care centres. Centre Leaders employed by KIWI are supported over six years through various management courses. Contents include the following areas of expertise: Quality management; personnel management; team development and personal skills; communication, conflict and complaints; legal and business frameworks; work with parent; public relations.

The Styrian state government is offering a university course for "Management and Leadership in Early Childhood Education" (13 ECTS) in the 2022/23 CPD programme (University College of Teacher Education Styria 2022b). The course provides professionally oriented further education for managers and their deputies. In addition to deepening knowledge and expertise in the areas of quality development, quality management, administration and legal principles, the programme also reflects on one's own understanding of leadership and leadership behaviour and develops suitable methods for the respective location by expanding knowledge about focused personnel and team development. All training programmes offered by the Styrian Government are free of charge.

In general, participation in continuing education programmes is voluntary and is not financially supported. However, under certain conditions, students have the opportunity to apply for scholarships from the "Studienbeihilfenbehörde", a federal authority under the Federal Ministry of Education, Science and Research (Stipendium.at 2022).

7. Working conditions and current workforce issues

7.1 Remuneration

The minimum wage rate for employees in private ECEC centres with a regular working week of 40 hours is €2,473 gross for an **Early Childhood Pedagogue** in the 1st and 2nd year of employment, €2,695 gross in the 10th year of employment, €2,989 gross in the 20th year of employment and €3,418 gross in the 40th year of employment.

Certified **Special Needs Kindergarten Teachers** in special educational institutions or groups receive a monthly hardship allowance of €218.30. Kindergarten managers receive a monthly management allowance of €114.00 gross for one group. For each additional group, the allowance increases by €48.80 (BGBl II No. 546/2021).

In comparison, the income of **Primary School Teachers** is significantly higher. The following shows the salary of teachers who are subject to the new service law (BGBl I No. 211/2013, Pedagogical Service). This has been in force since the 2019/20 school year and is the first standardised employment law for teachers at all schools. This employment law is also associated with a changed salary scheme comprising seven levels and higher starting salaries with lower increases up to career grade. In 2023, the starting salary at level 1 was €3,116.10 with a retention period of 3.5 years; at level 2, €3,546.00 with a retention period of 5 years; at level 4, the salary is €4,408.20 with a retention period of 6 years and at level 7, the salary is €5,537.10 (Public Service Trade Union 2023).

The employment requirement under the new employment law requires a teaching qualification from a Bachelor's degree programme (240 ECTS) and a Master's degree programme of 60 ECTS building on this Bachelor's degree. Teachers who have completed a Bachelor's degree programme can be employed if they undertake to complete the Master's degree programme within five years while working, otherwise this is a ground for dismissal. From 2029, completion of the Master's degree programme before taking up employment will be mandatory.

One major difference to the early childhood profession is the extent of the weekly teaching commitment. This amounts to 24 hours per week for school teachers under the new employment law, of which 22 hours are for direct teaching and 2 hours per week for school-specific activities (e.g. as head of class, quality management, counselling, and so on). Compared to this, the average working time of a core pedagogical specialist of 35 hours per week in direct contact with children is very high.

The holiday regulations in most federal states are also clearly to the disadvantage of early childhood education employees, who are entitled to five weeks' paid leave per year, and six weeks from the 26th year of service (Labour Market Directive 2022). However, according to the Civil Service Act (BGBl No. 362/1991), teachers have the opportunity to "leave the place of their teaching activity" during the main summer holidays and during other holidays. This results in an average of at least 13 weeks off teaching per school year: nine weeks in summer, two weeks at Christmas, one week after the winter term, one week at Easter. Since 2019/20, there has been a slight restriction for teachers under the new employment law: for them, the summer holidays end one week before the start of the next school year. This means that teachers under the new employment law still have around 12 weeks of teaching-free time per year in contrast to the five weeks of holiday entitlement for Early Childhood Pedagogues. One exception is the employment law in Lower Austria, in which the kindergarten holidays correspond to the main school holidays. Kindergarten Teachers are subject to state law and are entitled to six weeks' holiday leave during the "kindergarten holidays" in summer, as well as during the closing days in accordance with the

Lower Austrian Kindergarten Act during the Christmas, Easter and Whitsun holidays (LGBl No. 5060-0/2006).

7.2 Full-time and part-time employment in ECEC provision

The legally regulated working time for full-time employment is 40 hours per week. In the 2022/23 kindergarten year, 39.9% of staff in ECEC centres were in full-time employment. According to statistics, core pedagogues work an average of 30.5 hours per week (Statistics Austria 2023a, 103).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

There are no generally regulated measures to support staff and for quality assurance. These are regulated individually at provider level or in the individual facilities. However, there are offers for quality improvement in this area, such as the university course for "Management and Leadership in Early Childhood Education" (13 ECTS) run by the University College of Teacher Education and the Styrian government (University College of Teacher Education Styria 2022b). The federal state of Upper Austria is offering support for 60 career starters in the form of mentoring by experienced educators in the 2022/2023 working year (Educational Directorate Upper Austria 2022).

7.4 Non-contact time

The time for indirect pedagogical work of professionals in ECEC centres is regulated by state law and varies from no legally prescribed time for planning, teamwork etc. to up to ten hours per week. It is up to the providers to set the child-free working hours higher than prescribed in the respective state law. For example, the "group-free working time" in the Upper Austrian Child Education and Care Act is set at seven hours for a full-time employee. At least half of this time must be spent at the centre (Educational Directorate Upper Austria 2019). The Styrian government offers the most extensive preparation time. With a weekly working time of 40 hours, specialists are entitled to ten hours per week for the necessary preparation work, of which at least five hours must be completed at the centre (LGBl No. 45/2007).

7.5 Current staffing issues

Of the total of 67,319 ECEC staff across Austria in the 2022/23 kindergarten year, 17,418 (25.9%) were over 50 years of age (Statistics Austria 2023a, 97). Staff shortages have been a recurring theme in recent years. However, the need for skilled labour varies depending on the federal state and region. For example, according to media reports, there was a shortage of 30 qualified staff in Upper Austria in September 2021. As a result, groups were run without core professionals and closed in the afternoons in some municipalities. Four large private provider organisations in Vienna (Diakonie Bildung, Kinderfreunde Wien, KIWI-Kinder in Wien, St. Nikolausstiftung) announced in a press release in July 2022 that there was already a shortage of more than 300 ECEC professionals for the start in September 2022 (APA 2022).

This contrasts with the number of students who complete their training through a collegiate course (*Kolleg*) for early childhood pedagogy. In July 2021, a total of 2,424 persons in Austria successfully completed an IPE course to become a core professional in ECEC, 721 of them at a *Kolleg* (Statistics Austria 2023b, 327f).

This rate would be labour market-friendly if all graduates were to enter the profession. Although there is no reliable data on this, experience shows that many graduates of the 5-year training

programme, which they complete at an average age of 19-20, do not opt for the profession but for further education, time abroad, etc.

The picture is different for graduates of collegiate courses. They register for the course only after completing A-levels, a degree programme or some form of vocational training. Experience shows that almost all of this group enter the labour market on completion of the course. For this reason, the Ministry of Education is very much in favour of opening new collegiate courses.

The alternative access via the "Higher Education Programme in Early Childhood Education" (see *Chapter 4.3*) also serves as a measure against the staff shortage. In addition, lateral entrants with non-specialist Bachelor's degrees can acquire the authorisation to work in ECEC settings in four semesters. These measures show that the explosive nature of the childcare shortage predicted by many experts has not been adequately recognised by those responsible for education policy.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Changes in the admission procedure for the various qualification routes

Aimed to make the qualification for the ECEC sector more attractive, the aptitude test at vocational colleges specialising in early childhood pedagogy, at *Kollegs* for early childhood pedagogy, at vocational schools for pedagogic assistant occupations and at advanced training courses for early childhood education was changed from January 2024 (Federal Law Gazette II No. 9/2024). The previous four areas (music, creativity, movement and physical resilience, communication, swimming) were replaced by a two- to four-hour examination of contact and communication skills.

New qualifying programme "Elementar+"

The "Elementar+" qualification measure, offered by the University of Graz (2023) and scheduled to start in autumn 2023, is currently undergoing the necessary approval by the Senate of the University of Graz. It aims to attract students from across Austria. 50 places are planned for the first round. Completion of the course is free of charge for participants. The Ministry of Education will cover the costs of the programme in full.

This federal initiative opens up new ways for those already working in ECEC institutions to obtain a fully-fledged qualification as a group-leading pedagogue. It is aimed in particular at those who already work in kindergartens and nurseries as assistants and maybe even lead a group.

The three-year university degree course is conceptualised as a part-time programme, carried out in regional groups. This makes it possible to combine work in an ECEC setting with participation in the qualifying programme. Participants without a *matura* take the university entrance qualification examination in the first year and can thus complete the university course as a qualified Early Childhood Pedagogue.

Language support

For several years now, the federal government has focussed on promoting German (as the language of education) in early childhood. Ideally, targeted and individualised support for children

with insufficient knowledge of German needs to begin before they start attending an ECEC setting. At the latest, it should take place during the last two years before they start compulsory schooling so that they will have mastered relevant language skills by the time they start school (FMESC 2022).

The Federal Institute for Educational Research, Innovation and Development of the Austrian School System (FIERID) has developed a standardised instrument to assess language skills in German as a language of education. This has been mandatory in ECEC settings nationwide since the 2019/20 kindergarten year (FMESC 2022). This observation instrument comprises two options which can be used to determine the language competence in German (a) of children with German as their first language and (b) of children with German as an additional language.

In addition, a mandatory handover sheet from kindergarten to primary school is used which, based on the results of the language assessment, provides information on a child's strengths and areas that can be supported and offers a specific starting point for further planning of support in Year 1. It must be sent to the primary schools by the beginning of September at the latest after the end of the school holidays.

Courses on "Early language support" totalling 6 ECTS have been set up at university colleges of teacher education to qualify early childhood specialists for language assessments. The courses, which are based on findings from linguistics, developmental psychology and early childhood education research, serve to acquire the skills to carry out speech and language assessments and to implement targeted language support measures (FMESC 2022).

Further information on the university course "Early language support" can be found on the homepages of the various teacher education colleges (e.g. University College of Teacher Education Styria 2022a).

Introduction of a higher education course in Inclusive Early Childhood Education – changing the qualification route for inclusive education in the early years

Since 1985, it has been possible to attend a four-semester "Course for Special Kindergarten Education" - since 2016 "Course for Inclusive Early Childhood Education" - at vocational colleges for early childhood education. From the 2022/23 school year, this further training option for Early Childhood Pedagogues will no longer be offered at *BAfEP* institutions, but as a four-semester "University course in inclusive early childhood education" with 90 ECTS credits at university colleges of teacher education. Building on training as an ECEC Pedagogue, it represents a professionally, academically and practice-oriented qualification that leads to professional authorisation as an "Inclusive Early Childhood Pedagogue". Further information can be found on the homepages of the teacher education colleges (e.g. University College of Teacher Education Upper Austria 2022b).

Introduction of an advanced training course following the vocational school for pedagogical assistant occupations

Since the 2019/20 school year, three-year "vocational schools for pedagogical assistant occupations" can be offered at vocational colleges for early childhood pedagogy. After successfully completing this vocational school, as from the 2023/24 school year graduates will have the chance to attend a further three-year "advanced training course" (AUL) which concludes with a school-leaving certificate and diploma examination. This qualification is equivalent to the regular awards from a *BAfEP* institution (BMBWK 2023c).

Amendment to the 15a agreement on the financing of kindergartens

In accordance with Art. 15a of the Federal Constitution Act (B-VG, Republic of Austria 2022), the federal government and individual or all federal states may conclude agreements on matters within their respective spheres of activity. These so-called 15a agreements (federal-state agreements) bind both the federal government and the federal states with regard to the agreements reached.

With this amendment, an annual sum of €200 million in special-purpose grants from the federal government to the federal states is to be made for the kindergarten years 2022/23 to 2026/27. The allocation of funds to the federal states is calculated based on the proportion of under 6 year-olds per federal state in relation to the total population of the same age. The distribution of funds between the federal states and municipalities is the responsibility of the local authorities. Attendance at an ECEC centre in the year before the child enters primary school is still compulsory. As before, attendance is to be offered free of charge for 20 hours, which the federal government intends to co-finance with €80 million per kindergarten year until 2026/27 as part of the special-purpose grants. According to the proposal, the remaining €120 million is to be largely earmarked by the federal states, namely at least 51% for the expansion of ECEC facilities and at least 19% for early language support. For these two areas, the federal states are also to provide additional co-financing of €63 million per year. The remaining 30% of the federal subsidy can be used flexibly depending on the needs of the respective state. In order to expand the quality of early childhood education services, the aim is to further develop staff qualifications nationwide in a standardised manner (Republic of Austria 2022).

9. Recent country-specific research focusing on ECEC staff

Calculation of costs for the expansion of ECEC

Source: Neuwirth, N. 2021 (see *References* for full details)

Aims: Current demographic scenarios for the period up to 2030 were the background to this study, as well as the need to develop access to ECEC services. The study aims to present the cost development in connection with specific recommendations for action for the ECEC sector (increase in employer costs as a result of tariff adjustments, taking over parental contributions for 4 year-olds, additional costs for tertiary-level initial professional education of core professionals).

Procedures: Varying data sources are placed in an analytical context and used as a basis for the calculations. Main data sources are the current population forecast based on three scenarios, the ECEC centre statistics, the EU-SILC Austria, the micro-censuses of the last ten years and other statistical working tables from the Austrian Institute of Family Research and Statistics Austria.

Findings and implications: Taking into account the three cost items of the draft reform (increase in employer costs as a result of tariff adjustments, taking over parental contributions for 4 year-olds, additional training costs for early childhood pedagogy professionals in the tertiary sector), costs totalling €344 million can be expected by 2030. However, around 56% of this expenditure will flow back as increased government revenue within 12 months. The additional costs of the draft reform will be largely self-financed in the first round through tax returns. Overall, it can be assumed that there will be strong positive economic effects in the long term, primarily due to the increased educational and later labour market opportunities for children.

European Quality Seal for ECEC settings

Source: Walter-Laager, C., C. Bachner, C. Geißler, L. Eichen and Quality Seal project group QUALIEPAED 2019. (see *References* for full details)

Aims: For the first time, a standardised "European Seal of Quality for ECEC settings" was to be developed in various European countries (in the Alps-Adriatic region) to record and ensure pedagogical quality in early childhood education and care settings, to which all EU countries will have free access. This can make an EU-wide contribution to the improvement, maintenance and visualisation of quality in ECEC settings.

Procedures: The development of reliable and valid criteria for determining educational quality formed the basis for the definition of quality and the development of the joint seal of approval. These quality criteria were validated by means of a quantitative survey of parents (N=1,908) and ECEC professionals (N=358). The quantitative part of the survey was supplemented by open, qualitative questions in order to be able to include any previously unconsidered but relevant quality criteria from the perspective of parents and professionals.

Findings and implications: Based on the results, a set of quality assessment tools was developed and piloted in ten audits in each country. The resulting handbook on the European Quality Label for Early Childhood Education and Care Centres summarises all the criteria developed, presents the respective measurement methods and describes the process of assessing educational quality in detail.

Policy Paper: Since political decision-making and implementation are of central importance for the sustainable establishment of the quality seal and for the general expansion and professionalisation of centre-based ECEC, a policy paper was developed that summarises the experience gained in the project and the findings of the criteria validation with specific recommendations for policy makers (Walter-Laager et al. 2019; Tietze et al. 2019)

10 steps to reflective language education integrated into everyday contexts

Source: Walter-Laager, C., E. Pözl-Stefanec, C. Bachner, K. Rettenbacher, F. Vogt, und S. Grassmann 2018 (see *References* for full details)

Aims: Based on numerous studies in the field of early language education, a wide variety of strategies can be deduced for supporting children's language acquisition. The project summarises the most important strategies for promoting language education in everyday kindergarten life and prepares them for practical use.

Findings and implications: The project "10 steps to reflective everyday integrated education" encourages ECEC professionals to reflect on strategies for language education integrated into everyday activities using short specialised texts, guided tasks to try out, checklists and video examples. In this context, the quality of interaction in groups can also be improved. Practical ideas for trialling the respective strategy in practice are also presented. A checklist is provided for regular reflections on everyday practices.

Working material for initial and continuing professional education, team meetings and parents' evenings: Various strategies for language education are presented using specialist texts, film material and opportunities for reflection. In addition to the accompanying booklet, six films are available online, in which scenes from everyday pedagogical life are shown and the various language strategies are made visible.

10. Workforce challenges – country expert assessment

The shortage of staff in early childhood education and care, which varies from region to region throughout Austria, is a challenge that has been exacerbated by the coronavirus crisis in 2020-2021. In the last three government programmes, the importance of ECEC was clearly emphasised. Currently, under the motto of "strengthening ECEC", some aspects related to quality improvement and the expansion of facilities are mentioned, but little in the way of structural improvements (staff to child ratio, more working hours for planning and reflection...) can be expected (Die neue Volkspartei/Die Grünen - Die Grüne Alternative 2020).

Qualifications

What does the ECEC system in Austria stand for? On what theoretical and sociological basis are decisions relevant to education and social policy made and measures adopted? There is little or no public discourse on these questions.

Until 2020/21, there was no fundamental opportunity for acquiring a professional qualification at tertiary level that fulfilled the legal employment requirements for core professionals in public institutions beyond the IPE provided by vocational colleges for early childhood education (*BAfeP*). This situation has changed with the introduction of the two-semester university course "Early Childhood Education" (60 ECTS) at university colleges of teacher education from September 2021 (see *Chapter 4.3*). Since September 2021, a four-semester course (120 ECTS) is also offered for graduates of all subjects at university colleges and universities (FMESC 2023).

A comparison of the curricula of the vocational colleges for early childhood education and higher education courses highlights the very different educational and professionalisation concepts which form the starting point. The change in IPE structures and the content of curricula are de facto fundamental socio-political decisions. The impending shortage of skilled labour has created a qualifications dynamic that lacks a theory-based inclusion of early childhood education and care as a fundamental, structural and curricular part of the education system.

Inclusion

With the ratification of the UN Convention on the Rights of Persons with Disabilities in 2008 at the latest, a commitment was made to establish and implement an inclusive education system for all age groups. This process is supported by a "National Action Plan on Disability (NAP)" (Federal Ministry of Social Affairs, Health, Care and Consumer Protection 2022). However, the evaluation of the measures defined in the NAP 2012-2021 (Federal Ministry of Labour, Social Affairs, Health and Consumer Protection 2019) by the "Independent Monitoring Committee for the Implementation of the UN Convention on the Rights of Persons with Disabilities" (Monitoring Committee 2022) shows inadequate results and an urgent need for action, as there are no suitable places available for many children with disabilities. According to BIZEPS (2022), the current 15a federal-state agreements and the National Disability Action Plan 2022-2030 also failed to fundamentally address the issue of inclusion in kindergarten. Strong criticism is voiced in the shadow report (Monitoring Committee 2020) on the occasion of the state review by the UN Committee of Experts: "In Austria, a distinction is made between children with and children without disabilities. This means that different (better) quality standards apply to children and young people without disabilities than to children with disabilities. This is contrary to equality and contradicts the goals of the UN CRPD (ibid., 7). The reorganisation of facilities into inclusive facilities, an

adjustment of the staff to child ratio, the reduction of the maximum number of children, a needs-based provision of resources for inclusive facilities, as well as an adequate number of Inclusive Early Childhood Pedagogue professionals represent major challenges. The further development of IPE for specialised core professionals is also unclear. It remains to be seen whether the introduction of the four-semester "Inclusive early childhood education" course at universities of teacher education from the 2022/23 school year will contribute to the recruitment of urgently needed specialist staff.

Federal responsibility and framework conditions

As mentioned at the beginning of this report, the entire field of early childhood education in Austria is federally regulated, which means that the legal frameworks differ from federal state to federal state. In addition to the clear demands from the professional field for better working conditions (at least 25% of working time as preparation time), a lower ratio of core professionals to children and greater support from specialised support staff, the declining entry rate of graduates from vocational colleges of early childhood education (*BAfEP*) into the profession can presumably also be attributed to these unfavourable framework conditions. For example, the NeceA association (2022) and the Educare platform (2022) are calling for, among other things, a standardised federal framework law for the ECEC sector throughout Austria under the responsibility of the Ministry of Education. This would at least make it easier to implement nationwide structural changes.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC provision are **childcare centre** (*Kinderkrippe*, 0–2) and **kindergarten** (*Kindergarten*, 3–5)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Austria

1830	First custodial institution (<i>Bewahranstalt</i>) established in Vienna for children from families in need of support.
1832	State regulation assigns the supervision and control of all <i>Bewahranstalten</i> to the Catholic church – as private charities without any state financing and not linked to schools.
1863	First kindergarten founded with an explicitly educational orientation (based on Comenius, Oberlin, Pestalozzi, Froebel).
1869	Imperial School Act – liberalisation of education; church loses supervision rights over kindergartens.
1871	A professional organisation for kindergarten educators is founded.
1872	– First kindergarten legislation with general country-wide standards – the decree promotes a Froebelian approach to early childhood education. – A framework plan for the training of kindergarten educators is included in the decree.
After 1879	Liberalism loses its momentum.
1896/97	40% of kindergartens are run by public agencies, 25% by humanitarian associations, 8.5% by religious orders or the church and 25.6% by private individuals, such as factory owners. The relative share of public institutions continues to grow over the years.
1900	Educational institutions for children before compulsory schooling come under the supervision of school authorities.
1914	Wartime Kindergarten Act transfers responsibility for kindergartens from the education sector to the social welfare sector, with youth offices in charge of supervision.
Up to 1939	Expansion of kindergartens takes place, mostly in Vienna, where innovative pedagogical approaches are developed, e.g. along psychoanalytical lines under the influence of Anna Freud and Erik Erikson.
1939–1945	Under the national socialist regime, these reform-oriented movements are suppressed and the pedagogical programme is changed to include goals such as “obedience” and “heroism”.
1962	Legislative competence for kindergartens is transferred to the nine Austrian provinces; responsibility for the professional education of kindergarten staff remains at the federal level.
1965-1975	Focus of early childhood education is primarily on cognitive development.
From 1975	Social-emotional learning becomes more important, play and learning are on an equal footing; promotion of the child's overall personality becomes the basis for early childhood education goals.
ab 1980	Increased expansion of kindergartens and stronger scientific foundation of approaches to learning
1990	Legal regulations to increase the compatibility of family and work in the 1990s

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for pre-primary settings in countries with a primary school entry age of 6 years.

1994	Introduction of 4-semester courses (“College for Kindergarten Pedagogy”) as a training opportunity for persons with advanced school-leaving certificate
1995	70% of 3 to 5 year-olds are enrolled in a kindergarten.
1997	Increased investment in the expansion of childcare facilities as a family policy issue for better reconciliation of work and family life
2000	Entitlement to paternity allowance for fathers is introduced.
2002	Federal Government funded projects focus on intercultural education and language enhancement.
2004	Promoting giftedness as a key indicator for the quality of education is also discussed for the ECEC sector.
2008	Introduction of a framework plan for early childhood settings valid across the country (further guidance follows in subsequent years)
2008	Agreement between the federal and regional governments to expand early childhood provision with an emphasis on the under 3 year olds and language support
2009	<ul style="list-style-type: none"> – Agreement between federal and regional governments to introduce a free and compulsory kindergarten year for 5 and 6 year-olds – Tax relief for childcare costs for all under 10 year olds is introduced.
2011	– Agreement between federal and regional governments to further expand childcare provision for under 3 year-olds and to extend opening hours
2012	<ul style="list-style-type: none"> – Ministerial Council Decision on language assessment (children in need of language support are given specific tuition) – In April 2012, the section "Early Childhood Education" is founded within the ÖFEB (Austrian Society for Research and Development in Education).
2013	Act on the National Qualifications Framework (NQF): Classification of training for kindergarten educators at Level 5: Short Cycle Tertiary Education (ISCED 2011)
2016	Ministerial Council Decision on the reorganisation of the transition from kindergarten to school, including passing on information in the context of school enrolment
2016	Revision of the nation-wide curriculum for the professional education/training of early childhood staff (including a stronger emphasis on under 3 year-olds) and a renaming of the professional training institutions as <i>Bildungsanstalten für Elementarpädagogik</i> - Educational Institutions for Early Childhood Pedagogy (replacing the term Kindergarten Pedagogy)
2018	Consolidated Federation-Länder Agreement on the expansion of early childhood education and care comes into force.
2019	Introduction of 3-year vocational training schools for Pedagogical Assistants
2020	Introduction of study programmes in early childhood education at higher education institutions specialising in pedagogy (<i>Pädagogische Hochschulen</i>) as a lateral entry option into the profession
2022	Introduction of 4-semester study programmes in inclusive early childhood education at higher education institutions specialising in pedagogy (<i>Pädagogische Hochschulen</i>) for the continuing qualification of kindergarten educators.

ECEC system type and auspices²

Austria is a federal state comprising nine autonomous *Länder* (Burgenland, Carinthia, Lower Austria, Upper Austria, Salzburg, Styria, Tirol, Vorarlberg and Vienna), each with its own legislative

² The Eurydice country report on ECEC in Austria provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

and executive competences. In accordance with the federal state structure, responsibility for early childhood education and care lies primarily with the *Länder*, and regulations vary considerably. Therefore, despite recent Federation-Länder Agreements, the ECEC system cannot be described as fully integrated but rather as “partially integrated”.

Since 2018, the Department of Early Childhood Education, Social Pedagogy and Preschool Integration in the Federal Ministry of Education, Science and Research (FMESR) has been responsible for the coordination and implementation of the Federal-Länder Agreements (FMESR 2021a) as well as for the professional education and training of pedagogical staff and the curricular framework for ECEC institutions (see section on *Curricular framework*).

Since February 2021, the Department of Family and Youth in the Federal Ministry of Labour, Family and Youth has been assigned to the Federal Chancellery. According to the 2021 amendment to the Federal Ministries Act, which came into force in 2022, the Federal Chancellery is now responsible for "general family policy matters, including the coordination of family policy and family support, as well as population policy in family and youth matters" (Federal Chancellery 2021a).

The nine *Länder*, through their own legislation, have overall responsibility for the ECEC sector as well as for supporting the municipalities in the building of ECEC provision. The *municipalities* are responsible for establishing and maintaining the running of kindergartens for 3 to 6 year-olds and childcare centres for under 3 year-olds.

General objectives and legislative framework

Pursuant to § 15a of the Federal Constitutional Act, a consolidated Agreement on Early Childhood Education between the Federal Government and the nine federal states came into force in October 2021, bringing together previous agreements into one legal provision (FLIS 2021). The Agreement was updated for the kindergarten years 2022/23 to 2026/27 (FLIS 2023), with the following overall goals:

- Strengthening early childhood educational institutions in their role as the first educational institution in a child's life
- Promoting children's holistic development in alignment with the nationwide curricular framework plan, especially in German as the language of instruction as well as mathematical, technical and scientific competences; promoting children's psychosocial and physical development in an age-appropriate way and relating to artistic, musical, creative and emotional competence
- Facilitating the entry into primary school (Austrian: *Volksschule*) in the sense of transition management and increasing equal opportunities for educational and professional pathways, regardless of the children's socio-economic and cultural background
- Supporting the education and upbringing of children according to nationally agreed and empirically proven pedagogical concepts, taking into account their respective age, individual abilities and individual needs
- Improving the compatibility of family and work and gender equality
- Recognising and transmitting fundamental values of Austrian society in early childhood educational institutions and through home-based ECEC providers.

Among the specific measures to be taken are:

- Implementing a standardised, compact language proficiency assessment tool (BESK-DaZ KOMPAKT, FMESR 2021d)

- Increasing support for language development in 4 year-olds
- Driving forward training for kindergarten pedagogues and language support staff
- Binding transmission of fundamental values
- Clear definition of the objectives of education and care through the specification of key educational documents
- Increased focus on the transition from kindergarten to school
- Increased monitoring and cooperation between the Federal Government and federal states
- Constant and efficient (impact) evaluation
- Continuation of the mandatory free kindergarten year for 5 year-olds
- Focus on the expansion of early childhood education programmes for children under 3 years of age
- Ensure more flexible and longer opening hours; improve working conditions and childcare ratio
- Promotion of home-based ECEC providers as an alternative to early childhood education institutions.

The legislative framework at the federal level for early childhood education and care is the Youth Welfare Act (1989) with subsequent amendments; each of the nine *Länder* has its own Kindergarten Act.

ECEC entitlement and compulsory attendance

In Austria, there is no universal entitlement to a place in a kindergarten or childcare centre. However, since the *Länder* have been obliged since September 2009 to provide a kindergarten place for children who have turned 5 by the end of August in the year before starting school, children are guaranteed a place during this year. Since 2018, attendance is **compulsory** for at least 20 hours a week, which are free of charge for parents and known as the ‘free kindergarten year’ (Federal Chancellery 2021a). In addition to the regular holiday periods and a number of ‘school-free’ days, parents are permitted to take a three-week holiday. An exemption from compulsory attendance may be granted under certain conditions (e.g. illness, severe physical or mental impairment, medical reasons, remote place of residence) at the request of the parent or guardian.

For children under 5 years of age, enrolment in an ECEC setting is voluntary.

Compulsory primary schooling begins in the September following the child's 6th birthday and lasts for nine years.

Main types of provision

Childcare centres (*Kinderkrippen, Krabbelstuben, Kleinkindbetreuungseinrichtungen*) provide places for infants and toddlers under 3 years of age. In 2022/23, there were 2,650 such childcare settings in Austria.

Kindergartens (*Kindergärten*) are the traditional form of provision for children aged 2½ to 3 years up to school entry at the age of 6. In 2022/23, the number of kindergartens totalled 4,602.

Mixed-age groups (*altersgemischte Gruppen*), a relatively new form of provision for 1 to 5/6 year-olds, are also available (1,557 in 2022/23). They are mostly located in kindergartens and to be found in areas where there are not enough children to establish same-age settings. Some of

the mixed-age groups are **parent-managed children's groups** (*elternverwaltete Kindergruppen*), characterised through a high level of parental responsibility and decision-making.

In 2022/23, there were a total of 9,717 ECEC and school-age settings comprising 21,888 groups attended by 388,256 children. The majority of these facilities were open all day (Statistics Austria 2023).

Home-based ECEC provision is primarily for very young children. In most of the nine *Länder* providers are expected to have some kind of pedagogical training (Federal Ministry for Digitalisation and Economic Location 2021a). In 2022/23, approximately 2.2% of children under 3 years of age and 0.7% of 3 to under 6 year-olds across the country were cared for by 2,011 home-based providers (Statistics Austria 2023, own calculations).

According to the Federation-*Länder* Agreement, ECEC settings should be open at least 45 hours per week (at least 9½ hours per day on at least four days) and for at least 47 weeks per year (Eurydice 2023). Exact opening hours vary according to region, state and provider. However, most are open at least six hours a day and almost all (99%) are open over lunch. Most open around 7:00/7:30 and close around 17:00/18:00. On average, ECEC settings have 21.9 closing days per year. In general, the trend towards longer opening hours continues (Statistics Austria 2023).

Over the past 15 years or so there has been a significant expansion in the number of early childhood settings, particularly of childcare centres and mixed-age provision. Between 2005 and 2022/23 the number nearly tripled. At the same time, the number of kindergartens sunk over the past seven years although the number of children enrolled in them increased slightly.

Table 1

Austria: Number of centre-based ECEC settings by type and children enrolled at different time points, 2005 to 2022/23

Year	Childcare centres		Kindergartens		Mixed-age settings		Total	
	Settings	Children	Settings	Children	Settings	Children	Settings	Children
2005/06	889	16,037	4,482	195,176	554	18,307	5,371	229,520
2015/16	1,760	33,500	4,664	217,952	1,663	45,673	8,087	297,125
2022/23	2,650	53,529	4,602	235,222	1,67	48,692	9,717	337,443

Source: Statistics Austria 2023

Provider structures

The distribution of provider types differs considerably from province to province. While, for example, about 86.3% of the childcare centres in Carinthia have a private provider, this is only the case for 4.7% in Burgenland. Private mixed-age settings are found most frequently (87.2%) in Vienna, and least frequently in Burgenland (8%). In Lower Austria almost all kindergartens (97.3%) are public, but in Vienna only 44.5% (Statistics Austria 2023).

In Austria, slightly more than half of the childcare centres and almost three quarters of mixed-age facilities are privately run, whereas almost three quarters of the kindergartens are publicly run. These ratios are also reflected in the number of children enrolled.

Table 2

Austria: Number of settings and children by provider type, 2022/23

ECEC setting type	Provider type					
	Public			Private		
	Number of settings	Share, in %	Number of children	Number of settings	Share, in %	Number of children
Childcare centres	1,322	49.9	25,259	1,328	50.1	28.270
Kindergartens	3,353	72.9	180,969	1,249	27.1	54.253
Mixed-age settings	414	26.4	12,161	1,153	73.6	36.531
	5,089		218,389	3,730		119.054

Source: Statistics Austria 2023

Participation rates in regulated provision

Participation rates, particularly for the under-threes, vary considerably between urban and rural areas and from federal state to federal state: e.g. in 2022/23 the attendance rate for under-threes was 19.9% in Styria and 42% in Vienna. Across the country, 29.9% of under 3 year-olds and 94.4% of 3 to under 6 year-olds attend an ECEC setting. At the beginning of September 2022, 388,256 children were enrolled in a centre-based setting (including school-age childcare facilities). Most attended a kindergarten (235,222), 53,529 a childcare centre and 48,692 a mixed-age setting (Statistics Austria 2023).

Table 3

Austria: Number of children in ECEC settings (excluding school-age childcare facilities) and enrolment rates by age, 2022/23

Age group	Childcare centres	Kindergartens	In mixed-age settings	Number of children	Enrolment rates, in %
Up to 1 year	1,295	3	310	1,608	2.0
1 year-olds	19,958	189	3,264	23,411	27.1
2 year-olds	28,580	14,322	8,444	51,346	59.4
Up to 3 years	49,833	14,514	12,018	76,365	29.9
3 year-olds	3,003	63,408	11,045	77,456	88.8
4 year-olds	347	75,908	10,148	86,403	96.0
5 year-olds	255	79,964	9,348	89,567	98.0
3 to under 6 year-olds	3,605	219,280	30,541	253,426	94.4
Up to 6 years	53,438	233,794	42,559	329,791	n.d.

Source: Statistics Austria 2023

In 2022/23, roughly half (52.8%) of the children attended kindergarten full time, 70.8% a mixed-aged setting full time and 57.6% were in a full-day childcare centre (Statistics Austria 2023).

According to Eurostat data, the proportion of children under 3 years of age in ECEC settings has increased significantly since 2005: while in 2005 only 4% of these children were cared for in centre-based settings, by 2022 the proportion had grown to 23%. The proportion of children aged 3 up to primary school entry attending a centre-based setting had also increased, from 69% in 2005 to 91.9% in 2022 (see Table 4).

Table 4

Austria: Enrolment rates by age and weekly hours of attendance, 2005-2022

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2005	1 to 29	4	53
	Over 30	0	16
	No enrolment in ECEC	96	31
2010	1 to 29	6	57
	Over 30	3	26
	No enrolment in ECEC	91	17
2015	1 to 29	13.7	57.7
	Over 30	8.6	27.6
	No enrolment in ECEC	77.8	14.7
2022	1 to 29	14.6	54.6
	Over 30	8.4	37.3
	No enrolment in ECEC	77.0	8.1

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 0.55% of GDP in 2019 (OECD 2023).

Early childhood education and care in Austria is mainly publicly funded. According to Austrian constitutional law, the financing of ECEC facilities is primarily the responsibility of the *Länder* and the municipalities.

From 2019 to 2021, the federal government made €142.5 million available as special-purpose subsidies and €70 million for the ‘free’ kindergarten year. Annually, €47 million are earmarked for the expansion of childcare provision and €18 million for language support; the difference can be spent flexibly by the *Länder*, which co-finance around €38 million (Federal Chancellery 2021c).

Through the 2021 Federation-*Länder* Agreement on Early Childhood Education between the Federal Government and the nine federal states, both levels are committed to enhanced investment in ECEC. The Agreement regulates the procedures and the conditions/obligations related to the receipt by the *Länder* of additional financial resources (subsidies) from the federal government (FMESR 2021).

Since 2010, part-time kindergarten attendance has been free of charge for parents in the year before starting primary school (‘free kindergarten year’). In some *Länder* this also applies to full-day enrolment. In Vienna, for example, attendance at a public ECEC setting is free of charge for parents of 0 to 6 year-olds. Otherwise, costs vary depending on the province and are partly income-related. Job-seekers or parents whose gross monthly income does not exceed €2,300 can apply for (income-dependent) childcare assistance (Federal Ministry for Digitalisation and Economic Location 2021a).

Monthly fees in public ECEC settings can vary between €100 to €440. Up to €2,300 per year can be claimed against tax for childcare costs (European Commission/EACEA/Eurydice 2019, 58).

In 2022, a couple with two children spent about 2% of net household income on childcare costs³ (OECD.Stat 2023).

Staff-child ratios and group size

Staff-child ratios are regulated by the *Länder* (Bundeskanzleramt 2021, 953ff) and can vary considerably.

Group size in **childcare centres** ranges from 7 to 15 children per group, in **kindergartens** from 20 to 25 children. In **mixed-age settings** both group size and the number of staff are dependent on the ages of the children attending. They range in size from 5 to 10 children.

As a rule, one fully qualified pedagogue is present in each group, but the number of assistants varies greatly in the federal states according to the size of the group, the age of the children or the time allocated to educational activities in the setting.

Across all *Länder* and child groups, staff-child ratios range between 10:1 in Carinthia and Tirol and 16:1 in Vorarlberg (Federal Chancellery 2021b, 9154).

Table 5

Austria: Group size and number of staff per group by *Länder*

Federal states/ <i>Länder</i>	Childcare centre 0–2 (per group)			Kindergarten 3–5 (per group)			Mixed-age settings (per group)		
	Max. number of children	Professional	Assistant staff	Max. number of children	Professional	Assistant staff	Max. number of children	Professional	Assistant staff
Burgenland	15	1	1	25	1	1 ¹	25	1	1 ¹
Carinthia	15	1	variable	25	1	1	20-25	1	1
Lower Austria	n/s	n/s	n/s	25	1	1 ²	10-15	1	1 ³

Styria	14	1	0.5	25	1	1	20	1	1
Tirol	7	1	1	20	1	1	12-20	1	1
Vorarlberg	9	1 person per 5 children under 2 ⁵		23	1	1 from 17 children upwards	12	1	2-3 depending on age constellation
Vienna	15	1	1	25	1	1	10-14	1	1 ⁶

¹Only for half of the opening time, ²only in the morning, ³only if children under 1 year present, ⁴from 6 children, ⁵no distinction between professional and assistant, ⁶if 1 child under 3 years present.

Source: Federal Chancellery 2021b, Tabellenband, 246-251

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Curricular framework

A Nationwide Framework Curriculum for Austrian ECEC Services (*Bundeslandübergreifender BildungsRahmenPlan für elementare Bildungseinrichtungen*) for work with 0 to 6 year-olds was issued in 2009 (FMESR 2021b). The play-based framework formulates 12 learning principles (e.g. integrated learning, inclusion, gender sensitivity, participation, transparency) and six learning areas (emotions and social relationships; ethics and society; language and communication; movement and health; aesthetics and design; nature and technology).

Two additional sections focus on (1) language and communication and (2) the final year in kindergarten. The pedagogical staff select content and didactic approaches that are appropriate to the situation, context and age. They seek a balance between activities initiated by the child and those guided by the staff; these include theme-based project work as well as individual and group activities.

Guidelines were published in 2016 to support ECEC settings in implementing the mandatory framework (European Commission/EACEA/Eurydice 2019, 108).

Digital education

In the curricular framework, "Information and Communication Technologies (digital media)" is subsumed under the learning area "Language and Communication". The importance of promoting children's media competence is emphasised: Children should be enabled to use media critically but also creatively and thus to express themselves and also to create their own products (FMESR 2021b, 38).

To support ECEC staff, the Charlotte Bühler Institute was commissioned by the FMESR to develop guidelines for digital media education in ECEC settings (Charlotte Bühler Institute 2020). The promotion of media literacy is seen here as a cross-curricular task and complementary learning area. It is considered important that children - based on their individual experiences, their age and their development - can build up media competences in a co-constructive educational process. The use of digital media is recommended from the age of 3 for a maximum of 30 minutes per day and in the company of an adult. Children should gain experience in dealing with media, use them for their own needs, reflect on their own use of them and generally learn to think about the function of media. However, a learning environment without digital devices is also suggested, especially as a means of reflection and for acquiring basic knowledge. Data protection and the right to one's own image are further topics that are dealt with. The guidance also includes practical examples for involving parents or using digital media in every day kindergarten life (e.g. selection criteria for apps).

Monitoring – evaluation

Quality assurance, monitoring and evaluation procedures in early childhood education and care are the responsibility of the federal states.

In terms of quality assurance, the Federation-Länder Agreement 2021 (with amendments in 2023) states that the following guidelines, among others, apply throughout Austria (FMESR 2021c): Nationwide Framework Curriculum for Austrian ECEC Services; Guidelines for language support at the transition from kindergarten to primary school; Module for the final year in ECEC settings; and the Guidelines for the development of values in kindergarten.

Child-related assessment

Since 2005, language assessment tools have been used in kindergartens to detect possible support needs 15 months before school entry (European Commission/EACEA/Eurydice 2019, 113). Since 2019/20, the nationwide standardised instruments "BESK KOMPAKT" (for children with German as a first language) and "BESK-DaZ KOMPAKT" (for children with German as an additional language), developed by the Federal Institute for Educational Research, Innovation and Development of the Austrian School System (BIFIE), are used for language assessment (FMESR 2021d).

Based on the results of the language assessment, which must be carried out at least once from the age of 3, an obligatory transfer sheet mapping the developmental status of the child in the year preceding school entry is passed on from the ECEC setting to the primary school.

Centre-level internal evaluation

There is no general obligation to carry out internal evaluations, this is decided by the *Länder* (European Commission/EACEA/Eurydice 2019, 126). Upper Austria, for example, has developed its own self-evaluation tool (Directorate of Education Upper Austria 2021), which is used once a year by all ECEC settings in the region. The Charlotte Bühler Institute (Charlotte Bühler Institute 2021a) recommends the use of the German-language versions of the Infant Toddler Environment Scale - Revised (KRIPS-R) and the Early Childhood Environment Rating Scale - Revised (KES-R) to determine and support pedagogical quality in early childhood education centres. However, it is emphasised that they should not be used as pure assessment and control instruments. The Charlotte Bühler Institute therefore offers various training courses on the use of the scales.

External evaluation

In all *Länder* there are kindergarten supervisors/inspectors who are responsible for ensuring the pedagogical quality in ECEC settings (Eurydice 2023). They visit each setting at least once a year. The size and organisation of rooms and equipment are checked, and also the suitability of the staff. The BMBWF reserves the right to make unannounced visits. How the results are used in each case is decided by the *Länder* (European Commission/EACEA/Eurydice 2019, 134).

Evaluations of the process quality in individual ECEC settings are also carried out by certified evaluators of the Charlotte Bühler Institute.

Evaluation studies

At the University of Graz Institute for Educational Research and Teacher Education (University of Graz 2021), a project on the implementation of quality development processes in ECEC settings was conducted from 2019 to 2021.

The Charlotte Bühler Institute, a research and development institute in Vienna established in 1992, carries out evaluation projects in the ECEC sector, for example: accompanying process quality assessment on educational cooperation in the border regions, including multilingual education (an EU project) (Charlotte Bühler Institute 2021b).

Evidence-based research and impact analyses on a variety of topics related to childcare, family and society are provided by the University of Vienna "Austrian Family Institute" (University of Vienna 2021).

Inclusion agenda

Children with special educational needs and disabilities

Children with disabilities have the option of attending a regular kindergarten, a facility with integrative groups or a special needs kindergarten (Federal Ministry for Digitalisation and Economic Location 2021b). In an integrative group, an average of four children with disabilities and 16 children without disabilities are cared for together - by one kindergarten pedagogue, one special needs teacher and two kindergarten assistants. In therapeutic education groups, a maximum of twelve children with severe disabilities are cared for (Agency for Education and Internationalisation 2022).

The tasks, goals and frameworks of these settings are regulated by the federal states. If there are more than two children with special needs in a regular ECEC setting, an additional full-time, fully qualified member of staff must be employed. Children with special needs in integrative settings count as two children. There may not be more than four such children in an integrative group.

The number of children under 6 years of age with (impending) disabilities or children with special needs is not statistically recorded at the federal level. Due to the federal regulations, there is also considerable heterogeneity between the *Länder* with regard to integrative or inclusive regulations. There is no legal entitlement to inclusive settings in the elementary education sector. There are also no data on the share of inclusive or special needs settings.

Children with a migration background

At the beginning of 2023, approximately a quarter (26.4%) of the total population had a migration background and 19% held a non-Austrian citizenship. Most came from Germany, followed by persons from Romania, Serbia, Turkey, and Croatia; there was a particularly marked increase in persons from Ukraine (Federal Chancellery 2023, 7).

In 2022/23, about one third (32.5%) of all children in ECEC settings had a home language other than German, with large differences between the federal states (data without Styria), varying from 14.7% in Tyrol to 58.7% in Vienna. The differences between the age groups of under 3 year-olds and 3 to 5 year-olds are relatively small (30.9% vs. 32.4%) (Statistics Austria 2023).

More than three quarters (77.9%, data without Styria) of the children in ECEC settings have Austrian citizenship. Just under 3% come from Asian countries, about 3% from Romania, 1.5% from Germany, 1.4% from Serbia and 1.3% from Hungary (Statistik Austria 2023). In 2022/23, the share of foreign children was highest in mixed-age settings at 34.2% and lowest in childcare centres at 17.6% (Statistics Austria 2023, own calculations).

For some years, differences in the enrolment rates of children aged 1 to 5 with a migration background and those without have been decreasing: 76% vs. 70% (2022). Larger differences exist with regard to the enrolment rates of younger children: While 63% of 2 year-olds and 92% of 3 year-old Austrian children attend an ECEC setting, the figures for non-Austrian children are 52% and 83% respectively. From the age of 4, the enrolment rates are very high, regardless of citizenship: 97% of 4 year-old Austrian and 94% of non-Austrian children are cared for outside the household, in the obligatory last year of kindergarten this proportion rises to 98% vs. 97% (Federal Chancellery 2023, 42).

Children whose home language is not German are offered support in the kindergarten with regard to language development as well as assessments of their language competence. Since the kindergarten year 2019/20, language assessment for children with German as an additional language has been carried out nationwide through a standardised instrument called "BESK-DaZ KOMPAKT" (BMBWF 2021d). At the beginning of 2021/22, it revealed a need for support in the

German language for 28% of 4 and 5 year-old children (regardless of their first language), which decreased to 21% by the end of the year (Federal Chancellery 2023, 42).

In addition to German, some languages of minority groups are also spoken in Austria: Burgenland-Croatian, Hungarian and Romany in Burgenland; Slovene in Carinthia and Styria; Hungarian, Czech and Slovak in Vienna. In order to promote the respective home language in kindergarten, there are bilingual kindergartens in some federal states or the children are taught in their home language (Federal Chancellery 2015).

Parental leave arrangements⁴

Mandatory **Maternity leave** (*Mutterschaftskarenz*) starts eight weeks before the birth date and continues for eight weeks afterwards. Payment is 100% of average income during the three months preceding the beginning of maternity leave.

Fathers living in the same household as the mother and child are entitled to a month of **Paternity leave** (*Papamonat / Väterfrühkarenz*); This *family time bonus* is remunerated with €23.91 per calendar day. The month can be taken within 91 days after the birth.

Parental leave (*Elternkarenz*) is a family entitlement and can be taken until the child is 2 years old. A childcare benefit (*Kinderbetreuungsgeld*) is available to all families whether or not parents take Parental leave. Parents can choose from two options:

- 1) Flexible lump sum option (*Kinderbetreuungsgeldkonto*): Parents receive a sum of €13,085 (if only one parent receives it) or €16,389 (if both parents receive it), which they can spread over a certain period of time: between 365 days (i.e. €35.85 per day) and 851 days (i.e. €15.38 per day) for one parent and between 456 and 1,063 days for both parents.
- 2) Income-dependent option (*einkommensabhängiges Kinderbetreuungsgeld*): Here, 80% of the net income of the last six months is paid for 365 days (for one parent recipient) and up to 426 days (for two parent recipients). A maximum of €69.83 per day or €2,100 per month is paid. Up to €7,800 per year can be earned in addition.

With both variants, both parents can take only one month of Parental leave at the same time, in which case the total length is reduced by one month. If parents share their childcare benefit for at least 124 days, they receive a partnership bonus of €500 each. Since January 2019, working parents receive an additional family bonus as a tax-free amount of up to €2,000 (2022) per child until the child's 18th birthday.

Almost all those entitled make use of Parental leave (93-96%). As a rule, these are women. Statistics on option 1) mentioned above show that this was chosen by about two thirds of parents and that 36% of these parents applied for 28 months or more; 89% of these parents were mothers. 35% of parents chose option 2) for 12 to 14 months; here 30% of applicants were fathers. However, on average, fathers only claimed about 4.5% of all days allocated for childcare in Austria.

⁴ The brief summary in this section is based on the country note for Austria by Eva-Maria Schmidt and Andrea E. Schmidt in the *International Review of Leave Policies and Research 2023* (see References).

Current challenges for the ECEC system in Austria

Country expert assessment by *Marisa Krenn-Wache*

Academic-level IPE programmes for early childhood education and new professorial chairs

Since 2018, Bachelor's degree programmes (180 ECTS) in early childhood education have been offered at higher education institutions specialising in pedagogy (*Pädagogische Hochschulen*). These courses are primarily designed for the further qualification of Early Childhood Pedagogues already working in the field.

From the academic year 2020/21 onwards, for the first time – alongside the regular and long-established vocational qualifying courses for Early Childhood Pedagogues – undergraduate study programmes will be offered at the *Pädagogische Hochschulen*. With the higher education course in "Early Childhood Education" (60 ECTS), a lateral entry option into the field has been created for persons with relevant prior initial professional education. From the summer semester 2023 onwards, another higher education course (120 ECTS) will offer graduates of non-relevant disciplines with a minimum of 180 ECTS a qualification with a professional licence.

Research and teaching in the field of early childhood pedagogy are underrepresented in Austria. It was not until 2010 that the first chair for early childhood pedagogy was established at the University of Graz (2021). Then, in 2015, a joint chair for early childhood education and upbringing was established at the University of Innsbruck (2021) and the University of Teacher Education Vorarlberg. Three Master's degree programmes started in 2014 in Salzburg (university course) and Vienna (BA programmes) (2021). In 2012, a section for Early Childhood Pedagogy was founded by the professional association for educational sciences "ÖFEB". A significant expansion of basic and applied research is urgently needed.

Further expansion initiatives and staff recruitment measures

According to national statistics and the Austrian Conference on Spatial Planning, a growth of approximately 8% is expected in the population group of 0 to 5 year-olds. During the past ten years, the participation rates of 0 to 2 year-olds have doubled and it can be assumed that this development will continue. If population growth continues up to 2025, it has been estimated that a related 11,100 places will need to be made available in early childhood settings and an additional 3,600 places related to the increased enrolment rates. Targeted measures to ensure provision of places and to raise the attractiveness of the occupational field are needed across the country (Neuwirt 2016).

In 2022, the Federal Ministry of Education, Science and Research won an award for an EU project on "Improving the framework conditions for staff to increase quality in early childhood education and care in Austria" (FMESR 2022). Within the framework of this project (duration 2022-2024), instruments are to be developed together with the federal provinces and with the involvement of other relevant stakeholders which will lead to improvements in the quality of early childhood education, in the availability and stability of pedagogical staff and in reducing staff shortages.

Transferring responsibility for early childhood education to the federal level

Since 1962, legislative and executive powers for the early childhood sector have come under the auspices of the nine federal states. There has long been a demand on the part of the relevant professional association for a transfer of responsibility for early childhood education and care to the federal government level. Federal framework legislation is seen as the way forward in order to improve and unify the very disparate conditions and terms of employment to be found

in the individual *Länder* and offered by the various ECEC providers. However, a solution to change this legal situation, which would require a two-thirds majority in parliament, is not in sight.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population of Austria totalled 8,978,929. Over the past two decades it has increased steadily – 2000: 8,002,186; 2010: 8.351.643; 2020: 8,901,864 (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27(2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries (EU27+6) was in France (1.84), the lowest in Malta (1.13). At 1.48, Austria is slightly below the EU27 average (Eurostat 2023c⁵).

Children under 6 years of age

Table 6

Austria: Number of under 6 year olds by age, 2022

Age	Number of children
Up to 1 year	84,551
1 year-olds	84,286
2 year-olds	85,852
3 year-olds	87,503
4 year-olds	89,593
5 year-olds	90,231
Total 0 to under 6 year-olds	522,016

Source: Eurostat 2023a

The proportion of children under 3 years of age in the total population was 2.8% in 2022, and that of children under 6 years of age was 5.8%. While these shares were slightly above the then EU15 average in 2000, they had fallen slightly below it by 2015. In 2022, they were again slightly above the respective EU averages (see *Table 7*).

⁵ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Table 7

Austria: Relative share of under 6 year-olds in population compared with EU averages, 2000 to 2022, in %

Year	Comparison Austria/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Austria	3.1	3.4	6.5
	Ø EU15 ⁶	3.2	3.2	6.4
2005	Austria	2.9	2.9	5.8
	Ø EU25	3.1	3.1	6.2
2015	Austria	2.8	2.8	5.7
	Ø EU28	3.0	3.2	6.2
2022	Austria	2.8	3.0	5.8
	Ø EU27(2020)	2.7	2.9	5.7

Single households with children under 6 years of age

In 2022, more than three quarters (78.6%) of households with children under 6 years of age were couple households. Households with single parents accounted for only 2.6% - usually single mothers, the share of single fathers is very low at 0.1%.

Table 8

Austria: Households with children under 6 years of age, 2022

Household type	Number	Share of total households, in %*
Households – total	849,900	
Couple households	668,400	78.6
Other types of households	159,400	18.7
Single households, total	22,400	2.6
Single households, women	21,100	2.5
Single households, men	1,300**	0.1

Employment rates of parents with children under 6 years of age

In Austria in 2022, the employment rate (15-64 years) of men as a whole was 82.1%, that of women 73.4% (Eurostat 2023g).

In 2022, 70,7% of women and 90.9% of men with children under 6 were in employment (18-64 years). The shares of employed fathers were thus above the average (87.2%) of the 27(2020) EU countries, those of mothers were significantly higher than the EU average (63.6%) (Eurostat 2023d).

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 9a

Austria: Employment rates of parents with children below age 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers in %	Fathers in %
Austria	61.7	79.5
Highest rate of employment in 27 EU countries ⁷	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 32.7	Latvia: 74.8
	2022	
	Mothers in %	Fathers in %
Austria	70.7	90.9
Highest rate of employment in 27 EU- countries ⁸	Luxembourg: 81.9	Sweden: 95.1

Children at risk of poverty or social exclusion⁹

In 2022, 21.1% of children under 6 were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. Also, the share of all persons at risk of poverty or social exclusion in the total population was at 17.5% below the European average of 21.6%. In 2020, 2.8% of children under 6 and 3% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023e, f).

About the authors

Florence Pirard, PhD in Psychology, was appointed professor at the Department of Education and Training at the University of Liège (Wallonia-Brussels Federation, Belgium) in 2010. She has worked in the early childhood education field for over 25 years, first as a researcher and then as an educational advisor in a public agency (*Office de la Naissance et de l'Enfance*). Her publications focus on the initial training and professional development of practitioners in early childhood education and care. A further specialisation lies in supporting the implementation of curricula.

Brecht Peleman, PhD in Educational Sciences, is a researcher at VBJK (Centre for Innovation in the Early Years) and the Department of Social Work and Social Pedagogy (Ghent University, Belgium). He currently works on (inter)national research and professionalisation projects about linguistic diversity in ECEC, quality of teacher-child interactions and out-of-school care.

Nima Sharmahd, PhD, is a senior researcher at VBJK (Centre for Innovation in the Early Years) in Ghent (Belgium). She works in international research projects on ECEC, with a focus on professional development, access to ECEC, and family participation. She also collaborates with the Department of Education and Psychology at the University of Florence (Italy), where she obtained her doctoral degree. She worked for several years in Italy at the University of Florence as a researcher and coach for different ECEC centres in Tuscany.

Katrien Van Laere, PhD in Social Work from Ghent University, is a senior researcher at VBJK (Centre for Innovation in the Early Years) in Ghent (Belgium). Her doctoral degree focused on "Conceptualisations of care and education in ECEC" in relation to the accessibility of preschool education. In recent years, she has worked mainly in (inter)national action research and professionalisation projects on the topic of inclusive transitions from home or childcare to preschool education. She has published several articles and essays on the importance of educare and smooth transitions on ECEC.

Catherine Reinertz is head of the Education and Training unit at the Ministry of the German-speaking Community (Belgium). She is jointly responsible for the financing of educational institutions in the Community - including kindergartens - as well as for the legal-organisational framework, e.g. with regard to the weekly and daily school timetables

Jana Backes is head of the Family Unit in the Department of Family and Social Affairs of the Ministry of the German-speaking Community (Belgium). The unit is responsible for the recognition, subsidisation and monitoring of persons and service providers active in childcare in accordance with the relevant legal framework and also for the administration of projects to fund childcare in eastern Belgium.

Introduction

Belgium is a federal, multilingual state comprising three autonomous Regions (Flemish Region, Walloon Region, Brussels-Capital Region), three language Communities (Flemish, French, German-speaking), and four language areas (Dutch, French, German and in the Brussels-Capital Region bilingual, French/Dutch). Of a total population of 11.5 million in 2021, 6.65 million were Dutch-speaking and lived in the Flemish Region and 3.56 million were French-speaking, living in the Walloon Region. In the bilingual Brussels Region (1.2 million inhabitants) a large majority is French-speaking. The German-speaking Community accounts for 0.7 percent of the total population (78,497 inhabitants in 2021).

Wherever possible, separate accounts are given in this report for the Flemish Community, the French Community and the German-speaking Community. Otherwise, unless specifically stated, the data presented refer to the whole country. It should be noted that the Workforce challenges (see Section 10) represent a common country expert assessment drafted together by all the authors of this report.

1. ECEC governance in Belgium

Early childhood education and care in the three language Communities is organised as a multi-sectoral system. Belgium is historically characterised by an ECEC split system since the 19th century. This implies that childcare services for children up to 3 years of age (*kinderopvang*) are under the auspices of the Minister for Welfare, whereas pre-primary institutions (preschools – *kleuterschool*) for children from 2½ to compulsory school age (6 years) are under the auspices of the Minister for Education (OECD 2006). The two types of institutions have distinct curricula, professional profiles and staff to child ratios. The day-to-day running of childcare centres is the responsibility of the childcare service providers (local authorities, non-profit organisations, and also private for-profit providers). In March 2019, the Belgian Federal Parliament passed a law to lower the starting age of compulsory education from 6 to 5 years, thus including the last year of ECEC. The law came into force on 1st September 2020.

In the **Flemish Community**, preschools (pre-primary education, *kleuterscholen*) for children from 2½ years up to school entry come under the general auspices of the Ministry for Education and Training (*Vlaams ministerie van onderwijs en vorming*). Schools enjoy a high degree of autonomy, which is part of the Belgian Constitution. There is ‘Freedom of education’ and ‘Freedom of organisation’, which gives the right to any natural or legal person to start a school. Moreover, this degree of autonomy also allows each school to develop its own educational policies, including its own pedagogical plan, teaching methods, curriculum and timetables, as well as to appoint its own staff. Although schools receiving public funding are required to operate within a regulatory framework, they still enjoy ‘considerable autonomy’. School boards are distributed over three ‘educational networks’ (GO! education of the Flemish Community; municipal schools; publicly funded and privately run schools, mostly Catholic) and may belong to an ‘umbrella organisation’, that is, a representative association of school boards that acts as a partner for schools in policy discussions with the Flemish government. In the case of childcare provision for younger children (*groepsopvang & gezinsopvang voor baby’s en peuters*) and out-of-school provision for school children (*buitenschoolse opvang*), the Department of Welfare, Public Health and Family (*Department Welzijn Volksgezondheid en Gezin*) delegates supervisory duties to a governmental

agency called The Upbringing Agency (*Agentschap Opgroeien*, formerly *Kind en Gezin*, *Child & Family*). The Upbringing Agency is responsible for regulations, allocation of places, funding, quality standards and quality management. The day-to-day running of childcare centres is the responsibility of the service providers (local authorities, non-profit organisations, and also private for-profit providers). All childcare services must be registered with the Upbringing Agency.

In the **French Community** (Wallonia-Brussels Federation - WBF), the *écoles maternelles* (pre-primary education) for 2½–6 year-olds come under the general auspices of the Minister for Education (*Ministre de l'Éducation*) and, more specifically, under three provider umbrellas: the State, local authorities or subsidised organisations. In the case of provision for younger children and out-of-school provision for school children, the Minister for Childhood, Health, Culture, Media and Women's Rights (*Ministre de l'Enfance, de la Santé, la Culture, des Médias et des Droits des Femmes*) delegates responsibility to a government agency called ONE (*Office de la Naissance et de l'Enfance - Birth and Childhood Office*). ONE is responsible for regulations, allocation of places, funding, accompaniment and monitoring of both childcare services, and the continuing professional development system in WBF.

In the **German-speaking Community**, the Minister for Education and Scientific Research (*Minister für Bildung, Forschung und Erziehung*) is responsible for both ECEC for children under the age of 3 and pre-primary education for children aged 3–6. Pre-primary education is currently accessible for children from the age of 3 but will be accessible for 2½ year-olds from 1st September 2024.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The administrative split in services for 0–6 year-olds between 'childcare' for the under-threes and 'education' for children aged 2½ years up to school entry is also reflected in the qualifications required for work in these two different sectors. In 2022, core pedagogues in pre-primary education follow their professional Bachelor's education/training alongside teachers in the school system. Practitioners working with children in services for the under-threes are mostly Infant Care Workers (vocational secondary level).

Flemish Community

Childcare sector

In the Flemish Community of Belgium, childcare (*kinderopvang*) for children from 0–3 is organised in two settings: *groepsopvang* ('group-based childcare') and *gezinsopvang* ('home-based care'). For the purpose of this report, we will only focus on group-based childcare, unless otherwise stated. The core practitioners working in group-based childcare are called *kinderbegeleider groepsopvang* ('childcare worker group-based childcare') or just '*kinderbegeleider*' ('childcare worker'). There are no 'assistants' but some childcare services work with volunteers for supportive tasks.

The adult to child ratio is set at 1 adult per 8 children, but there are no regulations regarding group size or age range of the children in a group. All childcare services are free to choose how they arrange the groups. When there are two *kinderbegeleiders* in a group, the maximum group size is 18 children (so in this case, the adult to child ratio is even less favourable at 1:9.)

In the 2014 Decree on childcare for the 0 to 3 year-olds (*Decreet houdende de organisatie van kinderopvang van baby's en peuters*) it was stipulated that every childcare worker should have a qualification by 2024. There is a list of possible certificates of qualification from different fields of study eligible to do the job. The minimum qualification requirement is the same for *kinderbegeleiders groepsopvang* as for *kinderbegeleiders gezinsopvang* and is set at level 4 of the European Qualifications Framework (also ISCED 4).

Pre-primary education

In pre-primary education in the Flemish Community of Belgium, the core pedagogues are called *kleuterleerkracht* ('Toddler Teacher') or *kleuterleider* ('Toddler Leader'). They work in a *kleuterklas* ('toddler class') within a *kleuterschool* ('toddler school' = pre-primary) that is mostly situated at the same site as the school for children from 6 to 12 years old (*lagere school* or 'lower school' = primary) with one Principal for both the pre-primary and the primary school.

All Pre-primary School Teachers hold a Bachelor's degree in pre-primary education (EQF level 6; ISCED 6, 180 ECTS credits). They often have additional support from a Childcare Worker (*kinderverzorgster*, 'child carer') for a few hours per week, depending on the number and socio-economic situation of the toddlers. Schools with less than 35 toddlers receive funding for four hours 'childcare' in the week. The Childcare Workers usually have a secondary vocational degree in childcare (*kinderzorg*) (ISCED 4). The deployment of these assisting practitioners is mostly framed as a support for the core teachers or as a means to unburden the core teacher. Childcare Workers in pre-primary schools in the Flemish Community of Belgium are typically responsible for caring tasks for the youngest children (e.g. potty training and toilet moments, guidance during meals and snack time, supervising midday naps) while the Teachers are responsible for the learning activities.

Many pre-primary schools collaborate with after-school care services either within or outside of the school building. After-school care workers organise the leisure time of children after school and may also supervise the children in between educational activities and during the lunch break. Many hold a secondary vocational degree in childcare (ISCED 4). In addition, many staff members without any specific pedagogical or educational qualification can be responsible for the supervision of playtime outside and lunchtime.

French Community (WBF)

Childcare sector

In both the childcare and pre-primary education sectors the initial professional study requirements are currently undergoing a series of reforms. A new law on childcare for the 0 to 3 year-olds has come into force (*Arrêté 2-05-2019, MB 09-10-2019*), requiring every Childcare Worker to graduate at least at upper secondary level and giving the possibility of acquiring higher qualifications. The main staff working directly with children are currently '*puériculteurs/puéricultrices*' (Childcare Workers), but people with other qualifications can also be employed (e.g. *auxiliaires de l'enfance*).

However, since September 2020, official working groups set up by the SFMQ (*Service Francophone des Métiers et Qualifications*, French-speaking service of profession and qualifications) have elaborated a new job profile (*accueillant/accueillante d'enfants*) which should become the official common profiles for the multiple former initial training programmes (see *Chapter 4.2*). Another working group in the ARES (*Académie de Recherche et d'Enseignement supérieur*, Academy of Research and Higher Education) made up of the heads of all the university colleges and adult education institutes in WBF, has studied the opportunity of creating together a higher level initial training as recommended by research reports commissioned by the ONE (César et al.

2012; Pirard et al. 2015), which were the product of a broad consultation process with stakeholders in the childcare sector. In 2022, the creation of a new Bachelor's degree in childcare and education in September 2023 is decided and a new job profile (*référentiel métier et de compétences, Bachelier en accueil et en éducation du jeune enfant*) has been set up.

Pre-primary education

At the same time other reforms are ongoing in education as a consequence of the *Pacte pour un enseignement d'excellence* (Pact for a teaching of excellence) which invests in preschool as the first step of the whole system. A new law defines a new common job profile for all the teachers (from preschool – “section 1” to secondary school) (*Décret D. 07-02-2019, MB 05-03-2019; 02-12-2021, MB 02-02-2022*). This law comes into force in 2023. A Master's degree (EQF: level 7, 60 ECTS) for all Teachers (including Pre-primary Teachers who will be registered to work in pre-primary and primary settings with 2½/3 to 8 year-olds) is to be set up by university colleges and universities. More Childcare Workers (*puériculteurs/puéricultrices*) considered as qualified auxiliary staff, are to be registered to work in pre-primary settings, mostly with 2 and 3 year-olds.

German-speaking Community

Early childhood education and care in the German-speaking Community is divided into two domains: childcare for children under 3 years and pre-primary education for children over 3 years.

Childcare sector

In March 2014, a new decree on childcare for the 0 to 3 year-olds was implemented (*Dekret über die Kinderbetreuung*). In addition, in May 2014 two edicts came into effect: Government Decree Services and Other Forms of Childcare (*Erlass der Regierung über die Dienste und andere Formen der Kinderbetreuung*) and Government Decree on Self-employed Childminders (*Erlass der Regierung über die selbstständigen Tagesmütter/-väter*). Amongst other things, they contain and regulate the conditions for the accreditation and subsidisation of childcare institutions and home-based ECEC services.

Childcare is organised for children from birth until they enter pre-primary education. Childcare in the German-speaking Community also comprises after-school care and out-of-school care during holidays for children in primary education. The Regional Centre for the care of small children (“Regionalzentrum für Kleinkindbetreuung”, RZKB) is the focal point for the establishment, organisation, and attendance of childcare facilities. It has the legal status of a non-profit organisation and works in cooperation with the local public institutions.

There are different forms of childcare in the German-speaking Community.

- **Up to the age of 3**, children often attend regulated home-based care, which is provided by childminders (*Tagesmütter/-väter*). Childminders either work independently (*selbstständige Tagesmütter/-väter*), thus determining the contractual details of the care themselves, or they are affiliated to the RZKB in the so-called childminder service (*Tagesmütter/-väterdienst, konventionierte Tagesmütter/-väter*). In both cases, home-based childcare providers care for the children in their own home or in external premises working together as *Co-Tagesmütter/-väter* (two or three childminders).
- There are also organisations in which several childminders work together under one roof. They are called “childminder houses” (*Tagesmütter/-väterhäuser*). The childminders themselves determine the contractual details of the care. They do this in the form of a company or association.
- There is also a centre-based setting known as *Kinderkrippe*. Two *Kinderkrippen* have a capacity of 24 places and one has a capacity for 36 places for children from 0–3 years.

- *Kinderhorte* offers the possibility for occasional childcare.

Currently, the childcare sector is undergoing a reform with the goal of transforming the RZKB into an institution of public interest. As part of the process, legal frameworks, including qualification and education requirements, are being reconsidered. At the moment, there are no minimum qualification requirements for all types of childminders, whereas for working in a *Kinderkrippe* a certificate as Childcare Worker (“Kinderbetreuer:in”) is a prerequisite.

Pre-primary education

From the age of 3, children are entitled to free early childhood education in a **kindergarten**. Early childhood education together with primary education constitutes ‘elementary education’. Primary education starts at the age of 6.

Childcare and pre-primary education for children under the age of 5 is not obligatory in the German-speaking Community. Compulsory education starts at age 5, when children are required to attend pre-primary education full-time.

Table 1 shows ECEC staff working in direct contact with children in centre-based settings and also categorises the core professionals (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this section).

Table 1

Belgium: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Childcare sector (0–2¹ years)				
<i>Flemish Community</i>				
Childcare Worker <i>Kinderbegeleid(st)er</i> <i>Profile:</i> Social Care/Health Care Professional	<i>Kinderdagverblijf</i> Childcare Centre / Nursery <i>Groepsopvang</i> Group-based Childcare	Core practitioner with group responsibility	0–6 years	3 years at upper secondary level plus 1 year specialisation <i>Award:</i> Vocational Certificate in Childcare or Certificate as Childcare Worker (through Adult Education) – Babies and Toddlers ECTS credits: n/a ² EQF: level 4 ISCED 2011: 4

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as also in Belgium): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Nowadays a Director or a Centre Leader is a required position both in childcare services and in the pre-primary schools in the three language Communities of Belgium. In Belgium, there is one director, or principal, often responsible for both pre-primary and primary school together. Legislation defines their general profile, but the more accurate job characteristics and the understanding of leadership depend on the context.

Flemish Community

Childcare sector

In the childcare sector in the Flemish Community of Belgium, the Centre Leader is called a *verantwoordelijke* ('responsible person'). According to the 2014 Decree on childcare for the 0 to 3 year-olds, a Centre Leader is 'the person appointed by the service provider to take care of the quality of the daily operation of the childcare centre'. Centre Leaders are also the main contact persons for parents, for the inspectorate and for the government agency responsible for childcare (*Agentschap Opgroeien*). They mainly have administrative tasks, but sometimes Centre Leaders are also in charge of pedagogical support for their teams. In smaller childcare services, it often happens that Centre Leaders also work directly with children on a regular basis.

As far as qualification requirements go, a distinction is made between services up to 18 full-time child places and services with at least 19 full-time child places. Centre Leaders of childcare services up to 18 children are required to have at least the same level of qualification as the core pedagogues. There is a list of possible certificates of qualification from different fields of study eligible to perform the job. The minimum qualification requirement is set at level 4 of the European Qualifications Framework (also ISCED 4). Centre Leaders of childcare services with at least 19 full-time child places are required to have at least a Bachelor's degree (EQF level 6, ISCED 6). There is a list of possible certificates of qualification from different fields of study eligible to perform the job.

Pre-primary education

In the education sector, Directors of pre-primary and primary school education are in charge of the pre-primary and primary schools. They need to have a Bachelor's degree initial qualification. In order to be tenured and thus receive a higher salary, they need to have a 'pedagogical certificate of competence'. Directors of pre-primary and primary school education do not have to take additional training, although most school boards expect them to. Umbrella organisations have their own training programmes for directors which can last between one and three years. Each school board provides a job description and makes agreements with respect to the assessment

of staff members (in a promotion position) in accordance with the provisions laid down by the Flemish decree on how to evaluate school staff members.

French Community (WBF)

Childcare sector

In the French Community, a new law on childcare for 0 to under 3 year-olds (*Arrêté 2-05-2019*, MB 09-10-2019) recognises the position of Director for the first time, as recommended in research studies (César et al. 2012; Pirard et al. 2015). Six main functions are defined: (1) administrative and organisational management; (2) team management and human resources (recruitment, integration, evaluation, training plan, organisation of the teamwork/schedules); (3) change support in teams (orientation of practices...); (4) ensuring, participating and coordinating the implementation of the educational project, its evaluation and its evolution, including its social and health dimensions; (5) establishing a relational approach with parents and children which promotes the accessibility for all of them and the support for parenthood; (6) playing an interface role with families, partners, local stakeholders and developing actions with the local community. Currently the Director, who does not work directly with children, is often a medical, social or, more recently, a pedagogical worker. Depending on the size of the childcare service (at least 14 children according to the new law) and the management options of the institution, he or she can work alone or in a multidisciplinary team where some tasks can be shared or delegated. He or she has at least a Bachelor's level degree, but rarely an orientation related to childcare when first employed. According to the new law, a relevant experience is required, or an additional qualification recognised by ONE (list to be established) has to be taken within the first two years in office. This additional qualification has been set up as a modular multidisciplinary certificate (25 ECTS) with five parts especially focused on childcare: (1) psycho-educational approach, (2) communicational and relational attitudes and strategies, (3) institutional management /leadership (4) team support, (5) health promotion. This programme has been adapted to the candidate's profile and is made accessible (through a shifted schedule, relocation...). A 10% salary increase has been planned. Two challenges for the near future can be underlined. Firstly, a pedagogical view has been increasingly expected according to the pedagogical curriculum implemented since 2002 in WBF, even if the initial training programmes and the qualification requirements of the staff (Director included) do not yet sufficiently reflect this new approach. Secondly, too many administrative tasks make pedagogical leadership difficult.

Pre-primary education

In the education sector, the missions of all school Directors have been officially defined since 2007 (*Décret 2-02-2007*, MB 15-05-2007) and were reviewed in 2019 (*Décret 14-03-2019*, MB 16-04-2019, Erratum MB 20-05-2019) according to the general reform of schools (*Pacte pour un enseignement d'excellence*, Pact for a Teaching of Excellence). The Directors are promoted teachers (possibly Pre-primary Teachers) with a relevant experience (at least three years) and an additional qualification. They are in charge of both the management and the organisation of their establishment. They are considered as pedagogical and educational leaders in charge of the action plan (*plan de pilotage*) of their establishment. An official typical profile identifies seven areas of responsibility (*Circulaire n° 8198*, 19-07-2021): (1) production of meaning according to values; (2) overall strategic and operational management of the school, which includes the responsibility of the pedagogical and educational projects; (3) leading educational actions and projects where a shared pedagogical leadership is expected; (4) management resources and human relations to develop a collective dynamic with the educational staff and supporting col-

laborative work; (5) internal and external communication; (6) administrative, financial and material management of the establishment; (7) planning and active management of their own professional development. The profile is common for the whole educational system (not specific to preschool). According to the law (*Arrêtés* 22-05-2019, MB 1-10-2019 and MB 8-10-2019) an additional qualification is required to develop relational, pedagogical, administrative, material, financial and organisational general competences (not specific to pre-primary school Directors). This initial training programme is free and combines two parts: (1) a first common part for all candidates dedicated to administrative (12 hours) and steering (*pilotage*) (78 hours) tasks; (2) a second part organised by each of the educational umbrella organisations with their own specific modules on administrative, material and financial topics (30 hours), educative and pedagogical issues (60 hours). This initial training programme also includes an internship and a support to reflexive competences development (30 hours) during the period of integration. In WBF the profile and the initial training programme for the Directors are included in the global reform of the whole education system. They do not take into account specific ECEC issues. In 2020–2021, only 12.89% (251/1,947) of Directors in schools were designated pre-primary Directors (without also being in charge of a primary school) and in June 2021, only 16.25% (331/2,037) had an initial qualification as Pre-primary Teacher (Fédération Wallonie Bruxelles 2020). So the directors are often Primary Teachers with an additional general qualification without specific skills, knowledge or views about pre-primary issues. They are responsible for both a primary and pre-primary school which may be implemented in different places. The Directors often work in an office (usually in the primary school) and do not work directly with children on a regular basis, although they maintain contacts through visits to classes.

German-speaking Community

Childcare sector

Within the Regional Centre for Early Childcare (RZKB), there are different leadership functions. The Director is not directly involved in childcare but rather concerned with administrative and financial tasks. His/her role includes e.g. responsibility for the whole service, ensuring compliance with the management contract, the strategic orientation of the RZKB in cooperation with the administrative board and the government and the execution of the decisions of the administrative board.

Second, there is the Head of Service for Childcare (*Dienstleitung Kleinkindbetreuung*) and the Head of Service for Out-of-school Care for children up to the age of 12 (*Dienstleitung Außerschulische Betreuung*). The tasks of the Head of Service for Childcare consist of quality development, strategic decisions, staff management, compliance with regulations, work rules, and so on (FASNK 2022), as well as promoting the development of the service and of the mission statement. The tasks of the Head of Service for Out-of-school Care consist of recruiting staff and staff management, including supervision, management of trainings and education programmes, and the preparation and organisation of projects taking place during the school holidays.

Third, there are the social-pedagogical specialist staff (*Sozialpädagogisches Fachpersonal*), responsible for the management of the crèches /*Kinderkrippen*. Their tasks include the recruitment of childcare workers and team leading, ensuring compliance with the rules and regulations, observing pedagogical processes and the children's development, deployment in case of shortage of childcare workers, contact with parents (allocation of places, contracts, etc.), calculation of fees, management of buildings and material and on-site supervision of trainee childcare workers.

Each childminder house appoints a main person in charge. He/she is available every day and is also active in childcare. His/her tasks consist in particular of the implementation of the pedagogical concept with the team, the supervision and guidance of the childminders, the day-to-day management and the contact to legal guardians and authorities.

Pre-primary education

Pre-primary schools can only be created in attachment to a primary school. In consequence, the leader of the pre-primary school is also the leader of the primary school. The Directors are usually promoted Primary or Pre-primary Teachers, but a qualification in teacher education or relevant experience are not required by law. Any higher education degree is acceptable, along with the proof of a thorough knowledge of the German and French languages (see Royal decree of 22 April 1969; decree of 31 August 1998 and decree of 19 April 2004). Directors must undergo a special training for school leaders within five years of taking up their post. Should they fail to do so, then the designation as Director would be terminated *ex officio* after five years.

Depending on the number of pupils, the Director is fully or partially relieved of teaching duties. In schools with 50 to 99 pupils, the Headteacher teaches a three-quarter timetable, in schools with 100 to 149 pupils a half timetable, and in schools with 150 to 179 a quarter timetable. In schools with 180 pupils or more as well as in school centres which have at least 125 pupils and are composed of at least three school sites, the Director is exempted from teaching altogether.

The official tasks of the school leaders in the German-speaking Community are the following (article 96 of the decree of 26th April 1999): (1) the pedagogical and organisational management of the school on behalf of the school authority; (2) the implementation of social, educational and school-related objectives; (3) the management and supervision of the school staff; (4) representing the school externally; (5) ensuring that lessons are taught; (6) chairing class councils and other school conferences; (7) the distribution of lessons; (8) drawing up the weekly and annual timetables; (9) admitting and dismissing pupils on behalf of the school authority; (10) organising supervision and substitutes; (11) monitoring compliance with statutory and regulatory provisions and the school rules; (12) cooperation with the staff members, the pedagogical council and the other representative bodies of the school; (13) cooperation with the psycho-medical-social centres; (14) the counselling of pupils and their guardians; (15) cooperation with the school authorities; (16) the organisation of in-service and further training events; (17) personal continuing education and training; (18) tasks contributing to the implementation of the school project and the school's internal curriculum; (19) the coordination of special needs education; (20) The tasks that contribute to driving school development in line with the mission statement and school development goals for continuous quality improvement; (21) the assignment of middle managers in relation to operational tasks of management in the school organisation and in relation to strategic tasks in school and teaching development.

2.3 Centre-based posts of responsibility

The view on the posts of responsibility allocated within the centre for pedagogical tasks across the centre depends on the Community (French, Flemish or German-speaking Community), on the sector (childcare services/pre-primary school) and on local projects. In the **French Community**, Pre-primary Teachers can also become mentors and are granted remuneration for this role. Pre-primary and Primary Teachers can also become specialised in supporting the French Language learning (*FLA*) of migrant children or the integration of children with special needs. But in these cases they can also be considered as specialist staff (see *Chapter 2.5*) even if some reforms aim at giving them more responsibility within the centre in the immediate future.

Generally speaking, however, it is not common practice in Belgium to assign one of the regular centre team to a designated and remunerated post of responsibility regarding a specific pedagogical task.

Some local authorities (in cities like Gent, Aalst, Oostende, Sint-Niklaas, ...) deploy in pre-primary schools staff members (*brugfiguren*) who act as a 'bridge' between the school and parents, with a focus on socially disadvantaged families. Although some of these 'bridging persons' may have a teaching background, this is not a requirement, as their selection is based on social, communication, and organisational skills as well as their experience within the local communities.

2.4 Co-ordinating and supervisory staff

In Belgium, Pedagogical Coordinators and supervisory staff are employed in a few cities such as Gand, Liege, Seraing, Arlon..., but their role is not generalised as in some other countries such as France or Italy, where for many years coordinators have combined professional support and guidance, administrative and coordinating functions aimed at improving children's educational experiences in early childhood services. Pedagogical coordination can also be exercised by pedagogical advisers employed by private associations or public administrations over a large area. This is an emerging function.

Flemish Community

Childcare sector

Since the implementation of the 2014 Decree on childcare for 0 to 3 year-olds, every provider of childcare has to guarantee pedagogical support for all employed Childcare Workers. The government has provided financial resources to realise this right to pedagogical support and allocates them according to the scale of childcare services:

- Income related childcare services (where parents pay a fee according to their income) with more than 18 full-time child places receive a subsidy with which they can choose how they want to organise the pedagogical support. They can either employ or hire a Pedagogical Coach themselves, or make use of the existing training offer provided by different pedagogical support centres and training centres.
- Income-related childcare services with less than 18 full-time child places and childcare services that are not income related can access a support network called *Mentes*. This support network is made up of about 20 support organisations that are active in the entire Flemish Community. Childcare services get support from *Mentes* through a Regional Counsellor (*regionale ondersteuner*) or through a Pedagogical Coach (*pedagogisch coach*). The Regional Counsellor is the first point of contact for a childcare service and works on the policy-making capacity (*beleidsvoerend vermogen*) of the childcare service. One FTE (full-time equivalent) Regional Counsellor supports about 45 childcare services and sees them in an annual cycle. They mainly coach the service provider or the Centre Leader. The Pedagogical Coach offers support on the ground, cooperates in the childcare service and from that position looks for solutions to pedagogic issues that are present. One FTE Pedagogical Coach supports about 33 childcare services in total and sees about 17 of them per year. They mainly coach Childcare Workers.

With the Flemish Intersectoral Agreement (*VIA6*) that was reached in 2021 (Vlaamse Regering 2021b), financial resources were made available to recruit 264 FTE Pedagogical Coaches for the whole childcare sector in the Flemish Community of Belgium.

There is no qualification list that enumerates the possible diplomas a Pedagogical Coach must have. However, a Pedagogical Coach must: (1) have at least a Bachelor's degree (EQF 6, ISCED

6); and (2) have demonstrable competences or sufficient relevant experience in the pedagogical field of childcare. The support must be based on (1) the legally defined competences for the profession of a childcare worker (*15 Beroepscompetenties Kinderopvang*); (2) the Pedagogical Framework MeMoQ (Kind en Gezin 2016). It is expected that the Coach knows and applies these well.

Pre-primary education

Every pre-primary and primary school has a Care Coordinator (*zorgcoördinator*) and sometimes care teacher (*zorgleerkracht*) who is responsible to develop a ‘care’ policy with the aim of increasing the educational opportunities of all children. Care Coordinators can work on different themes such as parental involvement, etc. Most of them do pupil guidance (embedded in a care concept of remedial teaching a sort of learning delay). This group consists of teachers, Speech Therapists, Special Needs Educators or other persons with a social or educational bachelor degree. Here there is thus an overlap here with the specialist support staff (*Chapter 2.5*).

In the pre-primary education sector, each umbrella organisation has its own Pedagogical Advisory Service (PBD, *Pedagogische begeleidingsdienst*), which ensures professional internal support to schools and pupil guidance centres. The School Advisers (*pedagogische begeleiders/onderwijsondersteuners*) offer support to different schools within their network, including professional development, support for self-evaluation and quality assurance (including student assessment and teacher appraisal). They are mostly former teachers, directors and care coordinators. The Pedagogical Advisory Services (PBD) also play a role in external school evaluation. In the case that inspectors give a school a negative evaluation, the inspectors may determine whether or not that school has sufficient policy-making capacity to implement a successful improvement plan. If the inspectors judge that this is not the case, the school will be obliged to accept support from the PBD.

French Community (WBF)

Childcare sector

While most municipalities have created a coordination position for the out-of-school provision for children from 3–11 years of age (*coördinateurs, coördinatrices* ATL, social, pedagogical and psychological workers with a Bachelor’s degree acquired through three years at university college), few municipalities envisage such support for the childcare services or pre-primary schools. Indeed, coordination is only legally provided for in these specific (out-of-school) services and includes a great deal of administrative work (to make inventories and monitor the provision, to improve accessibility) alongside the pedagogical support (to sustain and develop the quality of services, to accompany the elaboration of educational projects). In some municipalities (very often cities, no official data), some coordinators for childcare services may be employed, but without official guidelines.

However, pedagogical coordination and supervision have been developed since 2001 by the governmental administration ONE, which has employed 62.8 FTE Care Coordinators (*coördinateurs, coördinatrices accueil* – social or medical workers with a Bachelor’s degree following three years at university college) and 10 FTE Pedagogical Advisers (*conseiller/conseillères pédagogiques* – pedagogical and psychological workers with a Master’s degree after five years at university) to support and accompany childcare services beyond its traditional controlling/monitoring role (Pirard, Camus, and Barbier 2018). While these ONE coordinators have combined controlling, evaluating and supporting roles with an extended multidisciplinary approach since 2001, Pedagogical Advisers only have a support and guidance role focused on their disciplinary

specialism. Nowadays Coordinators and Pedagogical Advisers must collaborate to support the educational function of the childcare services.

Pre-primary education

In the education sector, some actors can also be considered to be Pedagogical Counsellors. They are employed by the educational umbrella organisations (*conseillers pédagogiques des réseaux ou d'organes de représentation et de coordination*, pedagogical advisers of networks or representative and coordinating bodies, *Décret 28-03-2019*, MB 09-10-2019). According to the reform pact, their role is to change. They not only have to work on the action plan of schools with the DCO (*Délégués aux Contrats d'Objectifs*, Delegates to Contracts of Objectives) to assure a diagnostic mission with the general service of inspection (*SIG, Service Général d'Inspection*) or to support some innovation such as the development of an integrated digital approach, but also to support Directors to create collaborative working among staff, to accompany staff in carrying out their plan according to educational project of their network. They sustain innovation and work to improve the quality of the children's education. These overarching missions concern the whole educational system and are not focused on pre-primary school issues.

German-speaking Community

Childcare sector

Every childminder affiliated to the RZKB is licensed by the RZKB. Social-pedagogical specialists of the RZKB accompany them. These Social Assistants carry out the same tasks as the pedagogical staff working at a *crèche* (see *Chapter 2.2*). Additionally, they are the immediate contact person for all childminders and assess the suitability of potential new childminders before recognition. Moreover, they organise pedagogical consultations.

Every self-employed childminder must be recognised by the German-speaking Community. They are accompanied by socio-educational specialists from Kaleido Ostbelgien (2022). Consultants from the Ministry's "Service for Children and Families" supervise them and control compliance with current regulations.

2.5 Specialist support staff

Flemish Community

Childcare sector

In the childcare sector, there are no specialist staff who work with individual children within the centre. However, childcare services that provide childcare for children with specific support needs / disabilities can turn to a 'Centre for Inclusive Childcare' (*Centrum voor Inclusieve Kinderopvang*, or, 'CIK') for free support. A Centre for Inclusive Childcare either takes care of children itself or puts parents in contact with other childcare services that offer inclusive childcare. Childcare services may receive support and subsidies from the Inclusive Childcare Centre. Depending on its needs, a childcare service receives long-term support or support through a network of professionals. The Centre for Inclusive Childcare provides customised support: thinking about organising care for a specific child, reflecting on the accessibility of care, training on inclusive policy and the pedagogical role of the service, coaching on communication with parents. The goal of the support provided by a Centre for Inclusive Childcare is to increase accessibility for families and children with specific support needs and to develop qualitative childcare. In the Flemish Community of Belgium there are 16 of these Centres for Inclusive Childcare.

Pre-primary education

Every accredited school in Flanders works together with a centre for pupil guidance (CLB *Centrum voor Leerlingenbegeleiding*). A CLB can help with questions about: (1) Learning and studying: problems with reading, writing, arithmetic, learning ... (2) The educational career: questions about study choice, courses of study, certificates and diplomas ... (3) Psychological and social functioning: depressive feelings, stress, fear of failure, bullying problems, transgressive behaviour, a difficult home situation ... (4) Preventive health care: health problems, vaccinations, growth disorders, drug use, obesity. Parents, students, teachers and administrators can contact a team of doctors, nurses, psychologists, educators and social workers free of charge. The M-decree on measures for pupils with specific educational needs (M-Decree, 2014) states that inclusive education is the first option for children and parents. The aim is to allow more pupils to attend school in mainstream education and thus to refer fewer pupils to schools for special education. A school builds a continuum of care and, together with the teacher or teachers, the parents and the centre for pupil guidance (CLB), considers what reasonable adjustments or measures a pupil with special educational needs may need in order to attend classes.

The Flemish Government will replace the M-decree for pupils with specific educational needs by the learning support decree. In the learning support decree, a new model for supporting pupils with specific educational needs in ordinary education will be elaborated: the learning support model. The decree on learning support and the learning support model will be phased in from 1 September 2023 (Vlaamse Regering 2021a). Learning support staff will have their own status, in line with that of a care coordinator and with retention of seniority. In consultation with the educational field, a competence profile will also be developed, including the expertise that a 'learning support worker' must have. To develop this expertise, cross-network consultation between the learning support centres is envisaged.

French Community (WBF)

Childcare sector

According to the law, the childcare services must guarantee the preventive medical and health surveillance of each child and draw up a contract with a general practitioner (sometimes a paediatrician) who also supports the staff (collective health promotion) and/or collaborate with a children's consultation bureau of the *ONE*.

A pedagogically qualified candidate can be employed complementarity to the Social and Health workers (*Arrêté* 2-05-2019, MB 09-10-2019) to support the staff and the pedagogical programme, which can include working with children and families (e.g. a *Pédagogue*, a Psychologist, a Psychomotor Specialist). So a pedagogical role can be integrated, but without specific additional public funds. Indeed, hiring a pedagogical worker in the staff instead of exclusively Social and Health Workers is an innovative choice, not a requirement. Step by step networks supported by the Pedagogical Counsellors of the *ONE* have been set up to share pedagogical views and experience.

Other specialists such as physical therapists can also work within the centre when they are required. But in the field, few specialists regularly work with individual children within the centre. As explained in *Chapter 2.3*, the inclusive approach favours a collective support and the reinforcement of the staff in the childcare services rather than the multiplication of specialists. That's the point of the inclusion support provided by the teams of the *mobile inclusion support device* (*dispositif mobile de soutien à l'inclusion* see 2.2), made up by multidisciplinary experts and childcare workers who reinforce the in-service staff without replacing them or focusing their work on the only child(ren) with special needs. These specialised teams are also supported by

the *ONE* which has set up a team aiming at developing a transverse inclusive approach. In all these supports, also working with families, not only with the child is required according to their rights, but also to the parenthood support framework (*ONE* 2012).

Finally, an inclusive approach is required from all the practitioners in all the childcare services, but no specific post of responsibility is dedicated to this development. However, nine external specialist teams (eight in Wallonia, funded by the Agency for a Quality of Life - AVIQ, *Agence pour une qualité de vie* and one in Brussels funded by the service PHARE) can support the staff when one or several children with special needs is/are included in the childcare service. These teams (*dispositif mobile de soutien à l'inclusion, mobile inclusion support device*) made up by multidisciplinary experts (psychologists included) support the in-service staff reflexion about the needs of the child(ren) and their own. Some of these support teams include childcare workers who reinforce the in-service staff without focusing their work on the child(ren) with special needs. These specialised teams and services collaborate with the *ONE*.

Pre-primary education

In the education sector several specialists work on site to support the integration of children with special needs. Until now integration agents who are teachers (often Primary Teachers) attached to a specialised school or a Speech Therapist enrolled by a psycho-medico social centre (PMS), depending on the diagnostic and the agreement with the staff, are granted around four periods of time per child with special needs (number of periods of time decreasing each year down to two). Their guidance is more focused on the primary than the pre-primary level. According to a new law (*Décret* 17-06-2021, MB 06-08-2021) these agents should progressively be replaced by a pool of resource people allocated to each territorial area (*pole territorial*) and distributed according to the number of children at school in the area, no longer depending on the number of children with special needs. Even if some children with special needs still need support, their function is extended to support teachers (Pre-primary Teachers included) and help them to define reasonable arrangements. In 2019, the Minister of Education decided to employ 170 additional Speech Therapy Assistants especially allocated to pre-primary settings and integrated in the PMS teams. They are expected to support and advise staff or Pre-primary Teachers (reasonable arrangements, learning strategies, and so on) rather than work with individual children, but they can observe them and therefore interact with them. Moreover, from 2019, additional periods of time for teachers are dedicated to a new support called *FLA* (*Français Langue d'apprentissage*; French as an additional language) focused on newcomers (at least 4 years old) who have not yet mastered the language of instruction (French) to successfully adapt to the activities of their age group (*Décret* D. 07-02-2019, MB 18-03-2019). When a school has at least eight newly arrived or already settled children with a migration background, an educational service called a *DASPA* (*Dispositif d'Accueil et de Scolarisation des élèves Primo-Arrivants et Assimilés*; Reception and Schooling System for Newcomers and Already Settled Pupils) can be set up and granted. A *DASPA* is aimed at welcoming, schooling and integrating newcomers and other immigrant children into regular education from the third year of pre-primary education to secondary school. In 2021 (15th January), only 0.07% of the children in the *DAPSA* were young children registered in a pre-primary. In 2019, the granting of these additional periods under the new system *FLA* generated an increase of 2% working in preschool education, despite a 1.5% drop in the school population (Fédération Wallonie-Bruxelles 2020). Complementary in-service training sessions for teachers working or wishing to work in the *DASPA* or the devices *FLA* support are organised and have become compulsory (see section 6), but not specialised in pre-primary issues.

German-speaking Community

The Centre for the Healthy Development of Children and Adolescents, *Kaleido Ostbelgien*, is responsible for all children and adolescents from 0–20 years of age and has the following general objectives: to promote optimal physical and mental health of children and adolescents, including pregnancy counselling; to support the optimal development of the educational potential and inclusion in education and training of children and young people; promoting a safe environment for children and young people to protect them from accidents and deliberate harm; promoting economic security and a decent standard of living for children and young people as a basis for healthy development; to promote children and young people as part of a developmentally supportive network of family, friends, neighbours and community; promoting the inclusion of children and young people in the community; promoting the ability of children and young people to make a positive contribution to society.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Flemish Community

Childcare sector

In the childcare sector, a large proportion of the core practitioners are still not qualified, despite the Decree requirement to do so by 2024. 8.8% of Childcare Workers in group-based childcare and 31.8% in home-based ECEC provision affiliated with a larger childcare provider do not have the required qualification (Agentschap Opgroeien n.d.). In group-based childcare, 71.7% of staff have a post-secondary vocational degree (EQF 4), compared to 21.6% of staff in home-based childcare services.

On 01.01.2022, a total of 357 men (2.4%) were working in childcare, of whom 164 (1.1%) were core practitioners, 98 (0.7%) had a supportive function and 95 (0.6%) were centre leaders.

Pre-primary education

In the Flemish Community, over 90% of staff working in pre-primary settings during the official teaching hours (*lestijden*) with 2½ to 6 year-olds have a Bachelor level qualification; around 10% of the workforce in the *Kleuterscholen* are Assistants qualified at upper secondary vocational level. In the school year of 2020/2021, a total of 21,437 ‘hours of childcare’ (*uren kindverzorging*) were allocated to 2,268 *Kleuterscholen* (AGODI 2021). In the school year 2020/2021, 23,850 teachers were employed in pre-primary education, of which 630 (2.6%) were male (Departement Onderwijs en Vorming 2021b). Staff members or volunteers without a specific educational qualification can be responsible for the supervision of numerous groups of children during the lunch break as well as before and after school. No specific data are available on their number. There are however exceptions as in the city of Ghent where qualified out-of-school care staff support the children during these extracurricular times. The out-of-school care staff have a minimum of three months of training and many hold a secondary vocational degree in childcare (ISCED 4).

Table 2:

Belgium - Flemish Community: Structural composition of ECEC workforce

Staff categories	Year / Proportion of workforce in %
Staff with a specialist three-year (or longer) higher education degree	<i>Pre-primary education, 01.10.2022:</i> Bachelor's degree (EQF 6): 19,854 Master's degree (EQF 7): 123 98.0 0.6
	<i>Group-based childcare, 01.01.2022:</i> Bachelor's degree (EQF 6): 551 Master's degree (EQF 7): 21 5.3 0.2
Staff with a specialist vocational qualification (upper secondary, post-secondary)	<i>Pre-primary education, 01.10.2022:</i> - Post-Secondary vocational degree (EQF 4) ¹ : 2,325 - Higher vocational qualification (EQF 5): 278 11.7 1.4
	<i>Group-based childcare, 01.01.2022:</i> - Post-Secondary vocational degree (EQF 4): 7,451 - Higher vocational qualification (EQF 5): 157 71.7 1.5
Staff with a non-relevant qualification	<i>Pre-primary education, 2019/2020:</i> - Among tenured teachers - Among temporary staff (Data only available on pre-primary and primary school staff combined.) 0.01 7.7
	<i>Group-based childcare, 01.01.2022:</i> - Secondary vocational degree (EQF 3): 582 - General secondary degree (EQF 4): 212 - Technical secondary degree (EQF 4): 1,166 - Arts secondary degree (EQF 4): 19 - Bachelor's degree (EQF 6): 135 - Master's degree (EQF 7): 23 5.6 2.0 11.2 0.2 1.3 0.2
Trainee staff (not counted in staff to child ratios)	No data available
Unqualified staff	<i>Pre-primary education:</i> No unqualified staff
	<i>Group-based childcare, 01.01.2022:</i> - No required qualification: 900 (701.27 FTE ²) - Currently qualifying: 994 (853.12 FTE ²) 8.83 9.25
Male practitioners (disaggregated according to: centre leaders, core pedagogues, auxiliary staff/assistants)	<i>Pre-primary education, 2020/21:</i> 630 out of 23,850 (Departement Onderwijs en Vorming, 2021b) 2.6
	<i>Childcare sector, 01.01.2022</i> 357 men total out of 14,967 - 164 core practitioners - 98 support staff - 95 centre leaders 2.4 1.1 0.7 0.6
Staff with a minority ethnic background or a 'background of migration'	<i>Pre-primary education, 2019</i> Proportion of teachers of foreign origin (Departement Onderwijs en Vorming 2021a) 5.4

Staff categories	Year / Proportion of workforce in %
(definitions will vary from country to country)	Childcare sector No systematically compiled data

Note: The data for the childcare sector in the Flemish Community was provided by *Agentschap Op-groeien* (non-public database, 2022) and is based on a sample of 93% of all childcare services. The data for pre-primary education was provided by *Agentschap Voor Onderwijsdiensten AGODI* (non-public database, 2022).

¹: In pre-primary education, staff with a post-secondary vocational degree (EQF 4) are childcare workers, working as assistants of the teacher. They are not counted as teaching staff.

²: Full-time equivalent

French Community (WBF)

Childcare sector

In the childcare sector, data collections on qualifications have only taken place since 2020 and only in subsidised childcare facilities (*crèches*), but not in non-subsidised settings, revealing a lack of reliable data across settings. The data is therefore partial but underlines some trends which need to be confirmed: 97% of staff working with children in subsidised childcare facilities (*crèches*) have an upper secondary vocational level (92% *puériculteurs-puéricultrices*; 8% *auxiliaires de l'enfance*); 3% have a Bachelor level qualification (*instituteurs-institutrices maternelles, éducateurs/éducatrices en accompagnement spécialisés, assistant-e-s sociales, infirmiers-infirmières*). 97% of the staff who carry out psycho-medico-social supervision have a higher education degree (48% *infirmiers-infirmières*, 37% *assistant-e-s sociales*, 1% *éducateurs/éducatrices en accompagnement spécialisés*, 0,5% *instituteurs-institutrices maternelles*, 13,5% unspecified). There are only a small number of male workers in the childcare centres for under-threes and no reliable data. Research results emphasise that the current professional education/training needs to focus more on gender-neutral competences (Pirard, Schoenmaeckers, and Camus 2015). No data is collected on staff characteristics relating to minority ethnic background or a 'background of migration'.

Pre-primary education

In 2020, over 89% of staff working in **pre-primary settings** with 2½–5 year-olds had at least a Bachelor level qualification; around 11% of the workforce were Assistants who graduated from upper secondary vocational level to support teachers in the first year of the *école maternelle (classe d'accueil)* with 2 and 3 year-olds. Nearly 100% of Pre-primary Teachers (*instituteurs-institutrices maternelles*) were qualified: 95.3% with a specialised Bachelor's degree in pre-primary education (*bachelier instituteurs/institutrices maternelles*), 2.4% with a Bachelor's degree in primary education (*bachelier instituteurs/institutrices primaires*), 0.8% with a general Bachelor's degree and an additional specialisation (AESI, *Agrégation de l'Enseignement Secondaire Inférieur*), 1.2% with a Master's degree in Educational Sciences complementary to their Bachelor's degree in pre-primary education (Fédération Wallonie-Bruxelles 2020). In October 2020, in addition to these Pre-primary Teachers (10,355 full-time equivalent - FTE), 79.1% of the staff), there were 1,469.74 FTE *puériculteurs/puéricultrices* (11.2%) employed as auxiliary workers in *écoles maternelles* financed by the WBF, others were employed and paid directly by the School Heads (no data available). Assistants without any formal qualification may also be part of the staff (no data), although it should be noted that not every *école maternelle* employs an Assistant or an auxiliary worker. The fairly low number of specialist support staff tend to be mostly *maîtres/maîtresses de psychomotricité* (812.04 FTE, 6.2% of the staff) and more recently teachers

for French as a foreign Language (FLA, *Français Langue d'apprentissage*, 449.58 FTE, 3.4% of the staff). No data are available about the integration agents working in pre-primary schools (see *Chapter 2.5*). 97% of Pre-primary Teachers (Fédération Wallonie-Bruxelles 2020), 98.24% of auxiliary workers, 76.51% of *maîtres/maîtresses de psychomotricité* and 98% of FLA are female. 96.4% of the specifically Pre-primary directors (compared to 66.6% of the total number of Pre-primary and Primary directors) are female.

Table 3

Belgium - French Community: Structural composition of ECEC workforce - Pre-primary education

Staff categories	2020 / Proportion of workforce, in %
Staff with specialist higher education degree	(corresponds to 10,355 FTE <i>instituteurs / institutrices maternelles</i> of 13,085 total 79.1 79.1% composed by: Bachelor's degree (pre-primary) 95.3 Bachelor's degree (primary) 2.4 Bachelor's degree (general + specialisation) 0.8 Master's degree 1.2
Staff with specialist vocational qualification (post-secondary)	n/a
Staff with specialist vocational qualification (upper secondary)	<i>puériculteurs/puéricultrices</i> as auxiliary workers – 1,469 FTE of 13,085 total at least 11.2
Staff with non-specialist qualification	n/a
Staff without formal IPS	Assistant (no current data available)
Specialist support staff	<i>Maîtres/maîtresses de psychomotricité</i> 812 FTE of 13,085 total 6.2 <i>Français Langue d'apprentissage</i> 449,58 FTE of 13,085 total 3.4
Male staff	– Share of total staff 3.0 – Share of pre-primary directors 3.6
Staff with a background of migration	No data available

Source: Fédération Wallonie-Bruxelles 2020 and Fédération Wallonie-Bruxelles – *Administration générale de l'Enseignement* (unpublished)

German-speaking Community

No statistical data are compiled in the German-speaking Community about the workforce composition in *Kinderkrippen* or in the pre-primary section of primary schools.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

For a long time, the administrative split in services into 'childcare' for the under-threes and 'education' for the 2½ to under 6 year-olds has been reflected in the qualifications required to work in these two different sectors. On the one hand, core practitioners in childcare settings have either a vocational qualification or no formal IPE at all. This upper-secondary vocational qualification route takes place in secondary schools or adult education courses. On the other hand, core pedagogues in pre-primary education predominantly have at least a Bachelor's degree. In 2021, the IPE at Bachelor level takes place at higher education institutions – university colleges – specialising in teacher education or pedagogy of the young child (*Hogeschool, Department Onderwijs – Institut Supérieur de Pédagogie – Autonome Hochschule*).

In pre-primary education a growing number of Childcare Workers now work as an Auxiliary Worker (Teacher's Assistant).

Flemish Community

Childcare sector

To obtain a qualification as Childcare Worker, courses are offered in secondary vocational education, adult education, higher education or in a specialised training centre.

Route 1: *Secondary vocational education: '7th year childcare'*

The vocational track 'Childcare' is a specialisation year in the third grade of vocational secondary education. It is therefore called a 'seventh year'. In a linear, full-time track, the training takes one school year, at the rate of 32 to 36 hours per week. The programme can also be followed in modular form.

To start this training, a certificate of the basic training 'Care' is required (third degree of vocational secondary education). It is also possible to enter from other training courses, but then permission is needed from a class council. The class council is the only body within the school that is responsible for the admission, formation, evaluation and deliberation of pupils. It is composed of the principal of the school or her/his delegate and all teaching staff providing education to the pupil. The principal chairs the class council and may invite additional members if necessary.

After completing the specialisation year in Childcare, students are awarded the diploma of secondary education and a 'Certificate of Childcare' if they have passed the modules. This qualification is classified at level 4 of the EQF. After the specialisation year, students can work as a Childcare Worker in group-based childcare, home-based ECEC provision, after-school care or in pre-primary education. It is also possible to choose to continue studying.

There is no enrolment fee in post-secondary education, but schools may charge extra.

Route 2: *Adult education: 'Childcare Worker – Babies and Toddlers'*

Various Centres for Adult Education in the Flemish Community of Belgium offer the course 'Childcare Worker – Babies and Toddlers'. In a linear, full-time track, the training takes two semesters, at the rate of two teaching days or evenings per week. The training consists of 720 50-minute lessons, so 600 hours in total. Those who already work in childcare can also follow the training on Saturdays.

After the training, students obtain either a certificate of 'Childcare Worker – Babies and Toddlers' (for those who have not yet obtained a diploma of secondary education) or a diploma of 'Childcare Worker – Babies and Toddlers' (for those who have already obtained a diploma of secondary education). Both the certificate and the diploma count as a recognised professional qualification for Childcare Workers and Centre Leader in group-based childcare settings for up to 18 children. This qualification is classified at level 4 of the EQF.

The government has fixed the standard registration fee at €1.50 per lesson hour. Without any additional costs, participants therefore pay €1,080 for this course. However, since the profession of a Childcare Worker has been officially recognised as a 'bottleneck profession' (*knel-puntheroep*), one can follow the training completely free of charge.

Route 3: Specialised training centre (Syntra): 'Childcare Worker'

Syntra is a network of training centres that offer profession-oriented training courses. They also have a course that focuses on the childcare sector: 'Childcare Worker'. In a linear, full-time track, the training takes one year, at the rate of three teaching days per week. The course lasts 610 hours in total. It is also possible to take the course in evening classes at the rate of two evenings per week. In that case, the training lasts two years.

To be eligible for this programme, students must be at least 18 years old. In addition, they must have either a secondary school diploma, a vocational secondary school certificate or demonstrable experience. They must also have a certificate of good behaviour and morals and a certificate of medical fitness.

After the training, students obtain a diploma of 'Childcare Worker – Babies and Toddlers', which is recognised as the professional qualification for Childcare Workers and Centre Leader in group-based childcare settings for up to 18 children. This qualification is classified at level 4 of the EQF. The full-time, one-year course costs €999.

Route 4: Higher Education: 'Bachelor – Pedagogy of the Young Child'

Although a Bachelor's degree is not expected from the core practitioners in childcare, we consider the programme 'Pedagogy of the Young Child' as one of the initial qualifying routes. This Bachelor's programme has been offered at three University Colleges (*hogescholen*) in Flanders (Brussels, Antwerp and Ghent) since 2011. The first students graduated in 2014. These graduates take up a post as Pedagogical Coach or Adviser, designing the pedagogical policy of the childcare centre with the core practitioners and the centre leaders. They are also trained to work with children and their parents. Some of these Bachelor graduates also work as part of the management staff in childcare centres, and it is envisaged that they will gradually replace the Nurses and Social Care Workers currently working in childcare centres.

In a linear, full-time track, the training takes three years (20 teaching hours per week). The total programme amounts to 180 ECTS credits.

A diploma of secondary education is required to start this Professional Bachelor programme. After the training, students obtain a Bachelor's degree in 'Pedagogy of the Young Child'. This qualification is classified at level 6 of the EQF.

The price for a full-time programme of 60 credits is €979.60. For the full programme (180 credits), students therefore pay €2,938.80 without any additional costs.

Pre-primary education

A Bachelor's Degree is required to work as a Pre-primary Teacher (*kleuterleerkracht*). The full name of the programme is 'Bachelor in Education: Pre-primary Education' (also 'Bachelor in Pre-

school Education') (*Bachelor in het Onderwijs: Kleuteronderwijs*, also *Educatieve Bachelor Kleuteronderwijs*). In a linear, full-time track, the training takes three years (about 20 teaching hours per week). The total programme amounts to 180 ECTS credits.

A diploma of secondary education is required to start this Professional Bachelor programme. From the academic year 2017/2018, there is also an entry test. All prospective students are required to take this test, but the result is not binding. Hence, although the test is mandatory, candidates who fail can still start the course. The aim is to give students an indication of their skills in certain starting competences for the programme. The test consists of a Dutch language test and a test on motivation and study skills. This entry test is the same for all University Colleges in the Flemish Community of Belgium that offer teacher training programmes (*lerarenopleiding*).

The price for a full-time programme of 60 credits is €979.60. For the full programme (180 credits, students therefore pay €2,938.80€ without any additional costs.

French Community (WBF)

Childcare sector

Some similar qualifying routes to Flanders are organised in WBF: secondary vocational education with a 'seventh year' (the main core workforce), possibly Adult education in the childcare services and Professional Bachelor programme after a diploma of secondary education in pre-primary education. As explained above, in both the childcare and pre-primary education sectors the initial professional education requirements are currently undergoing a series of reforms.

German-speaking Community

Childcare sector

To obtain a qualification as Childcare Worker, courses are offered in secondary vocational education or in adult education.

Pre-primary education

Pre-primary Teachers complete a Bachelor-level degree at the Autonome Hochschule Ostbelgien, the only higher education institution in the German-speaking Community. Initial professional studies combine professional basic knowledge, scientific approaches, generic and subject-specific as well as didactic training, and links between theory and practice. The total course comprises 180 ECTS points (60 credits per year), with one credit representing a work load of 25 to 30 hours.

Tables 4 and 5 give an overview of the core practitioners (Childcare Workers and Pre-primary Teachers) in all three language Communities.

Table 4

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Flemish Community

Childcare Worker (*Begeleid(st)er Kinderopvang/ Kinderzorg*)

Competences: In 2018, 15 competences for the profession of a Childcare Worker (*15 Beroepscompetenties Kinderopvang*) were legally defined as the professional qualification for a childcare worker (*Beroepskwalificatie Kinderbegeleider Baby's en Peuters*) (Vlaams ministerie van Onderwijs en Vorming, 2019).

A Childcare Worker ...

- Interacts in a positive, constructive manner with all babies and toddlers, parents, colleagues and others.
- Observes the behaviour of the baby/toddler, individually and in groups, reflects on it and adapts his/her actions accordingly
- Stimulates each baby/toddler in their development, uses the child's talents and entrepreneurial spirit
- Supports the baby/toddler in all their activities
- Encourages positive contacts between babies and toddlers and sets boundaries
- Recognises and responds to the social-emotional needs of the baby/toddler
- Provides a stimulating, safe, hygienic and healthy play environment for babies and toddlers
- Works with parents and recognises them as primary educators
- Cooperates with others in the care of the baby/toddler
- Cooperates, gives feedback and makes agreements
- Reflects on the organisation and contributes to the improvement of childcare
- Accompanies babies and toddlers at their arrival and pick-up time
- Prepares baby and toddler meals, organises and supervises mealtimes
- Organises sessions of rest and exercise
- Cares for the baby/toddler according to their needs.

Curriculum: This vocational qualification forms the basis of the curriculum within both the Centres for Adult Education and the Syntra Specialised Training Centres.

Route 1: Secondary vocational education: '7th year Childcare'

In contrast to the initial training courses within the Syntra Centres and the Centres for Adult Education centres, the curriculum of the initial training course 'Childcare' within secondary vocational education is not based on the legally defined professional qualification 'Childcare Worker'. There is no legally defined educational qualification either. As a result, teaching content and timetables differ from school to school. Schools have great freedom in organising the curriculum.

Globally, students go through two modules: 'Guidance for young children' and 'Guidance for school-age children'. They have to pass both modules. The theoretical part of these modules consists of 'General Education' and 'Vocational Training':

- 'General Education' is mainly offered at school. It consists of the general subjects such as French or English, Physical Education, Cross-curricular Secondary Education Attainment Targets and Ideology classes....

- In 'Vocational Training' students learn what they need to be able to do as a beginner Child-care Worker. Vocational training is partly covered during the internships and partly at school.

Route 2: Adult education: 'Childcare Worker – Babies and Toddlers'

Curriculum: The training focuses on pedagogical skills needed to guide and stimulate babies and toddlers in childcare. A very large part of the training is spent at a workplace. In terms of content, the MeMoQ pedagogical framework guides the curriculum. Most Centres for Adult Education use the same structure for the training of 'Childcare Worker – Babies and Toddlers'. The full programme consists of 18 modules:

Table 6

Belgium, Flemish Community: Curriculum areas and number of teaching hours in Adult Education

Curricular areas	Number of teaching hours
Childcare and me	20
First aid and life-saving treatment	20
Basic principles of pedagogical work	40

Babies' and toddlers' play	40
Internship	150
Organisational management of a childcare facility	44 + 1 (final test)
Manager of a childcare facility up to 18 places	44

Route 4: Higher Education: 'Bachelor Pedagogy of the Young Child'

For the Bachelor 'Pedagogy of the Young Child' there is a legally defined educational qualification (*onderwijskwalificatie*). This means that the Flemish Government (Department of Education and Training) officially acknowledges the domain-specific learning outcomes of the Bachelor programme. For the Bachelor 'Pedagogy of the Young Child' there are 10 distinct learning outcomes divided according to different fields of responsibility. The program consists of four competence areas:

Table 8

Belgium, Flemish Community: Competence areas in Higher Education

<p>1. Responsibility for the children in the service</p>	<ul style="list-style-type: none"> – Creating a positive, safe, healthy, hygienic and structured living environment of care for every baby and every child in the group; creating basic trust with each child by being sensitive and focused on fulfilling basic needs. – Supporting the whole personality development of every baby and every child by means of stimulating interaction in a rich environment and by guiding an offer based on observation of their living environment and developmental needs.
<p>2. Responsibility towards families</p>	<ul style="list-style-type: none"> – Maximising continuity between the home and the care environment by designing vision-based childcare together with the team and in such a way that parents recognise themselves in it – Building a relationship of trust with the parents in the best interests of the child, and links his/her own professional expertise to the experiential expertise of the parent.
<p>3. Responsibility towards one's own team and the facility</p>	<ul style="list-style-type: none"> – Stimulating and motivating diversely educated staff to professional development in the areas of 'educating children', 'supporting children's development' and 'being a partner to the children's families', by fulfilling a model role, by giving and receiving feedback in an open manner and by creating a favourable professional development context for the staff – Taking responsibility, together with a team of diversely educated colleagues for the common socio-pedagogical project of the facility and actively creating the preconditions for this.

<p>4. Responsibility towards the childcare sector and towards society at large</p>	<ul style="list-style-type: none"> – Working proactively in the local social context and taking the initiative to cooperate with external partners to this end – Actively following relevant developments in society, government policy, the field of study/expertise, and the international context to interpret the social relevance of his/her professional activity.
---	--

Two learning outcomes transcend these four competence areas and are important for each one:

- Building up new pedagogical knowledge and integrating this into the policy of the facility. Together with the team, she/he collects, analyses and interprets relevant complex situations in professional practice, uses the results of research, and takes the initiative and responsibility to innovate the existing pedagogical practice.
- Acting from an awareness of her/his own frame of reference with respect for identity of others (children, parents, team, external partners) and supporting the identity development of children and their families.

The three University Colleges that offer this Bachelor programme each have their own emphases and accents with regard to the curriculum, but there is regular consultation and exchange between the different institutions. It is noticeable that the role of Pedagogical Coach is getting more and more emphasis in the curricula of the different University Colleges that offer the Bachelor 'Pedagogy of the Young Child'.

Pre-Primary Teacher (*Leraar Kleuteronderwijs*)

The integrated teacher training programmes combine subject-specific, didactical and pedagogical/teaching components throughout the entire three-year study route for Pre-primary Teachers. They also focus on building capacity and experience in practice through extensive internships in authentic learning environments. The pre-primary route leads to a professional Bachelor's degree in Education (*Bachelor in het onderwijs: kleuteronderwijs*). The total course comprises 180 ECTS credits (60 credits per year), with one credit representing a work load of 25 to 30 hours. The practical component accounts for at least 45 credits.

Competences: In 1998, and again in 2007, the first official professional profiles for Pre-primary Teachers and basic competences for new teachers were established which assigned the profession ten specific roles, including an instructional role (*lerende*) and an educational role (*opvoedende*). The basic competencies for teachers set out the requirements that education and society place on newly qualified teachers. They are both a frame of reference for the curriculum development of teacher education programmes, which have autonomy in this area, and an individual assessment framework for each student in teacher education. The government sets the minimum quality criteria so that parents and outsiders know what to expect from teachers. By specifically defining the basic competences, the government makes it clear that a newly graduated teacher cannot be expected to perform at the same level of professional practice as a teacher with some experience. This indicates that 'being a teacher' is a process of lifelong learning

These basic competences for a beginning teacher start from the following premises: 'In the future, more than ever, a teacher will become a team player. Cooperation with other teachers and other actors in a school team is essential to ensure quality education. To participate fully in this, each individual teacher must possess certain competencies. They must be able to use both individually and together with colleagues.'

Table 9

Belgium, Flemish Community: Functional roles for a beginning teacher

Functional roles	
<i>As a facilitator of learning and development processes</i>	<p>The teacher can:</p> <ul style="list-style-type: none"> – Identify the initial situation of the learner and the group – Adapt his/her didactic approach to the objectives on the one hand and the environment, motivation, initial situation and needs of the learner(s) on the other hand, taking into account the diversity of the group – Choose and formulate objectives for the level of education in question, taking into account the starting situation of the learners and the validated objectives framework, curriculum... – Select, structure and translate learning and development opportunities, learning experiences or learning content into a coherent educational offer, shaping and monitoring the horizontal and vertical coherence between learning content and learning areas. – Determine and use appropriate forms of work and grouping – Select, use and adapt developmental materials and teaching aids – Create a powerful learning environment with attention to group heterogeneity – Can prepare and carry out observation and evaluation with a view to adjustment and remediation as part of the learning process of a learner(s) and can use those observation and evaluation data to question his/her own didactic actions and adjust them where necessary – Contribute to the organisation of inclusive education for each learner within the framework of the care and equal educational opportunities policy of the educational institution – Contribute to the learner(s) being sensitive to language and open to other languages – Set up learning and development processes, both from the content of the learning areas or subject areas of his/her expertise, and from a learning area or cross-curricular perspective.
<i>As an educator</i>	<p>The teacher can:</p> <ul style="list-style-type: none"> – Create a positive climate for the learner(s) in the group and in the educational institution – Promote the empowerment of the learner(s) by encouraging them to become empowered, independent, self-initiative, responsible and participative – Support the learner(s) in their individual development and social participation by paying attention to their attitude formation, social-emotional formation and value development of the learner(s) – Monitor current social events and trends and translate them into an educational context – Adequately deal with learner(s) with specific educational and pedagogical needs. – Pay attention to the physical and mental health of the learner(s) – Communicate with learner(s) from diverse language backgrounds in a variety of linguistic situations.
<i>As a content expert</i>	<p>The teacher ...</p> <ul style="list-style-type: none"> – Masters the knowledge and skills related to the learning areas or subject areas of his/her expertise, which are relevant to his teaching level. He can update, broaden and deepen these – Is able to use the knowledge and skills acquired in relation to the learning areas or subject areas. In primary education this is done in an integrated way, in the other levels this is done in an integrated way where relevant – Masters the knowledge and skills related to the (subject) didactics of his/her teaching assignment. He/she can update, broaden and deepen these – Can situate his/her own offer in the whole of the educational provision with a view to educational career guidance – Can use appropriate and correct teaching language.

As an organiser	The teacher can: <ul style="list-style-type: none"> – Promote a structured play, living, working or learning environment – Create a smooth and efficient teaching and daily routine that fits into short- and long-term planning – Plan his/her own work in view of his/her teaching assignment and can perform relevant administrative tasks – Create a stimulating, workable and safe living, working or learning space.
As an innovator and researcher	The teacher can: <ul style="list-style-type: none"> – Further develop the quality of his/her teaching. The teacher can question and adjust (improve) his/her own teaching practice and his/her own functioning – Share and discuss new insights and experiences with colleagues – Identify his/her professionalisation needs and turn them into actions.
As a partner of parents or carers	The teacher can: <ul style="list-style-type: none"> – Inform himself/herself about and exercise discretion with data about the learner(s) and their context – Communicate with parents or carers about the learner(s) in the educational setting, based on consultation with colleagues or external parties as appropriate – Inform and involve parents or carers in teaching, taking into account diversity – Engage with parents or carers on issues relating to parenting and education – Communicate with parents and carers from diverse language backgrounds in a variety of linguistic situations, and can develop strategies for doing so.
As a member of an educational team	The teacher can <ul style="list-style-type: none"> – Collaborate and consult within the educational team on issues such as curricula and educational vision – Discuss his/her own pedagogical and didactic task in the team, reflect on it in the team and take feedback into account in his/her own actions – Reflect on the joint functioning of the educational team in consultation with colleagues.
As a partner of external parties	The teacher can: <ul style="list-style-type: none"> – Establish and maintain contacts, communicate and cooperate with external bodies or actors. These include, for example, internship or employment sites, the broad socio-cultural sector, teacher training programs, higher education, the labour market, and childcare facilities.
As a member of the educational community	The teacher ... <ul style="list-style-type: none"> – Is aware of their social role and his potential influence on the wider society – Can take a reasoned position on educational issues – Can engage in conversation about their profession and their place in society – Can document their own legal status and that of learners.
As a cultural participant	<ul style="list-style-type: none"> – The teacher, from their professional position, can recognise and critically approach current social issues and developments in the socio-political domain, the socio-economic domain, the ideological domain, the cultural-aesthetic domain and the cultural-scientific domain.

The following dispositions and attitudes apply to all functional roles:

- *Decision-making ability*: daring to take a position or to proceed to an action, and also to take responsibility for it
- *Relational orientation*: showing characteristics of authenticity, acceptance, empathy and respect in contacts with others
- *Critical attitude*: be prepared to question oneself and one's environment, to verify the value of an assertion or a fact and the desirability and feasibility of a proposed goal, before taking a stand
- *Eagerness to learn*: actively seeking situations to broaden and deepen one's competence

- *Organisational ability*: aiming to plan, coordinate and delegate tasks in such a way that the intended goal can be achieved in an efficient way
- *Sense of cooperation*: being willing to work collectively on the same task
- *Sense of responsibility*: feeling responsible for the school as a whole and making the commitment to promote positive development of the learner(s)
- *Flexibility*: being prepared to adapt to changing circumstances, such as resources, goals, people and procedures.

As with the Bachelor Pedagogy of the Young Child (see above), the same applies for the Bachelor in Pre-primary Education: there is an official educational qualification with a framework of domain-specific learning outcomes. There are 10 distinct learning outcomes related to the following **competence areas**:

- Supporting toddlers in their learning and development in complex school and classroom contexts. Taking into account the starting situation of the class group and the perception of the individual child, he/she provides appropriate guidance, formulates general and concrete goals, selects appropriate learning content and learning experiences, adapted development materials, forms of work and grouping. He/she functions autonomously and uses Standard Dutch.
- Creating a pleasant and challenging playing, learning and living climate in the classroom and at school, with an eye for the social-emotional development and the physical wellbeing of the class group and the individual child. He/she uses a care wide approach and responds positively to the social, cultural and linguistic diversity within the class group. She/he promotes emancipation, individual development and social participation.
- Having a thorough insight into the broad development of the pre-school child and masters the basic knowledge – including at least the developmental objectives – regarding contents and skills from the learning areas Dutch, mathematical initiation, world orientation, music education and physical education, and cross-curricular themes. She/he uses an integrated and media-minded approach and follows recent developments critically.
- Creating a safe, workable and stimulating playing, learning and living environment. She/he provides goal-oriented and child-oriented planning. She/he handles administrative tasks correctly.
- Adjusting and renewing her/his professional role on the basis of a systematic, critical reflection on her/his own professional practice from relevant theoretical frameworks and insights from educational research
- Communicating discreetly and in Standard Dutch or if necessary in another appropriate register with parents/carers about the child, the school, upbringing and education. She/he involves parents/carers in class and school events.
- Working in a team-oriented way and taking responsibility in the school team for the implementation of school policy
- Establishing contacts and cooperating with providers of educational initiatives and other external partners
- Taking part in the social debate on educational themes and on the profession of the teacher and his/her place in society, also in an international perspective
- Thinking critically and with an open mind about developments in the socio-political, socio-economic, philosophical, cultural-aesthetic and cultural-scientific fields.

16 institutions throughout the Flemish Community of Belgium offer the Bachelor programme.

French Community (WBF)

Childcare Worker (*puériculteur/puéricultrice*)

Competences: The new law related to the childcare services in the French Community defines competence specifications for all Childcare Workers (*Arrêté 2-05-2019, MB 09-10-2019*):

- Taking care of children according to their daily needs and providing them rich conditions for their development at the physical, psychological, cognitive, emotional and social levels
- Ensuring the hygiene in the childcare service
- Contributing to the preparation of appropriate meals and to the practical organisation of the childcare service
- Putting into action the educational project and contributing to its evaluation and development
- Welcoming families and children, ensuring daily relations with parents in a spirit of partnership
- Providing support for trainees.

The main initial training for *puériculteurs/puéricultrices* consists in a three-year upper secondary course, followed by a year of specialisation in working with infants and toddlers. They are then expected to display the following competences: Guaranteeing care, hygiene and health

- Organising meals
- Organising sleeping
- Guaranteeing the children's safety and taking the right measures in cases of child abuse
- Planning and organising activities according to the individuality of each child
- Organising appropriate interventions towards children and parents
- Supporting children in toilet-training
- Developing a warm relationship with the child
- Planning and documenting professional practice for parents or colleagues
- Working in teams
- Communicating and building a professional relationship with parents
- Respecting ethical values.

In 2021, a new profile for Childcare Workers for children from (*accueillant, accueillante d'enfants*) was approved and the following **competence specifications** should become official in the near future.

- Welcoming and establishing a relationship of reciprocal trust adapted to the child
- Ensuring a socio-educational role in the childcare service promoting the physical and psychological well-being of each and all children
- Taking care of a group of children taking into account the diversity of their needs and interests
- Proposing arrangements for space and time and activities in order to promote the psychomotor, sensory, cognitive and socio-emotional development of the child and of all children
- Communicating with the child and his/her family using verbal, non-verbal, para-verbal communication techniques and the most appropriate supports to dialogue
- Putting into action the educational project of the childcare service and participating in its development through open and proactive collaboration with families and other professionals
- Establishing and developing a partnership with the family, the child's environment, the multidisciplinary team and external services for the socio-educational well-being of the child
- Taking care of the logistical tasks related to the organisation of the childcare service

- Applying and monitoring changes in regulations and recommendations relating to the childcare services.

The initial training of the Childcare Workers who work as an Auxiliary Worker (Teacher's Assistant) in pre-primary settings is the same as that for the Childcare Worker in childcare services.

In 2022, a new profile for Bachelor-level Childcare Workers for children from 0–6 years (*Bachelier en accueil et éducation du jeune enfant*) was approved and is to become official in 2023.

Pre-primary Teacher (*Instituteur/institutrice maternelle*)

The IPE of Pre-Primary Teachers in the French Community combines academic subjects, professional studies and social context studies. There is a common competence profile for pre-primary, primary and secondary teachers. The total course comprises 180 ECTS credits (60 credits per year), with one credit representing a workload of 25 to 30 hours. Ongoing reforms should generate some changes (see 2.1).

Competence specifications for all teachers in the education system are defined in a 2019 Decree of 2019 (*Décret* 07-02-2019, MB 05-03-2019) and include **15 competence areas**:

- The ability to act as an educational, social and cultural actor within school and society, including in their transformation, to integrate the diversity and develop civic practices for greater social cohesion
- The willingness to position oneself in the face of ethical issues and to respect the ethical and regulatory frameworks of the profession in a democratic and accountability perspective
- The ability to invest in the collaborative work of an educational team, in order to increase its professionalism and expertise through the rallying/mobilisation of collective intelligence, particularly during consultations
- The ability to analyse the organisational environment and institutionalisation of the education system and to act within it, in particular by interacting with colleagues, parents and other stakeholders in order to: (1) be part of the establishment's quality approach and participate in steps to improve the French Community's educational system; (2) make the classroom and the school a place where students learn, grow and are trained in a positive climate, not a place of selection
- The ability to draw on various subjects in the human sciences to analyse and act in a professional setting
- French language proficiency to teach and communicate optimally in the various contexts and the different disciplines related to the profession
- Mastery of disciplinary content, including the concepts to be taught, their epistemological foundations, their didactics and the methodology of their teaching, as well as the development of a critical and autonomous relation with scientific knowledge
- The ability to critically read scientific research results in education and didactics and to be inspired by them for teaching action
- The ability to act as a pedagogue within the classroom and, in a collective perspective, within the school, particularly: (1) through the design and implementation of a teaching approach including varied and differentiated practices, in particular digital practices, and ensuring motivation and promotion of students' self-confidence, creativity and a spirit of initiative and cooperation in the concern for the general interest; (2) through the design, choice and use of teaching aids, tools and manuals; (3) through the construction and use of observation supports and specifically diagnostic and formative assessment promoting empowerment and students' participation in their learning

- The ability to lead, individually and with peers, an observation as well a critical and rigorous analysis of their own practices and of their impact on students in order to regulate their teaching and make the strategies and conditions of implementation evolve in a perspective of efficiency and equity. This analysis integrates the gender dimension.
- Development of relational capacity with pupils and students, including their own family circle, and with regard to colleagues; group management in educational and pedagogical setting
- The ability to identify individual training needs and participate in the identification of the training needs of the educational team
- The ability to develop personal skills related to professional requirements, including requirements related to the management of the class
- The ability to integrate into the education system respecting the codes and its functioning, in particular hierarchical functioning
- The control of their administrative situation and the follow-up.

A more recent Decree redefines four main roles for all teachers (*master de l'enseignement section 1*), including Pre-primary Teachers:

Teachers as

- Institutional, social and cultural actors
- Actors of a learning organisation in a collective dynamic
- Organisers and coaches of learning in an evolving dynamic and as
- Reflective practitioners (Décret 02-12-2021, MB 02-02-2022).

German-speaking Community

According to Article 6 of the Decree on childcare (Dekret 31-03-2014), any service provider concerned by the Decree and offering childcare for children aged 0–3 years must be recognised before commencing activities.

In order to be recognised, the providers of childcare have to comply with the conditions of recognition of the Decree and the Edicts. Each recognised provider of childcare is obliged to guarantee the quality of care in accordance with the relevant provisions.

Childcare Worker (*Kinderbetreuer:in*)

Curriculum: The one-year qualifying adult education course for Childcare Workers of the KPVDB (2022) includes theoretical and practical content as well as internships in the different fields of work. The students attend classes in the following modules:

- Domestic economy: cooking, infant and child nutrition dietetics
- Psychology and pedagogy: health education, psychology, developmental psychology, professional handling of problems in families, care of children with impairments, psycho-pedagogy, didactics, Pikler pedagogy, child-friendly play, conversational skills
- Care: Caring for healthy and sick children, back-friendly lifting, general hygiene, first aid
- Vocational skills: deontology, ethics, social organisations, social and labour legislation
- Methodological guidance: Learning techniques, supervision, organisation, seminars on current topics.

In addition, the education includes 480 hours of internships in different childcare structures/settings.

Pre-primary Teacher (*Kindergärtner:in*)

Pre-primary Teachers complete a Bachelor-level degree at the Autonome Hochschule Ostbelgien, the only higher education institution in the German-speaking Community. Initial professional studies combine professional basic knowledge, scientific approaches, generic and subject-specific as well as didactic training, and links between theory and practice. The total course comprises 180 ECTS points (60 credits per year), with one credit representing a work load of 25 to 30 hours.

The initial professional education as a Pre-primary Teacher is organised in such a way as to enable the student to develop the following 10 specific competences.

Competence specifications:

Pre-primary Teachers should be able to...

- Communicate clearly and correctly in the language of instruction, both orally and in writing
- Include both cultural/intellectual heritage as well as a critical examination and interpretation of facts and cultural assets in their professional approach and foster openness for cultural and linguistic diversity
- Listen to and observe the children and accept them as a person by consciously discerning their holistic educational needs as well as their socio-cultural needs in order to foster their search for identity, their independence and their sense of responsibility
- Consistently extend and deepen fundamental knowledge acquired within the subject areas, including the historical, scientific and health-promoting aspects
- Design the educational process as an active learning experience of discovery, while at the same time making clear decisions in relation to aims, fields of knowledge, learning and teaching methods, evaluation and certification within the framework of legal requirements
- Pursue one's own activities in close cooperation with the families, school authorities, education and cultural institutions as well as the community's interest groups within the framework of legal requirements
- While respecting the individuality of the children, complete tasks related to the achievement and evaluation of developmental goals and competencies, both individually and together as a team
- Use information and communication technologies and integrate them into the preparation and managing of teaching and learning activities in the classroom as well as in their own professional development
- Develop a professional identity, handle complexity, uncertainty, conflicts, and setbacks professionally as well as understanding group dynamics and the functioning of organisations
- Reflect both individually and as a team on professional development needs both in terms of individual advancement and institutional innovation and assessing the ethical challenges related to the profession.

4.3 Alternative entry and qualification routes, system permeability

Flemish Community

Childcare sector

According to the Decree of 2014, everyone working in childcare in the Flemish Community should be qualified by 2024. In 2022, however, a large part of the sector still had no qualification and there are still a considerable number of Childcare Workers who enter the job unqualified. For these unqualified staff, most training institutions provide the possibility of combining work

and training. For example, the Syntra training centres and the Centres for Adult Education (see above) offer training programmes in which students can follow the training in the evenings or during weekend days. This usually implies that it takes students twice as long to complete the entire training programme.

Unqualified Childcare Workers who consider that they have sufficient competences to be equal to qualified Childcare Workers can participate in an assessment organised by a recognised test centre or by a Centre for Adult Education. In the assessment, the assessors use the legally defined professional qualification of a Childcare Worker as a framework to test previously acquired competences (*Eerder Verworven Competenties*) in an attempt to validate non-formal and informal learning experiences of the applicant. The results of the test procedure should make clear which of the 15 competences the Childcare Worker already has and which still need to be learned. For the missing competences, a customised programme is then designed consisting of the different modules that the Childcare Worker can follow at the Centre for Adult Education.

Additionally, there is a special training programme called 'Childcare Worker – Dual work-integrated route' (*Kinderbegeleider Duaal*). This programme is organised as a specialisation year in the third year of the third cycle of secondary vocational education, so it follows the same curriculum as the '7th Year Childcare' (see above). However, this dual learning programme combines a school component with a work component. This means that students are properly employed in a childcare service and that they spend at least 20 hours a week at their workplace during the training. The training programme lasts for one year and can be followed by young adults (between 16–25 years old) who have fulfilled their full-time compulsory education. After completing this training, students are awarded the diploma of secondary education and a 'Certificate of Childcare' if they have passed the modules. This qualification is classified at level 4 of the EQF.

Careers within Flemish Childcare are flat, i.e. there is no system permeability in this sector. There is no offer of different job profiles to which people can move on, nor is there a 'learning ladder' to enable Childcare Workers to grow in their job. For the job of Pedagogical Coach and of Centre Leader of a facility with more than 18 places, a Bachelor's degree is required. However, it appears that the transition from post-secondary vocational level (EQF 4) to Bachelor (EQF 6) is very difficult. Many students do not succeed or have a great deal of difficulty in succeeding in the higher education programme.

Pre-primary education

Flemish policy makers have major concerns in finding sufficient teaching staff to work in pre- and primary school education. Enabling alternative qualifying trajectories for assisting staff to become Pre-primary Teachers could be a future pathway for the ECEC and broader primary school sector. Two newly developed alternative pathways are:

- The Baobab Project: this is a small-scale project in Brussels, initiated by the NGO EVA (EVA bxl 2022) and supported by the Flemish Community Commission (VGC). Motivated Brussels inhabitants (with diverse migration backgrounds) are working as assisting practitioners with experienced Pre-primary Teachers while following a qualifying trajectory to become a Pre-primary Teacher themselves (in the Erasmus University College). For four years they receive intense support in order to find a job as a Pre-primary Teacher in the city of Brussels.
- In order to counter the growing teacher shortage, the University Colleges have special training programmes for students in pre-primary education who combine work and study. Especially assisting staff in pre-primary education make use of the opportunity of getting an official qualification whilst continuing their job.

French Community (WBF)

The system is characterised by little permeability and there are only a few alternative entry and qualification routes at the vocational qualification (upper secondary) level. The candidate's previously acquired competences are not taken into account when studying to become a *puériculteur/puéricultrice*. A VAE (*Valorisation des Acquis de l'Expérience*) pilot project to promote access to the adult education programme for childminders (*Auxiliaire de l'enfance*) is currently being tested. In terms of the higher education study programmes, some measures have been developed to relax the entry requirements of IPE (for example to become a Pre-primary Teacher). Staff at the IPE institutions can examine the former experiences of the student and in some cases give extra credits so that the student can follow a shorter track. This system of previously acquired competences (VAE) was implemented in universities at the end of 2009.

German-speaking Community

The German-speaking Nursing Care Union in Belgium (*Deutschsprachige Krankenpflegevereinigung Belgiens*, KPVD 2022) offers one-year qualifying adult education courses for Childcare Workers. There are no formal entry requirements. Participants are selected on the basis of an interview.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Flemish Community

Childcare Worker (*Begeleid(st)er Kinderopvang/ Kinderzorg*)

Practica or workplace-based learning (*stage*) play an important role in the four IPE programmes of core practitioners in childcare in the Flemish Community. The Government Agency *Opgroeien* does not allow trainees to count towards the required adult-child ratio. All trainees need a certificate of medical aptitude and an excerpt from the criminal records to prove good behaviour and morals.

The internships in each of the four qualifying routes are organised as follows:

Route 1: Secondary vocational education: '7th year Childcare'

As the schools offering a 7th year Childcare have great freedom in organising the curriculum, the lesson content and timetables differ from school to school. In most schools, the work placement takes up about one third of a school year. This means that students in this programme have an internship of about 10 to 12 weeks in total. The internship is usually offered in blocks and takes place in group-based childcare, after-school care and in pre-primary education.

Route 2: Adult education: 'Childcare Worker – Babies and Toddlers'

Half of this IPE programme is spent at a workplace. In this guided workplace learning, students are coached by a mentor from the workplace and by a coach from the study programme. The experience gained in the workplace is actively integrated into the lessons and vice versa. In other words, there is a strong interaction between theory and practice. The internships take place in home-based provision, group-based childcare and out-of-school care settings. Although workplace learning is integrated in all modules within the entire programme, four modules are explicitly aimed at the internship: 'Internship childcare worker babies and toddlers 1' (80 teaching

hours), 'Supervised intervention babies and toddlers 1' (10 teaching hours), 'Supervised intervention babies and toddlers 2' (10 teaching hours) and 'Supervised intervention babies and toddlers 3' (10 teaching hours).

Route 3: Specialised training centre (Syntra): 'Childcare Worker'

In the Syntra IPE programme, 150 of the 610 hours are allocated to the internship of the students. This internship is spread over several internship periods throughout the year, when fewer lessons are scheduled.

Route 4: Higher Education: 'Bachelor – Pedagogy of the Young Child'

Although the three University Colleges that offer this Bachelor programme have their own emphases and accents with regard to the curriculum, internship is integrated in each of the three years in each of the three programmes and follows more or less the same structure. In the first year, the internship is explicitly focused on getting to know the childcare sector. Across the three University Colleges, the number of ECTS in this first year varies from 5 to 11. In the second year, students are stimulated to discover neighbouring sectors in which they can experiment with their role as coach. Here, the number of ECTS varies from 11 to 14. In the final year, the internship comprises almost half of the programme with ECTS ranging from 20 to 24. In this final year, students are free to choose an internship in childcare or in another sector. The students are expected to adopt a reflective attitude and to monitor their own learning process by means of a portfolio. In addition, a mentor or supervisor from the University College is always appointed, as well as a mentor or coach at the work placement site.

Pre-primary Teacher (*Leraar Kleuteronderwijs*)

According to guidelines of the Flemish Department of Education, the field-based component in the IPE of prospective Pre-primary Teachers consists of at least 45 ECTS credits. These 45 credits (usually more) are spread across the curriculum, and are progressive in volume and complexity. The work experience can be structured as a ribbon placement throughout the semesters (one day weekly) or in blocks of one, two or five weeks. University Colleges are free to implement their own system. These placements are mentored and evaluated by an experienced teacher in the pre-primary setting and by tutors at the university college. This mentoring role is taken on by motivated Pre-primary Teachers who coach students voluntarily, i.e. without additional payment.

French Community (*WBF*)

Childcare Worker (*Puéricultrice/Puériculteur*)

According to the relevant legislation (*Arrêté* 6-09-2001, MB 22-11-2001), 1,000 periods of 50 minutes (approx. 833 hours) must be dedicated to practical training in the field and focused on working with young children (up to 6 years). A further 1,000 periods should be dedicated to general teaching and 1,700 periods (approx. 1,416 hours) to technical and professional practice training at school – organised within three years. The law specifies different workplaces: childcare services, pre-primary schools, also maternity hospitals. At least 500 periods (approx. 416 hours) must be spent in a childcare service. Forthcoming reforms could generate some organisational changes.

According to an official guideline (*Circulaire* n°6718 du 28-06-2018), three types of internship must be organised: (1) discovery and initiation, (2) supported practice, (3) responsible practice. The head of the IPE institution appoints a tutor (*maître de stage*) for each student. This tutor is responsible for the preparation, pedagogical coaching and assessment of the practical training in the field. The tutor cooperates with a mentor (specified practitioner) in the ECEC setting

where the student is doing internship. External evaluation is conducted both by the tutor and the supervising practitioner; and there is a self-evaluation of the student. A contract must be signed by the IPE institution, the ECEC service and the student; this specifies the competences and skills to be acquired. The student is required to maintain a regular written journal/portfolio (*carnet de stage*) with information and observations collected in the field (for example, observations about the learning environment, activities with children, children's behaviour).

Mentoring has been gradually getting organised. According to the law, a mentor (specified practitioner) who can be a Childcare Worker or another staff member (Director included) in the services where a student is doing internship must be appointed. However, no additional funds are granted, time periods are not specified and there are no measures for providing substitute staff. The mentoring practitioner is not trained specifically to accompany students. Since 2014, more and more projects (four in 2014, 47 in 2021) have been financed by firstly the APEF association (*Association Paritaire pour l'Emploi et la Formation, Joint association for employment and training*) and then also by the ONE and the Minister of Education, to provide a framework which sustains cooperation between initial training institutes and childcare services in WBF, with a view to improving tutoring and mentoring practices (François and Noël 2015; Pirard, François, and Noël 2019).

In these projects both tutors and mentors have been accompanied by researchers (University of Liège) to evaluate their own tutoring and mentoring practices, to conduct specific projects which can improve these and to analyse their effects on the student's learning, the pedagogical coaching of the mentor and the tutor, and on the collaboration between IPE institutions and ECEC services. This analysis can draw on the student's or mentor's written observation and sometimes on video documentation to support the reflective competences of students in the field. However, this documented process analysis is not easy for childcare practitioners and can only be used to give normative advice (Alonso Vilches and Pirard 2016; Alonso Vilches and Pirard 2018). Several focus groups and study day conferences are organised each year, where tutors and mentors have the opportunity to present and share their experience and analysis. Attention has also been paid to contextualised practice and meaning making rather than the concept of 'best practice' (Pirard, François, and Noël 2019). An open website with all the resources has been set up. In 2022, a new improved framework for sustained cooperation between IPE institutions and childcare services (services admitting children from 0–12 years) in the Wallonia-Brussels Federation has been introduced following the analysis of these professional experiences, with a view to also improve tutoring and mentoring practices (Pirard, François, and Noel 2022). This framework was written in collaboration with tutors and mentors who have taken part in these pilot projects aiming at broadening the mentoring/tutoring learning network. It is supported by the APEF association, the ONE and the Minister of Education.

Mentoring time is granted in these projects and free training seminars, focus groups, study workshops have been organised every year. Despite a positive evaluation of all the stakeholders (students, mentors, childcare directors, teachers, school directors, ONE), the financial means are currently lacking to generalise the experience and ensure its sustainability.

Pre-primary Teacher (*Instituteur/Institutrice maternelle*)

A third of the ECTS credits in the IPE of Pre-primary Teachers are dedicated to field-based studies and analyses of practice. At least 26 ECTS credits throughout the IPE are dedicated to placements in pre-primary settings: two weeks in the first year (2 ECTS credits each), four weeks in the second year (3 ECTS credits each) and ten weeks in the final year (10 ECTS credits). Students must be accompanied by tutors employed by the University College: at least one visit per week during placement periods from the second year onwards. They also have a mentoring teacher (*maître*

de stage) who signs an agreement with the IPE institution that sets out a variety of partnerships in a range of professional settings.

The University Colleges also organise professional workshops (10 ECTS credits) to strengthen the link between practice and theory. These workshops are guided not only by University College tutors, but also by tutors who spend at least half of their working time in a pre-primary setting. Each University College can organise the field-based component of IPE according to specified guidelines (Decree focused on IPE of teachers, 12-12-2000, MB 19-01-2001). Forthcoming reforms could generate some organisational changes for the new *master enseignement section 1* in 2023.

German-speaking Community

In the German-speaking Community, the field-based component in the IPE of prospective Pre-primary Teachers consists of at least 43 ECTS credits. These 43 credits are spread across the curriculum, and are progressive in volume and complexity. The work experience is structured in blocks. These placements are mentored and evaluated by an experienced teacher in the ECE setting and by tutors at the University College. This mentoring role is taken on by motivated Pre-primary Teachers who coach students voluntarily, i.e. without additional payment.

The field-based component of prospective Child Workers of the adult education course of the KPVDB consists of 480 hours. It includes six weeks spent in a crèche/*Kinderkrippe* and two weeks in each of the following institutions: out-of-school-care during the holidays, out-of-school-care (AUBE), special school (*Förderschule*), home-based provision and kindergarten.

The vocational education programme offered by secondary schools also includes the completion of practical training in a childcare institution.

6. Continuing professional development (CPD) of ECEC staff

In Belgium there is an established tradition of pedagogical coaching to raise the level of professionalism in low qualified Childcare Workers. Such experimental approaches started in the 1980s and were supported by grants from the Bernard van Leer Foundation (BVLf). In Flanders, the first coaching projects were set up in the 1990s in Ghent (Peeters 1993). These pedagogical counselling projects focus on practitioners as active actors in their own professionalisation process, which has a motivating effect on the learners (Peeters and Vandebroek 2011). In the French Community, several action research projects sustained by BVLf or the *ONE* were also carried out in Liège, Mons, and other towns. One of them aimed at setting up a publicly funded CPD which could support counselling projects elaborated by childcare services from the analysis of their local needs (bottom-up process). A law was voted in 1983 but never came into force. It was not until sixteen years later that a subsidised system of continuing professional development was put in place by the Childhood Minister. Since 1999, the funds dedicated to CPD and the number of training providers have continued to increase. In 2001, a new Pedagogical Adviser position was introduced in the *ONE* to sustain local projects according to a logic of both innovation and reform (Pirard 2011).

In the education sector, no specific reform focusing on CPD for Pre-primary Teachers has been implemented, but global reforms for all teachers in schools. Across the country, Childcare Workers, Pre-primary Teachers, Centre Leaders and members of the educational teams have many

opportunities to participate in CPD activities. Specialised training centres offer a broad range of courses. The regional governments view the provision of professional development activities as part of their quality policy.

Flemish Community

Childcare sector

Since the Decree of 2014, organisers of childcare are obliged to provide Continuing Professional Development (CPD) for their staff. However, they are free to choose how they wish to organise this in terms of content, delivery mode (training courses, coaching, learning networks...), quantity and duration. Before the introduction of the Decree, there was a requirement that Childcare Workers had to follow 12 hours of training per year, but this expectation has been abandoned, without providing another. Consequently, there is no fixed amount of days per year granted for CPD activities during working hours, nor is there a system of childfree hours to be used for CPD activities. Moreover, there is no monitoring of CPD across Flanders. This means that there is no reliable data that would allow an indication of what is common for CPD of Flemish Childcare in terms of main forms, access, and key content.

The government has allocated financial resources to provide CPD and allocates them according to the scale of childcare services:

- Income related childcare services (where parents pay a fee according to their income) with more than 18 full-time child places receive a subsidy with which they can choose how they want to organise CPD. They can either employ or hire a pedagogical coach themselves, or make use of the existing training offer provided by different pedagogical support centres and training centres.
- The funds for income related childcare services with less than 18 full-time child places and childcare services that are not income related go to a support network, which is called *Mentes*. This support network is made up of about 20 support organisations that are active in the entire Flemish Community. Childcare services get support from *Mentes* through a Regional Counsellor (*regionale ondersteuner*) or through a Pedagogical Coach (*pedagogisch coach*). Because *Mentes* receives subsidies from the government, the government also has a say in the priority topics to be addressed in the CPD. For example, 'enforcement' and 'policy-making capacity' are currently high on the agenda as a result of malpractices that have recently come to light in Flemish childcare.

With the Flemish Intersectoral Agreement VIA 6 (Vlaamse Regering 2021b) that was reached in 2021, financial resources were made available to recruit 264 FTE Pedagogical Coaches for the whole childcare sector in the Flemish Community of Belgium.

Besides the funds that are made available by the Flemish Government, childcare services are of course free to use their own resources for extra CPD offered by pedagogical support centres and training centres. There is, however, no data available on whether or not childcare services do this and under what circumstances.

Pre-primary education

In the Flemish Community, continuing professional development courses for Pre-primary Teachers (*Kleuteronderwijzers*) are provided mostly by the state recognised and subsidised educational guidance services (PBD – *Pedagogische begeleidingsdienst*). Each of the three educational umbrella organisations (private Catholic education, Flemish state-maintained education (Go!) and municipal education) has its own educational guidance service, which ensures professional

on-site support to schools and centres. Schools can call on them for educational and methodological advisory services (innovation projects, self-evaluation projects, support initiatives in the classroom). Beyond this, private organisations can provide specialised courses in pedagogy, didactics, arts education, and so on. CPD and support for the core pedagogues (i.e. the Pre-primary Teachers) is structurally provided since schools receive funds for this. Each pre-primary and primary school has to develop a training plan for the teachers. Assisting Childcare Workers are hardly included in these plans. Schools need to follow-up on this plan, otherwise they may lose their CPD budget. Notwithstanding, schools decide autonomously how to organise the plan. Consequently, no minimum number of CPD hours are specified for the Pre-primary Teachers or Childcare Workers. Only one collective pedagogical training day per year for all the teachers is obligatory.

French Community (WBF)

Since 2003, two public offices have been responsible for the regulating and funding of CPD provision: one focused especially on the continuing professional development for staff in the childcare services (*ONE – Office de la Naissance et de l’Enfance*) and the other on the education sector (*IFPC Institut Inter-réseaux de Formation Professionnelle Continue, ‘Inter-network Professional Training Institute’, formerly IFC, Institut de Formation en cours de Carrière Inter-réseaux, ‘Inter-network career training institute’*). *ONE* and *IFPC* work separately, even if they have a collaboration contract for some specific common activities. None of them can refer to large-scale research projects on the CPD of ECEC personal funding over the past five years.

Childcare sector

In the childcare sector, the governmental organisation *ONE* provides an annual continuing development plan for all childcare practitioners according to a new official five-year programme from 2021 to 2026 approved by the government (*Arrêté 11-02-2021, MB 2-03-2021*). Public funds are used for different kinds of financially accessible in-service training, based on an offer from official training providers according to the governmental programme: specified sessions (often one or two days focused on a predefined topic); nomadic sessions (often one or two days focused on a topic and organised in a space negotiated with the participants); and pedagogical coaching in teams (one to five days in childcare services or a network of services where both the topic and the organisation can be negotiated with the training centre).

Fourteen focus areas classified by their funding rates are defined in the early childhood CPD public programme that takes into account both the priorities defined by childcare staff in their quality plans, the opinions of the trainers, Pedagogical Advisers and other *ONE* staff:

- Child development (20.8% of allocated funding)
- Family partners (9.2%)
- Health global approach (8.3%)
- Artistic and cultural activities and projects (8.3%)
- Attitudes, roles and tasks (7.7%)
- Environment (6.3%)
- Active role (5.7%)
- Diversity approach (4.4%)
- Group dynamics (3.6%)
- Activities practice (3.5%)
- Observation: practice and children (3.2%)

- Educational project (2.7%)
- Children’s rights (2.4%) and
- Institution management (2%).

Four of these focus areas directly concern centre leaders: (1) attitudes, roles and functions; (2) group dynamics; (3) educational project; (4) institution management. The remaining 11% of funds are dedicated to pedagogical coaching without any predefined topic. Complementary to these offers supported by specialised training centres, a team of ten Pedagogical Advisers (*conseillers pédagogiques*) enrolled by *ONE* organises some pedagogical support frameworks for childcare practitioners and their leaders grounded on an analysis of local needs in WFB: educational continuity, caregiving, outdoor, artistic and cultural awakening or speech development. Some of these topics can be integrated in the official two-year *ONE* campaign such as the outdoor investment planned in 2022. One of the Pedagogical Advisers coordinates a group of staff dedicated to the development of an inclusive approach which recognises diversity as a resource and the rule (not the exception) (Camus 2019). Pedagogical advisers and trainers can collaborate or work on common issues such as coaching new teams in creating a childcare service. From 2022 onwards, a process of twenty-hour training sessions could also be proposed two times directly by Centre Leaders every five years. This measure aims at improving the accessibility of the offer and responding to local needs of childcare services. It could provide a framework for experimenting in new forms of CPD such as blended learning or professional trips (Pirard, Rayna, and Brougère 2021).

Thus a large part of the training process is viewed as a specialised space, where new knowledge, skills and abilities can be acquired in a limited period of time, in order to be applied or transferred to childcare services. Nevertheless, the emergence of another culture of education is confirmed: a culture of professionalisation that views competence as the central theme in educational work, based on the hypothesis that action and actors can be jointly and simultaneously transformed (Pirard and Barbier 2012; Pirard, Camus, and Barbier 2018). Since 2019, CPD has become compulsory for all Childcare Workers (two days per year, *Arrêté 2-05-2019*, MB 09-10-2019), but there are no measures in place for providing substitute staff while a colleague pursues CPD. Moreover, participation in specific forms of CPD is not formally recognised in terms of promotion and career advancement.

Pre-primary education

In the education sector, the IFPC (*Institut Inter-réseaux de Formation Professionnelle Continue* according to the Decree on Book 6 of the Code of Primary and Secondary Education entered into force on August 29, 2022), formerly the IFC (*Décret 11-07-2002*, MB 31-08-2002), offers an annual general programme with specified sessions for all teachers, including Pre-primary Teachers and Centre Leaders from a global analysis of the needs in the field. The IFPC collaborates with University Colleges, Universities and specialised training centres, but has also registered trainers (mostly teachers, directors, staff from schools). All of them must meet the standards required by the IFPC.

Alongside the IFPC, each of the three educational umbrella organisations (service provider organisations) also has its own educational guidance service for providing on-site CPD activities. For the past five years sessions for twenty participants from different institutions have taken place out of school (sometimes in a museum). The topics have been rarely focused on the specific pre-primary staff needs, which have not been accurately analysed. They often concern general learning issues with a disciplinary approach for not only Pre-primary Teachers, but also primary school staff. Some topics relevant to preschool include: oral and written communication; pleasure in reading; learning to learn; observation of children; ‘better verbal communication’;

children's literature; memorisation tools for pre-primary classes; music education; identifying and analysing learning difficulties from the start of kindergarten; a social skills development programme; stimulating the prerequisites for learning; transition to pre-primary school, and so on. Supporting language and communication and supporting children with special needs are topics often chosen by pre-primary staff. There is no specific focus on pre-primary leadership or mentoring.

Some sessions are also organised for Speech Therapists who have recently been enrolled by the psycho-medico-social centres to collaborate with Pre-primary Teachers, but there are no specific CPD offers dedicated to the Teachers' Assistants.

In 2020–2021, a new specific CPD course with experienced pre-primary trainers was set up to support the implementation of the new pre-primary curriculum (*référentiel des compétences initiales*). All Pre-primary Teachers had to take part in two-day sessions and an additional funded six-hour session organised out of school. Another specific parallel session was organised for the leaders and for the first time, especially for the pre-primary Teachers' Assistants (*puériculteurs/puéricultrices*). This last session was focused on sustaining the child's independence, language teaching, the communication with parents, emotional and physiological needs, verbalisation, observing play, the child's rhythm and development, creating a positive and benevolent climate, the child statute, the scholar culture. This session was not compulsory and not funded for the Assistants, but 639 '*puériculteurs/puéricultrices*' (34% of the auxiliary workers hired by the WBF and 62 other *puériculteurs/puéricultrices*) took part in this first session that can be considered as a success and underlines their motivation to learn. This training process highlights the necessary complementarity of their work and that of Pre-primary Teachers in the interests of children's development. Moreover, the IFC (IFPC) is taking part in a partnership project between the FRB (*Fondation Roi Baudouin*, King Baudouin Foundation) and the WFB to provide pre-primary trainers with quality training tools focused on the special needs of children and families living in poverty and for all stakeholders in pre-primary education.

Nowadays, continuing professional development is free and mandatory (six half days per year) for all teachers, including Pre-primary Teachers (additional periods possible on a voluntary basis) but for their Assistants (Childcare Workers) who do not have any period of time dedicated to CPD nor any substitute staff, it remains voluntary. The participation in some forms of CPD is not formally recognised in terms of promotion and career advancement. From September 1, 2022 all teachers (Pre-primary Teachers included) enrolled in the French Language Learning coaching (FLA or DASPA) will have to take part in some specific course on French as an additional language and on intercultural mediation, but without promotion or career advancement.

According to a new law (*Décret 17-06-2021*, MB 30-07-2021), professional development activities should be planned in a six-year programme to promote longer and long-term training, alternating with work in the field and more appropriation of learning outcomes in context, according to the action plan of each school. These action plans will include the training plans for their staff next to the research recommendations and the institutional reforms or priorities. Mixed groups gathering Pre-primary Teachers and other stakeholders could be organised around common topics (e.g. partnership with libraries, artistic and cultural education). Some of them could integrate Childcare Workers such as those dedicated to smooth transitions at the start of pre-primary school, one of the priorities of the Government (*Déclaration de Politique Communautaire de la FWB*, Community Policy Statement, 2019–2024) and the topic of a three-year research project funded by the Minister of Education (Housen and Royen 2019; Housen, Royen, and Pirard 2020; Housen et al. 2022). Bridges between staff in pre-primary schools, leisure centres and childcare centres have been recommended. A quality chart is being elaborated by stakeholders

from pre-primary schools and a *ONE* Pedagogical Adviser drawing on research results and should be implemented in the near future.

In conclusion, reforms of CPD are underway in both the childcare and the education sectors. They can be focused on childcare challenges or more generally linked to goals for school. They aim at better meeting local needs according to quality plans of childcare services on the one hand, in school (pre-primary school included) on the other hand. In this context, how can a holistic approach towards children as recommended in the ECEC services be developed? How could a CPD programme dedicated to pre-primary school be better grounded on resources produced in the childcare services and not only directed toward turning children into pupils and making them ready for school (schoolification trends)? The quality charta about the first transition when starting pre-primary school can be considered as an important step in the emergence of an *ed-ucare* approach.

German-speaking Community

In the German-speaking Community, it is stipulated by law that regular participation in continuing professional learning is part of a teacher's job. During the career entry period, Pre-primary Teachers can take part in meetings with staff of the Autonome Hochschule Ostbelgien, experienced Pre-primary Teachers, and other young professionals. The topics discussed in these meetings are chosen by the newly-qualified professionals. In the context of peer-group mentoring, they can bring forward specific cases they struggle with or ask more general questions on teaching and education.

In ECEC, recognised and subsidised childcare services are legally bound to offer at least 10 hours per year of complementary further training to their staff (Erlass der Regierung vom 22. Mai 2014 über die Dienste und andere Formen der Kinderbetreuung). The RZKB and Kaleido Ostbelgien provide trainings and coaching projects on diverse topics ranging from first aid over nutrition to pedagogical contents. Those trainings are not compulsory. However, home-based childcare providers are granted a subsidy for participation.

7. Working conditions and current workforce issues

The following information applies to all three Communities unless otherwise stated.

7.1 Remuneration

Pre-primary Teachers in Belgium receive salaries equivalent to those of primary and lower secondary teachers (OECD 2012; European Commission/EACEA/Eurydice 2022). The salaries are comparable to other jobs that require a Bachelor's degree and are sufficient for living as a single parent in a major city. In WBF, teachers with a mentoring position are granted a higher salary whereas teachers designated for FLA or integration (integration agent) are paid like other teachers. Centre Leaders are paid more than teachers when they are promoted.

The salaries of Childcare Workers in the childcare services or those who work as an auxiliary in pre-primary settings are lower but still decent enough for living on as a single parent. In WBF, the salary of staff in childcare centres with a Bachelor-level qualification is comparable to that of a Pre-primary Teacher if they are in charge of a social, health or pedagogical specific role, but not if they work directly with the children. Mentoring is not funded. According to legislation

passed in 2019, the salaries of the Centre Leader were to be increased by 10% (*Arrêté* 2-05-2019, MB 09-10-2019).

In the Flemish Community, a tenured and non-tenured Pre-primary Teacher can earn a gross monthly salary between €2,754 (beginner) and €4,944 (36 years of experience). A tenured and non-tenured Childcare Worker can earn a gross monthly salary between €2,270 (beginner) and €4,213 (36 years of experience). A tenured and non-tenured School Director can earn a gross monthly salary between €4,108 (0 years of experience) and €6,329 (36 years of experience) (Vlaams Ministerie van Onderwijs en Vorming 2022). The average gross monthly salary in Belgium is €3,758 and the minimum wage is €1,626.

It should be noted that during the COVID-19 health crisis, Pre-primary Teachers continued to be paid by the Flemish Department of Education, whereas many Childcare Workers faced being technically unemployed. When the financial compensation measures for public and private childcare were installed by the Flemish Minister of Welfare, this meant for the staff that their salaries continued to be paid (Van Laere et al. 2021).

7.2 Full-time and part-time employment in ECEC provision

In Flanders and in WBF (not in the German-speaking Community), a full-time job in pre-primary settings comprises 26 hours per week of teaching, including six hours of non-contact time, whereas in childcare services a full-time week comprises 38 hours, with no specified non-contact time.

Flemish Community

In group based childcare, 47% of staff working with children and 68.2% of centre leaders work full time. In pre-primary education, 83.1% of teachers work full time as well as 20.9% of childcare workers working as assistants of the teachers.

French Community (WBF)

In 2020, 68.45% of teachers in pre-primary settings worked full time compared to 37% of staff working (full time) with children in subsidised childcare facilities (*crèches*) (no reliable data in non-subsidised childcare facilities).

German-speaking Community

In the German-speaking Community, a full-time job in pre-primary settings comprises 28 hours per week of teaching. The weekly working time of the Kindergarten Assistant is 36 hours at 60 minutes for full-time employment.

On 1st January 2021, 46.64% of teachers in pre-primary settings in the German-speaking Community worked full time. 16.14% worked 70–89% and 34.53% worked 50–69% of a full time equivalent. There is no data available for the Kindergarten Assistants.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Flemish Community

Childcare sector

There is no official support procedure or requirement for newly qualified and newly appointed staff in the childcare sector. It depends on the context, the childcare service and its management.

Pre-primary education

In 2006, the Flemish government took measures to support young teachers and introduced the so-called 'mentoring hours' (*mentor-uren*). Due to these mentoring hours, schools could guide and support student teachers and novice teachers in their new job. However, in 2010 these mentor hours were abolished. Hence, supporting student and novice teachers has become an issue of the individual school policy: it depends on the school making capacity. In 2013, the Flemish inspectorate focussed on this issue, and came to the conclusion that in most schools supporting novice teachers (*aanvangsbegeleiding*) is carried out well. A recent evaluation report of the educational guidance services recommends that cross-network collaboration for beginners should be further developed in order to prevent novice teachers quitting the job. It is also up to the individual school to take care of this for the assisting childcare staff. Although there are no data, this is estimated from anecdotal data to be very low.

The Flemish government is well aware that since the outbreak of the corona crisis, school directors must, more than ever, be open to change and flexibility and, in doing so, must regularly seek new directions, including educational ones. The corona crisis thus reinforces the need for a strong school leader. At the same time, the job of school director - like that of teacher - is increasingly perceived as a bottleneck profession in education. There is a growing outflow of school directors during their career. Moreover, a lot of potential candidates for the position of school director doubt whether they would effectively take up the offer to become a principal or to apply for a vacancy. One of the possible reasons for this is that a starting school director often only really experiences what the job is all about after he or she has already taken up the position. In many cases, such a practical shock leads to a swift exit, permanently or otherwise. Many directors also indicate that if they had had more insight into the profession of school leader beforehand, they might not have started. In order to take away or at least alleviate this doubt or having cold feet, the government are making it financially possible for an organising power or school board to offer a candidate director – both an already selected candidate and a potential or interested candidate – the opportunity to shadow one or more experienced school directors for a certain period of time. Through this shadowing process, the staff member involved can watch, observe, and ask questions about the job of director. The staff member can see "in real life" what the job of school director entails and experience what the work requires and how the experienced director deals with it.

French Community (WBF)

Although there is no official support procedure or requirement for newly qualified and newly appointed staff in the childcare sector, some teams decide to set up a support framework, drawing on the mentoring tools developed for the internships (i.e. those funded by APEF, ONE and the Minister of Education, see section 5). Some CPD sessions funded by ONE are dedicated to the support of staff in newly established childcare services alongside the support offered by the

Pedagogical Advisers (see section 6). Moreover, introductory events dedicated to candidates who would like to set up a new childcare service has been organised locally every month since September 2020: four compulsory meetings before the creation of the childcare service focused on legal, social pedagogical and health topics focusing on a quality perspective. They help applicants realise what is required and some of them subsequently drop or change their initial projects.

Since 2016–2017, welcoming and mentoring new teachers at school (preschool, primary and secondary) has become compulsory (*Circulaire* 5388, 28-08-2015). Different support actions are envisaged: (1) an interview with the director, (2) a visit to the premises, (3) communication of working hours, (4) provision and explanation of the school mission, of the regulations, work, standards and curricular programmes in force, to which the staff member is appointed, (5) introduction to the educational team, (6) designation of a mentor among the members of the teaching staff with an educational qualification and having at least 15 years of work experience. This mentor is considered as a key person for assisting and advising new teachers in their socio-professional integration and work tasks (only if the new teacher is employed for more than 15 weeks). Their task may be part of the collective missions of the schools which can obtain additional resources (Decree 14-03-2019, MB 27-03-2019). Some guidelines for directors and mentors (*Accueillir les enseignants débutants, guide de la Fédération Wallonie Bruxelles – Welcoming beginner teachers, WBF guidebook*) as well as some continuing training actions have been proposed but they are not specifically focused on pre-primary education. In the field, Pre-primary and Primary Teachers are less concerned than the secondary teachers by the shortage and drop outs at the start of their careers. Their working conditions (more often full time) are considered better (Goethals 2019) without being good in terms of the necessary rapid immersion of new teachers in new classes, new schools, new teams.

German-speaking Community

No data available.

7.4 Non-contact time

Flemish Community

In the childcare sector, there is no specified non-contact time. The government established for teaching staff, through performance denominators, the basic number of hours or teaching periods that comprise a full-time assignment, by level of education and by position. For Pre-primary Teachers these are 24/26 teaching periods of 50 minutes (*lestijden*). But the number of hours or class time that appears on the teachers' pay check does not equal the number of hours they are actually required to perform. Their assignment includes other tasks such as meetings, report writing, supervision, CPD, These tasks are part of their full assignment. There is no systematically compiled data available that allows for an estimation of the proportion of full working time allocated to these other tasks.

French Community (WBF)

In the *écoles maternelles*, a required 26 periods of 50 minutes per week are dedicated to teaching; 1,560 minutes maximum per week or 962 hours maximum per year are dedicated not only to teaching, but also to collaborative working which can include staff meetings, cooperation with parents, networking in the community and other activities according to the organisation and the

action plan (Decree 14-03-2019, MB 16-04-2019, Erratum MB 20-05-2019). There are no regulations for time allocated to preparation work: it depends on the personal organisation of the practitioner.

Puéricultrices/teurs who work as auxiliary staff in pre-primary settings work 36 periods of 50 minutes per week (1,800 minutes) or a 30-hour working week. These periods include (1) 1,400 minutes with teachers and children in the classroom (teaching periods), (2) 300 minutes alone with the children to help them eat or to supervise their free time and (3) at least 100 minutes or 60 periods per year dedicated to collaborative working or, without children, to taking part in meetings with parents (decree 14-03-2019, MB 16-04-2019, Erratum MB 20-05-2019). In the childcare sector, there is no specified non-contact time.

German-speaking Community

In the German-speaking Community, there is no regulation of paid non-contact hours in either pre-primary education or in childcare centres.

7.5 Current staffing issues

Flemish Community

The COVID-19 health crisis created some debates on the position of ECEC staff in society (Van Laere et al. 2021). One of the common themes in all discussions with stakeholders in the childcare sector was that childcare workers are the invisible heroes of this corona crisis in the wider public and political debate. According to the stakeholders, this health crisis has once again made it clear that society cannot function without high-quality childcare, including the three functions (economic, social, pedagogical). The general tendency among Childcare Workers is that respect and appreciation have been sorely missed. Many stakeholders in the media and parliament have stressed the societal importance of the childcare sector and called for attention to better working conditions, better wages, better qualifications. If you consider the societal importance that has been placed on keeping the schools open even in lockdown, one could think that teachers are highly needed and appreciated in society at large. According to both testimonies of school directors in the corona commissions and teacher trade unions, the jobs of Pre-primary and Primary School Teachers are still not appreciated enough in society and should feel the confidence of their minister and their government. When schools needed to close, schools and teachers still needed to provide childcare. This raised some questions and even frustration amongst teachers. According to the teacher trade union their core task is teaching, providing lessons (*'lesgeven'*) and not providing childcare. Applied to pre-primary education, there is a difference between Pre-primary Teachers who should organise purposeful playful learning activities and childcarers who organise free play for children. Pre-primary Teachers should be considered to be more than providers of childcare and accordingly they need to be acknowledged in their professionalism.

In the case of Childcare Workers in out-of-school care, the decision of the Minister of Education to offer the teachers an extra week of autumn holiday upset many Childcare Workers, since they had to provide childcare for the children. They stated that they had worked full time since the beginning of the crisis. This situation showed the difference in recognition and appreciation between these professional groups, present in the political and public discourse, a consequence of the split system. Because education determined the measures for childcare/emergency care on school days, it had an impact on how the cooperation worked at the local level. In the absence of a common framework in various places, this led to tensions between the staff of the two

facilities. An often-heard message is that childcare workers did not feel valued in their professional role. Childcare should be in charge of 'care' and teachers in charge of 'learning'. Respondents signalled that a different 'sense of value' was assigned to these tasks, which led to tensions (Van Laere et al. 2021).

There is a major shortage of Childcare Workers in the Flemish Community of Belgium. Many childcare centres have open vacancies, also intensified in the COVID-19 health crisis. For example, 96% of local authorities organising childcare state having problems filling vacancies for Childcare Workers. A small minority of secondary education students in childcare want to continue to work in ECEC. As the pre-primary schools received more hours of childcare (*kinderzorg*), some Childcare Workers now prefer a job in the educational sector (better salary, working conditions and longer holidays) There is now a sense of urgency at the policy level, which means that initiatives are being taken or initiated at different levels:

- The profession of Childcare Worker has been recognised as a bottleneck profession due to the large staff shortage in childcare. As a result, job-seekers can follow a training with a special contract that offers a number of financial benefits. The Flemish Public Employment Service ('VDAB') pays, amongst other things, the costs of the initial training in some Centres for Adult Education.
- Within the aforementioned intersectoral VIA6 agreements (see above), thought was also given to campaigning and branding in order to promote the profession more attractively.
- The government agency *Opgroeien* has set up an 'Action Plan Workforce' with an accompanying working group. This working group consists of all the main social partners within the sector. They mainly focus on short-term actions in the areas of inflow, advancement and retention.
- Since 2014, data relating to workforce has been monitored more closely by the Agency *Opgroeien*. For instance, it keeps track of the number of unqualified people entering the profession.

There is also a major shortage of teachers in the Flemish Community of Belgium. Many pre-primary schools have open vacancies for teachers, intensified during the COVID-19 health crisis. In pre-primary and primary schools, a quarter of beginner teachers give up their profession within five years. Initial training programmes for Pre-primary Teachers are attracting fewer and fewer people. Suggested solutions/actions in the public educational debate are: invest in higher societal appreciation of the job as teacher and as childcare worker, stimulate more lateral entrants, improve working conditions including the staff-to-child ratio, introduce more lifelong learning opportunities and job mobility... Alternative pathways on long term should be explored as well in order to raise the attractiveness of the ECEC sector: Besides the usual solutions, how can the expansion of innovative ECEC projects with staff of more diverse backgrounds attract more potential students or lateral entrants to work with young children, families and local communities? To change the image of the job, the image of the ECEC centres themselves has to change.

French Community (WBF)

Currently, there is not any official staff shortage in the French Community, neither in the pre-primary nor in the childcare sector, except in Brussels. However, observations in the field indicate a major shortage of Childcare Workers, particularly in the childcare services.

German-speaking Community

In the German-speaking Community, minor staff shortages in both in the pre-primary and the childcare sectors may occur if staff resign in the near future. However, the after-school care services for 3–12 year-olds face major staff shortages. This has resulted in hiring unqualified staff in after school care services.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Flemish Community

Childcare sector

In the Flemish Community of Belgium, no significant reforms have taken place over the past five years in both childcare and pre-primary schools. However, it is important for the childcare sector to refer to the aforementioned intersectional VIA6 (Vlaamse Regering 2021) agreements that were made in 2021 and that succeeded in mobilising resources to realise pedagogical support. Although they are not sufficient to support the whole sector in a qualitative way, they can be seen as an important resource for the decretal obligation of pedagogical support. Especially in combination with the *Mentes* network in which the most important organisations in the field of pedagogical and language support for babies and toddlers have joined forces since 2019.

In the field of initial professional education, several working groups have been set up to reflect on the curricula of the IPE programmes across the umbrella organisations. For example, the aim is to make the training trajectory within the Centres for Adult Education even more flexible and more in line with the legally defined professional qualification of a Childcare Worker. Today, the link between the competences from that qualification profile and the modules within the qualifying route is not straightforward. In this vein, also the assessment of previously acquired competences will be evaluated.

Furthermore, there is consensus that the '7th year of childcare' qualifying route should be evaluated and adapted. For example, the curriculum is not aligned with the 15 competences from the professional qualification profile and an often-heard complaint from the sector is that students are inadequately trained and prepared for the job. From the school year 2022/2023, an educational reform will be implemented in secondary education, which will allow students from technical secondary education to work directly in childcare after graduation. They will also be qualified at EQF level 4. Pupils from vocational secondary education will still have to complete a seventh year to be allowed to work in childcare, but that extra year will be given a different name. The substantive implications of this structural reform are currently unclear.

There are also calls to set up an initial training at EQF level 5 ('HBO-5'), but there is no consensus on this within the sector.

French Community (WBF)

In WBF, a series of reforms, more than those announced in the previous SEEPRO report (Peeters and Pirard et al. 2018) have been under way during the past five years. Pre-primary education, which has become compulsory for 5 year-olds, has been reformed, as has the whole educational system according to the Pact for a Teaching of Excellence (*Pacte pour un enseignement d'excellence*): (1) a new curriculum; (2) a new job profile for teachers (Pre-primary Teachers included);

(3) a forthcoming Master's degree in teacher education at EQF level 7 (Pre-primary Teachers included) devised by University Colleges and Universities; (4) a new job profile for Directors; (5) a new induction training programme for Directors; (6) a new specialist support staff system (employment of Speech Therapists, integration support for children with special needs and newcomers who do not master the language of instruction); (6) a reformed continuing professional development system. Few of those reforms are specifically dedicated to the pre-primary level.

In the childcare sector, reforms have also been under way: (1) a new common job profile for all practitioners with a vocational secondary qualification working with children; (2) a new initial training profile is currently being defined; (3) a new professional Bachelor study programme dedicated to childhood education; (4) a new initial training certificate for Directors combined with a salary rise.

German-speaking Community

Within the framework of the reform of the RZKB into an institution of public interest, a lot of consideration is currently being given to reforming Childcare Worker education. The aim is to enable permeability of education programmes and diplomas so that all professionals working in childcare have acquired the same competences and prerequisites and can work in the different childcare settings. The concept and implementation is to be developed together with the various actors of the childcare sector as well as the different training providers.

9. Recent country-specific research focusing on ECEC staff

Flemish Community

Research supporting the collaboration between ECEC core and assisting practitioners (2018-2020)

Sources: Rutar et al. 2019; Hulpia et al. 2020; Jensen et al. (2020); Van der Mespel et al. (2020) VALUE 2020 (see *References* for further details)

Aims and methods: For the VALUE Erasmus+ project on the collaboration between ECEC core and assisting practitioners, a literature study and action research was developed. The aim of the literature review was to explore sustainable solutions in the professional development of assisting practitioners, but beyond their sole individual responsibility. More specifically, the aim was to gain a more detailed understanding of the position and the working conditions of ECEC assisting and core practitioners in the Flemish community of Belgium and three other countries (Denmark, Portugal and Slovenia.) An analysis of relevant literature and methods on how to support the collaboration between ECEC core and assisting practitioners was also made.

The aim of the action research was to examine how collaborative learning between ECEC core and assisting practitioners in pre-primary schools can be supported as part of a sustainable CPD (continuing professional development) pathway in two pilots in the context of the Flemish community of Belgium. The views of the schools on the VALUE learning path were collected from (in)formal evaluation moments during the process of the VALUE learning path, focus groups with the school teams and interviews with the school principals.

Selected findings: Although each pilot school had a different way of working and a tailor-made process, they both showed that it is imperative that a CPD path is simultaneously focused on an

educare approach; professional identity and collaboration. The learning path raised awareness of the importance of inter-professional collaboration in order to overcome the artificial divide between care and learning of young children.

Some crucial conditions for the learning path and its impact on individuals and teams could be identified:

- Leadership as a precondition for success: school leaders should provide the organisational and structural environment to strengthen collaboration between all professionals, such as child-free hours.
- The role of the facilitator (coach) and an open and safe environment are crucial to enable shared reflection and action.
- Structural conditions such as limited working hours of a Childcare Worker in one school, lack of child-free hours, high staff-to-child ratio, hinder a collaborative and *educare* approach.

Implications: Based on the literature review, Flemish VALUE pilots and discussions with the stakeholder group, overall recommendations for regional Flemish policy, local policy and school policies were developed aiming to answer the following question. How can a smart deployment of Childcare Workers in pre-primary education lead to effective quality improvement for children and families and sustainable jobs for all ECEC staff?

Some wider implications, which go beyond the two studies, are to:

- Create visibility for childcare workers as important educators for preschool children
- Introduce an *educare* approach in which Childcare Workers and Pre-primary Teachers collaborate on an equal footing
- Invest in sustainable professional development initiatives, close to the workplace and giving Childcare Workers and Pre-primary Teachers the opportunity to participate in shared reflection on everyday practice
- Invest in structural conditions: a lower staff to child ratio, appropriate care infrastructure and continuing deployment (more hours and full-time positions) of Childcare Workers in pre-primary schools.

Job experience of childcare workers in infant and toddler care (2020-2022)

Source: Karel de Grote Hogeschool (2022) (see *References* for further details)

Aims and Methods: This research project aimed to gain insight 'from the inside' into the job experience of Childcare Workers and develop ways to make this experience visible at different levels. A further aim was to identify ways of taking the job experience into account in their daily work and, if possible, to influence it positively. Finally, it was hoped to contribute to the social discussion on the profession of Childcare Worker.

The design of this research was critical-participatory. First, through participatory research, insight was gained into the job perception of Childcare Workers. In a second part, the perspectives of other actors who can have a direct influence on the job experience were taken into account. The analysis and development of the research material was also participatory: Childcare Workers actively participated in the analysis process.

Selected findings: From the narratives we see that overall, Childcare Workers have a negative job perception and appreciation. This is a distressing finding in a sector that has an outspoken focus on child well-being and involvement. Moreover, this low well-being constitutes a risk: for the daily operation, for the retention of employees and for the willingness to deal with innovations and changes.

Implications: These narratives make an essential contribution to the practice of caring for infants and toddlers and to the public debate on child care in the Flemish community of Belgium. Of

course, this requires converting these narratives into appropriate measures, such as policy recommendations.

Pedagogical coaches in Flemish Childcare (2021-2023)

Source: Devlieghere et al. 2023 (see *References* for further details)

Aims and methods: This study set out to explore the perspectives of childcare workers, centre leaders and pedagogical coaches on the employment of pedagogical coaches in group based childcare services. In 2019, the Flemish government agreed to allocate funds to the employment of pedagogical coaches to support childcare workers in their practices and to further professionalise the childcare sector. These pedagogical coaches have a bachelor's degree and are thus more highly qualified than the childcare workers. Considering the scientific literature, there is little to no doubt about the need and importance of highly qualified childcare staff. What remains unclear, however, are the conditions necessary to realise the use of highly qualified staff. In other words, to date, we have little insight into the conditions that can encourage or inhibit the successful deployment of highly qualified staff in childcare. To explore this, a total of nine focus groups were organised, four of which were with pedagogical coaches (n=21), three with centre leaders (n=13) and two with childcare workers (n=8).

Selected findings: Throughout the interviews, a number of conditions emerge to consider when deploying pedagogical coaches.

1. A first element relates to the pedagogical coach's job description: where it is less tightly defined, there is often greater ambiguity about what exactly the role of the pedagogical coach is.
2. A second element refers to the (un)conscious installation of a hierarchical expert relationship between the pedagogical coaches and other actors, in particular the child supervisors.
3. A third element refers to affinity with and experience in the workplace. All participants agree that, as a coach, it is important to have or be able to develop affinity with actual childcare practice. When this affinity is not there and there is no room to develop it, this can cause resentment and resistance among both centre leaders and childcare workers. In this case, coaches make attempts to get involved on the work floor. They do this to build trust with the child supervisors.
4. A fourth element refers to the centre leader, who is regarded as an important 'bridging figure' between childcare workers and the pedagogical coach.
5. A fifth element relates to the systemic conditions in which the pedagogical coaches are employed: the constellation in which they have to work is not ideal. Their arrival is sometimes perceived by the childcare workers as extra work. In addition, the current staff shortage in Flemish childcare and the lack of staff continuity in some facilities leads to a high deployment of the pedagogical coaches on the work floor, with no room left to exercise their role as coaches. The question arises whether in the job of childcare worker there is any time and space at all to be coached in the workplace.
6. A sixth and final element refers to the lack of advancement opportunities for childcare workers. The use of pedagogical coaches with a bachelor's degree makes this even more acute.

Implications:

1. Work needs to be done to assure child-free hours so that time can go to coaching and guided reflection.
2. At least two organisational elements need to be considered, namely (i) at what level are pedagogical coaches best aggregated organisationally: at organisation or site level; and (ii) how

are pedagogical coaches best deployed organisationally: at different sites, or assigned to a specific site.

3. There is a need for a clear guiding framework on the mandate of coaches.
4. Pedagogical coaches should be given the opportunity to develop affinity with the job content of childcare worker.
5. There is a need for career perspectives and advancement opportunities for childcare workers.

Governing quality Early Childhood Education and Care in a global crisis: first lessons learned from the COVID-19 pandemic (2021)

Source: Van Laere et al. (2021) (see *References* for further details)

Aims and methods: This report explores the different ways in which European Union Member States have attempted to ensure high-quality Early Childhood Education and Care (ECEC) for children and families in the era of COVID-19. The Flemish Community of Belgium is one of the in-depth case studies of this report (together with Croatia, Germany, Italy and Sweden). Through a review of key research and policy documents, together with interviews and focus groups with key stakeholders of the ECEC sector, the researchers collected and analysed data concerning the five areas of the European Quality Framework, and drew policy recommendations related to each area: accessibility, workforce, curriculum, monitoring and evaluation, governance. On all these areas, the COVID-19 situation represents an opportunity for the ECEC sector to revisit its identity and evaluate the lessons learned, both in terms of its daily practice after the emergency, and as a possible preparation for future crises.

Selected findings: Concerning workforce in the Flemish Community of Belgium, the report underlines that the recognition and support accorded to ECEC staff have varied, and mainly professionals of childcare and out of school care provision have felt undervalued, when compared to those working in pre-primary schools. The data underline the need to invest in recognising the value of this profession at a structural level. Valuing the profession means also investing in good working conditions, good adult-child ratio, child-free hours to reflect. The role of pedagogical coaches and (democratic) leaders has also been found crucial in supporting ECEC staff during crisis times and beyond. Within this framework, ECEC staff appreciated the ‘supportive’ elements of monitoring processes (as opposed to ‘controlling’ ones). Continuous CPD activities focused on regular reflection aimed at adapting daily practice and pedagogical vision have been found crucial.

Implications: The report formulates policy recommendations for each area of the EQF. Concerning the workforce, the report underlines that providing job security and adequate compensation to ensure the motivation and retention of staff is key to the sustainability of high-quality ECEC in times of crisis and beyond. Although the crisis has highlighted the importance of ECEC centres, the overall social recognition of ECEC professionals remains low, and in the Flemish Community of Belgium this is even worse in the childcare sector (0-3). Meanwhile, the pedagogical and policy-making capacity of ECEC leaders has proved crucial in supporting ECEC professionals to deal effectively with the COVID-19 crisis. Accordingly, both the working conditions of ECEC staff and the pedagogical and policy capacity of ECEC leaders should be strengthened.

More specifically the following policy recommendations are formulated: 1) Structural measures should be considered to address shortages in the ECEC workforce, in order to avoid overworking the existing staff; 2) Given the importance of maintaining contacts with children and families during prolonged periods of closure of ECEC settings, continuity of salary for ECEC staff should be guaranteed; 3) Pedagogical coaching, collegial reflectivity and planning should not be discon-

tinued during crisis periods and beyond; 4) Staff conditions and concerns should be acknowledged and taken seriously into account through the provision of pedagogical guidance and professional development opportunities. Consideration should be also given to the possibility of including them among priority groups for vaccination during a pandemic crisis; 5) ECEC leaders play a key role in providing organisational, pedagogical and emotional support to their educational teams. It is crucial that an adequate decision-making infrastructure, operating in accordance with the principles of distributed leadership, is in place at the level of each institution and that leaders have the opportunity to systematically engage in peer-learning initiatives and advocacy processes within locally established professional networks, umbrella organisations or trade unions; 6) Investments should be made towards improving ICT infrastructure, as ECEC staff have been highly appreciative of the opportunities offered by digital tools to document children's experiences, carry out meetings and conduct exchanges with parents.

French Community (WBF)

Improving the quality of the initial professional education of Pre-Primary Teachers

Source: Degraef et al. 2019 (see *References* for further details)

Aims and methods: The main aim of this three-year action research study was to define core competences to be acquired by Pre-Primary Teachers (*instituteurs/intitutrices maternelles*) to improve their welcoming and support practices with children, especially those from immigration and/or precarious backgrounds. This project received financial and organisational support from the King Baudouin Foundation and from the Minister of Higher Education for the development of concrete collaborative projects by the 13 University Colleges (*Hautes Écoles*) which organise the IPE of Pre-primary Teachers in WBF with a view to reinforcing the quality of these teacher education programmes.

Selected findings: Seven key competences were identified:

1. Deep awareness of the social responsibility of pre-primary schools (*école maternelles*). Refusing fatalism, Pre-primary Teachers are aware of their capacity for action to prevent social inequalities from turning into educational inequalities. They have a positive image of their profession and of social diversity.
2. Ability to approach the child as a whole person. Children are considered and respected in all aspects of their personality in line with an “*educare*” perspective. Their potentialities are valued, the class is a reassuring living environment where children learn to live together. It is under these conditions that children can gradually enter the learning process and become pupils.
3. Attention given to the development of language skills of all children. Having acquired a good command of French and being aware of the specificities of the ‘language of instruction’ (*langue d’enseignement*), Pre-primary Teachers aim to stimulate the linguistic development of all children, in particular, those whose home language is not French and/or those who are more culturally distant from the language of instruction.
4. Use of learning methods that help all children learn. The meaning of learning is not always clear to all children, especially if they come from a cultural environment distant from the school culture. Pre-primary Teachers are therefore careful to explain the meaning of the proposed activities and sets up active and well-designed teaching devices, which appeal to the full range of children’s skills.
5. Development of quality relationships with parents: these are recognised and welcomed at school as full and competent educational partners. Pre-primary Teachers have analytical

tools to decode attitudes which are unfamiliar to them or which may seem disturbing to them at first glance.

6. Teamwork: Pre-primary Teachers do not have a solitary vision of their job, but collaborate with colleagues as well as other teaching professionals and local partners outside school. This dialogue makes it possible to exchange perspectives on the child and to establish a coherent and comprehensive educational approach.
7. Analytical skills, i.e. Pre-Primary Teachers are able to step back to observe themselves and take a reflective and critical look at their practices, preferably as a team, in order to adjust them.

Implications: The practices to be implemented at the initial professional teacher training level to promote the acquisition of these competences by students are highlighted. Firstly, a cross-cutting and concerted approach to poverty and diversity issues in University Colleges is advocated, i.e. a better coordination of teaching content between teaching teams, a strengthening of the professional training of Teacher Educators in this field. Secondly, the establishment of close collaborations with the Pre-Primary Teachers also constitute the essential basis for the development of each and all of the seven competences. Finally, recommendations are addressed to the stakeholders concerned: those responsible for the education departments of the University College and their University partners, but also all those in charge of the implementation of the reform of the initial professional training of teachers, as well as the active policy-makers on education, early childhood and the fight against poverty.

10. Workforce challenges – country expert assessment

The main workforce challenges in the three Communities of Belgium are outlined below.

Qualifications and initial/continuing professional education

In the French community of Belgium, the qualifications of Childcare Workers and Pre-primary Teachers should improve in parallel in 2023: on the one hand, a new Master (EQF: level 7) for Pre-primary Teachers on the other hand and a new professional Bachelor training dedicated to childcare and education (EQF: level 6). The reformed vocational secondary level (EQF: level 4) for the majority of the practitioners working with children in services for the under-threes is also in progress. However, the connections between these different training reforms remain to be established. Also, in the Flemish Community of Belgium, investment is needed on the level of qualification for ECEC professionals, which is now at EQF level 4 for childcare professionals and at EQF level 6 for Pre-primary Teachers. Besides, the contents of the curricula should also be revised, with a clearer focus on an *educare* approach in the three communities of Belgium. The problem is also emphasised in the different qualification requirements between Pre-primary Teachers and the qualified auxiliary workers in pre-primary settings working mostly with 2 and 3 year-olds.

Concerning continuing professional development, the options are different for Childcare Workers, Assistants and Pre-primary Teachers. In the Flemish Community, although childcare services are obliged to provide pedagogical support for their staff since the Decree of 2014, the resources made available by the government for this purpose are not sufficient to speak of quality CPD. If the facilities want extra support, they have to finance it themselves. However, the support on

offer is very fragmented and mainly consists of short-term courses or training sessions. Long-term coaching trajectories in which, for example, a team participates intensively in a group reflection process, are rare, although we know from research that such processes are more likely to have an impact on quality. Also in pre-primary education, the pedagogical guidance services tend to offer short-term courses rather than longer-term CPD processes. The same trends can be observed in the French Community, despite the growing investment in the CPD sector. Moreover, in the two sectors, childcare and pre-primary education, the directors' qualifications reforms aim at developing a better leadership but attention needs to be paid to a holistic educational view in the ECEC services. The lack of educational competences amongst childcare practitioners and directors in the childcare services on the one hand and the generalist approach of the Pact for a Teaching of Excellence ("*Pacte pour un enseignement d'excellence*") aiming at the academic success on the other hand, could reinforce two trends: (1) a focus on care and a lack of the educational approach expected by the pedagogical curriculum dedicated to the childcare services; (2) a schoolification of pre-primary education, focused on learning, without paying enough attention to emotional and physical care.

Working conditions

Structural conditions are needed to be able to work within an *educare* perspective. For example, the adult-child ratio should not be too high. In the Flemish Community of Belgium, the ratio of 1 adult to 8 children in childcare (1 adult to 7 children in WBF) does not allow professionals to offer good pedagogical quality to babies and toddlers. In pre-primary schools, there are no official guidelines on the staff to child ratio. Groups can comprise 27 or more children with one teacher, which affects the quality of the pedagogical practice. Besides, child-free hours are needed in order for professionals to meet and reflect together on their practice. At the moment, child-free hours are not officially foreseen in the childcare sector, and they are not sufficient in the pre-primary school sector. This means that when wanting to reflect on their practice, ECEC leaders and professionals are often obliged to look for 'creative ways' to adjust their hours, with consequences that weigh on the daily experiences of children, families and professionals. When reflecting on practice, all professionals (for example, Pre-primary Teachers and Assistants) should be involved. In the Flemish and French Communities, the fact that Pre-primary Teachers and Assistants working with the same children and families have different contracts and working conditions makes it challenging to align their pedagogical offer. The lack of child-free hours to reflect together on their practice contributes to the challenge of working towards a common vision on education and care. On top of this, the working conditions and the social image of the Childcare Workers (traditionally seen as an assisting job, socially not recognised, especially when referring to the 0–2 sector) has created a very challenging staff-shortage issue in ECEC, which has an impact on the quality of the work, because of the continuous staff turnover and (over)workload required. However, the governmental answer to this challenge seems to go in the direction of lowering the entrance qualification level to work in ECEC, which would of course impact the quality of the offer for children and families. Recently, in order to attract more professionals into the sector, the Flemish ministry proposed to create positions for Childcare Workers (*kinderbegeleiders*) in the pre-primary school classes, under the working conditions of the Education Department. This is experienced by the childcare sector as a controversial measure, because it might make the already problematic staff shortage issue in childcare even worse. Besides, this measure risks confirming the split between education and care, traditionally already characterising ECEC in Belgium: teachers in pre-primary school have mainly so-called educational-teaching tasks; childcare workers-assistants have mainly so-called caring tasks. Having Childcare Workers as Assistants in pre-primary school classes, without this being accompanied

by an *educare* vision, might just reinforce this division of tasks, hence the hierarchic traditional vision on education and care.

Professional continuity, diverse teams and collaboration

One of the challenges faced at the workforce level in all the three Communities is the lack of diversity, especially among pre-primary school staff, considering gender, language or socio-economic and cultural background. This represents a major challenge, especially when thinking about the cities, where there is a significant socio-economic and cultural diversity among children and families. Besides, more bridges need to be established between the working groups on reforms in the ECEC field and professionals from both childcare services and pre-primary schools. The challenges are multi-level: to develop a global and coherent view; to give opportunities to improve the quality of the workforce in all the services; to be able to develop an *educare* approach grounded in children and families' participation. In WBF, some relationships between key actors in the childcare and education sectors have been set up on the topic of transitions to pre-primary school, which has become one of the priorities of the Government (*Déclaration de Politique Communautaire de la FWB*, WBF Community Policy Statement, 2019–2024). This topic can become an important issue of professionalisation which encourages professionals from different sectors to work and learn together and to develop a more shared educational culture. The same challenge characterises the ECEC system in the Flemish Community, where more collaboration between childcare and pre-primary school is needed on a structural level. As a rule, not many common reflection moments are foreseen for different professionals working with the same children and families (e.g. Assistants and Pre-primary Teachers). This makes the enactment of an *educare* approach quite challenging. The role of leaders is a crucial one in this discourse, because of their mandate in promoting and supporting shared reflection on practice. In this sense, the lack of a professional profile for ECEC leaders represents an extra challenge.

Early childhood education and care (ECEC)

Belgium is a federal and multilingual country comprising

- Three autonomous Regions (Flemish Region, Walloon Region, Brussels Capital Region)
- Three language Communities (Flemish, French, German-speaking), and
- Four language Areas (Dutch, French, German, and French-Dutch in the Brussels Capital Region).

Each Region and language Community has its own system of early childhood education and care. While some contextual data apply for the country as a whole, most vary according to the Region/Community and where this is the case, each language Community will be presented separately.

Please note

In alignment with country-specific usage, the general terms used in this report for the main forms of ECEC provision are: **childcare centre** (*kinderopvang*; *crèche*; *Kinderkrippe*, 0–2) and **pre-primary school** (*kleuteronderwijs*; *école maternelle*; *Kindergarten*, 2½–5)¹. Any additional specific forms are described where appropriate.

Historical milestones in ECEC in Belgium

The table describes milestones at the national level only. After 1989 policies became the chief responsibility of the Belgian Communities

1827	First educational institution for young children (3-5) established alongside the more custodial institutions founded by philanthropists, municipal administrations and factories.
1831	Establishment of Belgium as a nation state: Freedom of organising education is formalised – soon interpreted broadly as a right to education.
1843	In the first Belgian law on public education, educational institutions for 3 to 5 year-olds are officially recognised and state subsidies are introduced for municipal settings.
1857	First Froebel kindergarten established in Elsene, a Brussels suburb
1858	First professional training courses for women working in kindergartens and primary schools
Since 1880	State-run and publicly funded ECE institutions for 3 to 5 year-olds
1890	First early childhood curriculum issued, based largely on Froebel's ideas
Since 1927	Three-year higher education studies a requirement for working with 3 to 5 year-olds
1950	Almost all 3, 4, and 5 year-olds attend a centre-based setting.
1965	First admission of 2½ year-olds into centre-based settings
1989	Responsibility for Education is devolved to the three Communities.
2020	Attending pre-primary education becomes obligatory for 5 year-olds.

Sources: Peeters et al. 2018; Willekens and Scheiwe 2020.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for settings for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In Belgium the corresponding formats are **0–2** and **2½–5**.

ECEC system type and auspices²

Overall, Belgium's early childhood education and care system is a 'split' system with different responsibilities for children under 2½ years of age and children between 2½ years of age and primary school entry at 6.

Since the 1988-1989 constitutional reform, responsibility for education in Belgium has been assigned to the three Communities (Belgium.be 2021). Only the decisions on of the beginning and end of compulsory schooling and the minimum requirements for the award of diplomas are still federal matters. Accordingly, the federal government has only very limited rights with regard to education.

Flemish Community

Childcare for children under 2½ years of age is the responsibility of the Flemish Minister of Welfare, Health and Family (*Departement Welzijn, Volksgezondheid en Cultuur*). Since 2019, the former Agency Child and Family (*Kind en Gezin*), together with a department of the Flemish Agency for Persons with Disabilities, now forms the new Agency for Growing Up (*Opgroeien*). This has the task of creating as many support services as possible for all children and their families in Flanders and Brussels, including childcare. The new agency is no longer responsible for organising childcare, but mainly for implementing the Flemish government's strategies.

Pre-primary education institutions (*kleuteronderwijs*) for children from 2½ to 6 years old are the responsibility of the Flemish Minister of Education and Training (*Departement Onderwijs*).

French Community

Childcare centres for children under 2½ years of age are supervised by the Office of Birth and Childhood (*Office de la Naissance et de l'Enfance - ONE*), which operates under the responsibility of the Minister for Childhood, Health, Culture, Media and Women's Rights (*Ministre de l'Enfance, de la Santé, la Culture, des Médias et des Droits des Femmes*). All non-school childcare settings for children up to age 12 must be approved by ONE, which is also responsible for supervision and inspection. Together with the Community, the regional administrations ensure the management of the buildings.

Overall responsibility for pre-primary education institutions (*écoles maternelles*), primary school and secondary education lies with the Minister of Education of the French Community. For the *écoles maternelles* for children between 2½ and 6 years of age, the Department of Education and Scientific Research (*Administration générale de l'Enseignement et de la Recherche scientifique*) of the Ministry of the French Community of Belgium is responsible. According to a Decree issued in 2019, its tasks are the implementation of general educational policy and the administrative and financial management of the staff (FWB 2022a).

German-speaking Community

The Department of Family and Social Affairs of the Ministry of the German-speaking Community is responsible for the supervision of childcare provision, the issuing of licenses, subsidies and quality assurance. The agency "Service for Child and Family" (DKF) is responsible for the implementation of these tasks (Eurydice 2021). The organisation and monitoring of the facilities is the responsibility of the Regional Centre for Childcare (RZKB).

² The Eurydice country reports on ECEC in Belgium provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

The Department of Education, Training and Employment of the Ministry of the German-speaking Community is responsible for pre-primary education (kindergartens) for children between the ages of 3 and 6 years.

General objectives and legislative framework

The overarching legal framework is the Constitution, which enshrines freedom of education and the principle of equal opportunity, regardless of gender, race, ethnicity or religion.

Flemish Community

In April 2014, a government Decree (*Decreet opvang van baby's en peuters*) on the organisation of **childcare** services came into force. According to this legislation, all settings for children under 3 years of age must have a license. The responsible agency (*Opgroeien*), a new agency which includes the service provider *Kind en Gezin* among others (*Opgroeien 2023a*), regularly checks whether the criteria and legal conditions are met.

With regard to **education** and therefore also pre-primary settings, the Decree on Basic Education (*Decreet basisonderwijs*, 1997 with amendments until 2020) forms the legal basis (*Vlaanderen is onderwijs & vorming 2021*).

Since 2019, the strategy paper "Education 2019-2024" of the Flemish Parliament aims mainly at achieving 'top quality' in education, giving professionals the acknowledgement they deserve, giving every child the support they need, and investing in learning and working environments.

French Community

Legal foundations for **childcare** include the Quality Code (*Arrêté du Gouvernement de la Communauté française fixant le code de qualité et de l'accueil*, 2003), which sets out principles and quality standards, and the Decree of 2019, which addresses improving accessibility to early childhood care services (*ONE 2019, 2021*).

In addition to the Constitution, the "Schools Pact", which came into force in 1959, applies by law to all educational institutions, including **pre-primary education**. It organises and standardises relations between the different users. Changes in the school system were laid down in the new law *Décret du Code de l'enseignement* (FWB 2020).

German-speaking Community

The legal basis for **childcare** in the German-speaking Community is the Decree on Childcare (2014, with amendments from 2020) and the Government Decree (2014) on services and other forms of childcare.

For **education** and therefore also for pre-primary institutions (kindergartens), the law of the so-called "Schools Pact" (1959) applies.

ECEC entitlement and compulsory attendance

In Belgium, children between the ages of 2½ and 6 have a legal right to a free place in a pre-primary educational institution (*kleuteronderwijs, école maternelle, Kindergarten*). The number

of hours varies according to the language community. As of September 2020, the last year before school enrolment is compulsory in all Communities (European Commission/EACEA/Eurydice 2019, 10, 54). Primary school begins at age 6.

Flemish Community

In Flanders, children aged 2½ to 6 years are entitled to a free place in a pre-primary setting (*kleuteronderwijs*) for 23 to 33 hours a week. This right does not exist for under 2½-year-olds. However, the municipalities are obliged to offer a place in a childcare setting, which is allocated according to priority criteria. The institutions receive subsidies from the government for this. No child under the age of 5 is obliged to attend an ECEC setting.

250 half days of attendance in the compulsory pre-primary year (when children are 5 years old) are required to transfer to primary school. If this attendance standard has not been met, the school council makes a decision on the transfer to primary school.

French Community

Children from 2½ years of age are entitled to 23 free hours per week in an *école maternelle*.

German-speaking Community

There is no legal entitlement to a place in childcare for under 2½ year-olds. There is currently a waiting list because demand is greater than supply.

All 3 to 5 year-olds are entitled to a place in kindergarten.

Main types of provision

Flemish Community

Childcare sector

Since April 2014, **childcare centres** (*kinderopvang*) for under 2½ year-olds and also all registered **home-based childcare** workers have to have a permit. This is issued when various requirements have been met regarding infra-structure, hygiene, safety and fire protection measures and staff training quality, with a confirmation from the respective municipality. The licences are reviewed annually by the authorities; childcare centres that do not have such a licence have to close. Childcare centres have to be open for 220 days per year and guarantee daily opening times of at least 11 hours between 6:00 and 20:00.

In 2022, 68.3% of the total number of places for babies and toddlers in Flanders were covered by centre-based settings. In total, 2,051 centre-based settings offered 63,622 places and 3,459 home-based settings offered 22,680 places. In addition, 479 multi-age centres provided 6,826 places (Opgroeien 2023b).

Table 1

Belgium–Flemish Community: Number of settings and places for babies and toddlers, 2022

	Number of settings	Number of places
Home-based childcare settings	3,459	22,680
Centre-based childcare settings	2,051	63,622
Combined models	479	6,826
Total	5,989	93,128

Source: Opgroeien 2023b

Education sector

Since 2003, **pre-primary education settings** (*kleuteronderwijs*) have to be linked to a school (European Commission/EACEA/Eurydice 2019, 110). From the age of 2½ years, children can start attending the institution on several fixed dates during the year. *Kleuteronderwijs* are open from 7:00 to 18:00 for at least 220 days a year and have a one-hour lunch break. They are generally closed on Wednesday afternoons.

In 2020/21, there were a total of 161 stand-alone pre-primary centres and 2,293 integrated facilities (*kleuteronderwijs* and primary school). A total of 257,625 children were enrolled in 2,454 regular pre-primary settings (DET 2022, 6f) and 2,406 in 123 special education settings (DET 2022, 13f).

Table 2

Belgium–Flemish Community: Number of pre-primary settings and children enrolled, 2020/21

	Settings	Children enrolled
Self-contained <i>kleuteronderwijs</i>	161	
Primary schools with integrated <i>kleuteronderwijs</i>	2,293	
Total	2,454	257,625

Source: DET 2022, 6f

French Community

Childcare sector

The main types of care for children between 3 months and 3 years are **childcare centres** (*crèches*) and registered home-based childcare workers (*accueillantes d'enfants*).

All must have a licence issued by *ONE*. Childcare centres for under 2½ year-olds are open at least 220 days a year, usually at least 10 hours a day from 6:00 to 19:00.

At the end of 2021, there were a total of 46,222 childcare places (including home-based childcare) for 51,561 children, of which 34,422 places for 37,432 children were subsidised by *ONE*, and 12,800 places for 14,129 children were not subsidised by *ONE* (*ONE* 2022, 26, 28). Table 3 provides an overview.

Table 3

Belgium–French Community: Number of places and children in the childcare sector for under 2½ year-olds by setting type, December 2021

	Number of children	Number of places
Childcare settings subsidised by ONE		
Childcare settings (<i>accueil collectif</i>)		25,814
Home-based settings (<i>accueil familial</i>)		8,608
Total	37,432	34,422
Childcare settings not subsidised by ONE		
Childcare settings (<i>accueil collectif</i>)		9,718
Home-based settings (<i>accueil familial</i>)		2,082
Total	14,129	11,800
Total (subsidised and not subsidised by ONE)	51,561	46,222

Source: ONE 2022, 26ff, 30

Education sector

Pre-primary education settings (*écoles maternelles*) are attended by children between 2½ and 6 years of age and are open 182 days a year, spread over 37 weeks. As a rule, this means nine half days (Wednesday afternoon is closed) from 8:30 at the earliest until 16:00 at the latest, with at least one hour for lunch. As from 2023, the summer break lasts between seven and eight weeks.

Sometimes *école maternelle* classes for the year before school entry are located in primary schools (European Commission/EACEA/Eurydice 2019, 110). In many *écoles maternelles*, childcare services are provided before and/or after regular opening hours or during the lunch break. Currently (FWB n.d., 9.11.2023), there are 1,750 *écoles maternelles* in the French Community. 1,082 of these are publicly funded settings, 147 of which are organised by the Community. 668 *école maternelles* are privately run but state subsidised settings, of which 648 are denominational.

German-speaking Community

Childcare sector

Children under 3 years of age can attend a setting run by the non-profit Regional Centre for Early Childcare (*Regionalzentrum für Kleinkinderbetreuung - RZKB*). There are currently three **childcare centres** in the German-speaking Community providing 84 places for 186 children in 2022 (Familienportal 2023 bzw. Statistikportal der Deutschsprachigen Gemeinschaft Belgiens 2023a). They are open from 7:30 to 17:30 and closed for four weeks a year.

Most under 3 year-olds are looked after in **home-based childcare** settings, overall 477 children in 2022. With a maximum staff to child ratio of 1:4, these are either organised by the RZKB or the providers are self-employed (in 2022 those cared for 429 under 3 year-olds), providing 10 hours of care for 220 days a year (Statistikportal der Deutschsprachigen Gemeinschaft Belgiens 2023a).

In 2022, 2,017 children aged 3-12 years were enrolled in out-of-school childcare settings (before and after primary school and on Wednesday afternoons) (Statistikportal der Deutschsprachigen Gemeinschaft Belgiens 2023a).

Education sector

In 2018/19 there were 27 kindergartens and primary schools in the German-speaking Community, 3 public and 24 subsidised private institutions. Kindergartens are attended by 3 to 5 or 6 year-old children. The youngest children are 2 years 8 months old. Kindergartens are always attached to primary schools. Opening hours are the same as at school: usually 5 mornings (mostly 8:30 to 12:00) and 4 afternoons (mostly 13:30 to 15:30). Younger children often attend mornings only. In 2022, 2,637 children were enrolled in a kindergarten (Statistikportal der Deutschsprachigen Gemeinschaft Belgiens 2023a).

Provider structures

In the three **childcare** sectors, providers differ in each Community. In the French and Flemish Communities, children under 3 years of age usually attend privately run childcare settings (European Commission/EACEA/Eurydice 2019, 41).

In the **Flemish Community**, there are several large 'umbrella organisations' that operate as childcare providers/organisers. They are non-profit organisations that mainly offer childcare

places in home-based ECEC provision and out-of-school care, but also group-based settings, albeit to a lesser extent. They also offer other support services besides childcare to families such as maternity care, domestic help and home nursing. Some of these large umbrella organisations date back to the period of pillarisation (early 20th century) and have a history/culture of safeguarding working conditions and providing support for their childcare services. In the past decade, several of these organisations have undergone fusions, making the link with the original pillar less prominent. In addition to these large umbrella organisations, several small non-profit bodies are active in organising childcare. The scale of these smaller organisations varies from one to several childcare services. Besides private childcare providers, also the municipalities organise childcare. In the Flemish Community there is an umbrella organisation (VVSG - *Vereniging van Vlaamse Steden en Gemeenten*) that supports cities and municipalities in doing so. They count as an equivalent childcare provider to the aforementioned large umbrella organisations. Because the 2014 Decree equalised the subsidy regulations for all childcare in the Flemish Community, the distinction between private and public providers is now less relevant than before the introduction of the Decree.

The situation in the **French Community** is similar to the one described for Flanders. Besides the public sector (childcare services organised by a municipality or by a municipal social public centre *CPAS - Centres Publics d'Action Sociale*), there are large umbrella organisations in the 'non-market' sector: the *UNESSA (Union En Soins de Santé*, health care union) which covers regional branches and services active in the reception, support, assistance and care of people in the voluntary sector, particularly in the childcare services in Wallonia and Brussels; the *FILE (Fédération des Initiatives Locales pour l'Enfance*, Federation of Local Initiatives for Children) also federates secular organising authorities (non-profit organisations and public authorities) in the childcare and child protection sector, throughout the Wallonia-Brussels Federation. The *Cosege (Coordination des services d'accueil d'enfants de la fédération Wallonie Bruxelles)* and *FSMI (Fédération des Services Maternels et Infantiles*, Federation of Maternal and Child Services) bring together home-based services. The public (municipality, CPAS) and non-market (ASBL - *Association sans but lucratif*, non-profit association) sectors correspond for the most part to subsidised childcare facilities (70%). The private sector which corresponds to a maximum of 30% of the facilities covers non-subsidised childcare services or independent childminders.

Education sector

Flemish Community

In Belgium, **pre-primary schools** for children aged 2½ years up to the beginning of primary school are state-subsidised. There are three providers of pre-primary settings in the Flemish Community: (1) pre-primary schools fully funded by the Flemish Community; (2) publicly-subsidised *kleuteronderwijs*, which are established by municipal authorities and receive state subsidies; and (3) private *kleuteronderwijs* subsidised by the state. In 2020/21, 61.3% of children in *kleuteronderwijs* attended private state-subsidised institutions, 22.4% municipal state-subsidised and 16.3% Flemish Community institutions (DET 2022, 13).

French Community

The vast majority of pre-primary settings are public. There are three types of provider of *écoles maternelles*: (1) organised, managed and fully funded by the French Community; (2) managed by municipality and subsidised by the Community; and (3) managed by private or legal entities but subsidised by the Community. Private, non-subsidised facilities are almost non-existent.

Table 4

Belgium–French Community: Number and share of children in pre-primary settings by provider, 2020/21

Provider	Number of children	Share of enrolments, in %
<i>Écoles maternelles</i> Fully funded by the French Community	11,454	6.8
Publicly-subsidised <i>écoles maternelles</i> run by municipalities	89,918	53.1
Private state-subsidised <i>écoles maternelles</i>	67,927	40.1
Total	169,299	

Source: FWB 2022a

In 2020/21, slightly more than half of the children in *écoles maternelles* (53%) attended a publicly-subsidised institution run by the municipality (*officiel subventionné*), approximately 40% a private state-subsidised setting (*libre subventionné*) and 7% an institution fully funded by the Walloon Federation of Brussels (FWB 2022a).

German-speaking Community

Childcare for children under 3 years of age is mostly provided by private individuals or non-profit organisations. The Regional Centre for Early Childcare (RZKB) is responsible for the establishment and organisation of such facilities.

In 2018/19, the majority of kindergartens (24 out of 27) were private state-subsidised settings; there are no fully private kindergartens.

Participation rates in regulated provision

According to Eurostat data, there has been a significant increase in the attendance rates of children **under 3** years of age in childcare settings over the last 17 years. While in 2005 only 42% of children in this age group attended a childcare centre, by 2022 this figure was already over 52%. As early as 2013, it was noted that Belgium was one of the six countries that had achieved both Barcelona targets (33% of children under 3 and 90% of children between 3 and school entry in institutional childcare).

In 2022, almost all **3 to 5 year-olds** are enrolled in a pre-primary setting; almost 80% attending for more than 30 hours a week (see Table 5).

Table 5

Belgium: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years, in %	3 years to compulsory school age, in %
2005	1 to 29 hours	23	50
	Over 30 hours	19	48
	No enrolment in ECEC	59	2
2010	1 to 29 hours	17	36
	Over 30 hours	19	63
	No enrolment in ECEC	65	1
2015	1 to 29 hours	23.3	21.7
	Over 30 hours	26.8	77.1

Year	Weekly attendance	0 to under 3 years, in %	3 years to compulsory school age, in %
	No enrolment in ECEC	49.9	1.3
2022	1 to 29 hours	17.9	19.7
	Over 30 hours	34.8	78.7
	No enrolment in ECEC	47.3	1.7

Source: Eurostat 2023b, differences in the sums due to rounding

In 2021, for the whole of Belgium, almost all over 3 year-olds attended a pre-primary setting in the education sector, as well as half of the 2 year-olds (see *Table 6*). Eurostat does not provide similar statistics for the childcare sector.

Table 6

Belgium: Number and enrolment rates of children in pre-primary settings in the education sector by age, 2021

Age	Number of children	Enrolment rates
Under 2 years	3	
2 year-olds	61,828	51.4
3 year-olds	118,532	97.1
4 year-olds	122,904	98.2
5 year-olds	123,628	97.6

Source: Eurostat 2023f, g

The information for the three language Communities is as follows:

Flemish Community

In September 2022, 53.3% of children between the ages of 2 months and 3 years were in centre-based settings. The slight decrease from 55% in 2019 could be due to an improved calculation method on the one hand, but also to the Corona pandemic on the other. At the end of 2022, there were 93,128 licensed places for babies and toddlers in 5,989 facilities; 22,680 places with childminders (Opgroeien 2023a, b).

The relative shares by age group are as follows:

Table 7

Belgium–Flemish Community: Enrolment rates in formally licensed childcare settings for babies and toddlers by age, 2022

Age	Enrolment rates, in %
2–5 months	26.1
6–11 months	62.7
12–17 months	68.9
18–23 months	69.0
24–29 months	69.8
30–35 months (most of this age-group are already enrolled in a kindergarten)	12.7

Source: Opgroeien 2023a

French Community

At the end of 2021, the enrolment rate of the under 3 year-olds in a centre- or home-based setting was 37.4%. More than three quarter (76.9% see *Table 8*) of the available places are in centre-based settings.

In 2021, there were 1.16 enrolled children for each place in a childcare setting subsidised by ONE (ONE 2022, 30).

In **pre-primary education**, particularly in the year before school enrolment, the demand for places is higher than the supply (European Commission/EACEA/Eurydice 2019, 13).

Table 8

Belgium–French Community: Number of places and children under 3 years of age in centre-based and home-based ECEC settings, end of 2021

Setting type	Number of available places	Number of children
Centre-based	35,532	
<i>Subsidised by ONE</i>	25,814	
<i>Not subsidised by ONE</i>	9,718	
Home-based	10,690	
<i>Subsidised by ONE</i>	8,608	
<i>Not subsidised by ONE</i>	2,082	
TOTAL centre-based and home-based	46,222	51,561
<i>Subsidised by ONE</i>	34,422	37,432
<i>Not subsidised by ONE</i>	11,800	14,129

Source: ONE 2022, 26f, 30

In 2020/21, 169,299 children aged 2½ to 6 years attended an *école maternelle*, more than half (53.1%) were in a publicly subsidised setting. 1,297 children attended a special education institution (*l'enseignement spécialisé*) (FWB 2022a).

By age group, attendance rates at the *école maternelle* in 2020/21 were 42% for 2 year-olds, 92% for 3 year-olds, 95% for 4 year-olds and 94% for 5 year-olds. Overall, 92% of 3 to 5 year-olds attended an *école maternelle* (FWB 2022a).

German-speaking community

In 2022, 477 children under 3 years of age (altogether 751) were registered in home-based settings of the RZKB, 429 (467 altogether) in private home-based settings by self-employed childminders. 168 under 3 year-olds attended a nursery. The attendance rate of under 3 year-olds was 46.6% in 2022 (Statistikportal der deutschsprachigen Gemeinschaft Belgiens 2023a).

In 2021, 2,559 of 3 to 5/6 year-olds attended a kindergarten, the majority (2,023) a publicly-subsidised kindergarten, 366 attended one in the community education system and 170 attended one in the freely-subsidised education system (Ministerium der deutschsprachigen Gemeinschaft Belgiens 2022, 16).

Although kindergarten attendance is not compulsory, statistical surveys show that around 98% of 3 year-old children regularly attend. Thus, it can be assumed that almost all children attend kindergarten for an average of three years (Bildungsportal der deutschsprachigen Gemeinschaft Belgiens 2022).

Financing and costs for parents

In 2019, 0.81% of GDP was spent on the ECEC sector as a whole: 0.1% on provision for under 3 year-olds and 0.7% on provision for 3 to under 6 year-olds (OECD 2023).

In all three Communities, parents of under 3 year-olds have to pay for a place at a childcare setting, whereas attending a pre-primary education setting is free of charge, with parents paying only for meals.

In 2022, a couple with two children spent about 14% of net household income on childcare costs³ (OECD.Stat 2023).

Flemish Community

For roughly three-quarters of places in subsidised facilities for young children, parents pay an income-related amount. Childcare settings which do not receive subsidies or with only basic subsidies can set their own fees.

The *kleuteronderwijs* is free of charge, as are the necessary materials. Contributions may, however, be required for extra-curricular activities.

French Community

Childcare sector

Some of the childcare centres approved by ONE are fully funded by the authority and in these, parental fees are income-dependent. In 2022, parents paid an average of €17.82 per day per child under the age of 3, less for siblings or children with disabilities (ONE 2022, 28).

In childcare settings that do not receive subsidies, the setting itself decides on the parental contributions. Subsidies usually depend on staffing levels, enrolment rates of children and health issues. In 2022, 74.5% of childcare places (see *Table 3*) were subsidised by ONE (ONE 2022, 27, own calculations).

Education sector

Attending an *école maternelle* is free for parents of children over 2½ years old. Meals and certain extracurricular activities usually have to be paid for.

German-speaking Community

Self-employed carers in home-based settings set their own fees. For centre-based settings, fees are income-based.

Kindergartens are subsidised by the German-speaking Community and are free of charge for parents.

Staff to child ratios and group size

Flemish Community

In childcare centres for children under 3 years of age, there are usually a minimum of nine and a maximum of 18 children in a group at any one time. A qualified professional is responsible for

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

a maximum of eight children. If more than one professional is present, each one may be responsible for nine children. During rest periods, a ratio of 1:14 is also permitted for a maximum of two hours.

In *kleuteronderwijs*, children are usually grouped by age: 2½ to 3 years, 3 to 4 years, 4 to 5 years, and 5 to 6 years. However, settings can also decide on the group composition themselves. Decisions about group size are also a matter for the pre-primary setting: there are no formal regulations regarding group size.

French Community

In childcare centres, one qualified member of staff is responsible for seven children. Depending on the setting, groups can be same-age or mixed-age. Home-based carers are responsible for up to five children at a time.

In the *école maternelle*, one qualified member of staff is responsible for 20 children; a maximum group size is not specified. As a rule, two or three same-age groups are formed. Mixed-age groups are mostly found in rural areas where there are too few children to form same-age groups.

German-speaking Community

Centre-based childcare settings for under 3 year-olds have a capacity of 24 places. The children are divided into three groups based less on age and more on developmental aspects. There must be three childcare workers for 18 infants (i.e. a ratio of 1:6) as well as socio-educational staff.

In the **home-based childcare** settings (a maximum of three full-time childminders), 12 children can be cared for at the same time. A maximum of four children under 3 years of age and two children up to the age of 12, including the childminder's own children, are cared for at the same time. Self-employed home-based carers are responsible for a maximum of four children under 3 years of age and two children up to the age of 12, including their own children up to 6 years. Exceptions can be made under specific conditions.

There are no regulations regarding the formation of groups in **kindergartens**. Both same-age and mixed-age groups exist. The size of the groups depends on the staffing plan, which in turn depends on the total number of children. For six to 19 children, one specialist post is allocated, for 20 to 25 children 1.5 and for 26 to 32 children two posts are provided. From 33 children onwards, a quarter of a post is added for each additional group of five, six or seven.

Curricular frameworks

In all three Communities, children in pre-primary education are given 28 learning units of 50 minutes each per week (European Commission/EACEA/Eurydice 2019, 49).

Flemish Community

Childcare sector

A pedagogical framework for childcare settings for under 2½-year-olds was introduced in 2014 by the Flemish Ministry of Welfare, Health and the Family. This framework was commissioned by the professional supervisory authority *Kind en Gezin* and drawn up by Ghent University and the Catholic University of Leuven. It describes in detail what is meant by pedagogical quality and how it can be implemented. So far there is no obligation to disclose how the framework is used,

but it is expected that an institution is able to show how it implements the different dimensions of the framework.

Since 2017, there has been a so-called action plan to facilitate the transition from a childcare setting to pre-primary education. For this purpose, a working group consisting of the Ministry of Welfare and the Ministry of Education was formed with four objectives: (1) structural continuity (ensuring cooperation between the different services at regional and local level, paying special attention to vulnerable groups); (2) pedagogical continuity (aligning pedagogical frameworks); (3) professional continuity (sharing responsibilities between all professionals involved in the transition); (4) continuity in terms of the family, neighbourhood and community through partnerships between professionals, parents and community (European Commission/EACEA/Eurydice 2019, 38).

Education sector

In the Decree on Elementary Education (*Decreet Basisonderwijs*, B.S.25/06/2018) the Flemish Ministry of Education and Training defined 'developmental goals' (*ontwikkelingsdoelen*) for pre-primary education. Developmental goals are the minimum goals in terms of knowledge, understanding, skills and attitudes that the school should strive for in its pupils. They refer to a number of basic competences which pre-schoolers are expected to be able to acquire in everyday school activities. The developmental goals are formulated in six different domains: physical education, people and society, musical education, Dutch, science and technology, and mathematics. Schools are expected to make efforts to achieve these goals but the children are not tested by the independent inspectorate.

Each *kleuterschool* develops its own educational plan with corresponding goals which has to be approved by the government. The different age groups of the children are also taken into account. The curriculum is compulsory and only applies to institutions recognised by the authorities (European Commission/EACEA/Eurydice 2019, 96).

French Community

Childcare sector

Based on the Care Quality Code of 2003 (*code de qualité de l'accueil*), curricular frameworks have been developed for working with children under 2½ years of age, both in centre-based and home-based settings. These are essentially based on the Convention on the Rights of the Child and recommendations of the European Commission. Based on these principles and with the help of various brochures produced for this purpose, each childcare centre develops its own plan (Pirard 2011). In doing so, a focus is placed on the best conditions for child development, the quality of interaction between professional and child, the development of self-confidence and autonomy, and the support of age-appropriate socialisation.

Education sector

Curricula apply only to public and private-subsidised institutions (European Commission/EACEA/Eurydice 2019, 96).

The Pact for Excellence in Education (*pacte pour un enseignement d'excellence*) applies to all educational institutions, including pre-primary education. In its revised version this now defines a new "common core" based on eight areas of learning and knowledge. In September 2020 a new framework for pre-primary education was adopted by Parliament. The Guide to Initial Competences (*référentiel des compétences initiales*) defines the skills a child must have acquired by the end of the pre-primary period and on which the setting's educational plan must be based. The guidelines refer to various learning areas such as the development of autonomy, creativity

and thinking; knowledge of language and culture; beginnings of reading and various artistic activities; experimenting and exploring the world. The developmental appropriateness of the provision is considered particularly important.

German-speaking community

No curricular framework exists for the pedagogical work in childcare settings for under 3 year-olds.

For kindergartens, the Activity Plan of 2004 applies, which is based on development goals in the following learning areas: German language; foreign language (between 50 and 200 minutes per week in the first foreign language French); psychomotor development; world orientation; music education; development of mathematical thinking. There is no strict time allocation for the individual areas. In addition, the Activity Plan emphasises the importance of age-appropriate projects that are adapted to the interests and needs of the children. Play is at the centre of the pedagogical activities.

Digital education

Flemish Community

In the curriculum for childcare the use of digital tools is not mentioned. However, a recent NESET report on high-quality ECEC in the era of COVID-19 (Van Laere et al. 2021) acknowledges that digital tools can support the communication with families and provide alternative discussion and training platforms for ECEC staff. Consequently, the report highlights the importance of investing in this direction. Concerning the use of digital tools with children, the report underlines that they are an important support, but cannot replace face-to-face relationships, especially when in the case of young children. As far as professional development is concerned, a Flemish initiative called 'BLINK' ("Blended Learning in Childcare") was launched in the summer of 2022. The goal of BLINK is to provide an online learning platform to support childcare workers. BLINK was developed as a collaboration of five umbrella organisations of Flemish childcare providers. Currently, the platform is still being finalised, but it is already operational. BLINK comprises e-modules, inspiring practices and videos that should become accessible for the whole childcare sector.

French Community

In the curricula for childcare services and pre-primary schools, digital education is not mentioned. The use of digital tools is integrated in the curriculum from the primary school onwards. As in the Flemish Community, this use is developing in communication with parents alongside face-to-face relationships. It raises ethical issues and is becoming a topic for initial and continuing professional education. It is also becoming a support for professional development programmes. Following the pandemic, some training courses have switched to distance learning sessions and several webinars have been organised. An online training offer is being considered through pilot projects. New trainings focused on the childcare service leaders (leader certificate) will provide work platforms and some of them propose a distance learning component. In addition, the "notreplandeformation.be" platform (APEF, *Association Paritaire pour l'Emploi et la Formation*) - ONE collaboration - accessible to all public and associative organisations supports the development and monitoring of training plans for the 0–12 childcare sector. Finally, a ONE "digital resource centre" project for trainers in the childcare sector will be operational in March 2023.

German-speaking Community

In the curricula for childcare services, digital education is not mentioned.

In 2018, the municipalities concluded a framework agreement with the government to promote information and media literacy in the municipal schools. In this agreement, the municipalities, as the responsible bodies for most of the pre-primary schools in the German-speaking Community, have committed themselves, among other things, to ensuring that the teaching of information and media literacy at their schools is or becomes part of the school project of each school. It also states that information and media literacy must already be taught in pre-primary education in an age-appropriate manner.

Monitoring – evaluation

Flemish Community

Child-related assessment

All 5 year-olds must take a uniform Dutch language proficiency test ('KOALA-test'); if they have a weak score on this test, teachers are expected to intensify their Dutch language programme towards these children.

To transfer to primary school, children must have been registered for at least 250 half-days in the last year of *kleuteronderwijs*. As a rule, parents have a say in whether or not the child transfers to primary school (European Commission/EACEA/Eurydice 2019, 105f). The school board, however, makes the final recommendation based on the attendance of an individual child as well as on the estimated Dutch language proficiency.

Centre-level internal evaluation

Since 2017, a self-evaluation tool for **childcare centres** enables them to assess their own quality. Even though not mandatory, its use (every five years) is recommended, as it refers to the same dimensions as those looked at by the health inspectorate (Eurydice 2022a). How results from internal evaluations are used is up to the setting (European Commission/EACEA/Eurydice 2019, 128).

The parents' council has the right to participate in the internal evaluation process in both childcare centres and pre-primary settings (European Commission/EACEA/Eurydice 2019, 130).

According to the Inspectorate of Educational Quality (*onderwijsinspectie*) reference framework, pre-primary education institutions are expected to develop and systematically and regularly evaluate quality assurance measures, and also to examine the effect on children (European Commission etc. 2019, 128). It is assessed whether developmental goals have been achieved in the following learning areas: sport; people and society; music; Dutch; science and technology; mathematical literacy.

External evaluation

The Flemish Health Inspectorate is responsible for the supervision and inspection of all childcare settings for babies and toddlers. It makes on-site visits to ensure that the facilities adhere to rules, but also tries to improve the pedagogical quality by evaluating learning processes (European Commission/EACEA/Eurydice 2019, 125). Since 2017, a monitoring tool has been in place to assess six dimensions (child well-being, child involvement/concentration, emotional support, developmental support, environment, respect for diversity and family cooperation). This instrument was developed in the MeMoQ project (Measuring and Monitoring the Quality of Childcare for Babies and Toddlers - 2013 to 2016). Following the evaluation, a report is prepared to which

the childcare centre has to respond within 14 days and which also contains suggestions for improvement. A final report is then sent to *Opgroeien*, which is then also responsible for making any changes/improvements. As a rule, such visits take place once or twice a year.

Since 2019, each pre-primary setting is obliged to draw up a steering concept, which is then adopted together as a target agreement with the General Education Administration for six years. It is evaluated every year by the institution and at irregular intervals by the. Following the evaluation, an evaluation report is produced, a so-called Education Mirror (*De Onderwijsspiegel*), which summarises the results of the inspection (European Commission/EACEA/Eurydice 2019, 133).

French Community

Child-related assessment

For children under 3 years of age, assessments of child learning outcomes are not the main focus, mainly medical data and language and psychomotor development are recorded. Generally, children (including older children) are assessed through observation, and staff have a choice about how the results are reported (European Commission/EACEA/Eurydice 2019, 103). Results are discussed with parents two to three times a year.

A project called '*Décollage!*' ("Start!") was introduced in 2012, which aims, among other things, not to leave children unnecessarily longer in the *école maternelle*, but instead to ensure a good transition to primary school. After consultation with the Centre for Psychological, Medical and Social Services (*Centre des services psychologiques, médicaux et sociaux*), children can repeat the third year in the *école maternelle* if necessary.

Centre-based internal evaluation

Internal evaluations are carried out throughout the childcare sector and evaluation frameworks are in place. Every three years, childcare settings must evaluate the implementation of their improvement plan in order to renew their quality certificate. In pre-primary settings, the parents' board has the right to participate in the process of internal evaluation (European Commission/EACEA/Eurydice 2019, 128ff).

External evaluation

In the childcare sector, centres and staff are reviewed by ONE. As a rule, the focus is on the implementation of the centre-specific programme. As part of the legislation that has been in force since 2019, general assessment tools have been made available for all childcare settings. ONE has appointed coordinators to analyse and evaluate the programmes of new childcare facilities and has appointed pedagogical advisers to work on improving the quality of care and support for staff.

All childcare facilities must comply with the *Code de qualité de l'Accueil* (Quality code for childcare), as set out in the 2003 decree, draw up a programme and carry out specific educational projects within a time-span of three years. These are evaluated by ONE through supervisory services that are independent of the settings, and the childcare provision then receives a certificate if the quality objectives have been achieved. Since 2021, a new type of quality improvement process with operational assessments has been in place. The education projects last five years with an evaluation at mid-term and another at the end.

The quality criteria against which institutions for over 3 year-olds are evaluated are set annually by the Inspectorate and the Ministry of Education. An advisory board (*Conseil de participation*)

also evaluates the management every year with regard to the centre-specific programme, which may then need to be adjusted (European Commission/EACEA/Eurydice 2019, 126, 128).

German-speaking Community

Child-related assessment

Children under 3 years of age are not assessed. In kindergartens, information on the developmental status of children is collected mostly through ongoing observation. The basis of this formative evaluation are the developmental goals (see *Curricular Frameworks*). The information is recorded in writing and also communicated to the parents. Some kindergartens, especially if children have not attended the last year of kindergarten, also assess 'school readiness' (European Commission/EACEA/Eurydice 2019 105f).

Centre-based internal evaluation

ECEC settings for children under 3 years of age are not required to conduct internal or external evaluations.

The supervisory authority in charge of the external evaluation of the kindergartens also coordinates the internal evaluation. It is carried out by the educational council of the institution, which checks whether methods and results are in line with the objectives and creates a scientific basis for future development through self-evaluation. It is carried out at least every three years (Eurydice 2020). The parents' council has the right to participate in the process of internal evaluation in kindergartens (European Commission/EACEA/Eurydice 2019, 130).

External evaluation

The Autonomous University in the German-speaking Community is responsible for the mandatory external evaluations of kindergartens. The evaluations take place at least once every five years and result in a written report.

Inclusion agenda

Children with special educational needs and disabilities

In Belgium, the Act on Special and Inclusive Education (1970, amendments in 1986) states that all children should attend mainstream institutions whenever possible. Enrolment in a separate special education setting should only take place if the regular setting cannot provide the individual support needed. In 1997, all regulations from this Act were integrated into the Primary Education Act (EASNIE 2021).

Flemish Community

In the Flemish Community, the policy of equal opportunities in education (GOK) also applies, particularly for disadvantaged and ethnic minority children. For children who need more support, additional hours are granted in mainstream settings. These can decide how to use these hours (individual support, coaching specialists, etc.). Settings which include a child with special needs can also apply for additional funding (European Commission 2021, 34). In Ghent, there is also a professional network of 40 "bridge specialists" who establish contacts between institutions and families to support disadvantaged families (ibid., 62). Two recent projects aim to (1) make students in training institutions more aware of diversity, poverty and social inequalities

and (2) establish cooperation between different services that support disadvantaged children and families (ibid., 70).

In separate facilities, individual education plans are drawn up for each child. However, children must be 2½ years old and have a medical certificate before they can attend a support facility. In 2020/21, 2,406 children attended 123 special education centres (DET 2022, 13f).

French Community

The French Community is currently preparing on new legislation to replace the current system of integrating children with special educational needs (about 11,000 children) into mainstream provision. From September 2022, special centres will support regular settings at school (FWB 2022b). *Écoles maternelles* and also primary schools can facilitate the integration of children through special materials and also receive pedagogical support (Phare 2021).

Children with special needs can also receive support from specialised staff in regular settings in the childcare and family daycare services. In addition, there are support facilities, especially for physically disabled children. AViQ (*l'Agence pour une Vie de Qualité*) is responsible for the support of children with disabilities in cooperation with ONE for the Walloon Region and PHARE for Brussels. In particular, teams are to be supported (Eurydice 2022b). AViQ aims to contribute to identifying developmental difficulties as early as possible on the basis of 13 strategic objectives (AViQ 2017) and to involve all stakeholders in a transparent way, thus providing needs-based support. Through PHARE, mobile teams can support childcare centres that are approved by ONE. For children under 3, the Care Quality Code also emphasises support for with special educational needs.

At the end of 2021, there were 15 support services authorised by ONE for children aged 0 to 7 (*Services d'accueil spécialisé de la petite enfance - SASPE*) with 415 places, and one non-subsidised service with 56 places (ONE 2022, 35f).

German-speaking community

According to the 1998 Decree, every child has the right to appropriate school support and should be integrated into a regular institution if possible. An evaluation of abilities and impairments is a prerequisite for support. Children with special needs who have been diagnosed by the Centre for Special Needs Education can take part in special education measures if required. An individual support plan is drawn up for each child (Eurydice 2022c).

Children with a migration background – Children from Roma communities

In 2022, 12.8% of the total population had a non-Belgian citizenship. 8.3% came from other EU countries, 4.5% from non-EU countries (ibsa 2023b, own calculations). In the age group of children up to 5 years, 13.9% held no Belgian citizenship, roughly a half (50.8%) came from EU countries (Eurostat 2023c).

0.3% of the non-Belgian population are Roma, mostly living in Flanders and the Brussels area. The Europe-wide network REYN (Romani Early Years Network), an initiative of the International Step-by-Step Association ISSA, aims to improve access to early childhood education and care and enrolment rates of Roma children. Among other things, the Network organises workshops and seminars with all stakeholders and tries to recruit staff from the Roma population for ECEC through campaigns (REYN 2021).

Flemish Community

With support from the European Asylum, Migration and Integration Fund (AMIF), the Flemish government launched a pilot project (2017-18) to improve attendance rates of migrant children from developing countries. The project relied on network cooperation between institutions, migrant organisations and municipalities, in addition to parental involvement, which improved relations between all stakeholders (European Commission 2021, 119f).

French Community

Since 2012, a resolution in the French Community has aimed to optimise the integration of immigrant children aged 2½ to 18. Language problems are to be improved with the help of special language programmes. Children with an immigrant background or with a different first language may receive support in preparatory groups (European Commission/EACEA/Eurydice 2019, 113) and also in their mother tongue (ibid, 116). In 2018/19, new guidelines were issued recommending that staff also use books and songs in their languages for under 3 year-olds and encourage parents to speak to their children in their mother tongue so that they can form their cultural identity (European Commission/EACEA/Eurydice 2019, 117).

German-speaking Community

On 1st January 2023, 22% of the population of the German-speaking Community held a non-Belgian citizenship, 81% of them came from other EU countries (the majority from Germany), 19% from non-EU countries (Statistik-Portal der Deutschen Gemeinschaft 2023b).

Children of refugees or asylum seekers or children of non-Belgian origin between the ages of 3 and 18 learn the language in the first two years of kindergarten using the immersion principle. Funding for language courses is only provided for children in the year before they start school.

Parental leave arrangements⁴

Maternity leave (*Moederschapsverlof, congé de maternité, Mutterschutz*):

For employees and the unemployed, maternity leave is 15 weeks, of which up to six weeks can be taken before the birth. One week before and nine weeks after the birth are compulsory. Employees in the private sector receive 82% of their salary in the first month, then 75% for the following weeks - with a cap of €170.69 per day. Public sector employees continue to receive their full salary. This is financed by the Federal Health Insurance, i.e. by employees and employers.

Birth leave (*Geboorteverlof / Congé de naissance, Geburtsurlaub*):

Employees are entitled to 20 working days, three of which are compulsory and fully paid; the other seven are compensated at 82% of salary (capped at €170.69 per day). These days can be taken in the first four months after birth.

Parental leave (*Ouderschapsverlof, congé parental, Elternzeit*):

Each parent can take four months of parental leave, which is remunerated with €978.24 net per month. Parental leave can be taken very flexibly, either full time or part time (50% over eight months, 20% over 20 months or 10% over 40 months). In total, parental leave can be taken until the child's 12th birthday and also by both parents at the same time.

⁴ The brief summary in this section is based on the country note for Belgium by Bernard Fusulier and Dimitri Mortelmans in the *International Review of Leave Policies and Research 2023* (see References).

In 2021, 51,366 fathers took four or more days of paternity leave, an average of 13.63 days. In 2022, 86,310 persons made use of parental leave (79,008 in 2021). Most people were mothers (55,908 in 2022 compared to 38,053 in 2010), but the proportion of fathers also increased from 13,891 in 2010 to 30,402 in 2022. Part-time options are most preferred by fathers, with only 10% using full-time parental leave compared to 17% of mothers.

Current challenges for the ECEC system in Belgium

Country expert assessment by

Florence Pirard, Brecht Peleman, Nima Sharmahd, Catherine Reinertz and Katrien Van Laere

Several challenges characterise the Belgian ECEC system. A crucial one is the abrupt and unequal transition to pre-primary school (2½–5 years), based on a **misalignment between the concepts of ‘care’ and ‘education’**. This makes the start of pre-primary schooling hard for all children, but especially for the ones who have not attended childcare (who have a higher chance of being in a societally vulnerable position) and who are considered less ‘ready for school’. It needs to be noted that smooth transitions are included as a quality criterion in the Flemish toddler participation policy (policies to increase the enrolment and attendance in pre-primary schools) and are a priority of the French Community government. Currently, experimental practices are being developed in Flanders to work on smooth transitions and the concept/approach of *educare* to challenge this split system. In the French Community, an official charta is to support the implementation of transitional practices and familiarisation procedures by those involved at the start of pre-primary school. In 2022, *ONE* published a document aimed at clarifying the notion of *educare* (Genette 2022), which is little known on the ground.

The implementation of an *educare* approach is also hindered by **challenging adult-child ratios** both in both childcare and pre-primary education. In Flanders, the adult-child ratio in childcare is 1:8 (without additional rules that take into account, for example, the age of the children and group size). No official ratio is specified for pre-primary schools; however, the average ratio is around 1:24. In the French Community the adult-child ratio is 1:7 in the childcare services but as in Flanders, there is no official required ratio for pre-primary classrooms. In 2018, one third of the school professionals participating in a survey of a representative sample of schools working with the youngest children said that they had no more than 20 2½–3 year-olds in their class, whereas two thirds had at least 21; a quarter of the professionals said they had more than 30 children in their class (Housen and Royen 2019). Attention also needs to be paid to the ratio in out-of-school childcare settings with a proposal to revise the calculation of childcare standards for 2½ to 3 year-olds.

The **staff shortage issue** makes it more difficult to challenge the large number of children assigned to one professional. Many ECEC centres have vacancies for Pre-primary Teachers and Childcare Workers, intensified during the COVID-19 crisis. Never before was the impact of staff shortage so problematic in terms of availability and quality of ECEC, especially in Flanders and in Brussels according to official statistics. The shortage is largely related to the challenging working conditions of ECEC professionals (e.g. salary, lack of child-free hours, problematic adult-child ratios). Recent Master's thesis research at the University of Ghent showed that one in three newly graduated Childcare Workers in Flanders say they do not wish to work in the sector.

In addition, the **qualification level of ECEC professionals** represents a challenge. Childcare Workers in Belgium hold a low initial qualification compared to other EU countries. At the same time, there is a lack of resources and culture to create good quality continuing professional development paths for ECEC professionals. Reforms are currently underway in the French Community.

For Flanders, these challenges are put under additional pressure by the Flemish Government's limited financial investment in childcare.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Belgium was 11,617,623. A steady increase can be observed since the beginning of the century (2000:10,239,085; 2010: 10,839,905; 2020: 11,522,440) (Eurostat 2023a).

For the individual Communities, national statistics give the following data:

Table 10

Belgium: Population development between 2000-2022

	2000	2010	2020	2022
Brussels Capital Region	959.318	1.089.538	1.218.255	1,222,637
Flanders Region	5.940.251	6.251.983	6.629.143	6,698,876
Walloon Region	3.339.516	3.498.384	3.645.243	3,662,495
Belgium, total	10.239.085	10.839.905	11.492.641	11,584,008

Source: ibsa 2023a

Total fertility rate

In 2021, the average total birth rate in the EU27 (as of 2020) was 1.53. The highest total birth rate among the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.60, Belgium is slightly above the EU27 average (Eurostat 2023d)⁵.

Children under 6 years of age

Table 11

Belgium: Number of children under 6 years of age, 2022

Age	Number of children
Under 1 year-olds	118,483
1 year-olds	115,549
2 year-olds	119,365

⁵ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Age	Number of children
3 year-olds	121,146
4 year-olds	122,925
5 year-olds	125,935
Total 0 to under 6 year-olds	723,403

Source: Eurostat 2023a

The proportion of children under 3 years of age in the total population was 3.0% in 2022, and that of children under 6 years of age was 6.2%. These shares were well above the EU average in 2000, though they fell slightly during the last two decades (see *Table 12*).

Table 12

Belgium: Children under 6 years of age – share in total population from 2000 to 2022, in %*

Year	Comparison Belgium/EU	Under 3 year- olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Belgium	3.4	3.4	6.8
	Ø EU15 ⁶	3.2	3.2	6.4
2005	Belgium	3.3	3.3	6.6
	Ø EU25	3.1	3.1	6.2
2015	Belgium	3.4	3.5	6.9
	Ø EU28	3.0	3.2	6.2
2022	Belgium	3.0	3.2	6.2
	Ø EU27	2.7	2.9	5.7

Source: Eurostat 2023a, * Own calculations, deviations due to rounding

Single households with children under 6 years of age

More than three quarters (78.8%) of households with children under 6 were couple households in 2022. Households with single parents accounted for 5.6% - as a rule, these are single mothers. The proportion of single fathers is very low at 0.5% in total.

Table 13

Belgium: Households with children under age 6, 2022

Household type	Total households	Total households, in %*
All households	1,145,300	
Couple households	902,700	78.8
Other household type	178,000	15.5
Single households, total	64,600	5.6
Single households, women	58,900	5.1
Single households, men	5,700	0.5

Source: Eurostat 2023e, *Own calculation

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Employment rates of parents with children under 6 years of age

In Belgium, in 2022, the overall employment rate for men (15-64 years) was 74.2% and for women 66.8% (Eurostat 2023j).

In 2022, 68.7% of women and 86.4% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers thus were slightly below the EU-average (87.2%) and those of mothers were above the EU-average (63.6%) (Eurostat 2023e).

Table 14a

Belgium: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers in %	Fathers in %
Belgium	68,7	87,5
Highest rate of employment in 27 EU countries ⁷	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2022	
	Mothers in %	Fathers in %
Belgium	68.7	86.4
Highest rate of employment in 27 (2020) EU countries ⁸	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Source: Eurostat 2023e

For the SEEPRO-3 countries that were not part of the EU27(2020) in 2021/2022, data are displayed in *Table 14b*:

Table 14b

Employment rates in non-EU SEEPRO-3 countries, 2021/2022/2023

Countries	Parents with children under 6 years		Overall employment rate	
	Mothers in %	Fathers in %	Women in %	Men in %
*Norway (2022)	82.9	94.3	75.4	80.1
***Russia (2021/2022)	67.1 (2021)	k.A.	55.6 (2022)	70.4 (2022)
*Serbia (2022)	64.4	78.3	57.9	71.0
**Switzerland (2022/2023)	46.9	95.3	60.0 61.1 (2023)	83.5 84.2 (2023)
⁺ Ukraine (2021)	n.d.	n.d.	60.7	69.9
+++United Kingdom (2021/2023)				
with dependent children	75.6	92.1	⁺⁺ 72.3	⁺⁺ 79.2
with children under 2 years	72.4	93.1	⁺⁺ 72.1 (2023)	⁺⁺ 79.4 (2023)
with children 3–4 years	70.7	95.0

Children at risk of poverty or social exclusion⁹

In 2022, 18.1% of children under 6 were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 18.7% (EU: 21.6%). In 2020, 3.8% of children under 6 and 2.3% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023h, i).

Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-eqf>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the author

Rozalina Engels-Kritidis, DSc., is a professor and lecturer at Sofia University “St. Kliment Ohridski”, teaching academic courses including the foundations and theory of preschool education; research methods in preschool education; language acquisition and speech development in the early years; intercultural competence of teachers. She is the author of six books and more than 150 publications in the field of preschool education. She is currently President of the Bulgarian OMEP committee.

1. ECEC governance in Bulgaria

In Bulgaria, early childhood education and care is organised as a split system: Pre-primary education is regulated by the Ministry of Education and Science (*Ministerstvo na obrazovanieto i naukata*) and takes place in kindergartens where children aged 2/3 up to 7 years “receive care, upbringing, socialisation and education” (Law on Preschool and School Education, Art. 24). Traditionally, ECEC settings for children under 3 years of age are regulated by the Ministry of Health. Regional and local authorities provide maintenance of the buildings and guarantee compliance with health and safety regulations. Currently there are policy discussions taking place regarding the integration of the two sectors into a unified ECEC system.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Table 1 gives an overview of the staff working directly with children and categorises the core practitioners (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this section).

Table 1

Bulgaria: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Education sector				
Pre-primary / Kindergarten Teacher <i>Detski uchitel</i> <i>Profile:</i> Early Childhood Pedagogy Professional or Pre-primary and	<i>Detska gradina Kindergarten</i> (2)3 to 6/7 year-olds ¹ <i>Podgotvitelna grupa/klas 5-6-godishni</i> Transition group in kindergarten or Transition class in primary school	Core practitioner with group responsibility Centre head/ Kindergarten principal	0–6/7 years or 3–11 years	Bachelor, 4 years ECTS credits: 240 EQF level: 6 ISCED 2011: 6 <i>Occasionally:</i> Professional Bachelor, 3 years ECTS credits: 180 EQF level: 6

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In Bulgaria the relevant formats are **0–3** and **3–6/7**, since children start school when they are 7 years old.

Job title	Main ECEC work- place settings and age range	Main roles and positions	Main age- range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Primary Education Professional	5 to 6 year-olds <i>Podgotvitelna grupa/klas 6-7- godishni</i> Transition group in kindergarten or Transition class in primary school 6–7 year-olds			ISCED 2011: 6
Teacher's Assistant <i>Pomoshnik- vazpitateľ</i>	<i>Detska gradina</i> Kindergarten (2)3–6/7 year- olds <i>Podgotvitelna grupa</i> <i>5-6-godishni</i> Transition group in kindergarten 5–6 year-olds <i>Podgotvitelna grupa</i> <i>6-7-godischni</i> Transition group in kindergarten 6–7 year-olds	Non-qualified co-worker	n/a ²	No required qualifica- tion

Childcare sector				
Nursery Teacher	<i>Detska yasla</i> Crèche/nursery	Appointed to several	0–6/7 years	Bachelor, 4 years

² n/a = not applicable

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<i>Pedagog na detska yasla</i> <i>Profile:</i> Early Childhood Pedagogy Professional	Infant/toddler group 3 months–2/3 years	nursery groups; responsibilities include arranging, planning and managing the educational activities for the children.		ECTS credits: 240 EQF level: 6 ISCED 2011: 6
Medical Nurse <i>Medicinska sestra</i> <i>Profile:</i> Social Care/Health Care Professional	<i>Detska yasla</i> Crèche/nursery Infant/toddler centre 3 months–2/3 years <i>Yasleni grupi kym detska gradina</i> Infant-toddler groups in kindergarten 3 months–2/3 years <i>Domove za medico-socialni grizhi za detsa</i> Health and social care home 3 months–2/3 years	Core practitioner with group responsibility	All ages	Bachelor, 4 years ECTS credits: 240 EQF level: 6 ISCED 2011: 6

In most **kindergartens** a Children’s Nurse is on the premises all day; a Paediatrician and Speech Therapist pay weekly visits. The centre director (Principal) can work directly with the children if staff members are absent for one reason or another; at the same time, according to Directive № 4 (2017), the principal is required to work a minimum of 72 hours per year with children. Principals have the same initial professional education as the group leaders, but are required to complete an additional course in management and leadership issues. Non-qualified Assistants are present in the room; they do not usually work directly with the children, but are expected mainly to perform custodial tasks such as clearing up and cleaning the room or distributing meals (Oberhuemer, Schreyer, and Neuman 2010, 59).

Since budgets now come under the responsibility of the kindergarten principals, some, particularly those in larger cities, manage to fund a full-time position for specialist support staff, e.g. Speech Therapists, Psychologists, Special Pedagogues, even Physical Education Teachers (most often men), who work on site on a regular basis, and are on the kindergarten payroll.

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

The full-time position of **Municipal Kindergarten Principal** (*Direktor na obshtinska detska gradina*) is listed in the National Classification of Professions and Occupations (2011). Hierarchically, it is under the supervision of the Municipal Directorate of Education. As per Directive № 15 (2019), the main functions of the Kindergarten Principal are to apply state policy in the area of preschool and primary school education, to manage and bear responsibility for the entirety of the institution’s activities, to plan, organise, control and bear responsibility for the educational process, as well as the acquisition of key competencies by the children, among others.

According to Directive № 15 (2019), the requirements and qualifications for the position of Kindergarten Principal are:

Minimum requirements: Bachelor’s or Master’s degree in Education; 5 years of professional teaching experience

Additional requirements: Professional area: Pedagogical Sciences; professional qualification as “Educator” or “Preschool Teacher”

To fulfil the responsibilities of the position, the Kindergarten Principal must possess strategic, leadership and managerial competences, be results-oriented and competent in negotiation and motivation. The Principal must be able to work in a team, but also to be client-focused. Finally, a degree of digital competence is required.

The Principal is responsible for the following areas:

- Administration and management
- Organisation, coordination and control
- Education and upbringing
- Health and sanitation
- Social and humanitarian activities
- Financial matters.

The Kindergarten Principal is also the Chairman of the Educational Council and is responsible for the implementation of its decisions.

2.3 Centre-based posts of responsibility

Kindergartens sometimes work on micro-projects with various themes that are assigned to one or more teachers and staff as part of their continuing education, but this is considered part of the usual work responsibilities and is not rewarded with additional pay.

With regard to the practical training of students in a real educational environment, universities have contractual agreements with specially selected nurseries, kindergartens and teach-

ers/mentors. Most of the mentoring/supervising staff in partnership institutions are compensated with symbolic sums – according to the regulations of the Sofia University “St. Kliment Ohridski” and the Faculty of Educational Studies and the Arts, they may work no more than 16 hours per month on mentorship tasks and they are paid a symbolic amount (around 4 EUR per hour). However, there are also kindergartens where the supervision of students takes place on a voluntary basis (i.e. without pay).

The contracted ECEC mentors are highly-qualified pedagogues with experience in activities related to the practical application of innovations and the creation and practical testing of innovative practices. Most of them also have a degree for conducting in-service training (according to the Bulgarian national five-level qualification scale), most often attained in the Department of Information and In-Service Training of Teachers or the Faculty of Educational Studies and the Arts of the Sofia University, or in other universities. Some of the ECEC mentors have attained the highest professional qualification level, which involves the promotion of innovations introduced by the teacher through publications (Engels-Kritidis 2020a).

2.4 Co-ordinating and supervisory staff

The positions of **Senior Teacher** (*Starshi uchitel*) and **Head Teacher** (*Glaven uchitel*) are assigned to Kindergarten Teachers who fulfil the necessary requirements. In addition to the standard teacher functions, the Senior Teacher and the Head Teacher are also responsible for (Directive № 15, 2019):

- Planning, organising and reporting on the staff qualifications
- Analysing staff qualification activities
- Coordinating the participation in professional communities, the exchange of good pedagogical practices, including teaching activities for the acquisition of key competences by children
- Assisting newly appointed teachers and trainee teachers in cases where they have been appointed as mentors
- Methodological support – Senior Teachers support other teachers, while the Head Teacher supports Senior Teachers
- Development of kindergarten curricula, as well as innovative and original educational programmes.

According to Directive № 15 (2019), the requirements for the positions of Senior Teacher and Head Teacher are the following:

Senior Teacher	Head Teacher
<ul style="list-style-type: none"> – 10 years of professional experience – A post as “Teacher”* The 5th or 4th Professional Qualification Level – At least 3 qualification credits during the last attestation period – An assessment of no less than “meets expectations” during the most recent performance/attestation review. 	<ul style="list-style-type: none"> – Master’s degree in Education – A post as “Senior Teacher” – The 3rd, 2nd, or 1st Professional Qualification Level – At least 3 qualification credits during the last attestation period – An assessment of “exceptional performance” during the most recent performance/attestation review.

*** Note:** If the Teacher has attained a Professional Qualification Level higher than 4th, has attained more than the minimum of 3 qualification credits and has been evaluated as “exceeds expectations” or “exceptional performance” during the latest review, the Teacher can be assigned as a Senior Teacher regardless of the length of professional experience

2.5 Specialist support staff

Directive № 15 (2019) defines the specialist teacher position of **Resource Teacher** (*Resursen uchitel*). In addition to the standard teacher duties, the Resource Teacher is responsible for organising or adapting the educational environment for children with special educational needs (SEN), designing and implementing educational activities aimed at children with SEN, assisting teachers and parents in identifying individual children's needs and progress, as well as other activities and responsibilities related to children with SEN.

Additionally, kindergartens can engage the services of part-time specialist teachers for specific activities, e.g. Speech Therapists, Psychologists, Special Pedagogues, Dance/choreography Teachers, Sports Instructors, Foreign Language Teachers, etc. These teachers are most often in addition to the standard curriculum and their fees are covered by additional payments by the children's parents.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Traditionally, Kindergarten Teachers in Bulgaria have always been highly qualified. As far back as 2003/2004, according to Kusheva et al. (2006), looking at the entire teacher workforce in the education system, including early childhood education, teachers with higher education accounted for about 90%.

The data on gender ratios in pre-primary education show that the overwhelming majority of staff is female. Even though each year several men graduate as Pre-primary Teachers with Foreign Language or as Pre-primary and Primary School Teachers, most of them do not take up work in this job mainly because of the low remuneration and the traditional feminisation of the profession. Although there are no statistical data that show the gender distribution of Pre-primary Teachers in Bulgaria, recent observations and some (few) publications show that, during recent years (perhaps due to the significant increase in teachers' salaries) there have been a number of men working in kindergartens, mainly (but not only) in private settings. For example, according to Omaynikova (2022) in Kindergarten № 29 in Sofia there are two male Kindergarten Teachers and one male Music teacher, while in "Detelina" Kindergarten in the city of Vidin there was a male Kindergarten Teacher as far back as 2015 (BNR 2015). Additionally, in kindergartens that manage to ensure the relevant positions and the budget for them, there are male Physical Education Teachers (Uchiteli.bg 2015).

While over half of Kindergarten Teachers were over 50 years old in 2015 (Kusheva et al. 2006), more recent NSI data for 2022/2023 (see *Table 2*) show a clear tendency of reversal in this trend. The percentage of Pre-primary Teachers over 50 has dropped to 37.7% while the second-largest group (32.2%) are teachers aged 25-39 years old. This can be attributed to the significant increase in teachers' salaries (see *Table 7*), as well as increased interest from graduates of other fields to acquire the qualification of Pre-primary Teacher (as a Master's degree) and pursue a career in the early childhood education system.

Table 2

Bulgaria: Age distribution of teachers in kindergartens during 2022/2023 school year

Age group	Number of teachers	Totals/age groups	Percentage
Under 25 years	556	6,366	32.2
25-29 years	1,256		
30-34 years	2,057		
35-39 years	2,497		
40-44 years	2,982	5,939	30.1
45-49 years	2,957		
50-54 years	2,455	7,442	37.7
55-59 years	2,650		
60 years and older	2,337		
Total number of teachers	19,747		

Source: NSI 2023a

There are no recent national statistics about the overall composition of the ECEC workforce in Bulgaria that show the proportion of qualifications, gender or ethnicity.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

The teaching positions in **pre-primary education** in Bulgaria are usually held by personnel who have completed the traditional university degree of *Pre-school Pedagogy* (a four-year university programme, started in 1984 and available until 1996), as well as one of the more recent four-year degree programmes of *Pre-school Pedagogy with a Foreign Language* and *Pre-school and Primary School Pedagogy* (available since 1996). The first of the new degrees reflects the current need for qualified Pre-primary Teachers who, in addition to the mainstream pedagogical work, are proficient in early foreign language teaching. Graduates of this programme are eligible to teach preschool children in state, private, specialised and profiled children's institutions, as well as to conduct foreign language teaching in English, German, French, Spanish, Italian or Russian (currently only English).

The basic premise of the second degree, the 'hybrid' specialisation in *Pre-school and Primary School Pedagogy*, is the idea of facilitating the transition of children from kindergarten to primary school by providing teaching professionals with a broad spectrum of competence and who are well-acquainted with the specifics of working with children of both preschool and primary school age. Graduates of the programme can organise and conduct instructional, educational, methodological, organisational-managerial, expert, advising, diagnostic-prognostic and cultural activities in the educational system, in administrative-managerial and cultural institutions, as well as in social and sport organisations for children of pre-school and primary school age.

According to the entry requirements for prospective Pre-primary and Primary School Teachers in the Candidate Student's Handbook of the Sofia University St. Kliment Ohridski for 2022/2023 (Sofia University St. Kliment Ohridski 2022a), there is an entrance exam in one of the following subjects, chosen by the candidate student: Bulgarian Language and Literature, Bulgarian History,

Geography, Philosophy, English, German, French, Spanish, Italian or Russian Language. For enrolling in a programme of *Pre-Primary Education with a Foreign Language*, the entrance exam is in English, German, French, Spanish, Italian or Russian. For both specialisms, the Bulgarian Language and Literature marks from the high school diploma also count towards each candidate's overall score.

The university study programme ends with written state exams. Students of *Pre-school Pedagogy with a Foreign Language* are additionally tested on the respective foreign language, while the students of the hybrid *Pre-school and Primary School Pedagogy* specialisation are tested in a state exam on a pooled questionnaire – one part on preschool education and second part on primary education.

After completing the four-year Bachelor's degree, students can continue for two full-time semesters (one year) or three part-time semesters for a Master's degree programme in the field of pre-primary education or in another area. Furthermore, a three-year full-time or a four year part-time course of doctoral studies for a PhD degree in pre-primary education is available.

It is important to note that there are still two Pedagogical Colleges in Bulgaria where, after three years (six semesters) of study, students can be awarded the acknowledged educational degree of Professional Bachelor in Pre-school Education with a Foreign Language (only English).

One is the Pedagogical College in Dobrich, affiliated to the University of Shumen; the other one is the Pedagogical College in Pleven, affiliated to the University of Veliko Turnovo. According to a recent ministerial decision (Decision № 441 dd. 22 June 2023), 90 students will be accepted in 2023/2024 for the Professional Bachelor degree in the field of Pedagogy of the Pedagogical College in Dobrich and 70 students in Pleven; however, the numbers for both colleges include students from three pedagogical specialties, so it can be assumed that around one third of them will be enrolled in Pre-school Pedagogy with English Language. Almost all graduates of these colleges continue in a Master's degree programme specifically created for these cases.

In several Bulgarian universities there are special curriculum plans for the Master's degree programme in preschool education (four semesters) for those who have graduated from a college and have a "Professional Bachelor" degree and the qualification of Pre-school Pedagogy. One of the beneficial ideas supporting the existence of such colleges is that they allow the respective universities to reach people from smaller towns and also increase their enrolment quotas.

The low percentage of Professional Bachelor degree holders among the teachers in the general field of pedagogy in Bulgaria can be seen in the data on tertiary education graduates in 2022 (NSI 2023b). For the general sector "Education", 139 people graduated with a Professional Bachelor's degree; 2,976 with a Bachelor's degree; 4,497 with a Master's degree and 78 with a Doctoral degree (unfortunately there is no separate statistics for Kindergarten Teachers).

Teachers' Assistants who work in kindergartens graduate from high school (ISCED 3). They do not receive specific training. There is one exception: graduates of the 135th High School 'Jan Amos Comenius' in Sofia gain a special qualification. This is due to the vocational education/training with a 'pedagogical profile' that its students have been receiving since the 1980s during the four years following their eighth class; since 2012, those leaving school receive a certificate as *Assistant Educator in Children's Upbringing and Education*.

There are also various courses offered specifically for Teachers' Assistants. Some of the public and private centres for vocational education organise qualification courses in this area.

Table 3

Bulgaria: Pre-primary / Kindergarten Teacher

Job title in Bulgarian: <i>Detski uchitel</i> Profile: Early Childhood Pedagogy Professional (specialist focus 0–7 years) <i>or</i> Pre-primary and Primary Education Professional
Entry requirements: Higher school leaving certificate, university entrance exam Professional studies: Since 1996: 4-year degree programme <i>Pre-school Pedagogy with a Foreign Language</i> or <i>Pre-primary and Primary School Pedagogy</i> ; a subsequent 1-year Master’s study is possible. Award: State exam, Bachelor (= official requirement for core pedagogues in kindergarten); although optional, it is common for Kindergarten Teachers to have a Master’s degree (ISCED/EQF level 7). ECTS credits: 240 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: Kindergarten (2/3–6/7 years), transitions groups in kindergarten or primary schools (5–6 and 6–7 years), crèche, nursery, infant/toddler centre (3 months to 3 years)

Table 4

Bulgaria: Nursery Teacher

Job title in Bulgarian: <i>Pedagog na detska yasla</i> Profile: Early Childhood Pedagogy Professional (specialist focus 0–7 years) <i>or</i> Pre-primary and Primary Education Professional
Entry requirements: Higher school leaving certificate, university entrance exam Professional studies: Since 1996: 4-year degree programme <i>Preschool Pedagogy with a Foreign Language</i> or <i>Pre-primary and Primary School Pedagogy</i> ; a subsequent 1-year Master’s study is possible. Award: State exam, Bachelor (=official requirement for core practitioners in kindergarten); although optional, it is common for Nursery Teachers to have a Master’s degree (ISCED/EQF level 7). ECTS credits: 240 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: Kindergarten (2/3–6/7 years), transitions groups in kindergarten or primary schools (5–6 and 6–7 years), crèche, nursery, infant/toddler centre (3 months to 3 years)

Table 5

Bulgaria: Medical Nurse

Job title in Bulgarian: <i>Medicinska sestra</i> Profile: Social/Health Care Professional
Entry requirements: Higher school leaving certificate, university entrance exam Professional studies: 4 years at a university/faculty specialising in medical studies Award: Bachelor ECTS credits: 240 EQF Level: 6 ISCED 2011: 6 Main ECEC workplace: Crèche, nursery, infant/toddler centre (3 month to 3 years), nursery groups in kindergarten (3 month to 3 years), health and social care homes (3 month to 3 years)

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Kindergarten Teacher (*Detski uchitel*)

Competence specifications

According to the Sofia University Study Curriculum for Pre-school Pedagogy with a Foreign Language specialty (Sofia University St. Kliment Ohridski, 2021b), effective as of the 2021/2022 academic year, the students are required to attain the following professional competences:

- Application of acquired knowledge and abilities in pedagogical practice
- Utilisation of creative approaches during the realisation of the educational aspects in the curricula for each respective age
- Utilisation of modern and innovative formats and methods for interaction and education
- Ability to transfer knowledge and techniques, to integrate current theoretical achievements in practice
- Ability to communicate, to manage and overcome conflict, and to develop and manage pedagogically-relevant projects
- Ability to create conditions and prerequisites for learning (definition of goals, process organisation, execution, self-control and self-assessment)
- Ability to select approaches, forms of organisation, methods, equipment and pedagogical activities for educational work as appropriate for specific circumstances
- Ability to stimulate and assist children with cognitive activities, intellectual creativity, a positive attitude to learning, research, discovery and self-knowledge of the world
- Ability to help children develop their national, social, ethnic, religious, etc. identity, their self-esteem, their self-respect and respect towards others, tolerance
- Development of individual qualities such as tolerance, outgoing character, self-control, empathy, ability for taking initiative, creativity, etc. which are necessary for the conduct of effective educational and social interactions.

Curricular areas

The basic requirements for attaining the professional qualification of ‘Teacher’ (including ‘Pre-primary/Kindergarten Teacher’) are defined in the government Directive for State Requirements for Attainment of the Professional Qualification of “Teacher”, dated 11.11.2016 and last updated on 05.02.2021.

The directive stipulates that the theoretical preparation should include mandatory, elective mandatory and elective courses (art. 5), and defines the minimum of mandatory academic courses (art. 6 and Appendix № 5, amended in 2021) and their minimum duration in academic hours, as follows:

Table 6

Bulgaria: Mandatory courses for qualifying as a Pre-primary/Kindergarten Teacher:

	Academic course	Minimum duration in academic hours
1	Pedagogy	60 (min. 30 hours of lectures)
2	Main specialisation course: preschool pedagogy	45 (min. 15 hours of lectures)
3	Psychology	60 (min. 30 hours of lectures)
4	Didactics/tuition methodology	120 (min. 30 hours of lectures)
5	Inclusive education	30
6	Information and communication technology in education; working in a digital environment	30

According to the Directive (articles 9-12), “the practical preparation is conducted in kindergartens and schools that are part of the system for pre-school and school education and is realized in the following formats of tuition with a minimum duration in academic hours”:

1. *Observational lesson* (observing and analysing pedagogical situations in kindergartens and schools, conducted under the direct supervision of a university lecturer): 30 hours
2. *Ongoing pedagogical practice* (practicum preparation through observing and conducting pedagogical situations in kindergartens and schools in collaboration with a mentor-teacher under the supervision of a university lecturer): 60 hours
3. *Internship practice* (“independent participation of the students in the educational process via realisation of various kinds of pedagogical activities in kindergartens and schools, conducted under the supervision of a mentor-teacher and an tutor from the higher-education institution”): 90 hours.

Each Bulgarian university which has a pedagogical faculty and is accredited to train students in the field of Pre-school Pedagogy develops its own curriculum, based on the aforementioned minimum requirements.

As an example, according to the 2021/2022 curriculum of the Faculty of Primary and Pre-school Education of Sofia University St. Kliment Ohridski, the study programme *Pre-school and Primary School Pedagogy*, which qualifies for work with 3- to 11-year olds in kindergartens and primary schools, comprises 2,850 academic hours in 58 curricular areas and students are awarded 240 ECTS credits on completion (Sofia University St. Kliment Ohridski 2021a). In the same university, the other study programme for work in kindergartens – *Pre-school Pedagogy with a Foreign Language* – comprises 2,475 hours of study, 45 curricular areas and 240 ECTS credits. Both study programmes include subjects such as Basics of Education; Didactics; History of Pedagogy and Bulgarian Education; Pedagogical Psychology; Pre-school Pedagogy; Pedagogy of Early Childhood (0-3 years); Pedagogy of Playing Games in Early Childhood; Pedagogical Diagnosis; Basics of Primary School Education; Children's Literature; Pedagogy of Language Use and Speech Development; Pedagogy of Child-Environment Interaction; Pedagogy of Mathematics; Pedagogy of Music; Pedagogy of Art; Pedagogy of Movement. The theoretical studies end with written state exams. Both study routes lead to a Bachelor's degree.

The curriculum of the study route *Pre-school Education with a Foreign Language* is organised into four content areas: (1) theoretical foundations; (2) psychology and pedagogy; (3) practical application/methods; (4) optional subjects. Students are additionally tested on the respective foreign language (only English currently; German, French, Spanish, Italian, and Russian used to be options in the past); the foreign language component comprises 360 hours of auditorium study.

Most of the curricular areas mentioned above include separate hours for practical training, but parallel to this there is a main workplace-based cycle, focusing on the development of kindergarten teachers' practical skills (see *chapter 5*). For the aforementioned courses, especially for the specific methodological ones, a common theoretical background has been created that enables students to gain a more holistic understanding of the interconnections between theoretical knowledge and didactic strategies, thus helping them to develop professional competences (Engels-Kritidis, Kikušová, and Osad'án 2013).

Nursery Teacher (*Pedagog na detska yasla*)

Competence specifications and curricular areas required for prospective Nursery Teachers are exactly the same as those for Kindergarten Teachers. Graduates of the two previously mentioned Bachelor's degree programmes can also work as Nursery Teachers.

Medical Nurse (*Medicinska sestra*)

Competence specifications

According to the Directive for Unified State Requirements for the Attainment of Higher Education in the specialisms of 'Medical Nurse' and 'Midwife Nurse' at Bachelor level (introduced in 2005, with amendments and additions in 2006 and 2010), the study programme provides: (1) Appropriate knowledge of disciplines that are the basis of nursing, including adequate knowledge of the human organism, the psychological functions and the behaviour of healthy and diseased people, as well as the human social environment; (2) Adequate knowledge of the essence and the ethics of the profession and the general principles connected with health and nursing; (3) Appropriate practical clinical experience; (4) Ability to participate in the practical tuition of health personnel and work experience with this personnel; (5) Experience in collaboration with other medical specialists.

Curricular areas

Candidate students are required to have completed secondary education and to pass a written examination, determined by the higher education institute. The study programme for a Bachelor's degree in Medical Nursing takes four academic years (eight semesters) to complete and comprises 4,600 academic hours. Tuition includes theoretical and practical preparation. The theoretical preparation is conducted via mandatory, elective mandatory and elective courses delivered as lectures, seminars and practical exercises with a total duration of at least six semesters. The practical component of IPE takes place through educational (clinical) practice and internship. The mandatory courses (and their minimum duration in academic hours) more closely associated with the nurses' work in nurseries and infant-toddler centres include the following: Practical Basis of Nursing (660 hours); Nursing in Paediatrics (45 hours); Nursing of Women in Labour and Newborns (30 hours); Nursing of Children and Adults with Disabilities (60 hours); Hygiene and Ecology (30 hours); Therapeutic Feeding and Nutrition (15 hours); Pathology – Knowledge of Diseases (405 hours); Infectious Diseases and Epidemiology (30 hours); Paediatrics and Neonatology (45 hours); Ear, Nose and Throat Diseases (15 hours); Health Promotion (15 hours); Children's Pedagogy and Children's Psychology (30 hours); Medical Safety in Emergency Situations (30 hours); Principles and Methodology of Teaching (45 hours), etc. The ratio between theory-based and practice-based IPE is determined by the higher education institution, but the proportion of academic hours allocated to practical experience in work placements should be no less than 50% of the total hours.

4.3 Alternative entry and qualification routes, system permeability

The study route *Pre-school and Primary School Pedagogy* is available on a full-time and a part-time basis. Part-time studies are for those in employment while studying. Having in mind the low salaries in the educational sector, some students work in completely different areas, but a large number work as Teachers' Assistants in kindergartens or as part-time Pre-primary Teachers until they take their final exams.

Candidates who have completed a Bachelor programme in another humanitarian discipline are also given the opportunity to take an extended two-year (four semesters) Master's programme in order to acquire the qualification for working as a Pre-primary Teacher (see Sofia University

St. Kliment Ohridski 2022b). An admission score is assessed, comprising average results from state examinations and average results from semester examinations during their Bachelor's degree course; the overall entry requirement is a score of at least 7.00. The interest in this Master's programme is very high – during recent years, each autumn more than a hundred people apply and enter this programme. Since the 2015/2016 academic year, a new curriculum has been approved by Sofia University; for candidates with a Bachelor's degree with a pedagogical qualification (regardless of the specific area), a shorter two-semester (instead of four) course of study has been launched. In order to put the scale of interest in these programmes into perspective, it should be mentioned that in the 2021/2022 academic year, 167 people enrolled for the regular four-semester programme, while 128 entered the Master's degree programme for candidates with a pedagogical qualification (Sofia University St. Kliment Ohridski 2021c). The tendency for an increased interest by graduates of other areas in attaining the qualification of preschool teacher has continued throughout the last 6 academic years, during which the courses of these two Master degree programs comprise of over 100 people each.

On the other hand, Bachelor's degree students who graduated with the *Pre-school and Primary School* or the *Pre-school Education with a Foreign Language* specialisms can continue their Master's degree in a different area, giving them an additional pedagogical qualification in order to expand their expertise and field of competence, e.g. a Master's degree in Speech Therapy, in Special Education, in the Pedagogy of the Aesthetics of Mass Communication and others.

The field-based studies component of IPE accentuates a form of training that allows Pre-primary Teachers to adapt to the constantly changing educational needs of children. In this respect, increasing the number and quality of exchange programmes for students and teachers-as-mentors will be essential for ensuring that they are always up-to-date with good pedagogical practices developed by other European countries and worldwide.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Pre-primary / Kindergarten Teachers (*Detski uchitel*)

The practical element of the study route *Pre-school and Primary School* also entails work placements of 780 hours out of a total of 2,850 hours, i.e. comprises over 27% of the overall study programme. The number of hours spent in kindergarten or school increases per semester, and the final, eighth semester comprises a practical placement only, split equally between a kindergarten and a primary school. Each part ends with a state exam, and the final mark is an average of both separate marks – one for the kindergarten and another for the primary school. In the study route *Pre-school Education with a Foreign Language* the curriculum comprises 780 hours in practical placements out of a total of 2,475 hours, i.e. approx. 31%. The eighth semester is spent entirely in a kindergarten placement.

Students need to be able to transfer their acquired theoretical knowledge into the kindergarten's educational context. The whole system of field-based studies ensures that students gradually move from observation and analysis of teaching situations e.g. by carrying out small projects and research studies (during the first several semesters of their study), to enacting pedagogical situations (during the following semesters, usually in pairs) and finally, during the seventh and eighth semesters, to independent performance in everyday pedagogical conditions (Roussinova and Angelov 2008).

The practical element of initial professional education is regulated in the Directive for State Requirements for Attainment of the Professional Qualification of “Teacher”. For the placements in a real-life educational environment, universities have contractual agreements with specially selected nurseries, kindergartens and teachers/mentors. The mentoring/supervising staff in partnership institutions receive a symbolic monetary compensation. There are also kindergartens with ECEC mentors who work in placement settings on a voluntary basis, subject to a special contract.

The contracted teacher trainers/mentors are highly-qualified pedagogues with experience in activities related to the development, application and evaluation of innovative practices. Most of them have also attained a qualification level (according to the Bulgarian national five-level qualification scale – see also *Chapter 6*), most often acquired through courses at the Department of Information and In-Service Training of Teachers or the Faculty of Educational Studies and the Arts of Sofia University, or at other universities. Some of the teacher trainers/mentors have attained the highest professional qualification level, which involves the presentation of innovations introduced by the teacher through publications.

The organisation, realisation and evaluation of field-based studies is part of the overall evaluation of each study programme by the relevant university tutor. These depend on conditions defined by each particular university tutor for his/her subject.

The overall aim for all types of field-based studies is for the student to obtain a comprehensive view of the educational process, to gain professional and organisational competences connected with the role of the teacher, as well as competencies related to the realisation of educational activities in kindergartens.

The student has the chance to understand and verify the realisation of modern didactic strategies in a real-life educational context and thus to acquire key competencies such as: implementing educational projects at the level of kindergarten; orienting himself/herself in the programme systems for pedagogical interaction of kindergartens; realising general methods of education and general didactic of teaching in kindergarten; diagnosing the reasons for children’s problems and preparing appropriate pedagogical intervention to resolve them; communicating his/her knowledge with specialist educational and psychological services; preparing methodically educational sessions related to particular educational content (Engels-Kritidis, Kikušová, and Osad’an 2013).

As a form of student self-evaluation and also external evaluation, students are required to prepare a portfolio – a summary of necessary documents which give evidence of their educational activities. At Sofia University, this is called a *pedagogical diary*. This diary (or *portfolio*) has to contain all proposed and realised curricular projects, didactical approaches and other documents, including self-assessment by the student. The content of each project and the relevant preparations have to be discussed with the tutors responsible for the teaching of didactics in the relevant courses.

In most universities in Bulgaria, some of the students win competitions for participation in student exchange programmes such as Erasmus+, DAAD, etc. They spend various periods of time (usually a semester) in another European country mainly for improvement and exchange of knowledge and skills in the field of practical training.

The project *Student Internship* (2014-2015 – www.praktiki.mon.bg) realised with the financial support of the Operative Programme ‘Human Resources Development’ and co-financed by the European Social Fund of the European Union) offered an opportunity to students specialising in pedagogy/education to conduct their field-based studies (paid internship – one-time payment of 246 EUR (480 BGN) for 240 hours in kindergartens, schools, etc. in another country. The project was realised in partnership with all 51 higher education institutions in Bulgaria. The practical

education was attended by over 60,000 students in total, including a large number of students placed in preschool institutions. The project budget included funding for the compensation of academic mentors from the universities, as well as mentors assigned by the employers. The second phase of the same project was underway across the country until the end of 2023.

Nursery Teachers (*Pedagog na detska yasla*)

Prospective Nursery Teachers undergo the same format of workplace-based learning as prospective Kindergarten Teachers.

Medical Nurses (*Medicinska sestra*)

As previously mentioned, the ratio between theoretical and practical preparation in the curriculum for Medical Nurses is determined by the higher education institution, but the academic hours allocated to practical preparation should be no less than 50% of the total hours. The practical preparation during IPE is realised via educational (clinical) practice and internship; this is organised and conducted in faculties and/or affiliates of higher education institutions, as well as clinical settings that have been accredited for student education.

6. Continuing professional development (CPD) of ECEC staff

According to the national system for in-service training, all Bulgarian teachers (including Kindergarten Teachers) can develop their qualifications on a five-level qualification scale. The first two levels involve education on contextual and technological innovation, as well as the sharing of the teachers' individual experiences and pedagogical practices, while the latter three levels focus on activities related to the practical application of innovations and the creation and practical testing of individual innovative practices. The highest professional qualification level represents the dissemination of innovations introduced by the teacher through publications (Kusheva et al. 2006).

In the Law on Preschool and School Education of 2015, there is a separate section 4, titled 'Career development of pedagogical specialists' (National programme development of pedagogical specialists 2016), which defines different teaching levels – Teacher, Senior Teacher, and Head Teacher – also applicable for young children's teachers. As foundations for the career development of pedagogical specialists, the document mentions acquired qualification credits, acquired professional qualification level, as well as results of performance appraisals; a larger number of qualification credits and a higher professional qualification level are bases for a faster career development of pedagogical specialists, regardless of their years of service. The requirements and the procedure for acquiring teaching levels are defined by the State Educational Standard for the Status and Development of Teachers, Head Teachers and other Pedagogical Specialists (Directive № 15 dated 22.07.2019).

The Collective Labour Agreement applicable for the public education system (Art. 8, 2022) states that the budget for educational staff qualifications is defined at the start of each calendar year and should amount to no less than 1.2% of the annual salary of pedagogical staff. The budget is used for the enrolment of pedagogical staff in qualification courses after discussion in the educational committee and approval by the Centre Head. Some of the courses are optional, while others may be obligatory. Therefore, ECEC employers cover the costs of attending continuing

professional development activities in the size of the expenditures according to the mentioned budget, divided between members of the pedagogical team. If the cost of qualification is higher, the teachers have to cover the difference themselves.

The main providers of continuing professional development across the country are university departments of information and in-service training of teachers; the National Institute for Education and Qualification in the Educational System; some pedagogical faculties; educational inspectorates; non-governmental organisations; foundations, and other public and private providers at national, regional and local level.

The options for paid absence for education of full-time employees in Bulgaria (including Pre-primary Teachers and Teachers' Assistants) are defined in the Labour Codex (last amended in February 2023). According to the codex, Teachers and Teachers' Assistants who are studying at university while in employment can be granted 25 days of paid leave per year; additionally, they are entitled to 30 days of paid leave for preparing and taking matriculation or state exams, or the preparation and defence of a thesis, graduation project or dissertation. For preparation of a PhD thesis, the students can request six months of paid leave, subject to approval by the employer. For taking an entrance exam for a university or PhD course, students can request 12 days of paid leave.

The Collective Labour Agreement applicable for public education (Art. 46, 2022) states that the employer "can approve paid leave for qualification development, acquisition of new and/or additional qualifications" of pedagogical staff, "as long as the acquired knowledge, skills and competences will contribute to the improvement of the quality of the educational process in the educational institute". Usually, there are no problems regarding access opportunities to CPD – Centre Heads approve and generally encourage such leaves and they organise internal staff substitutes for the period of the paid leave (substitute teachers working overtime are compensated accordingly).

Participation in specific forms of CPD is **formally recognised** in terms of **career advancement**.

According to the Rules for organising calls for candidates for the post of Principal/Centre Head in public kindergartens in the Municipality of Sofia (2015), candidates for kindergartens (with or without nursery groups) have to meet the following main criteria: to have a Bachelor's or Master's degree with a professional qualification as Pre-primary Teacher and at least five years of full-time pedagogical experience, to not have a criminal record, and to have not been stripped of the right to work as a teacher. The call for candidates is published and the assessment is performed in two stages: part one comprises a 25-question test with questions related to application of the legal framework relevant to the educational system; the second part is an interview.

For the qualification of school or kindergarten heads/principals and teachers, the National Institute for Education and Qualification in the Educational System (2023) was founded in 2006. The aims of the National Institute are to organise educational activities for administrative staff of Bulgarian schools and kindergartens, to develop educational programmes and to participate in international projects. During the last 4 years (2020-2023), approximately 4,500 head teachers and 17,000 teachers have participated in different educational activities. Topics include Kindergarten Management – a basic programme for newly-appointed Head Teachers, Financial Management of Kindergartens – management of delegated budgets, Project Management, Management of Educational Processes, Human Resources Management in Schools, Control and Assessment of Teachers' Work, Assessment and Self-assessment of School Management, Working with Interested Parties – models of interaction between school/kindergarten and parents, Leadership Programmes – education of national or regional leaders, Mentorship Education, Development

and Improvement of Specific Professional Competences for Teachers – entrepreneurship, application of information technologies in the educational process, integration of pupils with special educational needs.

Some (relatively few) private kindergartens cover tuition costs for the university studies of their Teachers' Assistants or part-time substitute teachers to become qualified teachers, or for their teachers to be awarded a Master's Degree.

7. Working conditions and current workforce issues

7.1 Remuneration

Staff in kindergartens and primary schools receive the same salaries as all teachers in Bulgaria and have a relatively similar professional status. In both cases they are not civil servants. According to the most-recent available data of the National Statistical Institute (NSI 2023c) as of Q3 2023 the average gross salary of a teacher in Bulgaria (regardless of whether they are beginners, experienced or work in a city or rural area) is 1,015 EUR/ 1,985 BGN per month. *Table 7* shows the minimum starting salary (before taxes) according to the Collective Labour Agreement for the system of Preschool and School Education from 06.12.2022 (Art. 27, as updated by Annex dated 11.08.2023) regarding the salaries of employees in the public education sector. While the high inflation due to the geopolitical situation in the area should be taken into account, several updates of teachers' salaries in recent years have made it possible for teachers to feel they are starting to receive a more dignified salary, even though there is still room for improvement.

As per the Collective Labour Agreement applicable for public education (Art. 28, 2022), Teachers' Assistants in kindergartens receive at least 105% of the national minimum wage, which currently amounts to 419 EUR/819 BGN per month.

Table 7

Bulgaria: Minimum starting salary (before taxes) of employees in the public education sector*

Group	Position	Minimum salary/month (01.01.2023)
I. Pedagogical staff with management functions	Head Teacher (principal)	1,065 EUR/2,082 BGN
	Assistant Head Teacher	985 EUR/1,926 BGN
II. Pedagogical staff	Teacher	874 EUR/1,709 BGN
	Senior Teacher	901 EUR/1,763 BGN
	Mentor	936 EUR/1,831 BGN

* Collective Labour Agreement for the system of Preschool and School Education 2022 and Annex to the Collective Labour Agreement 2023.

According to the Collective Labour Agreement applicable for public education (Art. 33, 2022), for attained professional qualification levels teachers are entitled to a minimum additional payment of between 15 EUR/30 BGN (for the 5th level) and 46 EUR/90 BGN (for the 1st level). Teachers with a PhD receive an additional 66 EUR/130 BGN, while for those with a DSc the amount is 82 EUR/160 BGN.

Regarding remuneration of Medical Nurses who work in ECE, according to the Collective Labour Agreement applicable for the healthcare sector (Art. 47, 2022), the minimum starting salary in Bulgaria is 741 EUR/1,450 BGN.

7.2 Full-time and part-time employment in ECEC provision

All staff in kindergartens are employed on a full-time basis (40 hours per week).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

In terms of staff support measures in the workplace, Centre Heads usually arrange pairs of teachers so that a newly qualified teacher is paired with a Senior Teacher, the second acting as a mentor for the first one. Kindergartens from the same municipality often exchange observational sessions, aiming at the exchange of “good practices”.

7.4 Non-contact time

Six hours daily are spent in direct contact with the children, so two hours a day are non-contact time (preparation work, staff meetings, cooperation with parents, networking in the community and other activities). The working times of the two members of staff responsible for any one group overlap during the midday break for one hour. Teaching staff in both kindergartens and primary schools are entitled to 48 days of paid annual leave.

7.5 Current staffing issues

It is a positive fact during recent years is that there are no shortages of candidates for Kindergarten Teacher positions. This can be attributed not only to the increased teachers’ salaries, but also to the large number of higher education degree holders who choose to study for the additional qualification of Kindergarten Teachers and then enter the labour market in addition to the traditional preschool-education degree holders.

Moreover, it is often the case that Kindergarten Principals recruit retired Kindergarten Teachers (as well as Teachers’ Assistants), especially when someone from the staff is temporarily absent from work (maternity leave, illness, etc.).

Also, there is a practice of kindergartens with a mentorship contract with a university recruiting students in their final year and attracting them for a future full-time employment contract.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

According to an amendment to the Early Education and Schools Act in 2020, as of the 2023/2024 school year, compulsory attendance at kindergarten is extended to three years; kindergarten will be mandatory for children turning 4 years old during the school year. State and municipalities have a duty to ensure that the conditions for this are in place by 2023/2024 at the latest.

As per Directive № 26 (2008) on the organisation and operation of nurseries, a **Nurse** is required as part of the nursery staff, but a recent change in the Directive (applicable since 01 January 2023) allows for exceptions in cases when a nurse cannot be allocated to a nursery group – in such cases, the group can be assigned at least one pedagogue who has undergone training on early childhood development, complex application of healthcare and first aid, and one Teacher’s Assistant who is responsible for hygiene. However, this exception is only applicable if there is at least one medical specialist allocated to the nursery.

An interesting initiative of the Bulgarian provisional government in 2022 was a planned but ultimately not implemented amendment to the Law for Preschool and Primary Education (Parliament of the Republic of Bulgaria 2022), which included a clause that transferred state nurseries under the supervision of the Ministry of Education and Science (from the Ministry of Health). There were debates with arguments both for and against this proposal, with supporters hailing it as an interesting idea worth pursuing in the future.

9. Recent country-specific research focusing on ECEC staff

Enhancement of intercultural competence of prospective Pre-primary Teachers

Source: Spiridonova 2021a, 2021b, 2021c (see *References* for full details)

Aims: Spiridonova presents a model for the enhancement of intercultural competence of prospective Pre-primary Teachers based on the concept of intercultural competence as a construct with three aspects – cognitive, affective and behavioural.

Procedure: 230 Master degree students preparing to become Pre-primary Teachers participated in the evaluation of an innovative model for the education of tolerance in preschool children as part of a Kindergarten Teacher’s intercultural competence.

Findings: The results show that the three aspects of the teacher's intercultural competence are well-advocated in the theoretical and practical training of the students who are prospective Kindergarten Teachers. *Cognitive* aspects encompass intercultural knowledge through pedagogical reflection on the broad spectrum of specific manifestations of culture. *Affective* aspects refer to the intercultural sensitivity of the teacher and *behavioural* aspects are expressed in skills for implementing intercultural pedagogical technologies within educational institutions.

Implications: The results of this research were taken into account when updating the educational content of the following disciplines in the curricula of the *Pre-school Pedagogy with a Foreign Language* and *Pre-school and Primary School Pedagogy* courses at Sofia University: “Intercultural education”, “Games and Intercultural competences”, and “Pedagogical Interaction in a multicultural environment” (Sofia University 2021a, 2021b).

Attitudes of teachers in public inclusive kindergartens relating to work with children with special education needs

Source: Trosheva-Asenova 2022 (see *References* for full details)

Aims: To investigate the attitudes and preparedness of kindergarten teachers in public kindergartens regarding the inclusion of children with special educational needs.

Procedure: 102 preschool teachers in Bulgarian kindergartens across the country participated in the research via completion of a questionnaire.

Findings: The results show positive attitudes towards the inclusion of children with SEN and the willingness of teachers to work with them and provide them with additional individual support. At the same time, more than half of the participating teachers do not have any qualifications for working with children with SEN and their practical experience is minimal or absent entirely.

Implications: Such content needs to be included more effectively in the university curricula for Bachelor’s degrees in preschool pedagogy and more CPD opportunities offered that focus on

building competences for working with children with SEN. The results of this research will be taken into account in upcoming curricula updates of the *Pre-school Pedagogy with a Foreign Language* and *Pre-school and Primary School Pedagogy* courses at Sofia University.

Contemporary aspects in the preparation of preschool pedagogues from the perspective of students, preschool teachers, directors of educational institutions and university lecturers

Source: Spiridonova et al. 2023 (unpublished project proposal) (see *References* for full details)

Background: At the end of 2023, a scientific team from the Department of Preschool and Media Pedagogy at the Faculty of Educational Studies and the Arts of Sofia University "St. Kliment Ohridski" under the direction of Associate Professor Lora Spiridonova, PhD started work on a two-year project on the above-named topic.

Aims: The aim of the research is to study the current state, as well as to outline the trends and prospects for the educational process in the Bachelor's programs of Sofia University "St. Kliment Ohridski" that prepare preschool teachers (i.e. specialties "Preschool Pedagogy and Foreign Language", "Preschool and Primary School Pedagogy" and "Media Pedagogy and Artistic Communication") from the point of view of students as future teachers in preschool educational institutions, of directors as employers, of university lecturers as experts and of ECEC mentors in kindergartens who work in collaboration with them.

Procedure/method: Questionnaires measuring students', teachers', head teachers', and lecturers' levels of satisfaction and their evaluation of the educational process and its practical and theoretical results are being developed.

Results/implications: The results are expected to provide the foundation for a discussion about improvement of the educational process regarding the preparation of future preschool teachers.

10. Workforce challenges – country expert assessment

While incorporating a desire for learning from relevant European practices and legislation in the ECEC field, the Bulgarian educational system constantly looks for ways of preserving and promoting positive national traditions in education (Engels-Kritidis 2012). Building upon a solid historical and theoretical basis and encompassing the overall transformation of social life in the country, early childhood education and care in Bulgaria is now being further reformed in order to adapt to the constantly changing educational needs of children and demands of the educational system. Children and their needs are firmly established as the core focus of contemporary early childhood pedagogy. With the Law on Preschool and School Education (2015), in which pre-school education is seen on an equal footing with school education, a significant success has been achieved for the sector. On the other hand, this shift is also producing new challenges: Bulgarian Kindergarten Teachers need to be aware of possible negative effects which could occur. These include countering the early onset of strictly didactical methodologies which may develop through the recently introduced compulsory attendance for 4 year-olds, and being able to keep the idea of the 'preciousness' of childhood at the core of their practice.

Related challenges include focusing more strongly on the following priorities, and while they are connected mainly to improving the quality of the ECEC workforce in Bulgaria, they also define the scope and potential of improving and enhancing the ECEC system in its entirety.

- Providing CPD opportunities to develop an individualised and differentiated approach to working with each child (not only with those with a background of migration or SEN/D) during the organised group activities, even in large classes (see also Engels-Kritidis 2015)
- Expanding the opportunities of Kindergarten Teachers to work in nurseries instead of medical nurses and bringing the nurseries under the auspices of the Ministry of Education and Science (currently they are under the Ministry of Health)
- Establishing a national programme for the mentoring of newly-appointed teachers in the pre-school education system
- Continuing the national policy of taking measures to raise the social status and the salaries of pre-school teachers via initiatives for improving their qualifications and creating models for career development, including a new remuneration system.

On a positive note, the challenge of increasing the number of young staff in the ECEC system is gradually improving. Due to the recent increase in teacher salaries as well as improvement of the professional status, there is increased interest in the pre-primary study routes and more of the graduates pursue a career working in kindergartens. Additionally, many people with different Bachelor degree backgrounds apply for a Master's degree in *Pre-primary Education*; these candidates are highly motivated to stay in the profession and to pursue continuing professional development. As a result, as mentioned previously, the age distribution of Kindergarten Teachers has now begun to shift towards younger professionals.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms chosen in this report for the main form of centre-based ECEC settings are **nursery** (*detski yasli*, 0–2/3) and **kindergarten** (*detski gradini*, 3–6)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Bulgaria

1882	First early childhood institution established
1934	Official integration of kindergartens into the education sector
1935	First day nurseries for under 3 year-olds established
1991	Pre-primary groups for 6 year-olds established during the Socialist era are continued.
1993	Modern programmes for preschool education developed: <i>Educational Programme for Children Aged 2-7 Years</i> and <i>Children's Kindergarten Activities</i>
2000	State Educational Requirements for early childhood education and preparation of children for primary school were established by the content of Decree № 4, issued by the Ministry of Education and Science, with further additions published in 2005.
2002	Pre-primary groups for 6 year-olds are made obligatory.
2010	Obligatory pre-primary education is extended to 5 year-olds.
2014	Standards for development and learning in early childhood: from birth to three years published
2015	Early Education and Schools Act (<i>Zakon za preduchilishtnoto i uchilishtnoto obrazovanie</i>); comes into force 2016 (amendments 2017, 2020)
2016	National standards for early childhood education established through Decree № 5 for Early Education (2016), issued by the Ministry of Education and Science.
2020	Legislative amendment: Pre-primary education in kindergartens is to be made compulsory for 4 to 6 year-olds (three years) by 2023/24.
2021	Parental fees for 4 to 6 year-olds are to be completely abolished

ECEC system type and auspices²

In Bulgaria, the system of early childhood education and care is organised in two separate sectors, although there have been plans to work towards an integration of the two sectors for some time. At the national level, the Ministry of Education and Science (*Ministerstvo na obrazovaniето i naukata*) is responsible for kindergartens for 2/3 to 6/7 year-olds; it is also responsible for the implementation of curricular frameworks and educational reforms. The Ministry of Health is responsible for nurseries for under 3 year-olds (European Commission/EACEA/Eurydice 2019, 168).

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In the case of Bulgaria, the relevant format is **0–2/3** years and **3–6/7** years, since children usually start school when they are 7 years old.

² The Eurydice country report on ECEC in Bulgaria provided orientation for data on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

At the regional level, 28 supervisory authorities are responsible for administration and management. Regions and municipalities are responsible for buildings, maintenance and equipment, as well as for compliance with health and safety regulations, catering and the transport of children.

General objectives and legislative framework

Basic overall principles of the Bulgarian education system are: (1) quality of education; (2) active partnerships between all stakeholders (staff, parents, employers, unions, NGOs); (3) competitiveness between settings in striving for quality; (4) system transparency and flexibility; (5) equal access for all children, with an emphasis on integrating socially disadvantaged groups.

The overall goal of ECEC is to create the necessary conditions for children to be able to develop their potential, to ease their transition into school and providing the chance for children from disadvantaged backgrounds to develop a positive attitude towards learning. Improving the quality of education is also emphasised as well as achieving equality of access. The concept of lifelong learning is given high priority.

In 2018, the Ministry of Education established an early education strategy, which aims, among other things, to reform the care system for under 3 year-olds. This is to include certain standards regarding health, education, interventions, support and training for professionals working with 0 to 6/7 year-olds, as well as piloting alternative forms of care. This strategy was adopted as part of the new child protection strategy and is currently under discussion by the State Agency for Child Protection (Bogdanov and Zahariev 2018).

Another national programme called “Successful Together” initiated by the Ministry of Education (2019) aims to ensure the comprehensive development of children and to enable a good transition from family to kindergarten and from kindergarten to school.

In August 2016, the Early Education and Schools Act (*Zakon za preduchilishtnoto i uchilishtnoto obrazovanie*) came into force (amendments in 2017 and 2020), the main objectives of which are to promote inclusive education and to develop standards for the early education sector. In the regulations implementing the Act, kindergartens are defined as pre-primary institutions that provide care and education for children from (2)3 years of age until they start school. Framework conditions for the education, care and upbringing of children under 3 years of age are laid down in the Health Act of 2004, revised in 2016.

ECEC entitlement and compulsory attendance

As from 2023/24, attendance at kindergarten is compulsory for three years. This requirement was laid down in an amendment to the Early Education and Schools Act in 2020. Kindergarten will be mandatory for children turning 4 during any one school year and free of charge for parents. State and municipalities have a duty to ensure that the conditions for this are in place by 2023/24 at the latest.

There is no legal entitlement to a place in an ECEC setting for children under 4 years of age.

As a rule, statutory schooling in primary schools starts at 7 years of age.

Main types of provision

Nurseries (*detski yasli*) admit children from 3 months up to 3 years. These may be stand-alone settings, or a unit attached to a full-day kindergarten. The Early Education and Schools Act defines the appropriate age range as 10 months to 3 years. Staff in these settings have a recognised nursing qualification; they are supported by staff with a non-medical qualification (NSI 2022b).

Kindergartens (*detski gradini*) are the core institutions of early childhood education and care for 3 to 6/7 year-olds. According to the Early Education and Schools Act, 2 year-olds can also be admitted to kindergartens since 2015. Kindergartens are compulsory from the age of 4 until primary schooling at 7, i.e. for three years. Although the former term "compulsory pre-primary groups" (*podgotvitelna grupa*) remains in use, these do not exist as separate institutions; some are located in schools. The total weekly number of pedagogical sessions for 5–6 year-olds is at least 15, for 6–7 year-olds 17, with a duration of 20-30 minutes each.

A kindergarten consists of at least four groups; in large cities like Sofia, there may be ten or more. Children are divided into same-age groups: from (2)3 to 4 years, 4 to 5 years, 5 to 6 years, and 6 to 7 years. Occasionally (in smaller towns) there are mixed-age groups.

As a rule, children attend a full-day kindergarten (NSI 2023a), which is open from 7:00 to 19:00. There are also some half-day kindergartens that close at noon (see *Table 1*). Free transportation to the nearest facility is provided for children from remote areas.

There continues to be a considerable insufficiency of kindergarten places in Bulgaria, particularly in the larger cities. It has been calculated that more than 60,000 additional places would be needed to meet the demand (OSI 2020, 15). In 2018, only about 17% of kindergartens and nurseries had available places (*ibid*, 88); long waiting lists are common, particularly in large cities.

Kindergartens with nursery groups are a less common form of provision, catering for children aged 10 months up to 7 years.

Table 1

Bulgaria: Number of children in different kindergarten types (including preparatory groups at schools), 2022/23

Kindergarten type	Number of places	Number of children
Full-day kindergarten	232,813	205,476
Half-day kindergarten	14,634	11,005
– of these, in private kindergartens	8,091	5,977
Total	247,447	216,481

Sources: NSI 2023a

Provider structures

Nursery services are offered by both public and private providers, as well as nursery groups that are provided in some public and private kindergartens. Consolidated statistics for the number of private nurseries and nursery groups are hard to find as official statistics from the Ministry of Health only state the total number of nurseries and nursery groups which at the end of 2022 totalled 835 (NSI 2023b).

Most **kindergartens** are run by local authorities. However, during recent years the proportion of privately-run settings rose slightly from 5.3% in 2017 to 6.5% in 2022/23. Most of these private kindergartens are run on a for-profit basis and are generally too expensive for the greater majority of parents.

Table 2

Bulgaria: Number of kindergartens according to provider, 2017-2022/23

Provider	2017/18	2018/19	2019/20	2021/22	2022/23
Public/municipal	1,736	1,733	1,734	1,700	1,698
Private (mostly for-profit)	98	101	106	117	119
Total	1,834	1,834	1,840	1,817	1,817
Share of private kindergartens, in %*	5.3	5.5	5.8	6.4	6.5

Source: NSI 2023d, *own calculations

Only 3.3% of all kindergarten places were provided in private facilities in 2022/23 (8,091 of 247,447). In the same year, 2.8% of children attended a private kindergarten, whereas the share was only 0,5% in 2005 (see Table 3).

Table 3

Bulgaria: Number of children in kindergartens according to provider, 2005–2022/23

	2005	2015	2022
Public kindergartens*	205,291	228,692	210,504
Private kindergartens	952	3,333	5,977
Total number of children	206,243	232,025	216,481

Source: NSI 2023a, *own calculations

Private kindergartens are characterised by a significantly lower average number of children than municipal facilities: in 2022/23, there was an average of 50 children in a private kindergarten compared to 124 children in a municipal kindergarten. Also, the private kindergartens have less children in each group (roughly 15) compared with publicly-run kindergartens (approx. 23) (NSI 2023a, own calculations).

Participation rates in regulated provision

According to national statistics, at the end of 2022 there were 835 nurseries (stand-alone nurseries and nursery groups in kindergartens) in Bulgaria, attended by 30,544 children, which corresponds to an enrolment rate of approximately 17% of the under-threes (Eurostat 2023a). Most of the children were 2 years old. Out of 33,193 places, 44.4% were in stand-alone nurseries (14,743) (NSI 2023b).

Table 4

Bulgaria: Number of nurseries and number of children enrolled by age, end of 2022

	2010	2015	2022
Nurseries (including groups in kindergartens)	731	812	835
Children enrolled	29,507	32,124	30,544
<i>of these:</i>			
1 year-olds	6,059	5,621	5,394
2 year-olds	22,513	22,081	24,884

Source: NSI 2023b

Whereas in both 2010 and 2020/21, the majority of children under 3 years of age were not enrolled in an ECEC setting, the proportion of 3 to 6/7 year-olds in ECEC settings increased from about half of the age group (54%) to 94.6% during this period. Despite the overall low enrolment

rates, the proportion of children under 3 years of age in nurseries also more than doubled, from 7% to 17.4%.

Table 5

Bulgaria: Participation rates according to duration of attendance in centre-based settings by age, 2005-2022

Year	Weekly hours of attendance	Under 3 year olds, in %	3 years to minimum compulsory school age, in %
2010	1 to 29	1	4
	Over 30	6	50
	No enrolment in ECEC	93	46
2015	1 to 29	0.5	3.3
	Over 30	8.4	68.2
	No enrolment in ECEC	91.0	28.5
2022	1 to 29	11.4	19.1
	Over 30	6.0	75.5
	No enrolment in ECEC	82.6	5.4

Source: Eurostat 2023b

In 2022/23, according to national statistics, a total of 216,481 children attended kindergarten, corresponding to an attendance rate of 87.3% of the 3–6/7 year-olds (NSI 2023a).

Table 6

Bulgaria: Children in kindergartens (including preparatory groups in schools) by age, 2022/23

Age	Number of children
Under 3 years	8,438
3 year-olds	46,412
4 year-olds	50,350
5 year-olds	55,941
6 year-olds	54,666
7 year-olds	634
Over 7 years	40
Total	216,481

Financing and costs for parents

Almost 87% of the Bulgarian education system is state funded. Public **kindergartens**, which are mostly run by municipalities, are primarily funded through municipal budgets (Eurydice 2023). Private kindergartens are not funded by the state or municipal budgets. However, they can receive state subsidies for educational activities if they are registered as an institution in the education system.

Nurseries that are part of a kindergarten are financed from the budgets of the municipalities and the Ministry of Education; stand-alone nurseries are financed by the municipalities and the Ministry of Health.

A recent change in the Law for Regional Taxes and Fees means that from 1 April 2022 fees have been abolished in all public kindergartens and nurseries while fees for private nurseries and kindergartens can vary from 375 to 850€/month (Ilieva 2023).

Staff to child ratios and group size

Childcare sector

Infant nursery groups comprise between 6 and 8 children aged between 3 and 10 months; the same number applies to groups including children with disabilities. Regular nursery groups for children between 3 months and 3 years comprise between 8 and 16 children.

Nursery groups in kindergartens can include between 8 and 18 children from the age of 10 months up to 3 years. Group size is reduced to between 6/8 and 11 children if children with disabilities attend.

At least one qualified teacher must be employed for up to 60 children, and another teacher for every 20 children. In each nursery group, the children are cared for by at least one qualified member of staff, usually a nurse, and a non-qualified assistant in rotation.

In the study “Bulgaria grows with its children” (For Our Children Foundation 2020, 57), the staff to child ratio was reported to be between 1:5 and 1:8.

Education sector (ISCED 02)

Half-day or full-day **kindergarten** groups are attended by 12 to 23 children. The children are grouped into four age groups: 2/3 to 4 year-olds, 4 to 5 year-olds, 5 to 6 year-olds and 6 to 7 year-olds. For any one kindergarten group, at least two professionals are responsible, who overlap for one hour, and one assistant. The number of children per group can be increased by up to two above the maximum of 23 children if there is a continuous shortage of kindergarten places in the municipality, or may even reach a maximum size of 28 children per group in exceptional circumstances.

The above-mentioned study reports that especially in major cities the maximum number of children in a group is often exceeded and can be more than 30 children. Moreover, there should be no more than three children with special educational needs in a group, for whom a resource teacher must then be present (For Our Children Foundation 2020, 42, 81ff).

Table 7

Bulgaria: Maximum group size and number of children in kindergartens with nursery groups per staff by age, 2021

Age of children	Maximum number of children per group	Maximum number of children per staff member	Maximum number of children per teacher
3 – 10 months	8	3	4
3 months – 3 years	20	7	20
3–4 years	28	14	23
4–5 years	28	14	23
5–6 years	28	14	23
6–7 years	28	14	23

Curricular frameworks

Childcare sector

The “Standards for development and learning in early childhood: from birth to three years” (Atanasova-Trifonova et al. 2014) act as a guideline for the development of programmes for working with children up to 3 years of age. Additionally, several curricular programmes have been published specifically for working with this age group, including “Impact through interaction:

Programme for educational work with children up to 3 years of age” (Tatoyozov 1995), “Little Fairytale Trail” (Peneva and Mitkova 2018), as well as others.

Education sector (ISCED 02)

The first state educational guidelines for early childhood and pre-primary education (3 to 6 years) were issued by the Ministry of Education and Science in 2000. Since then, a number of statutes and regulations have contributed to updating them, most recently Regulation No. 5/03.06.2016 for Early Childhood Education (Official Gazette 2016). The curricular framework is mandatory (European Commission/EACEA/Eurydice 2019, 168).

Seven learning areas are defined: Bulgarian language and literature; mathematics; social environment; art; music; construction and technology; and sport. General aims of early education focus on the children’s intellectual, emotional, social, spiritual, moral and physical development as well as age- and needs-appropriate support.

Since 2016, national educational standards set down in the Early Education and Schools Act have applied to all age groups in kindergartens (Decision 5/2016, Official Gazette 46). These define knowledge, skills and attitudes of children to be achieved at a certain age and for different learning areas.

Pedagogical units are defined by the kindergarten teacher and last approx. 15-20 minutes for 3 to 5 year-olds, or approx. 20-30 minutes for 5 to 7 year-olds. There should be at least 11 to 17 such sessions per week. During pedagogical sessions, Kindergarten Teachers follow the educational programme approved by the Ministry of Education. Teachers are free to choose between alternative programmes, e.g. “Hand by Hand”, “Wonder World”, “Little Golden Key” and others (Engels-Kritidis 2020 and personal communication, 14.07.2021). The rest of the day is spent in free play, outdoor activities and learning a foreign language.

Digital education

The educational guidelines in Bulgaria emphasise the pedagogical benefits of digital technologies, especially to support learning processes. However, no specific digital skills are mentioned. The recommended activities include, for example, reading e-books, exploring nature and science with digital devices such as webcams or GPS, also experiencing digital forms of expression or making computer games (European Commission/EACEA/Eurydice 2019, 100). However, digital aspects are not explicitly addressed in the 'construction and technology' section of the early education curriculum, except that the two older groups of children learn to recognise differences between information and communication tools and become familiar with their use (Georgieva 2018).

However, in the context of contemporary Bulgarian pedagogy, digital education is seen as strongly connected to media education, an area where research has notable traditions in a national scope, starting from preschool age (Angelov 2016; Danov 2020, Stoyanova 2022, and others).

Monitoring – evaluation

A National Quality Framework for early childhood education and care has been created (including four key principles, ten statements and 27 indicators) based on the European Quality Framework and adapted to the Bulgarian context through a broad consultative process (Ministry of Education and Science 2022).

It is important to note that since 2014 there have been Bulgarian *Standards for development and learning in early childhood: from birth to three years* (Atanasova-Trifonova et al. 2014). Additionally, at the end of 2023, authors from the same team developed and published guidelines for early screening assessment and developmental stimulation of 3 year-olds (Atanasova-Trifonova, Peneva, and Stoyanova 2023).

Child-related assessment

How children develop in various areas of learning is continually assessed by the kindergarten teachers through observations. Parents are informed regularly about their child's progress. Self-assessment procedures include the children's views and encourages them to take an active part in their own learning. For some learning areas, standardised tests are also carried out (European Commission/EACEA/Eurydice 2019, 104).

Particular value is placed on an assessment at the beginning and end of the child's time in kindergarten. 14 days before the end of the final kindergarten year, the teacher assesses each child's "school readiness" in terms of their physical, cognitive, language, social and emotional development. A certificate is prepared which also gives suggestions as to how the child can be best motivated and supported. Parents are obliged to hand over this certificate to the class teacher when their child starts school.

Centre-based internal evaluation

The kindergarten heads are responsible for ensuring that assessments and quality improvement measures approved by the Educational Board are carried out. Internal evaluations should take place at least once every five years. Kindergartens use their own assessment criteria for self-evaluation measures. Parents can also be included in the internal self-assessments (European Commission/EACEA/Eurydice 2019, 131).

External evaluation

External evaluations of kindergarten settings and staff are obligatory and are carried out both at the national and regional levels.

At the national level, the Ministry of Education and Science is responsible, together with the national education inspectorate within the Council of Ministers. At the regional level, 28 education inspection authorities and also the municipalities carry out inspections.

According to the Act on the Inspection of Kindergartens and Schools (2016), an inspection system has been put in place which focuses both on educational processes as well as compliance with regulations (European Commission/EACEA/Eurydice 2019, 122).

Inclusion agenda

Children with special educational needs and disabilities

In 2003, the Education Act was amended to ensure that children and young people with special needs or disabilities are integrated into mainstream institutions as far as possible. In 2017, regulations on inclusive education came into force which define the national education standards for inclusive education. The regulations control the public relations of settings that offer inclusive education and support children in the early education and school system in their personal development. For children with special educational needs or disabilities, appropriate conditions should be created so that they can attend regular institutions (materials, structural access, support staff). A team consisting of the centre head, support staff, psychologists or therapists makes

an initial assessment and follows the child's development. An individual plan, which is closely based on the curricular framework, focuses on the acquisition of skills and abilities so that the child can live as independently and socially integrated as possible.

In general, the diagnosing of developmental delays as early as possible is emphasised so that successful inclusion can take place. Psychologists and other support professionals work with regular professionals to adapt educational strategies for children with special needs.

At the end of 2022, there were four facilities for medico-social care for children with chronic illnesses or social problems, attended by 368 children, 341 of them under 1 years of age (NSI 2023c).

Under the responsibility of three Ministries (Education and Science, Labour and Social Affairs, Health), a national plan for children with special needs is revised annually. The ministries work together with the Child Protection Agency, municipalities and non-profit organisations.

From 2019 to 2021, the Ministry of Education and Science (2020) launched the project "Active inclusion in pre-primary education" which aims to facilitate access for children from disadvantaged environments and children living in poverty. The following measures in particular are used for this purpose:

- Children with a home language other than Bulgarian receive additional language training so that they can better integrate into their peer group. A specific method for this is being developed within the framework of the project; furthermore, it is being considered to hire additional staff.
- Fees are to be adjusted to the economic possibilities of the parents.
- Parents will be motivated to actively cooperate with the kindergarten through two national campaigns.
- Kindergarten staff will receive training in how to use screening tests to identify children with learning difficulties at an early stage (European Commission 2020.).

Children with a migration background – children from Roma communities

In 2022, only 2% of the total population and only 0.3% of children under 5 had a non-Bulgarian citizenship; the majority of these were from non-EU27 countries (76.2% of the total population and 90.2% of children under 5 years) (Eurostat 2023d). Nevertheless, the most recent data from the 2011 Census reported just under 5% Roma, who are the second largest ethnic minority in Bulgaria after people from Turkey, and over 12% Roma children under the age of 10 (OSI 2020, 34), though most of these are believed to be of Bulgarian background.

The available data indicate that the share of Roma children in the age group from four to six years who do not attend kindergarten is high (between 25% and 45% in different age cohorts) (Eurochild 2021).

With regard to the integration of ethnic minority children, the *National Strategy for Roma Integration* (2012-2020) emphasises everyone's right to education (NCCEII 2021). The *Strategy for Educational Integration of Children and Pupils of Ethnic Minorities* (2015-2020) tries to dissolve Roma-only kindergartens and instead promote the development of integrated early education institutions and schools. Especially in rural areas, there are facilities attended only by ethnic minorities (OSI 2020, 93). Special education in Bulgarian is provided for children with a family language other than Bulgarian. In the Bulgarian report on the inclusion of Roma children in early education (RECI+ report, OSI 2020), measures recommended include family visits or incentives to ensure that services are also used by Roma. In 2020, the Bulgarian Parliament passed amendments to the law which – by abolishing or reducing parental fees in kindergarten – should make it possible for children from ethnic minorities in particular to attend kindergarten (Volen and de Laat 2021).

However, data on the attendance of children from ethnic minorities at pre-school institutions cannot be reported, as such data are not collected nationwide – but it can be assumed that their attendance rate is much lower (OSI 2020, 106f).

Parental leave arrangements³

Maternity leave (*otpusk poradi bremennost i razhdane*) lasts 410 days in Bulgaria, 45 of which must be taken before birth. The first 135 days are compulsory for mothers and are divided into three parts: (1) 45 days before birth, (2) 42 days after birth and (3) 48 days until the 135th day. Mothers who have previously worked at least 24 months with compulsory social insurance receive 90% of their gross salary during the 410 days, up to a maximum of BGN 3,400 (€1,738.42), with a minimum of BGN 710 (€363.02) (as of end of 2022). After the child is 6 months old, the entitlement for the remaining time can also be transferred to the father under the same conditions.

Fathers have 15 obligatory days of **Paternity leave** (*otpusk po bashtinstvo*) which are paid under the same conditions as Maternity leave. Since August 2022, a further two months are available under certain conditions.

After maternity leave, there is a (family) right to **Parental leave** (*otpusk za otglegdane na dete do 2 godishna vazrast*) until the child is 2 years old. This can also be transferred to the father or a grandparent. During Parental leave, a lump sum of 710 BGN (€363.02) is paid. A partial financial compensation of 355 BGN (€181.51) per month is paid after the 135th day if the mother does not take the rest of the parental leave or does not take all of it.

In 2022, 22,039 fathers took paternity leave – this is equivalent from about one third of all children born that year. The new two months paternity leave which was introduced in August 2022 was taken by 1,370 fathers. Of the 85,072 eligible persons who took parental leave in 2022, only 1% were fathers. 17.6% of those entitled returned to work early and received 50% of the compensation.

Current challenges for the ECEC system in Bulgaria

Country expert assessment by *Rozalina Engels-Kritidis*

Currently, the biggest challenge for the ECEC system in Bulgaria is the process of **prioritising early childhood education for children aged 0 to 3 years**. Significant effort has been put into the goal of nurseries becoming a proper part of the educational system by bringing them under the control of the Ministry of Education and Science rather than the Ministry of Health where they currently placed. Related to this issue is the debate concerning the core professionals working in nurseries. On the one hand, this refers to looking at measures for expanding the opportunities of Kindergarten Teachers to work in nurseries instead of medical Nurses. On the other hand, an interdepartmental working group has been established, including experts from the Ministry of Education and Science, the Ministry of Health, and the Ministry of Labour and Social Policy. An important aim, as stated by the current Minister of Education, Prof. Galin Tsokov, is to ensure that persons with a medical education have opportunities for acquiring additional

³ The information in this section is based on the country report for Bulgaria by Elitsa Dimitrova and colleagues in the *International Review of Leave Policies and Research 2023* (see *References*).

qualifications to become early childhood development specialists. In connection to this, a discussion has started with universities to create Bachelor and Master degree programmes focused on early childhood development, which presents another challenge. According to the Minister, it is very important to ensure strong pedagogical support for children, but also for them to have access to specialists such as Speech Therapists and Psychologists. In parallel, there is work being done on specific regulatory and legislative amendments that can ensure the integration of the early childhood education and care cycle (Ministry of Education and Science 2023a).

Early childhood development is also a matter of priority in the 2021-2030 Strategic Framework for the Development of Education, Training and Learning in Bulgaria (Ministry of Education and Science 2023b).

Another system-related challenge is the ongoing **shortage of places** for children in kindergartens, mostly in larger cities; this issue requires measures to be taken by the government in co-operation with the municipalities to ensure adequate coverage.

An upcoming challenge for the university education system, in which future Kindergarten Teachers are prepared, is related to the 2021-2024 Three-Year Plan for the **Implementation of the 2021-2030 Strategy for Development of Higher Education in Bulgaria**, in which there are plans for the introduction of legislation that will include provisions for regular and remote-based education in Bachelor's degrees with a total duration of three academic years instead of the current four years, with opportunity for continuing to a state-sponsored 2-year Master's degree course in the same professional area. Relevant discussions between universities in Bulgaria are currently underway.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Bulgaria totalled 6,838,937. Over the past 20 years the total population has sunk significantly (2000: 8,198,876; 2010: 7,421,766; 2020: 6,951,482; Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate in the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). With 1.58, Bulgaria is slightly above the EU27 average (Eurostat 2023c)⁴.

⁴ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Children under 6 years of age

Table 7

Bulgaria: Number of under 6 year-olds by age, 2022

Age	Number of children
Up to 1 year	58,593
1 year-olds	59,518
2 year-olds	62,040
3 year-olds	63,103
4 year-olds	65,120
5 year-olds	66,127
0 to under 6 year-olds	374,501

Source: Eurostat 2023a

The share of children under 3 in the total population in 2022 was 2.6%, that of children under 6 5.5%. These proportions have been below the EU averages for 20 years.

Table 8

Bulgaria: Distribution of under 6 year-olds in population by age compared with EU averages, 2000 to 2022, in %*

Year	Comparison Bulgaria/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Bulgaria	2.4	2.7	5.2
	∅ EU15 ⁵	3.2	3.2	6.4
2005	Bulgaria	2.5	2.5	5.0
	∅ EU25	3.1	3.0	6.2
2015	Bulgaria	2.8	2.9	5.7
	∅ EU28	3.0	3.2	6.2
2022	Bulgaria	2.6	2.8	5.5
	∅ EU27	2.7	2.9	5.7

Single households with children under 6 years of age

In 2022, 41.5% of all households with children under the age of 6 years were couple households. Households with single parents account for only 1.6% and are usually single mother households; the proportion of single fathers is very low at 0.2%.

Table 9

Bulgaria: Households with children under 6 years old, 2022

Household type	Number of households	Households in per cent
Households total	388,900	
Couple households	161,500	41.5
Other types of households	221,000	56.8
Single parent households, total	6,400	1.6

⁵ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Household type	Number of households	Households in per cent
Single parent households, women	5,600	1.4
Single parent households, men	800**	0.2

Employment rates of parents with children under 6 years of age

In Bulgaria, in 2022, the overall employment rate for men (15-64 years) was 77.3% and for women 69.7% (Eurostat 2023j).

In 2022, 59.6% of women and 81.5% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were among the lowest rates in the EU (EU-average 87.2%); those of mothers were also well below the EU-average (63.6%) (Eurostat 2023g, own calculations).

Table 10a

Bulgaria: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers in %	Fathers in %
Bulgaria:	48.4	76.4

Children at risk of poverty or social exclusion⁸

In 2022, more than a third (35.7%) of children under 6 year of age were at risk of poverty or social exclusion. This proportion was significantly above the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 32.2% (EU: 21.6%) (Eurostat 2023h). 8.6% of the total population and 16.7% of children under 6 years of age suffered from severe material deprivation in 2020 (EU averages 4.3% and 6.1% respectively) (Eurostat 2023i).

About the author

Dejana Bouillet, PhD, social pedagogue, is a full professor at the Department of Pedagogy, Faculty of Humanities and Social Sciences, University of Zagreb. Previously she worked at the Faculty of Education and Rehabilitation, the State Institute for Family, Maternity and Youth Protection, the Institute for Social Research and the Faculty of Teacher Education in Zagreb. Her scientific interest is in inclusive and social pedagogy, with a special focus on the possibilities of preventing social problems in the educational context.

1. ECEC governance in Croatia

In Croatia, ECEC is regulated by the Preschool Education Act¹ (Official Gazette, No. 10/1997, 107/2007, 94/2013, 98/2019, 57/2022, 101/23), by the National Curriculum for ECEC (Official Gazette, No. 5/2015), and by the State Pedagogical Standard of ECEC (Official Gazette, No. 63/2008, 90/2010). ECEC is provided by kindergartens and other legal entities that have established education programmes for children aged from 6 months to primary school age (under age 7). It is implemented through education, healthcare, nutrition and social care agencies for children from the age of six months until the start of primary school. ECEC is divided into three educational cycles, based on the age of children: from 6 months to one year of age, from 1 to 3 years, from 3 years of age to the start of primary education (age 7). Provision for children under 3 years is classified as ISCED 010 and as ISCED 020 for children aged 3 years and over.

A kindergarten (ECEC institution) can be established by the authorities of the Republic of Croatia, local and regional units of self-government, religious communities, and other legal and natural persons. All ECEC programmes are supervised by the Ministry of Science and Education (*Ministarstvo znanosti i obrazovanja*). The dominant providers of ECEC are public institutions established by local government authorities. In addition to regular kindergartens, children can also participate in other pre-primary and early childhood programmes provided by other legally recognised institutions – in primary schools, playgroups in libraries, or in other health, social, cultural and sports organisations. Their provision focuses on various short-duration programmes (Eurydice 2023).

ECEC represents the initial level of the education system. However, there is no universal legal guarantee to a place in ECEC for children under age 6. For 6 year-olds, a one-year pre-primary programme prior to starting school is compulsory. Pre-primary programmes last 250 hours in total. The responsibility for financing and developing ECEC capacities is set at the local level (towns and municipality). The territorial fragmentation of Croatia's public administration and differences in levels of administrative capacity and financial resources hinder the expansion and availability of ECEC. Croatia's funding model – 99% of ECEC costs are decentralised to the municipality level – is viewed as the primary obstacle to increasing ECEC coverage in the country (The World Bank 2019).

It can be concluded that Croatian ECEC is integrated in the educational system and significantly decentralised. The establishment and funding of ECEC programmes falls under the jurisdiction of local authorities (counties, cities, and municipalities), under the supervision of the Ministry of Science and Education.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The professional staff specifically qualified for educational work with children up to 7 years of age in Croatia are **ECEC Teachers** (*odgojitelj/odgojiteljica djece rane i predškolske dobi*). The role

¹ The Preschool Education Act is a literal translation of the title of the Act which refers to ECEC.

of ECEC Teachers is to plan, programme and evaluate educational work and to support the development of every child according to their abilities, while cooperating with peers, parents and the local community.

According to the Preschool Education Act (Official Gazette, No. 10/1997, 107/2007, 94/2013, 98/2019; 57/2022), ECEC institutions employ various **specialist support staff** who also work with children and members of their families, regardless of their developmental, social or family status, as well as a **Nurse** as a health manager. Qualified **Primary School Teachers** can also work in pre-primary programmes located in primary schools in the place of ECEC Teachers. In cases of staff shortages, they may also be employed as ‘unqualified staff’ in other ECEC programmes, but they are then required to complete the ECEC Teacher qualification within two years.

Table 1 gives an overview of these professionals. The core practitioner (ECEC Teacher) and the qualified co-worker (Nurse) are also categorised according to one of five profiles adapted from the original **SEEPRO** study (see Box 1 at the end of this chapter).

Table 1

Croatia: ECEC staff in centre-based settings

Job title	Main ECEC work-place settings and age range	Main position/s	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<i>Odgojitelj/odgojiteljica djece rane i predškolske dobi</i> ECEC Teacher (sometimes called Kindergarten or Preschool Teacher) <i>Profile:</i> Early Childhood Pedagogy Professional	<i>Predškolske ustanove i programi</i> Kindergarten and other licensed ECEC institutions 6 months – 6 years ²	Core pedagogue with group responsibility	6 months – 6 years	Bachelor’s degree, 3 years university ECTS credits: 180 EQF level: 6 ISCED 2011: 6
<i>Stručni suradnik – pedagog</i> <i>Stručna suradnica – pedagoginja</i> Pedagogue	<i>Predškolske ustanove i programi</i> Kindergarten and other licensed ECEC institutions 6 months – 6 years	Specialist support staff	Broad focus (children and adults)	Master’s degree (3 +2 years university) ECTS credits: 300 EQF Level: 7 ISCED 2011: 7
<i>Stručni suradnik – psiholog</i> <i>Stručna suradnica - psihologinja</i> Psychologist	<i>Predškolske ustanove i programi</i> Kindergarten and other licensed ECEC provision 6 months – 6 years	Specialist support staff	Broad focus (children and adults)	Master’s degree (3+2 years university) ECTS credits: 300 EQF level: 7 ISCED 2011: 7

² **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to 3** years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Croatia the corresponding format is **0–6**, because children start school between the ages 6 and 7 years.

Job title	Main ECEC work-place settings and age range	Main position/s	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<i>Stručni suradnik – edukacijski rehabilitator, logoped, socijalni pedagog</i> <i>Stručna suradnica – edukacijska rehabilitatorica, logopetkinja, socijalna pedagoginja</i> Educational and rehabilitation professionals (Curative Educator, Speech Therapist, Social Pedagogue)	<i>Predškolske ustanove i programi</i> Kindergarten and other licensed ECEC institutions 6 months – 6 years	Specialist support staff	Broad focus (children and adults)	Master's degree (3+2 years university) ECTS credits: 300 EQF level: 7 ISCED 2011: 7
<i>Viša medicinska sestra/Viši medicinski brat</i> Nurse <i>Profile:</i> Social Care/Health Care Professional	<i>Predškolske ustanove i programi</i> Kindergarten and other licensed ECEC institutions 6 months – 6 years	Qualified co-worker, particularly in health issues	Broad focus (children and adults)	Bachelor's degree 3 years university ECTS credits: 180 EQF: Level 6 ISCED 2011: 6
<i>Učitelj/Učiteljica razredne nastave</i> Primary School Teacher	<i>Program predškole</i> Pre-primary provision in schools	Core pedagogue with group responsibility	6 – 6 years	Master's degree (5 years university) ECTS credits: 300 EQF Level: 7 ISCED 2011: 7
<i>Pomoćnik/pomoćnica za djecu s teškoćama u razvoju or</i> <i>Stručni komunikacijski posrednik/posrednica</i> Assistant for children with developmental disabilities or Communication Mediator	<i>Predškolske ustanove i programi</i> Kindergarten and other licensed ECEC institutions 6 months – 6 years	Support co-workers in the education and upbringing of children with developmental disabilities	6 months – 6 years	Completed secondary school education plus completion of a further education programme for working with children with developmental disabilities ECTS credits: n/a EQF level: 4 ISCED 2011: 4

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

In Croatia, the principal is the administrative and professional manager of a kindergarten. The institution is governed by a steering council consisting of 5 to 7 members. At least half of the members of the council are appointed by the founder/provider from the ranks of public workers, one member is elected by the parents of the enrolled children, and the other members of the council are elected via secret vote amongst the ECEC Teachers or specialist support staff.

A person who meets the job requirements for the post of ECEC Teacher or specialist support staff, and has at least 5 years of work experience in ECEC, can be appointed Principal. The Principal is selected on the basis of a public tender announced by the governing council of the institution, and appointed and dismissed by the founder of the institution. The term of office of the principal is 5 years, with the possibility of re-election (Preschool Education Act, Official Gazette, No. 10/1997, 107/2007, 94/2013, 98/2019, 57/2022, 101/2023). Principals generally do not work directly with children, and their role is pedagogical guidance and administration.

According to the Croatian Qualifications Framework Act (Official Gazette, No. 22/2013, 41/2016, 64/2018, 47/2020, 20/2021), the expected sets of competences for Principals of educational institutions, including kindergartens are:

- Planning and programming the work of the educational institution
- Analysis of the learning environment
- Quality assurance
- Workplace organisation
- Advisory work
- Communication and presentation skills
- Human resources management
- Implementation of legal regulations.

However, accredited-education programmes for Principals in Croatia have not yet been developed. This gap is being filled by some civil society organisations that implement programmes for Principals as part of lifelong learning (e.g. Step by Step, Forum of Freedom in Education), but they are not licensed and are not available to all Principals.

There is also no adequate system for attracting individuals who are interested in the position of ECEC Principal which would encourage a selection of higher-quality candidates. Obtaining a license is not prescribed by law. There are no suitable criteria for determining the pedagogical and management competences of candidates. None of the important elements related to assuming the position of ECEC Principal, to the performance of his/her duties, or to leaving office, has been appropriately regulated. This means that ECEC Principals are not adequately-prepared for the management of ECEC institutions (Strategy for education, science and technology, Official Gazette, No. 124/2014).

Even though the Strategy predicts a definition of competence standards and the institutionalisation of the education of future Principals, and despite the fact that the Principal's role was introduced into the register of professions by the ministry, Croatia is still waiting for changes in the professionalisation of Kindergarten Principals.

2.3 Centre-based posts of responsibility

Beyond the post of Centre Leader, the only designated post of responsibility in Croatia relating to pedagogical tasks which require a co-ordinating focus across the ECEC setting is that of Supervisor or Mentor during field practice within students' initial professional education courses.

According to the Ordinance on kindergartens as professional development centres (Official Gazette, No. 49/2004), higher educational institutions (HEI) and kindergartens enter into an agreement which, among other things, defines the obligations of the HEI to pay for the work of Mentors and other individuals involved in the organisation and implementation of work programmes with students.

In some kindergartens Principals appoint a shift manager from the ranks of ECEC Teachers. This ECEC Teacher performs duties such as scheduling of ECEC Teachers' shifts, weekly recording of working hours of ECEC Teachers or other tasks ordered by the principal. These duties generally are not paid additionally and are not defined by legislation.

2.4 Pedagogical co-ordinators and supervisory staff

Croatian legislation does not provide for special positions regarding coordination or supervision of pedagogical work. If it is a kindergarten with regional facilities, facility managers are appointed from the ranks of ECEC Teachers or specialist support staff.

Professional and pedagogical supervision of kindergartens is performed by the Education and Teacher Training Agency, which also organises the professional development of staff (Act on the Agency for Education, Official Gazette, No. 85/2006).

Professional work in the Agency is performed by Advisers and Senior Advisers. A person with a university degree and 3 years of work experience in education may be elected as an Adviser, while a person with a university degree and 7 years of work experience in education may be elected as a Senior Adviser. Other conditions are defined by the statute or other general acts of the Agency.

2.5 Specialist support staff

The specialist support staff (*stručni suradnik, stručna suradnica*) in a kindergarten include a Pedagogue, a Psychologist and an educational rehabilitation expert such as a Speech Therapist, Social Pedagogue or a Curative Educator (State Pedagogical Standard of ECEC, Official Gazette, No. 63/2008, 90/2010).

A **Pedagogue** (*stručni suradnik – pedagog/stručna suradnica – pedagoginja*) monitors the realisation of educational activities, gives expert contribution to the achievement of educational goals and improves the overall educational process by:

- Proposing innovations, contemporary methods and forms of work
- Proposing, participating and assisting ECEC Teachers in the realisation of professional development programmes and their lifelong learning
- Cooperating with parents and helping them in the upbringing and education of children and tackling educational problems
- Cooperating with other educational actors
- Contributing to the development of teamwork in the ECEC institution
- Publicly presenting the educational work of the ECEC institution.

A **Psychologist** (*stručni suradnik – psiholog/stručna suradnica -psihologinja*) monitors the psychosocial development and progress of each child, sets developmental tasks and takes care of the mental health of children. Psychologists contribute to the development of teamwork in the kindergarten and participate in creating a framework for realising children's rights. The role of Psychologists is especially important in the work with children with special educational needs (e.g. children with disabilities and gifted children) and in devising developmental tasks which

facilitate the strengthening of the child's abilities. A Psychologist also works on the emotional and psychological strengthening of the family in order to better support the child's conditions of growing up. He/she collaborates with ECEC Teachers, parents and the local community and improves the overall work of the kindergarten. Further professional tasks include establishing connections with health and social care institutions, using supervisory assistance, participating in continuing education and research programmes, and publicly presenting the results of the work of the kindergarten.

Curative professionals (Curative Educators, Speech Therapists, Social Pedagogues) work on recognising, alleviating and eliminating children's difficulties. They identify the specific needs of children with disabilities and inform ECEC Teachers, other co-workers and parents about them. They create conditions for the inclusion of children in special and regular ECEC programmes.

In cooperation with ECEC Teachers, the specialist support staff (and parents) determine the most appropriate methods for each individual child and apply them in their work. They cooperate with health and social care institutions and others in the prevention of developmental disorders in children. They monitor, study and check in practice scientific and theoretical knowledge in the field of educational and rehabilitation sciences. They improve their own work and the whole process of inclusion of children with disabilities in the community.

Specialist support staff are obliged to spend 25 working hours per week in direct pedagogical work with children, ECEC Teachers and parents, and other tasks within the hourly rate up to full working hours (40 hours).

The number of specialist support staff with regard to the number of educational groups or the total number of children is as follows (State Pedagogical Standard of ECEC, Official Gazette, No. 63/2008, 90/2010):

- For 10 educational groups or 200 children, one full-time specialist support staff member
- For 11 to 20 educational groups or up to 400 children, two full-time specialist support staff (of different profiles)
- For 21 to 30 educational groups or up to 600 children, three full-time specialist support staff (of different profiles).

If educational groups with a special programme for children with disabilities or programmes for gifted children are established in the kindergarten, the number of specialist support staff is increased by 0.10 working hours per educational group per week. The number of specialist support staff can be increased due to special educational needs of children, dislocation of facilities and the diversity of programmes implemented in the kindergarten.

The profile of the specialist support staff is selected by the kindergarten based on the needs of the children and the programmes it implements. In the selection of specialist support staff, it is necessary to respect the multidisciplinary nature of the team of specialist support staff (Pedagogue, Psychologist and experts in the field of curative education: a Speech Therapist, a Social Pedagogue or a Curative Educator). If the kindergarten does not employ any specialist support staff members, resources in the local community are used. However, such cooperation is not specifically defined by law.

The regulation outlined above means that kindergartens with less than 200 children are not obliged to employ specialist support staff. Since approximately 40% of all kindergartens belong to this group of ECEC institutions, many children and kindergartens in Croatia have to manage without specialist support.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

According to national data (CBS 2023a, Tab.1), at the beginning of the year 2022/2023 there were 673 kindergartens (with 910 units) and 144 other institutions (e.g. primary schools, libraries) implementing ECEC programmes in Croatia. 384 were self-contained kindergartens, whereas 289 were kindergartens with affiliated units/departments in various locations.

The data on the overall composition of the ECEC workforce are shown in *Table 2*. National data about the ethnicity and migrant status of employees are not available because they are not systematically compiled. However, according to the last census held in 2021 (CBS 2022), the majority of the population are Croats (91.63%), meaning that predominantly Croatian staff work in Croatian ECEC institutions.

Table 2

Croatia: Structural composition of ECEC workforce (kindergartens), 2022/2023

Staff categories	ECEC Teachers	Nurses	Specialist support staff	Administrative and other staff (including Assistants)	Total	Proportion of workforce, in %
Staff with specialist higher education degree (BA)	11,977	353	49	515	12,894	51.64
Staff with specialist higher education degree (MA)	2,522	113	1,123	685	4,443	17.79
Staff with specialist vocational qualification (post-secondary)	660	110	-	5,304	6,074	24.33
Staff with non-specialist qualification	-	-	-	1,556	1,556	6.24
Total	15,159	576	1,172	8,060	24,976	100
Including: Men	165	20	36	876	1,097	4.4
Staff with a background of migration	No systematically compiled national data					

Source: CBS 2023a, own calculations

Differences in the educational levels of individual employees mostly stem from changes in the system of education of ECEC Teachers, which enables the acquisition of a Master's degree in early and preschool education. This level of education is not a mandatory condition for performing the duties of an ECEC Teacher. Employees who were educated before the implementation of the Bologna Process, and who have retained the right to qualify according to previous regulations, have lower levels of education.

4. Initial professional education (IPE)

4.1 Initial qualifying routes – higher education and vocational

Since 2005, professional studies for prospective ECEC Teachers in Croatia have been transformed significantly through the implementation of the Bologna Process. The major change was raising all initial ECEC Teacher education programmes to the tertiary level. Today, all studies for ECEC Teachers are conceptualised as university studies lasting three years (Bachelor's degree). After completion of a three-year undergraduate study programme (six semesters), the specialist **Bachelor's degree in Early and Preschool Education** prepares the ECEC Teachers for duties and tasks related to the education and care of young children up to compulsory school age (from 6 months to under 7 years of age), caring for them and educating them in different ECEC settings. They can then continue to follow a graduate two-year university study programme (four semesters) for a **Master's degree in Early and Preschool Education**, qualifying them to perform highly professional, research and developmental work in the field of ECEC.

Other professionals who work as specialist support staff in ECEC settings have followed different university study programmes (pedagogy, psychology, curative education, speech therapy, social pedagogy) and working in ECEC settings is just one aspect of their professional interest. They are qualified to work in a variety of settings, with different populations (young children, school pupils, teenagers, and adults). If they work in kindergartens, their main role is to support the ECEC Teachers, children and parents in the educational process.

The condition for enrolment in higher education in Croatia is the completion of a high school (gymnasium or vocational secondary school) and passing the Final State Exam. In addition to these two conditions, some higher education institutions may accept the results of competitions during high school and other achievements (eg. completed music school, the status of a categorised athlete, etc.).

Many universities offer initial ECEC education study programmes in Croatia. Their programmes are not uniform, and the procedures for enrolment differ. Thus, in some higher education institutions, additional tests of specific knowledge, skills and abilities are conducted, while in others they are not.

For enrolment in the undergraduate university study programme, psychological testing of abilities and motivation is conducted, but also artistic abilities, musical abilities and basic motor skills are assessed.

For enrolment in the undergraduate university study of **curative education**, an oral assessment of general knowledge, aptitude and motivation for the field of study is conducted, as well as an additional check of the specific abilities and skills required. For enrolment in the undergraduate university study of **speech therapy**, an assessment of language-speech-voice status (interview) is performed, and the exclusion criterion is the presence of language-speech-voice difficulties of the candidate. For enrolment in the undergraduate university study of **social pedagogy**, an oral assessment of knowledge, inclination and motivation for study is performed, and a health certificate from a school doctor is required.

For the study of **pedagogy and psychology**, a test of abstract thinking and an initial interview with candidates are conducted (although due to epidemiological circumstances, this was omitted in the academic year 2020/21).

The specifics of IPE in Croatia are:

Table 3

ECEC Teacher / Kindergarten Teacher

Job title in Croatian: <i>Odgojitelj/odgojiteljica djece rane i predškolske dobi</i> Profile: Early childhood pedagogy professional
Entry requirements: completion of 4 years at a gymnasium or vocational secondary school and Final State Exam (= university entrance exam) Professional studies: 3 years at university level Award: Bachelor – Early and Preschool Education ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main ECEC workplace: ECEC settings, 6 months – 6 years

Table 4

Croatia: Specialist support staff (Pedagogue, Psychologist, Rehabilitation Specialists, Speech Therapists, Social Pedagogues)

Job titles in Croatian: <i>Stručni suradnik – pedagog/stručna suradnica – pedagoginja</i> <i>Stručni suradnik – psiholog/stručna suradnica -psihologinja</i> <i>Edukacijski rehabilitator/edukacijska rehabilitatorica</i> <i>Logoped/logopetkinja</i> <i>Socijalni pedagog/socijalna pedagoginja</i>
Entry requirements: completion of 4 years gymnasium or vocational secondary school and Final State Exam Professional studies: 5 years study at a university (undergraduate and graduate study programme in Pedagogy, Psychology or Education and Rehabilitation Sciences) Award: Master's degree Total ECTS credits: 300 (180+120) EQF level: 7 ISCED 2011: 7 Main ECEC workplaces: As Pedagogues, Psychologists, experts in inclusive education and rehabilitation, social pedagogy or Speech Therapists in ECEC settings, 6 months – 6 years old. Graduates also may work in schools, public sector services, state institutions and local and regional self-governing institutions (with children, adolescents and adults).

Table 5

Croatia: Nurse

Job title in Croatian: <i>Viša medicinska sestra/Viši medicinski tehičar, Zdravstveni voditelj</i> (lit. "senior nurse") Profile: Social and Health Care Professional
Entry requirements: completion of 4 years gymnasium or vocational secondary school and Final State Exam (= university entrance exam) Professional studies: 3 years study at a university of applied sciences Award: Bachelor Total ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main ECEC workplaces: Working with children, parents and professionals in the field of protection of children's health and a healthy environment in ECEC settings. Graduates also may work in different health and social welfare institutions.

Primary School Teachers are employed in ECEC only as an exception, in cases of a shortage of ECEC Teachers.

4.2 Competences, curriculum, and pedagogic-didactic approaches in IPE programmes

According to the Croatian Qualifications Framework Act (Official Gazette, No. 22/2013, 41/2016, 64/2018, 47/2020, 20/2021), all qualifications and related learning outcomes should be harmonised with the *Croatian Qualifications Framework* and entered in the *Register of Croatian Qualifications*. In the field of ECEC, the occupational standard for ECEC Teacher was entered in the register of the Croatian Qualifications Framework on 15 May 2023.

Occupational standards for the Bachelor ECEC qualification (level 6) are:

1. Participation in preparing the annual plan and programme of ECEC curricula
2. Planning and evaluating the education process
3. Designing spatial, material, time, and other conditions for the implementation of the education process
4. Implementation of the education process (direct work, individual, and group access)
5. Implementation of specific educational programmes
6. Conducting prescribed pedagogical documentation
7. Communication and cooperation within the ECEC institution (parents, colleagues, specialist support staff, others)
8. Planning and implementation of continuing individual and institutional development
9. Evaluation and self-evaluation of individual and institutional work
10. Care for the safety and well-being of children.

The most important tasks of the ECEC Teachers are:

- Participation in the preparation of the annual work plan and the programme and curriculum of the kindergarten or other ECEC setting
- Planning and preparing direct educational work with the children
- Preparing and organising incentives, activities, and environments for educational work
- Carrying out the educational process through direct work and an individual and group approach
- Implementation of special educational programmes
- Keeping the prescribed educational documentation
- Collaboration and professional communication with parents, work colleagues and other stakeholders
- Implementation of the personal CPD and development plan
- Assessing and self-evaluating their own work and the work of the centre
- Concern for the safety and well-being of the children.

On the basis of the occupational standard drawn up, a qualification standard is created that defines the learning outcomes that a person must acquire in order to be able to fulfil the key tasks of ECEC Teachers and to acquire this qualification. This is documented with a diploma. The learning outcomes form the basis for the creation of study programmes that train specialists for the profession.

It is important to emphasise that qualification standards have not yet been adopted and implemented in the initial education programmes of ECEC Teachers, so they continue to study according to different study programmes, depending on which university and higher education institution they study at. It means that the curriculum of each higher education institution for each study programme is defined at the institutional level. Before the approval of study programmes, all higher education institutions have to undergo an accreditation process by the Agency for Science and Higher Education. *The Scientific Activity and Higher Education Act* (Official Gazette, No. 23/2003, 198/2003, 105/2004, 174/2004, 02/2007, 46/2007, 45/2009, 63/2011, 94/2013, 139/2013, 101/2014, 60/2015, 131/2017) stipulates that curricula should be in line with the latest scientific achievements, national priorities, and professional demands and be comparable to EU curricula. However, there are no compulsory or core subjects defined at the national or regional level. A common feature of all programmes is their university level, which means that ECEC vocational studies no longer exist in Croatia.

4.3 Alternative entry and qualification routes, system permeability

Formal opportunities for moving up and across qualifications frameworks, as well as alternative pathways of entry into ECEC work, are not developed in Croatia. ECEC workers can continue their professional development by entering advanced formal education study routes or through continuing professional development activities, without the possibility of changing their professional position or workplace. Even though the Croatian Government has adopted many different strategies and laws that focus on informal learning, these initiatives are still waiting to be implemented.

The only formal possibility to change the level of qualification is enrolment in a graduate ECEC study-as-you-work programme. However, ECEC Teachers who acquire the Master of ECEC qualification remain in the same job, with the possibility of a salary increase (depending on decisions made by the founders of the kindergarten).

5. Guided work experience (practicum) in the initial professional education of core professionals

Learning in the ECEC workplace is incorporated in the curricula of each faculty that provides a study programme for ECEC. These practica are conducted in kindergartens that have the status of a training centre. This status is determined by the Ministry of Science and Education, based on the requirement of the faculty that organises the students' placements (Ordinance on kindergartens as professional development centres, Official Gazette, No. 49/2004). Mutual obligations of the training centre and the faculty are regulated through a signed contract which is renewable on an annual basis. This contract includes a plan of the work with students, as well as regulations for the financial support for mentors and the ECEC institutions where the placement will be arranged. This financial support is provided by higher education faculties and is based on the number of students who decide to spend their practicum in each institution.

According to the relevant Ordinance (Official Gazette, No. 49/2004), the mentorship of students is performed by ECEC Teachers or specialist support staff with at least five years of experience. The mentor in the practicum class is initially appointed by the principal of the kindergarten or ECEC Teachers' council for a period of one year. After one year of successful mentoring, the

ministry appoints a mentor for a period of four years at the suggestion of the cooperating institutions. A mentor in the practicum class:

- Plans, prepares and evaluates the student’s work
- Collaborates with the university teacher who is responsible for the methodology courses
- Collaborates with other mentors in the kindergarten
- Participates in the analysis of students' educational work
- If needed, participates in the sessions of professional bodies of the higher education institution when discussing issues in the field of methodology and professional-pedagogical practice of students
- Keeps written documentation.

Another possibility is that the students themselves choose kindergartens for work-based learning; however, these institutions are not required to have the status of training centres. Practica in the study programmes of different higher education institutions may have different organisational forms, timetables and allocation of ECTS credits (see *Table 6*).

All students are obliged to keep a diary of work, as well as other documentation defined in the course syllabus. The mentor is obliged to evaluate the quality of the student’s practice through a written report. At the end of the practicum, the student hands in the various forms of documentation to the responsible university tutor, who checks whether all obligations have been fulfilled. This is the only formalised procedure of self-evaluation and evaluation of student’s practice. However, each university tutor can give the students special assignments connected with specific lectures or courses. In such cases, students evaluate their work within the framework of these courses and reflect on their work together with their university tutors.

Table 6

Croatia: Practical courses within the ECEC study programmes

University (HEI)	Bachelor’s degree		Master’s degree	
	Hours	ECTS	Hours	ECTS
Juraj Dobrila University of Pula, Faculty of Educational Sciences	280	7	-	_3
University of Split, Faculty of Humanities and Social Sciences	150	5	-	-
Josip Juraj Strossmayer University of Osijek, Faculty of Educational Sciences	120	9	90	6
University of Rijeka, Faculty of Teacher Education	60	6	-	-
University of Zadar, Department of Teacher and Preschool Teacher Education	120	8	90	6
University of Zagreb, Faculty of Teacher Education	120	6	160	6

Source: Study programmes of higher education institutions 2022

The placements in ECEC settings are organised as a separate course. During the time they spend at the workplace, students receive support from a Mentor, who should have at least five years

³ Some study programmes are offered exclusively in the format of in-service professional development and additional practica are not included in the study programme.

of working experience. This is the only requirement for taking on the role as Mentor. Specific qualifications or working conditions for this position have not been developed. The mentor is expected to support the work of the student through planning, preparing and evaluating the student's activities. The 'Student Mentor' position is awarded 3 points in the process of the professional promotion of ECEC Teachers (Ordinance on the manner and conditions for the promotion in the profession of ECEC Teachers and other professionals in kindergartens, Official Gazette, No. 133/1997; 20/2005).

During the practicum period, students are expected to become familiar with the organisational, legal and pedagogical aspects of kindergartens, as well as with all aspects of their future work.

Learning outcomes are defined in the course syllabus. For example, the Department of Teacher and Preschool Teacher Education of the University of Zadar, at the undergraduate level, envisages the following learning outcomes of student practice:

- Develop the skills of a reflective practitioner who continuously evaluates the effects of his or her achievements
- Demonstrate the ability to adapt to new and unexpected situations by actively applying the acquired knowledge, skills and abilities
- Recognise and evaluate the concepts of lifelong learning by advocating for personal professional development
- Explain the latest scientific knowledge about children's learning in early childhood and ways of supporting it
- Independently construct, implement and evaluate an integrated curriculum in the totality of all developmental areas (kinesiological, music, art, language-communication and research-cognitive) using activities and materials in accordance with modern development theories that interpret child development.

The learning outcomes of student internship at the graduate level are:

- Devise and examine new strategies in designing an integrated curriculum that will be a response to current knowledge about the developmental effects of extrafamilial ECEC as a child-friendly environment
- Identify opportunities to improve the quality of educational work and organise and manage research projects by selecting appropriate research paradigms (methods and techniques), as well as analyse and interpret research results
- Compare and critically evaluate the relationship between knowledge and its application in specific educational practices and assess the possible impacts on the quality of centre-based ECEC
- Develop the ability to lead at the level of independent action and teamwork in interdisciplinary teams of experts working in the field of ECEC.

It can be concluded that workplace-based learning in the IPE of core pedagogues in Croatia is not coordinated and in some aspects not sufficiently defined. This can be deduced from differences in the number of ECTS credits allocated for this part of IPE at different HEI, from the lack of formal procedures for organising and evaluating these processes, and from the lack of qualification requirements for field-based Mentors, who are not well recognised and supported.

6. Continuing professional development (CPD) of ECEC staff

The following regulations are relevant for CPD:

- the **Preschool Education Act** (Official Gazette, No. 10/1997, 107/2007, 94/2013, 98/2019; 57/2022), which stipulates the obligation of ECEC Teachers and specialist support staff in terms of CPD and the related possibility of promotion, according to the *Ordinance on the manner and conditions for promotion in the ECEC Teacher profession and for other professionals in kindergartens* (Official Gazette, No. 133/1997; 20/2005)
- the **Act on the Education and Teacher Training Agency** (Official Gazette, No. 85/2006) which prescribes that the Agency organises and conducts professional training of educational workers and principals.

CPD is one of the three criteria for the promotion of ECEC Teachers and specialist support staff in their professional advancement. It includes participation in (a) professional development sessions organised by the Ministry of Science and Education, and (b) CPD conducted by professional institutions and associations.

CPD is planned by the principal of the kindergarten on an annual basis. It includes formal seminars and courses, as well as center-based CPD activities, and depends on the capabilities and priorities of individual institutions and their contractors.

Professional development of ECEC Teachers and specialist support staff is one of the many obligations that are implemented during the non-contact time, but the exact share of professional development is not defined (State Pedagogical Standard of ECEC, Official Gazette, No. 63/2008, 90/2010).

Professional training organised by the Education and Teacher Training Agency is free of charge for participants, while other forms of CPD are paid for – either through project funds or by the institutions, or by the participants themselves. In addition to the Agency, ECEC professional development courses are offered by civil society organisations (e.g. Step by Step) and the lifelong learning centres of various university faculties. The Agency planned to hold 187 professional sessions in 2021, and around 50 meetings were related to ECEC (Education and Teacher Training Agency 2021).

The topics of professional development are diverse, and most often focus on general pedagogical topics related to curricula (Bouillet 2018a). In terms of quality, the programmes implemented by *Step by Step* stand out, such as: “Interculturalism and living diversity”, “The right to an appropriate upbringing and education”, “Developmentally appropriate practices” and “Quality and development”. They are, however, only available to a small number of ECEC Teachers and are not part of the regular programme offered of the Education and Teacher Training Agency.

During their professional career, ECEC Teachers can advance to the status of a **Mentor, Counsellor** or **Superior Counsellor**⁴, dependent to a certain extent on their participation in CPD courses. Precise criteria on the content, manner and forms of professional training have not been determined yet.

Such a situation leads to the conclusion that CPD depends on the individual aspirations of individuals and the capacities and willingness of the kindergarten to organise CPD activities at the institutional level. This is indicated by the results of a recent national survey (Matković et al.

⁴ The status of superior counsellor is an innovation based on the amendments of the Preschool Education Act from the year 2022.

2020) which showed in a representative sample for Croatia (N=2,023 qualified ECEC staff) that the most common form of professional development is training at work (colloquia, learning communities, etc.), with 82.5% of respondents referring to such a form of CDP. In second place were professional training courses or sessions organised by the Education and Teacher Training Agency, in which 52.3% of respondents participated during the year. In third place comes advanced professional training paid or provided by the employer (50.2% of respondents), and the lowest number of respondents participated in professional training funded by themselves (27.0%).

Approximately a quarter of the professional staff had not participated in any form of CPD during the previous year. This indicates that although two complementary mechanisms of professional development are provided (by the state or the employer), this joint coverage still does not reach a quarter of professionals employed in kindergartens (Matković et al. 2020).

Most ECEC Teachers participate in CPD only for one day or less a year. Centre Leaders and special support staff are more likely to participate in CPD than ECEC Teachers. Staff in ECEC settings in rural communities and temporary employees are less likely to engage in professional development activities than their contemporaries in urban areas. Obstacles to access are diverse: from lack of capacity in existing CPD options in terms of cost, distance, lack of time, lack of employer support and non-transparent training allocation practices, to inadequacy of the form or content of training (Matković et al. 2020).

The findings presented here come from the research project “Working in kindergartens: results of the research on working conditions in early and preschool education”, conducted in 2019 by the research team (Matković et al. 2020) as part of the activities of the Trade Union of Education, Media and Culture. The research was funded by the European Social Fund. This is the only extensive research on CDP in ECEC that has recently been conducted in Croatia.

7. Working conditions and current workforce issues

7.1 Remuneration

Salaries in ECEC, as elsewhere in the public sector, are largely determined by the level of education and length of service of employees. However, the ECEC system is significantly more decentralised than the rest of the public sector. Thus, defining the amount of salaries is in the domain of the setting providers, i.e. individual local self-government units in the case of public kindergartens, otherwise private and church-affiliated ECEC programme providers.

Seniority is a relevant salary factor because a salary supplement of 0.5% is allocated for each completed year of service. Staff also receive a higher salary for posts of responsibility (e.g. as Centre Leader, Deputy Leader, Student Mentor/Supervisor), as well as for the formal level of professional status (e.g. Mentor; Counsellor). Some founders of ECEC institutions (e.g. the City of Zagreb) provide 15% higher salaries to ECEC Teachers who have earned a Master's degree in ECEC.

Most ECEC Teachers earn a net salary of between €660 and €1,250 per month⁵. The monthly salary for the entry level is between €650 and €997. After five years of professional experience, their net salary increases to between €753 and €1,110 per month.

⁵ Croatia adopted the euro as its currency in January 2023.

The average salaries of employees in kindergartens in the City of Zagreb are higher than in the rest of Croatia, regardless of the category of job. The average salaries of ECEC Teachers are about €134-160 higher and in the rest of Croatia they differ relatively little. The lowest average salary outside the City of Zagreb was around €753, and the highest around €1099 (MojaPlaća 2023). The same is true for other staff: the average salary of other staff in the City of Zagreb is about €107-120 higher than the rest of Croatia, and the average salaries of other staff in the rest of Croatia are almost the same. In public kindergartens, the possibility of different salaries is legally open depending on the local self-government in which the kindergarten is located, although the application of regulations on salaries for primary school teachers is determined if they are more favourable for ECEC Teachers.

The average monthly net salary per employee in the legal entities of the Republic of Croatia was €1,178 in October 2023, which was 1.9% higher in nominal terms and 1.4% higher in real terms compared to September 2023 (CBS 2023b).

In the fourth quarter of 2021, the average monthly payment in Education was €1,047 (CBS 2022). Matković et al. (2020) did not find differences in the reported difficulties in “making ends meet” on a household level, compared to all ECEC employees and all public sector employees.

7.2 Full-time and part-time employment

According to the Croatian Bureau of Statistics (2023a), in 2022/23, 25,380 persons were working in ECEC settings in total. Among them, 23,545 or 92.8% are full-time employees.

Most part-time employees work in shorter programmes that are conducted outside kindergartens (preschool programmes, shorter preschool programmes, sports programmes, etc.). Thus, in kindergartens 1.08% of employees work part-time, while of those employed by other providers of ECEC programmes, 65.3% work full-time and 34.7% part-time. ECEC Teachers in kindergartens generally work full time, which is 40 hours per week. Some specialist support staff work part-time in one kindergarten and part-time in another.

A precarious form of employment in the ECEC system is temporary employment. According to the Labour Act (Official Gazette, No. 93/2014; 127/2017; 98/2019), an employment contract may exceptionally be concluded for a definite period of time, for the establishment of an employment relationship whose termination is determined in advance by a deadline, performance of a certain job or performance of a certain events. This form of employment includes 20% of all ECEC Teachers (Matković et al., 2020), which is significantly higher compared to the representation of such employment in the public sector, which amounts to 7%.

7.3 Support measures in the workplace for newly qualified staff

Support measures in the workplace for newly qualified staff (probationers) are prescribed by the Ordinance on the manner and conditions of taking the professional exam of ECEC Teachers and other professionals in preschool institutions (Official Gazette, No. 133/1997). According to that ordinance, a probationer’s internship lasts for 12 months and is completed by passing a professional exam.

Completion of the professional exam is a prerequisite for independent work in the ECEC setting, and is taken before the state exam committee. The exam is taken by all employees in ECEC institutions who are qualified for educational work (ECEC Teachers and specialist support staff).

The internship of trainees is realised based on a programme proposed by the internship committee, and adopted by the authorised professional body of the kindergarten (educational council). The task of the committee is to draft a proposal for an internship programme, provide the

trainee with pedagogical, methodological and any other assistance, and monitor his/her progress. The internship committee consists of the Centre Principal (as president of the Committee), a specified mentor, and one specialist (e.g. Pedagogue, Psychologist, experts in the field of education and rehabilitation). The committee is appointed by the Principal of the kindergarten.

Mandatory contents of the internship programme are:

- The legal framework of their work (the Constitution of the Republic of Croatia, Preschool Education Act, National Curriculum for Early Childhood and Preschool Education, as well as other legislation and regulations)
- General and profession-related regulations
- Specific characteristics, needs and dynamics of a child's development up to compulsory school age
- Aims and procedures of the care, education and upbringing of young children
- Organising resources for educational processes with young children
- Relationships and communication among professional staff, children and parents
- Planning, programming, preparation, realisation and evaluation of educational programmes
- Pedagogical documentation.

7.4 Non-contact time

Out of the 40 working hours per week, only 12.5 hours are allocated to non-contact time. These tasks include planning, programming and evaluation of work, preparation of the environment, co-operation and counselling work with parents and others, and professional development tasks (State Pedagogical Standard of ECEC, Official Gazette, No. 63/2008, 90/2010).

7.5 Current staffing issues

ECEC Teachers and specialist support staff belong to the group of occupations in Croatia with a surplus of vacant posts. For example, in Croatia in 2010 there were 975 vacancies for ECEC Teachers, in 2011 this number increased to 1,364, in 2020 to 4,140, and in 2021 the total number share dropped to 2,195. Therefore, ECEC Teachers have no difficulty in finding work, but there is a problem of ensuring compliance with the State Pedagogical Standard of ECEC (Official Gazette, No. 63/2008, 90/2010) because many kindergartens cannot recruit the required number of ECEC Teachers, so the maximum number of children in educational groups is exceeded or the number of children who remain not enrolled in ECEC increases.

The ministry is trying to overcome this problem by expanding the possibilities of employing primary school teachers in ECEC settings. The founders/providers of ECEC institutions do not have the opportunity to actively contribute to solving this problem because it is the responsibility of the Ministry of Science and Education and higher educational institutions.

8. Recent policy reforms and initiatives relating to ECEC staffing and professionalisation issues

The continuing professional development of those directly involved in educational work, professional co-workers and principals is one of the goals of the National Development Strategy of the Republic of Croatia until 2030 (Official Gazette, No. 30/2021). The basis of a sustainable future

is a system of upbringing and education that will provide every child with a systematic education, acquisition of basic competencies for lifelong learning, acquisition of vocational and higher education qualifications in quality educational institutions and provide employees with career paths in accordance with the needs of the economy, labour market and personal preferences and abilities. ECEC is the basis of lifelong learning, so the accessibility of ECEC is among the important goals of the Strategy.

The availability of quality ECEC to every child presupposes the reduction of regional differences in the quality and costs of ECEC, a sufficient number of ECEC Teachers and their further professional development, upgrading existing and building new kindergartens, as well as developing standards to ensure high-quality education for every child in Croatia from an early age, and helped families raise and educate their children in an increasingly demanding living environment.

The National Strategy is the most important document that builds on previously defined strategic documents, such as the Strategy of Education, Science and Technology (Official Gazette, No. 124/2014) and represents a framework for the development of Croatian society in the coming period. However, the goals of the National Development Strategy have not yet been codified by law: the latest amendments of the Preschool Education Act do not prescribe the conditions needed for their implementation.

Croatia is participating in the Child Guarantee initiative of the European Parliament and European Commission. The Child Guarantee programme in Croatia aims to increase the participation of children in ECEC, in cooperation with UNICEF's Office for Croatia, national and sub-national authorities and a selection of civil society organisations.

High expectations are placed on Croatia's Recovery and Resilience Plan (2021-2026) (Croatian Government 2021) which foresees investments in the ECEC system with the objective of improving enrolment rates. This implies investments in capacities, including an increasing number of available services and qualified staff. It is a demanding process that cannot be achieved without a complex reform of the whole educational system in Croatia.

For this reason, the Government of the Republic of Croatia has adopted the National Development Plan for the Education System for the period up to 2027 (Croatian Government 2023, 9) in March 2023, which stipulates the following:

"Initial training of ECEC and opportunities for professional development are considered to be advantages of the Croatian ECEC system. However, ... it is necessary to develop strategies for replacing and increasing the number of ECEC Teachers. An increasing number of pedagogical professionals is needed (ECEC Teachers and professional staff such as Psychologists, Rehabilitators, Speech Therapists, Social Pedagogues, Pedagogues) and health personnel in the areas where new kindergartens are to be opened, which are often rural, less developed local and regional self-government units... Newly qualified ECEC Teachers need more intensive training and more support to ensure the highest possible quality of pedagogical work with children according to their needs and differences. It will be particularly important to ensure that educators and professionals have the skills to work with disadvantaged children. The success rate that the government will achieve in training and employing new educators in the required areas in a timely manner will be critical to increasing the number of children participating in ECEC."

The realisation of this plan is expected in the near future.

9. Recent country-specific research studies focusing on ECEC staff

During recent years, a number of representative research studies within ECEC have been carried out in Croatia. Some examples are:

- *First Steps towards Quality.*
Zagreb: National Centre for External Evaluation of Education, 2017, authors S. Antulić Majcen and S. Pribela-Hodap
- *An Analysis of the Accessibility, Quality, Capacities and Financing of the ECEC System in Croatia.*
Zagreb: Ministry of Demography, Family, Youth and Social Policy, 2018, authors: I. Dobrotić, T. Matković, and V. Menger
- *Another Site of Inclusion of Children in Early and Preschool Age: Report on Analysis on Equity Issues regarding Access to Quality Early and Preschool Education to Children in Vulnerable Situations in Croatia.*
Zagreb: UNICEF Office for Croatia, 2018, author: D. Bouillet
- *How to get a kindergarten for everyone? ECEC funding opportunities.*
Zagreb: UNICEF Office for Croatia, 2020. Editor: I. Ćosić, head of the education program, UNICEF

These studies provide an analysis of ECEC in general and ECEC staff are included but are not the main focus.

Here are the most important research studies which focus on ECEC staff.

Working in kindergartens: research findings into working conditions in ECEC

Source: Matković, T., J. Ostojić, M. Lucić, K. Jaklin, and I. Ivšić 2020 (for more details see *References*)

Aims: The aim of the research was to gain insight into the situation within the system with regard to the basic dimensions of the quality of working conditions: physical environment, work intensity, working hours, work environment, skills and autonomy (with emphasis on training availability and worker participation), career prospects and salary.

Methods: The research was conducted during 2019 with a nationally representative sample of kindergartens in two phases. During the first phase, quantitative data were compiled, for which ECEC employees filled out a survey questionnaire, and in the second phase qualitative data were obtained through a semi-structured interview with those participants who expressed interest in participating in the interview. The final sample included 79 kindergartens and 2,023 ECEC staff.

Selected findings: One of the key problems pointed out by employees in kindergartens in recent years is non-compliance with the criteria prescribed by the State Pedagogical Standard regarding the number of children allowed in groups and adequate materials, personnel and space conditions for the operation of kindergartens. Work in kindergartens is characterised by a higher intensity of work than in the rest of the public sector, and employees in kindergartens on average report almost twice as many health problems compared to employees in other public sector occupations. 49% of employees in kindergartens said that their work has a negative impact on their health. Likewise, less than half of employees say they will be able to do the same or similar work until they are 60 years old.

Implications: This research contributes to existing analyses with the aim of approaching future system development planning based on comprehensive, comparable and evidence-based knowledge of working conditions in ECEC system. The development of the system should enable dignified work, sustainable for current employees and attractive for future employees, and provide a quality start in educating future generations. Improving working conditions in ECEC is also crucial for the expansion of the number of employees needed so that all children of kindergarten age can realise their right to high-quality ECEC.

Improvement of inclusion focus in initial teacher education for early childhood education and care in Croatia

Source: Bouillet, D., D. Hren, T. Maglica, and E. Sunko 2021 (for more details see *References*)

Aims: The aim of the analysis is to determine the level and content of inclusiveness of ECEC study programmes at higher education institutions in Croatia.

Methods: Interviews were conducted with students, ECEC Teachers and university professors, and in all study programmes (6 undergraduate and 5 graduate) for the initial education of ECEC Teachers that were offered in 2019/2020 at Croatian higher education institutions (in Osijek, Pula, Rijeka, Split, Zadar and Zagreb). Study programmes were thematically analysed with regard to the level to which they contribute to the development of sets of competences related to inclusive education.

Selected findings: The results of the analysis show that despite the focus of all study programmes on achieving the same number of ECTS credits (180 at undergraduate and 120 at graduate level) and striving to develop competences for the same qualification (ECEC Teachers), they are very diverse in the number and content in terms of defined learning outcomes. All analysed sets of competences are in some way represented in study programmes and their subjects, but with a large inconsistency in the connection of learning outcomes at the level of programmes and individual subjects, as well as inconsistency of descriptions of individual subjects, which indicates insufficient constructive alignment of study programmes and their subjects. This situation adversely affects the competences of ECEC Teachers for the practical implementation of inclusive education in professional work. This is confirmed by the analysis of interviews with students, ECEC Teachers and university professors. The results of the analysis point to the conclusion that there is a need to improve the inclusiveness of study programmes for the initial education of ECEC Teachers. Measures and activities to achieve this goal are formulated in the recommendations that form an integral part of this analysis.

Implications: Providing an analytical basis for the harmonisation of ECEC study programmes with the Croatian Qualifications Framework and other relevant documents that frame the European system of higher education.

Additionally, the programme “**Improvement of inclusivity of initial teacher education for early childhood education and care in Croatia**” was realised in 2020 and 2021, in cooperation with UNICEF’s office for Croatia and five higher education institutions: University of Zagreb; Josip Juraj Strossmayer University of Osijek; University of Split; University of Rijeka; Juraj Dobrila University of Pula. This programme is designed to address teachers’ competences for inclusive practice during their initial professional education because inadequate staff education for implementing inclusive educational practices is recognised as an important obstacle to inclusive ECEC. The main results of the programme are:

- University teachers from 5 HEIs providing initial teacher education for ECEC have increased capacities for delivering educational inclusion (conceptually and in practice) to their students.
- All university teachers at 5 HEIs who teach initial ECEC have access to inclusive learning resources and inclusive learning environments.

10. Workforce challenges – country expert assessment

The main strengths of the Croatian ECEC system are:

- ECEC is an integral and fundamental part of the education system.
- The required qualification level for ECEC Teachers is at Bachelor level across the entire ECEC system 0-6 years.
- The number of Master’s study programmes for ECEC Teachers is increasing.
- The number of national research studies in the field of ECEC is growing.

The most important ECEC workforce challenges in Croatia are:

- The lack of standardisation of the qualification of the ECEC Teacher profession at the national level, a consequence of significant differences between study programmes of various higher education institutions for ECEC Teachers (the plan is to overcome this challenge through entering the qualifications in the Croatian registry of qualifications, and through improved coordination of study programmes).
- The lack of co-ordinated forms, programmes and topics of in-service CPD (the improvement of the quality and effectiveness of in-service training and the development of mechanisms that will ensure that all ECEC staff are required to participate in CPD activities throughout their career is needed).
- The lack of comprehensive reforms of the ECEC system which would provide an accessible and quality ECEC for all children (the goal is to overcome this challenge through the realisation of the National Development Plan for the Education System for the period up to 2027).
- A high level of ECEC system decentralisation, leading to significant differences and inequalities within all aspects of ECEC. This is why the less developed towns and municipalities are not able to secure appropriate conditions for the staff or children in ECEC, with some parts of Croatia severely lacking in ECEC accessibility (the plan is to overcome this challenge through the realisation of Croatia’s Recovery and Resilience Plan).

It can be concluded that the ECEC system in Croatia has become a national policy priority. However, the significant changes needed to improve the quality and availability of ECEC still remain to be achieved.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the term chosen in this report for the main form of centre-based ECEC settings is **kindergarten** (*dječji vrtić*, 0–6/7)¹, sometimes referred to as **ECEC centre**. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Croatia

1432	First recorded institution for the care of abandoned and (later) illegitimate children opened in Dubrovnic.
1842	First custodial institution established in Karlovac for the children (3 to 7 years old) of factory workers – sometimes claimed to be the first kindergarten in Croatia.
1855	First pedagogically oriented institution for poor children opened in Zagreb.
1869	First institution with specifically educational aims established by Antonia Cvijić in Zagreb.
1880/81	First professional course for the training of pre-school teachers established in Zagreb.
1882	Opening of a kindergarten in Zagreb funded by the municipality – considered to be the start of public early childhood education and care in Croatia.
1945	<ul style="list-style-type: none"> – Up to 1955 no significant number of kindergarten-type centres for children. – First regulation for the establishment of ECEC institutions for children aged from 3 to 7 years old
1949	Ordinance on the organisation and work of kindergartens adopted.
1951	Regulation on the financing of preschool institutions adopted.
1958	Gradual expansion begins. Provision is mostly half-day and although kindergartens are officially seen as educational institutions, in reality they remain institutions for social care.
1962	According to the Law on financing education, parents should pay more for the ECEC of their children.
1967	Kindergartens regulated through further legislation. Local funds for preschool education are established.
1968	First university-level course of studies for prospective kindergarten teachers introduced, but not compulsory.
1974	<ul style="list-style-type: none"> – ECEC is allocated from national to local/regional level and the municipalities start participating in the cost of ECEC. – The first preschool programmes for children who have not participated in ECEC established.
1980	The tasks of ECEC are defined by law.
1990	The right to access ECEC from an early age is defined by law, but is not a legal entitlement to a place in kindergarten beyond the compulsory hours.
1993	The regional and local communities are responsible for financing the ECEC.
1997	First Croatian Early Childhood Education Act adopted.
2005	Colleges for the education/training of ECEC Teachers become part of universities (Bachelor degree).

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Croatia, the relevant format is **0–5**, since children start school when they are 6 years old.

2007	Amendments to the Act on Early Childhood Education adopted.
2008	National standards for ECEC adopted.
2013	<ul style="list-style-type: none"> – Further amendments on the Early Childhood Education Act adopted. – Preschool education one year before entering primary education becomes obligatory (250 hours). – First generation of students of Bachelor and Master university programmes for ECEC Teachers begin their studies.
2015	National Curriculum for Early Childhood Education and Care adopted
2019	Amendments to the Act on Early Childhood Education adopted
2021	National Development Strategy of the Republic of Croatia until 2030 adopted, including goals to increase the accessibility of a high-quality ECEC system and to secure related quality standards
2022	Further amendments to the Act on Early Childhood Education adopted
2023	The occupational standard for ECEC Teachers was entered in the register of the Croatian Qualifications Framework on 15 May 2023

ECEC system type and auspices²

Since 1997, early childhood education and care in the Republic of Croatia is an integral part of the education system, providing services for children from 6 months to school entry at 6/7 years. It is a unitary system and comes under the jurisdiction of the Ministry of Science and Education (*Ministarstvo znanosti i obrazovanja*). The ministry sets the objectives at the national level and provides a framework for accreditation and monitoring of educational institutions. The ECEC system is decentralised, and the financing and management of early childhood provision are the responsibility of municipalities.

Only a small number of children are cared for in home-based settings, which are the responsibility of the Ministry of Labour and Pension System, Family and Social Policy.

General objectives and legislative framework

The system of early childhood education and care in Croatia, which includes 250 hours of compulsory early education in the year before school entry, is governed by the Early Childhood Education Act (*Zakon o predškolskom odgoju i obrazovanju*) of 1997, amended in 2007, 2013, 2019, 2022, and 2023. The compulsory requirement was prescribed by the ECE Act in 2013.

Principles of the ECEC system include: high quality education for all; equal educational opportunities for all; compulsory general education and acquisition of key competencies; horizontal and vertical mobility between educational institutions; inclusion of all; scientific foundations; respect for human rights and children's rights; implementation of educational activities with a high level of expertise; democratic decision-making, involvement of all stakeholders; independence of institutions in the application of programmes and materials: pedagogical pluralism; education in the European context (EASNIE 2021).

In 2008, the National Early Childhood Education and Care Standard was introduced. It is the steering instrument for the minimum infrastructure requirements for both public and private

² The Eurydice country report on ECEC in Croatia provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

ECEC services, including financial, material and human resources. Steering measures relate to opening hours, the education and care of children from ethnic minorities, criteria for group size and number of professionals, and basic equipment. The content, duration and implementation of the compulsory preschool year were legally regulated in 2014 by the Ordinance on the content and duration of the preschool programme (Official Gazette 2014, No. 107).

ECEC entitlement and compulsory attendance

There is no universal entitlement to a place in ECEC. However, since 2014, a free place is guaranteed for obligatory attendance for 250 hours during the year before school enrolment. In areas where the full programme cannot be offered for organisational reasons, a reduced programme of 150 hours may be provided (European Commission/EACEA/Eurydice 2019, 48). The compulsory programme is usually located in the kindergarten, sometimes (mostly in rural areas) in a primary school. It is funded by the state, regions, and municipalities.

Children born in January-March start school in the calendar year in which they turn 6; all others, in the year in which they turn 7 (European Commission/EACEA/Eurydice 2019, 177).

Main types of provision

In 2022/23, there were 1,727 kindergarten units offering early childhood education and care in Croatia. These included 384 self-contained kindergartens and 289 multi-unit kindergartens in different locations as well as 144 units in accredited institutions such as primary schools, play rooms in libraries or other organisations (see *Table 1*). Compared to the previous year, the number of children enrolled increased by 3.8% (CBS 2023a, 100ff). Table 1 shows the facilities implementing early childhood education programmes.

384	289	910	101	6	37	1,727
1,583			144			

Source: CBS 2023a, 102

Kindergarten: According to the Early Childhood Education Act (1997), a kindergarten (*dječji vrtić*) is an institution that provides an organised type of non-familial education and care for children between 6 months and school age.

Kindergartens provide both half-day (4 to 6 hours) and full-day programmes (7 to 10 hours). They are usually open from Monday to Friday from 7:00 to 17:00, although opening hours can also be adapted to the needs of parents. It is expected that children will not attend kindergarten for more than 10 hours a day. They are usually divided into three age groups: 6 months to 1 year, 1 to 3 years, and 3 years to school entry. They consist of at least one group with a maximum of 25 children; usually there are about 200 children in any one setting. In larger cities, such as Zagreb, there are settings which admit up to 500 children, employ up to 50 professionals and

are housed in more than one building. The distance to the children's homes should not be more than one kilometre.

Five kindergartens work exclusively according to the Montessori approach, eleven others work partly with this approach. Some private kindergartens work according to Steiner education (Waldorf) or follow the approach of the Agazzi sisters. The Ministry of Education supports these alternative approaches, as well as cooperation with non-governmental initiatives such as the international organisation Step by Step (ISSA).

In addition, children can also attend a **playgroup** (*igraonica*). These are run by cultural organisations such as libraries and must be approved by the Ministry of Science and Education.

In 2013, the Act on Childminders attempted to address the shortage of places in institutions and the grey market of childcare. A **home-based childcare** worker must be registered and can care for a maximum of six children up to the age of 14. As a rule, they are paid through parental contributions; in some cases, the municipality also finances such care. The Ministry of Demography, Families, Youth and Social Welfare) is responsible for the supervision (ILO 2021).

Provider structures

In 2022/23, more than three quarters (76%) of early childhood education and care services were operated by public providers. Of the privately-run kindergartens (24%), which must be accredited by the Ministry of Education, 86% were managed by individuals/legal entities and 14% by religious communities (CBS 2023a, 102, own calculations).

Table 2

Croatia: Number of kindergartens (0-6) and other kinds of accredited ECEC provision by provider type, 2022/23

Service provider	Total	Kindergartens (6 months – 6 years)			Other accredited forms of provision

In 2022/23, the majority of children of all age groups (more than 80%) attending ECEC settings) were enrolled in public facilities (see Table 3).

³ Private organisations, social and health care settings

Table 3

Croatia: Number of children in ECEC settings by provider type and age-group, 2022/23

Participation rates in regulated provision

From 2010 to 2022, the proportion of children under 3 years of age not enrolled in an ECEC setting fell from 89% to 72.5%. In the group of 3 to 6 year-olds, almost 20% more children were enrolled in ECEC settings in 2022 than in 2010.

Table 4

Croatia: Enrolment rates in centre-based settings by age-group distribution and duration of attendance, 2010-2022

Year	Weekly attendance	0 to under 3 years, in %	3 years to minimum compulsory school age, in %
2010	1 to 29 hours	0	14
	Over 30 hours	10	34
	No enrolment in ECEC	89	53
2015	1 to 29 hours	2.3	6.5
	Over 30 hours	9.5	46.4
	No enrolment in ECEC	88.2	47.1
2022	1 to 29 hours	1.8	12.1
	Over 30 hours	25.7	54.1
	No enrolment in ECEC	72.5	33.9

Source: Eurostat 2023b, differences in the sums due to rounding

According to national statistics, in 2022/23 over three-quarters of children (118,918, 80.4%) attended a full-day setting (over eight hours), with only 9.7% (14,348) attending a half-day setting for less than five hours a week and about the same proportion (9.8%, 14,622) were in an ECEC setting between five and eight hours a day. Of the 147,888 children enrolled, most (135,252, 91.5%) attended a regular programme, 8,487 (5.7%) the compulsory programme and 4,149 (2.8%) a short-term programme (CBS 2023a, 102f, own calculations).

According to national statistics, 27.5% of all children under 3 years of age attended an ECEC setting in 2022/23. Whereas the enrolment rate of 2 to 3 year-olds was 46.5%, that of under 2 year-olds was only about 18.1%. In contrast, more than three quarters of 3 to 5 year-olds and more than 84.5% of 5 to 7 year-olds are enrolled in kindergartens (see Table 5).

Table 5

Croatia: Enrolment rates in kindergartens by age, 2022/23

Age	Number of children in total population (estimated data)*	Number of children in kindergartens	Calculated enrolment rate, in %**
0 to 1 year	35,441	164	0.5
1 to 2 years	35,268	12,656	35.9
Total under 2 year-olds	70,709	12,820	18.1
2 to 3 years	35,123	16,321	46.5
Total under 3 year-olds	105,832	29,141	27.5
3 to 4 years	35,384		
4 to 5 years	35,190		
Total 3 to under 5 year-olds	70,574	55,250	78.3
5 to 6 years	35,246		
6 to 7 years	34,439		
Total 5 to under 7 year-olds	69,685	58,670	84.2

Source: CBS 2023a, 103, 107; *CBS 2023c, own calculations, **calculated enrolment rates approximate values

According to national statistics, the age distribution in kindergarten nursery groups (Table 6) and kindergartens (Table 7) is as follows:

Table 6

Croatia: Children in kindergarten nursery groups by age-group, 2022/23

Under 1 year	1 to 2 years	2 to 3 years	Over 3 years	Total
164	12,656	16,321	3,069	32,210

Source: CBS 2023a, 107

Table 7

Croatia: Children in kindergartens by age group, 2018/19–2022/23

	Under 3 years	3–5 years	5–7 years	Over 7 years	Total
2018/19	26,422	50,934	61,140	882	139,378
2022/23	32,578	55,250	58,670	1,390	147,888

Source: CBS 2023a, 100

In nursery groups in kindergartens, slightly more than half (50.7%) of children between 2 and 3 years old, very few under 1 year-olds attend such groups and most of the over 3 year-olds are enrolled in kindergartens.

Financing and costs for parents

Early childhood education and care is primarily financed through the budget of local and regional self-governments, which cover 99% of public expenditure on early childhood education. In 2016, public expenditure on early education in Croatia amounted to 0.61% of the gross domestic product, or 8.1 to 10.6% of the total budget of self-governing institutions. In 2015, public expenditure per child was (€2,218) (EASNIE 2021).

Programmes for children with disabilities and children from ethnic minorities are co-financed by the state. For Roma children, ECEC enrolment is usually free of charge (EASNIE 2021). Local and regional self-governments determine the criteria according to which funding is provided. In coordination with the National Early Childhood Education and Care Standard, the providers determine the amount of the parents' fees. Overall, however, around 75% of the ECEC sector is financed by government funds (Eurydice 2023, 3).

Parents also have to pay for the year before school enrolment, despite compulsory attendance (European Commission/EACEA/Eurydice 2019, 56). However, parental fees are only a part of the total economic amount of (€200 to €333) – in most municipalities or cities not more than (€73). The amounts for Roma children's attendance are fully subsidised, and the Ministry of Education pays parental contributions for the two years before school enrolment. For children living in poverty, children with many siblings, children of single parents or children with disabilities, fees are reduced (European Commission/EACEA/Eurydice 2019, 61). Children who have not attended kindergarten spend the year before enrolment in a pre-primary unit at primary school, which is free of charge for parents. In 2017/18, this applied to approximately 12,000 children, about 30% of the age group (EACEA/ Eurydice 2019, 62, 177).

In 2022, a couple with two children spent about 5% of net household income on childcare costs⁴ (OECD.Stat 2023).

Staff to child ratios and group size

As a rule, children are divided into three age-groups: (1) from 6 months to 1 year, (2) from 1 to 3 years and (3) from 3 years to school entry. A typical kindergarten consists of 17 to 20 educational groups (340 to 400 children) in the regular programme. The maximum number of children per group is 25. If there is a disabled child in the group, the total number of children is reduced by two. If this child has a severe disability, it is reduced by four. *Tables 8 and 9* show the maximum permitted number of children in same-age and mixed-age groups as required by the National Early Childhood Education and Care Standard.

In 2022/23, national statistics report an average of 10 children per kindergarten teacher in kindergartens (CBS 2023a, 101).

The maximum numbers per group presented in *Tables 8 and 9* are from the State Pedagogical Standards of Early Childhood Education and Care (2008). The reality is that only a fifth of educators work in groups that are within the size range required. With the exception of ECEC for children aged six, the average number of children enrolled in each group or class exceeds the limits set by the pedagogical standard. In nursery groups, the average size is higher than the limit allowed under that standard (between 4.1 and 8.0 children). This means that up to twice as many children are often enrolled in nursery groups as envisioned by the standard (Matković et al. 2020, cited in UNICEF 2021b, 20).

Table 8

Croatia: Maximum permitted number of children in same-age groups

Age	Max. number of children
6 to 12 months	5
13 to 18 months	8
19 to 24 months	12

⁴ The calculation is based on the following fictitious model: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Age	Max. number of children
2 year-olds	14
3 year-olds	18
4 year-olds	20
5 year-olds	23
6 year-olds	25

Table 9

Croatia: Maximum permitted number of children in mixed-age groups

Age-group	Max. number of children
1 to 2 year-olds	10
1 to 3 year-olds	12
3 to 6 year-olds	20
4 to 6 year-olds	22

Source: State Pedagogical Standards of Early Childhood Education and Care (2008), cited in Eurydice 2023, 4.2

The number of staff present at any one time depends on the duration of the programme: In programmes up to 6 hours, one qualified member of staff must be present, in those from 7 to 10 hours, two. If a child with a disability is in a group, an additional qualified teacher is required. The number of support staff such as pedagogues, psychologists, etc. depends on the number of groups and children: for up to 10 groups and 200 children, one full-time member of staff is required, for 11 to 20 groups and 400 children, two, and for 21 to 30 groups and 600 children, three (Eurydice 2022, 4.2 – no longer accessible). Kindergartens of optimal size have 17–20 educational groups in standard programmes or 340–400 children in total. Kindergartens comprising several local units may have 30 educational groups or 600 children.

However, these standards cannot always be met because the demand for places is greater than the number of available places, especially in larger towns. In large kindergartens, two professionals are assigned to a group in two shifts, but these shifts only overlap by one hour, i.e. for children aged 3 and above, there are 30 children per qualified professional.

Experts think that the large groups are partly compensated by the special programmes and the generous number of additional support staff working in and with the kindergarten. In Zagreb, 300 special education staff work daily with the 10,000 children who have special needs (disabilities, autism, allergies, diabetes, language problems, etc.) (SEEPRO research visit to Zagreb in 2015).

In separate specialised settings for children with disabilities, group size is regulated at up to three children between 1 and 2 years, up to five children between 2 and 4 years or between 3 and 7 years or up to seven children between 4 and 7 years. If the children have different disabilities or if the groups are mixed-age, the groups are usually smaller.

Curricular framework

The National Curriculum for Early Childhood Education and Care came into force in 2014 after a long pilot phase (Official Gazette, Nr. 5/2015). It is part of a comprehensive curricular reform of the education system within the national *Strategy on Education, Science and Technology* (2014)

and forms the pedagogical framework both for regular ECEC programmes and the compulsory pre-primary year.

The National Curriculum places the child at the centre of the educational process and emphasis each child's individuality, which needs to be understood and respected. It is based on four guiding principles: (1) flexibility in the educational work in kindergarten; (2) partnership with parents and the broader community; (3) ensuring continuity in education; (4) openness for continuing learning and readiness to improve practices. Explicit core values are: knowledge; identity; humanism and tolerance; responsibility; autonomy; and creativity. On this basis, the following goals are to be achieved in early education: Ensuring the well-being of the child, stimulating the overall development of the child, developing competencies and ensuring equal opportunities for all – within the framework of democratic principles. Children should be accepted in their uniqueness, their rights should be implemented without any discrimination, their dignity should be respected at all times in the educational process and the development of their positive identity should be continuously developed.

Early childhood education institutions are expected to guarantee the realisation of equal rights for all. The educational approach is based on empathy, acceptance and mutual support, but also on children learning to understand their rights, obligations and responsibilities, as well as the rights, obligations and responsibilities of others.

Within the framework specifications, each kindergarten designs its own centre-specific programme according to the local context. These programmes, which include the goals for working with parents, have to be approved by the Ministry of Education and are reviewed annually by the administrative board of the kindergarten.

Everyday practices in the kindergarten include both teacher-initiated and child-initiated activities which take into account the individual needs of the children.

The contents of the compulsory programme in the year before school enrolment (250 hours, 10% of which are outdoor activities) are intended to lay the foundations for school readiness: Communication skills in the home language; elementary communication in a foreign language; mathematical competences; basic competences in science and technology; digital competences; learning to learn, social and civic competences; initiative and entrepreneurship; cultural awareness and expression; and motor skills appropriate to the child's age.

Many kindergartens integrate 'special programmes' into their curriculum at additional costs for the parents, e.g. learning a foreign language, music, drama, art, healthy eating, IT programmes, environment education and sustainable development.

Digital education

In Croatian kindergartens, digital media serve as a tool for planning, documenting, implementing and evaluating educational processes. However, not only adults, but also children should have access to digital media (MSES 2015). The National Curriculum for ECEC states that children develop digital competences by being introduced to diverse uses through various activities.

The acquisition of digital competencies as part of the mandatory preschool programme is regulated by the ordinance on the "Content and Duration of Preschool Educational Programmes" (MSES 2014).

Monitoring – evaluation

The framework for quality assurance in the Croatian education system provides for external evaluation, self-evaluation and evaluation of educational outcomes (EASNIE 2021).

Child-related assessment

Observations are the preferred method of assessing children. Staff can decide how to report the results. 'School readiness' is an entry criterion for primary schools, but the decision ultimately rests with the school, which makes its own assessment. To ensure the smoothest possible transition, the respective institutions discuss and familiarise themselves with each other's learning environments (European Commission/EACEA/Eurydice 2019, 22, 103, 106, 111).

Centre-level self-evaluation

Since 2012/13, the National Centre for External Educational Evaluation (*Nacionalni centar za vanjsko vrednovanje obrazovanja*) has annually called for institutions to self-evaluate according to a standardised process in the Handbook for Self-Evaluation in Early Education. This includes a self-evaluation report and the implementation of a development plan prepared with the help of the Centre (European Commission/EACEA/Eurydice 2019, 127).

At the setting level, a 'quality team' consisting of management, professionals, but also parents, support professionals, board members and the community, is responsible for self-evaluation.

In daily practice, the institution makes long-term plans (throughout the year), structures the orientation programme into a three-month plan and works on development tasks according to developmental areas (motor skills, social and emotional development, cognition and communication). The three-month plan is evaluated in terms of the number of children in the groups, financial and organisational changes as well as the acceptance of the activities by the children and the cooperation with the parents.

External evaluation

The National Centre for External Educational Evaluation offers numerous support materials for the external and internal evaluation of educational institutions. It provides guidelines, methods and instruments for monitoring different quality areas (e.g. management, equipment, working conditions, safety, staff) of ECEC settings.

In settings for children under 3 years of age, structural and process quality are checked by an inspection team, which comes to the facility if there is a suspicion that the facility is not working according to the law or that the pedagogical standards are not being followed (European Commission/EACEA/Eurydice 2019, 124, 126). Health inspections are carried out by the health authority.

Inclusion agenda

Children with special educational needs and disabilities

The Constitution of Croatia (Articles 3, 14, 65) states that all persons must have equal educational opportunities according to their abilities. Whenever possible, children with disabilities attend regular kindergartens in Croatia. Additional support staff with annual contracts are employed for this purpose. Inclusion measures are fully funded by the state at €100 per month per child.

Individual education plans for children with disabilities and for children from national minorities are drawn up within the framework of the National Curriculum according to the respective specific needs (EASNIE 2021). Separate facilities exist for children who cannot attend a regular kindergarten despite additional support.

The compulsory pre-primary programme for children with disabilities lasts two years instead of one. In addition, certain other programmes are offered – also for children from ethnic minorities – e.g. health care, religion, early language programmes.

Municipally subsidised kindergartens can apply for additional staff. These staff receive training from the Agency for Education and Teacher Training; their tasks are based on the respective disabilities of the children (European Commission 2021, 103).

The Ministry of Science and Education ensures additional funds if special ECEC programmes are organised for children with disabilities, gifted children, and children belonging to national minorities. Funding is calculated on a pro capita basis of the children involved, but staff salaries are not included.

Children with a migration background – Children from Roma communities

In 2022, only 0.9% of the total population had a non-Croatian citizenship, most of them (68.1%) came from non-EU27 countries. Similarly, 0.5% of children under the age of 5 are of a non-Croatian origin, of which 72.2% came from non-EU27 countries (Eurostat 2023g).

National statistics for 2021 report 800 children under 4 years of age as immigrants (CBS 2023b). In general, ECEC programmes exist for national minorities in the respective languages and in bilingual form to promote cultural identity and culture (European Commission/EACEA/Eurydice 2019, 115).

In 2022/23, 264 groups offered the preschool programme in a language other than Croatian: 2,640 children attended an English programme, 1,270 an Italian, 543 a Serbian, 224 a German, 196 a Czech, 117 a Hungarian and 6 a Hebrew programme (CBS 2023a, 104).

The “TOY for inclusion” project (European Commission 2021, 92) targets children from migrant families and ethnic minorities. Local action teams with representatives from Roma and non-Roma communities, municipalities and professionals run centres as meeting points that offer young children and their families new opportunities for exchange. In addition, the pilot programme “Testing the Child Guarantee” is being implemented in Croatia together with UNICEF, the Step by Step organisation and the EU, in which – also with the creation of new meeting places – social inequalities are to be compensated, especially for Roma children (UNICEF 2021a).

A fully subsidised 2-year integrated programme in mainstream institutions is offered for Roma children. The National Roma Inclusion Strategy (2013-2020) and the Action Plan for its implementation aim, among other things, to increase the attendance rate of Roma children in preschool institutions and to improve their quality (EASNIE 2021).

The overall attendance rate of Roma children in kindergartens was 32%, compared to 72% of non-Roma children (Roma Education Fund 2020). It is estimated that 69% of Roma children do not attend any ECEC setting at all. The Europe-wide Romani Early Years Network (REYN), an initiative of the International Step by Step Association (ISSA), aims to improve access to early childhood services and attendance rates for Roma children. Among other things, they try to fight prejudice and discrimination through campaigns (REYN 2021).

Parental leave arrangements⁵

Maternity leave (*rodiljni dopust*): If health insurance contributions have been paid during the six months before the birth, the full salary (without upper limit) is paid starting 28 days before the birth until the child is 6 months old. A parent who does not meet the condition of insurance contributions receives 125% of the ‘budgetary base rate’ of €441.44 per month. 98 uninterrupted days (28 before and 70 after the birth) must be taken by the mother, the remaining days can also be taken part-time or by the father.

Paternity leave (*očinski dopust*) lasts ten working days, which can be taken until the child is six months old; they are remunerated under the same conditions as Maternity leave.

Parental leave (*roditeljski dopust*) begins after the child is 6 months old and lasts four months per parent for the first and second child, of which two months can be transferred to the other parent. For the first six months, 100% of average earnings are paid, up to a maximum of 225.5% of the ‘budgetary base rate’ per month. If both parents take Parental leave, eight months are paid.

Parental leave may be taken either by both parents simultaneously or consecutively: (1) in one block, (2) in several blocks (no more than twice a year and no less than one month at a time) or (3) part-time, in which case the length is doubled and 70% of the basic rate is paid. In total, parental leave can be taken until the child is 8 years old.

In 2022, only 4.05% of fathers made use of the Parental leave which is predominantly taken by mothers. Also, only 0.23% of fathers used the transferable Maternity leave period in 2022.

Current challenges for the ECEC system in Croatia

Country expert assessment by *Dejana Bouillet*

Taking into account the critical role that early childhood plays in the individual’s lifelong development, well-being and success, universal and unbiased access to ECEC has been defined as a crucial strategic goal within contemporary education policies. Even though Croatia has adopted several important national strategies for improving the availability and quality of ECEC in recent years, problems remain. Among them, the most important challenges are:

- The lack in the number of ECEC institutions and available places, resulting in great regional disparities in the coverage and quality of child participation in ECEC
- The lack of ECEC Teachers, jeopardising the universal availability of high-quality ECEC programmes
- The lack of affordable ECEC programmes for children in disadvantaged situations, resulting in their low levels of enrolment in ECEC
- The decentralisation of ECEC, which has exacerbated regional differences in ECEC availability and is considered to be one of the main sources of educational inequality in Croatia
- The lack of an ECEC quality assurance system, contributing to suboptimal system performance.

The Croatian National Development Strategy 2030 (2021) states that its main development goal is to guarantee every child’s access to quality ECEC as a way of ensuring every child’s right to quality education. It is necessary to improve the determinants of structural and process quality to ensure greater accessibility, higher staff competence, an inclusive curriculum and a system of management and financing which will diminish regional disparities in terms of accessibility and

⁵ The brief overview in this section is based mainly on the country note for Croatia by Ivana Dobrotić in the *International Review of Leave Policies and Research 2023* (see *References*).

quality of ECEC in Croatia. A complex process of this kind calls for decision-making at the national education policy level, but also entails a shift in pedagogical practices. This goal cannot be reached without huge political changes in the complete educational system, including financing, organisation and monitoring of ECEC. That is why the new Early Childhood Education Law needs to be adopted. Much needed innovations include the prescription of structural and process indicators of high-quality ECEC programmes, ensuring conditions for their fulfilment and widening possibilities for employment of different professionals in ECEC settings (specialised staff, assistants to ECEC Teachers, etc.). The adoption of the new Act must be followed by ensuring national-level conditions which will guarantee every child a place in high-quality ECEC, regardless of the level of development and population of the local community in which they live.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Croatia was 3,862,305. A slight decrease in population numbers has been observed over the last 20 years (2000: 4,497,735; 2010: 4,302,847; 2020: 4,058,165) (Eurostat 2023a).

Total fertility rate

In 2021, the average total birth rate in the EU27 (as of 2020) was 1.53. The highest total birth rate of the 33 SEEPro-3 countries was in France (1.84), and the lowest in Malta (1.13)⁶. At 1.58, Croatia is slightly above the EU27 average (Eurostat 2023d).

Children under age 6

Table 10

Croatia: Number of children under age 6 in the total population by age, 2022

Age	Number of children
Under 1 year	35,717
1 year-olds	34,771
2 year-olds	34,953
3 year-olds	35,545
4 year-olds	34,779
5 year-olds	35,282
Total 0 to under 6 year-olds	211,047

Source: Eurostat 2023a

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

In 2022, 2.7% of the total population were children under 3 years of age and 5.5% were children under 6 years of age. These shares increased slightly from 2005 to 2015; however, in 2022, they are – except for those of the under 3s – slightly below the respective EU averages. The proportion of the under 3s corresponded with the EU average.

Table 11

Croatia: Children under 6 years of age – share in total population compared with EU averages from 2000 to 2022, in %

Year	Comparison Croatia/EU	Under 3 year- olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Croatia	n/a	n/a	n/a

Employment rates of parents with children under 6 years of age

In Croatia, in 2022, the overall employment rate (15–64 years) for men was 74.1% and for women 65.6% (Eurostat 2023j).

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

In 2022, 64.7% of women and 80.7% of men (18–64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were below the EU (EU-average 87.2%) and those of mothers slightly above the EU-average (63.6%) (Eurostat 2023g).

Table 13a

Croatia: Employment rates of parents with children under 6 compared with other EU countries, 2010 and 2022

	2010	
	Mothers in %	Fathers in %
Croatia	61.7	79.5
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2022	
	Mothers in %	Fathers in %
Croatia	64.7	80.7
Highest rate of employment in 27 (2020) EU countries ⁹	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Children at risk of poverty or social exclusion¹⁰

In 2022, 16.4 % of children under 6 were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 19.9% (EU: 21.6%). In 2020, 6% of children under 6 and 5.1% of the total population suffered from severe material deprivation (6.1% and 4.3% respectively) (Eurostat 2023h, i).

Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-eqf>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the author

Eleni Loizou, PhD, is a professor of Early Childhood Education and Care at the Department of Education of the University of Cyprus. Her research focus includes children's humour, play pedagogy, early childhood curricula, infancy pedagogy, and teacher education. In 2009 she was the scientific coordinator of the revised early childhood education curriculum in Cyprus. She is also currently a member of the Board of Trustees of the European Early Childhood Education Research Association (EECERA).

1. ECEC governance in Cyprus

Early childhood education and care (ECEC) in Cyprus is organised as a split-sector and partly parallel system divided between two ministries: the Ministry of Labour, Welfare and Social Insurance (*Ypurgeio Ergasias, Pronoias kai Koinonikon Asphaliseon*) and the Ministry of Education, Sport and Youth (*Ypourgeiou Paideias, Athlismou kai Neolaias*). Specifically, the Ministry of Labour, Welfare and Social Insurance (MLWS) has sole responsibility for provision for children under 3 years of age, whereas the Ministry of Education, Sport and Youth (MoESY) is responsible for state-maintained, community and private kindergartens for 3 to under 6 year-olds. Children aged 3 to under 6 fall under the jurisdiction of either ministry, depending on whether they attend a preschool/kindergarten or a childcare centre. It is important to note that the year preceding primary school in a pre-primary class (*prodimotiki*) is compulsory and free of charge for parents (MoESY 2022a). Primary school enrolment is compulsory for all children who have turned 5 years and 10 months before the 1st September.

Currently, there is an attempt by the MoESY, supported by all parties, to change the starting age of compulsory education to 4 years instead of 5, but this has not as yet been voted on by the House of Representatives.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The early years workforce includes a number of adults who work directly with children in childcare and preschool/kindergarten settings for 3 months to under 6 year olds. Alongside the regular Nursery and Childcare Teachers for younger children (3 months–2¹), the Preschool/Kindergarten Teachers and Centre Heads/principals for older children (3–5/6), there is a Teacher's Assistant and there may also be special education staff who, according to the children's needs, can be a Speech Therapist, an Occupational Therapist, a Psychologist, as well as a Child Personal Assistant ('accompanier' – an adult who accompanies and supports children with special needs in the classroom). Teachers' Assistants are responsible for cleaning the classrooms, tidying materials and toys, helping with the preparation of activities, being responsible for the children's safety when the teacher is out of the room, and other similar activities.

Table 1 provides details of each staff category working in the two sectors of ECEC. It also categorises the core practitioners (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see *Box 1* at end of this chapter).

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Cyprus): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

Table 1

Cyprus: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ETCS credits EQF level ISCED level
Childcare sector				
Nursery and Childcare Teacher <i>Vrefokomos/Vrefonipiagogos</i> <i>Profile:</i> Early Childhood Pedagogy Professional	<i>Vrefikos stathmos</i> Nursery centre 3 months–2 years	Core practitioner with group responsibility	3 months–2 years	Minimum requirement when working with children under 3 years: Certificate or diploma from a higher education institution in relation to the care, socioemotional and spiritual education of the child ECTS credits: 90-120 EQF level: 5 ISCED 2011: 4 or 5
	<i>Vrefokomi-koi/paidokomikoi stathmoi</i> Childcare centre 3 months–4 years		3 months–4 years	Minimum requirement when working with children from 3 years of age: 4-year degree at a higher education Institution (HEI) ECTS credits: 240 EQF level: 6 ISCED 2011: 6 (645/655)
Teacher's Assistant <i>Sxoliki Voithos</i>	<i>Vrefikos stathmos</i> Nursery centre 3 months–2 years <i>Vrefokomi-koi/paidokomikoi stathmoi</i> Childcare centre 3 months– 4 years <i>Nipiagogeio</i> Kindergarten/ preschool 3–4 years <i>Prodimotiki</i> Pre-primary class 5–6 years	Co-worker with no formal IPE	n/a ²	Compulsory school leaving certificate ECTS credits: n/a EQF level: 4 ISCED 2011: 3 (344/354)

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Each centre is directed by a head or principal, who has the day-to-day responsibility for running the ECEC setting. Leadership is quite hierarchical as the head/principal is the one who guides the centre's staff pedagogically and administratively. In the case of public and community schools these persons also work directly with the children depending on the number of required hours and years of work experience. In the case of private ECEC centres, if the head/principal has an early years' degree they might work directly with the children, if not, then they only direct the centre and focus on administrative work.

Table 2

Cyprus: Centre Leaders

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ETCS credits EQF level ISCED level
Director <i>Diefthinon prosopo</i> Owner/Provider <i>Idioktitria</i>	<i>Vrefikos stathmos</i> Nursery centre 3 months–2 years <i>Vrefokomikoi/ paidokomikoi stathmoi</i> Childcare centre 3 months–4 years <i>Nipiagogeio</i> Kindergarten/ preschool 3–4 years <i>Prodimotiki</i> Pre-primary class 5–6 years	Centre owner	n/a	The director of an infant-toddler centre or childcare centre needs to have a certificate or a diploma from a higher education institution specialising in infancy, child care, social work, psychology or pedagogy. ECTS credits: 90-120 EQF level: 5 ISCED 2011: 5 The owner of a pre-school or kindergarten may or may not have a relevant degree as long as the ECEC setting employs a person who has a 4-year university degree in ECE
Assistant Principal (in public ECEC settings) <i>Voithos Diefthintria</i> Principal (in public ECEC settings) <i>Diefthintria</i>	<i>Nipiagogeio</i> Kindergarten/ preschool 3–4 years <i>Prodimotiki</i> Pre-primary class 5–6 years	Centre head	3–6 years	4-year degree at university Bachelor's degree in ECEC ECTS credits: 240 EQF level: 6/7 ISCED 2011: 7 plus a Master's degree in Education ECTS credits: 60-120

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ETCS credits EQF level ISCED level
				EQF level: 7 ISCED 2011: 7 <i>plus</i> a specified number of years working in the field

2.3 Centre-based posts of responsibility

There are no legal provisions for centre-based posts of responsibility in Cyprus. In all types of ECEC setting posts of responsibility for pedagogical tasks (e.g. working with migrant families) are not allocated within the centre. The Ministry of Labour, Welfare and Social Insurance is responsible for providing the necessary allowances each person/family has been evaluated for and are allowed to receive. In addition, there is the "School and Social Integration Actions (DRASE)" programme that is co-financed by the European Social Fund. In this programme there is a small number of kindergartens that offer (1) Free remedial teaching programmes and creative activities for children and parents, in the morning and afternoon; (2) Additional psychosocial support services for children and parents, through the creation and operation of Information and Psychosocial Support Centres; (3) Support / technological equipment in kindergartens.

In the case of pre-service ECEC student mentoring, this is the responsibility of the Childcare Teacher or Pre-primary Teacher (see *Chapter 2.1*), depending on the students' needs. In the case of public pre-primary settings mentoring is compensated with one teaching hour (40 minutes). In other words, the teaching load of teachers who act as a mentor is reduced by one period (40 minutes) per week.

2.4 Co-ordinating and supervisory staff

There are differing types of co-ordinating staff who are responsible for a number of centres and are responsible for teacher evaluation, professional development or co-ordination of the different services children might need. These are mainly in the public ECEC settings and are employed by the government. In the case of the private settings the owners or the principals of the setting might have this responsibility and be involved in evaluating the work of the teachers. In the case of private settings which have the approval of the MoESY to run a *prodimotiki*-pre-primary class, they are supervised by experienced public ECEC principals who allocate a portion of their time to visiting these settings in order to evaluate the quality of their work and services. In the case of childcare centres, a social services officer is the person who supervises the implementation of the childcare regulations.

Table 3

Cyprus: Co-ordinating and supervisory staff

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ETCS credits EQF level ISCED level
Pre-primary Education Supervisor <i>Epitheoritria</i>	<i>Nipiagogeio</i> Kindergarten/ preschool 3–4 years <i>Prodimotiki</i> Pre-primary class 5–6 years	Visits the settings to assess the work of the Kindergarten Teachers	3–6 years	Bachelor's degree in ECEC plus Master's degree in Education ECTS credits: 60-120 EQF level: 7 ISCED 2011: 7 plus a specified number of years working in the field and a specified number of years working in the positions of Assistant Principal and Principal.
Special Educational Needs Co-ordinator <i>Syndetikos letourgos</i>	<i>Nipiagogeio</i> Kindergarten/ preschool 3–4 years <i>Prodimotiki</i> Pre-primary class 5–6 years	Collaborates with all the teaching staff related with the child's special needs as well as the parents and offers guidance on developing an individualised education programme for the child.	Broad age range – children and adults	Bachelor's degree in Special Education plus 5 years of experience as a Special Educator ECTS credits: 240 EQF level: 6/7 ISCED 2011: 6/7 (645/655/747)
Social Services Officer <i>Letourgos koinonikon ypiresion</i>	<i>Vrefikos stathmos</i> Nursery centre 3 months–2 years <i>Vrefokomikoi/ paidokomikoi stathmoi</i> Childcare centre 3 months–4 years	Coordinates and assesses childcare centres based on the implementation of the childcare laws and regulations	Broad age range – children and adults	Bachelor's degree in Social Work, Sociology, Psychology, Social Policy, Social Administration, Public Administration or Economics ECTS credits: 240 EQF level: 6/7 ISCED 2011: 6/7 (645/655/747)

2.5 Specialist support staff

A range of specialist support staff work with individual children in ECEC settings. They include an educational psychologist, a special educator, and a speech and occupational therapist. All of these specialists visit different public kindergartens during the day depending on the hours allocated to each centre. They are not based at the ECEC settings. These specialists work with children who attend public pre-primary classes, as they are employed by the MoESY. In the case of private settings parents are responsible for finding these specialists in the private sector.

Table 4

Cyprus: Specialist support staff

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ETCS credits EQF level ISCED level
Educational Psychologist <i>Ekpaideytikos psychologos</i> (for children with special learning needs – cognitive, auditory, visual impairments)	<i>Nipiagogeio Kindergarten/ preschool</i> 3–4 years <i>Prodimotiki Pre-primary class</i> 5–6 years	Responds to referrals for psychological assessment and recommendations	Broad age range – children and adults	Bachelor’s degree in Psychology ECTS credits: 240 EQF level: 6/7 ISCED 2011: 6/7 (645/655/747)
Special Education Teacher <i>Eidikos Ekpaideytikos / Paidogogos</i>	<i>Nipiagogeio Kindergarten/ preschool</i> 3–4 years <i>Prodimotiki Pre-primary class</i> 5–6 years	Responds to referrals for special education based on a diagnostic evaluation of child’s special needs	Broad age range – children and adults	Bachelor’s degree in Special Education ECTS credits: 240 EQF level: 6/7 ISCED 2011: 6/7 (645/655/747)
Speech Therapist <i>Logotherapeytis</i>	<i>Nipiagogeio Kindergarten/ preschool</i> 3–4 years <i>Prodimotiki Pre-primary class</i> 5–6 years	Assesses and works with children with communication disorders	Broad age range – children and adults	Bachelor’s degree in Speech Therapy ECTS credits: 240 EQF level: 6/7 ISCED 2011: 6/7
Occupational Therapist <i>Ergotherapeytis</i>	<i>Nipiagogeio Kindergarten/ preschool</i> 3–4 years <i>Prodimotiki Pre-primary class</i> 5–6 years	Supports and enhances everyday skills: motor, social, mental	Broad age range – children and adults	Bachelor’s degree in Occupational Therapy ECTS credits: 240 EQF level: 6/7 ISCED 2011: 6/7

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

There are no systematically compiled national data in general regarding the proportion of different staff categories in the workforce. Statistics do not differentiate between qualification categories of staff working with children of several age groups. It is also important to note that in terms of teaching personnel and type of ECEC institution, the data do not necessarily describe the age of children served. This is because a kindergarten can be approved by the Ministry of Education, Sport and Youth because it runs a classroom for children aged from 5 to 6 years (*prodimotiki*). However, such settings can also serve children from 1 years old upwards if they have the necessary licence from the Social Welfare Services of the Ministry of Labour, Welfare and Social Insurance.

Education sector (3 to 5 years)

Data suggest that ECEC personnel in all types of kindergartens/preschools are mainly women. Table 5 shows the number of kindergartens, children and teachers from 2015 to 2020/21. Compared to 2019/20, both the number of settings and the number of children decreased slightly, while the number of teachers increased slightly.

Table 5

Cyprus: Number of kindergartens, children, teachers, and type of provision, 2015/16 to 2020/21

	Number of ...	2015-2016	2017-2018	2019-2020*	2020/21*
Public Kindergartens	Settings	269	269	277	
	Children	12,241	12,107	12,37	
	Teachers	790	789	867	
Community kindergartens	Settings	83	77	466	
	Children	2,138	2,034	21,92	
	Teachers	131	134	1,745	
Private kindergartens	Settings	179	176		
	Children	9,758	10,310		
	Teachers	868	865		
Total	Settings	531	522	743	734
	Children	24,137	24,451	33,329	32,958
	Teachers	1,789	1,788	2,612	2,705

Sources: CYSTAT 2021a, b; CYSTAT 2023, 3;

* no further data available at the time of reporting

Table 6 shows the teaching personnel (teachers and principals), full time and part time, as well as the gender of the personnel working in different types of kindergartens/preschools in 2018/19 (CYSTAT 2021a). In 2018/19, only 0.76% of the workforce in kindergartens and only 2.07% of centre heads (kindergartens) were men. The majority of teaching staff (95.98%) and principals/centre heads (95.84%) worked full time.

Table 6

Cyprus: Full- and part-time teaching and management personnel in kindergartens/preschools, 2018-2019

Provider type	Teaching personnel			
	Full time		Part time	
	Men	Women	Men	Women
Public	4	614	0	0
Community	0	114	0	11
Private	5	648	2	45
Total	9	1,376	2	56
	Kindergarten Principals/Centre Heads			
Public	0	170	0	0
Community	0	8	0	3
Private	6	139	1	10
Total	6	317	1	13

Childcare sector (6 weeks to 5 years)

Table 7 shows the teaching personnel (teachers and principals), full-time and part-time, as well as the gender of the personnel working in different types of childcare settings during the year 2018/19 (CYSTAT 2021a). In comparison, it can be seen that childcare services for infants, toddlers and pre-schoolers (6 weeks to 5 years) are mainly provided by the community and private sector.

The distributions in the childcare sector regarding gender and working time are very similar to the pre-primary education sector: In 2018/19, 0.3% of teaching personnel were men and 3.8% of management personnel were also men. The greater majority of both teaching staff (88.8%) and principals (95.6%) worked full-time.

Table 7

Cyprus: Full-time and part-time teaching and management personnel in childcare sector provision

Provider type	Teaching personnel			
	Full time		Part time	
	Men	Women	Men	Women
Public	0	21	0	0
Community	0	164	0	22
Private	0	394	2	49
Total	0	579	2	71
	Centre Heads/Management personnel			
Public	0	3	0	0
Community	0	41	0	3
Private	6	125	1	4
Total	6	169	1	7

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

In Cyprus, there are four higher education institutions which offer programmes of study for people wishing to work in kindergartens/preschools (from 3 up to 6 years). These are the public University of Cyprus and three private universities: European University, Nicosia University and Frederick University. The Department of Education at the University of Cyprus offers two degrees: Bachelor's degree in Primary School Teaching and a Bachelor's degree in Pre-Primary School Teaching. The department of psychology offers a Bachelor's degree in Educational Psychology. The European University offers a BA in Early Childhood Education and a BSc in Psychology. The University of Nicosia offers a BA in Pre-Primary Education and BA in Primary Education and a BSc in Psychology and in Social Work. Finally, Frederick University offers, a BEd in Pre-Primary Education and a BEd in Primary Education, a BSc in Psychology and a BA in Social Work. The Frederick Institute of Technology offers a diploma in Nursery Education.

Prospective Childcare Teachers (3 months to 5 years) have to attend one of the three Departments of Early Childhood Education at a Higher Technological Educational Institute (ATEI) in Greece in order to obtain a degree or attend the Frederick Institute of Technology for a 2year Diploma in Nursery Education. The ATEIs offer 4-year degrees in early childhood education. But in order to work with children between 3 months and 3 years they only need to have a diploma or a certificate in relation to the care, socioemotional and spiritual education of the child. *Tables 8a to 8d* provides details of the IPE requirements of Kindergarten/Pre-primary Teachers, for Childcare Teachers, Special Education Teachers and Educational Psychologists.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

All universities in Cyprus offering early childhood studies, both public and private, have the same course framework. In April 2016 the University of Cyprus, Frederick University, European and Nicosia University stated on their websites that the framework for these studies includes compulsory, compulsory optional and general education courses covering the following areas: educational science (e.g. early childhood pedagogy), teaching methodology (e.g. creative drama), content area courses (e.g. pre-mathematical concepts), foreign language instruction and field experience courses.

Some of the universities give students the option to replace two courses (e.g. compulsory or optional courses) with a course titled 'Independent study' that involves the writing of a dissertation in the field of education (e.g. University of Cyprus, Frederick University).

The goal of these studies is to prepare prospective Kindergarten/Pre-primary Teachers for work in private, community or public pre-primary settings. There are no specified competence requirements but students are prepared to be able to implement the national curricula.

The Greek HTEIs providing Early Childhood Education and Care studies have a similar framework with compulsory and compulsory optional courses.

4.3 Alternative entry and qualification routes, system permeability

There are no alternative entry routes for working in public and community settings in Cyprus. Regarding the private sector for both childcare and pre-primary settings, the owners of provision can employ people from other disciplines, for example a psychologist to work with under 3 year-olds or a biologist to work with pre-schoolers. Also, in the case of childcare provision, the official requirement, as explained earlier, is a certificate or a diploma, thus service providers tend not to employ people with higher education degrees.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Quality teaching is not only based on the knowledge acquired but during field practice, the guided workplace experience that students experience during their degree. This experience assumes that students understand how learning takes place and how they can practise teaching to succeed learning, thus putting theory into practice. The field practice programmes aim to offer pre-service students the necessary experience to exercise their teaching skills in the different subject areas (e.g. Language, Mathematics, Music, Arts, Social Studies). All of the higher education institutions that offer a degree in ECEC have similar field practice programmes. *Tables 9a to 9d* provide the key elements of each type of practicum along with the ECTS and the expectations for each one, at one public and three private universities.

Table 9a

Cyprus: Key elements of field practice in university IPE programmes – University of Cyprus (2021)

University of Cyprus IPE degree: Early Childhood Education (4 years)	
Practicum Elements	
1 st Level	2 nd year of studies ECTS: 6 Duration: 13 weeks (24 lectures and 5-day visits at a public preschool)
2 nd Level	3 rd year of studies ECTS: 6 Duration: 13 weeks (24 lectures and 5-day visits at a public preschool)
3 rd Level	4 th year of studies ECTS: 20 Duration: 13 weeks (10 weeks of field experience at a public school, visiting daily, and 3 weeks of seminars at the university)
Programme Requirements and Learning Outcomes	
1 st Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Know the history and developments of early years in Cyprus. – Gather information in reference to the timetable and regulations of pre-schools and the regulations (e.g. planning, administration, environment and material organisation) as well as the different types of ECEC settings. – Develop professional attitudes and values that will support their professional identity. – Observe, collect and analyse data from their school visits. – Identify the characteristics of an effective preschool teacher. – Learn to communicate with children effectively and the rest of the school staff.
2 nd Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Observe and implement the different obligations and take on the roles of the preschool teacher (e.g. teaching, play). – Implement different teaching strategies based on current pedagogical principles. – Prepare a long-term activity play (using the project approach) and a short-term activity plan (lesson plans). – Plan and implement lesson plans effectively (content area and play) – Communicate effectively with a group of children, the whole class and use individualised ways of working with children. – Observe, record and analyse the teacher’s teaching based on pedagogical principles.
3 rd Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Systematically observe and analyse the relationships and interactions that take place within the classroom and the school. <ul style="list-style-type: none"> ✓ Plan and lead the teaching process of the different content areas (Language, Mathematics, Science, Arts, Music, Social Studies, Physical Education as well as Play Activities) – Plan and implement lesson plans for the different content areas and plan play activities. – Observe and take on the different roles expected by the teacher (e.g. teaching, planning, managing, playing). – Analyse the teaching process critically. – Develop the following attitudes: <ul style="list-style-type: none"> ✓ Interest in the teaching outcomes

University of Cyprus	
IPE degree: Early Childhood Education (4 years)	
	<ul style="list-style-type: none"> ✓ Acknowledge other people's point of view ✓ Willingness to learn new strategies and ideas ✓ Reflective and critical stance ✓ Develop confidentiality stance ✓ Be responsible for own choices
Assessment	
1 st Level	Assignment 1 (10%): Planning and organisation of a classroom Assignment 2 (15%): Planning and implementation of play activities, Assignment 3 (20%): Portfolio Final Exam (40%) Attendance and Participation (5%)
2 nd Level	Assignment 1 (20%): plan a theme using the PROJECT approach Assignment 2 (15%): Write 3 Lesson Plans Assignment 3 (20%): Presentation of Free and Structured Play activity planning Assignment 4 (25%): Presentation of Lesson Implementation Assignment 5 (10%): Observation of the teaching of a 4 th year student with a supervisor and filling out a feedback form Attendance and Participation (10%)
3 rd Level	Evaluation of lesson plans in the different subject areas 70% Professionalism 5% Implementation of the project approach 15% Implementation of a free and/or structured play activity for 45 minutes and a critical analysis of the experience 10%

Table 9b

Cyprus: Key elements of field practice in university IPE programmes – European University (2021)

European University	
IPE degree: Early Childhood Education (4 years)	
Practicum Elements	
1 st Level	2 nd year of studies ECTS: 6 Duration: Lectures at the University (18 hours) and field experience in a pre-school (40 hours) 1 day spent at an ECEC setting (public or private) for a period of 8 weeks
2 nd Level	3 rd year of studies ECTS: 12 Duration: Lectures at the University: 15 hours Field experience at a preschool: 75 hours (15 days spent at a preschool over a period of 8 weeks)
3 rd Level	4 th year of studies ECTS: 12 Duration: Lectures at the University (12 hours) and field experience in a preschool (200 hours), 8 consecutive weeks
Programme Requirements and Learning Outcomes	
1 st Level	The students are expected to: <ul style="list-style-type: none"> – Observe, document and analyse – (a) the children, the programme and the environment of a preschool, (b) the daily life at the preschool (e.g. outdoor play, routines, activities), (c) the different teaching approaches (e.g. project approach), (d) the different ways of planning learning and activities (e.g. play, work in teams, collaborative work, thematic approach)

European University	
IPE degree: Early Childhood Education (4 years)	
	<p>and € the content areas as taught in preschool (Language, Mathematics, Physical education, Social studies, Science, Arts, Music).</p> <ul style="list-style-type: none"> – Get to know the timetable and the curriculum of preschool. – Develop the skill of observing and planning individual observations. – Learn different observation methods and know their pros and cons. – Interact with the children and explore the uniqueness of the early years period.
2 nd Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Develop observation, analysis, self-evaluation and reflection skills. – Develop skills to enhance communication, differentiation, planning and managing the classroom. – Plan, implement, and assess activities in the different content areas of the curriculum. – Critically observe and assess different pedagogical models, teaching approaches, ways of organising learning through the collection and analysis of data in real life learning environments. – Participate in group activities of the preschool and value the meaning of collaboration and collective effort. – Construct a personal philosophy and attitude towards early years education.
3 rd Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Be responsible for a preschool classroom and deal with (a) the planning and implementation of activities, (b) the problems and issues that arise and (c) planning of different school activities. – Participate in different collective activities and value collaboration and collective efforts. – Develop critical and reflective skills in assessing their own or other people’s teaching as a means of continuously improving their own practical and theoretical knowledge. – Experiment and discover new approaches. – Report, analyse and implement new teaching approaches for effective learning, classroom planning and management. – Plan rich learning environments that respond to the individual needs of each child and enrich their learning potential. – Plan, implement and assess activities in the different content areas considering the epistemological framework of each one. – Cope with potential difficulties in the pedagogical process while focusing on finding solutions to problems.
Assessment	
1 st Level	<p>Field experience 90%</p> <p>Participation – professionalism 10%</p>
2 nd Level	
3 rd Level	

Table 9c

Cyprus: Key elements of field practice in university IPE programmes – University of Nicosia (2021)

University of Nicosia IPE degree: Early Childhood Education (4 years)	
Practica Elements	
1 st Level	2 nd year of studies ECTS: 5 Duration: one semester
2 nd Level	3 rd year of studies ECTS: 5 Duration: one semester
3 rd Level	4 th year of studies ECTS: 10 Duration: one semester
Programme Requirements and Learning Outcomes	
1 st Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Judge and find positive and negative elements of didactic methods. – Develop basic teaching skills. – Know the basic elements of a lesson plan and be able to implement them smoothly. – Plan, organise and implement a lesson plan. – Explore the ability of self-evaluation, presenting the effectiveness of the work with critical reflection
2 nd Level	<ul style="list-style-type: none"> – The students are expected to: – Plan teaching and implement it smoothly and effectively. – Implement didactic strategies and techniques that draw on the students' interest and active participation in the learning process. – Use multiple didactic methods and approaches for effective teaching and learning. – Deepen the pedagogical dimensions of specific teaching episodes during their own and other people's teaching.
3 rd Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Implement autonomous teaching: plan and implement a weekly teaching programme based on current strategies (e.g. thematic strategy, individual learning, project approach) – Implement teaching strategies and techniques that draw on the students' interest and active participation in the learning process. – Plan and implement weekly teaching programmes. – Plan and control a team of children outside the classroom with responsibility (e.g. playground, day trip, school activities). – Develop respect, collaboration and flexibility attitudes towards the people in the school (teachers, children, principal, assistants and parents).
Assessment	
1 st Level	Written examination, activity development, micro-teaching, reflective journal.
2 nd Level	Written examination, activity development, observations, reflection and assessment for two lesson implementations at preschool, portfolio (lesson plans, self-evaluation).

University of Nicosia IPE degree: Early Childhood Education (4 years)	
3 rd Level	Individual Assignment/Portfolio, Feedback and evaluation of 3 lesson implementations at preschool, assessment by the classroom teacher and the university supervisors, assessment from the student's mentor

Table 9d

Cyprus: Key elements of field practice in IPE diploma and university programmes – Frederick Institute of Technology (2022) and Frederick University (2021)

Frederick Institute of Technology Diploma in Nursery (2 years)	
Practica Elements	
1 st Level	Practical Experience I ECTS: 4 Duration 3 weeks
2 nd Level	Practical Experience II ECTS: 4 Duration: 3 weeks
Programme Requirements and Learning Outcomes (these refer to the programme in general)	
<p>The students are expected to:</p> <ul style="list-style-type: none"> – Possess the knowledge and skills of oral, written and technological communication, so as to communicate and co-operate efficiently with their peers, children, parents, and others. – Organise activities which will help children to acquire mathematical concepts and experiences from natural sciences, and cultivate their problem solving thinking and their initiative. – Handle successfully not only routine problems in the pre-school institution, but also to solve any problems arising in their working environment. 	

Frederick University IPE degree: Early Childhood Education (4 years)	
Practicum Elements	
1 st Level	2 nd year of studies ECTS: 5 Duration: 1 semester
2 nd Level	3 rd year of studies ECTS: 5 Duration: 1 semester
3 rd Level	4 th year of studies ECTS: 6 Duration: 1 semester
4 th Level	4 th year of studies ECTS: 12 Duration: 1 semester
Programme Requirements and Learning Outcomes	
1 st Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Discuss about teaching and learning in preschool using terms that relate to the pedagogical principles, the teaching-learning participants, the elements that impact teaching, the pedagogical climate of the teaching, the teaching-learning planning and assessment. – Note the elements that comprise the pedagogical climate of teaching and learning.

Frederick University IPE degree: Early Childhood Education (4 years)	
	<ul style="list-style-type: none"> – Analyse the role of the teacher, the student, the environment and the content areas in the teaching-learning process. – Problematised issues such as the curriculum, differentiation, technology, environmental education, parental involvement. – Explain the meaning of planning teaching and learning using webs for the analysis of a theme into specific subthemes. – Study the curriculum and describe elements that need to be taken into consideration for the planning of teaching-learning, such as the choice of content to teach, the process of teaching, the goals set, the methods employed and assessment.
2 nd Level	<ul style="list-style-type: none"> – The students are expected to: – Describe and analyse areas of development for the child based on the early childhood curriculum and discuss goals and activities based on these. – Discuss the way content areas are structured in education, focusing in the early years as these are presented in the curricula. – Set goals which are simple, clear, differentiated and evaluative. – Study and develop lesson plans taking into consideration the interconnection of goals, materials, activities and assessment. – Develop work plans based on the project approach. – Observe and document important episodes from the preschool based on different focus areas, and analyse these.
3 rd Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Plan and implement appropriate work plans. – Develop and implement teaching skills in practice. – Develop interrelationship skills, guidance skills, problem solving skills. – Be informed about the quality and needs of the students. – Deal with expected and unexpected issues and behaviour problems. – Use appropriately the materials and different strategies to satisfy students' differing needs. – Analyse, judge and assess educational problems. – Assess their own behaviour and improve their work. – Appropriately handle the children's time and know what they are expected to teach. – Develop initiative and a flexible and innovative stance.
4 th Level	<p>The students are expected to:</p> <ul style="list-style-type: none"> – Analyse and examine educational terms, theories and issues. – Plan and organise lessons with appropriate goals, the necessary teaching materials and through multiple activities. – Develop a series of teaching and learning material based on implemented strategies that make the process of teaching and learning easier. – Implement the teaching and learning processes, taking into consideration the goals of each content area and the special characteristics of the classroom. – Effectively deal with problems and collaborate with all those involved in the implementation of the programmes in the school. – Develop intercommunication with the people and teams in the school. – Develop guidance skills and appropriately guide people and teams.

Frederick University	
IPE degree: Early Childhood Education (4 years)	
	<ul style="list-style-type: none"> – Develop an encouraging environment for learning and positively face the different needs of the children and the individualities of the classroom. – Increase the experiences of children in reference to knowledge, emotionally and psychosocially. – Use techniques and strategies that develop higher order thinking. – Analyse and evaluate their accomplishments and learn to strive for continuous progress. – Develop an independent, flexible and innovative stance.
Assessment	
1 st Level	Participation – Classroom assignment 10% Team presentation 10% Written Assignments 40% Final Exam 40%
2 nd Level	Portfolio with Lesson Plans 20% Project Development 20% Observation notes from preschool visits 50% Evaluation by the preschool’s principal 10%
3 rd Level	University supervisors’ grading 60% Portfolio 15% Seminar attendance 5% Principal’s evaluation 5% Total of lesson plans 15%
4 th Level	University supervisors’ grading 60% Portfolio 10% Seminar attendance 5% Principal’s evaluation 5% Monthly planning 5% Total of lesson plans 15%

The Pre-primary Teachers and Childcare Teachers who mentor preservice student/trainee teachers in private preschools and childcare centres are not paid in any form and do not have any time release like the public school mentors described earlier.

6. Continuing professional development (CPD) of ECEC staff

Continuing professional development for staff in ECEC provision in both the public and private sector is undertaken mainly by the Ministry of Education, Sport and Youth through the Pedagogical Institute of Cyprus (C.P.I.). These programs are offered every year and are addressed to all current teachers of all levels. However, a closer look at the choice of themes for these seminars reveal that the options for focused CPD for Childcare Teachers are limited. In addition, all higher education institutions in Cyprus offer professional development seminars, workshops and conferences. These are optional for all staff in ECEC provision and take place during their own time

and at their own cost. Depending on the research interests and expertise of the university teaching staff, there may be some focused opportunities for CPD for Childcare Teachers.

The C.P.I. is under the jurisdiction of the Ministry of Education, Sport and Youth and is responsible, among other services, for providing professional development activities for serving teachers in all sectors and at all levels of education by offering compulsory and optional seminars.

The C.P.I. has developed a Teacher's Professional Learning Programme (PLP) (Eracleous *et al* 2022) that covers many of the ways it provides professional development for teachers. Specifically, this programme involves extensive activities in the school unit, as it includes a year-round systematic support from the Pedagogical Institute for the professional learning of teachers. Officers of the Pedagogical Institute, as Supporters, collaborate throughout the school year with the school to promote professional learning within the school, with actions and practices that are selected and interpreted based on the needs of teachers and the context (school and classroom). The aim is to meet the professional / learning needs of teachers and to improve professional practices. The PLP utilises a variety of methodologies, such as Action-Research methodology, Lesson Study methodologies, Quality Circles for Teachers and others, which are in line with the needs of teachers and the specifics of each school.

The PLP is structured on the basis of effectiveness elements related to teachers' professional learning programs:

1. Active involvement
2. Reflection
3. Teacher's dynamic professional identity
4. School based context
5. Collaboration and professional learning communities.

So, this type of professional development offered by the C.P. I. is one that entails teachers' active involvement, with continuous reflection and highlights the importance of developing a learning community.

Moreover, the C.P.I. offers other forms of seminars and workshops which include the following:

1. Optional Seminars which are free of charge and take place in the afternoons (i.e. after kindergartens/preschools have closed) and may include general pedagogical or specific themes for every level of education and/or content area. The seminars comprise five sessions lasting 2½ hours once a year.
2. School-based seminars take place in kindergartens/preschools where groups of teachers within the same or nearby public kindergartens who are interested in participating in such seminars meet together in one institution.
3. Seminars for kindergarten/preschool heads which aim to improve management strategies and to help them cope with current challenges focusing on modernising the Cypriot system in relation to EU policies. (C.P.I. 2022)

Regarding the *private* sector, the kindergarten owners are responsible for providing their staff with professional development but they can also participate in the optional seminars offered by the C.P.I.

The only obligatory CPD programme for teachers in *public* kindergartens/preschools takes place during the first week of September before school starts. Teachers attend one-day seminars either at their kindergarten/preschool or in large teams based on themes that the Ministry of Education, Sport and Youth considers necessary. For example, over the past five years, teachers have attended various professional development seminars on the new Early Childhood Curriculum (e.g. on play, music, language, mathematics) which was revised during the recent Educa-

tional Reform. In addition, two periods weekly (80 minutes altogether) are dedicated to professional development, during which the principal/centre head organises planning activities, or teachers who have participated in other types of professional development share their experience, knowledge and skills with their colleagues.

Moreover, during the academic year the Early Childhood Supervisors (*Epitheoritries*) organise seminars or conferences according to what they consider is important for the field. During these seminars, teacher representatives from the larger kindergartens (e.g. with two and more classrooms) attend and they are then required to share the information of the seminar with the other teachers in their team. These seminars take place during working hours.

The C.P.I. offers an in-service programme for newly appointed principals. During the year in which they take up their position, principals attend a weekly professional development session during their working hours. They are supported in developing leadership, managerial/ administrative and organisational abilities and skills. In addition, there are several optional seminars offered by the C.P.I. over the course of each year and other conferences organised by higher education institutions which they can attend during their own free time and at their own cost.

Kindergarten/Pre-primary Teachers may participate in optional workshops during their own time, sometimes covering the costs in order to have these documented in their assessment file. Attendance is considered for a teacher's annual assessment but there is no direct impact on remuneration. Career advancement is mainly accomplished through years of experience and post-graduate degrees.

Being part of the European Union provides early childhood teachers opportunities to participate in different programmes and seminars. For example, the optional seminars organised and provided by the C.P.I. are co-funded by the European Social Fund of the EU. In addition, early childhood teachers have the opportunity to participate and visit other European countries to enrich their own professional development. Two examples of such programmes include: (1) *MENETEP- Mentoring technology-based pedagogy*, which aims at developing teachers' digital skills, and (2) *DiDeSu- Differentiation of instruction for teacher professional Development and students' Success*, which aspires to make a substantial contribution to the field of teaching methodology and effective differentiated teaching, utilising the opportunities for collaboration at European level as provided through Erasmus +, and to create learning communities within schools.

There are no specific professional development options for Teachers' Assistants, and employers do not expect them to participate in CPD activities. The Child Personal Assistants ('accompaniers') decide for themselves whether to participate in different optional seminars or conferences to enrich their knowledge and skills. Finally, the Special Educators, Speech Therapists, Occupational Therapists, and Psychologists who visit the kindergartens to provide special assistance to the children who need it follow the same scheme of professional development provided by the C.P.I. or their department at the Ministry of Education, Youth and Sport.

7. Working conditions and current workforce issues

7.1 Remuneration

In the **childcare sector**, Nursery and Childcare Teachers work full-time and are paid as little as €600–€750, lower than the minimum wage. Also, they are often laid off at the end of the year so that they do not have to be paid during the summer holidays and the providers do not have

to raise their salary. There is no set regulation in terms of working and salary conditions in the private sector and, regardless of the teacher’s qualifications, the providers offer the same salary. In the **education sector**, all teachers working in the public sector, regardless of the level of education or specialisation, earn the same amount. Therefore, Kindergarten/Pre-primary Teachers earn the same as primary school teachers. The public sector has a yearly average increase based on inflation and tax index.

The Ministry of Education, Sport and Youth has issued regulations in terms of the functioning of (non-profit) community kindergartens along with the remuneration of the Kindergarten Teachers in these settings. An ECEC Teacher working in a community kindergarten earns less than one working in the public sector but it is still considered to be a fair/good wage.

In the private sector, remuneration is the lowest and working hours are the longest. There have been cases where someone is forced to be absent from work and as a result their employer deducts a certain amount from their salary. There is no agency to control what the private sector offers in terms of working conditions and salaries. People working in the private sector do not earn enough to support themselves (e.g. to rent their own apartment) or a family because they usually earn the minimum wage or close to that. *Table 10* shows the remuneration of Kindergarten Teachers according to the setting they work in.

Table 10
Cyprus: Remuneration of Kindergarten/Pre-primary Teachers, 2022

Type of ECEC provision	Remuneration
Public kindergartens	A8-A11 or combined (based on years of service) A8: €17,946 – €27,593 per annum A10: €25,112 – €34,720 per annum A11: €29,684 – €39,292 per annum
Community kindergartens	€1.068,73 per month and an annual increase of €24,96
Private kindergartens	Depends on the owner of the setting. Usually they offer the lowest average wage. The lowest average wage per month (before taxes) in Cyprus is currently €870 and after six months of work €924.

Source: MoESY 2022b

The Teachers’ Assistants in public and community schools, who do not have a higher education degree, earn €870 monthly and within six months their wage is raised to €924 through the regulations applying to the public school system.

7.2 Full-time and part-time employment in ECEC provision

The working hours in community kindergartens differ from those in public kindergartens and the private sector. Staff in community kindergartens work 36 hours per week with a daily schedule between 7:30 and 14:45 and they do not have as much annual leave or as many sick leave days as staff in the public school system. Teachers who work in the private sector always work one or two afternoons (at the most until 18:00) and have no sick leave days.

Staff in preschool/kindergarten settings

In the public sector, Kindergarten Teachers usually work on a full-time basis. In general, only those who substitute for other teachers due to health issues or maternity leave work part time. In the private sector, however, there tend to be more teachers working on a part-time basis, since the wages are then lower – a benefit for the owner of the setting only – and the practitioners have fewer benefits.

As already shown in *Table 6*, for the academic year 2018/2019, full-time work is predominant among teaching and management personnel in kindergartens. Overall, only 4.08% of teaching staff and 4.15% of management staff work part-time, with a percentage below the average of teaching staff (3.25%) and management staff (3.26%) working part-time in the private sector.

Staff in the childcare sector

Table 11 provides information which refers to the number of full-time and part-time teaching and management personnel (teachers and principals respectively) working at the different types of childcare centres during the academic year 2018/2019 (CYSTAT 2021a).

The majority of both teaching and management personnel work full time. Part-time workers are most likely to be found in the private sector.

Table 11

Cyprus: Full-time and part-time teaching and management personnel in childcare centres, 2018-2019

Type of school	Teaching personnel		Management personnel		Total
	Full time	Part time	Full time	Part time	
Public	618	0	170	0	788
Community	114	11	8	3	136
Private	653	47	145	11	856
Total	1385	58	323	14	1780

7.3 Support measures in the workplace for newly qualified and newly appointed staff

The newly qualified and appointed staff can choose from the different forms of seminars offered by the C.P. I. as described on *Chapter 6*. So, they basically participate in the compulsory one-day seminars offered for all teachers in September or they choose from the other voluntary seminars offered in the afternoons based on the themes that interest them. Additionally, in the case where their school demands in service professional development, they take part in the activities which are usually based on the needs of the school, as assessed by the head and supported by the C. P. I. officers.

7.4 Non-contact time

Table 14 illustrates the number of teaching periods (40 minutes) and non-teaching activities undertaken by each type of personnel in the public sector (MoESY 2021a).

Table 12

Cyprus: Number of weekly working hours and activities undertaken by personnel in the public sector

Personnel	Teaching time periods (40 minutes)	Non-teaching activities within the school	Staff meeting	Educational seminars
Principals in kindergartens depending on the number of teachers in the setting	11 to 21	14 to 24	1	2
Assistant Principals	23	12	1	2
Primary School, Pre-primary and Special Teachers depending on the years of teaching	25 to 29	6 to 10	1	2

Principals teach fewer hours than assistant principals and teachers; the higher the number of teachers in a setting, the lower the number of hours the principal has to teach. With increasing years of teaching experience, teachers spend less time teaching. Regarding the private and community sectors it is up to the providers and principals of the school to arrange non-contact time but it is generally uncommon.

All teachers, regardless of the number of their teaching periods, are obliged to stay at pre-school/kindergarten for the whole day. After teaching they have time to cooperate with parents and attend staff meetings that usually start at 13:15 after the pre-school/kindergarten day ends. Finally, all teachers have two periods a week to attend educational seminars/conferences.

7.5 Current staffing issues

In the field of ECEC there are more teachers than needed since there is no direct correspondence between the number of people studying and graduating as ECEC teachers and the actual number of teachers needed in the public, community and private sector. This can often mean that over-qualified people work with age groups for which they were not trained, and are poorly paid.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

New teacher appointment system

The Educational Service Commission of the Ministry of Education, Sport and Youth considers the appointment of new teachers in public kindergartens/schools to be one of the main problems facing the public education system since most teacher candidates are appointed for the first time many years after they graduate. Because of the fact that there is no immediate need to employ teachers in the public-school system, whoever graduates with a BA in Education is signed up on the public-school system list of educators. Thus, a graduate may not be employed in the public system until five to ten years after completing their initial professional education since this is the time it can take for a position to become available in public kindergartens or schools. In the meantime, this person may have been teaching in the private sector or may have been engaged in an entirely different profession all these years.

Therefore, following the guidelines of UNESCO 1997 and those of the committee for Educational Reform in Cyprus, the Ministry of Education, Sport and Youth prepared a proposal in 2014 for a new process of appointing new teachers in the public education sector. In 2015, the Greek-Cypriot Parliament passed a specific bill in accordance with the Ministry's proposal and a new teacher appointment system has been in place since 2017.

The criteria taken into consideration for including teacher candidates in the Appointments List include the following:

1. Written examination (45 credits)
2. Additional academic qualifications (up to 20 credits – 15 for a Master's degree and 20 for a Doctorate)
3. Educational experience (25 credits)
4. Year of graduation (first degree) (5 credits)
5. Average grade of first degree (3 credits for Excellent, 2 credits for Very Good and 1 point for Good or when there is no grade on the degree)
6. Service with the National Guard (2 credits)

The written examination takes place every two years and is open to new applicants and those already on the Appointments List wishing to improve their overall score. The examination score of each candidate is valid for ten years. To stay on the list, they have to take the exam again within two years before the end of the tenth year.

Candidates who fulfil all the requirements and are on the Appointments List have to follow an assessment programme during which their pedagogical and methodological abilities are assessed. If they are assessed as inadequate they will be obliged to participate in a special course offered by the C.P.I. with the aim of enhancing the necessary skills to be effective in their teaching. If the teachers who participated in the special programme are still assessed as inadequate when they return to the teaching position, they will be removed from the list (MoESY 2021b).

New assessment system

In January 2019, the MoESY developed the new system for the formative assessment of teachers and of school evaluation (public education), including kindergartens. The main purpose of the proposal was to develop an evaluation plan which helps to enhance the quality of the education provided.

The evaluation maintains a pedagogical character and aims at the feedback of all those involved in the learning process: students, teachers, parents, guardians and the educational system in general, with the main aim of giving feedback on the effectiveness of the educational practices and setting priorities for future action.

The basic principles of the assessment system include:

- Support processes for teachers and kindergartens through formative assessment and school project evaluation
- Provisions to support new teachers, contractors and substitutes
- Transparency and dialogue between all stakeholders
- A meta-assessment process, with the aim of gathering information for the continuous improvement of the evaluation criteria, the forms and the procedures used in the evaluation.

Based on the new assessment system, the following are evaluated:

- Substitutes and special contract teachers
- Teachers on probation
- Permanent teachers, senior teachers, assistant principals
- Principals
- Inspectors / Supervisors
- First Education Officers

The objectives of the assessment system are defined as:

- Providing schools and teachers with constructive feedback on the effectiveness of their educational practices and definition of their future priorities
- Establishing standards for efficient and continuous processes of internal evaluation and improvement
- The evaluation of the kindergarten's ability to carry out effective and continuous internal improvement
- Ensuring ongoing professional training and support for all involved
- Monitoring the practices of the kindergarten and all involved to achieve high quality standards and ensure accountability.

Finally, the system is unified and includes two types of evaluation:

1. Internal evaluation (self-evaluation): Internal evaluation, as a process of self-assessment, will be developed by the school as an internal process with initial needs detection, planning, implementation, monitoring and evaluation of actions.
2. External evaluation (feedback): External evaluation will follow and support self-assessment and will provide feedback to the kindergarten so that the process of re-designing can then be documented by an external assessment panel to strengthen and support the self-assessment process (MoESY 2021c).

Quality Framework for Early Childhood Education and Care (ECEC)

The Ministry of Education, Culture, Sport and Youth with the Ministry of Social Welfare Services are involved in a project with UNICEF funded by the Next Generation EU which aims to develop the EU Quality Framework for ECEC in Cyprus. A working group of experts from both ministries and the ECEC field have been meeting to unfold, define and describe the elements of high quality ECEC for all children and provide suggestions for their development and implementation. The framework is guided by five elements: access, staff, evaluation and monitoring, governance and funding, and curriculum. After several meetings the working group has prepared the elements of the Quality Framework for ECEC taking into consideration the Greek-Cypriot context. The document will be presented to the two ministries for considering their own actions during the following months.

9. Recent country-specific research focusing on ECEC staff

There are limited research projects which focus on ECEC professionalisation and staffing issues. Nevertheless, the following research examples provide a general picture of professionalisation issues in the field. These include three studies that (1) focus on the role of the practicum/work placement in initial professional education at the time of COVID, (2) elaborate on infant practices for initial teacher education programmes and (3) discuss continuing professional development for digital skills enhancement.

School practicum experiences at the time of COVID-19: Focusing on the implementation of play practices

Source: Loizou and Theodosiou 2022 (see *References* for further details).

Aims: The study describes the experiences of fourth year Early Childhood Education (ECE) pre-service teachers during their school practicum at the time of COVID-19 in Cyprus. The authors aimed to see how capable pre-service students felt in surpassing difficulties, such as COVID-19, when implementing play practices, and how their interaction with others (e.g., supervisors, peers, and mentors) made them stronger to cope with COVID-19 related stress.

Methods/Procedures: The participants were 28 fourth-year preservice female students who completed their practicum experience at public preschools. The data collection included the completed reflective journals at the beginning, the middle and at the end of the practicum that the students had to complete. These journals included open-ended questions guiding the student teachers to reflect on their play practice, the impact of the COVID-19 pandemic and the health protocol on their planning and implementation of play, their teaching abilities, as well as the support they received during their school practicum.

Findings: The findings focus on the play practices of preschool teachers during their practicum in COVID-19 period, and are presented in three sections: 1. Emotions and challenges expressed at the beginning of the internship at the kindergarten, 2. Play practices and teacher involvement in play during the COVID-19 pandemic and 3. Solutions found in the implementation of practices during the COVID-19 pandemic. The findings suggest that preschool teachers not only experienced this in different ways, but that there were constructive discussions that contributed to the implementation of their play ideas.

Implications: Play as a practice, which is often discussed as crucial for children’s learning and development, can be “vulnerable” in adverse situations such as the COVID-19 pandemic, but teachers can be creative enough to turn this vulnerability into potentiality.

Infancy pedagogy and praxis

Source: Loizou and Demetriou 2019 (see *References* for further details)

Aims: Through an examination of the reflective comments of 42 preservice Early Childhood Education Teachers (PS-ECETs), this study describes how an infancy course within an Early Childhood Education programme used four different ways of organising learning to unravel details of infant pedagogy, focusing on the role of the teacher.

Methods/Procedures: The participants of this study were 42 female pre service ECE Teachers in their second year of studies who were registered for the course ‘EDU102: Infancy and Practice (0–3 years)’. The data collection included the reflective assignments of 42 students focusing on visits 5 and 6 which involved the implementation of the four ways of organising learning. For these reflective assignments they were provided guidelines to focus on their actions, children’s and teachers’ actions, as well as their emotions in reference to their caregiving role.

Findings: Findings suggest that the way PS-ECETs describe their roles and the goals they set for the infants differ according to the specific way of organising learning (routines, structured play, quiet time observation, and purposeful playful intervention). The level of teacher involvement changes according to the way of organising learning, being more active during structured play and less active during quiet time observation.

Implications: Findings allow conclusions to be drawn about infant teachers’ practices (appropriate ways of interacting with infants to provide education and care), teacher education programmes that educate infant teachers along with professional development programmes for in-service infant teachers.

A teacher professional development programme for digital skills enhancement

Source: Papolomontos 2021 (see *References* for further details)

Aims: Considering that digital technologies constitute a most integral part of our lives and at the same time offer opportunities for effective teaching and learning, the Pedagogical Institute offered a Training Programme aiming to enhance the development of teachers' digital skills. The Programme was completed by 47 teachers from all levels, including kindergarten. The purpose of this study is the presentation of the programme and the views of the teachers who completed the programme.

Methods: A PD Programme was offered remotely, utilising the Online Learning Environment (OLE) of the C.P.I. It consists of an Introductory Module and 10 other Learning Modules with themes defined through a process of diagnosing the needs of teachers but also taking into account European and national directions. All 47 participants completed a questionnaire electronically at the end of the programme.

Findings: Findings show that the purpose and the expected results of the Programme were clear and unambiguous (61%), the general content, which was also described as "innovative" by the trainees, met its purpose and objectives Programme (61%). Also, the Programme was described as clear and understandable (63%), responding to the expected results (63%) and was useful for the development of their digital skills (76%). As far as the Programme met their expectations, one (1) person said little, 18 (39%) people said enough and 27 (59%) people a lot.

Implications: The findings have implications for the revision and improvement of the programme. It is suggested that the time period for which the programme is offered needs to be reconsidered to avoid time pressure and additional workload. A reduction of the theoretical component of the programme is also proposed.

10. Workforce challenges – country expert assessment

There are specific issues within the ECEC field in Cyprus which are directly related to quality and have an impact on the educational system and specifically on the effectiveness of the experiences we provide for children and thus their learning and development.

Quality issue 1: Salaries in the ECEC field

The field of early childhood education has always been underestimated by society and the government in terms of the importance of early education and care. This is reflected in the fact that people working with children aged 3 months to 3 years do not need to have a degree; a school leaving certificate is considered sufficient. In addition, in the private sector, which is the largest provider of places for children from birth up to 4 years 8 months, Nursery and Childcare Teachers are rarely acknowledged by their employers and are mostly underpaid (see *Chapter 8*). Since there are many early childhood teachers with a degree in ECEC, the providers are always in the safe position to find someone when the need arises. This affects the quality of education and care offered to children and will continue to do so in the near future. Teachers will be less and less motivated to work with children and this will definitely have an impact on children, their development and learning and finally an impact on society.

Quality issue 2: Teacher assessment and evaluation

The evaluation of teachers and the educational work of a preschool (public and private) is or rather should be a continuous dynamic process integrated in the daily operation of the setting. Unfortunately, the small number of Early Childhood Education officials and supervisors in Cyprus in combination with the procedures followed by the two ministries do not fully cover this need. The evaluation process should, in addition to assessing the educational work of the kindergarten, be linked to the general educational planning and the development of action plans of the Ministries. The ultimate goal should be to improve the quality of the educational work and the teachers who provide it. The ECEC system of Cyprus needs to be revised and adjusted so that the goal mentioned above is achieved to the maximum extent possible. This achievement will provide feedback on the teaching and administrative work of teachers, teaching practices, training programmes, while contributing to the creation of awareness, motivation, efficiency and enhancing individual responsibility without cancelling scientific training. These procedures

should include support for teachers and kindergartens, as well as provisions to support new teachers, contractors and substitutes. In addition, they should rely on transparency and dialogue between all the stakeholders. In addition, since Nursery and Childcare Teachers are expected to focus on care, they are not evaluated in reference to the education part of their work. It is imperative that education becomes part of their work and they get to be evaluated by both Ministries.

Quality issue 3: The role of Teacher's Assistant

In ECEC, the staffing of kindergartens with properly trained staff is constantly emphasised in order to ensure quality education. The kindergartens in Cyprus, public, private and community settings employ Teachers' Assistants, who mainly support the teacher in reference to the cleanliness of the classroom, morning welcoming of children, preparation of art materials, etc. It is imperative to staff preschool classrooms with more than one trained adult so that the needs of all children are fully and adequately met. In Cyprus each preschool has 25 children without the provision or possibility of supporting the teacher's pedagogical work either by another teacher (co-teacher) or someone who is partially trained in ECEC. At the time of COVID-19 it was even more evident that if classrooms were staffed with two ECEC teachers, then provision of quality education would have been possible.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms chosen in this report for the main forms of centre-based ECEC settings are **nursery** (*vrefikos stathmos*, 0–2), **childcare centre** (*vrefokomi-koi/paidokomikoi stathmoi*, 0–4) and **pre-primary school** (*nipiagogeio* – formerly kindergarten 3–5)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Cyprus

1880	Founding of first establishment for young children in Larnaca, shortly after the onset of British dominance
1898	First curricular guidelines for early childhood education issued, following the example of Greece
1920–1930	44 pre-primary groups attached to primary schools are set up and subsidised by the (colonial) government (39 for the Greek community, four for the Turkish and one for the Armenian community).
1933	Following an uprising on the island, only 15 of the centres survive.
1933–1960	<ul style="list-style-type: none"> – All public institutions lose government subsidies and are transferred to the private sector – By 1960 there are 48 centres for 3 to 6 year-olds, mostly unlicensed and staffed by professionally unqualified persons.
1960	Cyprus gained independence from the United Kingdom.
1960s to 1973	Only 10% of children aged 3 years 8 months to 5 years 8 months attend the existing 13 public and 37 private centres.
1974–1979	Following the Turkish invasion, 55 of 133 primary schools and public kindergartens are demolished and only 89 of 121 private institutions remain undamaged.
1975–1976	An Early Childhood Education Department is established at the Pedagogical Academy.
1977	First community kindergarten opened
1979	Government expansion plan to increase number of public sector ECEC centres to 300.
1987–1988	The number of students attending the Pedagogical Academy to become Early Childhood Teachers increases from 30 to 60.
1994	Publication of a pre-primary curriculum part of the elementary school curriculum
1996	Number of community kindergartens reaches 166.
2004	Compulsory and free of charge attendance in an ECEC setting (<i>prodimitiki</i>) accredited by the Ministry of Education and Culture
2008	The official Educational Reform at the Ministry of Education and Culture begins and includes early childhood education.
2013/14	The majority of kindergartens (265/515) are state-maintained, whereas the majority of nurseries and age-integrated childcare centres (108/172) are private for-profit facilities.
2014	The second phase of the Educational Reform begins.
2018	Council of Ministers decides to gradually raise the school entry age
2020/21	School entry age is raised to 5 years 10 months
2021/22	School entry age is raised to 6 years

Sources: Loizou 2018; Eurydice 2023, 4

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. The relevant formats for Cyprus are **0–2**, **0–4** and **3–5** years.

ECEC system type and auspices²

In Cyprus, the system of early childhood education and care is organised separately and partly in parallel. Nurseries for children under 3 years of age are under the responsibility of the Ministry of Labour, Welfare and Social Insurance (*Ypurgeio Ergasias, Pronoias kai Koinonikon Asphaliseen*). Kindergartens for 3 to under 6 year-olds come under the auspices of the Ministry of Education, Sport and Youth (*MOESY – Ypourgeiou Paideias, Athlitismou kai Neolaias*). Age-integrated centres for children up to the age of 5 years and 8 months fall under the responsibility of both ministries, each of which oversees the corresponding age group.

General objectives and legislative framework

The government "National Strategy for Lifelong Learning 2014-2020" (*Ethnikä Stratägikä gia tä Dia Biu Mathäsä*) sets out reform goals with regard to all forms of learning (formal, informal, non-formal). These include: Access for all; improving the quality and effectiveness of education and training; promoting research and development activities; improving labour market opportunities.

Since 2014, there has been an action plan for the reform of the education system, which also partially includes the system of early childhood education, upbringing and care (especially with regard to demands for further training and education of staff).

In nurseries for under 3 year-olds (*vrefikos stathmos*) the focus is more on care than on education. For childcare centres for children up to the age of 5 (*vrefokomikoi/paidokomikoi stathmoi*), the Children's Act applies (*O Peri Paidion Nomos tu 1993*, amended in 2011). State kindergartens are regulated by primary education regulations (*O peri Stoicheiodus Ekpaideusäs Nomos 2012*), private and municipal kindergartens by the Law on Private Schools and Institutions (*O peri Idiotikon Scholeion kai Phrontistärion Nomos tu 2012*).

The Special Education Act (*O Peri Agogäs kai Ekpaideusäs Paidion me Eidikes Anankes*, 1999, amended in 2001) stipulates that children with special educational needs are to attend mainstream institutions, which must be equipped with the necessary infrastructure and support measures.

ECEC entitlement and compulsory attendance

There is no legal entitlement to a place in an ECEC setting for under 3 year-olds.

Following a decision of the Council of Ministers in January 2018, the maximum age of children attending childcare centres is to be gradually increased from 4 years and 8 months to 5 years. Similarly, the starting age for primary school is to be increased gradually from the current age of 5 years and 8 months to the age of 6 (*MOESY 2022a, 2023*).

Pre-primary school (formerly kindergarten) is compulsory for children aged 5 and over and free for 26 hours per week. Attendance is voluntary for younger children.

Currently, there is an attempt by the MOESY, supported by all parties, to change the starting age of compulsory pre-primary education to 4 years instead of 5, but this has not as yet been voted on by the House of Representatives (*Loizou 2024*).

² The Eurydice country report on ECEC in Cyprus provided the main orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

Main types of provision

Nurseries (*vrefikos stathmos*) for children aged 6 weeks to 3 years and **childcare centres** (*vrefokomikoi/paidokomikoi stathmoi*) for children up to the age of 5 years are either independent settings or they are integrated into kindergartens and are then multi-age settings. They are open from 1 September to 30 July; they are closed in August and on 12 public holidays. As a rule, they are open from 7:00 to 17:00. ECEC settings are available in all places where more than 10 children live. Children from places with fewer than 10 children are transported free of charge to the nearest facility. In 2018/19, there were 229 nurseries for children under 3 years of age (CYSTAT 2021, no newer data available at the time of reporting).

Pre-primary schools / kindergartens (*nipiagogeio*) accept children from 3 to 6 years. State-run pre-primary settings, which are open from around mid-September to the end of June, usually have opening hours from 7:45 to 13:05; only a few are open until 16:00. In municipal/community pre-primary settings, the opening hours are usually agreed with the parents' council so that the parents' working hours can be taken into account. Most private settings are open in the afternoon.

In 2022/23, there were 347 pre-primary schools/kindergartens in Cyprus (272 public, 75 community schools) (MOESY 2022b).

Provider structures

There are three kinds of provider of ECEC settings: (1) Public/state-maintained institutions which are established and fully funded by the state; (2) non-profit private institutions which are organised by voluntary initiatives or associations and receive state subsidies; (3) private commercial settings which are founded and financed by a legal entity.

State-maintained **nurseries** are established by the Ministry of Labour and Social Affairs and state-maintained **pre-primary schools/kindergartens** by the Ministry of Education, Sport and Youth (MoESY). Both are run in cooperation with local authorities. The operation of both private non-profit and private for-profit facilities must be approved by the MoESY. Places in state-run nurseries are limited, since there are few of them compared to private non-profit and private for-profit facilities. Parents have to apply for a place, and these are then allocated according to certain criteria such as the employment of both parents or the number of children in the family. The larger majority of children aged 0–2 years who attend a nursery are in private-commercial settings – 68% in 2018/19 (CYSTAT 2021, no newer data available at the time of reporting). In the same year, just under 3% of children enrolled were in a state-maintained nursery, whereas nearly half of children aged 3 and above were enrolled in a state-run pre-primary school/kindergarten. In the national statistics for 2019/20, there was no breakdown of the ECEC setting types or the types of private settings. Almost two thirds of the children were enrolled in private ECEC settings (see *Table 1*). One year later (2020/21), both the number of settings (734) and the number of children (32,958) decreased slightly (CYSTAT 2023).

Table 1

Cyprus: Number of children enrolled in ECEC settings (nurseries, childcare centres and pre-primary schools) according to provider type, 2019/20

	Public	Private non-profit and for-profit	Total
Number of ECEC settings	277	466	743
Number of children	12,137	21,192	33,329
Share of children, in %*	36.4	63.6	

Source: CYSTAT 2021 (no newer data available at the time of reporting), *own calculations

Participation rates in regulated provision

The majority of under 3 year-olds are not enrolled in institutions (see *Table 2*), although the proportion fell from 81% to approximately 70% between 2005 and 2019. This is partly due to the fact that informal care provided by grandparents and other relatives is still very common in Cyprus. In contrast, by 2022, three quarters (74.5%) of children between the ages of 3 and school entry were enrolled in institutions. While this proportion rose from 2005 to 2015, it had fallen slightly by 2022.

Table 2

Cyprus: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years, in %	3 years to minimum compulsory school age in %
2005	1 to 29 hours	7	40
	Over 30 hours	12	38
	No enrolment in ECEC	81	22
2010	1 to 29 hours	10	34
	Over 30 hours	16	45
	No enrolment in ECEC	75	21
2015	1 to 29 hours	9.4	49.4
	Over 30 hours	11.4	32.0
	No enrolment in ECEC	79.2	18.6
2022	1 to 29 hours	5.8	19.6
	Over 30 hours	23.7	54.9
	No enrolment in ECEC	70.5	25.4

Source: Eurostat 2023b

According to national statistics, 24.7% of 0 to 2 year-olds attended an ECEC setting in 2018, and 90% of 3 to 5-year olds (CYSTAT 2021, no newer data available at the time of reporting). In 2021, Eurostat reported that two thirds of 4 year-olds (67.8%) and almost all (97.1%) 5 year-olds attended a kindergarten/childcare centre (see *Table 4*).

Table 3

Cyprus: Number of children in ECEC settings by age, 2018/19

Children's age	Number of children
Under 1 year	501
1 year-olds	1,681
2 year-olds	5,007
Under 3 year-olds	7,189
3 year-olds	7,087
4 year-olds	8,637
5 year-olds	9,442
3 to under 6 year-olds	25,166
0 to under 6 year-olds	32,355

Source: CYSTAT 2021 (no newer data available at the time of reporting)

Table 4

Cyprus: Number and enrolment rates of children in ECEC settings, by age, 2021

Age	Number of children in nurseries/ childcare centres	Enrolment rates in nurseries/ childcare centres in %	Number of children in kindergartens/ childcare centres	Enrolment rates in kindergartens/ childcare centres in %
Under 2 years	1,448	7.5	536	2.8
2 year-olds	2,282	24.5	1,859	19.9
3 year-olds	2,589	27.7	3,784	40.5
4 year-olds	1,893	19.9	6,450	67.8

Source: Eurostat 2023h, i

Financing and costs for parents

In 2020, the government spent 13.4% of its budget on education as a whole, which corresponded to 6% of GDP (CYSTAT 2023, 2). For each child in the early childhood and pre-primary sector, €5,204 were spent during the same year.

State-maintained nurseries and kindergartens are primarily funded by the government – either directly or through local school authorities. Public institutions are not allowed to accept any other funds.

While kindergarten attendance in a public setting has been free of charge since 2021 for children aged 5 years and older for 26 hours a week, parents of younger children in public kindergartens must pay a monthly flat fee of €42. In nurseries or childcare centres, parental fees are income-related. Under certain circumstances, depending on the criteria of the institution, a reduced amount may also be charged. Private commercial kindergartens do not receive subsidies from the government and set their own fees, which can vary considerably.

2022 gab ein Paar mit zwei Kindern für die Betreuungskosten etwa 16% des Netto-Haushaltseinkommens für die Kinderbetreuung aus³ (OECD.Stat 2023).

The government, through the Ministry of Labour, Welfare and Social Insurance, is proposing to subsidise the families with a sum of €100–350 for every child under 4 years of age who is attending a nursery/child care or pre-primary setting, starting in 2022-2023. This subsidy depends on the family's wages, children's ages and the number of children in the family. The money will go directly to the ECEC setting the child is attending (Ministry of Labour, Welfare and Social Insurance 2022).

Staff to child ratios and group size

The heads of **nurseries** and **childcare centres** decide on the group structure; legally binding regulations do not exist. However, the following are recommendations regarding the maximum number of children per qualified staff member (see *Table 5*).

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Table 5

Cyprus: Maximum staff to child ratios in nurseries and childcare centres by age

Age	Staff to child ratio
Under 2 years	1 : 6
2 to 3 years	1 : 16
3 to 4 years	1 : 24
Over 4 years	1 : 28

Source: Eurydice 2023, 4.2

In both public and private **kindergartens**, there should be no more than 25 children in a group or the number should correspond to the room size (Eurydice 2023).

In 2018/19, the average staffing ratio in nurseries and childcare centres was 1: 10.9 (9.4 in public, 11.6 in private non-profit and 10.7 in private for-profit). In kindergartens the average ratio was 1: 14.2 (15.5 in public, 16.5 in private-non-profit and 12.5 in private for profit (CYSTAT 2021, no newer data available at the time of reporting). In 2019/20, the overall staffing ratio in the early childhood and pre-primary sector was 1:12.8 – a slight improvement compared to the previous year (1:13.4) (CYSTAT 2023).

Curricular frameworks

There is no official educational plan for the work in **nursery** settings for children under 3 years of age. The activities are usually planned by the centre head and the staff choose the appropriate didactic-methodical approaches. The main goals are the safety of the children and age-appropriate activities.

The curricular framework (*Analytika Programmata*) for **kindergartens** is mandatory for all state and municipal kindergartens and is part of an overarching curriculum for primary and secondary education. In 2020 it was revised, but has been implemented since 2011.

There are four developmental areas: (1) personal and social understanding, (2) emotional empowerment, (3) motor skills, and (4) mental strengthening. In addition to planned structured activities, there is also room for spontaneous activities and play. Furthermore, emphasis is placed on cultural, linguistic and religious pluralism (European Commission 2020, 76).

The curriculum follows the philosophy that every child is unique and should be involved in a democratic way in the decisions that affect them. Learning should be holistic, cross-cutting and based on individual potential. It is child-centred, play-based and emphasises problem-solving skills as well as the development of social skills. The professionals are free to choose how they translate the curricular goals into practice.

In state kindergartens, there is a fixed daily schedule by the state but the teacher is free to revise it based on the children's needs. Private and private non-profit institutions develop their own schedules, which has to be approved by the Ministry of Education, or they can follow the curriculum of the public institutions.

Digital education

The kindergarten curriculum emphasises the pedagogical benefits of digital technologies as a support for learning without specifying the digital competences to be developed (European Commission/EACEA/Eurydice 2019, 100). "Technology" is seen as an integral part of the learning process and as a tool for both professionals and children. Digital media should be integrated

"appropriately" in kindergartens and used in an age-related way. It is pointed out that this should not replace real-life experiences, but rather strengthen and enrich them. It is up to the professionals to decide when and how to use which tools. However, professionals should continuously educate themselves so that they are able to offer children experiences with current technologies.

Monitoring – evaluation

Overall, the evaluation of the education system has not yet been regulated. However, the newly established Centre for Educational Research and Evaluation (CERE) is expected to conduct evaluation studies of the entire system.

Child-related assessment

In **nursery** settings, a personal file is kept for each child, in which the professionals record the child's progress. The first documentation takes place 15 days after entry into the setting and is updated at least every three months.

The assessment of children in **kindergarten**, which is considered an integral part of the curriculum, is done by means of portfolios, photographs, first efforts at writing, etc. At the beginning of the kindergarten year, the child is closely observed and both a diagnostic report (regarding cognitive, emotional and psychomotor development) and an informal report (describing the child's behaviour) are written.

Formative evaluations take place throughout the year through random or planned observations of the child's behaviour. A summative evaluation at the end of the kindergarten year provides the professionals with information for their own self-evaluation as well as for the evaluation and further development of the kindergarten-specific educational programme.

In terms of the transition to school, kindergartens work together with the primary schools. For this purpose, mutual visits take place and information about the children is exchanged. In addition, emphasis is also placed on cooperation with the parents.

The School Progress Report (*Sxoliki Ekthesi Proodou*) should be completed by the teacher for each child twice a year, in January and in June. It is considered to be a useful tool for evaluating progress across the school year and assessing the degree of success of the basic intended outcomes per class and child (MOESY 2019). Nevertheless, it can be restrictive, as it narrows down elements assessed for each child, sometimes losing the bigger picture of the child's overall abilities and potential.

Centre-level internal assessment

Internal assessments usually consist of a report on work of the institution. This is prepared by the kindergarten head, together with the team, and determines whether the self-imposed goals have been achieved.

The Ministry of Education recommends an annual informal report for kindergartens, which is submitted to the Inspector General at the end of the school year.

External evaluation

Quality assurance in **nurseries** and **home-based settings** is the responsibility of the Ministry of Labour, Welfare and Social Insurance. Both the facilities and the professionals are inspected by inspectors from the Ministry's Social Welfare Service.

The responsibility for quality assurance in public **kindergartens** lies with the Ministry of Education, Sports and Youth which inspects the quality of education as well as the professionals. Professionals are usually observed at work and evaluated once a year for their first three years of work and once every three years thereafter. Three supervisors are responsible for the evaluations. In addition, administrative and training aspects, equipment and rooms are evaluated. All observations result in a comprehensive report.

Inclusion agenda

There is no clear inclusion agenda, although the majority of children with special needs and disabilities attend mainstream institutions where care is taken to ensure that they receive appropriate support. Also, there is dual system where some children with disabilities attend special schools. Even though the MOESY initiated a reform for special education starting in 2018, it is still nevertheless considered as distinct and children with disabilities tend to end up being segregated (Symeonidou 2022).

Children with special educational needs and disabilities

Children with specific support needs are either placed in a separate room of a mainstream institution, where a maximum of six children are supervised by a specialist support worker, or they attend a separate institution for children with disabilities (only 5 to 6% attend the latter). An Individualised Education Programme (IEP) is designed by specialists for each child, emphasising psychological, social and other areas of education. The IEP is approved by the Ministry of Education.

Children from deprived socio-economic backgrounds are given priority for admission to public kindergartens (European Commission 2020, 43).

For the school year 2020/2021, 6,836 children with disabilities attended public pre-primary and primary settings, specifically 657 attended 116 special units located in the settings. For the same school year, 498 children attended separate special schools (MOESY 2021).

Children with a migration background – Children from Roma communities

There are no regulatory procedures regarding the enrolment of children with a migrant background in an ECEC setting. According to the "Strategy Report of the Ministry of Education for Multi-Cultural Education", the languages and cultures of children who do not speak Greek as their first language should be taken into account and the children should receive special support, such as learning Greek through intensive courses or materials in other languages.

In 2018/19, there were also (private-commercial) institutions where the language of instruction was not Greek: 1,398 children attended English-speaking, 58 French-speaking and 13 Armenian-speaking kindergartens. 824 under 3 year-olds were enrolled in English-speaking, 220 in Russian-speaking and 49 in Armenian-speaking nurseries. Out of a total of 33,108 children in ECEC settings, 3,195 were from EU countries and 2,250 from non-EU countries, i.e. 16.4% of under 6 year-olds had a non-Cypriot background (CYSTAT 2021, no newer data available at the time of reporting).

2019/20 a total number of 5.798 children with a non-Cypriot background attended an ECEC setting (CYSTAT 2023).

Eurostat data indicate that in 2022, 18.8% of the total population had a non-Cypriot citizenship, more than half of them (55.4%) were from other EU27(2020) countries. In the under 5 age-group, these shares were 9.6% and 63.1% respectively (Eurostat 2023c).

As the Roma population in Cyprus is very small (Council of Europe estimates 0.15% of the population), policies are integrated in the strategy for social inclusion of disadvantaged groups (European Commission 2021).

There is a specific guide (published in 2020) that supports children whose language is not Greek through a list of proposed activities and materials to support them to communicate and develop relationships. It is called “The Guide to welcoming children with an immigrant background” (MOESY 2020).

Parental leave arrangements⁴

Maternity leave lasts 18 weeks, including two weeks before the birth. These two and nine weeks after birth are compulsory. Employed mothers receive 72% of their salary (without upper limit), Employees of the public sector receive their full salary for the first 12 weeks and later 72%.

Fathers receive two consecutive weeks of **Paternity leave**, which is remunerated in the same way as Maternity leave.

Working parents (both parents) can also take an additional 18 weeks of **Parental leave**, two weeks of which can be transferred to the other parent. However, no more than five weeks can be taken in a calendar year. Six weeks (or eight in the case of a transfer) are remunerated at 72% of salary, the rest of the time is unpaid. Parental leave can be taken until the child is 8 years old.

There is no systematically compiled statistical data on the take-up of parental leave.

Current challenges for the ECEC system in Cyprus

Country expert assessment by Eleni Loizou

Lack of staff due to the low paid salaries in the private sector

In the light of current economic changes and the increase in the cost of living in Cyprus, it has been hard for ECEC teachers to keep a job that provides for their living expenses. Most of the ECEC graduates end up working for many years in private childcare and pre-primary settings before they get the chance to be considered for a post in the public sector. The wages in most of these private settings range from €650-850 per month. Thus, due to this low pay and the long hours they have to work, it is often the case that ECEC teachers change jobs or they leave the field completely to do something else that provides a better salary.

Lack of governmental support of public pre-primary schools

The Ministry of Education, Sport and Youth recently introduced a proposal for compulsory pre-primary education to start at 4 years of age. In order to provide and accommodate for all 4 year-olds, the MOESY proposed to subsidise private pre-primary settings instead of building new public pre-primary schools to respond to the demand needs. It is evident that the provision of public ECEC is not a priority for the government, but instead aims to support private schools.

⁴ The brief summary in this section is based on the country note for Cyprus by Maria Angeli in the *International Review of Leave Policies and Research 2023*

A limited number of early childhood education supervisors and policy makers with no ECEC specialist knowledge

It is a fact that ECE is under-represented in the Ministry of Education, Sport and Youth. There are only three ECEC Supervisors for the whole island, whose duties are to supervise, assess and support teachers in all public and community settings. This ratio is inappropriate and does not allow for quality support. Moreover, policy makers are often politicians who are not informed about ECEC and do not seem to have a vision for the field, thus their decision making is based on economic and other political variables only.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Cyprus totalled 904,705 This represents a steady rise over the past 20 years (2000: 690.497; 2005: 733.067; 2020: 819.140; 2015: 847.008; 2020: 888.005) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.39, Cyprus was significantly below the EU27 average (Eurostat 2023d)⁵.

Children under 6 years of age

Table 6

Cyprus: Number of children under 6 years of age, 2022

Age	Number of children
under 1 year-olds	10,275
1 year-olds	9,874
2 year-olds	9,522
3 year-olds	9,313
4 year-olds	9,327
5 year-olds	9,648
Total 0 to under 6 year-olds	57,959

Source: Eurostat 2023a

In 2022, 3.3% of the total population were children under the age of 3, and 6.4% were children under 6 years of age. As in the last 20 years, these shares were above the respective EU averages

⁵ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Single households with children under age 6

More than two thirds (69.7%) of all households with children under 6 are couple households. Single parent households accounted for only 2.2% of all households in Cyprus in 2022 – the statistical data show almost only single mothers (2.1%).

Table 8

Cyprus: Households with children under age 6, 2022

Household type	Total households	Total households, in %*
All households	101,500

Employment rates of parents with children under 6 years of age

In Cyprus, in 2022, the overall employment rate for men (15-64 years) was 83.7% and for women 73.0% (Eurostat 2023j).

In 2022, 71.3% of women and 92.7% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were above the EU-average (87.2%) as were those of mothers (EU-average 63.6%) (Eurostat 2023e, own calculations).

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 9a

Cyprus: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2021

	2010	
	Mothers, in %	Fathers, in %
Cyprus	72.3	91.1

Children at risk of poverty or social exclusion⁹

In 2022, 18.8% of children under 6 were at risk of poverty or social exclusion. This proportion was well below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 16.7% (EU: 21.6%). In 2020, 1.9% of children under 6 and 1.6% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023f, g).

About the author

Barbora Loudová Stralczynská, PhD, is an Assistant Professor of Early Childhood Education at the Faculty of Education, Charles University in Prague. She is in charge of the BA programme for pre-primary teachers. Her research interests include comparative education, inclusive education, support for children from socially disadvantaged backgrounds and health education. She has worked for many years in international and national professional development and integration projects.

1. ECEC governance in the Czech Republic

In the Czech Republic, the system of early childhood education and care is organised in separate sectors. Kindergartens (*mateřské školy*) for 2/3 to 6/7 year-olds and preparatory classes (*přípravné třídy*) for 5 to 7 year-olds¹ come under the responsibility of the Ministry of Education, Youth and Sports, while “Children's Groups” (*dětské skupiny*) – a new type of setting for 6 months to 6 year-olds – come under the auspices of the Ministry of Labour and Social Affairs. The majority of children aged 3 to 6 years attend a kindergarten. Children under 3 years of age are cared for either in a nursery or in a Children's Group. The former crèches no longer exist in their original form. However, some of them continue to operate as care facilities under the sponsorship of municipalities or as commercial facilities under the responsibility of the Ministry of Industry and Trade. They are usually used by parents who have not been able to get a place for their children in a public kindergarten.

Overall, the steering system is organised centrally by the state. However, for kindergartens and preparatory classes, which are part of the school education system, responsibility has been partly transferred to the regions or municipalities.

Responsibilities are divided among the three ministries, considered less than optimal in the long term by early childhood education experts. Even the Czech school inspectorate in its 2015/2016 report viewed centre-based education, upbringing and care in early childhood (0-6 years) as complex and recommended that it be included in the framework of inter-ministerial cooperation (CSI 2016, 31). Some years later, the *Long-Term Plan for Education and Development of the Education System of the Czech Republic for 2019-2023* (MŠMT 2019c) formulated the goal of creating an effective model of care for preschool children together with the Ministry of Social Affairs. Even the long-term plan states that “the system of education and care for children up to three years of age is still not systemically clarified due to unclear responsibilities and concepts for the care of preschool children” (MŠMT 2019c, 32). While some changes have been made in this area, a comprehensive and coherent model for the care and education of children aged 1-6 years has not been elaborated. The current provision of care for children under the age of 3 has systemic deficiencies that create financial problems for parents and do not compensate for the social barriers to accessing care and education, especially when the legal entitlement to a place in a public kindergarten for their 3 years old child cannot be met.

The current policy objective focuses on the provision of places for 1-3 year-olds in childcare centres and kindergartens, on supporting the kindergarten attendance of 5 year-olds from socially disadvantaged families as well as on the integration of Ukrainian refugee children in public kindergartens. The provision of childcare for children under 3 or 2 years of age is considered part of the social sector's responsibility, and the Czech Republic's Education Policy Strategy 2030+ does not include targets for children under 2 years of age. The 2030+ strategy emphasises the need to ensure greater participation of children aged 3 to 4 in pre-primary education in kindergartens (MŠMT 2021a, 20). Inter-agency collaboration currently focuses on supporting vulnerable children and their families². Cooperation between the Ministry of Social Affairs and the Ministry of Education focuses particularly on ensuring compulsory pre-primary education for 5 year-

¹ Children deferred from compulsory school are given priority for admission.

² Collaboration of the Ministry of Social Affairs, the Ministry of Education and the Ministry of Health under the project Support for Systemic Change in Services for Children, Youth and Families at Risk in the Czech Republic (2018-2022). <https://www.mpsv.cz/podpora-systemovych-zmen-v-oblasti-sluzeb-pece-o-ohrozene-deti-mlade-lidi-a-rodiny-v-ceske-republice>

old children who do not comply with this obligation and on supporting families at risk of social exclusion.

Between 2018–2021, a research project reviewing the impact of introducing a compulsory last year of pre-primary education was conducted and funded by the Ministry of Education. The research has shown a partial benefit of the introduction of compulsory pre-primary attendance in kindergartens on the frequency of children's attendance. For example, the regularity of children's attendance has improved as a result of the introduction of compulsory notification of non-attendance. "While 92% of children without social disadvantages attend kindergarten every day, according to the directors this is the case for only two thirds of children from socially disadvantaged backgrounds (64%). Sixteen per cent attend several times a week, 15% several times a month and 5% do not attend at all." (Greger et al. 2022, 142)

2. Who belongs to the early years workforce?

In ECEC settings, the qualifications of core pedagogues and other personnel depend on the type of workplace. There are fundamental differences in the qualification requirements for staff in educational institutions (kindergartens, preparatory classes) and in settings that provide childcare without explicit educational goals (Playgroups, Children's Groups, Toddler Crèches and other forms of childcare).

2.1 Regular contact staff in ECEC provision

Education sector

Staff in kindergartens and preparatory classes

According to the law, "pedagogues" or "pedagogical employees" work in kindergartens (*mateřské školy*) and preparatory classes (*přípravné třídy*). In everyday terms these are usually called **Kindergarten Teachers** (*učitelka/učitel*) and this is the terminology used in this report.

In both kindergartens and preparatory classes in schools, different kinds of **pedagogical support staff**, most of them qualified, may also work at times alongside the Kindergarten Teacher to provide support measures for individual children. Since September 2016, the supplementary support staff have included Teachers' Assistants, School Assistants, Bilingual Assistants, Social Care or Special Needs Teachers and Kindergarten Psychologists³. Between 2016 and 2022, kindergartens which worked in groups with at least two 2 year-olds had the opportunity to co-finance their work through a support programme of the Ministry of Education. As of the school year 2022/2023, this funding will no longer be granted. The care of 2 year-olds can still be supported by School Assistants, for whom a new funding programme provides subsidies to the kindergartens. However, the scope of work of the School Assistants is broader.

The Ministry of Education has launched several funding programmes in recent years which provide kindergartens with simplified access to funding for support staff. Systematic changes in the staffing of groups with 2 year-olds were ultimately not implemented. The main focus in the area of supplementary staff is the support of children with special educational needs and their integration into regular kindergarten groups.

³ Information from the Ministry of Education, MŠMT, 01.09.2016

Childcare sector

Staff in Children’s Groups and social care settings

The persons who work with children in children's groups and other childcare facilities are referred to by the umbrella term **Caregivers**. In fact, persons with very **heterogeneous** qualifications may work in Children's Groups.

Since October 2021, new qualification requirements for staff in Children's Groups have been in force (MPSV 2021a). The range and type of professional qualifications (education, health, social care) remain unchanged. The new job titles are: **Caregiver for pre-school age children** and **Caregiver for children in Children’s Groups**. Since July 2022, persons without a higher education entrance qualification (subject-related or general) are no longer allowed to carry out this work. For persons employed by existing providers who do not meet the new requirement, an exemption has been introduced with the obligation that staff complete their training by 1 October 2024. In addition to the above qualifications, the following persons may also work in children's centres: Kindergarten Teachers, Primary School Teachers, Educators, general nursing and care personnel, Midwives, Health Care Assistants, social services employees, Medical Doctors, health care workers, (Clinical) Psychologists.

Since 01.07.2022, the following new provisions apply to the profile of professionals working in Children’s Groups (“Caregivers”):

- (1) Care is provided by at least one person with a professional qualification in health care or a professional qualification as a Caregiver in a Children's Group.
- (2) If a child who is 3 years or older on 1st September is present in the group, at least one Caregiver with a professional qualification in education will carry out the work for at least 20 hours per week in the Children's Group (MPSV 2021a).

Table 1 gives an overview of the staff in both the education and childcare sectors who are in daily contact with the children. For core pedagogues, a reference to the professional profile according to the SEEPRO categories is added (see Box at the end of this Chapter).

Table 1

Czech Republic: Regular staff in ECEC settings

Job title	Main ECEC workplace settings and age range ⁴	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Education sector

<i>Profile:</i> No clear profile because of the variety of professionals working in Children's Groups (see <i>Table 6</i>)				<i>Award:</i> Subject-linked higher education entrance qualification ECTS credits: n/a EQF level: 4 ISCED 2011: 354 <i>or</i> many other possible qualifications – see <i>Table 6</i>

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Requirements for Centre Leaders vary according to the type of ECEC setting.

Childcare sector

Children's Group leaders

The Children's Group Act No. 247/2014 does not distinguish between managerial and support staff. In general, providers are subject to the qualification requirements described above (see *Table 1*). Although in practice a specific person is responsible for the management of a Children's Group, the law does not prescribe additional qualification requirements. There is no official job description for the position of director, which is a matter for the provider. However, from October 2021, it is mandatory for at least one person to have a health care degree if there are children under 3 in the group, or an educational degree if there are children over 3 in the group. These persons are expected to provide quality assurance as set out in the Quality Standards for Children's Groups (criteria for the standards are set out in Decree No. 350/2021 Coll.) (MPSV 2021b).

Kindergarten Head

The qualification requirements for a Kindergarten Head are described in the Act on Pedagogical Teaching Personnel (No. 563/2004 Coll., §5). A head is appointed by the provider. For a management position in a kindergarten, at least three years of practice are required: (1) as a Kindergarten Teacher or (2) practice in activities that require knowledge of a similar specialisation or (3) another management activity or (4) at least three years of activity in research and development.

A Kindergarten Teacher may follow a "course for school management" (further education for pedagogical specialists according to the Act on Pedagogical Teaching Personnel No. 563/2004 Coll., §24, par.4 a), which must be completed no later than three years after starting as a Kindergarten Head. The qualification in management of an ECEC setting can also be acquired within the framework of a Bachelor's or Master's degree programme.

Leadership tends to be understood as hierarchical, although the transformation of the Czech school system in recent decades has increasingly emphasised collegial leadership. The leadership positions are distributed among the so-called director and their deputy. On the third level of the management hierarchy are Kindergarten Teachers as core pedagogues and below them come the supplementary pedagogical staff and non-educational kindergarten personnel. The current government has prepared an amendment to the Teaching Personnel Act, which went through the approval procedure in 2022–2023. The new version provides for a differentiation of roles within the group of core pedagogues (e.g. as a mentor specialist for trainees).

The Kindergarten Head also works directly with children on a regular basis, whereby the hourly amount of direct pedagogical work with children is reduced depending on the number of groups (classes) (Government Ordinance No. 75/2005 Coll.; MŠMT 2019a). The kindergarten management is appointed by the provider. Since 2012, the term of office of the Kindergarten Head has been six years in accordance with Section 166(2) of the Education Act (MŠMT 2016, most recent amendment 2023). After six years, the service provider can re-advertise the post.

The kindergarten management bears full responsibility for the personnel, financial and pedagogical management of the kindergarten. The high level of autonomy and responsibility of the head at all levels of the school system place considerable demands on the office. One of the consequences of this is the general shortage of management staff and the low interest in this position in the Czech Republic, which is reflected in the low number of applicants for this position following advertisements. The high administrative burden for Kindergarten, Primary and Secondary school heads has long been criticised (Simonová et al. 2017; Federičová 2019; MŠMT 2020a). As research has shown, the workload that is the potentially most demanding for heads is that related to the organisation of the pedagogical staff and communication with them (Smetáčková et al. 2018).

2.3 Centre-based posts of responsibility

In the Czech Republic, there are no designated posts of responsibility for specific pedagogical tasks across the entire ECEC setting (e.g. with a focus on work with migrant families), neither in the childcare sector nor the education sector.

Kindergartens can apply for funding under the MŠMT funding programme for School Assistants, Social Pedagogues and Bilingual Assistants. Such posts are expected to promote social cohesion, working with a heterogeneous group of children and cooperating with the children's families. This includes support for multilingual children and children from socially disadvantaged backgrounds (e.g. families with a migration background).

There is currently a **new formal specification** of posts between trainee teachers, experienced teachers and mentors for students, resp. newly-qualified professionals in the amended version of the Act on Pedagogical Teaching Personnel No. 563/2004 Coll., §24 from September 2023 (valid from 1.1.2024). The employer's obligation to provide induction for trainee teachers is explicitly stated in the legislation for the first two years of pedagogical practice:

“The **induction teacher** in particular guides the novice teacher methodically during their adaptation period, continuously and regularly evaluates with them their direct teaching activities and the performance of work related to their direct teaching activities and familiarises them with the school's activities and documentation.” (Act on Pedagogical Teaching Personnel No. 563/2004 Coll., § 24b)

(1) The **accompanying teacher** shall methodically guide a student of another school or college or a participant in the further education of teaching staff referred to in § 22 (1) (a) preparing for the profession of teacher in the context of practical teaching, practical training or practice.

(2) The accompanying teacher may be a person ... who has acquired experience consisting in the performance of direct teaching activity of 5 years.” (Act on Pedagogical Teaching Personnel No. 563/2004 Coll., § 24c)“

The Labour Code requires employers to provide all school leavers (within two years of leaving school) with appropriate work experience to enable them to acquire the practical experience and skills required for their work. In practice, mentoring is a specific role in kindergartens as well as in primary and secondary schools. However, until 2023, there was no centrally specified system for the induction of Kindergarten Teachers. The specific form was left up to the centre leader, as was any financial remuneration for the mentor. In a new step, however, the forthcoming legal amendment on teaching staff and their training, provides for the introduction of the position of **induction teachers**, mentors for student teachers and novice teachers (**accompanying teacher**). From January 2024, the work of the mentor will be financially rewarded, and the mentor will be granted a reduction in the hours of direct pedagogical activities in order to support new colleagues.

2.4 Co-ordinating and supervisory staff

There are no legally regulated qualification requirements for educational counsellors. In the Czech Republic, there is no single counselling centre that provides comprehensive counselling for kindergartens or actively engages in pedagogical practice itself. The counselling function is performed by several institutions of different types, which can be used directly by kindergartens or individual professionals and parents:

- **School counselling centres** (pedagogical-psychological counselling centres and special needs education centres): they carry out assessments and offer support and counselling to schools, including kindergartens, and parents, especially in the area of support for children with special educational needs.
- The **National Pedagogical Institute** provides training for pedagogical staff and teachers, develops support platforms and methodological advice,
- **NGOs** and non-profit organisations.

The staff of the above-mentioned institutions must have adequate training and practical experience in the field. However, the requirements for their qualifications are determined by the individual institutions. An exception are the professionals of the school counselling centres, whose qualifications are enshrined in the Act on Pedagogical Teaching Personnel (MŠMT 2023a).

Inspection activities in the field of pedagogical work are carried out on a broad basis only in kindergartens. They are carried out by employees of the Czech School Inspectorate. The qualification for the function of inspector is the legally required education for this position (§ 25(1)(e) of the School Act), i.e. a university degree in pedagogy, psychology or another related field and usually five years of pedagogical or pedagogical-psychological practice (MŠMT 2022a).

2.5 Specialist support staff

Childcare sector

Support for children with special educational needs is not provided for in the legal regulations for **Children's Groups**. This is due to the nature of the institution, as Children's Groups are settings for the care of children, which are not obliged to offer support measures and ensure the education of children. For children with special needs, there are usually no specialists available as support staff.

Education sector

In **kindergartens** and **preparatory classes**, in addition to the Kindergarten Teacher, a mostly qualified **Teacher's Assistant** (*asistent pedagoga*) may also work in the group from time to time to provide possible support measures for individual children (see **2.1**). The number of working hours of the support staff is determined by the school counselling centres and depends on the assessment made of each individual child.

The Teachers' Assistants can also be assigned to several children in a group (as a so-called joint supplementary assistant), so that the kindergarten can coordinate and vary the workload of the staff depending on the number of children with recognised special educational needs and the changes in the support measures that occur during the child's attendance in kindergarten. Since 2020, there is no maximum number of children per Teacher's Assistant (MŠMT 2019b). The personnel management in this area represents a considerable administrative burden for the Kindergarten Head.

The presence of two Teachers' Assistants in a group is currently an exception, as an amendment to the 2021 regulation on the education and upbringing of children with special educational needs has increased the maximum number of staff in a group to three (MŠMT 2020b). The vast majority of kindergartens therefore have two Kindergarten Teachers and one Teacher's Assistant. In the school year 2020/2021, the most frequently used support measure in groups of children with special educational needs was support by a Teacher's Assistant (63.9%). On average, the number of kindergartens in the Czech Republic enrolling children with special educational needs is increasing; in the school year 2020/2021, more than one fifth of all kindergarten groups belonged to this category (CSI 2022).

The support can take place within the framework of joint educational activities for all children or separately in specially equipped rooms. This work of the Teachers' Assistants is determined in their job description by the Kindergarten Head and in relation to the specific conditions of each individual setting.

Kindergartens can also be supported by an external staff member from the school counselling office. However, this is an exceptional measure for regular kindergartens. The presence of special education staff is only typical for special kindergartens. If a child needs sessions with a Speech Therapist, this is usually carried out outside kindergarten hours and accompanied by the parents. Before 1989, Speech Therapists were part of the kindergarten staff in many kindergartens and speech therapy was offered to children directly in the kindergarten (Opravilová and Uhlířová 2021).

3. Structural composition of the ECEC workforce: qualifications, gender, ethnicity

Since early childhood education and care in the Czech Republic is organised as a split-sector system, statistical data are compiled and structured in different ways. The Ministry of Labour and Social Affairs does not carry out any statistical compilation of the qualification, gender or age structure of employees in Children's Groups. There is no statistical data on the qualification structures of staff in Children's Groups and institutions subject to the Trade Act – they can therefore not be included in this overview. The personnel statistics of the Ministry of Education only take into account kindergartens and preparatory classes.

Table 2

Czech Republic: Staffing structures in kindergartens and preparatory classes in schools (2–6 years), 2020

Personal	Proportion of workforce in %
Kindergarten Teachers with a relevant higher education degree – Ph.D.	0.1
Kindergarten Teachers with a relevant higher education degree – Master	9.3
Kindergarten Teachers with a relevant higher education degree – Bachelor	14.6
Kindergarten Teachers with a relevant award from a tertiary professional school	5.9
Kindergarten staff with a relevant upper secondary qualification	69.1
Kindergarten staff with other, non-specialist qualification	1.1
Staff with no formal IPE	6.1* (converted to full-time employees, the proportion is 5.8%*)
Specialist support staff (see 2.5)	Mostly not on-site; may be employed as supplementary staff in cases of need
Male staff	In kindergartens: 0.74
Kindergarten staff with a migration background	No national data available. Staff with a migration background work primarily in areas with a high proportion of minority languages (mostly in larger towns and industrial areas).

Sources: MŠMT 2022b; *CSI 2022

The proportion of qualified Kindergarten Teachers in the pre-primary workforce has steadily decreased nationwide since 2017/2018 and was 93.9% in 2020/2021. Converted to full-time employees, the share of unqualified staff is 5.8% (MŠMT 2022b). The qualification rate of staff is significantly lower in the economically richer regions, especially in Prague and in Central and Western Bohemia. This may be related to the higher cost of living, which is not easily covered by the salary of a Kindergarten Teacher. In addition, due to the shortage of skilled workers, many unqualified people are hired, especially in larger cities. However, they are only allowed to take on the work if their qualifications are supplemented on the job. By way of contrast, in the economically weaker regions (south-east Bohemia and south-east Moravia), the teaching profession in kindergartens and schools is a stable job. An exception are remote regions with a complicated socio-cultural situation (e.g. north-west Silesia), where unemployment is high and there is a long-term shortage of qualified workers.

At the same time, the proportion of people with **higher education** is increasing significantly (the Ministry of Education takes only core pedagogical staff into account in the statistics). In the last ten years, the number has more than doubled (see Annex 1 in the Appendix). In the age group of core pedagogues between 26 and 35 years, university degrees even slightly outweigh upper secondary awards. This can be seen as a very positive development (CSI 2022) (see *Table 3*).

Table 3

Czech Republic: Kindergarten Teachers with a relevant higher education degree – BA, MA, PhD

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Percentage	11.8%	13.5%	15.1%	17.2%	18.9%	20.3%	21.1%	21.8%	22.7%	24.0%

Until 1989, there were no **male professionals** working in kindergartens at all. Their percentage is now increasing every year, especially in the big cities (in the school year 2021/2022 there were 1.5% men in kindergartens in Prague). In the Czech Republic, the pre-school education sector has long been characterised by a high proportion of women (Bendl 2002; Fárová 2015; 2018). The proportion of males, at 0.74%, has long been well below the average for European countries (Loudová Stralczynská et al. 2022). 99.28% of teachers in kindergartens are female, and in preparatory classes 97.85% (MŠMT 2021c). In an international comparison, the Czech Republic is below the European average with 0,5% men in pre-school education and 5,8% in primary school (Eurostat 2021).

In the Czech Republic, there are no official data on **staff with a migrant background** in the pre-primary education sector. In larger cities, some kindergartens appear to employ Teachers' Assistants or School Assistants with a migrant background. The aim is to help children and families from socially disadvantaged backgrounds (e.g. children with a different family language) to integrate into the education system. While it is a legal requirement for these teachers to pass a language test (MŠMT 2016), they do not have to be native speakers of the language of instruction. Against the background of the conflict in Ukraine and the high number of refugees from Ukraine, the Ministry of Education is also trying to increase the number of Bilingual Assistants. To this end, it also offers kindergartens and schools simplified funding for these teachers.

Statistical data regarding the qualification structure of the active supplementary pedagogical staff such as **Teachers' Assistants** in kindergartens and preparatory classes are very limited. They are only available as proportions among all active supplementary teachers, but not in relation to the respective levels of the education system and the educational institutions⁶.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

This Chapter focuses on the initial professional education options for three staff categories:

- **Kindergarten Teacher** (core professional in kindergartens for 2 to 5/6 year-olds)

⁶ Statistical data are only available for the highest level of training of the supplementary pedagogical staff, but not for the qualification pathways and the form of training programmes. Therefore, no statements can be made about the most frequent qualification paths or number of lateral entrants.

- **Teacher's Assistant** (supplementary support staff in kindergartens with responsibility for children with special educational needs)
- **Caregiver** (an umbrella term for the staff with diverse IPE qualifications working in Children's Groups (6 months to 6 years), micro nurseries (for 6 months to 4 years) and institutions subject to the Trade Act for children up to 6 years of age).

The educational pathways are presented in three tables.

4.1.1 Kindergarten Teacher (*učitelka/ucitel*)

There are currently three qualification routes available for prospective Kindergarten Teachers. However, until now, only the first option (see below) is the minimum *requirement* for taking up a post in a kindergarten.

The qualification requirements in the Czech Republic for all teachers in the education system (including core pedagogues and supplementary pedagogical staff in kindergartens and preparatory classes) are laid down in Act 563/2004 Coll. on Pedagogical Staff, last amended on 1 September 2023 (MŠMT 2023a). Besides the qualification requirements, the Act defines working hours, continuing professional development and the career system. The pedagogical staff are required to have a professional qualification for the specific educational activity they perform; they must also be fully competent, of good character, in good health and have knowledge of the Czech language, unless otherwise specified. The Act is supplemented by two regulations (No. 1/2006 Coll. and No. 317/2005 Coll.), which lay down the conditions for the further training (CPD) of pedagogical specialists, the accreditation commission and the career system.

Kindergarten Teacher – qualifying option 1 (minimum qualification requirement)

Upper secondary vocational school – specialisation in pre-primary and out-of-school pedagogy

After nine years of compulsory schooling and following the completion of a personal eligibility test and demonstration of proven skills in music, sports and the arts, it is possible to enrol at a vocational school with a pedagogical specialisation. Good general health and a standard pronunciation in the Czech language are prerequisites for admission⁷. The initial professional education usually lasts four years and ends with a subject-related (pedagogy) higher education entrance qualification (ISCED 2011: 354; EQF level: 4).

A total of 44 vocational schools (including four denominational schools and twenty public schools) offer this specialised training (MŠMT 2022d). The classical form is accredited as a four-year face-to-face course or a one to two-year course for students with a university entrance requirement in another subject. The majority of vocational schools also offer a distance learning programme of varying length (three to five years or one to two years for applicants with a university entrance requirement in another subject – depending on previous course content, their aptitude and previously acquired training levels and orientation). This form of study (so-called combined⁸ or evening option of ten to 18 hours per week) may last a maximum of one year longer than the regular IPE programme. The individual VET schools can decide independently on the opening of the training programme and its forms in each year. They usually do so on the basis of demand from applicants and the agreement with the school provider (MŠMT 2009b).

⁷ The same applies to the professional qualifying institutions and to the study of early childhood education at the universities. As a rule, confirmation is required from the general practitioner and the speech therapist by all profession-qualifying institutions.

⁸ The combined form of education comprises in-person and distance forms of education – students have both traditional classes and tasks that they perform individually.

The initial professional studies in pre-primary and out-of-school pedagogy qualify the vocational school leavers for a broad field of work. As fully qualified pedagogues they may occupy the following posts:

- **Teacher** in a kindergarten (Act on Pedagogical Teaching Personnel No. 563/2004, compendium of laws, § 6) or pedagogical employee in other kinds of ECEC setting (MŠMT 2023a)
- **Educator** (Act on Pedagogical Teaching Personnel No. 563/2004, compendium of laws, § 16) and **Out-of-school Pedagogue** (Act on Educational Staff 563/2004, compendium of laws, § 17) in outside-school-hours provision (child-care settings, children’s and young people’s centres, children’s centres)
- **Teacher’s Assistant** (Act on Pedagogical Teaching Personnel 563/2004, compendium of laws, § 20)
- **Caregiver** for children under three years of age (in social care institutions regulated by the Trade Licensing Act) or in groups for older children (commercial enterprises).

Kindergarten Teacher – qualifying option 2

Tertiary professional schools – study programmes in pre-primary and out-of-school pedagogy

The second qualification option for prospective Kindergarten Teachers is the study programme in pre-primary and out-of-school pedagogy at one of the ten tertiary professional schools in the Czech Republic which offer qualification programmes specialising in early childhood education. Completion of studies is awarded with a Diploma (EQF level 6, ISCED 2011: 655).

The tertiary professional schools are a relatively new form of higher education providing initial professional education – they were established as part of the Czech education system in 1991. In the meantime, there are now four public, one church-affiliated and five private professional schools. Right from the early days these higher education institutions offered both regular courses of studies and distance learning options.

The admission requirements differ to some extent among the tertiary professional schools. In principle, the requirements include a general or subject-linked higher education entrance qualification and an entrance examination (test in aesthetic disciplines, pedagogy, psychology, often also a personality test or an individual interview with the applicant). The standard IPE lasts three years (distance learning four years). Completion of an upper secondary school award with a pedagogical orientation is not required for admission to the tertiary professional schools; the result of the entrance examination is what counts. The regular study programme is divided into winter and summer semesters (16 teaching weeks and three examination weeks). The distance learning course consists of 22 consultation meetings (200 hours) in the school year and three weeks for examinations. The consultations take place on a specific day of the week, about nine hours of block teaching, approximately twice a month (Rýdl and Šmelová 2012, 115).

The study programme qualifies for similar professional positions as the upper secondary programme (i.e. Teacher in kindergartens and other early childhood education institutions, Teacher in a preparatory class, Educator in after-school care centres and social services institutions, Recreational Educator in after-school care and Teacher’s Assistant in all types of schools).

Kindergarten Teacher – qualifying option 3

University studies in early childhood education

Since the time of the First Republic, Kindergarten Teachers have been trying to open up university education for kindergarten staff. However, this was never implemented before the Second World War. In the short term, the training of Kindergarten Teachers was carried out at university

level in the years 1946-1950 (a two-year course and later a one-year course). Due to the shortage of teachers, it was then reduced to the secondary level. From 1970 it was then possible to study early childhood education at two universities in the Czech Republic (in Prague and Olomouc). The study programme was aimed at teachers who were to take on more demanding pedagogical, methodological and management tasks in practice. It was organised as a full-time programme as well as a distance learning programme. The first accredited Bachelor's degree programme was offered in Prague (Charles University) in the academic year 1992/1993, later also at other universities (Opravilová and Uhlířová 2021).

Currently, all degree programmes are structured into a Bachelor's and Master's programme within the framework of the Bologna Process. At ten universities (usually at faculties of education) in the Czech Republic, three-year Bachelor's programmes (180 ECTS) and at four universities also subsequent two-year Master's programmes (120 ECTS) can be taken (both as regular studies and as part-time studies, so-called combined studies).

The Bachelor's programme is called "Pedagogy for kindergartens" (literally: "Teaching profession for kindergartens", *Učitelství pro mateřské školy*) and the Master's programme is called "Pedagogy of early childhood".

Entrance requirements are the general or subject-linked university entrance qualification and a successfully passed entrance examination (often a practical or theoretical test, e.g. in aesthetic subjects or the Czech language, an oral examination in the subject areas of pedagogy, psychology, children's literature, a personality test or a test of the applicants' general study requirements, etc.). The conditions differ depending on the university and are adjusted from year to year. In the long term, there are more interested persons than places for the Bachelor's degree programme. In Prague, from around 240 applicants, about 30 are usually accepted for a regular programme and 30 for a part-time programme. However, many school-leavers apply to more than one university or to other educational courses (e.g. primary education, special and remedial education).

Both intensive practical and theoretical elements are included in the three-year programme. The Ministry of Education guidelines specify the percentage, credits and hours of each component (see *Table 4*). The Bachelor programmes are designed to prepare kindergarten professionals with regard to the framework curriculum for preschool education (MŠMT 2021b). However, detailed specifications of the objectives and contents of the bachelor's degree programmes are not prescribed by the state and are within the university's scope of decision. The Bachelor's and Master's programmes are divided into compulsory, compulsory elective and elective courses. These are intended to promote general, subject-related, didactic and pedagogical-psychological knowledge, skills and abilities of the students (an example of curricular areas in the Bachelor's programme at the faculty of education of Charles University is listed in Annex 2 in the Appendix). The Bachelor's and Master's programmes are divided into compulsory, compulsory elective and elective courses. These are intended to promote general, subject-related, didactic and pedagogical-psychological knowledge, skills and abilities of the students (an example of curricular areas in the Bachelor's programme at the faculty of education of Charles University is listed in Annex 2 in the Appendix).

A uniform professional standard for the Bachelor's and Master's programmes did not exist until 2023. In October 2023, a *general Competence Framework for Teacher Education Graduates* (MŠMT 2023c) was published, an orientation framework for all teacher education programmes. Based on this general competence framework, specific competence frameworks, including the competence framework for Pre-primary Education Teacher graduates, should be developed in 2024.

Table 4

Czech Republic: Qualification routes for Kindergarten Teachers (*učitelka/učitel*)

Job title in Czech: <i>Učitelka/Učitel</i> ("Teacher") Profile: Pre-primary Education Professional
<p><i>Route 1</i> (= the only <i>requirement</i> for occupational practice):</p> <p>Entry requirements: 9 years of compulsory schooling; entrance examination; competence test (e.g. music, sports, the arts etc.)</p> <p>Professional education: 4 years upper secondary vocational, specialist field pre-primary and out-of-school pedagogy. Field placement of at least 10 weeks and teaching practice of at least 7 hours per week throughout the four years</p> <p>Award: Subject-linked university entrance qualification (<i>maturita</i>)</p> <p>ECTS credits: n/a EQF level: 4 ISCED 2011: 354</p> <p>Main ECEC workplaces: Kindergarten (2/3–5/6 years); preparatory class in primary school for 5 to 7 year-olds . Work in age-integrated Children’s Groups, in micro nurseries or workplace nurseries is also possible.</p> <p><i>Route 2:</i></p> <p>Entry requirements: General or subject-linked university entrance qualification; entrance examination and competence test (e.g. aesthetic-artistic field, pedagogy, psychology)</p> <p>Professional education: 3 years at a tertiary professional school, either specialising in pre-primary and out-of-school pedagogy or in IPE for Educators who have successfully passed an examination in early childhood education as part of their university entrance qualification</p> <p>Award: Diploma</p> <p>ECTS credits: n/a EQF level: 6 ISCED 2011: 655</p> <p>Main ECEC workplaces: Kindergarten (2/3–5/6 years); preparatory class in primary school for 5 to 7 year-olds. Work in age-integrated Children’s Groups (6 months–6 years), in micro nurseries or workplace nurseries is also possible.</p> <p><i>Route 3:</i></p> <p>Entry requirements: General or subject-linked university entrance qualification; entrance examination and competence test (e.g. aesthetic-artistic field, pedagogy, psychology – varies according to university); it is possible to enrol for a subsequent two-year Master’s degree full-time or distance learning programme.</p> <p>Professional education: 3-year Bachelor study programme specialising in pre-primary education</p> <p>Award: Bachelor’s degree/Pre-primary education</p> <p>ECTS credits: 180 EQF level: 6 ISCED 2011: 645</p> <p>Main ECEC workplaces: Kindergarten (2/3–5/6 years); preparatory class in primary school for 5 to 7 year olds. Work in age-integrated Children’s Groups (0–6 years), in micro nurseries or workplace nurseries is also possible.</p>

In addition to these three qualifying routes, alternative qualification paths have also been opened up. Since 2005, Special Educators with a university degree can also be employed as fully qualified core pedagogues in kindergartens; since 2012, persons with a university degree as an Educator, Primary School Teacher, Recreational Educator or graduates of the study programme in pedagogy after completing the continuing professional development programme for Kindergarten Teachers (within the framework of lifelong learning programmes at the universities).

4.1.2 Teacher's Assistant (*asistent pedagoga*)

Since 1993, Teachers' Assistants have been working as supplementary staff in groups for children with social disadvantages (in regular kindergartens, special needs kindergartens or preparatory classes at primary schools) and since 1997 in groups for children with health impairments (in integrative regular kindergartens or special needs kindergartens).

The legal basis for competences, training and work content was anchored in the years 2004 to 2005. However, no specific initial professional education path was defined.

After the amendment of the Schools Act in 2016, pedagogical support staff became an integral part of the workforce in all types of schools and their number has doubled since 2016. Teachers' Assistants are one of the most important assets in the promotion of inclusion in kindergartens and primary/secondary schools. The position of Teacher's Assistant is still more of an alternative employment opportunity – very often for mothers of pre-school and younger school-age children – but with the gradual improvement of salaries, this position is changing. Currently, however, there is a great shortage of supplementary Teachers' Assistants throughout the Czech school system.

The requirements for professional qualifications of supplementary specialists are laid down in Act No. 563/2004 Coll. on Pedagogical Personnel (amended by Act No. 183/2023, § 20). The Act provides for **two types** of Teachers' Assistants:

- 1) According to §20, para. 1, a Teacher's Assistant who performs **direct pedagogical activities in a classroom** where children or pupils with special educational needs are taught or in a school that teaches children and pupils in the form of individual integration.

The minimum qualification for this position is a subject-linked higher education entrance qualification (*maturita*) in the pedagogical field or a higher education entrance qualification and a further training course *Study Programme in Pedagogy* for supplementary staff.

- 2) According to §20, para. 2, a Teacher's Assistant who performs **direct pedagogical activities in the form of pedagogical support activities** in a school, in a school-based facility for recreational pedagogy, in a school-based educational and accommodation facility, in a school-based facility for the implementation of home or protective education or in a school-based facility for preventive pedagogical care.

For this position, even lower minimum requirements apply, namely basic training and studies for Teachers' Assistants (completion of lower secondary education and a qualifying course). This is viewed negatively in professional circles and is also a reason for the low remuneration.

The qualifying routes described below are equivalent, heterogeneous and characterised by high permeability possibilities. In general, all persons with initial pedagogical education at upper secondary level and pedagogical or psychological education at tertiary level can perform the work of a Teacher's Assistant without taking a further qualifying course. Such a qualifying course (so-called study programme in pedagogy or study programme for Teachers' Assistants⁹) is only obligatory for persons with a degree in a non-educational subject. In the meantime, however, there are a large number of institutions that have accredited such a 120-hour qualifying course for supplementary staff with the Ministry of Education. This great variety raises the question of the real quality of these courses with regard to some providers. Experts also point out that the qualification of Assistants who have completed only one such course is insufficient if they are to provide highly specific support to children with special needs (Hájková 2018; Němec et al. 2014).

⁹ According to the law, the "study of pedagogy" is a general designation for qualification/continuing education programmes of pedagogical orientation without further specification.

The following qualifying routes directly address the professional preparation of supplementary pedagogical staff.

Teacher's Assistant – qualifying option 1

Study programmes for Teachers' Assistants

The first way to obtain the minimum qualification for the work of Teachers' Assistants of both types is the so-called **Study Programme in Pedagogy**. This qualifying course is also offered by various universities and further education institutions. It is intended for persons who have completed upper secondary education or have a (specialist) university degree in a non-educational subject. Until 2023, it comprised at least 80 hours; since 01.09.2023 it comprises at least 120 hours. This study of pedagogy forms the new pathway for professionals to the qualification of a Teachers' Assistant (**1st and 2nd type**), who carries out direct pedagogical activities in a classroom.

The **Study Programme for Teachers' Assistants**¹⁰ is the second way to obtain the minimum qualification for Teacher's Assistant (**2nd type**), who carry out direct pedagogical activities in the form of pedagogical support activities. As from September 2023, the programme is called: *Studies for Teaching Assistants who carry out direct teaching activities in auxiliary educational work*. The programme is offered by various universities and further education institutions (53 providers), whose number has more than doubled in the last 5 years. Each of these educational institutions must have its own programme accredited. Depending on the specialisation, the contents differ: e.g. preparation mainly for work with children with a migration background, with socially disadvantaged or bilingual children, with children with ADHD, etc. The courses can usually be completed within one year. Great emphasis is placed not only on theoretical but also on practical preparation. This full-time training programme consists of at least 120 hours (80 hours of theory and 40 hours of practice).

A third way to obtain the minimum qualification for the work of a Teacher's Assistant of both types is to study within the framework of further education courses of higher education institutions and universities.

Teacher's Assistant – qualifying option 2

Upper secondary vocational school programme for Teachers' Assistants

Since September 2023, this programme is the second way to obtain the minimum qualification for Teacher's Assistant (**2nd type**), who carry out direct pedagogical activities in the form of pedagogical support activities. Currently, only five vocational schools have a designated and accredited qualifying programme in Pedagogy for Assistants in Education (*Pedagogika pro asistenty ve školství*). The course is offered by only two vocational schools and only in distance learning format (5-year training for trainees with completed lower secondary education in combined or evening form and 1- or 2-year regular training for persons with completed upper secondary education in another subject) (MŠMT 2022d, own research). The qualifying course, which was created in 2008, is intended to enable these persons to obtain upper secondary education and is therefore offered on a part-time basis¹¹. However, this qualifying option plays a less significant

¹⁰ In accordance with legislative provisions in Act No. 563/2004 Coll., §20 and Regulation No. 317/2005 Coll., §4.

¹¹ Personal communication from PhDr. Jana Kašparová, National Institute of Education, 23.09.2016.

role, as the Teachers' Assistants of both types are recruited either from persons with other pedagogical qualifications or from persons who have completed the qualifying course (see qualifying option 2).

This IPE route (similar to all accredited IPE routes at upper secondary level) is based on a national framework programme for vocational schools. In addition to the general education subjects (525 teaching hours), 310 teaching hours are devoted to pedagogical-psychological preparation and 150 teaching hours to the pedagogical work of the Teacher's Assistant. The minimum amount of practical training is 100 hours. The study programme is intended to prepare learners for supporting children with special needs in general, not only specifically for work in primary schools or kindergartens (MŠMT 2009a).

Table 5 gives an overview of the different qualifying routes for the profession of Teacher's Assistant.

Table 5

Czech Republic: Routes for qualifying as a Teacher's Assistant (*asistent pedagoga*)

Job title in Czech: <i>Asistent pedagoga</i> (lit. "Teaching Assistant")
<p>Type 1: Teachers' Assistants who carry out direct teaching activities in the classroom</p> <p>There are currently seven qualification routes for Type 1 Teachers' Assistants in kindergartens and preparatory classes. These professionals can also work in Children's Groups and social care settings outside the education sector.</p>
<p><i>Route 1.1</i></p> <p>Entry requirements: 9 years compulsory schooling; entrance examination</p> <p>Professional education: 4 years upper secondary vocational with specialisation in pedagogy</p> <p>Award: Subject-related university entrance qualification (<i>maturita</i>)</p> <p>ECTS credits: n/a</p> <p>EQF level: 4</p> <p>ISCED 2011: 354</p> <p>Main ECEC workplaces: Kindergarten (2/3 to 5/6 years), together with a core pedagogue; special needs/special education kindergarten (2/3 to 5/6 years), together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).</p>
<p><i>Route 1.2</i></p> <p>Entry requirements: General or subject-related university entrance qualification with a <i>non</i>-pedagogical specialisation</p> <p>Professional education: Completion of the <i>Study Programme in Pedagogy</i> within the further education</p> <p>Award: Certificate</p> <p>Main ECEC workplaces: Kindergarten (2/3–5/6years), together with a core pedagogue; special needs/special education kindergarten (2/3 to 5/6 years), together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).</p>
<p><i>Route 1.3</i></p> <p>Entry requirements: General or subject-related university entrance qualification; entrance examination</p> <p>Professional education: 3-year tertiary professional school programme with a specialisation in pedagogy</p> <p>Award: Diploma/degree*</p>

Job title in Czech: *Asistent pedagoga* (lit. “Teaching Assistant”)

ECTS credits: n/a for Diploma awards

EQF level: 6

ISCED 2011: 655

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/special education kindergarten (2/3 to 5/6 years), together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

*The tertiary professional schools are not yet integrated into the Bachelor/Master system, although according to ISCED (2011) their awards are placed at level 655 and in the EQF at level 6. Permeability of these professional studies is limited – only a few universities accept a selection of the examinations in their Bachelor study programmes, otherwise the tertiary professional school graduates have to complete the full course of studies.

Route 1.4

Entry requirements: Diploma/degree from a tertiary professional school with a *non*-pedagogical specialisation (3-year professional education programme)

Professional education: Completion of the *Study Programme in Pedagogy* within the further education

Award: Programme certificate

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/special education kindergarten (2/3 to 5/6 years), together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Route 1.5

Entry requirements: General or subject-related university entrance qualification; entrance exam

Professional education: 3 years university, Bachelor study programme with a specialisation in Educational Science; enrolment for a subsequent 2-year Master’s degree programme possible.

Award: Bachelor

ECTS credits: 180

EQF level: 6

ISCED 2011: 645

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/remedial therapy kindergarten (2/3 to 5/6 years), together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Route 1.6

Entry requirements: Completed Bachelor study programme in a *non*-pedagogical specialisation

Professional education: Completion of the *Study Programme in Pedagogy* within the further education

Award: Certificate

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/remedial therapy kindergarten (2/3–5/6 years), together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Since 01.09.2023 there is an additional qualifying option:

Route 1.7

Entry requirements: 9 years compulsory schooling; entrance examination

Job title in Czech: *Asistent pedagoga* (lit. “Teaching Assistant”)

Professional education: 8 or 6 years of secondary technical school (conservatoire). Conservatoires provide art education through two types of programmes:

- “Six-year programmes focused on music, singing, music and drama for pupils who have completed compulsory schooling; these programmes include upper secondary and tertiary level of education (ISCED 354+554)
- An eight-year programme specialising in dance for pupils who have completed the 5th year of the basic school; the programme includes lower secondary, upper secondary and tertiary level of education (ISCED 244+354+554).

It is possible to achieve the tertiary professional education in conservatoires by passing the graduate examination (absolutorium) after completing the whole educational programme.” (Eurydice 2023b)

Award: Diploma

ECTS credits: n/a

EQF level: 6

ISCED 2011: 554

Main ECEC workplaces: Kindergarten (2/3 to 5/6 years), together with a core pedagogue; special needs/special education kindergarten (2/3 to 5/6 years), together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Type 2: Teachers’ Assistants who perform direct teaching activities consisting of auxiliary educational work in the school

There are currently four qualification routes for Type 2 Teachers’ Assistants in kindergartens and preparatory classes.

Route 2.1

Entry requirements: 9 years compulsory schooling

Professional education: Accredited supplementary qualifying programme (*Study Programme for Teachers’ Assistants*) of at least 120 hours’ duration which is offered by further education institutions

Award: Certificate

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/remedial therapy kindergarten (2/3–5/6 years, together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Up to 01.07.2022, these persons were also allowed to work in Children’s Groups, but it is now no longer possible, as the minimum qualification level has been raised to university entrance qualification (there is a transition period for existing providers) (MPSV 2021a).

Route 2.2

Entry requirements: 9 years compulsory schooling; entrance exam

Professional education: Upper secondary vocational programme offering a specialism for Teachers’ Assistants (in the case of a subject-related university entrance qualification in a non-pedagogical subject the course can be completed within 1 to 2 years or as a distance learning programme within 1 to 3 years)

Award: Subject-related university entrance qualification (*maturita*)

ECTS credits: n/a

EQF level: 4

ISCED 2011: 354

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/remedial therapy kindergarten (2/3–5/6 years, together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Route 2.3

Entry requirements: Skilled worker certificate

Job title in Czech: *Asistent pedagoga* (lit. “Teaching Assistant”)

Professional education: Completion of the *Study Programme in Pedagogy* or *Study Programme for Teachers’ Assistants*, both within the further education.

Award: Certificate

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/remedial therapy kindergarten (2/3–5/6 years, together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Route 2.4

Entry requirements: General or subject-related university entrance qualification in a *non-pedagogical* discipline

Professional education: Completion of the *Study Programme for Teachers’ Assistants* within the further education.

Award: Certificate

Main ECEC workplaces: Kindergarten (2/3–5/6 years), together with a core pedagogue; special needs/remedial therapy kindergarten (2/3–5/6 years, together with a core pedagogue; preparatory class in primary school for 5 to 7 year-olds, together with a core pedagogue (in each case – focus on children in need of special support).

Possible additional routes: All further qualifying options for Type 1 Teachers’ Assistants (see Routes 1.1 to 1.7)

4.1.3 Caregiver (*pečující osoba*)

Caregivers are core pedagogues in Children's Groups and micro-crèches. Since 2021, there has been a specific qualification for these personnel prepared by the Ministry of Labour and Social Affairs, the graduates of which are designated as a "Caregiver for children in a Children's Group" (§ 5 of the Children's Groups Act, MPSV 2021a). Since 1 July 2022, it is obligatory for providers of Children's Groups to employ at least one Caregiver with a healthcare degree or one with the new professional qualification.

Since 1 July 2022, the provider is also obliged to employ a Caregiver with a pedagogical qualification for at least 20 hours per week if children are admitted to the Children's Group from 1 September after their third birthday. A “pedagogical qualification” refers to Kindergarten Teachers, Primary School Teachers, Special Education Pedagogues, Educators or a Teacher’s Assistant in accordance with §20 para. 1 of the Act on Pedagogical Teaching Personnel (MŠMT 2023a).

Since September 2016, persons who have completed an IPE course with a pedagogical, social or health focus (ISCED 2011 354) or with a Caregiver qualification (see Route 11) can also work as an Assistant (*chůva* – “nanny”) in kindergartens that have admitted 2 year-olds. However, this position has not been included in the Act on Pedagogical Teaching Personnel (MŠMT 2023a). The Ministry of Education provided funding for their salary costs through special subsidy programmes, but the kindergartens had to make a specific and repeated application. Their inclusion is a considerable help in supporting 2 year-old children, but systematisation remains a challenge for future legislation. Moreover, the programme to fund them expired with the school year 2021/2022.

Table 6 gives an overview of the qualifying routes of the 13 different professional awards that are considered prerequisites for employment as a core pedagogue in the Children's Groups and micro-crèches.

Profiles: Diverse

5. Midwife

Entry requirements: General or subject-related university entrance qualification; entrance exam

Professional education: 3-year Bachelor study programme

Award: Bachelor's degree

ECTS credits: 180

EQF level: 6

ISCED 2011: 645

Main ECEC workplaces: Children's Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years)

6. Paramedic

Entry requirements: General or subject-related university entrance qualification; entrance exam

Professional education: 3-year tertiary professional school or Bachelor study programme

Award: Diploma or Bachelor's degree

ECTS credits: n/a (Diploma), 180 (Bachelor)

EQF level: 6

ISCED 2011: 645/655

Main ECEC workplaces: Children's Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years)

7. Healthcare Assistant

Entry requirements: 9 years compulsory schooling; entrance exam

Professional education: 4 years upper secondary vocational programme with a relevant (*non-pedagogical*) orientation

Award: Subject-related university entrance qualification (*maturita*)

ECTS credits: n/a

EQF level: 4

ISCED 2011: 354

Main ECEC workplaces: Children's Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years)

8. Social Worker

Entry requirements: General or subject-related university entrance qualification; entrance exam

Professional education: 3-year tertiary professional school or Bachelor study programme

Award: Diploma or Bachelor's degree, subsequent Master's/Doctoral study programme possible

ECTS credits: n/a (Diploma), 180 (Bachelor)

EQF level: 6

ISCED 2011: 645/746/747/844/655

Main ECEC workplaces: Children's Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years) and other settings

9. Caregiver – early years (lit.: "Carer for children up to compulsory school age")

Entry requirements: General or subject-related university entrance qualification

Professional education: (1) None, just an examination without a previous formal qualification; (2) Further education programme for lateral entrants of 160 hours' duration (including 60 hours of field-based studies)

Award: Certificate

ECTS credits: n/a

EQF level: 4

ISCED 2011: 344/354

Main ECEC workplaces: Children's Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue,

Job title in Czech: Pečující osoba
Profiles: Diverse

micro-crèche (6 months–4 years) and other settings

10. Caregiver – Children’s Group (lit. “Carer for children in a Children’s Group”)

Entry requirements: General or subject-related university entrance qualification

Professional education: None, just exam without a previous formal qualification

Award: Certificate

ECTS credits: n/a

EQF level: 4

ISCED 2011: 344/354

Main ECEC workplaces: Children’s Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years) and other settings

11. Health and Social Services employee

Entry requirements: General or subject-related university entrance qualification; entrance exam

Professional education: 3-year tertiary professional school or Bachelor study programme

Award: Diploma or Bachelor’s degree, subsequent Master’s study programme possible

ECTS credits: n/a (Diploma), 180 (Bachelor)

EQF level: 6

ISCED 2011: 645/746/655/746

Main ECEC workplaces: Children’s Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years) and other settings

12. Medical doctor

Entry requirements: General or subject-related university entrance qualification; entrance exam

Professional education: 6-year university study programme

Award: MUDr. (*Medicinae Universae Doctor* – General Practitioner in the Czech Republic)

ECTS credits: 360

EQF level: 7

ISCED 2011: 747

Main ECEC workplaces: Children’s Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years) and other settings

13. (Clinical) Psychologist

Entry requirements: General or subject-related university entrance qualification; entrance exam

Professional education: 3-year Bachelor studies followed by a 2-year Master’s degree programme

Award: Bachelor’s degree and Master’s degree

ECTS credits: 300 (180 plus 120)

EQF level: 7

ISCED 2011: 746

Main ECEC workplaces: Children’s Group (*dětská skupina*) (6 months–5(6) years, as core pedagogue, micro-crèche (6 months–4 years) and other settings

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

4.2.1 Kindergarten Teacher (*Učitelka/Učitel*)

Kindergarten Teacher – qualifying option 1

Upper secondary vocational school – specialisation in pre-primary and out-of-school pedagogy

The content for this qualifying route is anchored in the *Framework Education Programme for the subject pre-primary and out-of-school pedagogy* (2009), which is a binding framework for all vocational schools with this orientation. This document defines not only the general basic competences, but also subject-specific competences. Educational content is based on the four goals of Lifelong Learning for the 21st Century (the "four-pillar model"¹² in the Delors Report¹³). The vocational course aims to develop skills and abilities in the form of key and subject-specific competences, which are linked to the curriculum for the uniform nine-year primary school (Framework Education Programme for primary and lower secondary education):

- **Key competences** are divided into: Learning competence, problem-solving competence, communicative competence, personal and social competence, civic competence and cultural awareness, work and business competence, mathematical competence and competence in the use of information and communication technologies.
- **Subject-related competences** concern the preparation, realisation and evaluation of pedagogical, educational and recreational activities of young and school-age children. Graduates should also be enabled to observe occupational safety and health protection at work, to strive for the highest quality in their own work and to act economically, in accordance with the strategy of lifelong learning. Each vocational school develops its own school education programme, which is structured either by subjects or in modules.

Table 7

Czech Republic: Key curricular areas of the vocational school qualifying programme for pre-primary and out-of-school pedagogy

Areas of learning	Minimum number of hours during the vocational school programme	
	Weekly	Total number of hours
Language education: Czech	5	160
Language education: foreign language	10	320
Societal education	5	160
Science education	4	128
Mathematical education	8	256
Aesthetic education (Music, Art, Drama)	5	160
Health education	8	256
Education in Information and Communication Technologies	4	128
Economic education	2	64
Pedagogic-psychological education	21	672
Pedagogical didactics	30	960

¹² Learning to live together; learning to acquire knowledge; learning to act; learning for life.

Kindergarten Teacher – qualifying route 2

Tertiary professional school – study programmes in pre-primary and out-of-school pedagogy

The qualifying courses include both theoretical and practical subjects and are primarily oriented towards pedagogical work with 3 to 6 year-old children in kindergartens, but also towards other educational situations. The specification of the curricular areas is designed individually by the higher education institution. Each higher education institution has its own accredited programme – although the programmes have a common basis in terms of content, they differ in terms of the design, scope and orientation of the subjects. As a rule, both general (foreign language, ICT, etc.) and subject-related subjects are covered, i.e. content from pedagogy, psychology, didactics, school law and school management and subjects that promote specific competences (communicative, musical or motor skills). Students also have other elective subjects at their disposal that are, for example, linked to current pedagogical topics (intercultural education/education, second/foreign language acquisition, environmental education, dealing with media, digital education) or that deepen their subject knowledge in a specific area (e.g. in an aesthetic discipline). The professional schools structure the training programmes into modules (compulsory, compulsory elective and elective subjects). Practical training is structured as weekly internships, mainly in the first and second year of study, both during the school year and in the holiday period.

The study programme ends with a diploma examination, which consists of three partial examinations: an oral examination in a foreign language, a theoretical or practical examination in subject-related subjects and the defence of the diploma thesis.

Kindergarten Teacher – qualifying option 3

University study programme in Early Childhood Education

The curriculum of the Bachelor's degree programmes emphasises the following professional competences (Opravilová 2007; 2016): Respect for children, children's development, creating an atmosphere of trust, safety and understanding. Observations of the children form the basis of the educational activities, which are then adapted to their needs and abilities. The methods and pedagogical activities should be chosen with the specific characteristics and developmental nuances of the children in mind, and decisions should be analysed and justified accordingly. Activities should be planned, and conditions created that benefit the development of the individual and the group – including children with special needs. The use of music, art and drama should reflect the needs of the early childhood environment and the children's individual abilities. Learning how to adapt the pedagogical work to the children's individual needs has a high priority.

The study programme **curricula** are beginning to respond to current societal problems in their educational content and increasingly taking into account challenges that arise for the pedagogical work: The education of children with special needs; inclusive education; support of children with a migration background and children with social disadvantages; transitions (especially in connection with school enrolment); at some universities also foreign language acquisition for young children.

The **content** of the study programme is intended to prepare students for competence-oriented pedagogical work in the current educational and upbringing concept of early educational institutions (especially kindergartens) and for the increased importance of special needs education. Societal developments emphasise the importance of preparation in these areas and are leading to more innovation in the faculty study programmes in order to take more account of these issues – which are rather new in the general pedagogical discourse in the Czech Republic compared to Germany and other Western European countries. The study content areas are exclusively oriented towards work with young children (mainly between 3 and 6 years of age). Increasingly, courses/modules or topics on the upbringing and education of under 3 year-olds are also being incorporated into the study programmes¹⁴. From a disciplinary point of view, the main curricular focus is on educational and psychological subject areas. Social topics and an orientation towards socio-pedagogical and out-of-school activities tend to be of less significance.

The study programmes at the ten universities differ greatly from each other in terms of programme content, especially in the electives. The diversity of options available to applicants is a positive feature which enables the choice of a programme that matches an applicant's personal professional interests. Electives relate to a component of the statutory requirements or to the focus of the programme. The number of credits for compulsory subjects together with the minimum number of credits for electives usually amounts to about 90% of the total number of credits.

All faculties have included foreign language learning in the compulsory or elective subjects. Some faculties offer only English, while others also offer German, French, Spanish or Russian and offer both language learning for students and foreign language didactics in kindergarten. Early foreign language teaching in kindergarten is a controversial topic in the Czech Republic, with much of the professional community raising questions related to the introduction of (mainly) English in mainstream kindergartens. As the number of multilingual children in kindergartens has doubled in the last ten years, more and more emphasis is being placed on the didactics of Czech as a second language. The consequences of the conflict in Ukraine and the high level of migration present a very particular context. Universities have responded to the new situation by setting up elective courses for students who want to further their education on this issue, or by recognising support for refugees as part of their practice, etc.

The practicum component of the study programmes is organised differently at each university (see *Chapter 5*). The universities often have faculty kindergartens, i.e. regular kindergartens and also kindergartens with alternative/innovative pedagogical approaches (Montessori and Waldorf pedagogy, Dalton Plan, Reggio pedagogy, forest kindergartens, the Step by Step approach or the innovative pedagogical concept "health supporting kindergarten"¹⁵), which cooperate with the respective faculty chair in the long term and ensure the practical placements in cooperation with the university lecturers. Students acquire theoretical knowledge and practical experience with alternative pedagogical programmes and with other forms of early childhood education institutions during their studies.

¹⁴ For example, at the Faculty of Education of Charles University in Prague, there is a specialisation/profiling in the Master's programme oriented to work with children up to 3 years of age (so-called study of early childhood).

¹⁵ This is an innovative pedagogical concept of Czech origin that emerged in the early 1990s as a response to the holistic and humanistic-oriented approach. It was particularly influential during the second half of the 1990s and at the beginning of the 21st century. Today, elements of this approach are already an integral part of most education programmes in kindergartens and primary schools.

The Bachelor's degree is completed with a written thesis and an oral examination, which usually consist of partial examinations in the subject areas of education and psychology, in a specialisation subject or children's literature and the defence of the Bachelor's thesis. This can be followed by a two-year Master's programme.

Graduates acquire qualifications for work as a core professional/lead pedagogue or manager in regular and special/ remedial kindergartens, in other early childhood education institutions, in kindergartens with alternative educational programmes and in kindergartens attached to hospitals, therapeutic institutions and sanatoriums.

Graduates should be prepared to perform the following tasks and professional requirements: designing and implementing the curriculum at class and institution level, consulting with other teachers, diagnosing and evaluating structural, organisational and qualitative processes at different levels. The graduates are prepared for teamwork with the family and the various educational providers in the pre-primary sector. They have basic competences in the management and leadership of kindergartens and have the ambition to further develop their own conceptual understanding. The study programmes focus on the students' personal and professional development and prepare them for an inclusive approach to working with a mixed group of pre-school age children.

Table 8 summarises the proportion of each study component set by the Ministry of Education as the uniform orientation framework for the newly accredited early childhood education programmes in 2017.

Table 8

Czech Republic: National Framework for determining the scope of individual components of initial professional education in the BA programme for educators

Curricular components	Proportion of programme, in %	Credits	Number of hours during the study programme
Propaedeutics: Educational psychology and special education subjects, e.g. general education, psychology and didactics, history, school education, educational psychology, developmental psychology, Inclusion didactics, methodology, medical propaedeutics, foreign languages and ICT in connection with teaching for kindergartens or studying.	23–30	41–54	1.230–1.620
Subject-specific components with didactics: Czech language and literature, communication, mathematics, nature and environmental education, physical education, music education, art education, drama education, dance education, etc.	45–50	81–90	2.430–2.700
Teaching practice: Guided and reflected practice (observation, practice in the form of selected days or sections of the week during the semester, continuous practice during the semester)	10–15	18–27	540–810
Preparation of the Bachelor thesis	510	9–18	270–540

Source: MŠMT 2017

A challenge for the current university study programmes is the danger of fragmentation of educational content with a large number of subjects. Pre-primary and primary education programmes should adopt an integrated approach to education, which some university faculties are beginning to consider not only in the content of their programmes but also in their structure.

The tradition of subject-specific segmented education is still very much rooted in current degree programmes and reflects the problems with pedagogical practice in many pre-primary settings (Syslová 2016a, 2017; Koželuhová, Loudová Stralczynská, and Lipnická 2020).

4.2.2. Teacher's Assistant (*Asistent pedagoga*)

Qualifying option 1

Supplementary training for Teachers' Assistants

The CPD programme includes topics from general and social pedagogy, psychology, educational theory, pedagogical diagnostics. Each training provider accredits its own programme and specifies the content (also in connection with the regional needs of the schools). However, there is a standard for the accreditation of this CPD programme issued by the Ministry of Education (MŠMT 2020c).

In total, the training programme should comprise at least 120 hours of teaching. This includes 80 hours of direct teaching (lectures and seminars) and 40 hours of teaching practice in schools, educational institutions and cooperating institutions. The standard formulates the competences and contents of the Teacher's Assistant for the entire field of education, without specialisation for a certain level such as kindergarten.

The programme is expected to cover the following topics:

Theoretical background and current trends in special education; relevant legislation; families and children with special educational needs; ways of educating pupils with special educational needs; types of disabilities; approaches towards educating and providing an appropriate environment for the development of children with special educational needs; mechanisms of development and support; models of inclusion of children with special educational needs in the educational process.

Development of abilities, skills, knowledge and personality traits in childhood and adolescence; formation of the psyche in a phase of relative stability in adulthood; developmentally relevant social relationships.

Thematic areas of the standard for the continuing education programme of study for Teachers' Assistants:

- I. School, schoolwork and the role of the Teacher's Assistant
- II. Pupil support
- III. System of pupil support
- IV. Pedagogical-psychological and cultural specifics in the work of the Teacher's Assistant (MŠMT 2020c).

Qualifying option 2

Vocational school route

The curriculum of the training programme at the few vocational schools includes the following topics: Czech school system; basic pedagogical concepts and methods for work in early childhood education and other school institutions; special education topics (support of children with disabilities, socially disadvantaged children and their families); family living conditions and child rearing; bullying in the children's group; addiction problems in families; communication with parents; behaviour and individuality of the child, etc. The practical training prepares learners mainly for effective cooperation with the lead pedagogue in the group and individual support of the child, taking into account his or her needs.

4.2.3 Caregivers (*Pečující osoba*) in Children's Groups and social care settings

Diverse qualifying options

Children's Groups (*dětské skupiny*) have been a new form of early childhood education since 2014. They are intended to partially replace the former work of the nurseries/crèches and to help reduce the temporary lack of space in kindergartens due to the high birth rate.

The staff in Children's Groups are usually not teachers, as is the case in kindergartens and preparatory classes. They can be people with different pedagogical, social or health qualifications (13 options in total, see *Table 6*). The following text mainly illustrates the lowest level of qualification and the new specialised training programme for future professionals.

The lowest level of qualification is held by two kinds of childcare staff: the **Caregiver for pre-school age children** (*Chůva pro děti do zahájení povinné školní docházky*, 2012) and the **Caregiver for Children's Groups** (*Chůva pro děti v dětské skupině*, 2021), see *Tables 6, 9 and 10*). These new professional qualifications were introduced in 2012 and 2021 respectively. Both qualifications have qualification and assessment standards that overlap in content and form the basis for the vocational qualification examination. The examination can be taken without prior training. Some CPD providers provide short-term preparation courses (e.g. amounting to 28 teaching hours). These persons may also provide childcare services within the scope of the Trade Act (e.g. in the child's family home, as a caregiver in a children's group, etc.).

The examination for *Childcare Workers for children in Children's Groups* is to include the following contents: Compliance with safety and accident prevention regulations; first aid for the child/children; common childhood diseases, epidemiology and hygiene; human somatology with a focus on childhood; safe handling of the infant from the age of 6 months; instruction of the child in hygienic habits; application of the principles of a healthy lifestyle according to the age of the child; application of methods and forms of pedagogical work with regard to the age of the child/children; dealing with unfavourable educational situations from a pedagogical and psychological point of view; application of knowledge about the stages of development and support of social-emotional development of the child at an early age; observance of ethical principles when working with children and guiding the child towards moral values; conditions of providing childcare services in a Children's Group; operational and hygienic rules when working with children in a Children's Group (MPSV 2021c).

4.3 Alternative entry and qualification routes, system permeability

Kindergarten Teacher – Alternative qualification routes

The three described standard qualification paths for professionals in kindergartens are offered in the regular form and in the form of a combined training/study. This combined form represents **Option 1** of the alternative qualification paths and often takes longer than the standard forms of initial professional education.

Option 2: A second alternative qualification route was opened in 2005 for Special Needs Educators¹⁶ who can now be employed as fully qualified core professional in kindergartens without further examinations or certification.

Option 3: Since 2012, other pedagogical professionals (persons who have completed studies in primary school pedagogy, pedagogy, leisure pedagogy or the study programme for Educators) can also acquire the required qualification at a university within the framework of the so-called lifelong training programme, which specialises in kindergarten pedagogy, and then work as fully

¹⁶ Since 2005 for special educators with a university degree in special/remedial education; since 2012 also for graduates of this field from tertiary professional schools.

qualified core pedagogues in kindergartens. Students of this further education programme write a thesis and take an oral examination at the end of their studies.

Option 4: Persons with the secondary school leaving certificate in the study programme for Educators can acquire the relevant qualification if they also take the baccalaureate examination section in early childhood education.

Option 5: Persons who do not have a relevant education may carry out pedagogical work in kindergartens or preparatory classes in the following cases:

- 1) If they were at least 55 years old as of 01.01.2015 and could show at least 20 years of practice in the relevant type of school (in kindergarten or in a preparatory class).
- 2) If the educational institution proves it is unable to find a suitably qualified person. The non-qualified person may only carry out the pedagogical work until someone qualified is found.

Teachers' Assistants in kindergartens and preparatory classes – Alternative qualification routes

The qualification routes of Teachers' Assistants in kindergartens and preparatory classes are not shown in the statistics and in inspection reports. The frequency of individual qualification routes of these qualified co-workers is therefore not known.

The high diversity of qualification routes also enables adequate system permeability.

Kindergarten Teacher – Formal connectivity and career advancement possibilities

- Kindergarten specialists who have acquired the relevant initial professional education within the framework of a university degree programme in special education may also work as teachers in higher levels of the education system.
- Kindergarten Teachers who have received the relevant training within the framework of a Master's degree in early childhood education can then work as Primary School Teachers if they extend their qualifications in the Lifelong Education Programme, a further training programme that is oriented towards the preparation of Primary School Teachers. It is usually a three-year distance learning programme at a faculty of education, which is combined with a final examination and the defence of a thesis. These persons do not receive another independent diploma, but only extend their qualification.
- Additionally, persons who have completed the primary school education programme may also work in kindergartens if they broaden their qualification in a Lifelong Education Programme oriented towards the preparation of kindergarten professionals¹⁷.

Pedagogical staff at all school levels (including kindergartens at ISCED 02 level) have **two career paths** – by (1) carrying out specialised activities in the institution or (2) taking on management tasks (administrative positions).

As of 1 January 2024, two new positions will be introduced, the **induction teacher** and the **accompanying teacher** (see *Chapter 2.3*).

The Education Act (No. 561/2004 Coll., §131) determines the competences and the appointment procedure for managers (MŠMT 2019d (see *Chapter 2.2*). For managers who have completed a "School Management" course in a higher or further education programme at a higher education

¹⁷ A draft for the career and mentoring system was developed by the Ministry of Education within a national project in 2017. However, due to a change of government, this model was no longer implemented. One of the goals of the current government is to create a new career system in education.

institution/university, this qualification is recognised in place of the further education programme "Study for School Managers" (Act on Pedagogical Teaching Personnel No. 563/2004 Coll., §25, para. 3). Thus, a university degree is not obligatory for Kindergarten Heads.

Experienced professionals (often former head teachers) can apply for the position of **school inspector** at the Czech School Inspectorate (*Česká školní inspekce*). School inspectors are not pedagogical specialists, but state employees. Requirements include a Bachelor's or Master's degree and at least five years of practical experience in the education sector (20 years for those with upper secondary education).

Entry options for persons with non-relevant qualifications – career changers

The entry options for persons without relevant qualifications have already been described. The Act on Pedagogical Teaching Personnel (No. 563/2004, Coll.) or laws specifying the qualification options for other professionals in early childhood education do not distinguish between alternative entry options and entry options for lateral entrants.

System permeability

The tertiary professional schools still have a relatively difficult position in the IPE system of early childhood education staff: On the one hand they provide initial professional education at tertiary level, on the other hand there exists very little permeability in terms of studying for a Bachelor's degree at a university and little acknowledgment or recognition of this qualification. The professional schools are still not integrated into the Bachelor-Master system. Although the diploma award is placed at level 655 of ISCED (2011) and level 6 in the European Qualifications Framework, the diploma qualification is considered to be at a lower level than the Bachelor's degree. Only a few professional schools recognise part of the diploma studies for their study programme in out-of-school pedagogy (the three-year course of studies can be completed within a year and graduates may go on to study for a Master's degree). Other universities do not recognise the diploma qualification and diploma holders have to complete all modules of the Bachelor study programme.

Studying at a tertiary professional school is for many school leavers with the university entrance qualification an alternative, second way (besides studying early childhood education at a university) of acquiring a tertiary-level qualification. Compared with the university studies in early childhood education for the Bachelor's degree, the tertiary professional schools study programmes are relatively broad, without an in-depth specialisation in pedagogical work with young children.

Employment of specialist staff from other European Union countries

All persons who apply for a post as a core professional or support worker in kindergartens and preparatory classes (support workers are excluded for the time being) have to fulfil the following legislative requirements (Act on Pedagogical Teaching Personnel 563/2004, paragraphs 3, 4 and 6):

- The general conditions for Pedagogical Teaching Personnel, who in the Czech Republic belong to the so-called regulated professions, are: legal capacity, qualification (recognition according to Law No. 18/2004, paragraph 6), integrity, state of good health, proficiency in the Czech language.
- All applicants who have acquired the relevant qualification in a language other than Czech are required to take a *proficiency exam in the Czech language*. The assessment is conducted by university faculties of education, by language school accredited to hold examinations in the Czech language and by CPD institutions for educational staff. The amendment to the

Teaching Personnel Act (MŠMT 2023a) sets the required language level according to the Common European Framework of Reference for Languages – CEFR – namely at least level B2 for Teachers’ Assistants. A level of at least C1 is then required for Kindergarten Teachers. The required level of knowledge of the Czech language can now also be proven by passing an individual matriculation examination, which in its content and form corresponds to the examination of the common part of the matriculation examination in Czech language and literature.

This examination of competence in the Czech language is **not** required by the following persons:

- Persons who will work in an educational institution with a language of instruction other than Czech
- Persons who have passed an exam in the Czech language as part of their university entrance qualification
- Persons who teach in another language (also applies to staff in kindergartens and preparatory classes) or give conversation classes.

Kindergarten Teachers and Primary School Teachers are not permitted to submit proof of their competence in the Czech language if the examination was taken in another country – in these cases the examination must take place in the Czech Republic.

The necessary recognition of specialist qualifications for persons from other EU countries, EEA countries (Iceland, Lichtenstein, Norway) and Switzerland is undertaken according to Act No. 18/2004 on the Recognition of Professional Qualifications.

Staff in kindergartens and preparatory classes who are recognised as qualified in another EU country and may practise their profession there (i.e. mostly those who have a qualification as Educator (*Erzieher:in*) or Childhood Pedagogue (*Kindheitspädagog:in*), are also recognised by the Ministry of Education as qualified for the work in kindergartens or other ECEC settings in the Czech Republic. During the recognition procedures, not only the formal initial professional education is taken into account but also the applicant’s non-formal competences and previous work experience as well as further acquired competences (e.g. through CPD activities). What is crucial for the recognition procedure is whether the applicant possesses a relevant qualification and permission to practise the profession in the country of origin. In such cases the qualification is then recognised in the Czech Republic and if the person fulfils further legislative requirements, then he or she can work as an early childhood specialist.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

The practicum is an integral part of all initial professional education programmes for core pedagogues in **kindergartens** and preparatory classes. For professionals in **Children's Groups** and social care settings, the situation is more heterogeneous, as not all IPE routes are Education-based and not all programmes focus on young children. Therefore, professionals in Children's Groups often do an internship in other pedagogical, social or healthcare institutions which does not always focus on pedagogical work with children under 6.

The guided workplace element of the IPE routes for working in kindergartens and preparatory classes is not regulated by regional or institution guidelines in general. However, there are national regulations of different kinds that refer to individual IPE programmes or education/training institutions.

For **vocational schools** at upper secondary level, there is a national framework programme for pre-school and out-of-school pedagogy (75-31-M/01; MŠMT 2009b). Practical training is organised individually by each vocational school. A so-called specialist internship (*odborná praxe*) lasts at least ten weeks during the whole IPE programme (often organised in block times in a kindergarten). The so-called teaching internship (*učební praxe*) comprises at least seven hours per week within the duration of the IPE programme (organised throughout the school year in a certain number of hours). The practical training may also be completed during the holidays, but not for more than three weeks altogether. Each vocational school formulates its own specific practicum programme. Therefore, it is not possible to make a general statement about the organisation of guided workplace experience.

The vocational schools cooperate with kindergartens in their vicinity where the practical training takes place. Each institution determines its internal rules (recruitment, payment, participation of the pedagogues in the internship etc.) and also the placements for their practical training. Before 2023, there were no national specifications for the cooperation between IPE institutions and the ECEC settings. The amendment of the Act on Pedagogical Teaching Personnel 563/2004 from 2023 regulates new positions of teachers who participate in the teaching practice (**accompanying teacher**) and initial support for the graduates of the IPE programmes (**induction teacher**) (see *Chapter 4.3*). The vocational schools ensure the quality of the internships by setting up a network of cooperating institutions and organising training sessions for mentoring professionals. Nevertheless, there are partial efforts to coordinate the internships within the regions¹⁸.

Tertiary professional schools accredit their training or study programmes with the Ministry of Education (according to Act No. 563/2004 Coll.). The programmes also include all practical parts, which are structured differently: as continuous practice on certain weekdays during the whole semester (individual subject-related hours/(half)days with a more general orientation towards direct pedagogical work) or as block periods (one to three-week internship in a kindergarten during the semester or holidays). In addition, smaller development projects are often realised.

In the Czech Republic, a similar model of guided workplace experience is used at all ten **universities**. Students complete a kind of motivational internship in a kindergarten during their first year; in the following semesters they progress from observing to working as a teaching assistant to leading teaching activities. The aim is to experience all the activities of a Kindergarten Teacher and the full range of time demands, especially in the final semesters of the programme when there are more contiguous blocks of weekly practice of full-time teaching. Students have the opportunity to experience not only practice in mainstream kindergartens, but also alternative and innovative pedagogical concepts such as Montessori, Forest School or Healthy Kindergartens. According to the regulation (MŠMT 2017), the practice within the study programme should have a share of 10-15%, 18-27 ECTS credits and comprise 540 to 810 teaching hours. The universities therefore have a relatively broad scope for decision-making.

A clear trend is the effort to combine theoretical and practical teaching. In the Czech Republic, there is no semester at any university so far in which students only work in an ECEC setting.

¹⁸ For example, in 2021-2023 the Municipality of Prague implemented a project entitled "Programme to increase the quality of practicum experiences for pedagogy students in kindergartens", which tried to coordinate and exchange experiences between vocational schools, vocationally qualifying higher education institutions and individual kindergartens.

Theoretical, didactic and practical seminars always stand side by side. However, it is clear from the individual university curricula that care is taken to ensure that students can complete practical and also elective placements during all semesters of study.

The internships are consistently adapted by the training institutions so that they meet the practical requirements. As a rule, students also have the opportunity to get to know different early education institutions (including the new Children's Groups and care institutions, family centres, etc.) and alternative and innovative pedagogical concepts. Some universities even offer students study trips to early education institutions abroad. This is not a national reform, but a trend to introduce students to new forms of early childhood education institutions.

Pedagogical portfolios have become an integral part of professional practice training at Faculties of Education in the Czech Republic. They take different forms at different faculties, with some also using them for state examination questions. They allow students to demonstrate their professional competences and thus link the theoretical examination with practice (Rodová and Syslová 2021; Syslová and Horňáčková 2014; Syslová 2016a, 2016b). Work with the pedagogical portfolio aims to include teaching students how to use the portfolio for self-reflection and professional growth. The current practice of portfolio work in some faculties anticipates the wider use of a professional portfolio envisaged in the proposals for teachers' professional development and promotion recently announced by the Ministry of Education.

Qualification of the mentoring staff

Until January 2024, no specified qualification was required for the staff in charge of mentoring students in kindergartens. They were usually selected on the basis of their practical knowledge and their professional and individual competences. Each IPE institution selects the cooperating kindergartens and the mentoring staff themselves and often have their own selection criteria. They also usually prepare the mentoring staff on how to accompany the students.

The amended Act No. 563/2004 Coll. on Pedagogical Personnel (MŠMT 2023a) for all teaching staff, including Kindergarten Teachers, provides for a position of two **mentoring specialists: an accompanying and an induction teacher**. The amendment enshrines the positions and specifies their activities in order to improve the quality of pedagogical practice of future teachers and to link initial teacher education with schools in the regional education system. The system of support for mentoring specialists and teaching practices is currently being piloted as an experimental validation; from 2026 onwards, to be funded on the basis of a specific normative enshrined in the Education Act (MŠMT 2023b). The Kindergarten Head decides on the time allocation of the mentoring specialists in early education institutions.

Current reforms related to guided workplace experience

The Ministry of Education is currently piloting a new system of teacher education that will also significantly affect the practical component of IPE programmes. Kindergartens and schools are to become places of practical training and a new national system for financing apprenticeships is to be introduced (MŠMT 2022e) (see *Chapter 8*).

6. Continuing professional development (CPD) of ECEC staff

Every employer is obliged under the Labour Code (Act No. 262/2006 Coll.) to support the professional development of its employees. As a rule, there are **two main forms** of Continuing Professional Development:

- (1) Supplementary qualifications** (seminars/courses, in-house CPD): The employer can order the employee to attend training courses to deepen qualifications (also outside working hours, as overtime). The deepening of qualifications means their continuing enrichment, enabling the employee to perform the agreed work. It is therefore compulsory CPD that all workers should follow (core skilled workers, supplementary (skilled) workers and facility management). The employer is obliged to cover the costs of the training (Act No. 262/2006 Coll., § 230).
- (2) Additional specialist qualifications:** This type of CPD is usually more time-consuming and may involve studying for a new (academic) degree or a new specialisation.

According to Act No. 563/2004 Coll, self-study is also part of CPD.

6.1 CPD for staff in commercial childcare centres

For professionals of commercial childcare institutions under the jurisdiction of the Ministry of Industry and Trade, there are no further requirements outside the Labour Code (Act No. 262/2006 Coll.).

6.2 CPD for staff in Children's Groups

For the Caregivers working in Children's Groups (childcare institutions under the jurisdiction of the Ministry of Labour and Social Affairs), according to the amendment of the Children's Groups Act (MPSV 2021a), a new regulation regarding CPD (type 1, supplementary qualification) applies. From 2022, the provider is obliged to provide the Caregiver with further education in the field of child care in the scope of at least 8 hours per calendar year, including at least once every two years a first aid course focused on childhood. The provider, together with the professionals, can choose such courses that support and motivate workers to continue working with children. Conditions for further training are:

- *Scope:* at least eight hours per calendar year
- *Content:* training in childcare, including a first aid course at least every two years with a focus on childhood
- *Form:* Course in an educational institution or at the employer's workplace, internship on the basis of a written contract between the provider and the educational institution
- *Format:* CPD sessions can be full-time or followed through distance learning (e.g. e-learning); for a first aid course, a full-time course including practical training preferable for qualification reasons (§ 5c, Act No. 247/2014 Coll.).

Various courses and workshops are offered, e.g. within the framework of the project *Support for the Management of Children's Groups*¹⁹.

¹⁹ <http://www.dsmpsv.cz/cs/>

6.3 CPD for staff in kindergartens and preparatory classes

For pedagogical staff in public education institutions, the CPD requirements are laid down in the Act on Pedagogical Teaching Staff (No. 563/2004 Coll.) and the Decree on the Further Training of Pedagogical Staff (No. 317/2005 Coll.). CPD is provided institutionally (1) at universities, (2) at institutions for teacher CPD and other institutions-on the basis of accreditation granted by the Ministry of Education, and (3) through self-study. However, an amendment to the Act on Pedagogical Workers (which came into force on 01.09.2023) specifies that no accreditation is required for short CPD programmes.

The kindergarten management draws up a CPD plan for the teachers. This plan may also include provider-specific requirements.

The Decree on the CPD of Pedagogical Specialists (No. 317/2005 Coll.) provides for three forms of in-service and further training:

- 1) **CPD to fulfil the qualification requirements for the job:** this includes, for example, qualifying courses for kindergarten and school heads (100 teaching hours) or for co-workers (Teachers' Assistants, with 120 teaching hours), which qualifies them to perform these job positions. This form of CPD also includes a qualification that leads to a supplement to the required qualification – this mainly concerns pedagogical staff without a relevant qualification. This further training is usually completed with an examination before an examination committee and with the defence of a written paper. The costs are borne by the professional, but the employer may cover part of the costs.
- 2) Additional training to meet **further qualification requirements** for the job: This includes, for example, CPD for pedagogical leaders (350 teaching hours). Here, too, the further training is concluded with an examination before an examination committee and with the defence of a written paper. The costs are borne by the educational specialist, but the employer can pay part of the costs.
- 3) Further training to **deepen the qualification** concerns the ongoing enrichment of the qualification. CPD is oriented towards current theoretical and practical problems of education and is usually obtained through courses and seminars of at least four hours' duration. The costs are usually covered by the employer. However, the professionals may cover part of the costs if they request a more financially demanding CPD session.

There are no national regulations for in-house CPD; the respective management decides whether such trainings are organised for the team and, if necessary, also the topics. These usually take place at the beginning of a school or kindergarten year.

6.3.1 Entitlement to days off for further education and training for ECEC professionals

The entitlement to days off depends on the kind of CPD:

- 1) **Self-study:** There is an entitlement to 12 paid days per year if the operating conditions of the institution do not contradict this.
- 2) **Attending CPD courses:** Kindergarten staff in particular have problems obtaining days off for the more time-consuming forms of CPD and often have to complete the course during their vacation time.

The following days off may be granted for further education leading to a higher qualification:

- All teaching days of the study programme
- Two working days for each examination in CPD programmes of colleges, universities and tertiary professional schools
- Five working days for preparation for and taking of a final examination or the baccalaureate

- Ten working days for preparation and defence of a final examination, Bachelor's, Diploma or Doctoral thesis
- 40 working days for preparing and taking the state examination or doctoral state examination.

Time off for CPD sessions on a small scale (about two to five days a year) is not problematic. However, in the case of more time-consuming further education, it becomes more difficult. The legal right to days off cannot be granted for "operational reasons" either.

6.4 Main providers of CPD

The main provider of CPD for educational staff is the **National Pedagogical Institute** of the Czech Republic (NPI CR), an organisation directly administered by the Ministry of Education. At the beginning of 2020, a merger took place between the National Institute of Continuing Education and the National Institute for Education. The newly established Institute (NPI CR) aims to ensure the transfer of educational innovations from the central conceptual level to the educational institutions in the regions. It develops pedagogical framework programmes for the individual school types, including kindergartens, and offers methodological support to schools and teachers and targeted training to teaching staff. The 13 regional offices of the NPI CR play an important role in supporting schools in the regions.

The NPI CR takes on the patronage for planning and organising CPD programmes and prepares the national programmes. In addition, it implements so-called government priorities in the CPD offers for pedagogical professionals, including management and framework education programmes.

The courses are mostly financed by the European Social Fund and by development programmes of the Ministry of Education and are therefore free of charge or cost only a small fee for the pedagogical staff. In this case, the institutions only have to reimburse a few costs for the CPD of their professionals.

Other important providers are colleges and universities, which are the exclusive providers of some FWB programmes within lifelong learning training programmes (Decree No. 317/2005 Coll., MŠMT 2005).

Other important providers are the **higher education institutions and universities**, which are the exclusive providers of some continuing education programmes²⁰ within Lifelong Learning training programmes (Decree No. 317/2005 Coll., MŠMT 2005).

CPD is also offered by schools, non-profit societies, private CPD providers whose programmes have been accredited by the Ministry of Education (in July 2022, 61 such providers were registered in the School Register) and who often finance their courses within the framework of European projects, so that participants only have to bear low costs.

6.5 CPD for Kindergarten Heads

Kindergarten Heads must (in addition to their initial professional education) have completed a headship course within three years of assuming the leadership position. An exception are those managers who have acquired the management expertise within the framework of a university degree in school management or within the framework of further training within the Lifelong Learning programmes at an HEI/university in the field of school management and organisation

²⁰ These are longer CPD programmes: Studies in the field of educational sciences with 250 teaching hours (supplementing the pedagogical qualification), studies to expand the qualification (e.g. for another school level, performing remedial and special educational tasks for children with disabilities outside the qualification of pedagogues), studies for pedagogical managers, etc.

as well as persons who have ten years of experience in a management position. The managers of other ECEC settings (Children's Groups, childcare facilities) are not obliged to complete certain CPD courses or modules that focus on the acquisition of specific management and leadership competences.

The professionals are obliged to undergo CPD. However, because until 2023, there were no other institution-specific positions in kindergartens and other early childhood education institutions beyond the position of head (from 2024, new positions are the **induction** and the **accompanying** teacher), further training in the sense of an additional qualification was not obligatory. However, a wide range of optional thematic CPD courses is available to regular staff in ECEC settings. The choice of courses and their thematic orientation is made in accordance with the interests of the professionals and the needs of the institution (Act on Pedagogical Teaching Staff No. 563/2004 Coll., Regulation on Further Training of Pedagogical Staff No. 317/2005 Coll.).

6.6 Main topics in the CPD of ECEC staff

Topics related to current problems and issues in practice represent a contemporary trend in CPD. Since 2016, as a result of the new Education Act, inclusion has been strongly promoted in the entire school system and at all levels (curricula, staff recruitment, CPD of professionals, new funding possibilities, etc.). Therefore, most of the programme offers are in line with this need: Supporting children with special educational needs (especially language support, supporting children from socially disadvantaged families, children with ADHD, etc.), inclusion, school management, 2 year-olds in kindergarten, further education for Teachers' Assistants.

The educators/teachers decide on topics that interest them personally in consultation with their employer. Sometimes the Kindergarten Heads choose courses for several or all teachers if they are dealing with a specific problem in the kindergarten and have specific pedagogical needs.

New topics include promoting science literacy, digital learning and assessment. There is currently particularly strong demand for courses that focus on the language development of multilingual children. This is due to the increasing number of non-Czech-speaking children in kindergartens (and in the Czech school system in general), as well as the need to integrate refugee children from Ukraine, more than 50,000 of whom have been admitted to kindergartens and schools since spring 2022. Currently, it is the promotion of multilingual children and the specifics of work with traumatised children – either as a result of the measures occurring in connection with the COVID pandemic or specifically in relation to the support for refugee children from war conflicts.

Of particular significance were training offers for teachers in kindergartens and preparatory classes in the field of online education, especially in the second half of 2020 and in 2021. The kindergartens were obliged to offer education activities online to children who had reached the age of 5 and had completed a compulsory pre-school year in their kindergarten in spring 2021, at the time of the general long-term closure of the schools during the pandemic (this obligation also applied to the preparatory classes).

The Czech School Inspectorate (CSI) continuously monitors the professional development in the monitored kindergartens. The CSI report (2022) states that "the professional development of teachers is organised by 85.5% of school heads according to the professional development plan". Only some principals (48.6%) are meticulous in developing CPD plans, i.e. they monitor and assess teachers' needs and tailor them to the needs of the school. Probably due to the anti-epidemiological measures related to the COVID-19 pandemic, the percentage of teachers who attended courses and seminars (70.6%) to deepen their professional development decreased in 2020/2021 compared to 2019/2020. The percentage of teachers who did not participate in any

kind of CPD was 16.5% (CSI 2022, 30-31). These were the majority of topics chosen by core pedagogues for CPD courses in the school year 2020/2021:

- Knowledge and skills in early childhood education and care
- Supporting the development of literacy and methods of key competences, and approaches towards of education, new and alternative pedagogical directions
- School readiness, enrolment of children in primary school
- Education of children with deferment of compulsory education
- Individualisation of education and pedagogical diagnostics (including portfolio management)
- Speech therapy, speech therapy prevention
- Education of children with special educational needs (methods, forms, support)
- Inclusion (legal aspects, curriculum change, etc.)
- Education in a multicultural or multilingual environment (CSI 2022, 32).

6.7 Research projects related to CPD in ECEC

No major national research projects have been funded over the past five years that deal with the CPD of early childhood educators. However, CPD institutes offer a relatively large number of projects which are linked to smaller research activities. Smaller research projects have also been realised at the faculties of education (for example, with a focus on the evaluation and development of own programmes).

However, within the framework of an extensive ESF project – *Systemic Support of Inclusive Education in the Czech Republic* -, a lot of space was devoted to the training and further education of support workers in 2013-2015: among other things, a standard for the work of Teachers' Assistants; guidelines for working with children with different special educational needs and further guidelines on specific topics in the work pedagogical specialists were developed. Several drafts on the system of initial and continuing professional development itself were also drafted, focussing on systemic development.

6.8 Current issues related to CPD

In the Czech Republic, there is **no credit system** for the recognition of CPD for professionals of all types of ECEC settings. Participation in CPD is not yet formally recognised (see *Chapter 8*).

7. Working conditions and current workforce issues

7.1 Remuneration

7.1.1 Core pedagogues and educational support staff

The payment of early childhood staff differs depending on the type of institution. "For remuneration in the non-commercial sector and in companies where no collective agreement has been concluded, there is the so-called guaranteed wage, i.e. the employer cannot set a lower wage (salary) for an employee than the lowest level of the guaranteed wage. The guaranteed wage is graded in eight groups according to the complexity, responsibility and difficulty of the work performed. In public schools. Teachers' salaries are currently higher than the corresponding guaranteed minimum wage, so this decree is particularly important for public schools (and Children's

Groups and childcare facilities for children under 3), as well as for the remuneration of non-educational staff" (Eurydice 2023a).

Kindergarten Teachers are paid as pedagogical employees in the school system under the collective bargaining system (11 salary grades in total). Kindergarten staff fall into the lowest salary grades (8 to 10) of the pay scale system. Each pay grade is further divided into 7 levels. The specialists are assigned to the respective level by the facility management based on the nature of their work (core professional, core professional with a post of responsibility, length of work experience, etc.). If the professional acquires an additional qualification (e.g. within the framework of further training courses), this does not usually affect the pay grade. An exception is the leadership position, which requires an additional headship qualification and is therefore also linked to a promotion in the pay scale system. Kindergarten professionals are generally entitled to remuneration for overtime and extra work in the context of direct pedagogical work. They may also receive other non-tariff supplements (e.g. for guiding other persons, for specialised work such as the planning of the institution's training programme, for long-term high-quality work or the performance of specific tasks).

Table 9

Czech Republic: Tariff classification and gross salary of Kindergarten Teachers, Teachers' Assistants and Primary School Teachers in the school system

Profile	Salary grade	Minimum gross salary per annum	Maximum gross salary per annum
Kindergarten and out-of-school pedagogues	8–10	CZK 300,480 ²¹ EUR 2,665	CZK 444,720 EUR 18,745
Primary School Teachers, Secondary School Teachers I and II, Special Educators, Psychologists	11–13	CZK 38,440 EUR 16,246	CZK 554,640 EUR 23,378
Support staff	4–9	CZK 186,480 EUR 7,860	CZK 433,560 EUR 18,274

Source: Eurydice 2023a

The salaries of early childhood core pedagogues are lower than those of Primary School Teachers. The salaries of supplementary co-workers are significantly lower. For them, the content of their work depends to a large extent on how the management determines it and thus places them in the appropriate salary bracket (see Table 9). With this pay, earning a living, e.g. as a single parent with one child in the capital city, is rather difficult, even though the pay scales have been increased substantially for kindergarten professionals across the board in recent years. The average gross monthly wage of a Kindergarten Teacher is CZK 33,861 (€1,427) (as of 2023).

The salaries are generally slightly higher for teachers in public kindergartens (€1,384) than in private (€1,179) and church institutions (€1,215; as of 2022; MŠMT 2022c). Over the last five years, salaries have increased by about one third. At the same time, however, the cost of living has increased considerably. The government's current goal is to raise the average teacher's salary to 130% of the average wage in the Czech Republic. Admittedly, this is a success in terms of average teacher salaries. However, professionals in kindergartens and pre-primary classes do not reach this salary level.

Specific positions of responsibility (i.e. head, deputy head, mentoring specialist) are paid additionally within the framework of the supplements. The supplement is 5 to 50% of the pay scale

²¹ Conversion rate July 2023

salary for the highest level in the respective pay grade; for management staff, the supplement can be 15 to 60%. The Kindergarten Head is paid according to the pay scale system (10th salary grade) just like other pedagogical staff. The specific conditions of payment in public institutions are determined by the authority that appointed the head.

The remuneration of all teachers consists of: (1) the pay scale part and (2) a non-pay scale part. The extra pay can be as follows:

- **Supplement:** Kindergarten Teachers are legally entitled to this if they perform one or more assignments (e.g. leading other teachers, working in schools and classes for children with special educational needs) for which this entitlement is enshrined in law.
- **Staff bonus:** There is no legal entitlement to this; it is the subjective decision of the Kindergarten Head to allocate this bonus to a teacher, e.g. for very good work performance in the long term or additional tasks (support of other teachers, children with special educational needs, etc.). This is a permanent supplement that cannot be withdrawn as long as the conditions are met. The supplement can be up to 50% of the salary (in some cases even up to 100%).
- **Award or so-called reward:** This is a one-time allowance for exceptional work, without legal entitlement.

7.1.2 Staff in other ECEC settings (Children's Groups, social care settings for children under 3 years of age)

The remuneration of regular and managerial staff is the same in these institutions and is governed by the Labour Code. As of 1 January 2022, they are included in the catalogue of professions in public service and administration, where they are classified in grades 6 to 9 depending on the difficulty of the work. They are also entitled to certain allowances.

7.2 Full-time and part-time employment in ECEC provision

A full-time staff member in a public kindergarten works 40 hours per week (of which 31 hours are for direct pedagogical work with the children). The working hours are the same for all kindergarten core staff. In the case of management staff, the workload for direct pedagogical work is reduced depending on the size of the institution. The working time of a full-time employee in other ECEC facilities (Children's Groups, social care settings for children under 3 years of age) is also 40 hours per week. The employer determines the work content of each worker; there are no central regulations. Full-time employment is characteristic for managers and core pedagogues in kindergartens. Supplementary co-workers are more often employed on a part-time basis, which very often depends on the amount of support provided to a child with special educational needs in the respective group.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Specific induction measures for novice staff in early childhood education institutions have not existed and were not enshrined in legislation until 2023. The general basic conditions for new entrants to the profession were only defined in the Labour Code (entitlement to adequate introductory practice during the first two years in the profession). The concrete form of implementation depends on the school management. The weekly direct pedagogical activity of a trainee teacher must not be reduced. In addition, a trainee teacher may receive advice, information or suggestions from the school management, benefit from discussions in the classroom, etc. The school management may appoint an induction teacher for a new core professional. The

management decides at its own discretion whether to reward the greater extent of the induction teacher's activity, e.g. with a personal allowance.

A new system of support measures in the workplace has been created and piloted since September 2023 (MŠMT 2023a). As of 1 January 2024, the adaptation period of the beginning teachers and the position of the Accompanying Teacher will be established. "The teacher's adaptation period is the period from the start of the teacher's first employment until the end of two years' employment with the legal entity carrying out the school's activities (MŠMT 2023b).

The Czech School Inspectorate continuously monitors how the management of kindergartens and schools deal with the introduction of newly qualified teachers. In the annual reports 2018/2019 and 2019/2020, the CSI (2020) evaluated the methodological support for prospective or new teachers; this was described by the school management as insufficient and unsystematic. According to the last inspection report (2022), there have been no significant improvements in this area. For the further development of Kindergarten Teachers, the Czech School Inspectorate recommends in particular the creation of a professional portfolio or cooperation with other kindergartens (CSI 2022, 35-36).

Table 10

Czech Republic: Support measures for novice core pedagogues – proportion of kindergartens with newly qualified staff in %

Formal induction programme (the new staff member is familiarised with respective school procedures)	53.2
Assignment of a mentor (induction teacher)	70.3
Reciprocal job shadowing of core pedagogues	58.2
Consultations with the Kindergarten Head	75.9
CPD courses	54.4
Other forms	54.4

Source: CSI 2022, 33.

7.4 Non-contact time

The working hours of full-time **kindergarten core pedagogues** are divided into so-called direct and indirect pedagogical work. Nine hours per week are set aside for indirect pedagogical work. This includes work with parents, team meetings, networking, material preparation, planning, follow-up, evaluations and documentation and other activities. For Kindergarten Heads, the direct pedagogical work can be reduced depending on the size of the institution (to 13 to 24 hours per week, or 5 to 16 hours per week in boarding kindergartens). In public kindergartens, the number of released hours for the Kindergarten Head is set nationally, but practice shows that they often "step in" when staff shortages occur (MŠMT 2019a).

In the case of full-time **Teachers' Assistants**, the management decides on the number of hours of indirect pedagogical work depending on the specific work content of the specialist. Out of 40 working hours, up to 20 hours can be devoted to indirect pedagogical work (MŠMT 2019a).

The child-free working hours of a full-time employee in other ECEC settings (care facilities for children under 3, Children's Groups) are not determined by law (only the total 40-hour working week). The institution owner determines the work content of each worker. They can therefore also determine some working hours for indirect pedagogical work.

7.5 Current staffing issues

Since 2016, there has been a widespread **shortage of staff** in kindergartens in the Czech Republic, especially of Teachers' Assistants. This is related to the introduction of support measures for children with special needs (MŠMT 2016, resp. 2020b, 2022b), which has enabled a significant increase in the number of assistant co-workers in kindergartens and schools. In all regions there is currently a significant shortage of qualified co-workers, but in recent years also of core pedagogues, because the number of children and kindergarten classes is increasing every year.

A high proportion of **older professionals** has for many years also been a distinct feature of the ECEC system; at the same time, the number of professionals in the two lower age groups increased slightly recently:

Table 11

Czech Republic: Age structure of core pedagogues in kindergartens, in %

Age	Distribution
Up to 20 years	1.7
21–30 years	22.3
31–40 years	18.4
41–50 years	26.3
51–60 years	25.4
61–70 years	5.6
71–80 years	0.3

Source: CSI 2022.

Staff recruitment strategies in recent years have included **significant pay increases** (across the board for all pre-primary staff) and the opening of new qualification pathways and lateral entry opportunities: this is especially true for other early education/care providers (Children's Groups and social care facilities for under 3 year-olds).

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

8.1 Education sector – kindergartens and preparatory classes

The current policy reforms are related to the **implementation of the Education Strategy 2030+** and the development of the Czech education system.

- In recent years, efforts have been made to amend the **Act on Pedagogical Personnel** to enable the recruitment of new teachers (especially **lateral entrants**). However, due to a change of government, the law was presented and accepted in 2023 in an amended form and did not include this issue. The key reform is the introduction of a teacher adaptation period of two years from the time of entry into practice and the introduction of the position of the so-called Accompanying Teacher from January 2024.
- One of the most important policy initiatives of the last five years has been the active effort to **gradually increase teachers' salaries** (including those of Kindergarten Teachers). The current government has set a target of maintaining average teacher salaries at 130% of the average salary in the Czech Republic, despite the economic crisis caused by the COVID-19 pandemic and the war crisis in Ukraine.

Further, in 2021, the Ministry of Education identified **six areas** where innovation in teacher development is needed, the first three of which are closely related to the initial professional education of pre-primary teachers:

"1. **Building a culture of continuous quality improvement based on a shared vision.** There is a lack of an explicitly articulated common vision of the goal of teacher preparation; mistrust exists between the main actors (universities and other IPE institutions – Ministry of Education) and information about the quality of graduates is missing. The available information shows that Czech graduates clearly lag behind their European counterparts, especially in terms of motivation to learn and critical thinking.

2. **Close links between university faculties and practice.** The proportion of practicum experience in teacher education has increased significantly but is still among the lowest in the European countries studied. However, the quality of practice and its conditions are crucial: professionals are not adequately remunerated for their work, there is insufficient training and support, and practice does not focus on the best professionals. Faculties have a wide network of practice nurseries and kindergartens, but the intensity of collaboration with them and the involvement of trainers with active teaching experience in teacher training are insufficient.

3. **Promoting innovations in teacher education and supporting regulation.** The Ministry of Education's framework "guarantees a minimum standard in teacher education, but significantly limits the scope for innovation." (MŠMT 2021c, 4, 16).

The Ministry of Education therefore included among its goals until 2023, for example, the creation of a **competence profile for university graduates** (published in October 2023²²), closer cooperation between the faculties with a reduced network of seminar schools, a professional standard and appropriate funding of mentors, etc.

These steps can be seen as positive in terms of the university preparation of teachers. However, the plan does not address the qualification level of professionals in kindergartens, for whom upper secondary education is still the minimum qualification level. On the one hand, this is understandable, as the education system is currently under great strain due to the economic crisis and the influx of refugees. On the other hand, a one-year compulsory kindergarten was introduced in 2017, and the Act on Pedagogical Personnel (MŠMT 2016) requires a Master's level degree for all other teachers providing compulsory education. Therefore, there seems to be still a considerable need for improvement in this point.

8.2 Childcare sector – Children's Groups

An important positive reform is the change in the requirements for Children's Group Caregivers, which is foreseen in the amending law of autumn 2021: Since July 2022, all Children's Group Caregivers must have a training in health care. At the same time, an education professional must be in the group for at least 20 hours per week if a 3-year-old child is present (MPSV 2021a, b). This is undoubtedly a positive measure. On the other hand, the pay conditions in Children's groups are still worse than in kindergartens and the work with young children in these settings does not have to follow the national educational programme applicable to work in kindergartens; also, the requirements for pedagogical quality are lower in Children's Groups than in kindergartens.

²² For Pre-primary Teachers, a self-assessment tool describing the development of teacher competences in different areas has been developed as a tool for the development of professional competences (Koželuhová, Koželuh, and Podpera 2023).

9. Recent country-specific research focusing on ECEC staff

Programme PROGRES Q17: Teacher education and the teaching profession in the context of science and research (2017–2021)

Source: Charles University, Faculty of Education 2021 (see *References* for full details)

Aims and procedures: Thematic areas of the research programme were: 1. School theory and the teaching profession (paedeutics), 2. Literacy and education, 3. Pupils, 4. Inclusion, 5. Teacher preparation. Faculty researchers addressed sub-themes within the above topics. The Chair of Preschool and Primary Education dealt, among other things, with the content of professional training for teachers working in kindergartens and primary schools. All Bachelor's degree programmes in pre-primary education established under the new accreditation conditions at universities in the Czech Republic were compared. In response to the ongoing pandemic, the topic of "teacher training as remote learning" was also included in the study.

Selected findings and implications: The result at the implementation level was the development of a new accreditation document for the Bachelor's degree programme in Early Childhood Education, which takes into account the existing tradition and at the same time aims to introduce new models and topical issues into the initial professional education of educators. The research results are professional articles and an English-language monograph that provide insights into the concepts and contents of pre-primary and primary school teacher education.

Project: Early childhood education and care in ECEC settings in the Czech Republic (2019–2022)

Source: [TACR] Technology Agency of the Czech Republic 2022 (see *References* for full details)

Aims and procedures: The project focused on innovative research that will contribute to the development of early childhood research in the Czech pedagogical discourse: It captures the experiences of key actors in different types of childcare facilities for children under 3 years of age using different research tools and analyses them together with current discussions on early care and education in broader sociological, pedagogical and historical contexts.

Selected findings and implications: With the help of the research findings, the topic of early care and education will be implemented in the professional education of education professions both at the level of higher education and at the level of Lifelong Learning at the Faculty of education of Masaryk University. The inclusion of the topic in the curricula of vocational education secondary schools will be actively supported.

Project: A model of teacher education for diversity (2019–2021)

Source: FPE ZČU – Faculty of Education, University of West Bohemia, Pilsen 2022 (see *References* for full details)

Aims and procedures: The main aim of the project was to contribute to the adaptation of teacher education to the new challenges associated with the education and upbringing of multilingual children and to create a model for school education under intercultural conditions, which would then be disseminated among teachers and, above all, used in an appropriate way to adapt IPE programmes for pre-primary and primary education. Since October 2019, a team of Polish researchers from the Faculty of Humanities and Computer Science and their Czech colleagues from the Faculty of education at ZČU have been working on the theoretical background

of education of migrant pupils and conducting surveys among school administrators, teachers and parents of these children in both countries.

Selected findings and implications: The data was then analysed and conclusions and resulting recommendations were formulated for the necessary changes in the support of these pupils and teachers in mainstream schools as well as for changes in the university study programmes for teachers to prepare them for working with migrant pupils. The main outcome is an electronic publication available in English, Polish and Czech. From the perspective of the professional education of educators, the specific recommendations for systematic support of pedagogy students regarding the education of migrant children and the intercultural context of our society are particularly interesting.

10. Workforce challenges – country expert assessment

The following aspects can be described as **immediate challenges** with regard to the qualification, recruitment and support of early childhood education staff:

- (1) **New career system:** A complex system of qualification and promotion possibilities (so-called qualification order) for pedagogues in the education system (beginners, mentoring staff, experienced pedagogues with supervisory tasks, etc.) shall be developed and implemented during the coming years. In future, advancement in the career system might be linked to further training, better pay and competence development. A provisional career system was completed in 2017, however a new version is now being prepared, which should be integrated into a reform of the faculties of education from 2024.
- (2) **Ongoing innovation of the IPE programmes** to include current societal issues to a greater extent: Particularly important are the topics of inclusion; working with heterogeneous groups of children; alternative and innovative approaches in pedagogy; individualisation and differentiation; second/foreign language education in kindergarten; effective cooperation with parents; support for children under 3 years of age; transitions; socio-pedagogical tasks of professionals in cooperation with families, etc. At present, these topics are even less represented in the current vocational school upper secondary programmes and at the tertiary professional schools than is the case in other Western European and Scandinavian countries. University curricula have changed a lot in these areas in recent years, but faculties still have important work in terms of innovation.
- (3) **Lack of support staff in kindergartens:** As a rule, two core pedagogues are responsible for a group/class with 24 children (or often with 28 children), whereby their working hours usually overlap for only 2½ hours per day. This leads to an excessive workload and the possibility to adequately support children with special needs might be limited. Since September 2016, additional supplementary staff (Teachers' Assistants) can be employed in all groups that are also attended by children with special needs. It is currently very difficult for both kindergartens and primary schools to find qualified co-workers as there is an acute shortage of them on the labour market²³.

²³ Until the reform of the Education Act (September 2016), the kindergarten management had to apply for the employment of supplementary pedagogical staff every year, which meant an enormous amount of time and personal uncertainty. If support for a child with special needs is recommended by the school

Long-term challenges with regard to the qualification, recruitment and support of early childhood education staff include the following:

- (1) **Introducing a higher education qualification requirement for kindergarten core pedagogues:** This measure needs to be linked to further changes (increase in pay, etc.). Compulsory higher education has been planned for a long time (MŠMT 2001), but has not yet been introduced.
- (2) **Redefining the qualification profiles for core pedagogues in Children's Groups and social care settings for under 3 year-olds:** The current qualification requirements are too diverse. Most of the routes followed do not specialise in early childhood education and care. The broad spectrum of qualification paths makes it possible to recruit skilled workers from other fields. This solves the problem of recruiting staff, but does not guarantee quality. The challenges therefore include an increase in the level of training and a deeper specialisation in the education and upbringing of young children for people who work as core pedagogues in ECEC settings for children under 3 years of age. This is also the aim of the amendment of the Children's Groups Act (2021), which introduced a new qualification for Caregivers in Children's Groups. However, this, is not linked to initial professional education but only to an examination which, in comparison to the requirements for employees in comparable facilities in other European countries, is to be seen as problematic in terms of quality assurance. A general issue is that these workers seem to do a relatively similar job to the Kindergarten Workers, but often have a much lower education or even no basic pedagogical training.
- (3) **Redefining the qualification routes for Teachers' Assistants:** The qualifications of those working in this role are also very diverse and the required qualification level very low. Expert discussions in recent years have underlined the fact that the Teachers' Assistants should be educated and trained at a higher formal level.

Diverse quality in IPE qualification programmes in early childhood education: The difference between the good quality university Bachelor programmes at universities and the high competence level of degree holders and the often questionably shortened qualification programmes offered as a distance learning option by some of the private vocational schools are nowadays assessed as problematic. These differences in qualification routes and the efforts required to complete them contrast negatively with the pay, which is more or less the same for all Kindergarten Teachers, regardless of their qualification route (Wiegerová et al. 2015; Syslová 2016a; Loudová Stralczynská et al. 2022).

An interesting phenomenon is that some graduates of secondary vocational schools who are fully qualified according to the legal provisions nevertheless choose one of the forms of tertiary education. At the same time, some choose to study part-time while working. Some applicants for a Bachelor's degree have even completed both lower levels of education (ISCED 354 and 655) and still decide to continue with a Bachelor's degree (or even a subsequent Master's degree in early childhood education). The inadequacy of secondary education and the demand for a minimum Bachelor's degree is a long-recognised fact, not only in the European Union but also in the Czech Republic (Syslová 2016a).

Professional discourse on these issues has been asking whether the vocational schools should

counselling centre, the management can employ a supplementary teacher on the basis of this recommendation, claim the resources for their remuneration and is no longer dependent on the decision of the regional administration.

focus more on preparing staff for home-based childcare provision with lower qualification requirements and whether Kindergarten Teachers should be educated and trained exclusively through a Bachelor level study programme. Also linked to these issues is the position of the tertiary professional schools and their IPE programmes, since in most cases there is no possibility of permeability when wishing to study for a university degree course.

- **Recruitment of male ECEC staff** (combined with status and pay rise).
- The relatively **resistant attitude in some kindergarten teams regarding inclusive approaches and pro-inclusive measures** is a challenge connected to the political and social developments in the second half of the 20th century. Such a resistant attitude used to be a general trend in the Czech Republic which also impacted the education system. Nowadays, Czech society and teachers appear to be increasingly open towards an inclusive approach. An important goal is therefore to positively influence the attitudes of pedagogues in terms of working towards a child-oriented approach, reflecting on their own attitudes (stereotypes, prejudice) and promoting the individual potential of all children in the best way possible. This can be supported, for example, through continuing professional development for kindergarten teams. Such CPD provision is currently offered in the larger towns by non-governmental organisations and is funded through EU projects in the context of municipal integration strategies.
- The key challenge for the initial professional education of pre-primary and kindergarten professionals is to innovate the content and methods of professional training in such a way that it prepares students to **respect the individuality and personality of the child**, to empathise with the child and find an **open and positive approach**. In the practice of Czech kindergartens, we still very often find approaches that do not as yet correspond to the concept of child-centred early education; traditional methods that were characteristic of the pre-1989 education system persist. This is one of the most important challenges in the transformation and reforms of early childhood education and care and the education system in the Czech Republic in general.

Early childhood education and care (ECEC)

Please note:

In alignment with country-specific usage, the terms chosen in this report for the main forms of centre-based ECEC settings are: **Children's Group** (*dětská skupina*, 6 months–5 years), **nursery** (*zařízení pro péči o děti do 3 let*, 0–2¹), **kindergarten** (*mateřská škola*, 2/3–5) and **preparatory class** (*přípravná třída*, 5–6/7). Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in the Czech Republic

1832	The first early childhood institutions are established in Prague with an upbringing, educational and care mission. The Czech childcare institutions (so-called <i>opatrovny</i>) had an educational mission from the very beginning. In this aspect, these institutions differed from most of the time, because the triad of education, upbringing and care was always present.
1869	The organisational conditions and regulations for the establishment and operation of day-care centres in the Czech lands were established. Until 1872, these settings focused on reading, writing and arithmetic. They were abolished following the ministerial decree of 1872 (see below).
1872	The Ministry of Education distinguishes systematically between educational institutions (<i>mateřská škola</i>) for 4 to 6 year-olds and social care institutions (<i>crèches</i>).
1948	Kindergartens are recognised as the first stage of the education system.
1948	The first compulsory curriculum documents for kindergartens are issued. In the 1950s these had the character of a syllabus, describing the contents in detail.
1960	Provision for under 3 year-olds comes under the auspices of the Ministry of Health and kindergartens for 3 to 6 year-olds under the responsibility of the Ministry of Education. Both kindergartens and <i>crèches</i> are integrated into the unified school system.
1967	A unified curricular framework is issued both for <i>crèches</i> and kindergartens. Only now are specific goals for <i>crèches</i> also defined. This document is obligatory for kindergartens, for <i>crèches</i> it is considered a recommendation and orientation with the aim of continuously implementing the pedagogical approach throughout the early years. In the following curricular documents, the concept of the curriculum was taken up again in the form of a syllabus which explained the work with children in <i>crèches</i> and kindergartens in great detail.
Post-1989	<ul style="list-style-type: none"> – The compulsory framework is no longer applicable; kindergartens start developing their own curricular approaches, ones that respect humanist and democratic values and principles. Both classical concepts (Montessori, Waldorf) and contemporary programmes (Step by Step; health-promoting kindergartens, forest kindergartens) find their way into kindergartens. – Massive cuts lead to the closing of almost all <i>crèches</i> and the dismantling or merging of many kindergartens.
2001	– A National Curriculum is issued (the so-called White Book) which defines reforms for all stages of the education system, including kindergartens.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as usually in the Czech Republic): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the Czech Republic, school entry may in justified and professionally assessed cases be deferred to 7 years of age.

	<ul style="list-style-type: none"> – A new national curricular framework for kindergartens is published (2001 (pilot), 2004, 2016, 2017, 2021). – Preparatory classes were originally set up for children from socially disadvantaged families at primary schools. Currently, they are intended for children whose admission to preparatory classes will balance their development. Priority is given to children who have been deferred from school and to children who will reach the age of 5 by the end of August of the current year.
2007	All state-maintained kindergartens are required to develop their own ‘educational plan’ in alignment with the national curricular framework.
2014	Multi-age Children’s Groups (<i>dětská skupina</i>) are established for 1 to under 7 year-olds under the responsibility of the Ministry of Labour and Social Affairs (currently for children from 6 months)
2015	Preparatory classes are opened up for all children with special support needs.
2016	Establishment of so-called "mini crèches" (<i>mikrojesle</i>) for children from 6 months to 4 years under the responsibility of the Ministry of Labour and Social Affairs.
2017	Since September 2017, kindergarten enrolment is obligatory for all children who turn 5 at the end of August for four hours per day. A further option is individual teaching, mostly in the child’s home.
2018	Children from the age of 3 have a legal entitlement to a place in a municipal kindergarten.
2022	Compulsory language support in kindergartens for children with a non-Czech nationality in the obligatory kindergarten year (amendment of the Education Act, amendment of the education framework programme for pre-primary education). A more child-centred approach now focuses to better meet the interests and needs of the children.
2023	<ul style="list-style-type: none"> – Fundamental innovation of the curricular framework for early childhood education towards a more open and child-centred pedagogy that protects the child from too much pressure in preparing for school; focus on promoting pre-literacy activities and active learning and exploration. – Amendment of the law on pedagogical staff.

ECEC system type and auspices²

The system of early childhood education and care in the Czech Republic is not a unitary system. Multi-age facilities for children from 6 months to school entry come under the auspices of the Ministry of Labour and Social Affairs (*Ministerstvo práce a sociálních věcí*). For childcare facilities exclusively for under 3 year-olds, the Ministry of Industry and Trade (*Ministerstvo průmyslu a obchodu*) is responsible; providers of such settings must comply with the provisions of the Trade Licensing Act (e.g. qualifications and hygiene regulations).

Kindergartens (*mateřské školy*) that admit children aged 2–6 years since September 2016 (Education Act 178/2016), and also preparatory classes for 5 to 7 year-olds, mostly deferred from compulsory schooling, come under the jurisdiction of the Ministry of Education, Youth and Sports (*Ministerstvo školství, mládeže a tělovýchovy*). The Ministry of Education is also responsible for the curricular frameworks. Various expert groups (academics, experts and managers from the field) are responsible for developing the content. A completely new curriculum is currently

² The Eurydice country report on ECEC in the Czech Republic provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

being developed within the framework of this dialogue between practice and theory, coordinated by the National Pedagogical Institute.

General objectives and legislative framework

Overarching government goals for early childhood education and care are to reconcile family life and work and to improve women's labour market opportunities through more flexible parental leave arrangements and working time models. These goals were pursued, among others, within the framework of a 2014–2020 government strategy for gender equality. Other important documents are the "Strategy for Education Policy until 2020" and the "Long-term Plan for Education and Development of the Education System in the period 2019 to 2023".

Goals for 2020–2023 include improving the quality of pre-primary education and integration of more and more children, as well as transforming the content of education to a focus on key competencies, teacher support and individual work with children.

The Ministry of Education, Youth and Sports prepares a long-term plan for education and development of the education system in the Czech Republic. This implementation document of the 2030+ strategy will define the tasks and goals for the Czech education system between 2023 and 2027. The material will be submitted to the Czech government for approval and will influence the development of long-term concepts in the regions. Regions could comment on the already prepared document until 15 May 2023, before inter-ministerial and public comments took place during the summer months (information on the website www.edu.cz). In October 2023, the long-term plan was submitted to the government for approval. The 2030+ strategy is a key document for the development of the Czech education system in the decade 2020-2030+ (MŠMT 2020, 2022).

Overarching goals specifically for kindergartens for (2)3 to 5 year-olds are set out in the Education Act (*Zákon o předškolním, základním, středním, vyšším odborném a jiném vzdělávání*, 2004 with amendments 2016, 2020, 2022, 2023), which emphasises the learning process and lifelong learning. The 2016 amendment focused mainly on strengthening inclusion, the 2020 amendment on funding aspect, and the 2022 amendment on language support for 5 year-olds in compulsory kindergarten. Among other things, the amendment anchored the obligation of kindergartens to provide language support for children with a non-Czech nationality under this Act. Previously, the children with special educational needs and insufficient language skills were entitled to support only within the framework of support measures of Decree 24/2016 Coll. However, this legal regulation only applies to 5 year-old children with a non-Czech citizenship and not to all children with insufficient Czech language skills, which is rated poorly by experts and NGOs. Nevertheless, this regulation remains in place for the time being.

The focus of the new Children's Groups established in 2014 for children aged 6 months up to school entry is mainly on identifying children's needs, developing age-appropriate skills and hygiene education. Since November 2014, the Children's Groups Act (*Zákon o poskytování služby péče o dítě v dětské skupině a o změně souvisejících zákonů*, 2014), the Decree No 350/2021 Coll., on the implementation of certain provisions of the Act on the provision of childcare services in a children's group and the Decree No. 410/2005 Coll., on hygiene requirements for premises and operations of establishments and services for the upbringing and education of children and adolescents – for groups of more than 12 children have been the legal basis.

ECEC entitlement and compulsory attendance

Children from 3 years are entitled to a place in a municipal kindergarten.

Since September 2017, attendance at a kindergarten for children who will be 5 years old by September has been compulsory; for children who have been deferred from school attendance, attendance is compulsory for two years. Participation in educational activities in the morning for four hours per day (20 hours per week in total) is compulsory.

Primary school starts at the age of 6 (cut-off date is 31 August).

Main types of provision

Childcare sector

Multi-age **Children's Groups** (*dětská skupina*) have existed since November 2014 for children between 6 months and school entry. However, children from the age of 5 attend these only in exceptional cases. If a child is 5 years old by 31 August, they may continue to attend a Children's Group, but must also be officially enrolled in a kindergarten for "individual preschool education" and come at least every three months for a so-called methodical consultation in which the child's development is assessed. The Children's Groups are run by employers or non-profit providers and are the responsibility of the Ministry of Labour and Social Affairs. These settings must offer at least six hours of care per day, and parents can decide for themselves on the amount of care. The organisation is usually agreed with the parents.

In total, there were more than 1,400 children's groups with almost 20,000 places at the end of 2022. However, no statistics are available on the use of these places (MPSV 2023).

Nurseries for under 3 year-olds (*zařízení pro péči o děti do 3 let*) are mostly operated by private individuals according to the Trade Regulation Act; however, there are also some public institutions. Registration is carried out by the trade offices in the jurisdiction of the Ministry of Industry and Trade.

Children's Groups have expanded greatly in recent years, offering care that is finally affordable also for middle-income families. Private commercial settings are usually the last choice for parents who are unable to care for their children. Such facilities, which are subject to trade law, exist only in large cities, they are very expensive and pedagogical processes are not controlled. Especially in big cities, individual care is an option for wealthy families during the summer holidays when kindergartens are closed (e.g. in August).

Also, since 2016, so-called **mini-nurseries** (*mikrojesle*) for children aged 6 months to 4 years have been administered by the Ministry of Labour and Social Affairs, in which a maximum of four children are cared for.

Education sector

Kindergartens (*mateřské školy*) for 2 to under 6 year-olds are mostly run by the municipalities, but legally they are part of the school education system. As a rule, primary school begins when a child has turned 6 by the end of August. Children who turn 6 until after that date continue to go to kindergarten, which explains the relatively high number of 6 year-olds in kindergartens. For children over 3 years of age, municipalities have a duty to provide places. Although kindergartens are part of the school system, the annual opening hours are designed in such a way that parents can be sure that their children will be looked after during the holidays. Nevertheless, in July or August, operating hours are often reduced or the setting may close. In this case, children

can be admitted to other kindergartens; however, provision of alternative forms of care is usually only available in larger cities. There are full-day kindergartens with opening hours to 12 hours a day, with some groups opening only in the mornings. In the afternoon children will be grouped so that fewer staff is required. In some settings children can stay overnight. The children are organised into same-age or mixed-age groups. Educational activities during the final compulsory year comprise four hours daily and start between 8:00 and 9:00; in addition, two hours are set aside for outdoor activities.

The compulsory year before starting school can be spent either in a kindergarten or in a preparatory class. All these institutions must adhere to the framework plan for pre-school education.

Preparatory classes (*přípravné třídy*) in primary schools are attended by 6 year-old children who are deferred from school attendance and also by some 5 year-olds. In 2022/23 there were 418 schools with 507 preparatory classes attended by 6,463 children (STATIS 2023, Tab. B 2.1.1). In 2021/2022, 210 children were enrolled in 34 preparatory classes located in special needs schools (Czech Statistical Office 2022, 657).

In addition to church kindergartens, there are also Waldorf, forest kindergartens, Montessori, Step by Step and more rarely Dalton, Reggio, Parentes, facilities. Almost all alternative kindergartens have their own associations controlling quality and all can be registered in the register of schools and school institutions and then provide pre-school education. They are subject to the same regulations as kindergartens.

In 2022/23, there were 5,374 kindergartens in the Czech Republic and 112 special kindergartens attended by 3,018 children (STATIS 2023, Tab. B 1.1.2).

Provider structures

Providers of the multi-age **Children's Groups** (*dětské skupiny*), which have been approved since the end of 2014, can be employers (private, public and state companies and organisations) or non-profit providers (municipalities, regional authorities, church or philanthropic associations).

Most **kindergartens** for 2 to under 6 year-olds are publicly funded institutions run by the Ministry of Education and operated by municipalities and school authorities. Church-affiliated and private institutions are not very common. In 2022/23, they accounted for only 9.2% (0.9% church, 8.3% private) of all kindergartens and were attended by only 4.6% of the age group (see *Table 1*).

Table 1

Czech Republic: Number of kindergartens and distribution of enrolment rates by provider, 2022/23

Provider	Number of kindergartens	Share of kindergartens, in %*	Number of children	Share of children, in %*
Public/state	7	0.1	167	0.05
Public/municipal	4,785	89.4	349,402	94.6
Private	447	8.3	14,782	4.0
Church-affiliated	84	1.6	2,717	0.7
Regional	1	0.02	36	0.01
Other	50	0.9	2,101	0.6
Total	5,374		369,205	

Source: STATIS 2023, Table B 1.1.2, *own calculations

In 2022/23, 369,205 children (including 32,714 children under 3 years of age in 2021/22, Czech Statistical Office 2022, 657) attended 5,374 kindergartens (including 498 church or private non-profit); only 20 of the 112 special needs kindergartens (2022/23) were private (STATIS 2023, Tab. B 1.1.2).

Participation rates in regulated provision

There are no data available for the participation rates of children in settings outside the education system.

Traditionally, children under 2 years of age were rarely cared for in institutional settings. In the last 20 years, however, the proportion of 2 year-olds **in kindergartens** rose to about 40% of the age group. However, due to preferential admission of older children, it has now dropped to about one third of the age group; this can partly be compensated by places in **Children's Groups**. In 2022/23, of all children (360,205) in kindergartens, most were 5 year-olds (30.23%), followed by 4 year-olds (28.99%) and 3 year-olds (26.10%). 8.7% were children under 3 years, 5.99% were 6 years and older. Except for the proportion of under-3s, which has been steadily decreasing for about five years (from 12.3% in 2016/17 to 8.7% in 2022/23), the ratios are relatively stable (STATIS 2023, Tab. B 1.4.1, own calculations).

Table 2

Czech Republic: Children in kindergartens according to age, 2022/23

Age of children	Number of children	Share of children in Kindergartens
Under 2 years	214	0.06%
2 to 3 year-olds	10,809	8.64%
3 to 4 year-olds	96,361	26.10%
4 to 5 year-olds	107,031	28.99%
5 to 6 year-olds	111,603	30.23%
6 year-olds and older	22,102	5.99%
3 to 6 year-olds	337,097	91.27%
0 years to school entry	360,205	100.00%

Quelle. STATIS 2023, Tab. B 1.4.1

In 2022/23, 6,463 children attended a preparatory class (5 year-olds: 1,695; 6-year-olds: 4,718; 7 year-olds: 50) (STATIS 2023, Tab. B 2.3.1).

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 0.48% of GDP in 2019 (OECD 2023).

Multi-age Children's Groups are currently partly funded by the state, and newly established ones can also benefit from grant programmes from the European Social Fund. Since 2022, funding conditions have changed. In particular, it is stipulated that from 2023, parental contributions for children under 3 years of age may not exceed CZK 4,720 (approx. € 200³) per month; the contribution must always be lower than the state contribution for this childcare place (MPSV

³ Conversion rate 25 April 2023

2023). Thus, the majority of the Children's Groups are used by younger children, for whom there are no other options due to their age and the lack of kindergarten places.

Public kindergartens/ Preparatory classes, which are registered in the so-called school register (*Rejstřík škol a školských zařízení*) and meet all legislatively established requirements (spatial, hygienic, staffing, etc.), receive funds from the state and municipalities and can also generate their own funds.

The financing of kindergartens changed in 2020 (Education Act 2020). The so-called "standardised cost-based financing" is now in effect, which re-centralises decision-making powers to the Ministry of Education. Since 2020 it has been implemented in two steps: (1) the Ministry of Education uses most of the state funds for direct education expenditures (e.g., salaries of professionals, learning materials, continuing education, quality development), which are determined for each individual institution; (2) the municipalities in turn distribute these funds in regional per capita amounts. In this new system, the per-capita amount per child is converted into a per-capita amount per specialist member of staff, which is better suited to fund the actual extent of "teaching". In practice, this means that in kindergartens the amount of funding is based on the number of pedagogical specialists and their salary groupings and no longer on the size of the institution. Each facility also receives funding for the salaries of "non-teaching" staff. The operating costs are borne by the respective institution.

In the public settings, the kindergarten heads set the monthly parental fees, which are mostly regulated by ordinances. They do not exceed 50% of the average non-investment monthly expenditure per child (salaries, insurances, materials, etc. excluded). Parental fees for a kindergarten place were highest in Prague in 2018/19 (CZK 712, €30), and lowest in the Vysočina area (CZK 244, €10). Private kindergartens are far more expensive than public ones (see *Table 3*). Often, smaller municipalities try to keep (or recruit) children into their settings by charging low fees. If an ECEC setting is located more than four kilometres from the child's home, the municipality must arrange transportation, but this is not free of charge. In 2023, tax relief of a maximum of CZK 17,300 (€692) could also be claimed for attendance at a kindergarten.

For children aged 5 and over or children in preparatory classes, attendance is free of charge, although this only applies to the four hours of educational activities.

Table 3

Czech Republic: Estimated average parental fees in kindergartens by provider, 2021/22

Kindergarten provider	Monthly fees	
	CZK	€
Public, state-maintained (established by the Regions)	217	9.23
Public, municipal (established by the municipalities)	387	16.46
Private not-for-profit kindergartens	6,259	266.25
Church-affiliated kindergartens	750	31.90
Average overall	938	39.90

Source: Eurydice 2023, 3.1 (Data provided by the Czech Schools Inspectorate)

In private kindergartens, direct educational expenses (e.g., running operating costs, development programmes) are covered by the state budget through per capita funding. If private institutions are registered in the school register and meet other administrative criteria, they can receive a basic subsidy (60%). If they meet other conditions (they have already been subsidised for one year, the last evaluation was at least average, they invest all profits in education, etc.), they can apply for extended subsidies.

In 2022, a couple with two children spent about 16% of net household income on childcare costs⁴ (OECD.Stat 2023).

Staff to child ratios and group size

Regulations on staff to child ratios and group size vary according to the kind of institution.

Multi-age Children's Groups (*dětské skupiny*): Since the amendment of the Children's Group Act 2021 (MPSV 2021), children aged between 6 and 12 months can also be included. At least one professional for a maximum of six children, at least two professionals for seven to 12 children and at least three professionals for 13 to 24 children. There is a maximum of four children under the age of 4 in a group.

In **nurseries** for under 3 year-olds (*zařízení pro péči o děti do 3 let*), neither the group size nor the staffing ratio is prescribed.

Kindergartens (*mateřské školy*): The maximum number of children per group is 24. The maximum number may be exceeded by four children in exceptional cases. Single-group kindergartens must be attended by at least 13 children (MŠMT 2021a).

Each day, both professionals must be present for at least 2.5 hours, with a maximum of 12 children per professional, otherwise one professional is responsible for a maximum of 24 (in exceptional cases 28) children. For outdoor activities, one qualified staff member may only be responsible for 20 children. If children under 3 years of age or children with disabilities are present, the number can be reduced and a pedagogical assistant can be employed. Generally, the number in a group is reduced by two children for each child under 3, however, to no less than 19 children. As a rule, there may not be more than five children with special needs in a group (MŠMT 2021b). In 2021/22, the average number of children per group was 21.5, and the average staffing ratio 1:10.7 (Eurydice 2023, 4.3).

Curricular framework

Childcare sector

Neither multi-age **children's groups** nor **nurseries** for under 3 year-olds have an official curricular framework. However, since October 2021, the **children's groups** are required to comply with certain quality standards (child-appropriate care, staffing, operational procedures) which are laid down in Decree 350/2021 (MPSV 2021). According to the Children's Groups Act, amended in 2021, some basic areas are mentioned, e.g., the development of cognitive and linguistic skills; movement; artistic and cultural competences; health and safety. Providers are required to develop an age-appropriate programme.

Education sector (ISCED 02)

Kindergartens are obliged to follow the national curricular framework (*Rámcový vzdělávací program pro předškolní vzdělávání*, 2004, 2021), which is currently managed by the National Pedagogical Institute. Based on this framework, kindergartens draw up their own school education programme. Professionals in the groups work out a class programme that is continuously developed and adapted to the situation and the children during the year. Some curricula documents are also required by the state and are evaluated by the Czech school inspectorate.

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

In addition to the description of the main objectives and methods, the framework education programme also contains five content areas and describes tasks of the professionals and provisions for evaluation procedures. Key competences are stated as: Learning and problem-solving competences; communication and social/personal competences; civic competences. In terms of content, five learning areas are mentioned: (1) biological (the child and their body); (2) psychological (language, cognitive abilities, imagination and fantasy, thinking and self-concept, emotions and temperament); (3) interpersonal (the child and others); (4) socio-cultural (the child and society); (5) ecological (the child and the world/environment).

Currently (2023), a new amendment to the supplementary guidance is being prepared. The aim is to encourage pedagogues and kindergartens to follow a child-centred pedagogy more closely and to use methods that activate the children and enable them to learn actively, discover the world and build independence and autonomy in the context of democratic and humanistic values. The amended framework education programme is scheduled to be published in 2024.

Digital education

Digital literacy is not a designated learning area in the national kindergarten curriculum, although the use of information and communication technologies is included in the skills related to communication and the targeted promotion of the development of digital and information skills ("literacy") is also part of the newly elaborated programme (see above). A revision of the concept of digital education in the existing curricular framework is currently under preparation. In particular, the development of critical thinking, problem solving, data handling, and security will be emphasised (European Commission/EACEA/Eurydice 2019b).

Monitoring – evaluation

Children's Groups have been obliged since October 2021 to comply with certain quality standards (child-appropriate care, staffing, operational procedures), which are laid down in Decree 350/2021 (MPSV 2021), but they are not inspected by the Czech School Inspectorate.

Evaluations of kindergartens are generally the responsibility of the Ministry of Education, regional local authorities and the Czech School Inspectorate.

Child-related assessment

In kindergartens, when assessing children, no particular emphasis should be placed on comparing children's performance. The traditional notion of "school readiness" is increasingly being questioned in the professional community and preference is being given to a new concept based on mutual dialogue between kindergarten and primary school (EDUin 2022).

Professionals are required to continuously observe and assess children in order to better support their individual development and to identify potential problems at an early stage. Each professional can use their own system of assessment. According to data from the Czech Schools Inspectorate, professionals mostly (84%) assess children individually, keep portfolios (70,2%) or so-called progress cards (19,8%). Written reports on individual children, in which the progress of educational activities is recorded, are confidential; however, observations about children are shared with parents on a regular basis (European Commission/EACEA/Eurydice 2019a, 119; CSI 2022, 49).

Kindergartens are not authorised to assess a child's "readiness for school." This is reserved for school counselling centres, at the request of parents when a child is to be deferred from school attendance or enrolled earlier.

There are no specific guidelines or materials for easing the transition to primary school; at present, the trend is moving away from "schoolification". Particularly where kindergartens and primary schools form a unit, this is not a prominent topic (EDUin 2022).

Centre-level internal assessment

Multi-age **Children's Groups** are not obliged to conduct internal evaluations apart of the development according to the quality standards.

In **kindergartens**, too, internal assessments do not follow a predetermined form and are not regulated by law. Nevertheless, kindergartens are expected to carry out the self-evaluations specified in the framework programme according to an individually developed evaluation system, which is then also evaluated by the school inspectorate. They usually form the basis for the annual report that the kindergarten head must prepare. Important points are e.g., staff satisfaction, cooperation with the centre head and with parents, compliance with regulations, the quality of pedagogical work and working conditions. Freely chosen methods include questionnaires, checklists and interviews. The National Pedagogical Institute also organises training courses on this topic.

External evaluation

Multi-age **Children's Groups** are inspected by the National Labour Inspectorate and regional supervisory boards in terms of compliance with the conditions and obligations laid down by law. The regional health authority is responsible for the monitoring of hygiene requirements for facilities, catering and overall management. Children's Groups can voluntarily apply for a so-called quality seal audit. Specific quality standards were introduced in the amended Children's Groups Act (2021).

At the national level, the Czech Schools Inspectorate (*Česká školní inspekce, CSI*) is responsible for the external evaluation of **kindergartens** of all provider types through 14 regional school inspectorates. The inspections are based on two key documents: (1) the basic task plan of the CSI and (2) the evaluation criteria, which are set for one school year at a time. Both documents are approved by the Ministry of Education. The activities of the kindergartens are evaluated; the conditions, processes and outcomes according to the respective education plans; the content of these plans and their compliance with the national curricular framework; the compliance with legal regulations and finances; the equipment; and personal assessments. The evaluations result in inspection and thematic reports that list the strengths and weaknesses of an institution as well as set deadlines for possible improvements. In the case of evaluations of private institutions, the report may also have an impact on state subsidies. The reports are published on the CSI homepage.

Inspection visits take place at least once every six years, lasting two to five days – depending on whether the inspection only relates to partial areas or whether it is a total inspection. In addition to the data from the documentation carried out by the kindergarten, they include observations, interviews with the centre head, children and parents, the inspection of the buildings and the data from the internal assessments (CSI 2021).

Inclusion agenda

Children with special educational needs and disabilities

The National Plan for the Promotion of Equal Opportunities for Persons with Disabilities 2015-2020 contains the main goals, objectives and principles for putting the policy of inclusion into practice (EASNIE 2021). In the Education Act (§ 16), the term “children with special educational needs” is used as a collective term for different groups of children with disabilities and disadvantages; further categorisation is intentionally avoided, as the focus is on the individual support of a child. The special educational needs of children are divided into five levels. Depending on the level and the type of disadvantage, the child has a right to certain support measures. Whenever possible, children with special education needs should attend mainstream settings, where they also receive the additional educational and psychological support.

In addition, there are special kindergartens (*speciální mateřské školy*) or special classes in regular kindergartens specifically for children with special education needs who cannot be adequately supported in inclusive kindergarten groups. Some remedial kindergartens also have inclusive classes, which are attended jointly by children with and without special education needs and open up opportunities for transition and further integration into a mainstream setting. In 2022/23, there were 112 kindergartens exclusively for children with special educational needs (STATIS 2023, Tab. B 1.1.2), with groups of six to 14 children. Preparatory classes also include children with disabilities, where they can be better prepared for the transition to elementary school.

In 2022, 18,925 children with special educational needs attended kindergarten (STATIS 2023, Tab. B 1.17.1), 17,853 of whom attended a municipal kindergarten (ibid. Tab. B 1.17.2). Significantly more children with disabilities attended special groups (6,779) than regular groups (6,252) (ibid. Tab B 1.2.1).

The curricular framework programme also applies to children with disabilities. Many kindergartens have integrated inclusive measures in their respective educational programmes. In recent years, educational professionals who support the institutions in the inclusive process have been offered further training from various (non-governmental) organisations. The number of so-called Pedagogical Assistants has increased significantly since 2016 – as a result of the new School Act and Ordinance on the Education of Children with Special Educational Needs 27/2016 Coll.

The state offers kindergartens a range of options for children in need of support: for example, a support plan or an individual education plan can be drawn up for the child; the kindergarten management can employ an additional pedagogical specialist (assistant); the group size is reduced to a maximum of 19 children per group or the children receive special support in certain developmental and educational areas, etc.

Since 2006, the non-governmental organisation "People in Need" has opened 14 "pre-school clubs" throughout the country. These are mainly aimed at children between 3 and 6 years of age from disadvantaged areas and children who do not attend kindergarten. The aim is to support them in attending a regular institution and to facilitate the transition to primary school (People in Need n.d.).

Children with a migration background – Children from Roma communities

Currently, there are 14 officially recognised ethnic minorities in the Czech Republic – including persons from Slovakia, Ukraine or Poland, as well as the Roma population. Recognised ethnic minorities have the right by law to be taught in their language and receive support to preserve

their culture. If more than eight children of an ethnic minority attend a kindergarten, the municipality or even the Ministry of Education ensures that they can also be taught in special language groups. Kindergartens attended only by ethnic minority children must consist of at least 12 children. Currently (2022/23), there are 24 kindergartens for the Polish minority only, attended by 845 children.

In the last census in 2011, 5,135 people reported being Roma. The Council of Europe, on the other hand, estimates that there are approximately 250,000 Roma (about 2% of the population) living in the Czech Republic (European Commission 2021).

However, there are not enough reliable data or research studies on Roma throughout the country. Back in 2015, the "Roma Strategy 2020" (European Commission 2015) emphasised the importance of Roma inclusion in social life, which as a bilateral process should aim to preserve their cultural and linguistic identity. Above all, the attendance rate of Roma children at ECEC settings should be improved in order to create good conditions for aligning the educational level of Roma with that of the population as a whole. The aim is to prevent Roma children from being segregated or excluded. To this end, support should also be offered to parents. In order to provide incentives to attend ECEC settings, it was suggested that fees be reduced or waived, that space capacities be increased and that teachers be specially trained in the integration of Roma children.

The new "Roma Integration Strategy 2021-2030" of the Office of the Government Council for Roma Minority Affairs and other experts is now intended to create a framework for action to reinforce positive changes achieved under the 2020 strategy with regard to Roma integration and to counteract negative trends (Vláda České Republiky 2021).

After February 2022, the Ministry of Education created a system to support the integration of Ukrainian refugees into the Czech education system. A recent letter from the Minister of Education to schools included material on the "Education of Ukrainian Children in the Czech Republic", which focuses on the specific procedures for integrating children and pupils into the community and the rules for their admission to schools. Also included is useful advice on dealing with language barriers and educating pupils of non-Czech origin, as well as important contacts (MŠMT 2023a).

In 2022, there was also a general call to all kindergartens and schools to help Ukrainian children to settle in and to support their socialisation (3–15 years old), to support the development of their language skills, especially their ability to speak in Czech, to prepare the children for entry into Czech schools, and to support the mental well-being and mental health of the children (MŠMT 2023b).

At the end of 2021, 6.3% of the population were of non-Czech origin, 2.1% were from other EU countries (more than half of them (51.6%) had a Slovak citizenship), and 4.1% were from non-EU countries, mainly from Ukraine (45.1%) (Czech Statistical Office 2022, 138, 156 and own calculations).

In 2022/23, out of 369,205 children in kindergartens, 94.7% had a Czech citizenship, 0.6% (2,181) were from Slovakia, 0.4% (1,452) were from other EU27- countries, 3.2% (11,988) from other European states, and 1.1% (3,946) were from other countries (STATIS 2023, Tab. B 1.5.1, own calculations).

Parental leave arrangements⁵

Maternity leave (*mateřská dovolená*) is 28 weeks: six to eight weeks before birth and 20 to 22 weeks afterwards. These periods are remunerated at 70% of daily earnings, up to a maximum of CZK 47,700 (€2,00.92) per month, provided the mother has paid into a health insurance scheme for at least 270 days during the last two years. From the seventh week after the birth, the father can also take this leave for at least seven days. During Maternity leave, mothers (or fathers) can also continue to work – but not in the job from which they are taking Maternity leave.

Fathers who are officially registered as the father of the child are entitled to 14 calendar days of **Paternity leave**, which is paid at 70% of daily earnings, up to a maximum of CZK 22,260 (€933,76) for seven days. These days can be taken for six weeks at a stretch after the birth of the child.

Both parents can take **Parental leave** (*rodičovská dovolená*). Regardless of whether Parental leave is taken or whether the parents work full-time or part-time, the parent caring for the child receives parental allowance: up to the child's fourth birthday, a total of CZK 300,000 (€12,584.42), usually in monthly payments (new from 1/2024: CZK 350,000 and only up to the child's 3rd birthday). Parents on leave can work without limitation. For children under 2 years of age, publicly funded childcare may be used for a maximum of 92 hours per month.

In 2021, 43% of fathers took Paternity leave. It is still very rare (currently just under 2% – no recent data) for men to claim the parental leave allowance. Statistical data on the length of parental leave claimed do not exist, but it can be assumed that most return to work on the child's third birthday so that they do not lose their job.

Current challenges for the ECEC system in the Czech Republic

Country expert assessment by Barbora Loudová Stralczyńska

Translating the inclusion agenda into practice

In 2016, new regulations were issued for all schools and school institutions (i.e. also kindergartens). Through current legislative conditions individual support and inclusion in schools could be strengthened. However, a persistent problem is the lack of qualified pedagogical assistants who are appropriately trained to support children with special educational needs. The differentiation of training opportunities at secondary and higher education level according to the work position and content and the creation of a new training system for pedagogical assistants is a challenge for the further development of early childhood education and care in the Czech Republic.

The Ministry of Education recently prepared new legislation that will limit the number of assistants to a certain extent. This proposal has been criticised, especially by institutions and schools attended by many children with special educational needs, that employ many assistants in their groups (classes).

Inclusion is always a controversial and prejudice-laden topic in the general public. However, the experiences of the war in Ukraine and the influx of refugees have positively influenced the general social discourse⁶.

⁵ The brief summary in this section is based on the country note for the Czech Republic by Jirina Kocourková in the *International Review of Leave Policies and Research 2023* (see *References*).

⁶ Czech society in 2022 was clearly united in its efforts to help refugees on many levels. The experience of the Soviet occupation in 1968 is still a strong historical moment, updated in the context of the war in Ukraine.

As a result of the migration wave (2022), half a million Ukrainian refugees arrived in the Czech Republic, a third of whom are children. The integration of Ukrainian children into the education and care system is a major challenge for the education and social sector. The Czech Republic has created special legislation to enable children from Ukraine to benefit from adaptation groups in various forms and to be integrated into early childhood education. Statistical data show that in June 2022, 33% of Ukrainian children were participating in pre-school education in kindergartens, and by the end of 2022 this figure had risen to 65% (PAQ 2023). Thus, the ECEC system has succeeded to a certain extent in caring for Ukrainian children, although the system is struggling with a shortage of places in childcare facilities, especially in larger cities. Many kindergartens and schools have enrolled Ukrainian children beyond their normal maximum capacity. Many women from Ukraine have also been integrated into the education system, working as assistants for Ukrainian children or taking on non-educational tasks in schools. The Ministry of Education provides financial resources for this purpose.

Expansion of places in kindergartens (or other appropriate forms of provision) for 2 and 3 year-olds

The ECEC system has experienced a number of positive developments in recent years. Although many parents take advantage of the 2-year parental leave and the accompanying parental allowances, there is still a lack of financially affordable childcare places for children under 3 years of age. In recent years, there has also been an increasing lack of kindergarten places for 3 year-olds as well, even though there is a legal entitlement to a kindergarten place for children from the age of 2 and municipalities are obliged to provide such places. Therefore, the Czech Republic is a kind of paradox in this respect. Although parents have a legal entitlement, the state is unable to ensure its fulfilment, but at the same time it does not offer an adequate alternative with the same level of quality and similar financial burden for families.

According to the demographic scenarios, the number of children will decrease in the next few years, so the shortage of kindergarten places might not be as pronounced in the future. However, if one takes into account the development of migration and the wave of refugees within Europe, the expected decline in the number of children in the future cannot be relied upon.

A systemic solution for ECEC of children up to 6 years of age within the framework of social, family, economic and educational policy is still a challenge, although the care situation for children under 3 years of age has improved greatly in recent years. However, it is not only a question of quantitative, but also qualitative expansion and ensuring quality and continuity in the educational careers of children. In large cities, the focus is no longer on the number of places, but rather on the cost for families and the quality of educational processes.

However, with regard to the recommendations of the Council of Europe to promote the quality of childcare, the Czech ECEC system for children under 6 years-faces a number of challenges. Current childcare in Children's Groups and childcare facilities for children under 3 years of age is usually not available to children from socially disadvantaged families for financial reasons. In most regions of the Czech Republic, there is no low-threshold support for these children that would enable them to achieve equal opportunities in education. The financial demands of childcare in institutions other than kindergartens are also difficult for single parents to cope with. This hinders their return to the labour market and their ability to overcome social problems. The guarantee of generally available and accessible care for children under the age of 3 therefore still needs to be developed.

Introduction of compulsory attendance for the final kindergarten year and supporting transition processes

Since 2017, all children are required to attend kindergarten for at least one year (compulsory pre-primary education). Home-based education remains an option, but parents must apply for approval and agree to send their child to regular tests at a prescribed kindergarten during the compulsory year. It was assumed that this compulsory year would help to increase the attendance of children from socially disadvantaged families. As statistics show, these expectations have not been fulfilled. The overall share of kindergarten attendance in the population of 5 year-olds has actually been declining since 2018. Even though pedagogical practice has become accustomed to compulsory pre-primary education, some doubts remain about its effectiveness. The compulsory pre-school year was supposed to ease the transition from kindergarten to the first grade of primary school. Transition *in* particular is a very topical issue in the current public debate. The compulsory pre-school year has not proven to be a very effective measure. At present, the need to relax the requirements for pupils in the first grade and to intensify cooperation between kindergarten and primary school is in focus. The Czech Republic is at the top of the EU countries in terms of the number of deferrals from school. The creation of systemic conditions for a successful start to school is one of the central themes of current education policy.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in the Czech Republic totalled 10,516,707. From 2000 to 2005, a slight decline could be observed; between 2005 and 2020, the population figures increased (2000: 10,278,098; 2005: 10,198,855; 2010: 10,462,088; 2015: 10,538,275; 2020: 10,693,939). After a drop in 2021, they are rising again (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13) (Eurostat 2023d). At 1.83, the Czech Republic had the second highest rate in the EU27 (Eurostat 2023d)⁷.

⁷ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Children under 6 years of age

Table 4

Czech Republic: Number of children under 6, disaggregated by age, 2022

Age	Number
under 1 year-olds	111,659
1-year-olds	108,020
2-year-olds	110,900
3-year-olds	113,326
4-year-olds	114,193
5-year-olds	113,464
Total 0 to under 6-year-olds	671,562

Source: Eurostat 2023a

In 2022, 3.1% of the total population were children under the age of 3, and 6.4% were children under 6 years of age. These shares were well above the EU27 average.

Table 5

Czech Republic: Children under 6 years of age – share in total population from 2000 to 2022, in %*

Year	Comparison Czech Republic/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Czech Republic	2.6	2.8	5.5
	∅ EU15 ⁸	3.2	3.2	6.4
2005	Czech Republic	2.8	2.6	5.4

Single households with children under age 6

In 2022, more than three quarters (79,6%) of all households with children under 6 were couple households. Single-parent households accounted for only 4.8% of all households in the Czech Republic, mostly single mothers (4.5%).

Table 7

Czech Republic: Households with children under age 6, 2022

Household type	Total households	Total households, in %*
All households	1,117,200	
Couple households	889,400	79.6
Other household type	174,400	15.6
Single households, total	53,400	4.8

⁸ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Household type	Total households	Total households, in %*
Single households, women	49,800	4.5
Single households, men	3,600	0.3

Employment rates of parents with children under 6 years of age

In the Czech Republic, the overall employment rate for men (aged 15-64) was 83.7% in 2022, and for women 70.4% (Eurostat 2023i).

In 2022, 42.5% of women and 95% of men with children under 6 were in employment. Compared with the EU27(2020) countries, the proportion of working fathers were among the highest (average 87.2%), while those of mothers were the lowest (average: 63.6%) (Eurostat 2023d).

Table 7a

Czech Republic: Employment rates of parents with children below age 6 compared with seepro3-countries, 2010 and 2022

	2010	
	Mothers, in %	Fathers, in %
Czech Republic	36.3	93.1
Highest rate of employment in 27 EU countries ⁹	Denmark: 82.7	Switzerland: 98.6

Children at risk of poverty or social exclusion¹¹

In 2022, 13.2% of children under 6 in the Czech Republic were at risk of poverty or social exclusion. This proportion was below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 11.8% (EU: 21.6%). In 2020, 4% of children under 6 and 2% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023g, h).

About the authors

Anette Boye Koch, PhD, is a Senior Associate Professor (*docent*) in Early Childhood Education and Care at VIA University College in Denmark. She is head of the research programme for children's wellbeing in the research centre for pedagogy and education, and has comprehensive knowledge of the Danish pedagogue profession through teaching and counselling for more than 20 years. Anette's areas of research are childhood wellbeing, ECEC, pedagogical anthropology, children's perspectives and child-centred pedagogy.

Jytte Juul Jensen was an Associate Professor and Senior Researcher at VIA, Pædagoguddannelsen, Aarhus. For many years she was involved in the initial professional education of pedagogues, the early years professionals in Denmark. Her most recent research project focussed on Danish pedagogues' understandings of Danish practice in early childhood services. She has undertaken a wide range of cross-national work, including research, and has given numerous lectures and papers at international conferences in many European countries, as well as outside Europe.

1. ECEC governance in Denmark

Denmark has a unitary system of early childhood education and care for children up to age 6 which includes family day care. ECEC provision at the national level, since June 2019, comes under the responsibility of the Ministry of Children and Education (*Børne- og Undervisningsministeriet*). Traditionally, ECEC services were located within the social welfare system rather than within the education system, but during the last decade this affiliation has been challenged and the responsibility for the area has shifted, depending on government formation.

Currently, the Ministry of Children and Education provides the overall curricular requirements and general regulations. The funding and organisation of ECEC provision as well as details of regulatory practices are the responsibility of the 98 local municipal authorities.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Pedagogues (*pædagoger*) are the core pedagogues in Danish centre-based ECEC provision and account for almost 60%¹ of the staff. The remaining staff are mainly Pedagogue Co-helpers, for which no formal qualification is required. Most of these co-workers are young people between 19 to 25 years with an upper secondary leaving certificate who want to spend a year or two in a workplace before they begin to study. The job is quite popular and it is not unusual to have between 200 to 300 applicants for one Co-helper post, even in small cities and rural areas (EPOS and EVA 2013, 28; EVA 2020). The reasons for this popularity are, among other things, that it is a well-paid and responsible job which offers the opportunity to work with children. Some of the Pedagogue Co-helpers go on to take the Pedagogue education/study route.

Table 1 shows ECEC staff working in direct contact with children in centre-based settings and also categorises the core pedagogues (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this chapter).

Box 1

SEEPRO Profile Categories for ECEC Core Professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

² **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Denmark): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

³ Students under 25 years of age study for 2 years plus 6 weeks. Students above 25 with two years of relevant work experience study for 42 weeks.

⁴ n/a = not applicable

2.2 Centre leader

In Danish ECEC, leaders operate at different levels, depending on local decisions in each municipality / by the centre owner. In general, Pedagogical Leaders have the day-to-day responsibility for the running of a local institutional setting, but in addition, some municipalities / owners operate with Centre Directors responsible for a group of more ECEC settings located in the same geographical area. All leaders are qualified Pedagogues with substantial experience. Further qualification is not a national/general requirement, but an advantage in terms of acquiring and succeeding in the positions. All formal management training takes place as continuing professional development (CPD). Most leaders are encouraged to engage in a theoretical management education after employment if they do not already hold a CPD qualification, e.g. Diploma study programmes in leadership or the equivalent. The understanding of leadership in Danish ECEC is predominantly collective, based on dialogue and with a flat leadership structure. The main leadership tasks are both pedagogical and administrative. Many Pedagogical Leaders prioritise working directly with children on a regular basis.

2.3 Centre-based posts of responsibility

As mentioned in *Chapter 2.2*, each local centre has a Pedagogical Leader, who receives a higher salary based on the collective agreements. Other centre-based posts of responsibility are established decentrally by each local authority in cooperation with the ECEC centre. These may include a special responsibility for language guidance, for physical activities or for student mentoring. The special responsibilities are rewarded with a salary bonus.

A ‘professional beacon’ initiative was introduced in reference to the national competence initiatives in ECEC in 2018 (Ministry of Children and Social Affairs 2018). Within this initiative, local centre units apply for funding of the continuing professional development (CPD) of one or more staff members. These are then trained for a post termed ‘professional beacon’ by participating in a three-day course or by taking a diploma-module (Jensen and Preus 2020). The idea of the ‘professional beacon’ post is one of resource building in the organisation through special resource persons leading and inspiring colleagues.

2.4 Co-ordinating and supervisory staff

The organisation of co-ordinating and supervisory staff to ECEC centres is established decentrally by each local authority. Pedagogic Consultants are employed by the municipalities, with the primary task of advising and supervising the ECEC institutions. The consultants are Pedagogues with a CPD qualification, and usually have a university degree in pedagogy or similar. Their role is to support the ECEC centre’s pedagogical mandate as formulated in the curriculum, to provide supervision and to support the centre leader in personnel management, cooperation and conflict resolution. The consultants’ duties also include pedagogical advice for the staff in relation to children with special needs. In relation to the administrative level, pedagogical consultants might participate in the development and organisation of pedagogical activities. They may carry out case processing for the administrative management and lead projects relating to policy and administrative initiatives.

2.5 Specialist support staff

Specialist support staff are located off-site and allocated in individual cases by the local authority’s Pedagogical-Psychological Counselling Service (*Pædagogisk Psykologisk Rådgivning – PPR*).

Specialist staff who work with individual children in the centres on demand are typically Psychologists, Pedagogical Consultants, Speech Therapists, Language Coaches, Motor Skills Supervisors and Special Needs staff. The range of specialist support staff available depends on the organisation of the PPR in each local municipality and therefore varies across municipalities.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

As *Table 2* shows, Pedagogues are the main staff category in ECEC in Denmark, making up more than half of the workforce. The proportion varies according to the type of provision. The majority of the remaining staff are non-qualified Pedagogue Co-helpers (35.6%) and only 6% of all staff are Pedagogical Assistants with a post-secondary vocational qualification.

Table 2 also shows the percentage of male staff in ECEC centres, proportions that compare favourably with the situation in other countries. 15.6% of all staff and 9.5% of qualified Pedagogues are male workers. Most male workers are unqualified, thus 16% of those working as Pedagogue Co-helpers are men.

With regard to ethnicity, the larger majority (91,7%) of all staff have a Danish ethnic background.

Table 2

Denmark: Structural composition of ECEC workforce in Denmark: qualifications, gender, ethnicity, 2021

Staff categories	Year / Proportion of workforce, in % All centres (municipal and independent)	
Staff with specialist higher education degree (Pedagogues)	54.61	
Staff with specialist post-secondary vocational qualification (Pedagogical Assistants – PAU)	5.99	
Staff with no formal IPE (Pedagogue Co-helpers)	35.60	
Staff with other pedagogical education	1.27	
Trainee pedagogical staff	1.70	
Trainee pedagogical assistants	0.83	
Specialist support staff (e.g., Pedagogical Consultants, Speech Therapists, Psychologists)	Mostly off-site	
Male staff	Proportion among all staff	15.6
	Proportion of all Pedagogues in ECEC**	9.5
Staff with a Danish ethnic background	Proportion among all staff	91.7
	Proportion among all Pedagogues in ECEC	93.8

Source: Denmark Statistik, via email, July 2023

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Pedagogue/Social Educator (*Pædagog*)

Applicants for this study route are admitted to a specialist university college according to a quota system. Quota 1 comprises candidates with the highest grades in the upper secondary examination; Quota 2 comprises those admitted following an assessment of competences and qualifications. There is a third possibility for applicants who do not fulfil the demands of either Quota 1 or 2. They can undergo a competence assessment related to prior experiences and skills. This competence assessment of the applicants' suitability, merits and prior experience may include: general personal qualifications and experience, e.g., work experience, vocational training, work abroad; special qualifications and experiences relevant to the Pedagogue training, e.g., work in social services for children, young people and adults, work in leisure time facilities, in civil society organisations etc.; relevant professional qualifications, e.g. single subject at a higher level exam; local authority, trade union or evening courses.

The Pedagogue study courses are free of charge. During study time at the colleges as well as during their first and fourth practicum the students receive a national student grant and can take out a loan. In 2022, the grant amounted to DDK 6,397 (€ 860) per month and the loan to DDK 4,910 (€60) per month. Most students also work some hours per week, for example as substitute staff in pedagogical settings, in order to have a reasonable standard of living. During the second and third practicum, each lasting six months, the students receive a practicum salary of around DDK 11,745 (€ 1,575) per month.

Denmark: Pedagogue / Social Educator

Job title in Danish: <i>Pædagog</i> Profile: Early Childhood Pedagogy Professional
Entry requirements: <i>Quota 1</i> Minimum age of entry: 18 years; one of the following upper secondary leaving certificates: <ul style="list-style-type: none">– <i>Studentereksamen</i> (STX) (12 years of upper secondary school)– <i>Højere forberedelseseksamen</i> (HF) (examination award of equivalent institution)– <i>Højere handelseksamen</i> (HHX) (higher vocational)– <i>Højere teknisk eksamen</i> (HTX) (higher technical)– <i>Særligt hf-forløb for fremmedsprogede</i> (GIF) (special course for foreign language people)– <i>Gymnasial eksamen fra Duborg skolen i Flensburg</i> (upper secondary from Duborg school in Flensburg, Germany)– <i>Gymnasial erhvervsuddannelse</i> (EUX) (upper secondary vocational) <i>Quota 2</i> A variety of entry routes: <ul style="list-style-type: none">– For those with one of the above upper secondary leaving certificates but do not have the entry grade in Quota 1– Social and Health Assistant with specific levels in some upper secondary subjects– Pedagogical Assistant with specific levels in some upper secondary subjects– Examination award in four upper secondary subjects (Danish, English, social studies and an optional subject) with specific levels

Job title in Danish: <i>Pædagog</i> Profile: Early Childhood Pedagogy Professional
<ul style="list-style-type: none"> – Leaving certificate from a preparing course for immigrants and refugees (FIF) based at some university colleges – An approved upper secondary examination of another country and adequate language skills – An IB-Diploma (International Baccalaureate) and adequate language skills <p>Professional studies: Higher education, 3½ years at a specialist university college</p> <p>Award: (since 2001) Bachelor’s degree in Social Education</p> <p>ECTS credits: 210</p> <p>EQF level: 6</p> <p>ISCED 2011: 6</p> <p>Main ECEC workplaces: Age-integrated centres (<i>Aldersintegrerede institutioner</i>), 0–5 years; kindergartens (<i>Børnehaver</i>), 3–5 years; nurseries (<i>Vuggestuer</i>), 0–2 years; other pedagogical fields of work</p>

Pedagogical Assistant (*Pædagogisk Assistent*)

The qualifying courses take place either at a vocational school or a university college. Candidates can either be school leavers, or may take the course as an adult if they are over 25. Before starting the qualifying course, an applicant must have a training agreement with their employer, which may be a local authority, a region or a private pedagogical centre. For the duration of the course, the students receive a monthly salary from their employer of DDK 9,000–12,000 (€1,200–1,600); the relevant salary as an adult learner is around DDK 22,000–25,000 (€3,000–3,350) per month. The studies are free of charge.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Pedagogue/Social Educator (*Pædagog*)

Course structure and competence specifications

The 2017 ministerial decree (Bekendtgørelse 2017) on the study programme for the award of the Bachelor’s degree in Social Education regulates the qualification of Pedagogues in Denmark and is supplemented by each university college’s specific course syllabus. The decree specifies

the purpose, duration, exams, syllabus, the merit education as Pedagogue⁵ and the competence goals for the different areas of the programme.

The study programme consists of two parts: a common part focusing on basic professional competences (70 ECTS credits, including one practicum period) and a specialisation part (140 ECTS credits). There are three specialisations: (1) early childhood pedagogy, (2) school and leisure pedagogy, (3) social and special pedagogy.

The specialisation course also consists of an inter-professional course, an optional subject area, a bachelor project and four practicum periods.

The generic competences of all three specialisation areas are linked to the Danish welfare state institutions, the aims of which are laid down in different acts. As in §1 in the ministerial decree of the Pedagogue study programme, it addresses the whole pedagogical field of work and not just early childhood:

The purpose of the education is that the student acquires relevant professional competences, knowledge and skills, to be able to manage, develop and convey development, learning and care assignments in a social perspective, both independently and in collaboration with others (Bekendtgørelse 2017).

The Bachelor's degree is on a par with other professional Bachelor programmes, such as those for school teachers, social workers and nurses.

Curriculum and didactic approaches

The decree states for all education elements the areas and the competence goals, as well as knowledge and skills goals. Since 2014, the decree has formulated competence goals which describe what the students must know and be able to do. The decree does not prescribe curricular areas.

Pedagogues specialised in early childhood pedagogy

...have particular competences to create and develop pedagogical environments and activities, in which optimal conditions are created on the basis of a professional, pedagogical foundation for a stimulating and safe life for children (Bekendtgørelse 2017, Appendix 2).

The designated areas of competence are:

1. Childhood, culture and learning
2. Profession and organisation
3. Professional relations and communications – 2nd practicum
4. Cooperation and development – 3rd practicum

Beyond specific academic knowledge, learning to be a 'competent Pedagogue' is also based on personal qualities. "These include own life experiences, engagement and corporeality, feelings and own values and morals" (Jensen 2016, 24). Personal education formation (*Dannelse* in Danish, *Bildung* in German) takes place throughout the entire study programme; for example, through aesthetic expressions and participating in pedagogical practice (not only through observing) where the students "must dare to invest their own personality" (Jensen 2016, 24).

Understanding pedagogical practice is built on learning to make judgements in a specific situation by drawing simultaneously on multiple sources of knowledge and skills. This needs to be reflected in the didactic approaches used in the Pedagogue education: class teaching, lectures for larger groups of students combined with discussions with students and group work, teaching themes, project work based on students' own selection of subjects and themes with supervision,

⁵ The Merit Education/qualification route is a specific study route for experienced Pedagogue Co-helpers and Pedagogical Assistants wishing to work towards gaining a full qualification as Pedagogue, i.e. a Bachelor's degree.

and so on. Since pedagogical practice is relational, it is important that this is reflected in the didactics.

The alternation between practicum periods and university college periods as two learning places is used didactically. Here it is important to emphasise that the practicum is not only 'practice' but also 'theory'. Likewise, learning in the college environment also comprises both elements. For example: Students need to practise skills in aesthetical forms of expression in pedagogical activities and this happens not only during the practicum periods but also at the university colleges.

"This is a different type of learning process than the cognitive one. The student must achieve skills in, for example, playing an instrument, telling a story, balancing a ball, playing in a sandbox, lighting a bonfire, climbing a tree, and so on" (Jensen 2016, 23).

A **reform** of the Pedagogue IPE is underway, based on a recent evaluation (Agency for Higher Education and Science 2021). The evaluation points to high learning outcomes, but a great variation in the competences of the new graduates, as the study programme includes a broad variation of students. The link between the practicum parts and teaching needs to be more closely connected, and the structure of the study programme with its many goals and short modules needs reconsideration in order to ensure coherent learning processes. Digital education is not mentioned in the 2017 decree, but the area is expected to be included in a future decree.

Pedagogical Assistants (*Pædagogisk Assistent*)

Competence specifications and curricular areas

The ministerial decree (Bekendtgørelse 2022) which specifies details about the Pedagogical Assistant Education (*Pædagogisk assistentuddannelse* – PAU) states the objectives, duration, as well as competence specifications for different stages of the study programme. The course award is a Certificate as Pedagogical Assistant.

During the study programme students acquire the skills required of a Pedagogical Assistant within five designated areas of competence:

1. Practical pedagogical tasks, efforts and activities
2. Pedagogical care and relationship work that supports and strengthens the target group's well-being and development
3. Practical pedagogical work that strengthens the target group's quality of life and motivation for a healthy and active life, through health-promoting and preventive activities
4. Practical pedagogical work with welfare technology, social and digital media that support technological understanding and digital culture
5. Evaluation, documentation, collaboration and communication in relation to the area's organisation in order to develop the pedagogical practice.

Course structure

The study programme consists of a basic course and a specialisation that altogether lasts between three years and six weeks up to four years. The specialisation lasts two years and six weeks full time, with 47 weeks spent in the IPE institution and 52 weeks in different workplace settings.

Practicum periods: At the practicum centre, students are allocated a practicum supervisor who ensures that they work according to the required goals and tasks stated in the training programme.

School periods: The main course comprises both basic subjects such as Danish, community, English (optional) and specific subjects such as pedagogy, nature and outdoor life, digital culture,

movement and sport, health, cultural and aesthetic expressions and activities, pedagogical psychology, communication in the group, work environment and ergonomics. The study programme also has different optional studies.

Pedagogic didactic approaches

The course alternates between practicum and school periods. Through teaching at the IPE institution and the work placement periods, students acquire knowledge, skills and competences to carry out pedagogical care and relational work at an Assistant level. They acquire knowledge about the pedagogical sector and learn about the context for the practical pedagogical work. A mix of pedagogic-didactic approaches is utilised, such as lectures, group work, teaching themes, projects, role play, practical subjects.

4.3 Alternative entry and qualification routes, system permeability

Below three types of inclusive approaches for becoming a Pedagogue or Pedagogical Assistant are presented: (1) the Merit qualification route as Pedagogue, (2) the Pedagogic Assistant training (PAU), and (3) the preparatory course for immigrants and refugees (FIF).

Merit qualification route for experienced Pedagogue Co-helpers

The Merit qualification route as Pedagogue is a special study programme for experienced Pedagogue Co-helpers and Pedagogical Assistants, leading to the award of the Bachelor's degree in Social Education. The Merit route is described in chapter 6 of the 2017 ministerial decree (Bekendtgørelse 2017) and follows the same course regulation as the ordinary study route.

The entry requirements are twofold: first, applicants must fulfil the same admissions criteria as for the regular Pedagogue IPE programme; second, they must have at least two years of experience working as co-helpers in the pedagogic field, including ECEC centres. Work experience is defined as either two years of working a minimum of 30 hours per week or working to a total of 3,120 hours during an unspecified number of years in either classical pedagogical institutions or in other profession-related fields such as schools, social work, psychological care, physiotherapy etc.

If the applicants do not meet these requirements, they can ask for a 'real competence assessment' to see if dispensation can be given.

The Merit qualification route considers the students' previous practical experience in pedagogical settings in the form of credits. They do not have to participate in the two six-month placements which are required for the regular study route. This means that they study for three years at a university college, one-year full time and two years part time. This IPE programme is organised under the Open Education Act (Bekendtgørelse af lov om åben uddannelse 2019). Students pay a fee of around DDK 60,000 (€ 8,100) for the full course, which can also be covered by the employer or the Municipal Competence Fund established by a number of trade unions in Denmark. During the first year of full-time study the student may receive a student adult grant (SVU). During the remaining time needed to complete their studies, they often work and may be given (some) time off for studies by their employer.

Merit qualification route for academics (the track change model)

A trial qualification route was initiated in 2021, running until 2027, to help recruit more Pedagogues at a time of shortages of qualified staff in ECEC, schools and other pedagogical institutions. The track change model started at the University College Copenhagen in 2021, at VIA University College Aarhus in 2022, and one more of the five Danish University Colleges will follow.

It is a special study programme aimed at academics who wish to change career. The track change model is aimed at applicants with a higher education degree, at a minimum bachelor's level, who are awarded credits for their previous theoretical qualification level.

If the applicants do not meet these requirements, they can ask for a 'real competence assessment' to see if dispensation can be given.

The qualifying course lasts 2½ years – one year less than the traditional Pedagogue education. It gives students the opportunity to gain practical experience by working 30 paid hours a week in, for example, nurseries, kindergartens or leisure time institutions.

Pedagogical Assistant Education (PAU) route for school leavers and adults

The Pedagogical Assistant Education (PAU) is a *direct admission criterion* for the Pedagogue study route. As a study route for young people, it is mostly attended by school leavers. As an adult further education course for people over 25 years, it comprises three different groups: former Pedagogue Co-helpers, Family Day Carers (the largest group) and people not in regular employment.

The foremost rationale behind this study programme was to attract non-qualified people and, in this way, raise the general educational level in society. Another aim set forward by FOA, the trade union for Pedagogical Assistants and Pedagogue Co-helpers, is that it is a way of raising the qualification level of the Pedagogue Co-helpers. There is a political interest in the field against the background of the government's aim that 95% of a youth cohort must have a qualifying education.

The demand in ECEC centres for people with a Pedagogical Assistant qualification has not been high, so they constitute overall only a small percentage of staff (see *Table 2*). The employment of staff is devolved to the individual ECEC centres and the current pedagogical culture prioritises young male persons with an upper secondary examination (they are around 19 years or older). On the whole, ECEC centres tend to prefer a short-term contract for Pedagogue Co-helpers of one or two years.

The salary of a Pedagogical Assistant is higher than that of the untrained Pedagogue Co-helpers and their terminal salary is the same as the starting salary of a Pedagogue. This means that some ECEC centres prefer either a qualified Pedagogue or a young, cheaper, non-qualified (male) Pedagogue Co-helper.

Preparatory course for immigrants and refugees (FIF)

The preparatory course for immigrants and refugees, called FIF, has been available for a wide range of qualification routes. The first course addressing the Pedagogue study programme started in 1991 and was called the 'building bridges course'. Since 2019, only refugees and immigrants from non-western countries can be omitted due to a new course. This excludes students from Eastern Europe, who earlier were some of those who greatly benefitted from the courses.

The entry requirement to FIF is an upper secondary leaving certificate. The course runs for 12 months at a university college. For the duration of the course, the students receive a national student grant which may be supplemented by a loan. The aim of the course is to qualify the participants for admittance to the initial professional education route for Pedagogues. Around 80% of the students go on to take further studies, with a majority choosing the Pedagogue route. To be admitted to the Pedagogue study programme they have to complete a 'real competence assessment'. If they are accepted, the graduation rate is just as high among bilingual students as among other Pedagogue students.

The course is for people with a minority ethnic background, “... who because of their language, culture and so on are not ... ready to seek entrance to the Pedagogue education by way of the formal route” (Jørgensen 2010, 203). The course is based on preparing this group of students for learning about Danish educational culture and introducing them to Danish pedagogy.

It is only possible to join FIF with a foreign high school diploma. Some students are refugees with a professional qualification. Some families are reunited and plan to settle in Denmark. Some are women who have lived isolated lives in Denmark and want to explore the society in which they must bring up their children so that they can manage better. And some are men who have acknowledged the necessity of getting involved in pedagogical work with, for example, young people from their own culture. Jørgensen (2010, 204) points out that many ethnic minority students do not have the same notion of the Pedagogue occupation as a female occupation, which could be explained on the one hand through the fact that pedagogy generally speaking is not seen as an occupation in many of their countries of origin, and on the other hand through the fact that many students see an obvious need for male Pedagogues with an ethnic background.

The course has two main objectives. One relates to personal and social aspects, helping the students to become aware of and describe their own identity and integration process and to view themselves as active participants in the current Danish environment. The second objective is to learn about the educational culture at a Danish Pedagogue university college. Thus, the individual students need to be introduced to methods and study techniques that are applied in these colleges. Moreover, students should understand the past and current views of children and childhood that characterise Danish pedagogy.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Regulations for the practicum (*praktik*) during the Pedagogue study programme are stipulated in the relevant ministerial decree (Bekendtgørelse 2017) and implemented by the university colleges and individual ECEC centres.

According to the decree, the practicum consists of four periods totalling 75 ECTS credits, meaning that it takes up more than one third of the total course duration. The first practicum takes place in the second semester during the common course attended by all students and comprises 32 working days of six hours per day on average (10 ECTS credits). The second and third placements start in the third and fifth semesters, each lasting for six months (30 ECTS credits each). The students work on average 32½ hours per week. The fourth practicum takes place in the seventh semester in connection with the student’s bachelor thesis and consists of 16 working days of six hours (5 ECTS credits). The decree also stipulates three study days during the first practicum and ten study days during each of the second and third practicum periods. Study days are organised by the university colleges. The decree says that the “purpose of the study days at the university college is to support the student’s acquisition of the competence goals” (Bekendtgørelse 2017, § 8). The decree also states the possibility for students to take their second or third practicum abroad.

The ministerial decree has two detailed paragraphs (one on the role of the hosting ECEC centre and another on the role of university colleges) quoted in full below.

Role of the ECEC centre

The practicum centre devises a practicum description, which must contain the following elements:

1) *Description of the centre, including purpose, user group description and standard methods*

2) *Education plan for the practicum periods. The plan must comply with the competence goals for the relevant practicum period, including suggestions for relevant literature, organisation of practicum guidance and collaboration with the university college. The education plan is devised in joint cooperation with the university college.*

Sec.2. The practicum centre is responsible for the student receiving supervision during the practicum in accordance with the competence goals for the practicum period.

Sec.3. No later than upon 2/3 completion of the first, second and third practicum periods, the practicum centre must conduct a meeting with the university college and the student, after which the centre must make a statement declaring how the student may fulfil the competence goals for the practicum period in question (Bekendtgørelse 2017, § 9).

Role of the university college

Prior to each practicum period, the university college must prepare the students for the upcoming practicum period, including methods of study and relevant competence goals.

Sec. 2. During the study days of the practicum period, the student receives formal training and supervision at the university college.

Sec.3. After completing the practicum period, the university college must continually include the students' practicum experiences in the education. Furthermore, the university college must include the statement from the practicum centre in the student's further supervision process (Bekendtgørelse 2017, § 10).

The university colleges appoint a supervisor, who provides information for the student about the choice of practicum, the competence goals, the relevant literature, etc.

The students' skills and competences

The decree states the competence goals of each practicum as well as the knowledge and skills specifications. For example, the following are the competence goals for the 2nd and 3rd practicum within the specialisation in early childhood studies (see also *Chapter 4.2*):

Competence Area 3: Professional relations and communication – 2nd practicum period

This area focuses on relational work, interaction and communication in pedagogical practice with 0 to 5 year-old children, including the significance of children's diverse life conditions with respect to well-being, relations and communication.

Competence goals: The student knows how to create relations with individual children and with the whole group, can support the children when they interact with each other, can support the development of children's communicative competences, master professional communication and reflect on their own abilities to communicate and to initiate and sustain relations.

Competence Area 4: Cooperation and development – 3rd practicum period

Here the focus is on systematic and knowledge-based reflection and contributing towards development and innovation within pedagogical practice.

Competence goals: The student is able to plan, implement, document and evaluate activities and learning processes in a focused way that supports the child's wellbeing, learning, intellectual growth and development. In the context, the student must be able to challenge existing practice in professional terms, to look for and assess alternative options and to contribute to the development of pedagogical practice (Bekendtgørelse 2017, appendix 2).

Forms of student self-evaluation and external evaluation

The 2017 decree does not specify details of the students' self-evaluation during their practicum. Each university college includes practicum regulations in their syllabus and in a written practicum booklet which describes in detail the decree, regulations, practicalities and so on.

Before the practicum, the students write down their own competence goals and the knowledge and skills they wish to achieve during the practicum period. The goals are discussed with and approved by both the supervisor teacher at college and the practicum supervisor/mentor. During the practicum period the student keeps a daily diary or portfolio, and uses this at the practicum supervisor meetings during the study days and also later on in their studies.

The aim of the fourth practicum, added with the 2014 reform, is to do fieldwork research and produce data from their work in the ECEC centres for use in their bachelor thesis. Here students are encouraged to use different research methods.

The three other practicum periods end with an examination. For the first and second, the examination is conducted internally by the practicum supervisor in the ECEC setting and the practicum supervisor from the university college; for the third practicum an external examiner is also required (Bekendtgørelse 2017).

The **supervising staff at the ECEC centres** are qualified Pedagogues. The competences required for this position are not nationally regulated. All practicum supervisors receive a practicum bonus based on collective agreements between trade unions and local municipalities. It is possible, but not mandatory, to attend relevant short-term courses, a higher education diploma course (introduced in 2013) or a Master's degree course in Pedagogical Supervision. Field experts estimate that many attend the short courses but few take a diploma and even fewer a Master's degree (Jensen 2015).

A practicum supervisor who works directly with the children, i.e. is a regular member of staff, is appointed by the Centre Head. It is estimated that planned meetings between the supervisor and the student take place (during regular working hours) for an average of one hour per week. Supervision is also part of the daily work and other Pedagogues can give supervision in a more situated and informal way than in a planned meeting (Jensen 2015).

Reforms, trends and debates

There is an ongoing debate about the specific roles of learning in the workplace (practicum) and learning at the university college and about the cooperation strategies between the two learning places. There are two prevailing major discourses: a learning discourse (focusing on learning in the workplace) and an academic discourse (focusing on the learning at the university college) and there is a continuing effort to integrate the two (see Jensen 2015 for different understandings of practicum).

Since 2014, the decrees have placed more responsibility on the practicum centres regarding student evaluation, which can be seen as a strengthening of the learning discourse. The ECEC practicum centres play an important role as a learning space and there is an ongoing debate about whether they have enough resources and competencies to fulfil that role – not only concerning student evaluation but in general.

The 2014 decree added a fourth practicum where the students are required to produce data during their work in the centre and analyse and integrate these into their bachelor thesis. This can be seen as a step towards integrating the tasks of practicum centres and university colleges and as a strengthening of the academic discourse.

An earlier recurrent theme of debate was about whether students should receive payment during their practicum. Currently, students receive a practicum salary paid by the employer during the two six-month practicum periods (i.e. the second and third). The paid practicum was introduced following the former generalist study programme reform in 1992. "For the students this means a double role: on the one hand being a student, on the other hand an employee and a regular member of staff" (Jensen 2015, 160). Some argue that the students are not allowed to

be students; fewer argue that they really learn the conditions of work. For the first and fourth practicum periods, students receive student grants.

6. Continuing professional development (CPD) of ECEC staff

A national framework exists in terms of recognised courses and awards relating to the continuing professional development of ECEC staff, but not in terms of a general CPD entitlement or of an annual allocation in terms of the number of days to be spent on CPD activities. Nevertheless, some CPD activities may be obligatory, e.g. those for the centre team as a whole, or some courses provided by municipalities regarding current reform initiatives.

In terms of career development, a profession is dependent on both vertical and horizontal possibilities of mobility. Formal strategies of further training/professional development for Pedagogues have a relatively short history. This has something to do with the traditional 'flat structure' (non-hierarchical) in the ECEC centres and the presence of a large number of non-qualified staff. An informal estimate is that around 25% of Pedagogues participate in formal CPD activities, whereas the remaining 75% get through their career with only a few days of competence development per year.

One of the reforms initiating increased further training from the early 1990s onwards was the Open Education Act (Bekendtgørelse af lov om åben uddannelse 2019). The Merit qualification route to become a Pedagogue as well as the Diploma studies and Master's degrees (see below) are provided for under this Act. The Act aims to help adults combine work with further related studies. Students are granted a degree or an education certificate and have to pay a fee for the study programme.

Before the early 1990s, CPD tended to be initiated by the ECEC Centre Leader or staff. Today, many initiatives come from central and local authorities and – as budgets are low – do not leave much space for centres' or individual staff's needs or wishes for CPD. Field experts talk about a centralisation and standardisation of CPD and not all Pedagogues find that they benefit from some of the courses on offer (Ahrenkiel et al. 2012).

Overall, the leader of a centre is responsible for the staff's professional development. CPD can be discussed during the obligatory annual appraisal reviews (*MUS-samtaler*). The Centre Leader, in collaboration with the team in the setting, may also compile a competence development plan for all staff. Furthermore, local authorities sometimes provide professional development courses for the entire staff team in an ECEC centre, for part of the team, or for individual staff members who need to strengthen competences in specific areas, e.g. language or inclusion.

CPD for Pedagogues/Social Educators

The main providers of CPD are university colleges (*professionshøjskoler*) and the municipalities, but may also be vocational schools and private firms/organisations (Hjorth-Weber 2012).

A distinction can be made between (1) short-term courses of between one to seven weeks' duration and (2) a long-term study route over a period of two or three years. They include various diploma studies as well as Master's degrees.

Short-term courses

Short-term courses primarily serve as an improvement strategy for the work in pedagogical settings. The competences in focus are linked to everyday work routines. BUPL, the trade union for early childhood staff, argues that both the course fee and the time needed to attend the course must be covered by the employer. The trade union recommends two weeks of CPD per year for all Pedagogues.

Course topics are diverse: outdoor life, music, storytelling, movement and language, environmental assessment by children, etc. The main providers of such short-term courses are university colleges, local authorities, and private organisations. No formal academic credits are given for short-term courses. If Pedagogues participate in more than six weeks of full-time studies over a period of two years, they have the possibility of having a 'real competence assessment' in order to apply for Merit points for enrolment in a Diploma study course (see the following paragraph for details of Diploma studies).

Long-term further studies

Long-term further studies have a double purpose: to enhance the pedagogical work in general and to give the Pedagogue in question new career opportunities.

Diploma study programmes

Diploma studies are for adults with a short-cycle or further higher education degree and are primarily an additional qualification for a specialised area of work in pedagogical settings, e.g., a Diploma in Public Management (Hjorth-Weber 2012). Typically, Pedagogues choose one of the available pedagogical diploma qualifying courses, which have in common:

- A duration of two to three years of part-time study, which sometimes can also be taken full time in one year (60 ECTS credits)
- A relevant qualification and at least two years of work experience as admission criteria
- A course fee ranging between DDK 59,000 – 110,000 (€8,000–15,000) in 2022
- In most cases, a possibility to combine studies with employment. The fee may be covered by the employer and they may get (some) time off from work to study.

Around 30 different pedagogical diploma study courses exist in different subjects or subject areas relevant to the pedagogical working field. Diploma studies are also followed by other Bachelor-level professionals such as school teachers and social workers. The providers of these professional development courses are university colleges and universities.

Centre Leaders

A trend, also pushed forward by a tendency to have one leader for several centres, is that Centre Leaders are more likely to study for a diploma or take courses for other types of competence development. There are no national/general requirements for leaders of ECEC centres. Most leaders are experienced Pedagogues. During recent years, however, national initiatives including the national government, municipal authorities and trade unions, have funded diploma study programmes in leadership for the whole public sector in order to raise the quality of the welfare institutions.

Two diploma courses exist for leaders in welfare institutions: Diploma in Leadership (DIL) and the public diploma in Leadership Education (DOL). The difference between these two is that the first is provided by university colleges; the second by both university colleges and private providers. Both diplomas are awarded with 60 ECTS credits and consist of different modules.

Master's degree/PhD

In Denmark there are two types of Master degrees: Continuing Higher Education and Ordinary Higher Education (EQF/ISCED Level 7).

Most Pedagogues who take a Master's degree do this as Continuing Higher Education. Entry requirements are a Bachelor's degree and at least two years of relevant job experience. A Master's degree comprises one year of full-time study (60 ECTS credits) and is followed on a part-time basis, since the students are working at the same time. The students have to pay a fee. The Master's study programme has to be completed within six years. Studies are research-based but also include the students' experiences from their daily work. Fees are sometimes covered by the employer, either partly or fully, and students may be given time off for studying. The main provider is DPU – the Danish School of Education, University of Aarhus, which offers a range of Master's degrees in the field of pedagogy and education. DPU is also a research centre in education and pedagogy in Denmark. Other universities also provide relevant Master's courses for pedagogues.

The other type of Master's degree, a Candidate degree in Ordinary Higher Education (120 ECTS credits), lasts two years and is often taken soon after completion of the Bachelor's degree. DPU and other universities provide a range of Master's degrees relevant for Pedagogues. The admission criteria are a Bachelor's degree and very good grades. Many Pedagogues apply for a Candidate degree course, but there are few places for this. The students are not required to pay a fee and they can apply for a State Education support grant (*Statens Uddannelsesstøtte, SU*) while studying.

Master's studies can be followed by a PhD course.

CPD for Pedagogue Co-helpers (*Pædagogmedhjælper*)

The non-qualified Pedagogue Co-helpers have various CPD possibilities. The initiative to participate may come from the Pedagogue Co-helper, the Centre Leader or from the local authority as part of a competence drive among all non-qualified employees. They can apply for the following options:

- The IPE for prospective Pedagogues
- If they have more than five years of work experience, the Merit qualification as Pedagogue
- The Pedagogical Assistant qualification
- Short-term AMU-courses. AMU (Danish Adult Vocational Training Programmes) is the vocational education system that provides many different courses: a pedagogical basic course (three weeks), children and nature (five days), play and learning with digital media in early childhood centres (five days), parent cooperation (five days) and so on. Here the non-qualified can acquire skills to be used directly in pedagogical work and are awarded a certificate. The providers of the courses are vocational schools and university colleges. The studies are free of charge. The leader must approve participation. The Pedagogue Co-helpers take the course during their working time and often continue to draw their regular salary. The centre may apply for economic compensation to be used for a substitute worker (FOA and KI 2014).

Key content focus of CPD

Thematically, CPD is offered in a myriad of different fields encouraging ECEC staff to excel within a wide range of topics. Popular topics currently in focus in CPD activities are themes related to the strengthened pedagogical curriculum adopted by the Danish Government in 2018 – for example play, outdoor activities, early intervention or a CPD course to qualify as a special resource

person ('professional beacon') to cooperate with the management in the implementation of the strengthened pedagogical curriculum in daily ECEC pedagogy and practice.

Research projects on CPD

Two large-scale research projects on CPD were carried out in 2012 and 2013, one focusing on Pedagogues (Ahrenkiel et. al. 2012), aiming to explain why a large part of the workforce does not attend CPD. The other on the Pedagogue Co-helpers (EPOS and EVA 2013) explored a potential need for development of existing qualification pathways for Pedagogue Co-helpers and Pedagogical Assistants.

Additionally, in 2020 a Danish study was published on the CPD of ECEC personnel (Jensen and Preus 2020). They examine the ways in which the position of 'professional beacon', introduced in the context of national competence initiatives in ECEC in 2018, was constructed in practice by centre leaders, employees and the professional beacons themselves, in order to identify challenges, possibilities, and dilemmas related to the position. Based on several interviews from professional beacons, leaders and colleagues, the article shows that the professional beacons are constructed in specific and multifarious ways, closely connected to the context and the negotiated positions in which they participate in the local collaboration: professional beacons as light-casters, experts, facilitators and change enforcers.

7. Working conditions and current workforce issues

7.1 Remuneration

Nearly all Pedagogues are members of BUPL, the Danish Union of Early Childhood and Youth Educators, and many Pedagogical Assistants and Pedagogue Co-helpers are members of FOA, the trade union for Pedagogical Assistants and Pedagogue Co-helpers. Benefits include six weeks of annual holiday leave, one year paid maternity and parental leave. All staff groups pay for an obligatory occupational pension.

Average monthly salaries for full-time staff in different job positions in early childhood centres are as follows (BUPL 2021):

- Non-qualified staff: DDK 27,000 (€ 3,600)
- Pedagogues: DDK 32,000 (€ 4,300)
- Department leader / deputy leader: DDK 36,000 (€ 4,800) and
- Centre leaders: DDK 44,000 (€ 6,000).

Posts of responsibility such as the Centre Leader, Deputy Leader, or Pedagogical Leader of a smaller unit receive a higher salary based on the collective agreements. The practicum supervisor receives a bonus.

A qualified Pedagogue earns only minimally less than a school teacher. The salary increases with seniority. It is possible to live on this salary without additional support, e.g. living as a single parent with one child in a major city, but the living standard very much depends on the cost of housing.

7.2 Full-time and part-time employment in ECEC provision

According to collective agreements, full-time staff work 37 hours per week.

In 2020, 40% of Pedagogues and 38% of Pedagogical Assistants in ECEC worked full time. 59% and 60% worked part time and 1% and 3% were hourly employees. Pedagogue Co-helpers stand out markedly in that 21% are employed by the hour. This is partly due to the fact that no formal education is required to work as a Pedagogue Co-helper and that Co-helpers are widely used as substitute staff (Indenrigs- og Boligministeriets Benchmarkingsenhed 2021).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

The 98 local municipalities, the funders and providers of ECEC have an organised system that supports the staff to improve and monitor the quality of their work. This may take place through on-site mentoring, meetings, and consultancy as well as through off-site experts, for example Speech Therapists, Language experts and Psychologists. Municipalities employ Pedagogic Consultants who are mostly experienced Pedagogues with additional training (see also *chapter 2.4*). They are used by the centres when staff conflicts arise, to support children with special needs and other difficulties, and much more. Newly qualified staff are included in the general support to introduce them to the work.

7.4 Non-contact time

Pedagogues do not have any official preparation time, but the issue is often debated in a trade union policy context. The current debate is primarily concerned with the fact that new tasks and increasing documentation requirements lead to fewer quality hours with the children. Time for staff meetings, cooperation with parents, networking etc. is locally decided. An increasing number of administrative tasks are taken care of while being together with the children.

In general, the increased requirements and new tasks in pedagogical work have led to a deterioration in staff-child ratios in Danish ECEC institutions, more time where one qualified member of staff is alone with a large group of children, and less time in general to provide care for the children (Pade and Glavind 2017; 2018; 2021).

One particular research study problematises the fact that even though Pedagogues spent 78,5% of their time together with children in 2017 compared to 72% in 1973, this does not necessarily lead to the conclusion that child-staff contact has improved between 1973 to 2017. Rather, it points to the fact that administrative work has been decentralised, so that Pedagogues no longer *only* spend time together with the children, but rather tend to constantly multi-task to a high extent (Pade and Glavind 2021). The multi-tasking compromises close contact and pedagogical attentiveness towards the children.

7.5 Current staffing issues

The Pedagogue study route is the largest study programme in Denmark: 4,781 applicants were fully enrolled in 2021. In comparison, the School Teacher Education enrolled 2,556 applicants, 4,112 were enrolled at the Danish Nursing Education and 2,226 were enrolled to study Social Work. Nevertheless, the popularity for all welfare study programmes has decreased over the last five years, and Denmark is facing a situation of shortage of qualified ECEC staff.

In the period June–November 2021, 3,500 (30%) of Pedagogue posts advertised were not occupied and 700 (20%) of jobs for Co-Helpers remained vacant (Styrelsen for Arbejdsmarked og Rekruttering 2022).

The full coverage in early childhood services, the political adoption of minimum standards for staff-child ratios and a prospect of more than 45,000 additional children aged 0–5 in 2030 has led to an urgent need for new recruitment strategies.

General recruitment strategies

Trade unions call for national recruitment strategies, in combination with better working conditions and higher wages. A working time survey from 2019 shows that part-time Pedagogues are willing to work more hours if standards improve. A large proportion of part-time employees mention a harsh working environment as a reason for their part-time employment (BUPL 2019). Since 2017, there has been an elevated awareness of how the increased requirements in pedagogical work (for documentation, for example) have led to less favourable staff-child ratios, more time with one adult alone with a large group of children, and less time in general to provide care for the children (Pade and Glavind 2017; 2018; 2021).

In December 2021, an amendment on staff-child ratio minimum standards was included in the Act on Early Childhood Education and Care (Lov om ændring af dagtilbudsloven 2021). As from 2024, there must be a minimum of one adult for three children 0–2 and for six children 3–5 years of age (Dagtilbudsloven 2022).

Municipalities are encouraging all their experienced Pedagogical Co-workers to enrol in the merit qualification route. Recently, a merit qualification route for academics (the track change model) was initiated as a trial qualification route from 2021–2027 to help recruit more Pedagogues at a time of acute shortage (see *Chapter 4.3*).

Recruitment of male pedagogues in ECEC

The Pedagogue study programme has been able to attract a relatively large number of male students, 26% of the total intake currently (in 2021). In 2000, the relative share was 17%. However, as shown in *Table 2*, the share of them working in early childhood centres is not that high; mostly they prefer to work in other kinds of pedagogical settings.

The recruitment of male Pedagogues for ECEC centres has been on the agenda for years and related strategies have been carried out. The 2014 Pedagogue education reform did put gender on the agenda and all students must learn about gender issues. A variety of recruitment initiatives have been taking place, and the experiences are compiled in a handbook for inspiration (Wohlgemuth and Hviid 2016). In 2016, the ministry launched a campaign for recruiting more male Pedagogues into early childhood centres (Ministry of Children, Education and Equality 2016), but the efforts have yet to be evaluated. A qualitative study from 2021 points to five factors that are important to male pedagogical staff, which need to be at the centre of efforts to recruit male employees: focus on the core task; high professionalism, focus on diversity; special fields of interest (outdoor life and movement); presence of other male employees (Rambøll 2021).

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Strengthening ECEC through a revised curricular framework and competence development initiative

In June 2017, a political agreement “Strong day care – all children need to join the community” was adopted by the Ministry of Children and Social Affairs (Ministry of Children and Social Affairs 2017), and subsequently a revised Act on Early Childhood Education and Care came into force in July 2018. The amendments were accompanied by a strengthening of the legal requirements to work with a strengthened pedagogical curriculum (Ministry of Children and Education 2020).

These include a much more detailed description of the content of the curriculum, which has not previously been seen in the Danish ECEC arena (Aabro 2019). As part of the realisation, the Ministry of Children and Social Affairs allocated extra funds for a national competence development initiative.

Staff from both municipal and private institutions could apply for the funding in a model where one or more Pedagogues in an ECEC centre were to be trained for a function that was categorised as a 'professional beacon', through either three learning days or a pedagogical diploma module (Jensen and Preus 2020). The new phenomenon is based on an idea that some management tasks are delegated to special resource persons as organisational intermediaries in the sense of distributed management (Spring and Spring 2020). Pedagogues can qualify as a professional beacon on the basis of a completed CPD course. The function is remunerated with a salary supplement – see also *chapter 6*.

The 2018 amendments to the Act on Early Childhood Education and Care are solidly based on the Danish ECEC tradition, so most ECEC settings were familiar with many of the initiatives in the strengthened pedagogical curriculum, whereas some were entirely new. Central elements are:

- A common pedagogical foundation with key elements (e.g. play, communities of children and a broad concept of learning) constituting the understanding and approach to work on children's wellbeing, learning, development and formation in ECEC
- Establishing a pedagogical learning environment throughout the day, including in routine situations, planned activities and child-initiated play
- Detailed descriptions of the six curriculum themes as well as new, broad pedagogical objectives for the relationship between the learning environment and children's learning for each theme
- The pedagogical curriculum should relate to vulnerable children, cooperation with parents on children's learning, transition to school as well as cooperation with the surrounding community.
- An evaluation culture has to be established in all local ECEC settings (Ministry of Children and Education 2020).

In December 2021, an amendment on minimum standards for the staff to child ratio and strengthened inspection was included in the Act on Early Childhood Education and Care. Fully implemented by 2024, there must be a minimum of one adult for three children 0–2 and for six children 3–5 years of age (Dagtilbudsloven 2022). The amendment to the law was adopted together with the release of financial resources that could be applied for the implementation of minimum standards over a number of years. The amendment intends to maintain quality in ECEC and ensure that staff-child ratios are not aggravated due to elevated costs of ECEC in the municipalities with an increasing number of children attending ECEC in the future.

Evaluating the initial professional education of Pedagogues

In 2020, the Danish Government initiated an evaluation of the Pedagogue Education, published in 2021 as a part of an overall quality plan for Danish ECEC to make the pedagogues even more skilled and even better able to practise and develop their practices. The evaluation is a follow-up on the reform of the pedagogue education from 2013. Four themes were evaluated: learning culture and study environment; knowledge base; practicum; and the competences of newly qualified staff. The main findings indicated:

- A great variation in student backgrounds and biographies
- Potentials for more graduates to be better qualified for practical pedagogical work

- High study intensity and number of classes but low level of feedback
- An emphasis on profession-oriented knowledge
- Internship (practicum) is seen as a central feature of learning but links between the university colleges and practicum institutions are not sufficiently close
- Study programmes with too many goals and an insufficient number of in-depth modules
- Students are not adequately qualified to work in social and special education
- Female and male students thrive equally well, but choose different areas of specialisation (Agency for Higher Education and Science 2021).

9. Recent country-specific research focusing on ECEC staff

An increase in research in ECEC has taken place during the last 25 years or so. Research takes place at universities, at university colleges, or in various research centres. ECEC stakeholders commission research.

Many research projects relating to ECEC professionalisation and staffing issues have been conducted over the past five years and the three presented are selected examples. One is published only in Danish language, two are in English – one of which has been carried out since the COVID-19 pandemic outbreak.

Effective pedagogical work in ECEC settings

Source: Charlotte Ringsmose, and Lone Svinth 2019 (see *References*).

Background: Research points to a number of well-documented suggestions on pedagogy that are effective in promoting the well-being and development of children in vulnerable positions. However, there is a lack of knowledge regarding the translation of these suggestions into pedagogical practice in ECEC. Also, a knowledge gap exists on how big a role the administration might play in the development of effective ECEC services – especially for children in vulnerable positions.

Aims and methods: The study investigates how Danish ECEC institutions located in so-called socially disadvantaged residential areas with a relatively high number of children living in vulnerable conditions create an environment that reduces inequality among children. The project is based on observations of pedagogical work and interviews with leaders and staff in five home-based settings, 15 ECEC institutions and 10 municipal administration departments.

Selected findings: The project points to a number of factors that seem to increase all children's well-being and development opportunities in ECEC. Effective ECEC is characterised by a strong leadership, with leaders who set a clear direction without being too dominant, and who believe in the staff. Leaders who have a plan and are good at engaging, create a safe and humorous atmosphere and offer support and respect when needed.

Moreover, in effective ECEC institutions the pedagogical staff are very sensitive towards individual children's needs, professionalism in the staff group is high, employees are proud of their work and eager to join new initiatives and professional dialogues. Also, effective ECEC settings are characterised by an awareness of not lowering the expectations of the children in spite of their vulnerable positions, creating participation chances for all children, a sense of openness

and competences in dealing with behavioural issues and conflicts arising through physical closeness, touching and soothing, and friendly recognition of the child by addressing unwanted behaviours with respect and acknowledgement.

Implications: The study points to a challenge in the development of effective ECEC in institutions with many children in vulnerable positions. When the need is greatest, it seems to require an extra effort to develop quality. Even if effective ECEC institutions are located next door to less effective ones, transfer does not seem to occur in spite of visits, courses and/or observations. More knowledge is needed on how to work on developing quality in less effective institutions.

‘Academics’ as play and the social as discipline: school readiness in Denmark

Source: Bjørg Kjær, Dil Bach, and Karen Ida Dannesboe 2020 (see *References*).

Background: Denmark has a tradition of kindergarten pedagogy focused on children’s play, sociality and individual interests. Political emphasis on global competition, however, has led to reforms in early childhood education and care (ECEC) since 2004.

Aims and methods: Based on ethnographic fieldwork in three kindergartens, the study analyses how ECEC reforms have affected the priorities of parents and pedagogues regarding school readiness. To understand how this is negotiated, researchers draw upon Lareau’s distinction between childrearing as ‘concerted cultivation’ or as ‘the accomplishment of natural growth’.

Selected findings: The study shows that parents and staff consider the social as the most important thing for kindergarten children to learn and as something that the adults must cultivate – often in a strict manner. Moreover, both parents and pedagogues state that academic competences are not important to cultivate because an interest in academics will grow naturally. Adults just have to support academic activities through play when the children choose to engage in them. However, academic competences are actively cultivated in practice.

Implications: The political focus on formal learning from 2004 onwards is not incompatible with the emphasis on the social in Danish ECEC, but occurs in the practices of everyday life, in more organised activities and specially themed activities. Despite a strong conviction that a child’s interest in academic skills will develop on its own, adult-initiated work to cultivate this also takes place in ECEC. Here, a dominant discourse regarding enjoyment is activated, particularly when pedagogues and parents talk about including the academic in play. Thus, demonstrating motivation for school in conjunction with conforming socially seems to be the culturally enacted definition of school readiness in a Danish kindergarten context.

Child well-being in early childhood education and care during COVID-19: Child sensitivity in small, fixed groups

Source: Anette Boye Koch 2022 (see *References*)

Background: Child well-being in Danish ECEC provision has been intensively studied and debated since 2007, when well-being was incorporated into the Danish Act on Early Childhood Education and Care as an overall aim. During the COVID-19 pandemic, all usual pedagogical routines and practices were set on standby. A great concern was whether pedagogues would be able to ensure the children’s subjective well-being during a pandemic, or if the children would suffer harm either due to the risk of infection or to the human consequences of the strict regulations.

Aims and methods: The study explored subjective child wellbeing in Danish ECEC during the time of COVID-19. It was initiated to follow the reopening in 2020 until 2021. Two ECEC institutions were followed first-hand to observe the impact of the pandemic on pedagogy and child well-being. Observations and qualitative interviews were conducted with follow-up interviews and an online survey a year later.

Selected findings: The uncertainty and increased external control during COVID-19 did not appear to negatively affect either the pedagogy or child wellbeing. The pandemic caused pedagogues to work in a more child-sensitive way with elevated staff-child ratios and children in small, fixed groups. Pedagogues experienced more peace in their work from the fact that the parents did not enter the institution. Grouping the children into small units resulted in more concentration and retention of children with a tendency to outward attention. Many learning activities took place in an outdoor environment. Excursions were more frequent, more informal and in smaller groups of children, with plenty of time to stop and talk and include children's perspectives. The non-negotiable COVID-19 structure provided more predictability and a greater sense of security for many children.

Implications: The COVID-19 study speaks to an ongoing public debate in Denmark about ECEC quality, pedagogue professionalism and politically defined standards for a minimum number of staff members per child. It manifests how the core values of Danish early childhood pedagogy remain deeply rooted in a pedagogical culture. In spite of strong political efforts to impose a learning regime on Danish ECEC settings during the last two decades, the values that imperceptibly characterise the Danish Pedagogue profession persist and trump the school logic and pre-occupation with academic skills during an acute situation.

10. Workforce challenges – country expert assessment

Increasing challenges for ECEC personnel

Over the last ten years, staff in early childhood centres have been required to take on more and more tasks, arising from the realisation of the national government's policies, such as producing learning plans, the strengthened pedagogical curriculum and the resulting implementation policies in the municipalities. According to ECEC staff, parents also tend to demand more and politicians call for the early detection of children with special affordances and a higher quality pedagogical work in general. A paradox is that the staff-child ratio has deteriorated and also the proportion of qualified pedagogues has decreased among staff. Both are key factors for quality in early childhood centres and key factors to be able to live up to the required policies.

Many of the new tasks demand highly educated staff. One example (from the 2020 Act) is the new construction outlined earlier in this report, where management tasks are delegated to special resource persons (professional beacons) as distributed management. The post of responsibility is awarded on basis of a successfully completed CPD course and remunerated with a salary supplement.

The strengthened pedagogical curriculum requires among other things new efforts and more documentation than ever before. Systematic evaluations are demanded. Language assessment and stimulation are high on the agenda. Collaboration with parents has always had a high priority, and parents demand it even more. New organisational changes and development of the learning environment by inclusion of children's perspectives, etc. – all these demands require time and a high professionalism among the staff.

A response from politicians is to demand higher quality in the Pedagogue Education. An evaluation of the pedagogue education from 2021 (see *Chapter 8*) calls for, among other things, higher levels of feedback, better cohesion in the educational programme and a stronger connection

between practicum settings and the IPE institutions. The responses from trade unions and pedagogues are to demand better working conditions, higher wages and improved staff-child ratios. A critical response from many pedagogues to governmental and educational efforts to provide better knowledge, new methods and concepts of how to reach higher quality ECEC is: We are already sufficiently qualified, and we do know how to practise good pedagogy. But it does not help, if we do not have sufficient time and working conditions to practise what is needed!

Staff to child ratios

A comprehensive workforce challenge is to deal with the fact that increased requirements and new tasks in pedagogical work have led to a deterioration of staff-child ratios in Danish ECEC institutions, more time where one pedagogical staff is alone with a large group of children, and less time in general to provide care for the children (Pade and Glavind 2017; 2018; 2021).

After heavy debates for years, a law on staff-child ratio minimum standards was finally included in the Act on Early Childhood Education and Care in December 2021. Fully implemented by 2024, there must be a minimum of one adult for three children 0–2 and for six children 3–5 years of age (Dagtilbudsloven 2022). Although the number of staffs has increased overall, there is still a large proportion of pedagogues who feel that they are not able to provide the needed care to all children (Pade and Glavind 2021). 63% of all pedagogical staff experience on a daily basis that they either do not have time to comfort, solve a conflict, support a child in play or discuss problematic issues regarding a child with a colleague (Glavind and Pade 2022).

In a 2019 survey based on a representative sample on everyday life in early childhood centres, 20% of almost 700 Centre Leaders report that no more than two adults are present at the same time all through the day both in a *vuggestue* (0–2 years) group of ten, or in a *børnehave* (3–5 years) group of 20 children. Staff are also alone with the group during certain times of the day (Glavind and Pade 2019b).

Between 1972 and 2018, the staff-child ratio in early childhood centres deteriorated markedly. In 2018, the number of children per the adult was around 10–11 in kindergartens and just over 5 in nurseries, if looking at the number of adults and children present. If deducting the time during which the adults solve other tasks, while at the same time keeping an eye on the children, the figures are more likely to be 13 children per adult in kindergartens and 6–7 children per adult in nurseries. The main reasons for the increased number of children per adult in ECEC settings include the implementation of economic austerity measures, new management methods, and unrealistic assumptions about how this will affect everyday life in ECEC settings (Glavind and Pade 2019a).

Dalsgaard, Jordan, and Petersen (2016) analysed the 2014 staff-child ratios in the 98 local municipalities. Their study shows huge differences between municipalities: in one municipality among those with the best ratios, the ratio was 1:3 for children under 3 years of age and 1:5.2 for children aged 3 to 6 years; in another among those with the best ratios, the ratios were 1:5.4 (0–2 years) and 1:9.4 (3–5 years).

Recruitment challenges

The increasing number of children means that the number of places in ECEC institutions needs to be increased by approximately 60,000 over the next ten years. As the adult-child ratio must also be improved, the number of pedagogical staffs must be increased by more than 12,000 full-time employees compared to the present. In 15 years, there will be approximately 80,000 more children in care than now (Glavind and Pade 2022). The increased need for pedagogical staff means that it may be difficult to secure trained staff. A large number of municipalities seek to

counteract this by supporting merit educations or by focusing on more students for the pedagogical basic education.

The popularity of the Pedagogue Education is not as high as it used to be. Once again in 2022, the education was the most popular in Denmark with 4,608 applicants as their first priority in quota 1 (see *Chapter 4.1*), but this is 18% fewer than the year before, and 23% fewer than in 2019. The decrease in the number of applicants is problematic at a time when society is screaming for more educated staff in ECEC institutions. The Trade Union BUPL warns that society is facing a welfare catastrophe if the Pedagogue Education does not become an attractive choice for more potential students: "In many ECEC settings, only half of the staff are educated pedagogues, and the municipalities simply cannot find enough pedagogical staff for the vacancies," says BUPL chairman Elisa Rimpler, referring to the fact that more than one in four pedagogue positions advertised from September 2021 to February 2022 was not occupied (BUPL 2022).

The trade unions call for national recruitment strategies, in combination with better working conditions and higher wages. A working time survey from 2019 shows that part-time pedagogues are willing to work more hours if the standards improve. A large proportion of part-time employees mention a harsh working environment as a reason for their choice to work part time (BUPL 2019).

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms chosen in this report for the main forms of centre-based ECEC settings are **ECEC centre** (*aldersintegrerede institution, 0–5*), **nursery** (*vuggestue, 0–2*) and **kindergarten** (*børnehave, 3–6*)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Denmark

1829	First philanthropic day nursery opens for working-class children, inspired by Robert Owen.
1870	First part-time Froebel-inspired kindergarten is established.
From 1900	The two strands of provision (care/education) gradually merge into a people's kindergarten (<i>børnehave</i>) along Froebelian lines, mostly for poor children.
1919	Allocation of first state subsidy to institutions with a social purpose. Childcare for the poor was now seen as a public responsibility. 50% of the costs of establishing kindergartens are subsidised, but two-thirds of the children must be from poor families.
1933	The legal regulation of childcare was moved from the Ministry of Education to the newly established Ministry of Social Affairs.
1949	State subsidy extended to include institutions for non-disadvantaged children.
From 1951	Introduction of legal obligation for the municipalities to support universal access to all public services
1964	The Child and Youth Care Act states that it is a public task to provide universal access for all children.
1987	Full delegation of financial administration of ECEC provision to the municipalities
2004	<ul style="list-style-type: none"> – Day Care Facilities Act, updating the responsibilities and the overall goals of the day care system – Responsibility for ECEC shifts from the Ministry of Social Affairs to the Ministry for Family and Consumers' Affairs
2007	Re-Transfer of ECEC to the Ministry of Social Affairs, now called Ministry for Welfare (including health)
2009	Compulsory school entry age lowered to age 6 instead of previous age 7
2010–2011	Transfer of responsibility for ECEC back to Ministry of Social and Domestic Affairs and subsequently to the Ministry for Social Affairs and Integration
2011–2013	First transfer of national responsibility for ECEC to the <i>Education</i> Ministry (Ministry of Children and Education), followed by re-transfer to the Social Affairs domain two years later under the Ministry for Children, Gender Equality, Integration and Social Affairs.
2015	Second transfer of national responsibility for ECEC to the Education sector, now under the Ministry for Children, Education and Gender Equality.
2016	Re-transfer to the Social Affairs domain in late 2016; ECEC now under the auspices of the Ministry for Children and Social Affairs.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4, and 5 year-olds in countries with a primary school entry age of 6 years. An additional relevant format for Denmark is **0–5** years, referring to the age-integrated ECEC centres.

2018	Amendments to the Act on Early Childhood Education and Care (<i>Dagtilbudsloven</i> – previously Day Care Facilities Act) are adopted, to be fully implemented by 2020. The amendments include additional specifications in terms of the pedagogical foundations of ECEC (play, concept of learning, view of the child, etc.). A revised version of the curricular framework for ECEC (<i>The strengthened pedagogical curriculum</i>) is issued.
2020	Following a change of government, ECEC is re-allocated to the new Ministry of Children and Education.
2021	A ministerial decree on staff-child ratio minimum standards and strengthened monitoring of ECEC was included in the Act on Early Childhood Education and Care (<i>Dagtilbudsloven</i>). Fully implemented by 2024, there must be a minimum of one adult for three children 0–2 and for six children 3–5 years of age.

ECEC system type and auspices²

Denmark has a unitary system of early childhood education and care for children aged 6 months (26 weeks) up to 6 years. Traditionally under the jurisdiction of Social Welfare, since 2020 the responsible authority at the national level is the Ministry of Children and Education (*Børne- og Undervisningsministeriet*). The funding, organisation and regulation of early childhood provision is the responsibility of the 98 municipalities. Early childhood services include both age-integrated ECEC centres (0–5 years) and age-separated settings (0–2 years, 3–5 years), as well as regulated home-based provision.

General objectives and legislative framework

The Act on Early Childhood Education and Care (*Dagtilbudsloven*), last amended in 2022, regulates early childhood services, including home-based childcare, and also school-age childcare and other forms of socio-pedagogic provision for young people. It specifies that the local municipal authorities are responsible for formulating the targets and creating an administrative framework for services for young children, including children with disabilities or with other support needs.

According to the Act on Early Childhood Education and Care, the general purposes of early childhood services are to create – in cooperation with parents – a setting that benefits the well-being, development and learning of children; to provide families with flexibility and choice of provision so that they can organise their family and working lives according to their needs and wishes; to integrate preventive and supportive services for children with special needs and disabilities; and to create coherence and continuity in transitioning from one form of provision to another. One of the requirements for service providers is to ensure that children have opportunities of joint influence and responsibility in the ECEC setting in order to gain understanding and experience of democracy. ECEC settings are expected to support children’s independence and their ability to participate in a rule-based community, thus strengthening their integration into Danish society (Ministry of Children and Education 2022).

² The Eurydice country report on ECEC in Denmark provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

ECEC entitlement and compulsory attendance

Denmark has a system of universal entitlement to a fee-paying, full-time place in publicly subsidised early childhood provision, starting when the children are 26 weeks old. Municipalities have a duty to provide ECEC services for all children between the age of six months and the start of primary school. Attendance is not compulsory.

Statutory schooling begins at age 6.

Main types of provision

ECEC settings (*daginstitutioner* – ‘day institutions’) may be age-integrated, from 26 weeks up to compulsory school age (6), or age-separated for the younger (0–2) and older (3–5) children. Typical opening hours on weekdays are from 6:30 to 17:00, which tend to cover parents’ full-time working hours (European Commission/EACEA/Eurydice 2019, 50). Specific types of setting are:

ECEC centres (*aldersintegrerede institutioner*) for children aged just over 6 months up to school entry are the most common type of provision. Some also provide school-age childcare. In 2014, age-integrated centres accounted for just over 63% of all centre-based settings, while kindergartens account for approximately 31% and nurseries for nearly 6% (Statistics Denmark 2017). Since 2018, however, no separate national statistics are compiled for the age-integrated centres.

Nurseries (*vuggestuer* – ‘cradle room’) provide places for children up to age 3.

Kindergartens (*børnehaver* – ‘children’s garden’) are settings for 3 to under 6 year-olds.

Home-based childcare (*dagpleje*) provision is mostly organised, funded and regulated by the local authority. In general, it is for children up to age 3, but can also include children up to age 6. Up to five children are allocated to one home-based provider. Private home-based care arrangements operate according to an agreement with the local authority, which provides a per capita subsidy and also supervision.

Provider structures

The majority of ECEC settings in Denmark are provided and run by the municipalities. Some are independent and self-governing but still run in close co-operation with the municipality. However, a growing number of ECEC centres (13.8% in 2022) are now privately owned and are run by parents, associations, or businesses, with subsidies from the local authorities.

In 2022, 2,266 ECEC providers managed a total of 3,910 centre-based settings. Since 2017, both the number of providers (from 2,199 in 2017) and the number of settings (from 3,964 in 2017) have increased (Statistics Denmark 2017, 2023a, BOERN 4).

In 2022, well over half of ECEC providers (57.1%) were public/municipal, almost one fifth (17.7%) were independent and one quarter (25.1%) were private persons or entities. All forms of private settings are subsidised by the state, although the amount can differ between those classified as independent and those classified as private. The greater majority of settings (72.8%) are run by municipalities; just over one quarter of all settings are run by independent or private providers.

Table 1

Denmark: Number and distribution of ECEC settings by centre type and ownership, 2022

Ownership/Provider	Number of settings 'at parental committee level'*	Share, in %	Number of settings 'at unit level'*	Share, in %
Public/municipal	1,295	57.1	2,846	72.8
Private non-profit, some self-governing ('independent')	401	17.7	484	12.4
Privately governed and publicly subsidised	569	25.1	580	14.8
Total	2,266		3,910	

Source: Statistics Denmark 2023a, BOERN 4, own calculations

* In the Danish ECEC register, a distinction is made between ECEC institution (corresponding to the parental committee level) and local ECEC settings (corresponding to unit level). All local ECEC settings are linked to and managed by an ECEC institution with a parental committee.

In 2021, the majority both of children under 3 years of age and over 3 years of age were enrolled in publicly funded ECEC provision (see Table 2).

Table 2

Denmark: Number of children in centre-based settings by age and provider, 2021

Provider type	Under 3 year-olds		3 years to school entry age	
	Number of children	In per cent	Number of children	In per cent
Public	86,572	85	140,940	78
Private, state subsidised	15,237	15	39,810	22
Total	101,809		180,750	

Source: Eurostat 2023f

Participation rates in regulated provision

Overall, 75,297 children under 2 years of age and 160,080 from 3 to 5 years were enrolled in centre-based ECEC settings in 2022. 25,732 children were cared for in a home-based setting (Statistics Denmark 2023a, BOERN2, own calculations). In the same year, 6,232 children under age 3 and 18,673 of the 3- to 5 year-olds attended a private setting (Statistics Denmark 2023a, PBOERN2).

According to Eurostat data, the participation rates of children under 3 years of age in centre-based settings remained almost the same from 2005 to 2022 (74% and 74.3%), as were those of children aged 3 to 6 (94% and 93.4%). The majority of both age groups spent more than 30 hours per week in an ECEC setting in 2022 (see Table 3).

Table 3

Denmark: Participation rates in centre-based ECEC provision according to age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years in %	3 years to minimum compulsory school age in %
2005	1 to 29 hours	13	15
	Over 30 hours	60	79

Year	Weekly attendance	0 to under 3 years in %	3 years to minimum compulsory school age in %
	No enrolment in ECEC	27	5
2010	1 to 29 hours	10	15
	Over 30 hours	68	75
	No enrolment in ECEC	23	10
2015	1 to 29 hours	7.7	9.2
	Over 30 hours	69.6	88.0
	No enrolment in ECEC	22.7	2.7
2022	1 to 29 hours	6.8	5.5
	Over 30 hours	67.9	87.9
	No enrolment in ECEC	25.3	6.6

Source: Eurostat 2023d, Slight deviations from 100% due to rounding

Across Europe, Denmark has the highest participation rates of under 3 year-olds in publicly subsidised ECEC provision (Jensen 2018). In 2021, 86.5% of 2 year-olds and over 97% of the over 3 year-olds attended an ECEC setting (see *Table 4*).

Table 4

Denmark: Number and enrolment rates of children in centre-based ECEC settings, by age, 2021

Age	Number of children in ISCED-01 settings	Enrolment rates in ISCED 01 settings, in %	Number of children in ISCED-02 settings	Enrolment rates in ISCED 02 settings, in %
Under 2 years	46,747	38.1		
2 year-olds	53,624	86.5		
3 year-olds	1,424	2.3	58,060	93.4
4 year-olds	11		61,212	97.4
5 year-olds	3		57,942	97.0
6 year-olds			3,518	6.0

Source: Eurostat 2023b, I

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 1.24% of GDP in 2019, 0.8% was allocated to provision for under 3 year-olds and 0.4% for 3 to 5 year-olds (OECD 2023).

ECEC settings in Denmark are fee-paying. The local authorities receive block grants funded by the state. A place in a municipal ECEC setting is funded primarily through a municipal, tax-funded subsidy (per capita funding), and the parents pay the remainder. However, the parental fee is not allowed to exceed 25% of the gross operating costs. The subsidies are paid directly to the ECEC centre and are reviewed annually. At least 75% of funding is therefore public, excluding rent and maintenance.

Fees in ECEC settings (both centre-based and home-based) are income-related and also vary according to the child's age. The parents pay lower fees or no fees if their income is below a certain limit – and the local authority pays an additional aided place subsidy in such cases. Two other reasons for reduced fees are if the child already has siblings in an ECEC centre and/or school-age childcare provision or if the child is deemed to have special educational and support

needs. In 2023, the average monthly fee charged for children aged 0 to 2 years was €465 in *daginstitutioner*, for children aged 3 to 6 years €259 (see Table 5), slightly higher if lunch was included. Parents receive financial support if they enrol their children in private settings; in 2022, 9,723 children and 9,635 families were affected (Statistics Denmark 2023a, DAGTIL4).

Table 5

Denmark: Average fees in centre-based municipal ECEC settings, 2023

Type of setting	DKK	€/year ³	€/month
Nursery (0–2 years)	41,582	5,577	465
Kindergarten (3–5 years)	23,214	3,113	259

Note: The yearly rates are the rates decided by the municipalities. The figures have been corrected in cases where one or more months are free of payment. The actual fees paid are often lower than the monthly rates shown, since families with more than one child, low-income families, etc., are eligible for reduced rates.

Source: Statistics Denmark 2023a, RES88, own calculations

In 2022, a couple with two children spent about 8% of net household income on childcare costs⁴ (OECD.Stat 2023).

Private ECEC centres can fix the charges made to parents, and consequently these may be higher than the fees for a place in a local authority centre. The subsidy granted by the local council for a place in a private ECEC centre consists of an operating subsidy, a building subsidy and an administration contribution. The total subsidy is paid to the centre and not to the parents. Municipalities are obliged to publish the costs for a place in ECEC.

Staff to child ratios and group size

Denmark is one of the few European countries which have no national regulations on either the number of children per staff member or on the maximum group size. Even so, staff to child ratios on average compare favourably with many other European countries. Local authorities and ECEC centres decide on staff deployment and group size according to the local situation. The Act on Early Childhood Education and Care 2020 explicitly states that when preparing the pedagogical curriculum “... the composition of the group of children shall be taken into consideration”.

In December 2021, an amendment on minimum standards for the staff to child ratio was included in the Act on Early Childhood Education and Care. As from 2024, at least one adult must be present for every three children aged 0 to 2 years and for every six children aged 3 to 5 years (Ministry of Children and Education 2022, Ministry of Employment 2023).

Usually, there are 12 children in nursery groups and 24 in kindergarten groups. In family day care, one person cares for three to five children (Juhl 2018).

In 2022, the staff to child ratio was on average 2.9 children (0–2 years) per full-time staff member and for children aged 3 to 5 years 5.6 children and 3.3 children in home-based provision (Statistics Denmark 2023a, BOERN3). After a period of higher numbers of children to one member of staff through personnel shortages, ratios have improved slightly over the last five years.

³ Conversion rate December 2023

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Curricular framework

As in many European countries, the underlying principles of Danish kindergarten philosophy can be traced back to the ideas and theories of Froebel and also Montessori, with adaptations to Scandinavian culture (Jensen and Langsted 2010). A major educational goal is to help children become aware that they can actively influence what happens in their immediate surroundings.

Denmark was the last of the Nordic countries to take the step of introducing a formal curricular framework (*pædagogisk læreplan*). In 2018, commissioned by the top-level ministry, the original curricular framework (2004) was revised by a group of experts, stakeholders and practitioners within the pedagogical field. It is now called “The strengthened pedagogical curriculum” (Ministry of Children and Education 2020). Since 2004, all ECEC settings are required to prepare a centre-specific pedagogical learning plan. In this way, each ECEC setting can take into account the specific context such as the composition of the child group (age, gender, disabilities, cultural differences, family backgrounds, etc.) as well as the specific location and physical facilities. ECEC settings are also required to document the learning and development of 0 to under 6 year-olds. Certain basic principles form a common pedagogical foundation. These include: an image of the child as unique; listening to and taking into account the child’s perspective; viewing play as an integral part of ECEC activities; having a broad understanding of learning through play, relationships, planned activities and exploration of nature – and by being challenged; viewing the group as a learning community; creating a safe and stimulating pedagogical learning environment; cooperating with parents with a focus on enhancing the child's well-being and learning; providing for vulnerable children; and ensuring continuity with school by supporting children's social skills, confidence in their own ability, and curiosity.

Staff are required to relate their pedagogy to six main themes: (1) comprehensive personal development; (2) social development; (3) communication and language; (4) body, senses and motion; (5) nature, outdoor life and natural phenomena (science); (6) culture, aesthetics and community (Ministry of Children and Education 2020). It is interesting to note that neither reading literacy nor mathematics are explicitly included as learning areas in this framework. At the same time, it is stated that “...the pedagogical learning environment for the oldest children should also introduce and allow the children to develop their curiosity towards, letters, numbers, patterns, shapes” (Ministry of Children and Education 2020, 27).

The ECEC centre head is responsible for preparing the centre-specific pedagogical plan, which has to be approved by the local council. It is also the centre head’s responsibility to make the curricular framework known publicly, e.g. on the centre’s website, and for evaluating it annually. At the centre management level, both in public and private settings, a bi-annual review is required which includes the parent board in the evaluation and includes their suggestions for follow-up.

Digital education

In the home environment, Danish children are given access to digital media and technologies at a very early age. More than 90% of children under the age of 7 have access to a tablet in the home. Although ICT use is encouraged by government policies, in ECEC settings there are large differences in use and implementation (Chaudron et al. 2018, 117ff).

The revised pedagogical curriculum (2018) states that ECEC activities should be meaningful and challenging and provide a basis for how children understand and act in a digital and global world. However, no specific digital competences are elaborated. The curriculum refers to the use of

digital tools, but in a general way. GPS, digital scales, webcams, etc. are mentioned as possibilities for supporting children to develop a creative, productive and critical approach to the use of digital technologies (Ministry of Children and Education 2020).

Monitoring – evaluation

The Act on Early Childhood Education and Care stipulates that the municipalities are responsible for carrying out evaluations in ECEC and ensuring that content and pedagogical activities are carried out in accordance with the law (European Commission/EACEA/Eurydice 2019, 123). However, they have different approaches and traditions in terms of monitoring and evaluation. Moreover, policy perspectives and those of research contexts tend to differ. For example, policy-related discussions on quality pay only little attention to children's play and participation – in favour of promoting academic skills through structured learning activities that can be measured (Juhl 2018).

Child-related assessment

Denmark does not have a long tradition of formal child-related assessment. However, since 2007, the municipalities are required to conduct language assessments of 3 year-old children in ECEC to assess whether a child needs additional language stimulation. Assessments are also required for children not attending an ECEC service and the municipalities are obliged to provide language support if this is considered necessary. Completing a form to assess vocabulary and sentence construction is mandatory for staff and parents when children are 3 years old, sometimes when they are 2 years old (European Commission/EACEA/Eurydice 2019).

Centre-level assessment

The centre leader is responsible for establishing a culture of evaluation in the setting and has a duty to carry out a centre-level assessment at least every other year (Ministry of Children and Education 2020). The Act on Early Childhood Education and Care specifies that parents must be involved in the development, evaluation and follow up of the setting's curriculum, but it is up to the municipalities and ECEC settings to decide how this should be carried out. The way the internal evaluations are used is a matter for the individual ECEC setting

The revised curricular framework (2018) states that the learning environment in the ECEC centre is to be evaluated from a child's perspective, and that the children's experiences of their environment should be taken into account (Ministry of Children and Education 2020).

External evaluation

The national institute for educational evaluation, *Danmarks Evalueringsinstitut – EVA*, compiles, analyses and disseminates knowledge about early childhood education and care. The general focus is on evaluation studies of topics of nationwide importance, such as quality management, children's perspectives, evaluation culture, and transitions. Currently (2021), EVA is providing ECEC settings with online guidance for assessing the centre-level implementation of the curriculum with a document on “Questions you can use to evaluate the work with the pedagogical learning plan” (EVA 2021).

Inclusion agenda

Children with special educational needs and disabilities

The guiding principle in Denmark for young children with disabilities and additional educational needs is to make it possible for them to attend mainstream ECEC settings. The local authorities are responsible for ensuring that ECEC centres provide the supports necessary for enhancing the children's integration. Sometimes children with disabilities are placed in a separate group, in which the staff-child ratios are high and the pedagogues have access to specialised support staff. Across the education system, special needs education includes additional staffing for individualised support and personal assistance, counselling and technical aid.

Children with a migration background – Children from Roma communities

According to Eurostat data, 9.6% of the population in 2022 had a non-Danish citizenship and 41.9% of this group came from another EU country. In the under-fives age-group, these shares were 10.2% and 38.9% respectively (Eurostat 2023c).

At the beginning of 2023, national statistics report 12.7% of children under 6 years as having a non-Danish background. Of these, 33.5% came from other EU countries. Overall, most of the non-Danish children were from Syria (12.6%), followed by Romania and Ukraine (10.1% each).

Table 6

Denmark: Children under age 6 with a non-Danish background by country of origin, sorted by frequency, 2023

Country of origin	Number of children under age 6 with a non-Danish background	Share of children's countries of origin among non-Danish population under 6 years of age
Syria	5,094	12.6
Romania	4,114	10.1
Ukraine	4,081	10.1
Poland	2,904	7.2
India	1,796	4.4
Eritrea	1,563	3.9
Lithuania	1,161	2.9
Turkey	1,147	2.8
Germany	1,128	2.8
Pakistan	1,044	2.6
Other countries	16,528	40.7
Total	40,560	

Source: Statistics Denmark 2023b, own calculations

For children with a background of migration the local authorities are obliged to offer language stimulation training from the age of 3 upwards. Since August 2004, this language support is compulsory. For children who do not attend some kind of ECEC provision, 15 hours per week of Danish language contact may be provided to families in their own home. Children attending an ECEC centre receive additional language support determined by a local evaluation.

Statistical data on Roma are not available, as the ethnic origin of persons is not registered in Denmark. The Council of Europe estimates that there are approximately 5,500 Roma living in Denmark (0.1% of the population). Denmark's policy on the Roma is based on equal treatment, to ensure that the Roma and Travellers have access to all mainstream services. Goals for active

inclusion, education level, employment rate and health in Denmark apply to Roma as well as to other groups with a minority ethnic background in Denmark.

Parental leave arrangements⁵

A new leave model was introduced for anyone who has given birth or adopted children on or after 2nd of August 2022 in order to support equality between men and women. Now, each parent is entitled to 24 weeks of leave after the birth of the child. Some of the weeks are earmarked and non-transferable (Ministry of Employment 2023).

Pregnancy and Maternity leave (*Graviditets og fødselsorlov*) is provided for 4 weeks before birth and 10 weeks after the child's birth. The first two weeks following birth are compulsory. The income-related remuneration has an upper limit of DKK 4,550 (€ 610.15). Eligibility for employees is dependent on having worked for at least 160 hours in the four months preceding the paid leave. Adapted regulations apply to self-employed persons, persons on a work placement following vocational training, unemployed persons, students and persons on sickness leave.

Fathers (and same-sex co-parents) are entitled to ten compulsory weeks **Paternity leave** (*Fædre/medmoderorlov*) under the same conditions, eight weeks of which are transferable.

Each parent is entitled to 14 weeks of **Parental leave** (*Forældreorlov*), which can be taken by both parents, also at the same time; nine weeks are non-transferable. Between eight and 13 weeks can also be taken at a later date. The 28 weeks can also be extended for reduced cash benefits. During this period, it is possible to work part time.

During Maternity, Paternity and Parental leave parents are protected against dismissal.

In terms of leave uptake, there are no disaggregated statistics on the proportion of parents using either Maternity, Paternity or Parental leave. The mother's formal education level and her position in the labour market are central to the way leave is divided between parents. Well-educated mothers take the shortest leave, whereas well-educated fathers take the longest leave. In 2021, 83% of mothers made use of leave with benefit: in 79% of cases both took leave (not necessarily at the same time). In 2021, mothers made use of 279.1 days on average.

The proportion of fathers taking leave has not changed since 2015. In 2021, 78% of eligible fathers took leave with benefit. Fathers who are on Parental leave together with their partner, took 35.6 days on average in 2021 (vs. 29.7 days in 2015).

Current challenges for the ECEC system in Denmark

Country expert assessment by Anette Boye Koch

The ambition of Danish ECEC to ensure the well-being and participation of all children in strong child communities is challenged. In the context of the inclusion agenda, an increasing number of children in vulnerable situations in need of social or special pedagogical support are participating in general ECEC institutions (Baes-Jørgensen 2021). The municipalities aim to develop inclusive child environments in ECEC settings, but the task is found to have educational, governance and financial consequences that are demanding to meet under the current conditions.

ECEC managers estimate that the proportion of children in need of social and special pedagogical support in or outside general ECEC is greater today compared to five years ago. They also find

⁵ The brief information in this section is based mainly on the country note for Denmark by Tine Rostgaard and Anders Ejrnæs in the *International Review of Leave Policies and Research 2023* (see References).

that the complexity of the special support has increased, and that the proportion of children in vulnerable situations due to impaired mental or psychological functioning has grown. The rise is partly due to an extended focus on inclusion of children in vulnerable situations in general ECEC settings, but also that child professionals have become more effective in diagnosing children (Baes-Jørgensen 2021). Until recently, Danish ECEC practices were designed to deal with a high degree of homogeneity in the group of children. With the inclusion of children in need of social and special pedagogical support, a rethink of ordinary pedagogical practices is required, as the ECEC communities need to become more flexible with increased room for diversity (Baes-Jørgensen 2021; Petersen 2022).

Pedagogues are experiencing a shortage of both resources and special pedagogical expertise and knowledge to carry out the task alongside aggravated staff-child ratios, having to produce learning plans and carrying out systematic evaluations. Consequently, they experience difficulties in offering children sufficient direct contact with adults in general. It is also arduous to get the needed help for children in vulnerable situations, as economical resources are tight and the time to write applications for extra support has to be taken out of the daily quota (Baes-Jørgensen 2021).

When asked, Pedagogues say they lack the time and specific skills to detect and investigate the children they are concerned about, and to initiate the needed cooperation with parents and interdisciplinary experts. Consequently, they end up working at the individual level and detect challenges in individual children rather than to ideally work purposefully with the child community (Baes-Jørgensen 2021).

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Denmark totalled 5,873,420, representing a gradual increase since 2000 (2000: 5,330,020; 2010: 5,534,738; 2020: 5,822,763) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.72, Denmark was well above the EU27 average (Eurostat 2023e)⁶.

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Children under age 6

Table 7

Denmark: Number of children under 6 years of age, 2022

Age	Number of children
under 1 year-olds	63,602
1 year-olds	61,514
2 year-olds	61,864
3 year-olds	62,135
4 year-olds	62,297
5 year-olds	62,893
Total 0 to under 6 year-olds	374,305

Source: Eurostat 2023a

In 2022, 3.2% of the total population were children under age 3 and 6.4% children under age 6. Compared to the respective EU averages, these proportions have always been higher than average since 2000 (Table 8).

Table 8

Denmark: Children under 6 years of age – share in total population from 2000 to 2022

Single households with children under age 6

In 2022, more than half (51.8%) of households with children under 6 years of age are couple households. 12.3% of all households are single households, whereby the proportion of single mother households (8.6%) is significantly higher than of single father households (3.8%).

Table 9

Denmark: Households with children under age 6, 2022

Household type	Total households	Total households, in %*
All households	447,100	
Couple households	231,600	51.8
Other household type	160,200	35.8
Single households, total	55,200	12.3

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Household type	Total households	Total households, in %*
Single households, women	38,300	8.6
Single households, men	16,900	3.8

Employment rates of parents with children under 6 years of age

In Denmark, in 2022, the overall employment rate for men (15-64 years) was 82.7% and for women 78.1% (Eurostat 2023j).

In 2022, 79.5% of women and 88.6% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), both the shares of employed mothers and fathers were above the EU-average, especially that of mothers (63.6% and 87.2% respectively) (Eurostat 2023i, own calculations).

Table 10a

Denmark: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

Children at risk of poverty or social exclusion¹⁰

In 2022, 12.3% of the children under age 6 were at risk of poverty or social exclusion, a considerably lower proportion compared with the EU28 average of 23.3%. Overall, 17.1% of the total population in Denmark are categorised as being at risk of poverty or social exclusion (average: 21.6%). 6.4% of the children under 6 years suffered from severe material deprivation in 2020, compared to 2.8% of the total population (EU averages 6.1% and 4.3% respectively) (Eurostat 2023g, h).

About the authors

Marika Veisson, PhD in psychology, worked at Tallinn University from 1988 and from 2001 as a Professor of Early Childhood Education. Since 2019 she is Professor Emeritus. Her academic research focuses on child and youth development, children with special needs, teacher professionalism, the sustainability of education, teacher-parent partnerships, and values education. She has participated in 19 scientific projects, edited 19 books, and authored around 200 articles.

Tiina Peterson, PhD, is a specialist in pre-primary education in the General Education Policy Department of the Ministry of Education and Research in Tallinn. Her responsibilities include the development of early childhood education and care policy in Estonia and advising centre heads and other ECEC professionals as well as local government experts. She is a member of the European Commission ECEC working group and the OECD ECEC network.

1. ECEC governance in Estonia

Estonia has a unitary system of early childhood education and care. According to the draft Early Childhood Education and Care Act 2022, not only the ECEC centres/kindergartens (*koolieelne lasteasutus/lasteaed*) for children aged 1 year 6 months up to 7 years, but also childcare services now come under the overall responsibility of the Ministry of Education and Research (*Haridus- ja Teadusministeerium*) at the national level. Governance and system management are distributed between the national and regional levels, reflecting a multi-level governance model. At the local level, education and social affairs authorities are responsible for ECEC provision and management.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Staff qualifications, professional education/training and remuneration are regulated. There are three main categories of staff: ECEC Teacher (*koolieelse lasteasutuse/lasteaiaõpetaja*), ECEC Assistant Teacher (*abiõpetaja*) and Childcarer/Nurse (*lapsehoidja*). Setting leaders are categorised as: Director (*direktor*) and Lead Teacher (*õppealajuhataja*). Assistants are required to have an ISCED level 3 qualification, Nurses/Childcarers an ISCED level 4 qualification, and ECEC Teachers ISCED level 6, Directors ISCED level 7 (Master's degree) and Lead Teachers an ISCED level 6 or 7 qualification.

According to the Early Childhood Education and Care Act (draft, Official Gazette 2022) teachers should create conditions for the growth and development of children in an atmosphere of mutual respect and understanding with the children and their parents and take care of the life and health of the children at the ECEC centre. Teachers are required to provide advice on issues of learning and teaching to the parents of children, who attend the ECEC setting, and also to the parents of children not attending the centre but who live in the catchment area if the parents so request.

Table 1

Estonia: ECEC staff in centre-based settings

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Estonia, the relevant format is **1½–6** years, since children usually start school when they are 7 years old.

² n/a: not applicable

2.2 Centre leader

According to the Preschool Child Care Institutions Act (Official Gazette 1999) the duty of the Director is to ensure the effective operation and to direct the activities of the ECEC institution in co-operation with the teachers' council and the board of trustees. The Director is the legal representative of the ECEC institution during the period of validity of their contract of employment.

- To perform the duties provided for in this Act, the Director has the right to conclude transactions with the assets of the ECEC institution pursuant to the procedure established by legislation.
- The Director is responsible for the development of the ECEC institution and for the purposeful and expedient use of its financial resources.
- The Director shall submit a written overview of the learning and teaching provided at the ECEC institution and the financial situation and use of funds to the rural municipality or city government and the board of trustees once a year and shall give written notice of any material deterioration of the economic state of the ECEC institution and of any regulations issued by a supervisory agency.
- In order to fill a vacant position of a Director, a public competition shall be organised. The rural municipality or city government shall announce the competition and establish the procedure for its conduct. The person who wins the competition shall be appointed to office by the rural municipality or city government.
- The contract of employment with the Director shall be entered, amended and cancelled by the rural municipality or city mayor or an official authorised by him or her.

According to the draft Early Childhood Education and Care Act (Parliament of Estonia 2022), the qualifications required for the position of Director are a Master's degree or equivalent. The pedagogical, managerial and leadership competence requirements of a Centre Director are described in the Professional Standard for Teachers. Management and leadership competences are assessed by the employer in the following areas: organisational development; design of the learning environment; human resources management; general resource management; management of the learning process; and self-management.

The competency and career model of educational leaders prepared in 2023 (Good Deed Foundation et al. 2023) describes what high performing educational leaders do and know, and how the development of leaders in the field of education should take place. This tool can be used by educational leaders themselves in planning their own development and career, as well as in the recruitment, development, and future planning for Centre Directors and Head Teachers in ECEC institutions as places of employment. In addition, the competence model provides state institutions and universities with a good basis for the development of programmes and advanced training courses for educational leaders. Coping with today's challenges requires educational leaders to apply high-level leadership skills in supporting and managing their teams.

2.3 Centre-based posts of responsibility

In Estonia, there are no specifically designated positions for specialised pedagogical work across the ECEC centre (e.g. with a focus on working with the parents of migrant children or on students completing a practicum). The qualification requirements for a teacher working in a group of children with intensified support and a group of children with special support are higher education and a teaching qualification or higher education and pedagogical and special pedagogical competences.

2.4 Co-ordinating and supervisory staff

Each ECEC centre has a **board of trustees**. According to the Preschool Child Care Institutions Act (Official Gazette 1999), the co-ordinating and supervisory tasks of the board are the following:

- 1) The board of trustees is a permanent body whose function is to make sure that the learning and teaching provided at the ECEC centre corresponds to the development and interests of the children and to co-operate in this field with the centre staff.
- 2) The board of trustees shall include a representative of teachers, representatives of parents of each group and a representative of the rural municipality or city.
- 3) The board of trustees shall:
 - Hear the report of the Director on the learning and teaching provided and the management of the ECEC centre.
 - Make recommendations to the Director and the rural municipality or city government for the preparation of the budget of the ECEC centre and for the expedient use of the budget funds.
 - Submit proposals to the Director and the rural municipality or city government to ensure a favourable environment for development for children.
 - Through a representative (representatives), participate in the work of the committee of a competition organised to fill the vacant position of Director.
 - Decide the daily cost of catering for children.
 - Decide on other issues placed within the competence of the board of trustees by this Act or a resolution of the rural municipality or city council.
- 4) The board of trustees has the right to obtain information necessary for its work from the director and from the rural municipality or city government.
- 5) To organise its activities, the board of trustees shall elect a chairperson and deputy chairperson from among its members.
- 6) The work format of the board of trustees shall be a meeting, which is to be held at least once a quarter on the proposal of the chairperson of the board of trustees or the director.

2.5 Specialist support staff

A **Health Care Professional**, who is employed daily at an ECEC centre, is required to carry out the following tasks:

- 1) Monitor the health of the children based on the health protection and health promotion requirements for children established by a regulation of the Minister of Social Affairs and by a regulation of the Government of the Republic and inform the parents and the doctor of a child of any health disorders the child may have.
- 2) Prepare the daily schedule of the ECEC centre, which complies with the requirements for the daily schedules established by a regulation of the Minister of Social Affairs and approved by the director.
- 3) Verify whether the catering for the children meets the requirements for catering for children as established by a regulation of the Minister of Social Affairs.
- 4) Advise parents and teachers on issues related to children's health.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

In 2021/2022, a total of 8,012 teachers were working in Estonian kindergartens/ECEC centres (IMO 2023). Among these were 6,678 ECEC Teachers/Kindergarten Teachers, 581 Music Teachers, 477 Physical Education Teachers, 185 Special Education Teachers working with children with special needs, 171 Estonian Language Teachers, and 47 Swimming Instructors. One regular ECEC Teacher and two Assistant Teachers are assigned to each group of children.

The age distribution of the ECEC Teachers was as follows:

763 teachers were below the age of 30; 1,667 between 30–39 years; 1841 between 40–49 years; 2,277 between 50–59 years; and 1,507 teachers were over 60 years of age.

Most teachers are women. Only 62 men work in ECEC centres.

Table 2

Estonia: Structural composition of ECEC workforce, 2021/22

Staff categories	ECEC Teachers	Child-carers	Specialist support staff	Administrative staff	Total	Proportion of workforce
Staff with specialist higher education degree (BA)	4,114	466	151	330	5,061	49%
Staff with specialist higher education degree (MA)	1,630	-	439	646	2,715	26%
Staff with specialist vocational qualification (post-secondary)	898	351	6	6	1,261	12%
Staff with non-specialist qualification	1,296	-	11	9	1,316	13%
Men	62 (under 1%) (including male administrative staff; no systematically compiled data by qualifications and workplace)					
Staff with a background of migration	No systematically compiled national data					

Source: IMO 2023

Since 2015, all ECEC Teachers are required to have a higher education degree. Higher education in early childhood education has been available at Tallinn University since 1967 and at Tartu University and its affiliated Narva College since 2004. Whereas in 1995 the proportion of ECEC Teachers with higher education was only 20.9%, by 2001 it had risen to 25.6% (Torm 2002, 465), by 2016 to 66% and by 2022 to 72% – a remarkable rise over a period of less than 30 years (IMO 2023). Currently, 20% of ECEC Teachers, well over half of Lead Teachers (58%) and 67% of Directors have a Master's degree (see Table 3).

Table 3

Estonia: Directors and ECEC Teachers according to qualification, 2021/22

Education level	Directors (direktor) N=592	%	Lead Teachers (õppealaju- hataja) N=436	%	ECEC Teacher N=8,150	%
Doctoral degree	4	0.7	2	0.5	3	0.04
Between MA and PhD	22	3.7	7	1.6	39	0.5
Master's degree	397	67	253	58	1,630	20
Bachelor's degree / Bachelor professional (<i>ra- kenduskõrgharidus</i>)	162	27	169	38	4,114	51
Between secondary and higher education	3	0.5	6	1.4	898	11
Secondary education, with long years of work experi- ence	3	0.5	3	0.7	1,296	16

Source: IMO 2023

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Historical developments: On 1 September 1967, the Tallinn Pedagogical Institute (renamed Tallinn University in 2005) opened the first specialist degree course for early childhood education and psychology; students were admitted for both full-time and part-time learning. Between 1993 and 1997 a four-year common degree was introduced for Pre-Primary and Primary School Teachers was established and between 1994 and 1998 this was extended to include a child psychology specialisation (a four-year bachelor's degree course).

Between 1995–2002, the Pre-primary and Primary School Teacher education lasted five years. Between 1998–2005, it was possible to receive a four-year degree in Educational Sciences, specialising as a Pre-primary and Primary School Teacher. The education of students who graduated in those years has currently been equalised with a Master's degree. The new 3+2 curricula for ECEC Teachers were compiled in 2001 and the first students both for Bachelor's and Master's levels were admitted in the academic year 2002/2003. Since 2002, the ECEC Teacher Bachelor study programme has a duration of three years. The following Master's programmes have been available since 2002.

- 2002–2004: ECEC Teacher-Counsellor studies (one year, 40 ECTS credits). The first Master's students graduated in 2003.
- 2003–2010: ECEC Teacher-Counsellor Master's studies (two years, according to the new curriculum 120 ECTS credits).
- Starting in 2010 and up to the present, the nominal study period for the MA in Early Childhood Education (*Alushariduse pedagoog*) is two years (120 ECTS credits) (Veisson et al 2011).

- Since 2015, Early Childhood Education BA and MA study programmes have been administered by the teacher education and educational science department at Tallinn University School of Educational Science. Other study programmes in this department include primary education, general education, vocational education, and adult education.

Current context:

The goal of teacher education is to support the preparation of teachers who are professionally competent and able to participate in the development of educational institutions as organisations. The activities in the field of teacher education and educational sciences are also supported by the Centre for Innovation in Education.

The study programme of early childhood education of Tallinn University gives a contemporary scientific preparation at either the Bachelor's (180 ECTS credits) or the Master's level (120 ECTS credits). These degree qualifications guarantee students' professional competencies and skills of self-reflection as ECEC Teachers. The courses also prepare students to become early childhood education experts who understand educational-political processes. They provide graduates with qualifications to become ECEC Teachers (*alushariduse pedagoog*) who can direct children's development, create a favourable learning environment and to cooperate with other adults including parents, other teachers, and specialist support staff in the community network. The bachelor's degree also supports each learner's personal development and enables them to continue their studies at the Master's level.

Bachelor level studies

The study programme of early childhood education at BA level comprises 180 ECTS credits. It mainly includes in-depth courses in the principal subjects:

- Teaching the first (home) language and Estonian as an additional language – *emakeele didaktika ja eesti keel teise keelena*
- Mathematics and teaching mathematics – *matemaatika ja matemaatika didaktika*
- Nature studies and teaching about nature – *loodusteadus ja loodusteaduse didaktika*
- Art in early childhood education – *kunst koolieelses eas*
- Music and movement education – *muusika ja liikumine koolieelses eas*
- Educational science
- Psychology and
- A pedagogical traineeship (practicum).

According to the goals of the programme structure, the role of in-depth studies supports the future ECEC Teachers to form a general, cultural, social, communicative, ethical, and professional set of skills and to be prepared for pedagogical work with children aged birth up to 7 years in diverse ECEC settings.

The university bases its activities on the needs of Estonian society, relying on historical experiences and educational research, and cooperating with universities and educational institutions in Estonia and in other countries. Since 1967 we have educated over 2,500 specialists in early childhood education, in different time periods either following the four years, the five-year or 3+2 years' curriculum, and all of them have now been equalised by the Estonian Ministry of Education and Science with the currently valid Master's curricula.

Master's level studies

The curriculum of the Master's study programme enables students to acquire a scientific education qualification at Master's level, to deepen ECEC Teachers' competences, to complement

scientific knowledge in early childhood education, to acquire additional knowledge in the management of children's institutions and to learn how to support a child's smooth transition from kindergarten to school. Work on the Master's thesis allows students to continue in-depth scientific studies towards the level of Doctoral studies. Studies take place in the form of lectures, seminars, independent works, practical work, and traineeships.

Former Masters students can work in managerial positions, e.g. in the Estonian Ministry of Education and Science, in the National Examinations and Qualifications Centre and at university colleges, as trainers of teachers in further education, in education departments, as Directors or Lead Teachers in kindergartens and as ECEC Teachers.

Table 4

Estonia: ECEC Teacher

<p>Job title in Estonian: <i>Koolieelse lasteasutuse õpetaja (Tartu University)</i> <i>Alushariduse pedagoog (Tallinn University)</i> Profile: Early Childhood Pedagogy Professional</p>
<p>Entry requirements: 12 years compulsory schooling with school leaving certificate; written test and oral examination.</p> <p>Professional studies: Three-year study route at university, including at least 18 weeks' work placement.</p> <p>Award: bachelor's degree/Early childhood education <i>Alushariduse pedagoog</i> at Tallinn University and ECEC Teacher qualification at Tartu University</p> <p>ECTS credits: 180 – Qualified Teacher Status (Teacher Professional Standard – <i>Õpetaja kutsestandard</i>)</p> <p>EQF level: 6, 7 or 8</p> <p>ISCED 2011: 6, 7 or 8</p> <p>Main ECEC workplaces: Kindergarten (<i>Lasteaed</i>), 1½–6 years; nurseries (<i>Lastesõim</i>), 0–2 years.</p>

Estonia: Childcarer/Nurse

<p>Job title in Estonian: <i>lapsehoidja/abiõpetaja</i> Profile: Social Care/Health Care Professional</p>
<p>Entry requirements: 12 years compulsory schooling with school leaving certificate</p> <p>Professional studies: One-year study route at a Health Care College</p> <p>Award: Qualified Childcarer Status (Childcarer Professional Standard – <i>Lapsehoidja kutsestandard</i>)</p> <p>ECTS credits: 60</p> <p>EQF-level: 4 (or 5 for work with children with special needs and parents)</p> <p>ISCED 2011: 4 (or 5, see above)</p> <p>Main ECEC workplaces: Kindergarten (<i>Lasteaed</i>), 1½–6 years; nursery (<i>Lastesõim</i>), 0–2 years; child care service, 0–18 years</p>

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

An important document which regulates work in kindergartens is the Teacher Professional Standard (Estonian Qualification Authority 2020), classified at level 6 in the Estonian and European Qualifications Frameworks.

The Professional Standard is a document which describes professional activities and provides the set of skills, knowledge and attitudes or competency requirements needed for successful conduction of professional activities. The profession of teacher (level 6) includes the following parts of work and duties: planning of learning and teaching activities, development of learning

environment, supporting of learning and development, reflection and professional self-development, counselling of learner and parent. Main tools of a teacher are learning and playing equipment. Personal qualities needed for work are self-management, cooperativeness, initiative, responsibility, self-confidence, creativity, tolerance, empathy, integrity and a positive attitude.

Universities are free to put together curricula according to the new National Curriculum for Pre-school Child Care Institutions (*Koolieelse lasteasutuse riiklik õppekava*) (Official Gazette 2008) and the draft Early Childhood Education and Childcare Act (*Alushariduse ja lapsehoiu seadus*), (Parliament of Estonia 2022).

Box 2

Estonia: Bachelor study programmes at Tallinn University (2022a) and Tartu University (2022)

Tallinn University
Objectives
<ul style="list-style-type: none"> – To create opportunities for the acquisition of broad education in Educational Sciences in the area of early childhood education – To support the formation of skills to work in jobs that require an ECEC Teacher’s knowledge – To create opportunities for the continuation of studies in early childhood education at Master’s level.
Outcomes
<p>The BA graduate...</p> <ul style="list-style-type: none"> – has basic knowledge in educational sciences, systematic knowledge in early childhood education, knows the principles of child development, subject didactics, and methods of scientific research. – knows how to integrate theoretical knowledge into practical work with children and adults. – knows how to create a favourable intellectual and physical environment for child development. – knows how to plan, integrate, analyse critically, and evaluate pedagogical processes. – can search information by using various information sources in early childhood education and to seek answers to specific questions and problems of the field. – knows how to conduct empirical research, write and formalise a Bachelor thesis. – knows how to reflect upon one's own activities, to evaluate personal needs for self-education and further training, as well as being aware of the possibilities to continue at a post-graduate (Master’s) level.
Tartu University
Obligatory Basic Modules
<p>Module 1.1</p> <ul style="list-style-type: none"> – Inclusive Education – Communication and Feedback in early years settings – Research Methods in Education – Teacher's Identity and Agency – Learning Environment and Teaching Resources – Basics of Learning – Teaching for Learning <p>Module 1.2</p> <ul style="list-style-type: none"> – Basics of Academic Writing – Modern Estonian – The Child in Estonian Cultural History – Seminar Paper – Planning Research and Writing Report <p>Module 1.3:</p> <ul style="list-style-type: none"> – English for Early Years Teachers (B1) – English for Early Years Teachers (B2) <p>Module 2: In-depth field modules</p>

<p>Module 2.1</p> <ul style="list-style-type: none"> – Ongoing field studies in Early Childhood Education – Main Pedagogical Traineeship in Early Childhood Education
<p>Outcomes</p> <p>The BA graduate will...</p> <ul style="list-style-type: none"> – have an overview of child development as well as factors influencing children's behaviour; be able to notice and consider children's special educational needs. – be able to organise learning activities according to children's age and abilities, considering cross-curricular links and integrating theoretical knowledge with practical skills. – be able to provide a safe and motivating learning environment. – have knowledge of different cultures and consider the specific characteristics of a multicultural learning environment. – be able to co-operate and communicate effectively with parents, colleagues, and other specialists. – be able to analyse and evaluate their work as well as the needs for continuing professional development. – have knowledge of research methods and be able to conduct research under supervision. – know the curriculum of early years education. – be aware of the role and ethical aspects of their work. – be able to use information-communication technology in their everyday practices. – understand subject-related terminology in Estonian. – understand and communicate in at least one foreign language. <p>After completion of the programme students can continue their studies toward a Master's degree in education.</p>

Box 3

Estonia: Master's study programme at Tallinn University (2022b)

<p>Objectives</p> <ul style="list-style-type: none"> – To create opportunities for broad analysis of international trends in early childhood education in the context of educational sciences and educational policy – To support the development of readiness for analysis of theoretical concepts of management and counselling in ECEC establishments – To support the development of professionalism as an ECEC Teacher in activities of early childhood settings, management of learning and educational activities and in guiding personal development – To create preconditions for continuing studies at Doctoral level.
<p>Outcomes</p> <p>The MA graduate...</p> <ul style="list-style-type: none"> – is familiar with local and international trends in educational sciences and educational policies and has a systematic overview of leadership and counselling theories. – knows how to manage activities in early childhood educational establishments, plan organisational development and evaluate the effectiveness of these activities. – knows how to evaluate ECEC quality in the context of children, teachers, and organisational development. – knows how to create a favorable environment for child development according to individual or special needs of the child. – can counsel parents and colleagues in teaching and educational matters. – is familiar with international scientific research in the area of early childhood education, is able to conduct professional educational scientific research and formulate it into a scientific thesis. – can plan, analyse and reflect upon professional development needs as an ECEC Teacher – is able to continue studies at Doctoral level.

4.3 Alternative entry and qualification routes, system permeability

Currently, the only possibility to become an ECEC Teacher is either to study early childhood education (*alushariduse pedagoog*) at Tallinn University or to register for the early years' teacher

programme (*koolieelse lasteasutuse õpetaja*) at Tartu University and its affiliated Narva college. ECEC Assistant Teachers are required to follow only one year of training, which is organised by Health Care Colleges in Tallinn and Tartu.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Practicum periods in ECEC settings are an integral part of all **BA study programmes**. Students undertake several placements to consolidate what they have learnt and to develop and test their skills and knowledge in a holistic way.

Guided workplace experience at Tallinn University

The traineeship takes place in five block periods over five semesters. The general aim is to give students the chance to familiarise themselves with the work in a variety of ECEC settings and the values and agreed rules within them. This includes learning about the specialised competences and role of an ECEC Teacher, setting goals for their professional development and analysing the importance and feasibility of cooperation with colleagues.

Structure

Teaching Practice I (3 ECTS) and *Teaching Practice II* (3 ECTS) aim to create opportunities for the practical application of theoretical knowledge in work with children up to 7 years of age, with a focus on toddlers (1½ to 3 years) in the second practicum; to support awareness of the links between acquired knowledge and educational activities; to enhance students' skills in supporting children's development; and how to communicate with colleagues as a teacher and organiser of educational activities.

Teaching Practice III (3 ECTS) includes a focus on children from multilingual backgrounds. Students learn about ways of transmitting Estonian as a second language and organising activities for multilingual learning among children with different family languages (including immersion approaches) and learn about the principles of monitoring children's language development.

Teaching Practice IV (3 ECTS) includes supporting the students' skills in terms of planning, conducting and analysing learning and educational activities based on the level of development of the group or the group of special children; supporting the development of individual children; implementing digital technologies and IT tools to make learning and teaching more visible; reflecting on and analysing one's own practices.

Teaching Practice V (6 ECTS) aims to consolidate all the goals of the previous teaching practices and supporting the student in planning professional development and forming a comprehensive picture of the role of the profession.

In the **Master's study programme**, teaching practice takes place twice during the course and is awarded 6 ECTS.

Teaching practice I (3 ECTS) aims to create opportunities for students to become familiar with planning, organising and leading an ECEC institution's educational activities; to support the students' skill of analysing the leadership of educational activities; to support the formation of connections between the students' analysis of leadership competences and acquired knowledge; to enable the student to acquire teamwork experience.

Teaching practice II (3 ECTS) aims to create opportunities for students to learn about the management of educational activities, the guidance of teamwork and the different forms of working

procedures; to try out the implementation of different forms of work organisation, to use different methods and suitable ICT tools in educational activities; to assess the teacher's actions and teamwork.

Courses and traineeships can also be undertaken abroad, with Erasmus+ placements abroad and other mobility schemes for undergraduate students; 15 ECTS are awarded on the BA programme and 9 ECTS on the MA programme.

Methods: Pedagogical traineeship includes both observation and practical activities in the assessment of children's development and activities, as well as in the planning and implementation of teaching and educational activities in ECEC institutions. Reflection on and analysis of the student's own development is a key focus.

Mentoring: One supervisor from the kindergarten and one from the university evaluate the student's practicum. At the end of all teaching practice session students are required to present a report in eDidaktikum and make an oral presentation.

Guided workplace experience at Tartu University (BA programme)

The university provides three courses and one main practicum in ECEC:

Course 1: Continuous traineeship in ECEC (3 ECTS)

The course has two main goals, to be achieved jointly with the domain- and subject-didactics:

- To support student's learning to be a teacher by creating opportunities to associate studies of domain- and subject-didactics with teachers' activities in an educational institution
- To give students an opportunity to perform traineeship tasks in different educational institutions at different age levels and with children with special educational needs.

Main Pedagogical Practicum in ECEC (11 ECTS)

The course has three main goals to support prospective teachers based on previously completed university studies and the course in continuous pedagogical traineeship. It aims to create opportunities for:

- Integrating acquired knowledge with practical teaching activities in an ECEC institution
- Exploring the educational process as a whole and teaching during a complete educational period in an ECEC institution
- Practising principles related to subject-didactics in an ECEC institution.

Course 2: Pedagogical Practice (4 ECTS)

The main goal of the course is to support students in becoming a teacher by creating opportunities to practice knowledge acquired from different basic module courses and domain- and subject-didactics courses before starting corresponding teaching practice in an ECEC setting.

Course 3: Ongoing Pedagogical Traineeship in ECEC (6 ECTS)

The course has three main goals to be achieved jointly with the basic module courses:

- Creating ongoing opportunities to associate theoretical knowledge with a teacher's activities in an educational institution.
- Developing skills and a habitus of reflecting on other teachers' and students' activities in order to support their own development as a teacher.

- Defining themselves as a member of the school personnel who collaborates, according to the type of the educational institution, with children, different teachers, administration, support specialists.

6. Continuing professional development (CPD) of ECEC staff

Regulatory framework: In Estonia there are binding frameworks at the national, regional and provider levels for regulating the CPD of ECEC workers. CPD is organised according to the Professional Standard of ECEC Teachers. In the Adult Education Act (2019), the Continuing Education Standard sets out the curricular requirements for continuing education, for the documents certifying the successful completion and participation in continuing education and a list of key curricular areas to be provided for.

Organisation, obligation, and funding: Continuing professional development for ECEC Teachers is organised either at the national or the municipality level as well as by the ECEC settings themselves. Based on national priorities and orders, universities organise CPD courses for kindergartens staff, including heads, teachers, assistants, and support specialists. CPD activities are obligatory. The Government of the Republic supports local governments in providing professional development for kindergarten teams (Ministry of Education and Research 2023). The funds are to be used to facilitate teaching in the Estonian language, to support a modern learning approach and the digital literacy of teachers and managers, and to promote collaboration and sharing experiences among professionals.

On the one hand, Centre Directors must direct their own professional development, and on the other hand, both the school administrator and the state must support them throughout their career. The updated competency and career model is a necessary tool for this. Next steps for the Ministry of Education are to implement the models: to create an implementation plan for providing the necessary support in recruiting leaders, supporting their professional development, and evaluating work results (Good Deed Foundation, Ministry of Education and Research, Fontes, Estonian Principals' Association 2023).

Main forms: Main forms of CPD are formal seminars/courses; centre based CPD activities (sharing of inspiring practices in the local, regional, and national level), open programmes for the cooperation of different ECEC institutions, webinars, and conferences (national and international).

Providers and certification: The main providers of CPD in Estonia are Tallinn University, University of Tartu, Estonian Kindergarten Teachers Association, Association of Estonian Early Childhood Education Principals and Hea Algus (NGO). The certification awarded by any one CPD provider is also recognised across the entire early childhood sector and by different employers. Certification requirements are set out in the Adult Education Act (2019) – noted above.

Formal career advancement: Beyond the regular profession of teacher (ISCED level 6), ECEC Teachers may gain a level 7 qualification through successful completion of a Master's programme. **Senior Teachers**, also at level 7, additionally support the development of other teachers and of the organisation and develop field methodology. A **Master Teacher**, at level 8, additionally instructs colleagues and leads development activities within the organisation.

Leave entitlement: To participate in formal education or continuing education, study leave shall be granted to employees on the basis of an application and a notice from the education institution for up to 30 calendar days in a year. In case of a training based on the interests of an employer, the Employment Contracts Act and Civil Service Act. Study leave shall also be granted for participating in formal education or continuing education of an equal foreign educational institution (Official Gazette 2019).

During the study leave granted for participation in formal education and continuing education with the purpose of professional development, an employee shall be paid the average study leave pay based on a calendar day for twenty calendar days pursuant to the procedure provided in the Employment Contracts Act. ECEC staff have similar access opportunities to CPD.

Content: In recent years, the focus in the CPD courses for ECEC Teachers has been on supporting children's language and speech, Estonian language, supporting children with special needs and using child-centered learning strategies, including digital pedagogy.

7. Working conditions and current workforce issues

7.1 Remuneration

Staff remuneration is independent of the age of the children.

At the same time, social guarantees for ECEC Teachers (pedagogues) are important. ECEC Teachers were the first in the educational system to feel the inequity in salaries due to the transfer of kindergartens/ECEC centres to municipal ownership. The remuneration issue of early childhood education teachers is defined by the local authorities and so far, it has not been regulated by the State. That means that wages depend on the decisions of local governments. Only the minimum wage is regulated.

Although the remuneration level of ECEC Teachers has been raised substantially, the differences between counties have remained. In 2023, salaries ranged from €1,574 to €1,749 per month for a teacher with a Master's degree or equivalent. This is an indicator of society's attitudes and low value of an ECEC Teacher's work, and this can, in turn, influence the education of the next generation of citizens.

ECEC Teachers' salaries are equal to those of Primary School Teachers in the two biggest cities, Tallinn, and Tartu, and in a few smaller municipalities. It is a decision of the municipal authorities. In most municipalities ECEC Teachers' salaries are lower compared to those of Primary School Teachers (roughly 10% less). But the aim is to pay Early Childhood and Primary Teachers equal salaries in all local governments.

Directors' and Lead Teachers' salaries are higher according to the posts of responsibility. Teachers' salaries are related to the level of education and work experience.

It is possible to live on this salary, but remuneration for teachers with a qualification below Master's level is only somewhat above the minimum wage – which amounted to €725 in January 2023 (WageIndicator.org 2023).

7.2 Full-time and part-time employment in ECEC provision

In 2022, 95% of ECEC teachers worked full time (35 hours/week and above). Only 5% of ECEC teachers worked part time (Estonian Education Information System 2022).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Novice teachers are provided with mentorship during their first year at work. The probationary year programmes are based on the Estonian Education Strategy 2021–2035 (Ministry of Education and Research 2021). The aim of the Probationary Year programme is to support newly qualified teachers in their transition to work and in coping with professional challenges. The trainee teacher is supported by a mentor in the workplace. After completing the probationary year, teachers are not left on their own but are welcome to participate in a supervision group for teachers.

7.4 Non-contact time

There is no officially specified non-contact time in kindergartens in Estonia. A full week comprises 35 hours and teachers spend all this time working with the children. Children sleep after lunch and teachers can use this time for documentation. Individual decisions about the allocation of non-contact time are made by the Director of the kindergarten.

7.5 Current staffing issues

In smaller municipalities there are sometimes shortages of teachers. Usually, the teacher is required to have at least a bachelor's degree. In cases of staff shortage, however, an exception is sometimes made, and students of the early childhood education teacher's specialisation are hired. This decision is usually made by the director of the kindergarten and a contract with the student is usually signed for one year only.

To fill vacant positions of teachers, the Lead Teacher or other persons employed in the field of learning and teaching, or the Director of the kindergarten is required to organise a competition, the procedure for which should be approved by the board of trustees. If a teacher who meets the qualification requirements is not found, the director must organise a public competition within a year.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Estonian Education Strategy 2021–2025

A fundamental policy initiative for the education system in Estonia is the Estonian Education Strategy 2021–2035 (Ministry of Education and Research 2021). The Strategy sets out principles, goals, indicators, and targets for all levels of the education system. Specifically related to the ECEC sector, these are the following:

Strategic goals: To have competent and motivated ECEC Teachers and ECEC Heads, a diverse learning environment and a learner centred approach to learning and teaching.

Action trajectories: A contemporary approach to learning and teaching curricula; smart learning resources and methodology based on the principles of contemporary approaches to teaching and learning; shared space of culture and values; high-quality Estonian-language instruction and learning of Estonian; next generation of teachers and support specialists and next generation of leaders of educational institutions.

Indicators:

- Subjective well-being of children and teachers
- Proficiency in the Estonian language
- 95% participation of children from 3 years old to school age in early childhood education (compared with 92% in 2021).

General targets for ECEC settings for 2035

Language proficiency: A plan for the development of Estonian-language education has been developed, starting from the early childhood level, that provides sufficient language proficiency to continue studies in Estonian at the following levels of education.

A new generation of qualified ECEC Teachers and ECEC Heads is ensured. The teaching profession is highly valued and prestigious. Preschool teaching staff has a strong identity and safeguards the reputation and dignity of the teaching profession. The sector provides good opportunities for professional development and self-fulfilment, involving changes in ECEC and the professional development of teachers and heads. The role of a teacher as coach and mentor is becoming more important.

The organisational culture of early childhood educational institutions is caring, collaborative and democratic, supports the development of general competences and the well-being of all, including better physical and mental health, diversity of views and constructive resolution of disagreements and crises.

Specific targets for the ECEC system for 2035

- The ECEC setting is child-friendly, learning takes place through play, in teaching and learning and everyday activities.
- There is a clear legal framework for ECEC, which is the part of the general education system.
- Teachers assess the development of children to identify the special needs of children and plan teaching and learning activities based on the child's individuality.
- The child-centred approach to learning is followed, focusing on the child's general skills, including play, cognitive and learning skills, social and self-regulation skills.
- Different fields of teaching and learning are integrated, e.g. language and speech, mathematics, environment, art, music, and movement.
- The initial education and in-service training of teachers is based on state standards. The current qualification levels are maintained and strengthened³. The aim is that all ECEC Teachers possess at least a BA degree and all ECEC Directors an MA degree.
- The state supports local governments in the organisation of continuing professional development.
- The salary of ECEC Teachers is equal to the salary of Primary School Teachers.
- The ratios of teachers to assistants per child make it possible to carry out teaching and learning activities in smaller groups and individually.
- There is a strong drive towards promoting inclusive education and supporting networking for children with special needs.
- Support specialists and services are more involved in ECEC settings. The learning opportunities of speech therapists, special education teachers and psychologists at university have also been increased for this purpose.

³ Currently in Estonia, 51% of ECEC Teachers have a bachelor's degree and 20% a Master's degree, 72% of ECEC Directors have a Master's level degree and 28% a Bachelor's degree (IMO 2023)

- The Estonian system of initial professional education will improve in accordance with research evidence. Based on the Estonian Strategy 2021–2035, it will be necessary to promote the professionalism of ECEC Teachers, ECEC Teacher Assistants and ECEC Directors through the development of scientific activities and continuing professional development. ECEC Teachers are key actors in planning, providing feedback, and supporting the teaching and learning process in ECEC institutions. ECEC Directors should create a learning culture and environment that supports learning and well-being, skilfully managing and implementing changes, and upgrading ECEC Teachers' cooperation with support specialists (Ministry of Education and Research 2021; Peterson 2022).

9. Recent country-specific research focusing on ECEC staff

ECEC Teachers' views on professionalism, teacher education and sustainability

Source: Veisson and Kabadayi 2018 (see References for further details)

Aims: Since education is a dynamic process and open to contemporary changes, professionalism which is vitally important for the sustainability of teacher education, has gained importance. Recent studies have emphasised the relations between professionalism, the quality of teacher education and sustainability. The aim of the current study was to interview preschool teachers and to explore their views and understandings about professionalism, quality of preschool education and sustainability in Estonian and Turkish cultural contexts.

Procedure: In this study qualitative research methods were used to analyse the data obtained from the participants. 15 preschool teachers from Estonia and 36 preschool teachers currently working in different parts of Turkey participated in the study. They were asked to respond to 15 open-ended questions about professionalism and the quality of teacher education and sustainability. Content analysis techniques were used for coding, finding the themes, and arranging the sub-themes for interpreting the data obtained.

Selected results: The result of the study put forward that the participants were intrinsically motivated with their job; and they admitted they had some strong and weak sides in their teaching profession. It was also seen that they had a lack of defining the terms of professionalism, quality of preschool education and sustainability. For example, they defined professionalism in teaching in an ego-centric way, mostly the proficiency of the teachers in action rather than a comprehensive definition including teaching learning processes, parents, environmental conditions, school atmosphere, needs of the students and the society etc.

Implications: Some suggestions were made to the teachers and educational policy makers related to the research findings. Estonian teachers expressed in the interviews that cultural sustainability is most important because Estonia is very small country, and this is a reason why we must keep our culture and language.

ECEC Teachers' views on initial professional education

Source: Mikser, Tuul, Veisson, and Goodson 2018 (see References for further details)

Aims: Educational requirements for early years professionals are increasing across the world. This is associated with the neoliberal reform policies of raising the status of early education professionals while regulating the field more tightly and increasing its accountability. The quality of pre-school professionals' education, and particularly the professionals' own perceptions of it,

substantially determine whether reform initiatives succeed and whether professionals are able and motivated to critically appraise and to influence reform policies.

Procedure: This paper introduces the results of a written survey conducted among Estonian preschool teachers (n=576). The respondents were asked to rate the pre-service programmes for preschool teachers in Estonia, specifically focusing on the relationship between theory and practice.

Selected results: It appeared that whereas the respondents rated the amount of time spent on theoretical studies as disproportionately large at the expense of field practice, they rated the quality of the theoretical studies the highest and the field practice the lowest.

Implications: A discussion point was that the mechanisms by which this contradiction threatens to decouple the practitioners from broader conceptual and contextual concerns in the field and to evoke 'policy evasion' rather than stimulating an active critical stance, as should be inherent in the notion of professionalism in its extended meaning.

ECEC Teachers' views and expectations of professionalism

Source: Mikser, Niglas, Tuul, Veisson, and Goodson 2019 (see References for further details)

Aims: Around the world, preschool education policy reforms have raised the qualification requirements for teachers. University preparation, research-based practice and high-quality in-service education have become important ingredients of preschool teachers' professionalism. However, teachers' views are often disconnected from or contradict these reform initiatives.

Procedure: This paper introduces the results of a written survey conducted among Estonian preschool teachers (n=576). We asked the respondents' views and expectations of reform policies concerning preschool teachers' professionalism. A cluster analysis enabled us to distinguish between five clusters of teachers.

Selected results: It emerged that whereas teachers from different clusters espoused different views and expectations on most aspects, the respondents from all clusters attributed little value to university-based preparation, scientific and research-based practice, and engagement in research activity.

Implications: The possible social-political and personal reasons for this phenomenon were discussed.

Recent and future issues in professionalising ECEC staff – a discussion paper

Source: Peterson, Õun, and Ugaste 2019 (see References for further details)

In Estonia, preschool education is ensured to most of children aged 3–6 years, and there are requirements established concerning the education of kindergarten teachers as well as a national curriculum to ensure the quality of primary education. At the same time, studies have revealed several aspects that more attention needs to be paid to in the organisation of preschool education in Estonia, in the work of the staff and in the content of pedagogical activities. The Assistant Teachers and Childcarers in kindergarten and childcare institutions need better training in supporting the general skills of children. The professionalism of preschool teachers needs more support regarding the avoidance of cultural stereotypes in learning and educational activities, enabling children to take personal responsibility for creating a caring growth environment and enabling the children's smooth transition from kindergarten to school. Teachers and principals need more support to enhance their competence in addressing pedagogical leadership and human resource management issues. Family involvement is a challenge in the development of the quality of preschool education. Teachers need more knowledge and skills in how to encourage family members to participate in learning and in educational activities, create possibilities

for families to learn and to support one another, and promote family involvement in the community.

The professionalism and the professional development of teachers were priorities of the Estonian teacher policy for 2014–2020. Programmes at Estonian universities have undergone significant changes in the recent past, and these changes seem to be of a positive nature. The universities have a common platform that unites the effort across the university and provides the opportunity for an interdisciplinary approach.

The methods and forms of preschool teachers' initial training are modern and multifaceted, with an emphasis on student-centred approaches, and teaching and learning are supported by current technologies.

Better integration of pre-primary and primary education is important in improving the national curriculum of preschool childcare institutions so that the transition from kindergarten to school is smooth. Ensuring a smooth transition is also a challenge for the initial and in-service training of preschool teachers and primary teachers. According to the Estonian Education Strategy 2021–2035 (Ministry of Education and Research 2021) the role of preschool teachers is of key importance in carrying out changes. Their image in society needs to change as well: salaries must be more competitive and work organisation must be such that working as a preschool teacher would be highly valued in society. The objective in Estonian educational strategy is to make the evaluation and compensation of teachers and leaders in early childhood education proportional to their professional qualifications and their effectiveness in performing their tasks.

10. Workforce challenges – country expert assessment

Over the last five years there have been significant policy changes in the areas of curriculum, staff qualifications and child assessments in Estonia and further changes are planned in expenditure, staff to child ratios, quality inspection and monitoring, and teacher education and development. Despite these positive steps, several challenges remain.

A major challenge is to guarantee a **place in kindergarten for all children** who need it. This means that, since 2022, the Ministry of Education and Research together with local municipalities will be responsible and must offer sufficient places in kindergartens.

Providing for **research in early childhood education** is another challenge. Researchers need more research grants from the Estonian Science Agency and Ministry of Education and Research. Both the Ministry and the Science Agency have decided to give more responsibility to the universities to make decisions on how to use research money and on which studies should be granted.

A further challenge is to raise the **status of ECEC Teachers** in society and find finances to pay them the same salary as all other teachers.

The status of ECEC Teachers in society depends on all of us, but also on the quality of the legislative policies and legal acts concerning the work of early childhood education teachers. Decision-makers must understand and become aware of the influence of their decisions in examining various links in the chain of responsibilities for children's education and care. Although all political parties declare the importance of early childhood education in general educational policy, their understanding of the content of early childhood education is another matter. Over time,

the prevailing majority of ECEC Teachers have carried out their professional job in the best possible way; they have been keen to learn and have valued education and erudition. However, ECEC centres have a more meaningful role to fulfil in society today than we have previously thought.

The challenge is to enact **child-centred and play-based learning** and teaching in kindergarten. To reach these goals all universities and CPD programmes must offer these topics. Our study results showed that younger teachers work more according to these principles compared with more experienced teachers who received their education during the Soviet period. In those days, early childhood education was much more teacher centred (Mikser et al. 2020).

A further important challenge is, from 2024 onwards, to organise work in the kindergartens for children aged 3 up to school entry in the **Estonian language**. This decision was made in 2022 by the Estonian Parliament and current Government. All children with other native languages must have at least 50% of learning activities in the Estonian language. Directors can decide whether to support the use of other languages such as Russian or Ukrainian in the other 50% of learning activities.

Providing for **Ukrainian children** has been a major challenge since the Russian invasion in February 2022. Due to the difference between the start of the compulsory school age of children in Estonia and Ukraine (in Estonia at 7 years of age, in Ukraine at 6 years of age respectively) and the short-term stay of children in Estonia, kindergartens started to refer Ukrainian children to an out-of-school counselling team for routine assessment of development and school readiness. However, this is not considered justified in an ECEC institution, as the assessment of a child's development and school readiness is the obligation of the ECEC centre. Counselling centres (*Rajaleidja*) provide the necessary support for children with special needs and advice for local governments, parents, and kindergartens. ECEC Teachers have benefited from the guidelines elaborated and training programmes initiated by the Ministry of Education and Research and the Education and Youth Board. The training programmes (on site and online) on „how to better support a non-Estonian speaking child" are considered highly useful for Kindergarten Teachers. Regional methodological centres have been set up to support early childcare organisations with assistance. Teachers are offered thematic counselling, training courses, practical workshops, and study visits by these centres. Diverse guidelines and learning materials on how to support a refugee child not only for learning but also for mental health have been elaborated and disseminated to educational institutions.

Meetings are also held for families by local government representatives and kindergartens to introduce the setup and values of the education system in Estonia as well as to build relationship for future cooperation with families. Several events have been organised by the communities for fundraising to support children with everything that is needed for their well-being and learning.

Two major challenges arising from or accelerated by the crisis in Ukraine are:

- The need to change the legislation to ensure sufficient nursery places for children of 1½–3 years
- The sustainability of financial subsidies for social services; the financial resources available to support access to services for refugee children are considered of crucial importance by the local governments (United Nations Children's Fund 2023).

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms chosen in this report for the main forms of centre-based ECEC settings are: **ECEC centre** (*koolieelne lasteasutus*, 1½–6), also called **kindergartens**, and **pre-primary group** (*koolieelikute ettevalmistusrühm*, 6–7)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Estonia

1839	First kindergarten established based on Froebel's principles of pedagogy
1840	Baroness Uexküll founds the first childcare institution in Tallinn for 2 and 3 year-olds from families living in poverty.
1862	The Estonian Welfare Society founds its first 'kindergarten'.
1905	First kindergarten with Estonian as the language of instruction opens (previously mostly German and Russian)
1919 -1940	Estonia becomes an independent state for the first time.
1921	First curricular programme developed by C.H. Niggol based on Froebel's principles.
Up to 1940	Kindergartens the responsibility either of municipalities or private founders – no state legislation
1944	Statutory age for beginning school is lowered from 8 to 7 years.
1950s to 1970s	<ul style="list-style-type: none"> – Care and supervision are the main aspects in the institutions, cognitive stimulation comes later. – Working mothers have only 2 months of paid maternity leave, but there is a well-functioning state system of ECEC.
1968	First state curricular framework based on Communist principles, with an emphasis on moral education.
Early 1980s	Statutory age for beginning school is lowered from 7 to 6 years.
1987	Second state curricular framework based on Soviet programmes for same-age groups
1989	747 ECEC institutions exist, with approximately 83.000 children enrolled.
1991	<ul style="list-style-type: none"> – Estonia once again becomes an autonomous state. – Reform of the education system following independence – State-maintained provision comes under the responsibility of the municipalities. – Compulsory schooling age raised from 6 to 7 years
Post-1991	Economic crises and sinking birth rates lead to the closing of many kindergartens (100 between 1990 and 1994).
1999	<i>Preschool Child Care Institutions Act</i> comes into force.
Up to 2004	Continuing expansion of ECEC facilities, also because parental leave pay is not sufficient to care for a child at home.
2004	'21st Century Education Programme' emphasises the creation of high quality education related to children's needs.
2008	Introduction of a National ECEC Curriculum

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In the case of Estonia, the relevant format is **1½–6** years, since children usually start school when they are 7 years old.

2014	<ul style="list-style-type: none"> – Political strategy of lifelong learning launched – Introduction of legal entitlement to a place in ECEC provision for children aged 1½ to 7 years
2015/2016	634 ECEC institutions exist, with 68.331 children enrolled.
2017/2018	Amendments to the <i>Preschool Child Care Institutions Act</i> with focus on better support for children with special educational needs
2020	<ul style="list-style-type: none"> – A “Development Plan for Education 2035” is launched. – A Parliamentary Bill sets out the integration of the education and care sectors for children under and over 3 years of age.
2022	<ul style="list-style-type: none"> – Responsibility for all ECEC settings for children ages 1½ to 7 years now lies with the Ministry of Education and Research. – A draft Early Childhood Education and Care Act is issued and will be submitted to Parliament in March 2024.

ECEC system type and auspices²

Age-integrated ECEC centres/kindergartens (*koolieelne lasteasutus* – ‘preschool child care institutions’) for children aged 1½ years to school entry at 7 are the main form of provision, coming under the jurisdiction of the Ministry of Education and Research (*Haridus- ja Teadusministeerium*). Moreover, the draft *Early Childhood Education and Care Act* states that not only the ECEC centres/kindergartens, but also former childcare services such as playgroups or other facilities housed in institutional spaces as well as home-based ECEC provision will all come under the overall responsibility of the Ministry of Education and Research.

Consequently, the system of ECEC in Estonia is to be fully integrated under Education.

The education system is the responsibility of Parliament (*Riigikogu*) and the Estonian government. Parliament decides on the design and development of the system and the government ensures the implementation of educational programmes. The Ministry of Education is responsible for research and management in the field of education as well as for quality assurance, financial planning, the development of national curricula, and the professional education of the teaching staff. At the local level, the district government is responsible for the technical supervision of teaching and educational activities, and the municipalities for providing and organising ECEC.

General objectives and legislative framework

Overarching goals of early childhood education and care include the right of all children to education, the development of their individual potential and the reduction of social inequalities. Of particular importance is an integrated view of education and care. This includes, on the one hand, the support of parents in reconciling family and working life, and on the other hand, the promotion of children's skills that prepare them for school and life in general.

In 2014, the Estonian Lifelong Learning Strategy 2020 (*Eesti elukestva õppe strateegia 2020*) was introduced, which serves as the government's cornerstone for all changes in the education system. Important goals are (1) respecting the individuality of the learner; (2) improving the competences and motivation of professionals and teachers; (3) linking lifelong learning to the needs

² The Eurydice country report on ECEC in Estonia provided orientation for data on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

of the labour market; (4) using modern digital technologies and creating a good infrastructure for this; (5) ensuring equal opportunities for all. The Ministry of Education is responsible for coordinating the implementation. In addition, the Ministry of Education has initiated a ‘Development Plan for Education 2035’ which is to contribute to the further optimisation of equal opportunities in education (European Commission 2020, 27).

Tending towards decentralisation, the organisation and principles of the education system are guided by the Estonian Education Act (*Eesti Vabariigi haridusseadus*, 1992 with amendments until 2004), the Preschool Child Care Institution Act (*Koolieelse lasteasutuse seadus*, 1999 with amendments until 2023), the Child Protection Act (*Eesti Vabariigi lastekaitse seadus*, 1993 with amendments from 2016), and the Estonian Constitution (*Eesti Vabariigi põhiseadus*, 1992).

In 2015, the Estonian Minister of Education and Research approved an integrated early childhood education concept (Decision No. 1.1-2/15/455). This aims to provide high quality education and care, ensure access for all children between 1½ years of age and school entry, create a safe and supportive learning environment and improve preparation for school. A new *Early Childhood Education and Care Act* is therefore under preparation which aims to provide high quality early childhood education and care for all children and to support pre-primary education by making the system of ECEC more coherent. The new law harmonises the requirements for ECEC centres/kindergartens and childcare facilities as well as for municipal and private kindergartens. Both rural municipalities and city governments shall, at the parents’ request, provide children from 18 months to 7 years of age residing in their territory and whose residence coincides with that of at least one parent the opportunity to attend an early childhood centre (‘preschool’). According to the action plan of the Estonian Government, a new draft of the Early Childhood Education and Care Act will be submitted to Parliament in March 2024.

Based on amendments made to the Preschool Child Care Institution Act (2022), the transition to Estonian-medium teaching and education in early childhood education must be completed by 1 September 2024. Instruction and educational activities in kindergartens will be conducted only in Estonian. The aim is to ensure that children whose home language is not Estonian have the opportunity to acquire primary education in Estonian and to reach a level of language proficiency sufficient for them to cope in an Estonian-speaking environment, to continue their education in Estonian and to integrate themselves into the Estonian cultural and value system. Estonian-medium learning in kindergartens is carried out by integrating language learning with other activities or by additional language activities. The transition will be supported by a training and motivation programme for teachers, while the overall increase in teachers’ salaries will also be a key objective.

ECEC entitlement and compulsory attendance

Since 2014, all children between the ages of 1½ and 7 years have been entitled to a free place in an ECEC setting (see *chapter Financing and costs for parents*). If in some cases the municipalities cannot guarantee this, they may provide a place for under 3 year-olds in a centre-based childcare service in lieu.

There is no obligation to attend an ECEC setting. However, local authorities have a duty to provide a place at the request of parents for all children between 1½ and 7 years of age, irrespective of special educational needs.

Compulsory education begins at age 7.

Main types of provision

According to national Statistics in 2022, there were a total of 586 ECEC centres/kindergartens ('preschool institutions' – *koolieelne lasteasutus*) in Estonia in which 68,623 children were enrolled (Statistics Estonia 2023a).

ECEC centres (still called 'preschool child care institutions') for children aged 1½ to under 7 years are the most common form of provision and local authorities are responsible for their management. 'Integrated' in this sense means both age-integrated across the early childhood period (1–6 years) as well as in terms of providing a combination of nursery and kindergarten facilities and also pre-primary education for 6 to 7 year-olds under one roof. Integrative groups comprising children with and without disabilities can be set up in the centres, as can mixed-age groups. The ECEC centres are open all the year round. The municipalities decide on the specific opening times in consultation with parents. If the demand for places exceeds the number available, the municipalities offer half-day places. The opening hours of most centres are from 07:00/08:00 to 18:00/19:00.

In 2022, 447 kindergartens served 62,589 children, and 5,962 children attended one of 132 preschool groups (Statistics Estonia 2023a).

Childcare services (*lapsehoiuteenus*), including centre-based and home-based provision, come under the auspices of the Ministry for Social Affairs. Based to the Social Welfare Act, the objective of childcare services is to support the ability of a person raising a child to cope or work or to reduce the care burden arising from the special needs of the child. 10% of under 3 year-old children are enrolled in childcare services (European Commission/EACEA/Eurydice 2019, 172). According to the Preschool Child Care Institutions Act, a rural municipality or city government may, with the parents' consent, substitute the guaranteed place of a child from 18 months to 3 years of age in a public ECEC centre with a place in a childcare service or a private kindergarten, the financing of which shall be based on the provisions of the Preschool Child Care Institutions Act.

In 2022, there were five childcare services attended by 253 children (Statistics Estonia 2023a).

Provider structures

The majority of ECEC settings are public and run by the municipalities. In 2022/23, only 60 (10,4%) settings from a total of 589 were owned by private providers (Estonian Education Information System 2022). According to Eurostat data, only 4.4% of children over 3 years attended private ECEC settings in 2021; no data are available on children under 3 years of age (Eurostat 2023j).

Participation rates in regulated provision

In 2022, 92.5% of children aged 3–6 years, 34.1% of children aged 1 year and 76.4% of children aged 2 years attended an ECEC institution (Statistics Estonia 2023d).

The share of children under 3 years of age who are cared for in ECEC settings has increased since 2005 from 12% to 33.7% in 2022. The proportion of children between the ages of 3 and 6 also increased significantly - 93.9% of these children attended a facility in 2022 (see *Table 1*).

Table 1

Estonia: Participation rates in ECEC centre-based settings by age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years in %**	3 years to minimum compulsory school age in %
2005	1 to 29 hours	3	9
	Over 30 hours	9	69
	No enrolment in ECEC	89	22
2010	1 to 29 hours	2	6
	Over 30 hours	19	86
	No enrolment in ECEC	79	8
2015	1 to 29 hours	3.6	6.8
	Over 30 hours	17.8	86.1
	No enrolment in ECEC	78.5	7.1
2022	1 to 29 hours	12.3	11.9
	Over 30 hours	21.4	82.0
	No enrolment in ECEC	66.3	6.2

Source: Eurostat 2023b, deviations in the sums due to rounding

Table 2

Estonia: Number of children in ECEC settings by age-group and enrolment rate, 2022 (excluding child-care services)

Age	Number of children enrolled in ECEC	Number of children in the total population	Enrolment rate
Under 1 year	34	13,312	0.3*
1 year-olds	4,654	13,343	34.1
2 year-olds	10,708	14,255	76.4
Under 3 year-olds	15,396	40,910	37.6*
3 year-olds	13,407	14,607	90.7
4 year-olds	14,179	14,017	95.6
5 year-olds	13,484	14,439	92.3
6 year-olds	12,157	14,460	81.4
3 to under 7 year-olds	53,227	57,523	92.5*
Under 7 year-olds	68,623	98,433	69.7*

Source: Statistics Estonia 2023b, c, d; * own calculations

Since the late 1980s, due to demographic changes and lower birth rates, there have been significant changes in the number of ECEC settings and enrolment rates. Moreover, over time, these have always been significantly lower in rural areas than in urban areas. In general, enrolment rates increased again after the turn of the millennium (Veisson 2018). From 2000 to 2015, the number of children in settings increased up to 2021, when they fell, as did the number of settings. While the number of settings continued to decline in 2022, the number of children increased. Overall, however, enrolment rates for under 7 year-olds increased steadily between 2000 and 2022 increased steadily (see Table 3).

Table 3

Estonia: ECEC settings, children and enrolment rates between 2000 and 2022

Year	Number of settings	Number of children	Enrolment rates, 1 to 7 year-olds, in %*
2000	646	50,247	56.7
2005	609	54,560	61.7
2010	638	64,259	62.3
2015	634	68,331	65.2
2020	612	66,375	66.7
2021	601	66,626	67.5
2022	586	68,623	69.7

*Calculated on the basis of the rates for each age group, see Table 2

Source: Statistics Estonia 2023a

Demand and supply of ECEC places are balanced (European Commission/EACEA/Eurydice 2019, 63). Municipalities are cooperating with private providers to provide places for under 3 year-olds (European Commission 2020, 39).

Financing and costs for parents

According to the Estonian Educational Information System (2022), the total public expenditure on early childhood education and care amounted to 1,3% of GDP in 2020.

Public/municipal ECEC centres, which comprise the majority of settings, are financed through municipal budgets. Staff salaries, teaching/learning materials and the professional development activities of ECEC staff, as well as language courses for children with Estonian as an additional language, are subsidised by the government. Privately-run settings also receive these subsidies. The four special ECEC centres for children with multiple disabilities are fully state-funded. Financing from the European Social Fund is also available.

Parents always have to pay for meals. Sometimes, however, their fees may contribute both towards staff salaries and materials/equipment. This varies from municipality to municipality. What is regulated by law is the maximum fee, which may not exceed more than 20% of the minimum wage. The fees vary depending on the region and are also partly income-dependent: The average amount paid is €37 (Estonian Education Information System 2022).

In the case of privately-run ECEC settings, it is mostly the provider who is responsible for the running costs. However, in certain circumstances they may be supported through state and municipal budgets, particularly regarding salaries and staff professional development. Parental fees are determined by the service provider.

In 2022, a couple with two children spent about 2% of net household income on childcare costs³ (OECD.Stat 2023).

Staff to child ratios and group size

Groups in both the ECEC centres as well as the childcare centres may be organised in same-age or mixed-age groups.

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

In centre-based settings the maximum group size is 14 children, in a pre-primary group 20 and in a mixed-age group 18. Integrative groups which include children with disabilities have a maximum size of 12 children per group.

One qualified member of staff *or* an assistant is responsible for up to 7 under 3 year-olds, up to 9 children in a mixed-age group, up to 10 children in a pre-school group, and up to 8 children in an integrative group or 2 to 6 children with special educational needs, depending on their specific support needs.

The staff to child ratio is set by law: 1:7 for under 3 year-olds, 1:10 for children aged 3 and above.

Curricular framework

The educational programmes of the **ECEC centres** are obliged to comply with the National ECEC Curriculum (*Koolieelse lasteasutuse riiklik õppekava*, 2008, most recently amended in 2011). Based on this framework, each setting develops its own educational programme which is essentially play-based and takes into account the individual needs of children. Curricular guidelines are available to support staff. Particular emphasis is placed on the co-operation between families and the ECEC setting. The national curricular framework also sets out learning goals appropriate for the 6 and 7 year-olds in pre-school groups and includes principles for the evaluation of children's progress. A smooth transition to school is also foregrounded.

Early childhood education is understood as supporting the children's emotional, moral, social, intellectual and physical development as well as respecting their individual needs. The aim is to support the acquisition of playing, learning, social and personal, reflective skills. The curricular framework is organised around the following learning areas: Self and environment; language and speech; Estonian as an additional language; mathematics; the arts; music; and movement. Between the ages of 3 and 7 children also start learning a foreign language. Materials are currently being developed to support the acquisition of a foreign language.

Staff are free to choose the methods and materials they consider appropriate. Group activities relating to the national curricular framework do not have to be followed in detail. Some ECEC centres may prefer to work according to alternative pedagogical approaches such as Step-by-Step, Reggio Emilia or Waldorf.

Childcare services are still regulated by the Social Welfare Act and obliged to guarantee the care, development and safety of the child. There are no specific curricular guidelines for these services. This is likely to change when the new Early Childhood Education and Care Act comes into force.

Digital education

As early as 2000, the Estonian government declared access to the internet a human right. The Lifelong Learning Strategy 2020 emphasises digital literacy as a key competence. All levels of education are expected to develop a digital culture. However, the National ECEC Curriculum (current version 2011) does not include the terms 'digital literacy' or 'computers'.

The "ProgeTiger" programme, a public-private partnership with the Ministry of Education, has been aiming since 2012 to integrate digital technologies in ECEC centres and to equip them with programmable devices. Over five years, 44% of ECEC settings in Estonia participated and received over €830,000 worth of equipment, for example for programming or multimedia devices (NESTA 2019). Staff in ECEC settings use different types of robots such as Qobo, mTiny, Blue-Bot, Matata Lab, LEGO WeDo set and tablets with coding games or animation apps. Children are

expected to acquire basic knowledge about coding and digital media at an early age through playful activities and learning through trial and error (education estonia 2021).

However, studies suggest that staff in ECEC settings still need more knowledge about how children can use digital technologies and how to teach them these skills (Õun et al. 2018).

Monitoring – evaluation

Child-related assessment

Assessing child development is one of the daily tasks of an early childhood educator and is seen as cooperation between staff and parents. Children are observed during various activities according to a specific plan. Notes are made in accordance with data protection regulations and at least once a year there is a discussion with the parents. The ongoing assessments of the children are only known to the respective institution and the parents and are not passed on to others. They are mainly used for the optimal support of the children. Parental satisfaction with the setting is also surveyed. While children under 3 are primarily observed by the professionals, standardised tests are also used for children over 3 years of age. Special assessment instruments have been developed to determine the developmental level of children between the ages of 1 and 7.

Before the transfer to compulsory school, parents receive a ‘school readiness confirmation’, which they hand over to the corresponding primary school. This confirmation is usually made at the ECEC centre, but sometimes also externally. The exact procedure is regulated by criteria from the Ministry of Education. This confirmation documents the child's cognitive, physical and social abilities with regard to the areas of the National Curriculum, and also his or her particular strengths and areas in which further support is needed.

Centre-level self-evaluation

ECEC centres/kindergartens are obliged to carry out internal evaluations. The aim is to establish a quality assurance system and to improve the management of the settings. The centre leader can choose the preferred method. Centres can also ask for advice from the Ministry of Education. A final report lists the strengths and weaknesses of the ECEC centre. Such a development plan must be drawn up at least every three years. Children and parents are also encouraged to share their own experiences and views and thus play an active role (European Commission/EACEA/Eurydice 2019, 104, 127, 130).

The focus of such internal evaluations should be on leadership and management, cooperation with stake-holders and educational processes (Õun et al. 2018).

External evaluation

The review of the efficiency of a municipal institution is carried out by the local authority. In the case of a state institution, this is conducted by the Ministry of Education. The Ministry of Education compiles an annual overview of external evaluations in the education system, which also includes data from self-evaluations (European Commission/EACEA/Eurydice 2019, 134) and publishes it on its website. Criteria include the spatial conditions, equipment and compliance with safety and health regulations, as well as compliance with regulations, the curriculum, leadership qualities and management, and finances. The results are made available to all stakeholders (facilities, providers, parents, authorities) and form the basis for further planning.

External evaluations are carried out annually in about 10% of early learning institutions based on thematic priorities (European Commission/EACEA/Eurydice 2019, 126).

Inclusion agenda

Children with special educational needs and with disabilities

The 2017/18 amendments to the Early Childhood Education and Care Act focused on better support for children with special educational needs and their access to specialist support workers. In 2019/20, 19% of children attending ECEC centres could benefit from this (European Commission 2020, 27).

Children with a migration background

In 2023, 12.6% of the total population held a non-Estonian citizenship, 8.1% in the group of 0 to 4 year-olds and 9.6% in the group of the 5-9 year-olds. Of the persons of non-Estonian origin, 13.3% came from other EU countries, 86.7% from non-EU countries. Of the under 4 year-olds, 10.8% had another European citizenship as well as 8.2% of the 5 to 9 year-olds; 89.2% of the children under 4 years and 91.8% of the 5 to 9 year-olds one of non-EU countries. In the total population as well as in the groups of under 4 year-olds and 5 to 9 year-olds, most persons of non-Estonian origin came from Latvia and from Finland (EU countries). In terms of non-EU countries, most people in the total population came from Russia, followed by people from Ukraine, and the younger age groups there were more persons with Ukrainian citizenship followed by those with a Russian one (Statistics Estonia 2023e, own calculations).

Language training is provided for children with a first language other than Estonian in groups for 3 to 7 year-olds. In addition, the Ministry of Education also provides funds to teach children in one of the languages of the 17 different ethnic minorities in 'Sunday schools' (European Commission/EACEA/Eurydice 2019, 115).

Since 2000, the language immersion programme has been used in ECEC settings, in particular for Russian-speaking children. During the two years before starting school, children are thus given the opportunity to develop good skills in both their family language and Estonian (Õun et al. 2018).

Five specialist centres across the country provide support for professionals working with children with a non-Estonian family language.

By August 2022, 50,347 war refugees from Ukraine had arrived in Estonia, of whom 27% were minors (ERR 2022a). In 2023, additional funding was allocated from the national budget for the temporary protection of Ukrainian refugee children in nurseries and kindergartens. The per child contribution per calendar month was €465. The data for children in private childcare centres were calculated on the basis of data provided and verified by the municipality. The subsidy for children attending private childcare and nursery settings was allocated to municipalities. Ukrainian children are supported on the basis of principles developed by the municipality. These include ensuring that the subsidy allocated to the municipality is used for the intended purpose of providing Ukrainian children with childcare and kindergarten places within the municipality or in cooperation with the private sector. An additional subsidy was paid for the period January-February 2023. State support for Ukrainian children continued until the end of the school year 2022/23.

Looking at all school-age children, 70% were enrolled in Estonian-language institutions, 20% in Russian-language institutions and 10% in institutions with language immersion programmes (ERR 2022b).

Parental leave arrangements⁴

Maternity leave (*emapuhkus*) is granted for 100 calendar days; 70 of which may be taken before the expected birth date and 30 after the birth. The latter are obligatory. During this time mothers receive 100% of their average earnings based on the previous calendar year. Mothers who have not worked receive the basic minimum wage of €654 per month.

Paternity leave (*isapuhkus*) is granted for 30 working days which can be taken during 30 days before the expected birth up to the time the child reaches 3 years of age. Fathers receive a fully paid benefit calculated in the same way as the Parental leave allowance. This option is not available for same-sex couples.

Parental leave (*vanemapuhkus*) is a family entitlement and can be taken up to the child's 3rd birthday and can also be taken in several parts, up to 60 days can be taken by both parents at the same time. The shared Parental benefit (*vanemahüvitis*) is a full payment of average earnings during the previous 12 months (up to €4,291.29 per month, minimum €725) for 475 days after the end of Maternity leave. Parents who are not working receive a lump sum of €654 per month. The allowances are only reduced if the income of simultaneous employment exceeds 50% of the upper limit of the benefit (€2,154.65).

In 2021, 74.7% of fathers took Paternity leave; data regarding Maternity leave or the take-up of Parental leave does not exist. 16.2% of the recipients of Parental leave allowances in 2021 were men. Of these, 72% were also at least partially employed at the same time.

Current challenges for the ECEC system in Estonia

Marika Veisson and Tiina Peterson

The foremost challenge for the ECEC system in Estonia is the imminent integration of all ECEC institutions under the Ministry of Education and Research. Related staffing challenges include ensuring that all teachers in ECEC institutions have a higher education qualification, as stipulated by law, and raising the salaries and status of ECEC Teachers.

To continue improving the quality of ECEC both at the structural and process level, providing the framework for collaborations with researchers in Europe and beyond is essential, and at the same time a challenge. In order to participate actively in a knowledge based society, Estonian researchers need partners in other countries to conduct cross-cultural research studies. Tallinn University, for example, already cooperates with a number of universities in Finland, Norway, Denmark, Malta, the UK, and the USA on ECEC issues. Such international collaborations need to be extended and supported.

⁴ The brief summary in this section is based on the country note for Germany by Katre Pall in the *International Review of Leave Policies and Research 2023* (see References).

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Estonia totalled 1,331,796. Up until 2015, the population gradually sank, but has been increasing slightly since then (2000: 1,401,250, 2005: 1,358,850, 2010: 1,333,290, 2015: 1,314,870, 2020: 1,328,976) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total birth rate of the 33 SEEPRO-3 countries was in France (1.84), and the lowest in Malta (1.13). With a total fertility rate of 1.61, Estonia is above the EU27 average (Eurostat 2023d)⁵.

Children under age 6

Table 4

Estonia: Distribution of children under age 6 by age in the total population, 2022

Age	Number of children
Under 1 year	13,312
1 year-olds	13,343
2 year-olds	14,255
3 year-olds	14,607
4 year-olds	14,017
5 year-olds	14,439
Total 0 to under 6 year-olds	83,973

Source: Eurostat 2023a

In 2022, 3.1% of the total population were children under 3 years of age, 6.3% were children up to 6 years of age. Since 2015, these shares are well above the respective EU averages.

Table 5

Estonia: Relative share of children under 6 in total population compared with respective EU average, 2000 to 2022, in %*

		Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Estonia	2.6	2.8	5.5
	Ø EU15 ⁶	3.2	3.2	6.4

⁵ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

		Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2005	Estonia	3.0	2.8	5.7
	Ø EU25	3.1	3.1	6.2
2015	Estonia	3.2	3.5	6.7
	Ø EU28	3.0	3.2	6.2
2022/3	Estonia	3.1	3.2	6.3
	Ø EU27(2020)	2.7	2.9	5.7

Single households with children under age 6

In 2022, the majority of all households (73.2%) with children under age 6 were couple households. Single households in Estonia comprise 16.7% - most of them single mothers (10.1%). However, in European comparison, the proportion of single father households is relatively high at 6.7%.

Table 6

Estonia: Households with children under age 6, 2022

Household type	Total households	Total households, in %
All households	133,800	
Couple households	97,900	73.2
Other household type	13,500	10.1
Single households, total	22,400	16.7
Single households, women	13,500	10.1
Single households, men	8,900	6.7

Employment rates of parents with children under 6 years of age

In Estonia, in 2022, the overall employment rate for men (15-64 years) was 82.7% and for women 79.6% (Eurostat 2023h).

In 2022, 72.1% of women and 90.7% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), both shares were thus above the average (87.2% and 63.6% respectively) (Eurostat 2023e).

Table 7a

Estonia: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Estonia	51.4	80.8
Highest rate of employment in 27 EU countries ⁷	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7

⁷ AT, BE, BG, CY, CZ, DK, DE, EE, EL, ES, F, FI, IE, IT, HU, LV, LT, LU, MT, NL, PL, PT, RO, SE, SI, SK, UK

Children at risk of poverty or social exclusion⁹

In 2022, 13.8% of children under 6 years were at risk of poverty or social exclusion. This proportion was well below the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 25.2% (EU: 21.6%). In 2020, 1,8% of children under 6 years and 2,1% of the total population suffered from severe material deprivation (EU average 6,1% and 4,3% respectively) (Eurostat 2021f, g).

About the author

Heidi Chydenius works as a university teacher at the University of Helsinki and is a doctoral researcher at the University of Eastern Finland. In her dissertation she is examining collaborative approaches towards guiding and supporting students during supervised field practice within a multi-professional ECEC team. Further interests lie in a socio-historical approach towards researching the ECEC teaching profession and team practices.

1. ECEC governance in Finland

Over the past ten years, the system of early childhood education and care (ECEC) in Finland has been undergoing a period of unprecedented change. In 2013, responsibility for ECEC was transferred from the administration of the Ministry of Social Affairs and Health to the Ministry of Education and Culture (*opetus- ja kulttuuriministeriö*). The new Act on Early Childhood Education and Care, which emphasises the best interests of the child and the pedagogy of early childhood education, was passed in 2015. The law assigned the Finnish National Agency for Education (*Opetushallitus*) the task of drawing up a National Core Curriculum for Early Childhood Education and Care (Act on Early Childhood Education and Care 580/2015). The Act on ECEC was thoroughly revised in 2018. The law defines ECEC as “a systematic and goal-oriented entity that consists of upbringing, education and care, with a special emphasis on pedagogy”. New personnel titles and personnel structures were entered into the Act, and the assessment of the quality of ECEC was defined as mandatory (Act on Early Childhood Education and Care 540/2018). The Finnish Education Evaluation Centre FINEEC (*Kansallinen koulutuksen arviointikeskus Karvi*, n.d.) is responsible for the national evaluation of ECEC, teaching and training.

Changes in the administrative sector have initiated a paradigm shift in Finnish early childhood education and care which has been further accelerated by development projects and experiments launched by the Ministry of Education and Culture and the Finnish National Agency for Education. Nationwide, the education system has been developed with the help of the *Right to Learn* project in 2020-2022 included in the government programme. The aim of the €313 million project has been the sustainable and effective development of ECEC, pre-primary and primary education through the reform of structures and legislation. Several smaller projects aiming to secure an equal start for learning by improving quality and equality in ECEC and comprehensive school education have been linked to this larger project by the Ministry of Education and Culture (Ministry of Education and Culture n.d.). The latest version of the National Core Curriculum for Early Childhood Education and Care was introduced in August 2022, with inclusive early childhood education as its overarching principle (Finnish National Agency for Education 2022).

After all the changes, Finland has a unitary system of early childhood education and care, organised in two stages. Both ECEC provision for children up to age 5–6 (*varhaiskasvatus*) and pre-primary education for 6 to 7 year-olds (*esiopetus*) come under the auspices of the Ministry of Education and Culture, but with different curricular frameworks. The Finnish National Agency for Education is responsible for drawing up curricula for both stages of ECEC. In addition, two different laws govern ECEC and pre-primary education (Act on Early Childhood Education and Care 540/2018; Basic Education Act 628/1998).

Pre-primary education is most commonly provided in ECEC centres and sometimes in transition classes in primary schools for at least 700 hours per year, i.e. for about four hours a day (Basic Education Decree 852/1998). In August 2021, the Ministry of Education and Culture launched an experiment of two-year pre-primary education, which is to last until the end of May 2024. This extension to two years is currently a topic of widespread debate.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The Act on Early Childhood Education and Care was amended in 2018 and the amendments targeted, among other things, ECEC personnel. The pedagogical quality of ECEC was strengthened by increasing the overall proportion of staff members with a tertiary level education and by increasing the number of people who have completed teacher education at university. With regard to changes in the staffing structure, the law will raise the level of staff education so that from 2030 onwards two thirds of the staff in ECEC centres will have a tertiary level education. At least half of those with a tertiary level degree must have a Bachelor's degree in Early Childhood Education completed at a university. The Finnish ECEC system is thus going through a transition period (01.09.2018–01.01.2030) concerning the eligibility requirements for staff in ECEC and staffing structures. The law defined the new professional titles as:

- Teacher in ECEC (*varhaiskasvatuksen opettaja*)
- Childcarer in ECEC (*varhaiskasvatuksen lastenhoitaja*)
- Social Pedagogue in ECEC (*varhaiskasvatuksen sosionomi*) and
- Special Education Teacher in ECEC (*varhaiskasvatuksen erityisopettaja*) (Act on Early Childhood Education and Care 580/2015).

The changes relating to eligibility concern in particular the qualification requirements of the Teacher in ECEC as well as the new Social Pedagogue in ECEC. Previously, it was possible to gain the professional title of Teacher in ECEC along two different routes, either through a teacher education study programme at a university (Bachelor's Degree in Early Childhood Education) or through a social pedagogue training at a university of applied sciences, formerly polytechnics (Bachelor's Degree in Social Services). Since 31 July 2023, the Teacher in ECEC qualification can only be achieved through a teacher education study route. The law codifies the title of Social Pedagogue in ECEC for those with a Bachelor's degree in Social Services, but the competences required and the job description for the position are still undefined.

To support the implementation of the Act on Early Childhood Education and Care (540/2018) and the new personnel structure, the Ministry of Education and Culture set up an ECEC Training Development Forum (Ministry of Education and Culture 2019, *Varhaiskasvatuksen koulutusten kehittämisfoorumi*). The first phase of the forum's work in 2019–2020 included among other things structuring the competences generated in different IPE programmes. However, this was a challenging task. In particular, describing the specialist competences of a Social Pedagogue proved challenging and highlighted different views within the working groups. It should also be noted that Finnish society is strongly corporatist, which also brings its own challenges to the professionalisation of the ECEC workforce.

In this report, we consider **Teachers in ECEC** as core professionals. According to the National Core Curriculum for Early Childhood Education and Care, the Teacher in ECEC has overall responsibility for the group of children.

Social Pedagogues (Bachelor's Degree in Social Services) in ECEC also have a tertiary level education, but their job description is currently undefined and therefore their role in groups of children is unclear. The need for Social Pedagogues is not the same in all groups of children and within the framework of the law, municipalities can allocate vacancies for Social Pedagogues where there is a need for child protection and family work. Some municipalities have developed

the role of a Social Pedagogue into a regional and consultative one. In general, few posts for Social Pedagogues have as yet been established.

Special Education Teachers in ECEC are also tertiary level educated, but the role of a Special Education Teacher in ECEC is primarily regional and consultative, without group responsibility, and is therefore not counted as a core professional. Especially during recent decades, municipalities have interpreted the principle of inclusion in such a way that children in need of support have been placed in ordinary groups and integrated special groups have been abolished, which has reduced the continuity of support for children and changed the job description of Special Education Teachers (Pihlaja and Neitola 2017).

Table 1 outlines the profiles and minimum qualification requirements of staff who will be working directly with children in ECEC provision after the transition period, which ends in 2030.

Table 1

Finland: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<p>Teacher in ECEC <i>Varhaiskasvatuksen opettaja</i></p> <p><i>Profile:</i> Early Childhood Pedagogy Professional</p>	<p><i>Päiväkoti</i> (‘day home’) ECEC centre 0–6 years¹</p> <p><i>Esiopetus</i> Pre-primary education (organised in ECEC centres or schools) 6–7 years</p>	Core practitioner with group responsibility	0–7 years	<p>3 years of university studies with specialism in early childhood education</p> <p><i>Award:</i> Bachelor’s degree</p> <p>ECTS credits: 180 EQF: Level 6 ISCED 2011: 6</p>
<p>Childcarer in ECEC <i>Varhaiskasvatuksen lastenhoitaja</i></p> <p><i>Route 1:</i> ECEC Nurse <i>Lähihoitaja</i></p>	<p><i>Päiväkoti</i> ECEC centre 0–6 years</p> <p>Complete range of social and health care services, e.g. children’s homes, hospital units, youth centres, services for senior citizens etc.</p>	Qualified co-worker	All ages	<p>Approximately 3 years of upper secondary vocational education in social welfare and health care</p> <p>ECTS credits: n/a² EQF: level 4 ISCED 2011: 3</p>

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Finland, the relevant format is **0–6** years, since pre-primary education is part of ECEC and children start school when they are 7 years old.

² n/a = not applicable

Special Needs Assistant <i>Avustaja</i>	Personal or group assistant for children with special needs in various settings	(Non-qualified) co-worker (although qualification recommended)		No IPE required; recommended: 1–2 years vocational training ECTS credits: n/a EQF: Level 4 ISCED 2011: 3

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

According to the Act on Early Childhood Education and Care (580/2015), every ECEC centre must have a head in charge and responsible for operations. The revised Act on Early Childhood Education and Care (540/2018) defined the eligibility conditions for the head of an ECEC centre. The qualification criteria for the role of head responsible for the operations of centre-based early education are at least a Master's degree in Education and a qualification as Teacher in ECEC or as Social Pedagogy in ECEC, as well as sufficient leadership skills.

The National Core Curriculum for ECEC 2022 states that the starting point of management and leadership should be the promotion of the wellbeing and learning of each child. The curriculum further states that the development of the organisational culture and inclusiveness in ECEC requires a pedagogical leadership which is goal-oriented, planned and evaluative. Pedagogical leadership is not only a task of the Centre Leader, but can be distributed among other personnel according to the work tasks (Fonsén et al. 2021). However, only the Centre Head has the right to manage the overall organisation of the ECEC centre. In addition, the head's duties include managing the personnel and the centre's budget, and ensuring safety precautions and providing guidance for the families using the ECEC centre. In large cities, early childhood education unit managers are often administrative managers and do not work directly with children. However,

the management and leadership structures and thus the head's job descriptions vary widely among different ECEC service providers.

2.3 Centre-based posts of responsibility

One of the challenges of organising ECEC in Finland is the regional differences, especially between big cities and small rural towns. With the help of legislation and other guidelines efforts have been made to align the organisation of ECEC, but the variation in the quality of ECEC shows that the organisation is still left too much to local consideration. Also, the centre-specific pedagogical tasks vary widely and are defined locally. In larger municipalities, specific tasks vary according to the size of the ECEC centres, the number of children and the diversity of families. In an annual meeting the ECEC centre personnel discuss the responsibilities within the centre under the guidance of the Centre Head and agree on a conceptual plan for the next year. For certain tasks, such as that of the Teacher in charge of pre-primary education, a small compensation may be paid which is agreed locally.

The institution providing initial professional education (e.g. university or university of applied sciences) pays a small fee to the supervisor or the ECEC centre for supervising students. Acting as a supervisor usually requires the completion of supervisor training and a cooperation agreement between the educational institution and the ECEC centre.

2.4 Coordinating and supervisory staff

In Finland, the municipality must ensure that the services of the local child welfare team, which includes healthcare, psychological and remedial services, are available in pre-primary education (Act on Pupil and Student Welfare 1287/2013). In other respects, the posts and tasks of the cooperation staff in ECEC are decided on locally. There are more such posts in larger municipalities than in smaller ones. Regional positions include, for example, the positions of an ECEC Special Education Teacher and a Finnish Language Teacher (see *Chapter 2.5*). Locally, regional positions for Social Pedagogues in ECEC are beginning to be created. The role of the regional Social Pedagogue in ECEC is to act as a support for parents. They cooperate closely with, for example, counselling centres, social work services, and the child welfare team of pre-primary education.

2.5 Specialist support staff

In Finland, with the strengthening of the principle of inclusive ECEC and the clarification of special support, children have the right to a so-called three-level support, i.e. general, enhanced and special support (Act on Early Childhood Education and Care 540/2018). Specialist support staff working with individual children within the ECEC centre are usually the Special Education Teacher and the Special Needs Assistant. The intensity of the support a child receives depends on the amount of support needed. This may be continuous or occasional support directly from the Special Education Teacher or Special Needs Assistant, or the ECEC centre staff can receive consultative support to ensure the necessary measures within the centre. For example, a regional or centre-specific Special Education Teacher or a Finnish Language Teacher in ECEC may offer such consultative support.

Other specialist support staff, such as a Speech Therapist or an Occupational Therapist, are not part of the ECEC staff. These services are part of social and health services but can be implemented in an ECEC centre.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

In Finland, compiling statistics on and monitoring developments within the ECEC workforce have not been satisfactory. No systematically collected database is available for labour and training needs (Karila, Kosonen, and Järvenkallas 2017, 91–92). In order to remedy these shortcomings, the Act on Early Childhood Education and Care (540/2018) provided for the establishment of a data storage system called Varda (*Varhaiskasvatuksen tietovaranto*). The purpose of the data repository is to produce commensurate, up-to-date, comparable and high-quality information that is utilised in national and international planning, guidance and development work in ECEC and in the activities of public authorities. In addition, the data can be used for scientific research. The Finnish National Agency for Education maintains Varda, and ECEC service providers are obligated to store the information about the service provider, locations, children, guardians and staff (Ministry of Education and Culture 2021, 57). The full implementation of the system and the recording of data have been delayed and, as a result, information on ECEC staff is still incomplete.

During the period when ECEC services were administered by the Ministry of Social Affairs and Health (until 2013), the proportion of staff with social welfare and health care qualifications was on the increase in the field of ECEC (Onnismaa, Kalliala, and Tahkokallio 2017). In the early childhood education curricula drawn up by the social administration, a mention of teaching was avoided and the teacher's role and tasks were only vaguely presented (Chydenius et al. 2023). The number of students in university ECEC teacher education study programmes was kept very low and a significant number of students graduated with a degree as Social Pedagogue with an additional teaching qualification (Onnismaa et al. 2017). This has not prevented a shortage of Teachers in ECEC, which has been made visible by the eligibility conditions of the new Act on Early Childhood Education and Care. By 2030, the share of Teachers in ECEC is planned to be at least 30% and the share of those with tertiary level education at least 60% of the staff in ECEC. Due to the increase in the number of students at university and the multiple forms of IPE, the proportion of Teachers in ECEC is slowly growing. In 2012, approximately 18% of ECEC staff had a Teacher qualification and approximately 30% of staff were educated at tertiary level (Onnismaa 2018). At present, approximately 20% of the ECEC staff have a qualification as Teacher in ECEC and approximately 39% altogether have a tertiary level education (see *Table 2*). Nationwide, more than 45% of ECEC jobs are defined as Teacher in ECEC positions. However, according to an analysis prepared by Finland's largest pension provider Keva (2021), there is a shortage of more than 4,000 Teachers in ECEC in Finland. Because of the shortage of Teachers, often an under-qualified person, most commonly a Childcarer, fills the position. In large cities, in up to 30-40% of cases an under-qualified person performs a Teacher's job. As Childcarers are transferred to Teacher positions, there is a shortage of Childcarers in some places. There is also a shortage of Special Education Teachers (Keva 2021). A non-specialist applicant, often a Teacher in ECEC, fills some of these jobs but sometimes the post is left vacant. Nevertheless, according to the Act on Early Childhood Education and Care (540/2018), ECEC service providers must ensure Special Education Teacher consultation and instruction for the children needing support. In ECEC services for linguistic minorities (Sámi and Swedish), staffing challenges are equally prevalent.

Table 2 provides an overview of selected aspects of the structural composition of the ECEC workforce in Finland. Assistants do not belong to these categories³.

Table 2

Finland: Structural composition of workforce in ECEC provision, 2021

Staff categories	Year / Proportion of workforce
Staff with specialist higher education degree	Approx. 39% – 20% with Teacher in ECEC degree – 17% with Social Pedagogue degree – 1.8% with Special Needs Teacher degree 46% of staff are required to have a tertiary level qualification: however, up to 15% work as under-qualified staff (often a Childcarer as a Teacher substitute).
Staff with specialist vocational qualification (post-secondary)	n/a
Staff with specialist vocational qualification (upper secondary)	Approx. 52%
Staff with non-specialist qualification	Small numbers, only as substitute staff
Staff without formal initial professional studies	n/a
Specialist support staff (e.g. speech therapists)	Mostly off-site
Male staff (all ECEC services)	2.9% 6.0% of male employees work in ECEC administration, e.g. as Centre Leaders.
Staff with a background of migration	No systematically compiled national data.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Teacher in ECEC (*Varhaiskasvatuksen opettaja*)

Initial professional education is provided at universities governed by the Universities Act (*Yliopistolaki* 558/2009). The law defines Finnish universities and their tasks. The Government Decree on University Degrees and Professional Specialisation Programmes (*Valtioneuvoston asetus yliopistojen tutkinnoista ja erikoistumiskoulutuksista* 794/2004) defines the scope and structure of teacher education. In addition, the regulation defines the institutions providing teacher education. Study programmes for prospective Teachers in ECEC are provided by seven universities in Finland, and in all of them, it is possible to continue studies up to a Master's degree in ECEC. Åbo Akademi and the University of Helsinki also offer IPE in Swedish (Swedish is the second official language in Finland). Two universities also provide the option of studying in English (University of Tampere and University of Turku).

Finnish universities enjoy a high degree of autonomy regarding the statutes regulating the teacher education programmes. The goal descriptions of education at different universities vary

³ Personal or group assistants for children with special needs work in ECEC centres. Usually a child must have a diagnostic statement in order to be granted a personal assistant.

somewhat, but their basic ideas are quite similar (Ministry of Education and Culture 2021). The education provided at Finnish universities is based on research, including the contents and teaching methods and the evaluation and development of education. Conducting research and studying research methods are also part of teacher education (Toom, and Pyhältö 2020). University education in ECEC is carried out in close co-operation with other teacher education programmes, such as those for primary level class teachers or secondary level subject teachers.

Table 3

Finland: Teacher in ECEC

<p>Job title in Finnish: <i>Varhaiskasvatuksen opettaja</i> Profile: Early Childhood Pedagogy Professional</p>
<p>Entry requirements: 12 years schooling + matriculation Professional studies: 3 years at university, degree course in (early) education Award: Bachelor’s Degree in Early Childhood Education ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main ECEC workplaces: ECEC centre, 0–6 years; pre-primary transition class, 6–7 years; ECEC planning and administration</p>

Childcarer in ECEC (*Varhaiskasvatuksen lastenhoitaja*)

The qualifying courses to become a Childcarer in ECEC are part of vocational education/training regulated by the Act on Vocational Education and Training (*Laki ammatillisesta koulutuksesta* 531/2017). The law determines, among other things, the structure of awards. The Finnish National Agency for Education is responsible for drawing up vocational education curricula. There are two main ways to qualify as a Childcarer in ECEC:

- 1) A vocational upper secondary qualification in healthcare and social services (ECEC Nurse)
- 2) A vocational upper secondary qualification in education and guidance (Children’s Instructor).

It is also possible to fulfil the requirements through some other suitable qualification that includes or has been supplemented with adequately extensive study modules on the care, upbringing and education of children. The IPE of ECEC Nurses and Children’s Instructors (and Special Needs Assistants) can also be organised as an apprenticeship and in some cases, the first year of studies, e.g. in the IPE of ECEC Nurses, may consist entirely of workplace-based learning.

Table 4

<p>Route 2 – Children’s Instructor (<i>Lastenhoitaja</i>)</p> <p>Entry requirements: 9 years comprehensive school</p> <p>Professional studies: 3 years upper secondary vocational training at The Church Training College or corresponding training institution in Childcare and Education and Family Welfare.</p> <p>Award: Vocational Qualification in Child Care and Education and Family Welfare</p> <p>ECTS credits: n/a</p> <p>EQF level: 4</p> <p>ISCED 2011: 3</p> <p>Main ECEC workplace: ECEC centre (0–6 years)</p>

Social Pedagogue in ECEC (*Varhaiskasvatuksen sosionomi*)

The Social Pedagogy qualification route prepares for work in different areas of the social welfare sector and with different job titles, one of which is Social Pedagogue in ECEC. Social Pedagogue training is provided in higher education institutions governed by the Universities of Applied Sciences Act (*Ammattikorkeakoululaki 932/2014*). The Government decree on universities of applied sciences (*Valtioneuvoston asetus ammattikorkeakouluista 1129/2014*) defines the scope and structure of studies. In Finland, there are 20 universities of applied sciences, 18 Finnish-language and 2 Swedish-language institutions, with study programmes for the Social Pedagogue degree (Bachelor’s Degree in Social Services). The contents of the education can be structured in different ways depending on the focus areas of the universities of applied sciences.

According to law, the degree course for Social Pedagogue in ECEC must include 60 ECTS credits that qualify for early childhood education and care (Act on Early Childhood Education 540/2018). Both the quantity and the content of ECEC studies vary considerably. The Network of Universities of Applied Sciences for Social Work in Early Childhood Education and Care has given its own recommendations on the content of the study programme (*Ammattikorkeakoulujen sosiaalialan varhaiskasvatusverkosto 29.09.2021*).

Finland: Social Pedagogue in ECEC

Job title in Finnish: <i>Varhaiskasvatuksen sosionomi</i>
Profile: Social Care/Welfare Professional
<p>Entry requirements: 12 years schooling + matriculation</p> <p>Professional studies: 3½ years at a university of applied sciences, degree course in social services</p> <p>Award: Bachelor’s degree in Social Services</p> <p>ECTS credits: 210</p> <p>EQF level: 6</p> <p>ISCED 2011: 6</p> <p>Main ECEC workplace: ECEC centre, 0–6 years</p>

Special Education Teacher in ECEC (*Varhaiskasvatuksen erityisopettaja*)

There are two ways to qualify as a Special Education Teacher in ECEC:

- 1) Eligibility for the position of Teacher in ECEC, plus studies providing professional skills in special education, available at five universities as a one-year postgraduate course of study
- 2) Master's degree programme in Early Childhood Special Education, available at one university.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Teacher in ECEC (*Varhaiskasvatuksen opettaja*)

Competency specifications:

At the end of the study programme students are expected to:

- Understand childhood as part of cultural diversity
- Understand the growth and development of children as a holistic social and cultural process
- Be able to look at children’s growth, development and learning from several different perspectives
- Be able to look at the holistic learning environment of children and make use of new technology
- Be familiar with the aims, contents and methods of public early childhood education and pre-school education

⁴ Early education for children with special needs is mainly provided in mainstream settings (inclusive education)

- Be able to analyse, evaluate and develop phenomena related to early childhood education on a research basis.

Curricular areas: (1) Language and communication studies; (2) Basic studies in education; (3) Intermediate studies in education; (4) Content/subject areas in early childhood education; (5) Optional subjects (see *Box 2* for details). Through bilateral contracts, students can study for part of the degree at a university in another country, e.g. through the ERASMUS programme or the NORDPLUS student exchange programmes (University of Helsinki 2022a).

For the preparation of the Teacher in ECEC study programme at the University of Helsinki (see *Box 2*); representatives of municipalities, as the largest employers in the ECEC sector, were consulted (University of Helsinki 2022b).

Box 2

Finland: Curricular areas, Teacher in ECEC study programme, University of Helsinki (2022b⁵)

(1) Language and communication studies (15 ECTS credits)

Native language, usually:

Academic writing (Finnish)(2 ECTS credits)

Communication and interpersonal skills (Finnish) (1 ECTS credit)

Other national language, usually:

Oral skills in the second national language, Swedish (CEFR B1⁶) (2 ECTS credits)

Written skills in the second national language, Swedish (CEFR B1) (1 ECTS credit)

Foreign language, usually:

Academic and professional communication in English 1 & 2 (CEFR B2) (4 ECTS credits)

Student's digital skills (3 ECTS credits)

Teacherhood and communication (2 ECTS credits)

Personal study plan (0 ECTS credits)

(2) Education, basic studies (25 ECTS credits)

Social, cultural and philosophical foundations of education (5 ECTS credits)*

Psychology of learning and development (5 ECTS credits)*

Planning, implementation and assessment of teaching I (2 ECTS credits)*

Planning, implementation and assessment of teaching in ECEC I (3 ECTS credits)*

Toddler pedagogy (5 ECTS credits)

(3) Education, intermediate studies (45 ECTS credits)

Support for learning and wellbeing (5 ECTS credits)*

Planning, implementation and assessment of teaching II (5 ECTS credits)*

Integrated practice (8 ECTS credits)*

Advanced practice period (7 ECTS credits)*

Qualitative research methods I (5 ECTS credits)

Quantitative research methods I (5 ECTS credits)

Bachelor's thesis (10 ECTS credits)

Maturity test (in Finnish), Bachelor's degree (0 ECTS credits)

(4) Studies providing professional readiness for work in institutional early childhood education and preschool education (60 ECTS credits)

Preschool and elementary education (5 ECTS credits)

Activity learning in early childhood education (5 ECTS credits)

The diversity of development and early childhood special education (5 ECTS credits)

Mathematics pedagogy (5 ECTS credits)

Environmental education and primary science (5 ECTS credits)

Pedagogy of language and interaction (5 ECTS credits)

⁵ Curriculum for Early Education Teacher training (180 ECTS) in 2020–2023. The new curriculum came into effect in the fall of 2023.

⁶ CEFR = Common European Framework of Reference for Languages, levels of language proficiency

Moral education and worldview education (5 ECTS credits)
Children's literature and drama (5 ECTS credits)
Visual arts education (5 ECTS credits)
Music education (5 ECTS credits)
Pedagogy of craft (5 ECTS credits)
Pedagogy of physical education (5 ECTS credits)

(5) **Optional study modules 35 ECTS credits** (e.g. special education or pre-primary and early primary years education)

*PST = Pedagogical Studies for Teachers (35 ECTS credits)⁷

Childcarer in ECEC (*Varhaiskasvatuksen lastenhoitaja*)

A Childcarer in ECEC is qualified in the vocational training sector, most commonly as either an ECEC Nurse or a Children's Instructor. Finnish National Agency for Education is responsible for guiding the content of these qualification routes (Act on Vocational Education and Training 531/2017).

A special feature of vocational training is the individualisation of studies. A competence development plan is prepared for the student, which takes into account, among other things, the previously acquired competence. Completion of vocational training is based on the skills demonstrated in practical work situations. It is also characteristic of vocational education to complete studies as an apprenticeship training, in which case the student acquires competence in the workplace in connection with practical work tasks and the training provider is responsible for other possible training content (Act on Vocational Education and Training 531/2017).

In vocational training, the scope and depth of studies are described in terms of competence points. If the internationally used ECTS credit equals approximately 27 hours of work input, a competency point equals approximately 15 hours of input. The scope of the vocational award at upper secondary level is 180 competence points. The duration of the training is individual, with a maximum duration of approximately 3 years.

- **ECEC Nurse (*Lähihoitaja*)**

An ECEC Nurse who has graduated in the field of education and care of children and young people is able to promote the child's growth, wellbeing and learning, as well as the health and wellbeing of children, adolescents and families. The ECEC Nurse award consists of common parts of the course (5 competence points) and professional parts of the course (145 competence points). The student must include optional modules to the extent of 15 competence points. The common parts of the course are: (1) Communication and Interaction Competence, (2) Mathematical Science Competence, and (3) Social and Working Life Competence. The professional parts of the degree are: (1) Promoting Growth and Participation, (2) Promoting Wellbeing and Functional Capacity, (3) Promoting the Child's Growth, Wellbeing and Learning, and 4) Promoting the Health and Wellbeing of the Child, Adolescent and Family. In addition, the award includes optional modules (Finnish National Agency for Education 2018a).

- **Children's Instructor (*Lastenhojaaja*)**

The Children's Instructor has acquired the versatile skills required for guidance, education and communication tasks, as well as good communication skills. The Children's Instructor has the

⁷ Teachers working in comprehensive (primary/secondary) schools, as well as in other educational institutions, are required to have 60 ECTS points in *Pedagogical Studies for Teachers* of which 35 ECTS points can be taken in the Bachelor's degree course for Teacher in ECEC.

ability to take into account the guidance and support needs of people from different backgrounds and ages. The course consists of four compulsory modules (105–110 competence points) and optional degree modules (35–40 competence points). The compulsory parts of the degree are: (1) Professional Encounter, Education and Guidance, (2) Promotion of the Child's Growth, Wellbeing and Learning, (3) Implementation of Pedagogical Activities in ECEC, and (4) Working with Families and Multidisciplinary Cooperation (Finnish National Agency for Education 2018b).

Social Pedagogue in ECEC (*Varhaiskasvatuksen sosionomi*)

Competency specifications:

The study programme is based on the following principles:

- Empowering citizens
- Preventing marginalisation and promoting inclusion and social pluralism
- Promoting social participation, equality and wellbeing in society.

Curricular areas:

The following study units at the Metropolia University of Applied Sciences (2020) form the early childhood education track in the Social Pedagogue IPE programme (60 ECTS credits):

- Childhood growth and development (5 ECTS credits)
- Everyday life of families and children in Finnish society (5 ECTS credits)
- Individual and community counselling (5 ECTS credits)
- Supporting daily life through socio-pedagogical work plus first internship (15 ECTS credits)
- Child protection (5 ECTS credits)
- Special needs support in early education (5 ECTS credits)
- Early education (20 ECTS credits)
- Work placement in ECEC setting (20 ECTS credits)
- Thesis (15 ECTS credits).

Special Education Teacher in ECEC (*Varhaiskasvatuksen erityisopettaja*)

Competency specifications:

Psychosocial factors such as learning how to utilise play, how to support peer interaction and how to recognise children's needs and respond to them as well as pedagogical sensitivity are abilities that are achieved in the Special Education Teacher's education programme at the University of Helsinki. Studies are based on an ecological framework of early interventions which are considered to be not only individual support for the child with special needs, but also impact on every child's action and behaviour by boosting children's strengths and finding new courses of action in unfamiliar or challenging situations. Furthermore, after graduating, the students are expected to understand the considerable impact of physical environmental factors in ECEC (play materials, schedules, daily structuring of the programme) on children's development and learning.

Curricular areas:

The postgraduate course in Special Education (early childhood) at the University of Helsinki focuses on basic studies in special education (25 ECTS credits), Children's behaviour, wellbeing and interaction (10 ECTS credits), Learning support (20 ECTS credits), and Professional growth (10 ECTS credits) (see Box 3 for details) (University of Helsinki 2022c).

Finland: Curricular areas, Special Needs Teacher Education, University of Helsinki (2022c)**Basic studies in special education (25 ECTS credits)⁸**

- Introduction to Finnish special education
- Marginalisation and mental health
- Special educational needs
- Learning disabilities
- Scientific thinking in the context of education

Theme 1. Behaviour, wellbeing and interaction (10 ECTS credits)

- Communication and perception
- Challenges in behaviour

Theme 2. Learning support (20 ECTS credits)

- Brain and learning
- In-depth special education
- Reading skills and reading difficulties
- Mathematical learning difficulties

Theme 3. Professional growth (10 ECTS credits)

- Special Needs Teacher as a researcher
- Special education practice

4.3 Alternative entry and qualification routes, system permeability

In Finland, competence requirements are based on formal qualifications. Legislation defines eligibility requirements for all ECEC professional titles with the exception of the Special Needs Assistant. On the other hand, the Assistant is not included in the ratio of children to staff. However, in upper secondary level vocational training (here referring to ECEC Nurses, Children's Instructors and Special Needs Assistants), there is an alternative qualification route, i.e. a fully competence-based qualification system. This offers the possibility of completing a vocational qualification partially or wholly through a demonstration of vocational skills which are then considered equal to the regular qualification.

There are no formal barriers between vocational training and tertiary level education. For example, after completing the qualification route to become an ECEC Nurse it is possible to apply for a place in tertiary level education. However, the training programmes of vocational schools and universities of applied sciences, such as that for the registered ECEC Nurse or the Social Pedagogue in ECEC, are more general than university degree programmes. For example, a graduate Social Pedagogue can work in family work, child protection, youth work, school welfare work, adult social work, criminal sanctions, substance abuse and mental health work, disability work, special upbringing, elderly work, multicultural work – or in ECEC.

⁸ Basic studies in special education (25 ECTS credits) must be completed before entering the Special Education Teacher's study programme. However, only 20 ECTS credits are counted. Thus, the sum total of ECTS credits of the whole study programme is 60 ECTS credits.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Teacher in ECEC (*Varhaiskasvatuksen opettaja*)

Time allocated to field-based studies: Field-based studies refer to practical placement periods in ECEC settings, including pre-primary classes. The term refers to structured and supervised studies and is preferred to the term ‘workplace-based learning’, which could be interpreted as just being in an authentic workplace setting and assisting centre staff. The time allocated to field-based studies in the Teacher in ECEC degree programmes at Finnish universities varies between 7% and 11%, which amounts to between 12 and 20 ECTS credits out of a total of 180 ECTS credits. Most commonly, the field-based element accounts for 15 ECTS credits (Onnismaa, Tahkokallio, and Kalliala 2015).

Content focus in field-based studies: At the University of Helsinki⁹, each field-based period has its own character and goals. *Integrative practice* (8 ECTS credits) focuses on the planning, implementing and evaluation of early childhood education, in particular on developing skills and reflective competences in the core content areas of early childhood education (e.g. drama and physical education, music, nature and mathematics). *Final practice* (7 ECTS credits) aims at developing the holistic responsibility of the student with respect to planning, implementing and evaluating work in the ECEC centre, including working with parents. In addition, the student becomes acquainted with administration and working as a member of multi-professional teams and networks. Field-based periods are carried out in collaboration between two students, in which case the student receives peer feedback in addition to the supervising Teacher in ECEC and university lecturer.

Alongside the field-based periods in ECEC settings, students plan, carry out and observe different kinds of pedagogical sessions with children in a campus-based classroom that has been constructed especially for visiting groups of children at the University of Helsinki. Students also visit ECEC centres beyond the placement periods, e.g. during physical education courses, and organise various activities for children. Students also receive supervision from university lecturers when carrying out these activities. The professional identity of the Teacher in ECEC (including eight hours of observation in ECEC centres) is treated as a part of *Planning, Implementation and Assessment of Teaching I* course during the first academic year. The students spend two mornings (three hours each) and one whole day (six hours) in ECEC settings observing the pedagogical activities carried out by the Teacher in ECEC and their professional role. The observation is reported and discussed with other students and the university lecturer.

Structure of field-based studies and mentoring support: The Teacher in ECEC supervisor has a key position in helping students to develop their skills and construct their theory-in-use. It is also considered important that the university lecturer be very familiar with the field of ECEC. Consequently, in ideal cases, the educational background of the university lecturer who supervises student teachers should include an ECEC teaching qualification (Onnismaa, Tahkokallio, and Kalliala 2015).

Close cooperation with municipalities (ECEC administration) is exercised, particularly in the case of the field-based study periods. At the University of Helsinki, a network of placement centres

⁹ The University of Helsinki has been used here as an example because it has the largest Teacher Education Department in Finland, taking in 140 Teacher in ECEC students each academic year (exceptional years: 2020: 200 students; 2021: 220 students; 2022: 260 students, 2023: 200 students).

was established in 1996 based on officially ratified contracts between municipalities in the metropolitan area. The consistent and goal-oriented education of field supervisors (5 ECTS credits), conducted by the University of Helsinki, has been an essential part of strengthening the coherence of the network. Furthermore, Teacher supervisors/mentors are invited to the university at the beginning of each field-based period. Once a year, a symposium on field-based studies brings together participants from the entire teacher education department (i.e. including the study programme for school teachers), the cooperating schools and ECEC centres, to reflect on current developments.

The 'double supervision model' – where the student receives feedback and guidance from both an experienced teacher in the field and from a university lecturer – depends on there being a sufficient number of motivated supervisors. The aim of collaboration between ECEC centres and the university is to create a new kind of learning community (Onnismaa, Tahkokallio, and Kalliala 2015).

Recent reforms, trends and debates: In Finland, co-operation has been launched between six universities offering Teacher in ECEC education with a focus on developing teaching practice guidance in changing learning environments in Early Childhood Teacher Education. The OHOSKE (2022) network is supported by the Ministry of Education and Culture, and it develops the supervisory competences of teacher education in ECEC and brings together national and international research data on supervisory competences and their development in changing learning environments, besides clarifying the goals and contents. The network organises supervisory training and seminars, and produces supervision materials for use in teacher education programmes. The network develops supervisory skills related to early childhood teacher education in the initial and continuing professional education of early childhood education teachers and teacher educators. The network includes local development groups and covers early childhood teacher students, teachers in kindergartens, teacher educators, municipal actors and researchers in the field.

Childcarer in ECEC (*Varhaiskasvatuksen lastenhoitaja*)

The vocational education and training of a Childcarer in ECEC always includes on-the-job learning in Finland or abroad, and competence is usually assessed in working life. The length and extent of workplace periods vary according to the student's personal study plan, averaging 30 competence points out of 120 competence points. It is also possible to complete the studies in a workplace-based learning manner in the form of apprenticeship training.

Social Pedagogue in ECEC (*Varhaiskasvatuksen sosionomi*)

Workplace-based learning (*internship*) within the IPE of Social Pedagogues is allocated at least 45 ECTS credits. At the Metropolia University of Applied Sciences, for example, students who have decided that they want to work in ECEC conduct their first (5 ECTS credits) and third internship (20 ECTS credits) in an ECEC setting. Quality is enhanced by developing the guidelines and support for theory-based professional reflection, which is conducted by tutors and Teachers supervising students during their internships. There is an ECEC centre internship network in the metropolitan area of Helsinki for the students of Metropolia and the supervisors are trained twice a year. Either a Teacher or a Social Pedagogue in the ECEC centre guides students in their internship. One challenge is that many of the students choose to do the internship working as supply staff, without a supervising teacher in the same team. That limits the possibilities of peer learning and pedagogical reflection. Tutors at Metropolia are working to solve this challenge and recommend internship as a student, not as a staff member. Since there are approximately 20

institutions offering study programmes for Social Pedagogues, duration and content of the field-based learning element of IPE vary considerably.

6. Continuing professional development (CPD) of ECEC staff

The CPD of ECEC staff is included in the Act on Early Childhood Education and Care (540/2018). The organiser or provider of ECEC must ensure that the ECEC staff participate sufficiently in CPD activities that maintain and develop their professional skills. In addition, the implementation and effectiveness of CPD are to be monitored and evaluated. The Ministry of Education and Culture regularly issues detailed instructions on the content, amount, organisation, monitoring and evaluation of continuing professional development (Act on Early Childhood Education and Care 540/2018).

The Finnish National Agency for Education organises state-funded CPD for staff through the acquisition of training offers from municipalities, associations of municipalities, registered communities and foundations, universities and universities of applied sciences. In cooperation with the Finnish Education Evaluation Centre (FINEEC), the Finnish National Agency for Education collects information on the CPD needs of staff and determines the content to be offered. According to the summary of the Finnish Education Evaluation Centre (FINEEC 2021), the needs for education in ECEC focus on art education, toddler pedagogy, leadership of pedagogy, assessment skills and curriculum knowledge. In 2019, slightly more than 15% of ECEC staff participated in CPD offers organised by the Finnish National Agency for Education. The number of participants decreased by almost 10% from the previous year due to the pandemic (Finnish National Agency for Education n.d.).

In addition to CPD courses provided by Finnish National Agency for Education, many other courses are available for ECEC staff. The Development Forum of ECEC Training programme for 2021–2023 identifies challenges related to continuing professional learning. Finding out the training needs of ECEC personnel needs to be enhanced and the organisation and planning of CPD strengthened. There are also many different providers of CPD, and there are no nationally agreed criteria for the quality of training, which makes it difficult to assess the quality of the offers. In addition, staff access to CPD is limited in terms of lack of resources and suitable offers. The Development Forum therefore proposes the development of a comprehensive system of CPD in terms of funding, quality, providers, planning and evaluation. Development work is also required to ensure availability and participation. In addition, the development programme recommends strengthening the continuity between pre-service and in-service training (Ministry of Education and Culture 2021).

Changes in Finnish ECEC have increased the need for CPD. According to the FINEEC report (Repo et al. 2019), more than 40% of ECEC professionals and ECEC Centre Heads felt that they needed further training to implement the ECEC curriculum and pedagogy. About 70% of the staff had already participated in CPD related to the ECEC curriculum or pedagogy during the years 2016–2018. More than 50% of the respondents (n=1,642) found participation in CPD useful from the point of view of implementing the ECEC curriculum (Repo et al. 2019).

7. Working conditions and current workforce issues

7.1 Remuneration

In Finland, salaries for Teachers in ECEC (ISCED 01 and ISCED 02) are about 9% below the OECD average. In contrast, salaries in primary and secondary education are higher than the OECD average. Although the salary level of teachers everywhere typically improves the higher the level of education, in Finland the change from one stage to another is greater than the average. In OECD countries, the average salary level for upper secondary school teachers is about 17% higher after 15 years of work than in ECEC, whereas it is almost 50% higher in Finland (Haapamäki et al. 2021, 17).

Part of the reason for the unfavourable salary development of Teachers as well as Special Education Teachers in ECEC has been in the bargaining sector, which was unsuitable for teachers. The Teachers' salary has traditionally been agreed in a collective agreement with the rest of the municipal sector. After years of contract negotiations, all Teachers in ECEC were transferred to the collective agreement in the field of education as of September 1, 2021 (Local Government and County Employers KT 2021). From the perspective of the Teachers in ECEC profession, this can be seen as the ultimate integration of early childhood education into the education system. The working conditions of other personnel in ECEC are agreed in connection with a collective agreement with the rest of the municipal sector.

In the spring of 2022, a significant collective agreement was reached in the municipal sector, including the education sector, on the basis of which the salary level of ECEC staff will be increased by a total of about 5% between 2022 and 2025. In addition, the duties of the Centre Leader and the Deputy Leader were clarified and the remuneration was increased (OAJ 2022a). The salary programme includes all teachers, which is why the salary gap between Teachers in ECEC and other groups of teachers will continue to grow in the future.

7.2 Full-time and part-time employment in ECEC provision

The regular working time of ECEC personnel is a maximum of 9 hours a day, and in the municipal sector 38 hours 15 minutes a week or in private ECEC centres 38 hours 20 minutes a week. Less than 8% of ECEC personnel work part-time.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Collegial support has proved to be vital for teachers who have full teaching responsibility from the very beginning of their career (Onnismaa et al. 2016). Various forms of induction support in the field of education have been discussed and induction training for both Teachers and Centre Leaders has been recommended in reports (Ministry of Education and Culture 2021; Siippainen et al. 2021).

A peer-group mentoring project for recently graduated Teachers in ECEC started in collaboration between the City of Helsinki and the University of Helsinki in 2014. In the first phase of the project, university lecturers trained 25 peer mentors and the first mentoring groups started in autumn 2014. Teachers in ECEC and Social Pedagogues working as teachers participated in peer-mentoring groups, which have been adopted as a regular working method in ECEC services in the city of Helsinki. Teachers' peer group mentoring draws on the ideas developed in the *Finnish*

Network for Teacher Induction (2016)¹⁰ (Onnismaa et al. 2016) and is described here as an example. There are various forms of induction support and orientation to work in municipalities but no common policy so far.

The city of Helsinki continues to invest in mentoring and aims to alleviate the acute shortage of teachers. The mentoring system has also been extended to Centre Leaders and Deputy Leaders in Helsinki. Since many Centre Leaders will retire in the near future, peer group mentoring is expected to be an efficient way to support younger staff in leadership positions when they start working in their new post. Other municipalities have also developed induction measures for recently qualified Teachers as a measure to increase job commitment and improve occupational health.

7.4 Non-contact time

According to the nationwide collective agreement, approximately 13% (about five hours per week) of a Teacher in ECEC's working time should be allocated for non-contact time. This time is devoted to the planning, evaluation and development of pedagogical activities, the preparation of pedagogical plans and the evaluation and development of the pedagogical work of a multi-professional work community. In addition to this so-called planning, assessment and development time, the Teacher in ECEC must be given sufficient non-contact time for cooperative tasks such as cooperating with parents or other professionals. Team discussions and staff meetings require some non-contact time for all team members, including Social Pedagogues, Childcarers and Assistants (Local Government and County Employers KT 2022). In 2021, the Trade Union of Education in Finland (*Opetusalan ammattijärjestö*, OAJ 2022b) collected data on the implementation of non-contact time in ECEC. Teachers had an average of only four hours to plan, evaluate and develop ECEC; meaning that the five hours specified in the agreement are often not met. On the other hand, the amount of time devoted to other forms of cooperation had increased (OAJ 2022b).

7.5 Current staffing issues

In Finland, there is a nationwide shortage of Teachers in ECEC. According to a report by Keva (2021), there is currently a shortage of more than 4,000 Teachers. The retirement rate will be high over the next 10 years, with 26.4% of Teachers in ECEC working in municipalities retiring. The Ministry of Education and Culture has supported universities in increasing the number of students in Teacher in ECEC training and in launching development projects related to teacher education. These initiatives aim to reach the level of more than 1,000 new Teachers in ECEC students per year (Ministry of Education and Culture 2021, 92, 99). The calculations in the Government's proposal on the Act on Early Childhood Education and Care (540/2018) estimate that

¹⁰ *Osaava Verme* is a collaborative network between the Finnish teacher education institutions, including the vocational teacher education institutions and teacher education departments of universities. The main goal is to develop and disseminate the peer-group mentoring model (PGM) to support new teachers. Peer-group mentoring (PGM), known in Finland by the acronym *verme*, is a Finnish approach to supporting new teachers in their early career. PGM brings new teachers together to share and reflect on their experiences and to discuss the day-to-day problems and challenges they face. The method was piloted by the funding of the Finnish Work Environmental Fund in 2008–10 and is being continuously developed by The Finnish Network for Teacher Induction 'Osaava Verme'. PGM groups usually meet once a month to discuss work-related issues. The PGM approach draws on the constructivist view of learning, which maintains constructing knowledge is based on prior knowledge, experiences, and beliefs. Peer discussion is therefore an essential element in creating shared understanding of the work of teachers (Finnish Network for Teacher Induction 'Osaava Verme' 2016).

by 2030 the number of Teachers in ECEC in training will be sufficient, if the enrolment in universities is about 1,000 new entrants per year and the rate of completion is 80%. From 2022 onwards, no separate budget has been allocated for funding the raising of degree targets for Teachers in ECEC, but the increase for education will be implemented as part of the basic funding model for universities (Government's proposal 40/2018).

The challenges of attraction and retention are generally recognised in public sector jobs in Finland. Concerning the ECEC workforce, this has been highlighted in research and has provoked a lot of discussion in the media. The challenge is to keep ECEC personnel in their jobs, but especially to recruit recently graduated Teachers to commit to their work. Research shows that a high proportion of ECEC staff consider quitting the ECEC profession (44–62%), and Teachers' intentions to leave profession are higher (62%) than in other personnel groups (Heilala et al. 2022). Based on the research, according to the Teachers' perceptions the main reasons for the challenges of the sector's attraction and retention power are in salary and human resources. Remuneration is attached to the idea of valuing work. Personnel resources, on the other hand, are a result of the Teacher shortage and the ripple effect it creates. As an equation, these raise the question of the economic intensification of ECEC services (Kangas et al. 2022). Efforts have been made to raise wages through local agreements, and in the spring of 2022, the national wage negotiations guaranteed public sector personnel a salary increase of about 5% in the years 2022–2025 (OAJ 2022a). At the end of 2021, the Minister of Education started a report on the challenges of ECEC staffing and, based on the report, to guarantee adequate staffing by improving the legislation. The most significant of these are the notification obligation of the staff regarding non-compliance with the Act on Early Childhood Education and Care and refinements to early childhood education personnel sizing (540/2018).

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

In order to support the implementation of the transition phase of the Act on Early Childhood Education and Care, an ECEC Training Development Forum (*Varhaiskasvatuksen koulutusten kehittämisforumi*) was established in the spring of 2019 by the Minister of Education and Culture. The first term of the Forum lasted up to the end of 2020. At that time, the aim was to develop cooperation between ECEC settings, IPE institutions and training courses and to draw up a development programme at the national level for 2021–2030 (Ministry of Education and Culture 2021).

The second term of the Development Forum began in the autumn of 2021 and continued until the end of 2023. The objectives of the second term are to:

- Promote co-operation between different levels of professional education and training for ECEC staff and ECEC providers
- Monitor the implementation, development and change processes of ECEC
- Monitor and promote national and international educational research
- Support the implementation of the Act on Early Childhood Education Care in matters related to professional education and promote the implementation of the personnel structure specified in the Act
- Improve the attractiveness of ECEC and the whole field of work among students and applicants for education through active information. (Ministry of Education and Culture n.d.)

9. Recent country-specific research focusing on ECEC staff

Effects of the COVID-19 pandemic on ECEC staff

Source: Gillberg, Susanna, and Inkeri Ruokonen 2022 (see *References* for further details)

Aims: The aim of this study is to provide information on how ECEC staff perceived the measures taken in ECEC centres in March–June 2020, especially from the perspective of the work community and changes in work tasks.

Methods: The research data were collected through an online survey by the Helsinki Kindergarten Museum. In addition to background information, it was possible to answer ten open-ended questions in the survey, of which five were selected for analysis in the study. 587 ECEC employees from different parts of Finland answered the survey between March 26 and June 30, 2020. The collected data were analysed using the principles of data-driven qualitative content analysis.

Results: The experiences of ECEC staff about the exceptional period varied. In some work communities the unprecedented situation was dealt with mainly through the distribution of official bulletins, while in other work communities a joint discussion was felt to be important. During this exceptional period, ECEC staff had more time to focus, for example, on recording ECEC plans and organising the learning environment. Changes were also reported in pedagogy, and some ECEC centres began to provide so-called distant ECEC, although there were no general guidelines or tools for it. The exceptional circumstances caused by the COVID-19 virus can be seen as a crisis for the work community in ECEC centres. Centre heads play a key role in dealing with such crises, and the research highlights the issues and measures staff would have needed in terms of support.

Implications: Seen positively, a time of crisis may highlight the opportunities and challenges of ECEC. In this study the need to develop operating methods related to ECEC pedagogy and steering in times of crisis came up and need also to be considered at the administrative level.

Effects of the COVID-19 pandemic on heads of ECEC units

Source: Nurhonen, Linda, Heidi Chydenius, and Lasse Lipponen 2021 (see *References* for further details)

Aims: The aim of the report was to provide information on the effects of the COVID-19 crisis on ECEC for three groups: heads of ECEC units, children and guardians. The heads of the ECEC units were a particular focus of the study. Previous research on the management of ECEC in times of crisis is scarce. Therefore, the study sought to highlight the views of the heads of ECEC units about the support they needed and received, as well as the potential burden of the exceptional period.

Methods: The research data consisted of a survey and interviews with the heads of the ECEC units. The survey was prepared and carried out in cooperation with the University of Helsinki's Centre for Educational Assessment (CEA). The response period for the survey was from 1 February 2021 to 28 February 2021. 679 people from 120 municipalities responded to the survey. Interviews with heads of ECEC units were conducted in November–December 2020 via remote connections. 23 heads of ECEC units participated in the interview.

Results: The results of the study showed that the workload of heads of ECEC units increased during a pandemic and the job image changed. In the work of the head, more emphasis was placed on personnel management, work organisation and work related to COVID-19 instructions. The workload for heads of ECEC units increased so that there was not enough time left for

pedagogical leadership. According to the results, well-functioning and well-established leadership structures supported managers' resilience, job absorption and developmental work.

Implications: The crisis brought out the importance of management structures and the possibilities and competence needs of using digital devices in ECEC as well as need to better prepare for future crises at the administrative level.

Staff structure and expertise in ECEC

Source: Ukkonen-Mikkola, Tuulikki, Raija Yliniemi, and Outi Wallin 2020 (see *References* for further details)

Aims: The aim of the research was to find out the significance of the change in the expertise of ECEC personnel and to identify the expertise of different professional groups in the teams piloting the new personnel structure.

Methods: Second-year ECEC student teachers (n = 19), supervising Teachers in ECEC (n = 14) and education teachers (n = 7) took part in the study. The qualitative action research data consisted of staff diaries, development plans and group interviews. Discourse analysis was utilised in the analysis of the data.

Results: Three discourses related to the change in expertise were identified: discourses of powerlessness, development, and the best interests of the child. In addition, Teachers positioned themselves responsible for the team's pedagogical activities and promoting children's learning. Compared to Teachers, the position of Social Pedagogues was based more on shared responsibility for team action. In addition, the Social Pedagogues' expertise focused on taking care of the child's overall wellbeing and interests. The expertise of a third professional group, Childcarers as team members, was built on caring and looking after children.

Implications: It can be concluded that relational expertise and common knowledge is built in the context of initial professional education. Recognising relational expertise strengthens the collaborative work of different professional groups and should be taken into account in the IPE programmes.

Challenges and opportunities in ECEC

Source: Kangas, Jonna, Tuulikki Ukkonen-Mikkola, Katja Sirvio, Hanna Hjelt, and Elina Fonsén 2022 (see *References* for further details)

Aims: The aim of the research is to find out what kind of challenges Teachers face in ECEC work and what kind of development proposals Teachers present to their work.

Methods: The research was carried out as a survey and targeted Teachers who have made the decision to change careers or who are considering it. 469 Teachers who work or have worked as Teachers in ECEC answered the survey. The data was analysed with a multi-method approach. Factor analysis was used to summarise the most important work challenges, such as the lack of appreciation and the decrease in the meaning of work. Development possibilities were examined through both societal and unit-specific factors.

Results: The Teachers in ECEC felt that they were in control of the new requirements of the job, but the unit-specific working conditions were felt to make the implementation of the work challenging. From a societal point of view, improving pay emerged as the most critical job development target.

Implications: The organisers of ECEC services have woken up to the challenges arising from the shortage of ECEC professionals and are striving at least to some extent to improve issues related to the attractiveness of the profession. Research supports the identification of these factors.

Conceptual changes in multi-professional teamwork in Finnish ECEC over time (2002-2022)

Source: Karila, Kirsti, and Päivi Kupila 2023 (*see References* for further details)

Aims: The article analyses the theoretical, practical, and political interpretations of multi-professional teamwork in Finnish ECEC during the years 2002–2022.

Methods: The research was carried out using a semi-systematic approach to provide an overview of teams, teamwork, team composition, and multi-professionalism in Finnish ECEC. The data consisted of 1) key policy documents that regulate or guide multi-professional teamwork and 2) a systematic literature review of multi-professional teamwork in Finnish research studies. The analysis was conducted using thematic analysis.

Results: The results were constructed in a narrative timeline, which indicates two main themes regarding multi-professional teamwork in Finnish ECEC: 1) an emphasis on multi-professional teamwork as a resource combined with the challenges in implementing it, and 2) an emphasis on pedagogy and the clarification of professional profiles.

Implications: The research indicates that the discussion around multi-professional teamwork in Finnish ECEC should move in the direction of building a shared understanding about the responsibilities and division of labour of different professional groups. The researchers consider that more development projects and studies are needed to develop the practices of a multi-professional team that enable the team members to use their own competences and qualifications for the benefit of children attending ECEC.

10. Workforce challenges – country expert assessment

Massive changes have been taking place in the Finnish ECEC system over the past ten years. Prior to that, the development of ECEC had been limited and, as an example, the same law guided the Finnish ECEC system for about 40 years. Since 2013, the Ministry of Education and Culture has turned the development direction of ECEC away from social welfare towards the education system. The significant challenge for the workforce is the **change in the paradigm of ECEC** and its effects on the staff structure and the operating culture of ECEC. The inclusion of ECEC in the education system requires the reconstruction and reorganisation of the entire system. ECEC development work has been carried out systematically at the administrative level, but the implementation of change in ECEC practices is slow and challenging. It seems that there is a strong effort to develop the quality of ECEC, but the practical implementation of ECEC is not developing at the same pace. The development work is met with both acceptance as well as resistance and fears among various occupational groups of ECEC.

The biggest challenge in changing the ECEC system is the **lack of trained Teachers in ECEC**. Under the Ministry of Social Affairs and Health, Finnish ECEC personnel focused on staff members with a qualification in social and health care. In addition, the number of teacher trainees was not monitored and the training capacities were insufficient. As a result, about half of those working with the job title of Teacher in ECEC have completed a degree in social work. According to Statistics Finland, in the past ten years (2010–2021), the number of people who have received a “Teacher in ECEC” qualification with a Bachelor in Social Services has doubled in ECEC (n= approx. 3,000 → 6,000). At the same time, the number of teachers with a Bachelor’s degree in Early Childhood Education has remained the same (n= approx. 6,500) (Statistics Finland 2023).

The number of people trained in the social sector has not been able to prevent the teacher shortage in ECEC. However, the course of development has led to shortcomings in pedagogical quality, which is stated in FINEEC's report (Repo et al. 2019).

The shortage of Teachers in ECEC has been addressed through, among other things, increased university student intake as well as the provision of various forms of multiform teacher training. However, the challenges of recruitment and retention in the ECEC sector reduce the motivation to engage with the field and the professionals' commitment to the work.

The job description of Social Pedagogues is also unresolved in the field of ECEC. Due to ambiguities related to the division of labour, the **struggle between professional groups** and their unions continues.

Finnish ECEC has been purposefully developed in the direction indicated by the OECD, among others, during recent years, and it seems that the Finnish ECEC system is now strongly connected to the education system. However, this direction of development is not complete in all respects. The skills gap in ECEC is slowing down and challenging the **implementation of change**, and a certain group of policy makers sees the loosening of eligibility criteria as a quick solution to the trouble. There is a particularly strong lobbying for the restoration of the qualification of Social Pedagogues to work as Teachers in ECEC. However, Social Pedagogues are educated in the social welfare field, so from the point of view of the development of the education system, teacher education provides a stronger foundation for a Teacher's work. Global crises, which are weakening Finland's economic situation, also challenge political decision-making and produce pressure to cut costs, which brings its own challenges to the national development of ECEC.

Finland needs to stick to the direction of development it has chosen regarding ECEC. It is disquieting to note that the 2023-2027 government programme includes a proposal to relax the eligibility criteria for ECEC Centre Leaders. The state administration should not choose quick solutions to solve problems that weaken the quality of ECEC. In order to further develop ECEC in Finnish society, the need to reform the legislation in such a way that early childhood education and care and pre-primary education would be legislatively linked together is being increasingly discussed. Along with a law reform, changing pre-primary education from one to two years is seen as the next step in the development of Finnish ECEC.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms chosen in this report for the main forms of centre-based ECEC settings are: **ECEC centre** (*päiväkoti 1–5*) and **pre-primary class** (*esiopetus 6–7*)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Finland

1863	First kindergarten with a nursery founded near Jyväskylä.
1888	First Froebel-inspired kindergarten established in Helsinki.
1927	First framework issued for the public funding of ECEC provision.
1960s	Expansion of ECEC settings due to increasing employment of women
1973	Children’s Day Care Act comes into force; Municipalities have a duty to provide places for children below school age.
1983	Children’s Act: “All children are equal before the law”.
1985	Legal entitlement to a place in early childhood provision for all under 3 year-olds, implemented gradually up to 1990.
1990	Parents of under 3 year-olds can choose between a place in a municipal facility or a childcare allowance for caring for their child at home.
1996	Legal entitlement to a place in early childhood provision from the age of one up to school starting age established.
2000	Pre-primary education reform implemented (law approved in Parliament in 1998): the year preceding school entry free of charge for all 6 year-olds. First <i>National Core Curriculum for Pre-primary Education</i> announced.
2001	Municipalities have a duty to provide a free place for 6 year-olds.
2003	First National curricular framework for early childhood education and care is issued.
2005	Revision of the 2003 <i>National Curriculum Guidelines for Early Childhood Education and Care in Finland</i>
2013	Transfer of responsibility for ECEC up to school entry at age 7 from the Ministry of Social Affairs and Health to the Ministry of Education and Culture
2015	Act on Early Childhood Education and Care (<i>Varhaiskasvatuslaki</i>) is passed. Due to budget cuts, the right to a place in ECEC is reduced to 20 hours per week. Parents and guardians are expected to enrol their child in a pre-school class, but there are no sanctions if they do not comply.
2016	A new normative curriculum for ECEC (<i>Varhaiskasvatussuunnitelman perusteet</i>) is prepared by the Finnish National Agency for Education and comes into effect in 2017.
2018	Amendments to the Act on Early Childhood Education and Care (<i>Varhaiskasvatuslaki</i>) come into force and changes are updated in the National Curriculum Guidelines for ECEC.
2020	Each child’s subjective right to ECEC is restored in the Act on Early Childhood Education and Care (<i>Varhaiskasvatuslaki</i>).
2021	Deviations from ECEC ratios are specified in the Act on Early Childhood Education and Care. The staff are obliged to report any problems regarding the organisation of the ECEC setting.

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. The SEEPRO-3 editors have chosen the following age-inclusive format: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6. In the case of Finland, the relevant format is **0–6** years, since pre-primary education is part of ECEC and children start school when they are 7 years old.

2022	The inclusive principles and the specifications regarding special support are recorded as part of the Act on Early Childhood Education and Care (<i>Varhaiskasvatuslaki</i>).
2023	The requirement for a license for private service organisers is recorded in the Act on Early Childhood Education and Care (<i>Varhaiskasvatuslaki</i>).

ECEC system type and auspices²

Finland has a unitary and decentralised system of early childhood education and care for children up to primary school age (7 years). It is an integral part of the education system. The Ministry of Education and Culture (*Opetus- ja kulttuuriministeriö*, OKM) is responsible for all public education, including ECEC. The Finnish National Education Agency (*Opetushallitus*) works closely with the Ministry of Education on the development of educational goals and their implementation, the creation of curricula and the organisation of funding allocations and expenditures. At the regional level, various authorities are responsible for education; municipalities or private providers are responsible for the on-site organisation and financing of early childhood services.

General objectives and legislative framework

Education policy emphasises above all the right to equal opportunities for all. Education is considered a fundamental right of all citizens, regardless of age, place of residence, financial status, gender, family language or religion.

In 2018, a new Early Childhood Education and Care Act (*Varhaiskasvatuslaki*) came into force. Other legal provisions are the Government Decree on Early Childhood Education, Care and Upbringing (*Valtioneuvoston asetus varhaiskasvatuksesta*, 2018) and the Basic Education Act (*Perusopetuslaki*, 1998, with amendments), which regulates compulsory pre-primary education for 6 to 7 year-olds.

Further goals and principles are set out in the revised National Curricular Framework for Early Childhood Education and Care in Finland (*Varhaiskasvatussuunnitelman perusteet*), which came into force in August 2016 and is legally binding both for public and private providers, and in the National Core Curriculum for Pre-Primary Education (*Esiopetuksen opetussuunnitelman perusteet*, 2014).

ECEC entitlement and compulsory attendance

Since 1996, all children up to the age of 6 have been entitled to a place in an ECEC setting. Each of the 309 (2023) municipalities is obliged to provide the appropriate number of places. If the extent of municipal provision is not sufficient, vouchers for settings run by private providers can be issued by the municipalities.

An amendment to the Act on Early Childhood Education and Care in 2016 restricted the individual entitlement to early childhood education and care to 20 hours per week where one of the parents was unemployed or on maternity, paternity or parental leave, whereas parents in em-

² The Eurydice country report on ECEC in Finland provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

ployment or studying still had the right to a full-day place (European Commission/EACEA/Eurydice 2019, 62). However, in alignment with a decision adopted by the European Committee of Social Rights (Council of Europe 2019), each child's subjective right to early childhood education and care was restored in 2020.

Since August 2015, attendance at one-year, free preschool classes has been mandatory for 6 to 7 year-olds. Municipalities must provide at least 700 hours of educational activities. Currently (2021), a pilot project is still underway to provide a free year of pre-primary education (for 20 hours per week) for 5 year-olds as well (European Commission 2020, 49). This is taking place in selected ECEC settings only.

Compulsory primary education starts at age 7.

Main types of provision

At the end of parental leave, when the child is usually 9 to 10 months old, parents can choose whether their child attends a municipal or private centre-based ECEC setting. Alternatively, they may prefer to register their child with a municipal or private home-based childcare setting or care for their child themselves. In the latter case, parents receive a childcare allowance until the child is 3 years old.

The Finnish Act on Early Childhood Education and Care recognises three different forms of ECEC: 1) centre-based ECEC, 2) home-based childcare and 3) sessional ECEC, such as playgroups, all of which follow the same framework curriculum.

Municipalities provide **ECEC centres** (*päiväkoti*) for children between 0 and 6 years of age. Enrolment is possible on a full-day (maximum ten hours) or on a half-day basis (maximum five hours).

Children whose mother tongue is Swedish or Sami can also attend facilities in their respective family language. The opening hours of ECEC centres (usually from 6:15 to 17:30) are adapted to local needs, including shift workers. However, it is recommended that attendance should not be longer than 10 hours a day. There are about 20 Sámi-language ECEC centres in Finland (Aurola 2020) and about 380 Swedish-language ECEC centres (Oker-Blom 2021).

Pre-primary education (*esiopetus*) is part of ECEC. Municipalities have been required to provide free, compulsory pre-primary classes for 6 year-old children since August 2015. Pre-primary education is typically offered for 4 hours daily (or 700 hours annually), and most children are also enrolled for additional hours in an ECEC centre to ensure full-time coverage. This means that the children come under two different curricula and legislative regimes during their day in ECEC. The pre-primary education group must be staffed by a teacher who has completed a university-based initial professional education. Most commonly, children attend a pre-primary group in an ECEC centre from 8:00–12:00, 8:30–12:30 or 9:00–13:00. In some cases, pre-primary education can take place in primary school (see *Table 4* for the current distribution) and be held either by a primary education teacher or an ECEC teacher. In the fall of 2021, the Ministry of Education and Culture launched a two-year pre-primary education pilot phase, which is scheduled to end in the spring of 2024. It is estimated that approximately 10,000 children will have participated by then. It includes an extensive research project that is evaluating the organisation in the municipalities, the effects of two-year pre-primary education on children, and the experiences of the staff and the children and their parents or guardians (Ministry of Education and Culture 2021c).

Free transportation is provided for children who live further than 5 km from the nearest facility. In 2021, there were 2,856 such classes, of which only 44 were private independent and 2,812 private subsidised.

Children aged 10 months to school age can also be cared for in a regulated **home-based child-care** setting (*perhepäivähoito*). This is offered either by municipalities (also as group childcare) or by private providers for parents who receive the childcare allowance.

In addition, some church (e.g., the Lutheran Church) and non-profit organisations offer open-door short-term sessions for children and parents such as **playgroups** (*päiväkerho*).

Many municipalities also began to organise playgroup activities for children who do not meet the criteria for a full-day place in ECEC. Nevertheless, the pedagogical standards (e.g. education and training of staff) in playgroups cannot be compared with the standards in regular institutions. Moreover, in many municipalities playgroups are offered only a few days per week and only for three hours per day (Kumpulainen 2018).

Provider structures

Early childhood education and care is offered by municipal and private providers. Municipalities have a statutory duty to ensure that they can offer families with children appropriate childcare options. If there are not enough places in municipal facilities to meet demand, municipalities can also arrange places with private providers. According to the amended Early Childhood Education and Care Act in 2023, private ECEC providers must be licensed by the Regional State Administrative Agency (2023) before starting operation.

Private ECEC provision can also be commercially run, but the providers must meet the criteria required of public services. Both the Early Childhood Education and Care Act and the National Curriculum are binding for private providers. Especially in urban areas, private-commercial providers have increased recently, but this sector is still relatively small (6 to 8%, Kumpulainen 2018).

In 2021, 81% of all children in early childhood education and care attended municipal institutions, 6% were cared for in municipal home-based settings, and 19% in private ECEC centre-based and home-based settings. Altogether, 16.2% of under 3 year-olds and 83.8% of children aged 3 up to statutory school age were enrolled in ECEC settings, see *Table 1* (Eurostat 2023I).

Only 6% 2.5% of the children in pre-primary classes in primary schools were enrolled in private settings in 2021 (see *Table 2*).

Table 1

Finland: Number of children in early years settings by provider type, 2021

Provider type	Under 3 year-olds	Share in %	3 years to statutory school age	Share in %
Private for-profit and Private non-profit	12,428	23.9	28,806	14.2
Public	39,621	76.1	173,373	85.8
Total	52,049		202,179

Participation rates in regulated provision

Table 3 shows the development of enrolment rates since 2005. More than half (56.4%) of children under 3 years of age in Finland did not attend a centre-based setting in 2022, which can be explained at least in part by the generous parental leave and the childcare allowance. In contrast, 92.8% of children between the ages of 3 and school entry attended a centre-based setting. Since 2005, both rates have increased significantly.

Table 3

Finland: Participation rates in centre-based ECEC provision by age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	8	25
	Over 30 hours	19	51
	No enrolment in ECEC	74	24
2010	1 to 29 hours	8	21
	Over 30 hours	20	56
	No enrolment in ECEC	72	23
2015	1 to 29 hours	7.9	23.2
	Over 30 hours	24.6	59.6
	No enrolment in ECEC	67.4	17.2
2022	1 to 29 hours	9.3	19.6
	Over 30 hours	34.3	7.1
	No enrolment in ECEC	56.4	73.2

Source: Eurostat 2023b, Slight deviations from 100% due to roundings

Broken down by age, more than two-thirds of 2 year-olds and between 84-92% of 3 to 5 year-olds were enrolled in an ECEC setting in 2021. Almost all 6 year-olds (96.3%) attended the compulsory pre-primary class (see Table 4).

Table 4

Finland: Number and enrolment rates of children in centre-based ECEC settings, by age, 2021

Age	Number of children in ISCED-01 settings	Enrolment rates in ISCED-01 settings, in %	Number of children in ISCED-02 settings	Enrolment rates in ISCED-02 settings, in %
Under 2 years	17,396	18.8		
2 year-olds	34,653	71.6		
3 year-olds			43,455	84.3
4 year-olds			48,813	88.8
5 year-olds			52,322	91.8
6 year-olds			57,176	96.3

Source: Eurostat 2023e, h

In 2019, 63% of children under 3 years were cared for at home or attended open door ECEC services such as playgroups. Because of the Covid pandemic the share of children under 6 years attending ECEC centres decreased to 22% (Eurochild 2021).

In 2019, the overall attendance rate in ECEC centres was 77%, only 1% of the 1 to 6 year-olds were enrolled in a private setting.

In 2022, only a relatively small proportion of children (about 16%) attended pre-primary classes located in schools (Statistics Finland 2023a):

Table 5

Finland: Number and relative share of children in pre-primary classes by institution, 2022

Age	Total	Located in ECEC centres	Share in %*	Located in schools	Share in %*
Up to and including 5 year-olds	6,915	6,811	11.2	104	0.2
6 to 7 year-olds	53,058	43,718	71.8	9,340	15.3
Over 7 years old	899	589	1.0	310	0.5
Total	60,872	51,118	84.0	9,754	16.0

Quelle: Statistics Finland 2023a, *own calculations

Financing and costs for parents

In 2019, a total of 1.13% of GDP was allocated to the early education sector, 0.5% on the child-care sector for under 3 year-olds and 0.6% on the 3–6 sector (OECD 2023).

ECEC settings are financed by state funds (30%), municipal funds (56%) and income-based parental fees (14%). The maximum monthly fee (including meals) for a full-time place in a public setting is €295 (2023). The municipalities decide on criteria for reduced fees. Since 2018, fees have been lowered overall to enable children from low-income families to attend an ECEC setting. For a 20-hour visit, parents pay a maximum of 60% of the cost of a full-time place, depending on income. The ceilings are adjusted every two years. In August 2021, parental contributions were reduced by 31% through an increase in the income limits, as were contributions for siblings (Ministry of Education and Culture 2021a).

700 hours per year (20 hours per week) of pre-primary education for 6 to 7 year-olds is free of charge. For additional hours, an income-related fee is charged. The fees for private ECEC settings are decided by the provider. As a rule, the fees in private facilities are higher than in municipal settings.

In 2018, the Ministry of Education launched a pilot project that provides for free attendance for 20 hours per week for 5 year-olds, which has already been extended twice; a total of 61 municipalities and 48,253 children have participated so far. The state compensated about 79% of the loss of fee income. It was found that the attendance rate of 5 year-olds increased compared to reference municipalities, as did the participation of low-income families (European Commission 2020, 49).

In 2022, a couple with two children spent about 11% of net household income on childcare costs³ (OECD.Stat 2023).

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Staff to child ratios and group size

As a rule, children in **ECEC centres** are grouped into three age groups: 0 to 2 years, 3 to 6 years and 6 to 7 years. However, in some cases, so-called sibling groups include all ages together. As stated by law, there may not be more children in a group than are allowed for three professionals and each group must have its own designated space.

The ratio of qualified staff to children is prescribed by law: One qualified professional for 4 children under 3 years or for 7 children over 3 years. If there are children in the group attending for less than 5 hours, the staffing ratio can also be 1:13.

Pre-primary classes as separate groups can also be attended by younger children and are then subject to the same staffing ratio as other ECEC groups. For pre-primary classes that are integrated into a primary school, the legal requirements of the primary school apply, in which the group size is not regulated. However, according to a recommendation by the Ministry of Education, there should be no more than 13 children in a pre-primary group, regardless of where it is located.

Curricular frameworks

Since 2018, the revised National Curriculum for Early Childhood Education and Care (*Varhaiskasvatussuunnitelman perusteet 2018* and *Esiopetuksen opetussuunnitelman perusteet 2014*) has been in force for **ECEC centres**, on the basis of which the providers draw up local curricula and individual plans for each child. The central aim is to strengthen children's transversal competences as well as knowledge, skills, values, attitudes and volition. Play and outdoor activities are considered a prerequisite for development, learning and well-being.

The revised version of the National Core Curriculum for Pre-Primary Education (*Esiopetuksen opetussuunnitelman perusteet 2014*), which was introduced in local curricula from 2016, applies to **pre-primary classes**. The latest edition states that it mainly emphasises principles related to children's individuality, the importance of active learning and the importance of acting as members of a group. The emphasis is on play-based and child-centred learning and on a positive view of life. A separate curriculum has been drawn up for the pilot phase of the two-year pre-primary education (Finnish National Agency of Education 2023).

While the frameworks define specific content areas, these are intended only as a guide for professionals to ensure the balanced development of children. Centre-specific educational programmes are expected to adhere to the main areas of the curriculum, including cooperation between professionals and parents.

The same five overarching competence areas apply to both curricula: (1) thinking and learning, (2) cultural competences, interaction and expression, (3) management of daily life, (4) multiliteracy and competences in information technology, and (5) participation and involvement (Finnish National Agency for Education 2021). Five learning areas are the basis of the pedagogical work, which are combined and applied according to age: (1) the world of languages, (2) diverse forms of expression, (3) me and our community, (4) exploring my environment, and (5) I grow up, move and develop. Curricula are legally binding for both public and private providers.

Professionals in both settings have the freedom to choose their own methods and create appropriate learning environments.

To ensure a smooth transition to primary school, the curricula of early childhood education and care, pre-primary and primary school are aligned (European Commission 2019 et al., 108).

Digital education

In both curricula, "multiliteracy and competences in information technology" are listed as areas of learning. Although multiliteracy can be defined in very different ways, in Finnish research in the field of early childhood education it is also understood as becoming familiar with and working with digital media (cf. Valkonen et al. 2020). The Finnish National Agency for Education also considers the increasing role of digital competences in the lives of young children to be important and sees helping children to find their way in different digital environments as one of the tasks of early childhood education (Finnish National Agency for Education 2021).

Local curricula may define "digital competences" in more concrete terms: For example, according to the curriculum of the City of Helsinki, children should be encouraged to acquire competences in the use of digital media and understand them as a support for learning, creativity, self-expression and interaction. They have the opportunity to do this in a protected environment and under the guidance of professionals. They should assist the children in dealing with digital media and use them together with them. Digital games can, for example, contribute to learning problem-solving strategies (City of Helsinki 2019).

Monitoring – evaluation

In Finland, quality assessments (of settings, staff, curriculum implementation and children's developmental progress) are regulated at the local level and financed through municipal budgets. At the national level, the Finnish Centre for Educational Evaluation is responsible for evaluations. Regional state administrative authorities, the National Inspectorate of Social Affairs and Health and (in the case of private providers) municipalities are also involved in the supervision of ECEC provision.

Child-related assessment

An individual development plan (IDP) is drawn up for each child in cooperation with the parents. According to the Early Childhood Education and Care Act (2018), this is obligatory and it is the responsibility of the professionals to draw up such a plan as part of the pedagogical documentation with the help of interviews with the parents or guardians. In addition, the child's opinions must be heard and taken into account. The individual plan takes into account the child's experiences, well-being, interests and strengths, but also the need for support and guidance. The goals defined in the plan refer to the pedagogical activities and supports. They are not competence requirements for the child. The implementation of the plan must be evaluated and the plan must be revised regularly.

Centre-level assessment

Internal centre-based assessments do not focus on children's learning outcomes, but mainly on pedagogical activities, so that the quality of the ECEC centre as a whole, including the conditions for children's development and learning, can be improved.

Self-evaluation procedures are decided at local level, but they are mandatory for all levels of education. The Finnish Centre for Educational Evaluation supports providers by providing training and quality assurance materials. Guidelines and recommendations for the self-evaluation of ECEC settings were published in 2019 (Finnish Education Evaluation Centre 2019). How the results of a self-evaluation are used is up to the individual settings (European Commission/EACEA/Eurydice 2019, 128).

External evaluation

The providers of ECEC are required by law to carry out external evaluations of the quality of their settings as well as their own provider quality. These are carried out in particular by the Finnish Centre for Educational Evaluation and cover mainly structural and process-related factors, the latter also being directly linked to children's activities and experiences.

Despite the obligation to evaluate, there are no detailed guidelines on how this should be done. However, providers must ensure that both children and parents can participate in the evaluation (European Commission/EACEA/Eurydice 2019, 132).

Inclusion agenda

Children with special educational needs and disabilities

According to the principles of inclusion, children are offered the necessary support. Children with special educational needs are integrated into mainstream institutions close to their home wherever possible. According to the Education Act (2018), every child should receive the support they need. The national curricula also apply to children with special educational needs, but these are adapted where necessary – and for each individual case. Children receive the support they need as soon as possible in order to initiate improvements as early as possible (European Commission 2020, 58f). In addition, the Right to Learn Programme 2020-2022 aims to enable even more children to access early childhood services through improved quality (ibid., 26).

If necessary, ECEC is carried out in a Special group (6 to 8 children with special educational needs), a Special integrated group (5 children with special educational needs and 7 without) or another group reduced in size due to the need for support.

The number of integrated special groups has decreased since the turn of the millennium, and some Finnish municipalities no longer have integrated special groups (Pihlaja and Neitola 2017). This means that not all children have the opportunity to be taught by a group-specific early special education teacher in a special group. The authors suggest that the background could be the municipalities' cost-saving efforts to improve efficiency.

Children with a migration background

For children of non-Finnish origin, the use of the respective family language is recommended throughout the ECEC sector (European Commission/EACEA/Eurydice 2019, 116f).

In Finland, Finnish and Swedish are the two official languages. Finnish is spoken by 86.9% (2020) of the population and Swedish by 5.2%. As a rule, there are institutions where one or the other language is predominantly spoken. In addition, municipalities in areas where Sami is spoken are also required to provide settings in this language. At the end of 2022, people from Russia were the largest group of non-Finnish speakers, followed by people from Estonia, Arab countries, England and Somali (Statistics Finland 2024).

In 2022, a total of 5.3% of the population had a non-Finnish citizenship, of which 34.7% came from other EU27 countries. In the age group of children up to 5 years, 6.2% had a non-Finnish background, of which 29.1% came from other EU countries (Eurostat 2023c).

According to national statistics, in 2022, 93.2% of the children in pre-primary classes were instructed in Finnish, 6.8% in Swedish (Statistics Finland 2023c, own calculations).

There are also support services for parents of children with a migrant background who care for their children at home. They can, for example, receive language tuition in an institution where their children are cared for at the same time (European Commission 2020, 120).

Parental leave arrangements⁴

Following a new leave scheme from August 2022, the former Maternity leave has been replaced with "Pregnancy leave". Paternity leave was abolished as Parental leave now is divided evenly between parents.

Pregnancy leave (*raskausvapaa*) lasts 40 working days (about four months), of which two weeks before and two weeks after the birth are compulsory. The allowance depends on income and amounts to 90% of annual income between €10,665 and €64,048. Above an annual income of €64,048, 32.5% are paid; below an annual income of €10,665, a minimum lump sum of €800 per month is paid. Pregnancy allowance is paid only to the pregnant/birthing parent, it cannot be transferred to the other parent.

There is no longer a statutory entitlement to a **Paternity leave** (*isyysvapaa*).

Parental leave (*vanhempainvapaa*) lasts 160 working days per parent. It is an individual entitlement, 63 days of which are transferable to the other parent. For the first 16 days 90% of the earnings are paid; for the remaining days, benefit is paid at 70% of the individual's annual earnings between €13,713 and €41,629, with a lower percentage for earnings above this level and a minimum flat-rate of €800 per month below this level. If parents work while on parental leave, they receive only the minimum flat-rate. Parents can be granted parental allowance at the same time for a maximum of 18 days. Parental allowance can be used flexibly in several longer or shorter parts and the leave can be taken for the same period of time.

After the end of Parental leave, parents can take **Home-care leave** (*hoitovapaa*) up to the child's 3rd birthday in two parts with a minimum length of one month. They receive a basic lump sum of €377.68 per month and €113.07 for each additional child under the age of 3, plus an income-related payment of up to €202.12 per month. In addition, in 2022, 21% of municipalities paid a supplement to the home-care allowance.

Parents can also reduce their working hours after the end of parental leave until the end of the second school year. Parents with children under the age of 3 who work a maximum of 80% of their normal full-time hours receive approximately €179.49 per month, and €269.24 for a maximum of 60%.

Data on the uptake of the new leave scheme are not yet available. In 2021, 79% of fathers took up to 18 days of paternity leave. The 158 days of parental leave are usually taken by mothers. In 2021, about 7% of fathers took an average of 58 days of parental leave. A very large number of families (87% in 2020), usually mothers, take advantage of the childcare allowance. In 2021, only 8.1% were fathers. However, the overall popularity of this measure has declined in recent years, and many children under 3 years of age are now cared for in ECEC settings – one reason for this is also the improved labour market situation for women.

Country expert assessment by Heidi Chydenius

In Finland, the participation rate of children in ECEC has historically been low, and **increasing the participation rate** has been a Finnish educational policy goal for years. Efforts have been made to promote children's participation in ECEC, for example by experimenting with free ECEC for 5 year-old children and by experimenting with two years of pre-primary education instead of one. Results have been achieved, as the number of children participating in ECEC has doubled over the past few decades. When examining the participation rate, it should be noted that in

⁴ The brief information in this section is based mainly on the country note for Finland by Johanna Lammi-Taskula and colleagues in the *International Review of Leave Policies and Research 2023* (see References).

Finland, family day care is included in the scope of ECEC, which internationally is usually excluded from ECEC. However, the share of home-based ECEC provision has decreased nationally (Ministry of Education and Culture 2021b). According to the Education at a Glance report (OECD 2022, 163), in 2020, 88% of 3–5 year-olds participated in ECEC, which is at the same level as the EU average and above the OECD average (83%). The participation rate of children under the age of 3 in early childhood education has also increased. The participation rate was 37% in 2020, compared to 28% in 2015. However, the participation rate of children under 3 years old is still below the average of other Nordic countries, which is around 50% (OECD 2022). It seems that increasing the participation rate in ECEC for toddlers should be given more attention. The goal may turn out to be challenging, as Finnish culture is characterised by a strong familistic ideology, which has been strengthened by the long history of ECEC under social welfare.

The most acute challenge in Finnish ECEC is the **educational skills gap**. ECEC came under the Ministry of Education and Culture in 2013, after which efforts have been made to make the ECEC system a part of the education system. The skills gap has gradually emerged in the context of the social sector administration since the 1980s, when a new personnel regulation made it possible to reduce the number of teachers in ECEC groups. While teachers had previously comprised two thirds of the staff and childcarers one third, the situation gradually reversed during the 1990s. With the change, the organisers of ECEC aimed for cost savings, which were not significant. At the same time, the personnel structure of ECEC began to focus more and more on those trained in social and health care. The training needs of teachers in ECEC were not investigated during the period when the sector came under the Ministry of Social Affairs and Health. The extent of teacher training in universities was too low, and there was no basis for information about the need for teachers or the changes ahead. The available information on the personnel structure in ECEC is still indicative. According to the estimate, currently around 80% of ECEC staff have completed social and health education and only around 20% have completed teacher education. About 40% of the ECEC personnel have a tertiary level education. The majority of the staff are practical nurses who have completed secondary vocational education.

The temporal connection between the change in personnel structure and the quality problem is obvious. The evaluation report published by FINEEC in 2019 contains alarming **signs of quality deterioration**. The educational backgrounds of the employees who participated in the evaluation corresponded to the shares of different educational and professional groups in the personnel throughout the country. According to the report, the goals set by the mandatory curriculum for ECEC were not universally understood and implemented in accordance with the curriculum. There were particularly worrying deficiencies in the use of handicraft and art education and children's literature in the activities of ECEC centres. Based on the assessment, an understanding of ECEC for children under 3 years old also appeared to be lacking.

The Act on Early Childhood Education and Care (540/2018) elevates the best interest of the child to become the guiding principle of ECEC and emphasises the importance of pedagogy and pedagogical competence. In connection with the reform of the law, increasing the **proportion of staff with tertiary education**, and especially those with teacher education, was a major goal. By 2030, more than 60% of the staff in ECEC will have completed tertiary level education and at least 33% will be qualified teachers.–Data collection on ECEC professional education and the need for it has also been developed. To support the implementation of the law reform and to curb the teacher shortage, the intake numbers for IPE at universities have been increased. Qualifying programmes have been implemented for the time being, whereby those who work as childcarers are offered the opportunity to complete a tertiary level teacher education alongside their work. The childcarers who participate in these study programmes often act as substitutes for the teacher and receive the teacher's qualification based on the education.

Increasing the competence level of ECEC personnel is possible with the support of sufficient **education funding** and by improving the sector's attraction and retention power. Since the teacher shortage has developed over a long period of time, it will not be solved quickly. We are currently in a situation where there is a **shortage of teachers** and ECEC organisers struggle with the challenges of organising the service. Sometimes the decision-makers would like to solve the situation in the short term, such as by lowering the eligibility criteria or thinning out the personnel structure. In other words, they want to abandon the development goals set by The Act on Early Childhood Education and Care (540/2018). As an alternative solution, it may be necessary to rely on the extension of the transition period after 2030, in addition to which it could be necessary to draw up a development plan that supports the goals of the law. The development of early childhood education requires a long-term commitment to the goal set by the law.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Finland was 5,548,241. It had been increasing slightly, but steadily over the last 20 years (2000: 5,171,382; 2010: 5,351,427; 2020: 5,525,292) (Eurostat 2023a).

Total fertility rate

In 2021, the average total birth rate in the EU27 (as of 2020) was 1.53. The highest total birth rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.46, Finland is below the EU27 average (Eurostat 2023d)⁵.

Children under 6 years of age

Table 6

Finland: Number of children under 6 years of age, 2022

Age	Number of children
Under 1 year	49,592
1 year-olds	46,833
2 year-olds	46,400
3 year-olds	48,655
4 year-olds	51,810
5 year-olds	54,671
Total 0 to under 6 year-olds	297,961

Single households with children under age 6

The vast majority of households (89.4%) with children under 6 were couple households in Finland in 2022. Single parent households accounted for only 4.7% – almost exclusively single mothers.

Table 8

Finland: Households with children under age 6, 2022

Household type	Total households	Total households, in %*
All households	419,600	
Couple households	375,100	89.4
Other household type	24,700	5.9
Single households, total	19,800	4.7
Single households, women	17,200	4.1
Single households, men	2,600	0.6

Employment rates of parents with children under 6 years of age

In Finland, in 2022, the overall employment rate for men (15-64 years) was 80.6% and for women 79.0% (Eurostat 2023j).

In 2022, 69.5% of women and 91.7% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), both shares were above EU-average (63.6% and 87.2% respectively) (Eurostat 2023i).

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Children at risk of poverty or social exclusion⁹

In 2022, 15.6% of children under 6 were at risk of poverty or social exclusion. This share was significantly lower than the EU average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 16.3% (EU: 21.6%) (Eurostat 2023f).

In 2020, 1.3% of children under 6 years of age – this share has doubled since 2017 (0.6%) – and 1% of the whole population suffered from severe material deprivation still a relatively low figure compared to European average (6.1% and 4.3% respectively). In particular, single parents and parents with three or more children are at greater risk of poverty (2019: 21.4% and 12.7% respectively) (Eurochild 2021; Eurostat 2021g).

About the author

Sylvie Rayna, PhD in psychology, is honorary *maître de conférences* in educational sciences at the French Institute of Education (*École Normale Supérieure de Lyon*). She is an associate researcher at the EXPERICE laboratory at Paris Nord University where she is continuing her (mostly comparative) research on ECEC policies and practices, with a particular interest in transitions in ECEC (0–6 years) and cultural projects.

1. ECEC governance in France

The system of early childhood education and care in France is bi-sectoral, split between a childcare sector (0–2 years¹) and an education sector (2–5 years). 2 year-olds may attend a childcare setting or a pre-primary² school (*école maternelle*).

During lunch breaks, out-of-school hours and holidays, most children attending the *école maternelle* are also supervised by a third sector: the pre-primary leisure-time sector (*accueil périscolaire*), with services in the schools or near them.

Since September 2019, compulsory schooling in the *école maternelle* begins when the children are 3 years old. They start primary school (*école élémentaire*) when they are 6 years old.

1.1 Centre-based childcare sector (0–2 years)

During President Macron's first term (2017–2022), provision for the under-threes (both centre-based and home-based) was under the joint responsibility of the Ministry of Solidarity and Health (*Ministère des Solidarités et de la Santé*) and local authorities. At the beginning of his second term in June 2022, this Ministry was split into two. The new ministries are called the Ministry for Health and Prevention (*Ministère de la santé et de la prévention*) and the Ministry of Solidarity, Autonomy and Persons with Disabilities (*Ministère des solidarités, de l'autonomie et des personnes handicapées*).

The new Minister of Solidarity stated the following: "I am, and I want to tell you this very clearly, the Minister for Early Childhood and Families". At the same time, a State Secretary for Childhood has been directly linked to the new Prime Minister Elisabeth Borne (before this, the relevant State Secretary was linked to the Ministry of Solidarity and Health). Moreover, the Minister in charge of equality between women and men, diversity and equal opportunities who has to ensure "the improvement of the consideration of maternity and paternity in professional careers and the development of childcare, in particular childcare centres", is also delegated to the Prime Minister. There is therefore a certain amount of overlapping in terms of responsibility for ECEC.

At the beginning of E. Macron's first term, linked to the National Strategy for preventing and fighting poverty launched in October 2018 (Jeantet 2022), a commission of specialists in early childhood (but without representatives from the social sciences and education) had made recommendations for family and childhood policy (prenatal–2 years, the 'first thousand days'), which have been piloted by the Ministry of Solidarity and Health since 2021 (Ministry of Solidarity and Health 2020).

In 2021, a Childcare Sector Committee (*Comité de Filière Petite Enfance*) was created to cope with the significant lack of available places and, according to the previous Minister, to "respond to the professionals' feeling of lack of recognition and the need to reaffirm the meaning of their activity". In June 2022, this committee made some propositions, after having asked the CNAF

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: 0–2 years for children up to 3 years of age and 3–5 years for 3, 4 and 5 year-olds. In the case of France, where children start the *école élémentaire* at age 6, the relevant formats are 0–2 and 2/3–5 years.

² To establish a degree of comparability between the country reports, the term 'pre-primary' is used in this report when describing the *écoles maternelles*. However, the *école maternelle* and the *école élémentaire* jointly form the *école primaire* for children aged 2–11 years.

(*Caisse Nationale des Allocations Familiales*/National Family Allowance Fund) to quantify the shortage in *crèches collectives* in the spring of 2022.

The Decree n° 2021-1131 30 (2021) on childcare had introduced, for the first time, common regulations for both home-based and centre-based care. *Crèches collectives* are categorised according to their size: *micro-crèches* (12 places maximum), *petites crèches* (13–24 places), *crèches* (25–39 places), *grandes crèches* (40–59 places). Also for the first time, a curriculum was launched in the childcare sector, the *Charte nationale d'accueil pour les jeunes enfants* (National Charter for Childcare, Ministry of Solidarity and Health 2021a) – It is inspired by the “Giampino report” – a report commissioned by the Minister of Families, Childhood and Women’s Rights under F. Hollande’s presidency (Giampino 2016); this report was the product of a broad consultation process with stakeholders in the childcare sector and the *Charte* has been available since 2017 (Ministry for Families, Children and Women's Rights 2017). It is interesting to note that in the Decree, *crèches familiales* – a marginal setting grouping home-based childcare providers employed by the *crèche familiale* (which organises activities for them and the children under their care) – are placed in the same category as the *crèches*. A more recent setting which is on the increase, the *maisons d'assistantes maternelles (MAM)*, is placed in the same category as independent home-based provision. The *MAM* are settings where several independent home-based providers work together entirely outside their own homes, thus creating a group of children (Garnier, Bouve, and Janner-Raimondi 2022). Independent home-based childcare providers also have the possibility of joining a *Relais assistants maternelles RAM* for shared activities and training. From 2021, the *RAM* became *Relais petite enfance RPE*, with extended missions towards families (Decree 2021-115).

Centre-based settings for children up to 3 years of age include **full-time** provision and **part-time** sessional care (*haltes-garderies*). The **all-day settings** are:

- *crèches collectives* – mostly *établissements multi-accueils* (they can include some places for part-time, home-based or emergency situations), which accounted for more than 80% of the places in childcare centres in 2019 (National Early Childhood Observatory 2021);
- *micro-crèches* (i.e. limited to 12 children maximum), accounting for more than 12% of the places in 2019; and
- *jardins d'enfants* for 2 and 3 year-olds. Now that school is compulsory from age 3 (since September 2019), these are now a minority setting, existing in some cities only; they are to be disbanded by 2024 or transformed into *crèches*

All these full-day settings can be publicly run, associative, parent-run, or private. The private sector continues to increase in number. Private *micro-crèches* in particular appear to be a “promising market”: in 2020, annual revenue amounted to more than 1.7 billion euros (Xerfi 2021).

To be able to open and then operate, all *crèches* must be approved and then controlled by the departmental services of the *Protection maternelle et Infantile – PMI* (Maternal and Child Protection), but a new Decree n°2022-856, highly criticised, aims to transfer this responsibility to the CAF (Family allowance fund), starting with an experiment with the CAF in the Haute-Savoie *département*.

In 2019, there were a total number of 60 childcare places for 100 children under 3 years of age, 30 of these in childcare centres (National Early Childhood Observatory 2021). There are significant regional disparities. The COVID pandemic has not impacted the choices of parents of babies (6 months to 1 year): in 2021, according to a survey with 9,000 families, the *crèche* remained the most desired form of childcare (34%), although only 24% said they currently use it (Crépin and Boyer 2022). Faced with the massive shortage of childcare professionals, the new Prime

Minister Elisabeth Borne announced, in July 2022, the wish of her government to build “a real public service for early childhood”, with the creation of 600,000 new places in *crèches*.

This public service (*service public de la petite enfance- SPPE*) was part of President Macron's campaign commitments (at the crossroads of the policies of supporting the birth rate, of full employment, of equality between women and men and of equal opportunities from an early age). In December 2022 – after a consultation phase about the *SPPE* with mayors and presidents of intermunicipal authorities, presidents and directors of family allowance funds, professionals in the early childhood sector through the Early Childhood Sector Committee and the National Union of Associations families (UNAF) –, Jean-Christophe Combe, Minister of Solidarity, Autonomy and Persons with Disabilities, had organised the National Council for the “Refoundation” of Early Childhood (*conseil national de refondation sur la petite enfance – CNR*). While, in March 2023, a report by the General Inspectorate of Social Affairs (Bohic et al. 2023) was published on the quality of care and prevention of abuse in *crèches* (after the death of a baby in a private *crèche* in Lyon in summer 2022), three reports by the Supreme Council for the Family, Childhood and Age (SCFCA 2023a, b, c) provided quantitative and qualitative recommendations for the *SPPE* project. However, an enforceable right is not yet envisaged.

On June 1st 2023, Prime Minister E. Borne launched the *SPPE* with 5.5 billion euros for 100,000 places in *crèches* by 2027 (target: 200,000 places in 2030) (see the Key Contextual Data document for France for more details).

1.2 Pre-primary education sector (2–5 years)

Pre-primary education settings (*écoles maternelles*) for 2 to 5 year-olds fall under the responsibility of the Ministry of National Education and Youth Affairs (*Ministère de l'éducation nationale et de la jeunesse*) and, since 1989, are part of the primary school system. Teachers undergo the same training in university institutes for pre-primary and primary teachers, with the professional title *professeurs des écoles* and a curriculum based on 3 cycles of learning from 2 to 12. The first of these focuses on pre-primary education (Ministry of National Education, Youth Affairs and Sports 2015, 2021b).

In 2020/2021, 84% of all school Teachers worked in the public sector and 16% in private schools under contract with the State (Department of Evaluation, Prospective and Performance 2021).

Although most 3 year-olds customarily attended the *école maternelle*, instruction became compulsory in September 2019 through the Law n° 2019-791 on the *école de la confiance* (school of trust). This change increases the cultural gap with the childcare sector.

Around 12% of 2 year-olds also currently attend an *école maternelle* (often only during the morning), whereas in the 1990s about a third of the age group were enrolled. Due to national policies they are more likely to attend schools situated in disadvantaged areas, or in some regions (West and North of France) may attend according to local traditional choices.

Auxiliary staff, buildings, equipment and the organisation of the lunch break and leisure-time during out-of-school hours and holidays come under the responsibility of local authorities.

Children with disabilities have been individually supported (full time or part time) since 2003 by *auxiliaires de vie scolaire AVS* (school life assistants) from pre-primary school to secondary school, and not by an additional teacher as is the case in some other countries. The parents must make a request for an *AVS*, the procedure is complex, the provision is insufficient, the results are questionable. In 2014, their job description was changed to *accompagnante/accompagnante d'élève en situation de handicap AESH* (support staff for students with disabilities). They are recruited by the rectorates or departmental services of the the Ministry of National Education (level Baccalaureat or equivalent, but no specialist training). They operate during school

hours in the classrooms, they may also work during lunch breaks and leisure-time activities but, in 2020, the municipalities had to take charge these out-of-school hours. Debates are ongoing... The new Minister of National Education and Youth Affairs, Pap Ndiaye, will be responsible for a "School reform", announced President Macron, having first to solve for 2022–2023 the problem of the increasing teacher shortage.

Local disparities exist: variations in funding between cities are considerable. The funding level varies: according to a teachers' union (SNUipp-FSU 2021), schools, in some cities, can be funded up to 10 times more than in other cities. A former Children's Advocate has noted: "The priority budgetary item of the State, National Education, is nonetheless an impoverished domain in many towns, villages, districts" and called for "true transparency" on the distribution and use of resources, i.e. on the choices made (Brisset 2021, 9).

Concerning the lowering of compulsory instruction age to 3, parents' associations tend to be in favour of this early instruction, which is assumed to reduce school inequalities. This is not so in the case of teachers' unions who are, together with some researchers (Garnier and Brougère 2017; Garnier 2019) and other specialists (Association Spirale 2021), very critical about this measure as well as about the general educational policy approach of the Minister Jean Michel Blanquer, which is very focused on children's evaluations and evidenced-based approaches. During President Macron's first term, for the first time, a panel evaluated "incoming" children (around 35,000 3 year-olds) to assess achievements of the pupils. Data were collected in January, March and May 2022; grids of observation were focused on the behaviour of children, recalling the proposal for early detection to prevent delinquency by President Sarkozy in 2005; the draft Law evoked "a behaviour book" on the children, to be documented by the teachers.

1.3 Pre-primary leisure-time sector (2–5 years)

Leisure-time facilities during out-of-school hours and holidays (called *accueils périscolaires* or *centres de loisirs*) in both pre-primary and primary school settings (or near them), come under (since 2022) the auspices of the Ministry of National Education and Youth Affairs and are organised by local authorities. They provide for children aged 2–11 years during a substantial lunch break and leisure-time periods before and after school hours and on Wednesday afternoons, as well during holidays. Since President Macron's first term (2017), cities are free to continue or discontinue the changes introduced by the School Rhythm Reform (introduced in 2013 by the previous Minister of Education, Vincent Peillon, under F. Hollande's presidency), which includes school finishing at 15:00 on two days, followed by a *temps d'activité périscolaire (TAP)* (leisure-time periods including Leisure-time Facilitators but also various associations). The latter sector has increased since this reform (Foirien 2018). In 2020–2021, one in two municipalities have a school *accueil périscolaire* (1.7 million places) (Foirien 2021).

"Professionalisation issues" of the "marginalised professional world" of leisure-time work are just beginning to surface (Divert and Lebon 2019). Through strikes, they are currently demanding better working conditions.

The positive role of the *accueils périscolaires* during the pandemic has been officially recognised in a report by the General Inspectorate of Education, Sport and Research (Mansuy et al. 2021), which highlights the following: the low recognition and precariousness of jobs and the problems of acquiring relevant professional diplomas; a lack of coordination at the local authority level; a discontinuity in education between school and out-of-school hours. The report recommends not only an appropriate professional qualification which takes into account the specificities of these leisure-time sessions and a reinforcement of the further training of Leisure-time Facilitators, but also the integration of out-of-school hours' issues in the initial professional education of teachers. It also recommends, at the local level, improved coordination and a greater continuity in

public policies. It was followed, in 2022, by the Plan "*Pour un renouveau de l'animation en accueils collectifs de mineurs*" (For a renewal of animation in centres for minors), which intended to counteract the lack of *animateurs/animateuses* with 25 measures (short and long term), but also to decompartmentalise school hours and out-of-school hours towards a better complementarity (Ministry of National Education, Youth Affairs 2022a). A *Comité de Filière Animation* (Leisure-time Sector Committee) has been created.

2. Who belongs to the early years workforce?

The ECEC workforce is characterised by hierarchical structures.

- In the centre-based childcare sector, a considerable proportion of staff has a paramedical background (*puériculteurs/puéricultrices* and *auxiliaires de puériculture*, who can also work in hospitals).
- In the *écoles maternelles*, teachers are not early childhood specialists; *professeurs/professeuses des écoles* can teach to 2 to 11 year-olds.
- Leisure-time settings linked to *écoles maternelles* (and often in the same building) are staffed by *animation* personnel (who can work with 2–18 year-olds).

The three sectors constitute three distinct cultural universes.

In childcare, educational staff are a minority (*éducateur/éducatrice de jeunes enfants – EJE*) (MHP and MSADP 2022a). There is weak recognition of the educational role of the *accompagnant éducatif/accompagnante éducative petite enfance – AEPE* (Ministry of National Education 2017a), as well as, in *écoles maternelles*, of the auxiliary staff (who have also the *AEPE* diploma) and of the Leisure-time Facilitators working in out-of-school hours.

2.1 Regular contact staff in ECEC provision

2.1.1 Centre-based childcare sector (0–2 years)

40% of personnel in childcare centres are required to be qualified. No precise statistics are available about the composition of the staff, but the main professionals in direct contact with children under 3 are the auxiliary personnel: *auxiliaires de puériculture* and *accompagnant éducatif/accompagnante éducative petite enfance (AEPE)*. According to the new Decree on Childcare (2021-1131), a full-time *EJE* is not required in *micro-crèches*; in larger *crèches*, one *EJE* is required for working with the children; some of these *crèches* may have two *EJEs*. The heads, generally a *puériculteur/puéricultrice* or an *EJE*, may or may not participate in activities with the children.

If they are employed by municipalities, all these workers become local municipal civil servants after having passed an exam. *Puéricultrices*, *EJE*, *auxiliaires de puériculture* are supported by their own professional associations, which organise local and national conferences.

All these workers are “under tension” (Odena 2009): the heterogeneity of professions makes teamwork difficult, the various initial training courses do not sufficiently prepare for work in childcare centres (Odena 2019). This tension was exacerbated during the pandemic. Studies on the hardship of work in *crèches* (Meuret-Campfort 2014) and its disrepute (Mozère and Jonas 2011) have been supplemented by studies of suffering at work (Moisset 2022) that affects both centre leaders and the staff in direct contact with children.

During the pandemic, a survey launched by an information site for childcare professionals³ gave voice to 1,270 of this group, 60% of them are staff working in *crèches*. Results indicate a strong feeling of being underpaid by 88% of them, mostly among the staff in direct contact with the children and in private *micro-crèches*, and a lack of recognition, by their hierarchy, of their acquired skills (a better recognition is noted in associative *crèches*). The wishes of *crèche* staff are: a salary increase of 25% (considered "realistic" and corresponding to an additional expenditure of 1,157 million euros, i.e. 7.6% of the Family Policy budget devoted to childcare); additional further training (CPD); smaller *crèches* (for 88%, the ideal size is considered to be 30 places or less); a better staff to child ratio in the work with infants (pre-walking), with 68% suggesting 1:3; and better support by the hierarchy (APEMA 2022).

The main categories of staff working in centre-based settings for under-threes appear below.

Paediatric Nurse (*puéricultrice/puériculteur*)

The 1983 initial professional education curriculum (consolidated by the Ministry of Social Affairs and Integration (2017/1983) prepares these professionals for working in hospitals (0–16 years), in medical consultations with mothers (prenatal to 6 years in *PMI*), as well as in childcare settings (under 3 year-olds) as a Centre Head in a *crèche collective* or open-door centre for home-based childcare providers (*relais petite enfance – RPE –* previously called *relais assistantes maternelles – RAM*) (Albérola and Olm 2011; Vérité 2008). They can then become Early Childhood Coordinators/coordinators of *crèches* (Baudelot and Rayna 2000).

The initial professional education in a public or private *école de puériculture* (3 years as a nurse, plus 1 year of specialisation as a Paediatric Nurse) for work with children 0–16 years old, is not yet recognised as an equivalent of a Master's degree but nevertheless as a Bachelor's degree. Their association (*ANDPE*⁴) continues to demand recognition at the level of a Master's degree.

In *crèches*, increasing administrative tasks of heads have impacted the presence of Paediatric Nurses among the children. Initiation and/or participation in certain activities or projects with children – such as cultural or artistic projects (Rayna 2016), or bridging activities between *crèche* and *école maternelle* or leisure-time settings (Péralès, Chandon Coq and Rayna 2021) – can vary from one *crèche* to another.

Early Childhood Educator (*éducatrice/éducateur de jeunes enfants – EJE*)

The curricular requirements of the *EJE* initial professional education were updated in 2005 and for the childcare sector now include: working in direct contact with children or as a Centre Head in a *crèche collective* or in open door centres for home-based childcare providers (*relais assistantes maternelles – RAM –* renamed *relais petite enfance – RPE*), and sometimes with 2 year-old children in bridge classes in *écoles maternelles* (Dupraz 1995; Villain and Gossot 2000), as well as in *PMI* consultations. The minimum requirement was changed in 2011 from a post-secondary qualification to a Bachelor's degree for working with 0–7 year-olds. The training reform of 2018 required a mandatory agreement between the public or private IPE institution (*école d'éducateurs de jeunes enfants*) and a university for the approval of the ECEC centres; their pedagogical committee must be chaired by an academic, and the examination boards for obtaining the final diploma must include a trainer or an academic and a state-recognised professional in the sector (Ministry of Solidarity and Health 2018).

³ This survey by the site *Les pros de la petite enfance* was conducted with P. Moisset who has published the analysis in several articles (on this site).

⁴ Association Nationale des Puériculteurs/puéricultrices Diplômée.e.s et Etudiant.e.s (National Association of qualified paediatric nurses and students)

Auxiliary Paediatric Nurse (*auxiliaire de puériculture*)

These professionals work in hospitals, childcare settings and *PMI* consultations. The 2006 curricular requirements for this qualification have been consolidated by the recent training reform which provided for two months of additional training (currently from 10 to 12 months) (Ministry of Solidarity and Health 2021b). Since 2020, there are no more entrance exams to public or private *écoles d'auxiliaires de puériculture* (minimum age: 17 years), the candidates have to provide a presentation file (“dossier”). The diploma obtained is now higher than the *CAP-AEPE*. This upgrading, welcomed by the National Association of Childcare Auxiliaries (*ANAP*), has not reduced the shortage.

Early Childhood Educational Support Person (*Accompagnant éducatif/accompagnante éducative petite enfance: AEPE*)

Another kind of auxiliary staff, holders of an early childhood certificate following a 2-year vocational secondary school course in a public or private vocational school (*lycée professionnel*), are also allowed to work in *crèches* and become local civil servants (after having passed the required examination). This *CAP petite enfance (CAP PE)* certificate⁵ – created in 1991 for the workers who support teachers in schools (*ATSEM – agent territorial spécialisé des écoles maternelles* in public schools or *ASEM* in private schools and schools in Paris) – was upgraded and replaced in 2019 by the *CAP Accompagnant éducatif petite enfance* certificate. Minimum age is 18 years (on the day of passing the *CAP*). This first step towards another diploma in childcare now permits work in home-based and centre-based care, *écoles maternelles* and leisure-time settings. The new *CAP* aims to revalorise these less recognised (often unnamed) professionals (Ulmann *et al.* 2011).

⁶ n/a not applicable

2.1.2 Pre-primary education sector (2–5 years)

The Law *pour une école de la confiance* (for a school of trust) (2019-791), which lowered compulsory instruction age to 3 years in September 2019, has revised the initial professional education for school teachers. The *INSPE* (*Instituts Nationaux Supérieurs du Professorat* – National Higher Institutes of Teaching) have replaced the *ESPE* (*Ecoles Supérieures du Professorat et de l'Éducation* – University Colleges of Teaching and Education). They are attached to a university (Ministry of Higher Education and Research 2020). There are 32 *INSPE* situated in the 30 school districts (*académies*) in France. They are public – with a few exceptions such as the Catholic University of Lyon or the Catholic Institute of Paris. The district rector organises the recruitment examination (*CRPE – concours de recrutement de professeurs des écoles*) for the area and the students' workplace-based learning.

The new award for becoming an *Agent (territorial) Spécialisé des Écoles Maternelles* (*ATSEM/ASEM*) is the certificate as an *Accompagnant éducatif/accompagnate éducative petite enfance* (*CAP AEPE*) which replaced the *CAP PE* in 2019. In municipal schools, a recruitment examination is required for becoming an *ATSEM* and municipal civil servant. In the private sector, *ASEM* are recruited by the heads of the schools and paid by the private school provider.

Pre-primary Teacher (*professeur/ professeure des écoles*)

The qualification route for Pre-primary and Primary School Teachers (*professeurs/professeures des écoles*), who are national civil servants qualified to work with children (2–12) both in *écoles maternelles* and *écoles élémentaires*, takes place after the completion of a Bachelor's degree in a chosen discipline. Successful candidates are awarded a Master's degree in "Professions of teaching, education and training" (*MEEF – métiers de l'enseignement, de l'éducation et de la formation*).

The studies are discipline-oriented. The *professeur* is an "expert in the content taught" (Ministry of Higher Education and Research 2020). At the beginning of the Master's degree course, students choose between a range of different options which can be proposed by the universities associated with the *INSPE*, where they then attend courses in these key areas and receive mentoring support throughout the two years of study and during the preparation of their Master's thesis.

During the first year of the Master's degree course, they not only have to pass the exams of the *MEEF* itself but also a required specific academic recruitment examination (*CRPE – concours de recrutement des professeurs des écoles*). During the second year, if they have passed the exam, they are paid (€1,827 per month gross = €1400 net corresponding to the first step of a teacher remuneration) to work half-time as a teacher while they continue studying. The reform of the *MEEF* (Ministry of National Education, Youth Affairs and Sports 2021b) stated that the *CFPE* will now take place at the end of the second year. From 2022-2023, students will be paid only after their studies (at the second step) (Ministry of National Education and Youth Affairs 2022b, 2022c). Work-study training will however allow a small remuneration (€ 865 per month gross = €722 net) planned for a certain number of selected students (Ministry of National Education and Youth Affairs 2022b).

The *INSPE* are also open to parents with three children and high-level athletes without a Bachelor's degree.

Auxiliary staff (*ATSEM/ASEM*)

In *écoles maternelles*, Pre-primary Teachers are supported by auxiliary staff specialised in working with pre-primary age children: *Agents (territoriaux) Spécialisés des Écoles Maternelles*

A(T)SEM. They are recruited by the municipalities (and can become municipal civil servants) or by heads of private schools.

Each class for 2 to 3 year-olds (*toute petite section, TPS*) and for 3 to 4 year-olds (*petite section, PS*) generally has its own ATSEM/ASEM, who helps the teacher, cleans the room, cares for the children (Garnier 2010) and is in charge of them during out-of-school hours. They mediate between the pre-primary institutions and families (Garnier 2008). According to a report by the General Inspection of National Education (Bouysse, Claus, and Szymankiewicz 2011), there are significant disparities between municipalities, with some providing support for greater educational involvement and others continuing to regard ATSEM as the former *dames de service* whose only tasks were cleaning the classroom and helping children in the bathroom. Some cities have one ATSEM in each pre-primary class. In some settings, teachers and ATSEM can cooperate as complementary members of a team (Vasse 2008).

Since 2016, an ATSEM group has been created. The ATSEM now have an annual event. In 2017, the report on “The missions of the ATSEM” by the General Inspectorate of National Education and the General Inspectorate of Administration (Debrosse et al. 2017) recognised their educational role and pedagogical assistance to teachers. In 2018, the Decree n° 2018-152 stated that they “belong” to the “educational community”, they can assist teachers with children with special educational needs.

2.1.3 Pre-primary leisure-time sector (2–5 years)

50% of staff in leisure-time settings have to be qualified. Staff (*animateurs périscolaires*) employed by the municipalities (or associations) complement the work of the *écoles maternelles* in out-of-school hours: before 8:30 and after 16:30, during the two-hour lunch break, on Wednesday afternoons and during the school holidays. If cities (such as Paris) continue to apply the School Rhythm Reform (Law 2013–595), school finishes at 15:00 on two days per week and is followed by a *temps d'activité périscolaire (TAP)* (a leisure-time period).

In the public sector, the Leisure-time Facilitators can be tenured or contractual workers within the territorial public function (*fonction publique territoriale*) after passing a recruitment examination as *animateur territorial d'animation*.

Leisure-time activities usually take place in the building and grounds of the *écoles maternelles*. The staff in this sector comprise out-of-school care Leisure-time Facilitators (*animateurs/ animatrices périscolaires*), led by a Head of the leisure-time setting (*directeur, directrice de centre de loisirs*). They cooperate with *ATSEM /ASEM* staff during the lunch break and, if there are *TAP*, with cultural associations (professionals for reading with young children, artists, sport educators, etc.). The offer of leisure-time activities is highly variable, depending on the particular city (Divert and Lebon 2017; Lebon and Simonet 2017).

The minimum and most frequent award in this leisure-time sector for both pre-primary and primary school children is the 'Skills for the Leisure-time Facilitator Occupation' certificate (*BAFA – brevet d'aptitude aux fonctions d'animateur*), acquired after one month's training (in three sessions) in a training centre and on site). The requirement for heads is the 'Skills for the function of directors of leisure-time settings' certificate (*BAFD – brevet d'aptitude aux fonctions de directeur de centres de vacances et de loisirs*). The *BAFD* is obtained after 10 days' training, 14 days of practical placement, 6 days of course attendance and again 14 days of placement (Ministry of City, Youth Affairs and Sports 2017). *BAFA* and *BAFD* are non-professional diplomas. They characterise the so-called "voluntary" animation sector (a majority) as opposed to the so-called "professional" animation sector which comes under a series of other diplomas, infrequently issued despite the motivations of some of the "voluntary" Leisure-time Facilitators (Bacou, Dansac, Gontier and Vachée 2014).

The requirements for entering the *BAFA* training have been lowered to 16 years old in July 2022; for the *BAFD*: having the *BAFA* and being 18 years old continue to be required. These diplomas were awarded by adult education centres⁷ – most of them are related to *éducation populaire* movements which were the founders, before the State, of the training in the animation jobs –, recognised by the Ministry of City, Youth Affairs and Sports and since 1st January 2021, by the Ministry of National Education, Youth Affairs and Sports, which became in July 2022 Ministry of National Education and Youth Affairs (*Ministère de l'Éducation Nationale et de la Jeunesse*).

Staff may work full time but more frequently part time. Most of them are students. Turnover is therefore significant.

⁷ The list is available at: <https://www.bafa-bafd.jeunes.gouv.fr/coms/listeOfn.aspx>

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

2.2.1 Centre-based childcare sector (0–2 years)

Generally, the Head of a *crèche* is either a *puériculteur/puéricultrice* or an *EJE*. They can take on the position of *directeur/directrice* after three years of experience. Other professionals can also

become a Head, such as a medical doctor. In large *crèches*, heads are generally helped by a Deputy Head. Requirements vary according to the size of the *crèches*. According to the Decree of August 2021-1131, a full-time Head is required for *grandes crèches* and a half-time Head for *petites crèches*. For *micro-crèches*, only a *Référent Technique* (technical adviser) is required, who can be part of the staff in contact with children; however, for managing several *micro-crèches*, a Head is required. Since this Decree, Psychologists, Psychomotor Therapists, Teachers, Social Workers may also work as Deputy Heads.

Heads have hierarchical power over staff, but with variations according to the type of *crèche* format, with more vertical organisation in the municipal *crèches* of large cities, a more horizontal organisation in associative *crèches*, and a more vertical organisation with aims focused on profitability in private *crèches* (Odena 2019). Heads themselves are part of a very hierarchical system.

Their missions include: recruiting staff; supervising their work; developing and implementing the educational and social project; managing the pedagogical, educational, logistical and financial aspects of the *crèche*; welcoming parents and their children; ensuring health and safety.

They may be actively involved themselves, with the staff, the children and the families in projects such as those with artists (Rayna 2016) or in bridging activities with *écoles maternelles*, *centres de loisirs* and other institutions or associations (Péralès et al. 2021; Pourcelot 2021).

2.2.2 Pre-primary education sector (2–5 years)

Pre-primary (and Primary) School Teachers (*professeurs/ professeures des écoles*) are qualified to work with children both in *écoles maternelles* and *écoles élémentaires*. They can become Heads after three years in the job. A short training is planned once their application has been accepted by the departmental authorities. In large schools, Heads are full time, with pedagogical (school projects) and administrative tasks (solving the problems of teacher replacements, canteen registrations, etc.); small schools may have a half-time Head who teaches a class during the other half time (Ministry of National Education and Youth Affairs 2014). They have no hierarchical power over the teachers. The Heads see themselves as an in-between – “... neither a real peer, nor a real superior” (Glomeron 2015, 3). However, they are in charge of the *ATSEMs* during school time, even if the *ATSEMs* come under the overall hierarchy of the municipality.

Unlike Heads of institutions for older children (12+), before 2021 they did not have any status benefits, despite the similarity of their missions (Roaux 2019a, 2019b). However, the Law n° 2021-1716 has created a recognised status as Head, giving them material and administrative help. With this law, Heads enjoy greater autonomy in the day-to-day management of their school. In 2022, one or more *référents direction d'école* (School Heads Advisers) will be created in each Directorate of the Departmental Services of National Education to support School Heads. The Decree no. 2022-724 specifies the missions and methods of recruitment of these Advisers who must already have been a Head of school. They will have to respond to Heads' requests for advice and support as well as facilitating exchanges among them. They will be appointed for three years (renewable once).

2.2.3 Pre-primary leisure-time sector (2–5 years)

The tasks of Heads of out-of-school care settings in pre-primary and primary schools are both educational (responsible for the educational project, links with families) and administrative (registration of children, partnerships, etc.). They welcome and train students preparing for a *BAFA*. They are in a hierarchical position but try to build projects with the Leisure-time Facilitators.

They take part in some activities in direct contact with the children. They can develop partnerships with the Schoolteachers, although collaboration is often difficult due to their different professional cultures, and with other partners (such as museums).

From 2013, educational complementarity/continuity is the aim of local projects that municipalities had to develop within schools and around. Very few of these *Projets Educatifs De Territoire* (Local Educational Project) (*PEDT*) include childcare settings. In Paris, significant common activities are developing between municipal *crèches*, *écoles maternelles* and leisure-time settings in *écoles maternelles* (Péralès, Chandon-Coq, and Rayna 2021).

2.3 Centre-based posts of responsibility

In France, there are no designated posts with an agreed remuneration in schools or childcare centres for specific pedagogical projects (such as, for example, being responsible for working with migrant parents across the school/centre). However, there are a number of non-paid posts of responsibility. For example, Centre Heads contribute towards selecting and evaluating the staff, except in schools where they have no hierarchical position. In all sectors, they can supervise students, together with selected staff. Some schools may have a remunerated position as *maître formateur*, a Tutor Teacher. These teachers receive an annual allowance (€1,250 in 2021). Heads (and staff), in all sectors, develop various kinds of projects without extra pay, although in the education sector Heads and Teachers working in schools situated in disadvantaged areas receive an annual allowance of €1.733 and in very disadvantaged areas €4.646.

In the childcare sector particularly, the role of Centre Heads (as well as municipal Early Childhood Coordinators) is pivotal. They can sustain professional development activities which provide a rich informal learning context for the low qualified workers and contribute towards motivating staff to progress in their career in terms of within-sector possibilities (Galtier 2013).

2.4 Co-ordinating and supervisory staff

2.4.1 Centre-based childcare sector (0–2 years)

In France, the Early Childhood Coordinator (*coordinateur/coordinatrice de la petite enfance*), a post created in 1981, cannot be compared to the *pedagogisti* in Italy who work in both the childcare and education sectors, thus contributing to a culture of early childhood (Galardini et al. 2020). French Coordinators work only within the childcare sector – sometimes only with *crèches*; they are mostly former Centre Heads. No specific qualification for the job is required. However, the National Centre for Territorial Public Services (*Centre National de la Fonction Publique Territoriale CNFPT*) offers a training cycle (7 modules over 27 days). Their overall mission is to participate in the development and application of a comprehensive early childhood policy (Baudelot and Rayna 2000; Baudelot et al. 2003).

They can support the implementation of the educational plans of *crèches*, such as those developed with local artists and parents (Rayna 2016) or with Leisure-time Facilitators and Teachers in the frame of municipal educational projects (*PEDT*) (Péralès, Chandon-coq, and Rayna 2021). They help to create and co-ordinate networks of *crèches*, but their primary task is to supervise the staff, to evaluate them together with the Heads, to evaluate the Heads, and to check the proper functioning of the settings. This part of their job devoted to steering and control seems to have increased in recent years; sometimes it can have a limiting effect on staff creativity.

Heads of *crèches* (and other professionals) can have other posts of responsibilities in municipal early childhood departments. The CAFERUIS training (*certificat d'aptitude aux fonctions d'encadrement et de responsable d'unité d'intervention sociale* – certificate of aptitude for manage-

ment functions and heading a social intervention unit) can be useful. Created in 2004, this certificate for middle managers in social and medico-social organisations is based on 400 hours (four theoretical units: project design and management; technical expertise; team management; administrative and budgetary management), plus work-based training (420 hours), plus a dissertation.

2.4.2 Pre-primary education sector (2–5 years)

Professeurs/professeures des écoles are inspected and evaluated by national education Inspectors (*inspecteurs/inspectrices de l'éducation nationales – IEN*) who are in charge of a *circonscription* (a district including 30-50 schools). A recent report (Cour des comptes 2022) noted inequalities in their distribution. Large *académies* are less favoured: in 2020, in the poorest *département* (Seine-Saint-Denis, in the North of Paris), there was one *IEN* for 307 Teachers while there was one *IEN* for 209 Teachers at the national level. The individual inspections represent 30% of their work (they are also in charge of the organisation of examinations, administration of schools, etc. *IEN* work towards the implementation of national initiatives, within the framework of the plan of their *académies*. They work with both pre-primary and primary schools. As with the teachers, they have lost the specificity of working in *écoles maternelles*; little room is given to pre-primary schools in their training; they are generally more oriented towards the primary school and beyond than to early childhood. A study of 600 *IENs* indicates that their morale is deteriorating (too many meetings, etc.). Two-thirds of them say they have little room for initiative and feel dissatisfied with the listening and support from their superiors (Fotinos and Horenstein 2016). A considerable fragmentation of their tasks is estimated and recommendations have been made to the Ministry of National Education to refocus their job on the pedagogical support of teachers and staff.

Pedagogical Advisers (*conseillers/conseillères pédagogiques*), who work closely with the *IEN*, accompany novice Teachers and organise local pedagogical support, contributing to the initial and continuing professional education of the Teachers. However, the attractiveness of this job is declining.

Professeurs/professeures des écoles working in *écoles maternelles* continue to have their own association (*Association Générale des Enseignants d'Ecole Maternelle – AGEEM – created in 1921*) and conferences, despite the integration of the *école maternelle* into the primary school.

2.4.3 Pre-primary leisure-time sector (2–5 years)

Leisure-time Facilitators work under the responsibility of their Head. The staff of the leisure-time settings are supervised by the municipal service in charge of school affairs. As with Early Childhood Coordinators, municipalities can have coordinators for *accueils périscolaires*. There is no legal framework for the supervision. In this sector there is no association nor national network, but some Leisure-time Facilitators attend popular education federations (League of Education, *Franças*, Léo Lagrange, etc.).

2.5 Specialist support staff

2.5.1 Centre-based childcare sector (0–2 years)

Medical supervision of children is compulsory in all *crèches* with more than 10 children, but not therapy. Until recently, it was provided by a paediatrician or general practitioner, in cooperation with the *Protection maternelle et Infantile (PMI, Maternal and Child Protection Service)*. According to the recent Decree on childcare (2021-1131), this medical doctor was replaced in 2021 by a *réfèrent santé et accueil inclusif* (Health and Inclusive Care Adviser): ten hours per year for *micro-crèches* and up to 50 hours per year for *crèches* with 60 places. Due to the shortage of

doctors (also severe in the *PMI* centres), this function is now open to Paediatric Nurses or general nurses with three years of professional experience with young children. They will not be recruited to carry out the medical follow-up of the children, but to contribute to the dissemination of a health-related culture among the teams (administration of medicines; adaptations for children suffering from chronic illness or in a situation of disability; identification of abuse or situations presenting a danger to the child, etc.).

Other paramedical staff can intervene, at the request of the *crèches*, on a regular basis: Psychologists, Psychomotor Therapists, more recently Speech Therapists or Occupational Therapists, but not for therapy, even if children with disabilities are present.

All these medical and paramedical professionals work part time or full time, with varying status. Other external professionals (artists, musicians, storytellers, etc.) intervene occasionally to develop certain activities and enrich the work of the staff.

In recent years, compensatory programmes (language, play) targeting certain children and families have developed in some cities, following recommendations on social investment in early childhood (Terra Nova 2017). Highly criticised (Ben Soussan and Rayna 2018) but supported at the national level, these costly programmes which have not shown their effectiveness (Chaisemartin, Daviot, Gurgand, and Kern 2021), are still recommended in poor neighbourhoods – where the number of *crèches* is six times lower than the national average and 68% of children from the richest 20% families have access to childcare compared to only 9% for the poorest (Institut Montaigne 2022).

2.5.2 Pre-primary education sector (2–5 years)

The *médecins* and *infirmiers/infirmières de l'Éducation Nationale* (school doctors and nurses) have a preventive role. Their tasks increased during the pandemic, while at the same time shortages in the entire field of school medicine are significant (including secondary school). A report by the National Academy of Medicine (2017) warned of this deficiency and about the territorial disparities (one doctor for 2,000 to 46,000 pupils). The Cour des Comptes (2020) also made a critical communication to the Finance, General Economy and Budgetary Control Committee of the National Assembly. Currently, the national average is one Nurse for 2,000 pupils (the government's goal in the early 2000s was to have one nurse for 500 pupils).

The *RASED* (*Réseau d'aides spécialisées aux élèves en difficulté*, Network of specialised support for pupils in difficulty), established in France in 1990, brings together *psychologues scolaires* (School Psychologists) and *rééducateurs/rééducatrices de l'Éducation nationale* who are both specialised teachers. They are full members of the teaching staff of the schools where they work. These positions decreased between 2007 and 2012, under the presidency of N. Sarkozy, and again since 2017 despite the creation in 2017 of the body of School Psychologists (recruited into the body of Teachers, with a national diploma in school psychology obtained at university, they remained before 2017 Teachers by statute). The *rééducateurs/rééducatrices* have a one-year training at an *INSPE*.

Since 2019, Speech Therapists can work in schools with children with disabilities, under certain conditions (e.g. with children who are not already in speech therapy outside school).

A short-term training of 60 hours only is organised by the Ministry of National Education for recruiting *accompagnant/accompagnante d'élève en situation de handicap AESH* (Support staff for pupils with disabilities). The *AESH* work part time or full time.

2.5.3 Pre-primary leisure-time sector (2–5 years)

There are no specialist support staff allocated to leisure-time settings, including the ones which receive children with disabilities. However, during *TAP (temps d'activité périscolaire)* in some cities, cultural or sport associations can continue to provide intervention.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

3.1 Centre-based childcare sector (0–2 years)

Qualifications

In 2011, *crèches* employed on average 11 staff: eight to ten of them were civil servants or had a secure job; one to three worked on a part-time basis with a non-permanent contract. Most were low-qualified staff, and turnover was frequent. 90% of the *crèches* employed at least one educator; 87% at least one auxiliary Paediatric Nurse, and 71% employed someone with the *CAP petite enfance* qualification. 50% of Centre Heads were qualified educators (Albérola and Jauneau 2012). More recent data are not available, even in the most recent CNAF or SCFCA reports. Following the Decree 2010-613 on childcare services, during N. Sarkozy presidency, the proportion of required staff with a diploma in the childcare sector decreased to 40% (*CAP PE* not included). This Decree provoked strong protests in the field (Ben Soussan 2011). This measure has been maintained while the increase in the private sector and the shortage of qualified staff have led to an overall drop in qualified staff in the *crèches* and especially in private *micro-crèches*. Deregulation aggravated the situation (Decree 2021-1131; Ministry of Solidarity, Autonomy and disabled persons 2022). One of the recent SCFCA reports (2023a) raises the question of strengthening the regulation of private *micro-crèches* whose profitability has been increased by these recent measures.

Gender

In France, 49.8% of the jobs occupied by women are concentrated in only 12 of the total of 87 professional categories (Ministry of Women's Rights 2016). Inequalities between women and men persist at all levels of society; the reduction of gender inequalities progresses very slowly; the negative consequences of the pandemic crisis were stronger for women (Ministry for Equality between Women and Men, Diversity and Equal Opportunities 2022; Roussel 2022).

Projects have been carried out with the aim of changing attitudes towards an increasing balance such as *Les métiers n'ont pas de sexe* ('Jobs have no sex') (State Secretariat for Equality between Women and Men 2017) including projects located in the under-threes childcare sector (Dhorain and Stefan 2014).

Childcare professions – open to men since 1973 for *EJE* and since 1983 for all other professions (Paediatric Nurses, Auxiliary Paediatric Nurses, etc.) – remain female-dominated despite the Law for equality between women and men (2014-873) and various initiatives for gender mix in childcare. In the childcare sector, ten years ago, men represented only 1% of the *auxiliaires de puériculture*, 1.5% of the *puéricultures/puéricultrices* and 2.7% of the *EJEs* (Grenat and Nahon 2011, Albérola and Olm 2011). Men themselves tended to avoid working directly with children and

generally seek jobs with greater responsibilities (Grenat and Marquier 2009). Nowadays the percentages remain very low, they are lower still for personnel in direct contact with children (Forment and Vidalec 2020).

Professional experiences of the rare men in childcare and in *écoles maternelles* shed light on the gender obstacles that run through the attempts at mixing – gender pressure on men being less clear in *école maternelle* than in *crèches* or home-based settings (Devineau, Félieu, Valentin, and Clémence 2020).

Ethnicity

Statistics regarding the ethnicity of staff are not authorised in France. However, auxiliary staff (*auxiliaires de puériculture, CAP AEPE*) often have a background of migration, which is more common in particular among unqualified staff.

Table 4

France: Structural composition of ECEC workforce – Childcare sector (0–2 years)

Staff categories	Year/proportion of workforce
Staff with a specialist three-year (or longer) early years higher education degree	2011* : <i>Puéricultrices/puériculteurs</i> : 4% <i>Éducatrices/éducateurs</i> – as Heads): 16%
Staff with a specialist vocational qualification (post-secondary)	Not applicable
Staff with a specialist vocational qualification (upper secondary) (regional variations)	2011* : <i>Auxiliaires de puériculture</i> : 36% <i>Accompagnant éducatif / accompagnante éducative petite enfance</i> : No data
Non-qualified or minimally qualified staff (Variations among municipalities, public and private sectors)	Approx. 50%
Specialist support staff who work on site on a regular basis: <i>Paediatrician</i> : (one half day/week, compulsory) who examines the babies on entry and follows them up. Since 2021 they have been replaced by a Health and Inclusive Care Adviser (Paediatrician or Paediatric Nurse) <i>Psychologist and/or Psychomotor therapist</i> : (one half day/week, non-compulsory, but frequently requested) Since 2019, <i>speech therapist</i> (under certain conditions)	No data
Male practitioners	2011*, 2012**, 2019***: <i>Puériculteurs</i> : 1.5% <i>Éducatours de jeunes enfants</i> : 2.7% <i>Auxiliaires de puériculture</i> : 1.0% <i>Accompagnants éducatifs</i> : 1.0%
Staff with a minority ethnic background	No national statistical data available. Estimated share of staff from Maghreb and sub-Saharan Africa relatively high***.

Sources: *Gresy and Georges 2012; **Naves and Visnia-Weill 2014; ***Forment and Vidalec 2020

3.2 Pre-primary education sector (2–5 years)

There are twice as many Teachers in primary than in pre-primary education. 12% are Heads of public schools (9% of private schools), 36% of public school Heads continue to teach while leading the school, 8% are totally discharged from teaching. 24% of Teachers are assigned to priority education (in the public sector), where 53% complete at least their 4th year in the same school – excluding priority education, they amount to 61% (Department of Evaluation, Prospective and Performance 2021).

Around 50,000 municipal auxiliary workers (*ATSEM/ASEM*) (1 for 50 children) work in pre-primary and primary education (Debrosse et al. 2017).

Qualifications

Teachers in the *écoles maternelles* (Ministry of National Education 2017b) must be fully qualified, apart from those working part time during the second year of their Master's degree programme (*MEEF*). Since 2021, the Master's students have to pass the *CRPE* not at the end of the first year but at the end of the second year – at the same time as their Master's exams and thesis; they are therefore no longer paid during their second year of their Master's studies, as was the case previously.

Contractual teachers may also be recruited: these are persons who have obtained the Master's degree but have not passed the *CRPE*, which is required for tenure, or even persons who have only a Bachelor's degree or with other profiles. They were numerous in the past; after a decrease in numbers, the last ten years have seen a renewed increase in the context of Teacher shortages. 24% of staff in schools are contractual staff (5% of the teachers in public schools, 19% in private schools) according to the *Social report on school education 2020-2021* by the Department of Evaluation, Forecasting and Performance of the Ministry of Education (2021). Despite the precariousness of employment, being a contract teacher seems to be becoming a more a deliberate choice (Bertron et al. 2021), while the institutionalisation of contractual workers suggests a quiet neo-liberalisation of education (Pons 2021). The resignation rate has also increased, especially among new fully-qualified teachers.

Concerning the *ATSEM* – 90% of them are territorial civil servants in the public sector –, there are disparities, and thus inequalities, between rich and poor municipalities which can employ more or less *ATSEM* per school (Garnier 2008, 2016). In previous official texts, the *ATSEM* only "participated" in the educational community but, since the Decree No. 2018-152 of March 1, 2018, they "belong" to the educational community. This Decree also gives them access to territorial Leisure-time Facilitators' jobs.

Auxiliaires de vie scolaire AVS (school life assistants), who supported children with disabilities since 2003, becoming in 2014 *accompagnant/accompagnante d'élève en situation de handicap AESH* (support staff for children with disabilities), are lacking. Recruited by the rectorates or departmental services of the Ministry of National Education after 60 hours of training provided by Ministry of Education, they receive around the minimum wage, with little upgrading taking place in 2022, Trouver un Métier 2022a; Ministry of National Education and Youth Affairs 2022d).

Gender

Up until 1974, men were not permitted to work in *écoles maternelles*. While they remained a minority among teachers, they held the majority of the positions at higher hierarchy levels such as the inspectorate (Ferrier 1997). In the *école maternelle* and *école élémentaire* together, there were 80% women in public schools and 98% in private schools. Gender stereotypes, fear of paedophile accusations and the relatively low status of this job may explain the lack of men (Fillod

2001; Jaboin 2010). Considering the education system as a whole, about 70% of the jobs were held by women while 70% of men occupy the administrative and management posts.

Nowadays the feminisation of the sector is confirmed (Department of Evaluation, Prospective and Performance 2021). Women represent 84% of the teaching force in public pre-primary and primary schools and 92% in private schools. 10% of Teachers, mainly women, in the public pre-primary and primary sector work part time (mainly to care for a child). Feminisation varies according to the hierarchical category, but the presence of women is increasing in the hierarchy: in 2020, 69% of Heads were women; 71% of *inspecteurs, inspectrices de l'éducation nationales (IEN)*; and 53% as *inspecteurs, inspectrices d'académie (IA)*.

Among the *ATSEM*, the rate of feminisation is 98% (Forment and Vidalec 2020).

Ethnicity

Statistics regarding the ethnicity of staff are not authorised in France. However, auxiliary staff in both the *écoles maternelles (ATSEM)* and the *écoles élémentaires*, often have a background of migration.

Table 5

France: Structural composition of ECEC workforce – Pre-primary education sector (2–5 years)

Staff categories	Year/proportion of workforce
Staff with a pre-primary and primary education higher education teaching degree	2014/15 (no more recent data available): with a Master's degree (<i>Professeurs/professeures des écoles</i>) 97%*
Staff with a specialist vocational qualification (upper secondary, post-secondary)	<i>ATSEM</i> (paid by municipalities): ranging from one per class to none (big variations between cities)
Unqualified staff	None
Specialist support staff (e.g. speech therapists) who work on site on a regular basis Further specialists (psychologists, specialized teachers) are requested if necessary through the <i>RASED</i> . Since 2019 speech therapists can work in schools under certain conditions.	School doctors and school nurses work in several <i>écoles maternelles</i> and <i>écoles élémentaires</i> at the same time (health promotion, early detection of developmental difficulties, promoting inclusive work). They visit settings regularly. But their numbers continue to decrease sharply: 2006: 1,400 medical doctors 2017:** 990 medical doctors
Male practitioners	In pre-primary settings <i>and</i> elementary schools Public sector: 16%*** Private sector: 8%***
Staff with minority ethnic background	No national statistics available – staff with a background of migration tend to work in areas with a high minority language population.

Sources: *Ministry of National Education 2017b. ** National Academy of Medicine 2017. ***Department of Evaluation, Prospective and Performance 2021.

3.3 Pre-primary leisure-time sector (2–5 years)

Qualifications

The “voluntary” Leisure-time Facilitators in *accueils périscolaires*, who usually work between 15 and 20 hours per “school week” and are in a precarious employment position (Mansuy et al. 2021), have a non-professional diploma (*BAFA*) (one month in a training centre and placements).

Some of them become “professional” Leisure-time Facilitators thanks to a *certificat de qualification professionnelle (CQP) animateur périscolaire* (professional certificate as a qualified Leisure-time Facilitator) which can be acquired by training of three months alternating between the training centre and the professional field. Few *animateurs/animateurices* have this certificate or other professional diplomas, such as the CPJEPS – *certificat professionnel de la jeunesse, de l’éducation populaire et du sport* (professional certificate – youth, popular education and sport). The majority of Heads of *accueils périscolaires* have the *BAFD*, another non-professional diploma obtained after the *BAFA* (around 45 hours of courses and placements).

To become a professional Head, another diploma is required, the *BPJEPS – brevet professionnel de la Jeunesse, de l’éducation populaire et du sport* (professional diploma – youth, popular education and sport). This baccalaureate level diploma then opens access to the DE JEPS (*diplôme d’Etat de la jeunesse, de l’éducation populaire et du sport*, national diploma – youth, popular education and sport) or to the DES JEPS (*diplôme d’Etat supérieur de la jeunesse, de l’éducation populaire et du sport spécialité “animation socio-éducative et culturelle”*, higher national diploma – youth, popular education and sport specialty “socio-educational and cultural animation”). This *Baccalauréat* plus the 3-year diploma allows higher positions in other sectors, such as head of social centres.

Gender

In 1982, over half (56%) of Leisure-time Facilitators were women. The feminisation of the sector has increased sharply since the mid-1990s. Nowadays the animation sector is highly feminised: In 2019, more than two-thirds of *BAFA* graduates (68%) and *BAFD* (72%) were women (Foirien 2020), but still less than in the childcare sector and the pre-primary education sector.

Ethnicity

Statistics regarding the ethnicity of staff are not authorised in France. However, “the ethno-racial dimension of workers in the animation sector appears to be strong”, especially in the Paris region (Divert and Lebon 2019).

Table 6

France: Structural composition of ECEC workforce – Pre-primary leisure-time sector (2–5 years)

Staff categories	Year/proportion of workforce
Staff with a specialist three-year (or longer) early years higher education degree	None
Staff with a specialist vocational qualification (upper secondary, post-secondary)	No national statistics available
Unqualified staff	No national statistics available
Specialist support staff (e.g. speech therapists) who work on site on a regular basis	None
Male practitioners	No national statistics available, but it is estimated that more male staff work in the leisure-time sector than in the childcare and pre-primary education sectors. In 2019, 32% of <i>BAFA</i> graduates were male and 28% of <i>BAFD</i> *.
Staff with a BME (black and minority ethnic) background or a ‘background of migration’	No national statistics available, but it is estimated that more staff with a BME/migration background work in the leisure-time sector than in the childcare and pre-primary education sector

Source: Foirien 2020

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Diversity is the main characteristic of the different job categories in ECEC, both regarding the duration of IPE (ranging from a few weeks to a Master's degree) and the content (from a para-medical to an educational/instruction orientation). IPE takes place in various kinds of centres: vocational training centres (for *puériculteurs/puéricultrices, auxiliaires de puériculture*), centres linked to a university (for *EJEs*), university affiliations (for Teachers) or a vocational secondary school (for *AEPE*). IPE can follow classical qualifying routes but also apprenticeship routes. Validation of acquired experience (VAE) may be used (except for *puériculteurs/puéricultrices*). For workers and job seekers, all the diplomas can be also acquired as part of continuing professional development.

4.1.1 Centre-based childcare sector (0–2 years)

The care sector comprises a majority of workers with low-level IPE.

The medical history of this sector remains visible through the presence of *puériculteurs/puéricultrices* (Heads of *crèches*) and of *auxiliaires de puériculture* working in direct contact with the children (since 2018, the level of their diploma has been upgraded). The place and recognition of the other auxiliary staff, the *accompagnants éducatifs /accompagnantes éducatives petite enfance (AEPE)*, has increased but the level of their diploma remains the same (now below the level of *auxiliaires de puéricultures*). Early Childhood Educators (*EJE*), who have always been in the minority as far as contact with children is concerned, are increasingly becoming Heads of *crèches*; nowadays they have a Bachelor's degree.

Paediatric Nurse

A *Diplôme d'État d'infirmière* (national diploma /Nurse, 3 years) or *Diplôme d'État de sage-femme* (national diploma /Midwife, 4 years), obtained after the *Baccalauréat*, is needed to enter a vocational training centre for prospective Paediatric Nurses (plus an entrance examination). The professional education consists of 1 year of studies in a public or private specialist training centre (*école, institut de puériculture*). The award is the National diploma in paediatric nursing (*Diplôme d'État de puériculture*). The Master's degree is not yet a requirement, but is one of the demands made by the profession.

Table 7

France: Paediatric Nurse

Job title in French: <i>Puéricultrice/puériculteur</i> Profile: Health/Social Care Professional
Entry requirements: University entrance requirement (<i>Baccalauréat</i>); <i>Diplôme d'État d'infirmière</i> (National diploma – Nurse, 3 years) or <i>Diplôme d'État de sage-femme</i> (National diploma – Midwife, 4 years) plus entrance examination
Professional studies: 1 year at a specialised vocational private or public training centre (<i>école/institut de puériculture</i>)
Award: National diploma – paediatric nursing (<i>Diplôme d'État de puériculture</i>)
ECTS credits: 180
EQF level: 6
ISCED 2011: 6

Job title in French: Puéricultrice/puériculteur Profile: Health/Social Care Professional
Main (ECEC) workplaces: <i>crèches</i> ; registered family day care networks; mother and child protection centres (<i>PMI – Protection maternelle et infantile</i> , 0–16 years); maternity and paediatric hospitals (0–16 years)

Early Childhood Educator

The university entrance requirement (*Baccalauréat* or equivalent) plus entrance examination, or qualification as *auxiliaire de puériculture*, *CAP petite enfance* and 3 years of work experience plus entrance examination, are required for being accepted at a vocational Early Childhood Educator training centre. Professional education consists of 3 years of post-secondary studies (equivalent to a Bachelor's degree) at a private or public vocational training centre (*école, institut, centre de formation d'éducateurs de jeunes enfants*) – which may be part of a more general School of Social Work, nowadays linked with universities. The award is the national diploma – Early Childhood Educator (*Diplôme d'État d'éducateur de jeunes enfants*).

Table 8

France: Early Childhood Educator

Job title in French: Éducatrice/Éducateur de jeunes enfants – EJE Profile: Early Childhood Pedagogy Professional
Entry requirements: University entrance requirement (<i>Baccalauréat</i>) or equivalent + entrance examination or qualification as <i>auxiliaire de puériculture</i> , <i>CAP petite enfance</i> and 3 years' work experience plus entrance examination Professional studies: 3 years at a specialist training centre (<i>école/institut/centre de formation d'éducateurs de jeunes enfants</i>) – which may be private or public and can be part of a more general School of Social Work and linked with a university. Award: National diploma /Early Childhood Educator (<i>Diplôme d'État d'éducateur de jeunes enfants</i>) ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main (ECEC) workplaces: <i>crèches</i> ; Kindergartens (<i>jardins d'enfants</i> , 2–4/6 years); family day care networks (<i>RAM – relais assistantes maternelles</i> , renamed <i>RPE – relais petite enfance</i> ; mother and child protection centres (<i>PMI – Protection maternelle et infantile</i> , 0–16 years); bridge classes in pre-primary institutions (<i>classes passerelles</i> , 2–3 years)

Auxiliary Paediatric Nurse

The requirements for entering a private or public vocational training centre (*école/institut de formation d'auxiliaires de puériculture*) are: minimum age 17 years and completion of the first 4 years of secondary school. Since 2020, in order to increase recruitment, the entrance examination has been cancelled. The professional education consists of 12-month professional training. The award is the National diploma /Auxiliary Paediatric Nurse (*Diplôme d'État d'auxiliaire de puériculture*).

Table 9

France: Auxiliary Paediatric Nurse

Job title in French: Auxiliaire de puériculture Profile: Health/Social Care Professional
Entry requirements: Minimum age 17 years following completion of the first 4 years of secondary school Professional studies: 12 months at a private or public specialist training centre (<i>école de formation d'auxiliaires de puériculture</i>)

Job title in French: <i>Auxiliaire de puériculture</i> Profile: Health/Social Care Professional
Award: National diploma /Auxiliary Paediatric Nurse (<i>Diplôme d'État d'auxiliaire de puériculture</i>) ECTS credits: n/a EQF level: 4 ISCED 2011: 3 Main (ECEC) workplaces: <i>crèches</i> ; mother and child protection centres (<i>PMI – Protection maternelle et infantile</i> , 0–15/16 years); maternity and paediatric hospitals (0–15/16 years)

Early Childhood Educational Support Person

The requirements for initial professional education leading to a certificate in early childhood education (*CAP AEPE accompagnant éducatif petite enfance*) are: having completed the first four years of secondary school and to be at least 16 years old. This professional training consists of two years at a private or public vocational secondary school (*lycée professionnel*) or similar organisations. The *CAP AEPE*, awarded by the Ministry of Education, replaced the *CAP PE* (EQF/ISCED level 3) in 2017. It gives an official name to these workers: Early Childhood Educational Support Person (*accompagnant éducatif/accompagnante éducative petite enfance*).

Table 10

France: Early Childhood Educational Support Person

Job title in French: <i>Accompagnant éducatif/accompagnante éducative petite enfance – AEPE</i>
Entry requirements: Minimum age 16 years, having completed the first 4 years of secondary school Professional studies: 2 years at a vocational secondary school (<i>lycée professionnel</i>) or similar organisation Award: Certificate in Early Childhood Education (<i>CAP AEPE accompagnant éducatif petite enfance</i>) ECTS credits: n/a EQF level: 3 ISCED 2011: 3 Main ECEC workplaces: all kinds of <i>crèches</i> (0–2 years) (and <i>écoles maternelles</i> as <i>ATSEM/ASEM</i>)

4.1.2. Pre-primary education sector (2–5 years)

Since the inclusion of *écoles maternelles* into primary school education, Pre-primary Teachers were renamed *professeurs/professeures des écoles*; they no longer have a specialist qualification for working with children under 6 years of age. The curriculum for the Master's study programme covers both pre-primary and primary education, whereby the orientation is strongly didactic and instructional. In its report on Leisure-time Facilitators, the General Inspectorate of the Ministry of Education (Mansuy et al. 2021) recommended that the initial training of Teachers include more about the issue of out-of-school hours and the relevant staff.

Auxiliary staff (*ATSEM/ASEM*) have a much lower level of qualification, from a vocational secondary school (*CAP-AEPE*).

Pre-primary Teachers

The entry requirements for attending an *Institut national supérieur du professorat et de l'éducation (INSPE)* are: a 3-year university degree course award in any subject area (*licence*). These higher education colleges for teachers with university status as “university components attached to one university” (Ministry of Higher Education and Research 2020) are also open to parents with three children and high-level athletes without a Bachelor's degree, evaluated through a specific validation process (*VAPP – Validation des Acquis Professionnels et Personnels*).

The training consists of 2-year course of Masters' studies. The award is a Master's degree (*Métiers de l'enseignement, de l'éducation et de la formation, MEEF*) (see Table 11).

The training includes a recruitment examination (*Concours de recrutement des professeurs des écoles – CRPE*). Success at the *CRPE* is required to become a national civil servant. Holders of *MEEF + CRPE* then start their traineeship. After one year they are tenured.

Table 11

France: Pre-primary and Primary School Teacher

<p>Job title in French: <i>Professeur/ professeure des écoles</i> Profile: Pre-primary and Primary Education Professional</p>
<p>Entry requirements: 3-year university degree course award in any subject area (<i>licence</i>) Professional studies: 2-year course of studies, including a recruitment examination (<i>CRPE</i>), at a higher education college for Teachers with university status (<i>INSPE – Institut national supérieur du professorat et de l'éducation</i>) Award: Master's degree <i>MEEF (Métiers de l'enseignement, de l'éducation et de la formation)</i> ECTS credits: 300 (including 180 for the BA level degree as entry requirement) EQF level: 7 ISCED 2011: 7 Main ECEC workplace: Pre-primary education (<i>école maternelle</i>, 2–5 years); elementary school (<i>école élémentaire</i>, 6–11 years)</p>

Auxiliary worker

The *CAP AEPE accompagnant éducatif petite enfance* is the required qualification for becoming an auxiliary worker in pre-primary and primary education. Entry requirements are a minimum age of 16 years and completion of the first four years of secondary school. The professional education consists of 2 years at a vocational secondary school in a *lycée professionnel* or similar organisations.

Holders of this certificate in early childhood education can work in *crèches* or gain a qualified *ATSEM* status obtained after having passed an exam of Territorial Public Services (*Fonction Publique Territoriale*), for working in public *écoles maternelles*, 2 to 6 years, during school and out-of-school hours and becoming a territorial civil servant. *CAP AEPE* is not required for parents of three children and high-level athletes.

Table 12

France: Pre-primary Auxiliary Worker – ATSEM/ASEM

<p>Job title in French: <i>A(T)SEM – agents (territoriaux) spécialisés des écoles maternelles</i></p>
<p>Entry requirements: Minimum age 16 years, having completed the first 4 years of secondary school Professional studies: 2 years at a vocational secondary school in a <i>lycée professionnel</i> (or other organisation) Award: Certificate in Early Childhood Education (<i>CAP AEPE accompagnant éducatif petite enfance</i>) and qualified <i>ATSEM</i> status ECTS credits: n/a EQF level: 3 ISCED 2011: 3 Main ECEC workplace: Pre-primary education (<i>écoles maternelles</i>, 2–5 years) during school and out-of-school hours.</p>

4.1.3 Pre-primary leisure-time sector (2–5 years)

In this sector, only limited preparation is required, *BAFA*, a non-professional diploma for *animateurs/animateuses périscolaires*, called “*animateurs/animateuses volontaires*”. The equivalent for the heads is the *BAFD*. For becoming “professional” Leisure-time Facilitators or Heads, other diplomas are required.

Leisure-time Facilitators

The “entry requirement” is a minimum age of 16 years; heads need to be at least 18 years old and the holder of a *BAFD*. For the Leisure-time Facilitators, the training consists of three sessions at a centre recognised by the Ministry of National Education and Youth Affairs, including work placement (within a maximum period of 30 months); for the Heads, it consists of four sessions: two theoretical sessions and two placements. The awards are: Leisure-time Facilitator Certificate (*BAFA -brevet d’aptitude aux fonctions d’animateur*); and the Leisure-time Leader Certificate (*BAFD – brevet d’aptitude aux fonctions de directeur de centres de vacances et de loisirs*).

Table 13

France: Leisure-time Facilitator

Job title in French: <i>Animateur/animateuse</i>
<p>Entry requirements: Minimum age 16 years (Heads: 18 years).</p> <p>Studies: 3 sessions (around 30 hours, within a maximum of 30 months), including work placement, at a training centre recognised by the Ministry of City and Youth Affairs; for the Heads: 2 theoretical sessions and 2 work placements (around 45 hours within a maximum of 4 years)</p> <p>Award: Certificate to practice as a Leisure-time Facilitator (<i>BAFA -brevet d’aptitude aux fonctions d’animateur</i>); Certificate to lead a leisure-time setting (<i>BAFD – brevet d’aptitude aux fonctions de directeur de centres de vacances et de loisirs</i>)</p> <p>ECTS credits: n/a</p> <p>EQF level: 3</p> <p>ISCED 2011: 3</p> <p>Main ECEC workplace: Out-of-school leisure time setting (2–11 years); holiday centres (4–17 years)</p>

Very few Leisure-time Facilitators are “professionals”. Becoming a “professional” Leisure-time Facilitator has now become possible thanks to a *Certificat de Qualification Professionnelle (CQP) animateur périscolaire* (Professional Qualification Certificate Leisure-time Facilitator). The training is carried out by authorised organisations. The requirements are: minimum age 18 years; having completed the first four years of secondary school; experience in leisure-time work desired; having developed a project in leisure-time work.

The professional diploma for heads is the *BPJEPS (Brevet professionnel de la Jeunesse, de l’Éducation Populaire et du Sport, spécialités Loisirs tous publics ou Animation sociale)* (Professional diploma in Youth, Popular Education and Sport, leisure-time facilities for all ages or social animation): one year in a recognised training centre. The requirements are: minimum 18 years, the *BAFA* or other diplomas or 200 hours of experience in leisure-time work; holders of the *CQP* are granted a shorter length training. Very few heads of leisure-time settings have this baccalaureate level diploma.

However *BPJEPS* opens access to the level III DE JEPS (*diplôme d’État de la jeunesse, de l’éducation populaire et du sport*)(national diploma of youth, popular education and sport) and to the level II DES JEPS (*diplôme d’État supérieur de la jeunesse, de l’éducation populaire et du sport spécialité “animation socio-éducative et Culturelle”*, higher national diploma of youth, popular education and sport specialty “socio-educational and cultural animation”).

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Diverse competences are required for each profession, linked to the specificities of the different occupations and professions in the childcare sector. Giampino's report (2016) recommended maintaining the different job categories but raising the quality of the lowest IPE levels (auxiliary staff), naming the unnamed professionals (holders of *CAP petite enfance*) and working towards a more coherent and holistic system with a common core in the IPE of the diverse professionals. The report by an advisory body attached to the Prime Minister (the Supreme Council of Family, Childhood and Age) about managing quality in early childhood (SCFCA 2019) has continued in this way, recommending a common foundation in training within the childcare sector and continuity with education and leisure-time sectors.

4.2.1 Centre-based childcare sector (0–2 years)

Paediatric Nurses

The professional diploma was created in 1947. Initial education takes place in a training centre linked to a hospital (39 in France). Qualified Nurses who want to become a Paediatric Nurse must pass an exam for entering these public or private training centres. The content of the training (1,500 hours) lasting one, sometimes two years, has not changed since 1990. It includes theoretical and practical teaching units and five placements in hospitals, childcare centres and other settings which have an agreement with the training centre. The assessments relate to 10 competences (see *Table 14* below). Obtaining this national diploma is based on the successful evaluation of the placement periods and on three written tests (solving a care problem in the field, in the hospital or extra-hospital sector; information action on health education; oral presentation of a professional project).

These professionals continue to demand a revalorisation of their diploma at Master's level. Their national association (*ANDPE*) is waiting for the concrete consequences of O. Veran's (previous Minister of Solidarity and Health) declarations, in 2022, towards a two-year diploma (Master's degree) awarded by the Ministry of Higher Education and Research.

Early Childhood Educators

The reform of *EJE* training (Ministry of Solidarity and Health 2018) has maintained the previous length: 1,500 hours theoretical training, plus 2,100 hours of placements, as well as the four *domaines de compétence (DC)* (curricular areas), each including two (written, oral) exams, of the *Diplôme d'Etat d'éducateurs de jeunes enfants DEEJE*. New content related to digital technology and a foreign language have been introduced. For each competence domain, the jury is now composed of a trainer or an academic, and a qualified professional. A training booklet is provided to the jury with very precise rubrics for the evaluation of the different areas of competence and each placement (evaluation by supervising trainer, the supervising professional and the student). The part of reflexivity and initiation into research have been slightly reinforced.

Competence domain 1 (400 hours) – supporting young children and families – includes a situation analysis and a memorandum of practice.

Competence domain 2 (600 hours) – educational work with young children – includes a presentation by the student and reflective analysis of their training experience, and an analysis of a health and prevention setting (transmitted by the centre).

Competence domain 3 (250 hours) – multi-professional teamwork and professional communication – includes a presentation of professional communication and a file on teamwork and institutional dynamics.

Competence domain 4 (250 hours) – interindividual dynamic, partnerships and networks – includes a dossier based on a field experience and knowledge checks.

The four placement periods (the 1st placement: at least eight weeks during the first year) are no longer linked to curricular areas but must achieve the predefined objectives.

Auxiliary Paediatric Nurses

Recent changes concern the training of *auxiliaires de puériculture* (Ministry of Solidarity and Health 2021b) who remain “health professionals” under the responsibility of a Nurse or a Paediatric Nurse. They “carry out stimulating activities and care adapted to the evolution of the clinical condition aimed at the well-being, autonomy and development of the child”. Their role is “part of a global approach to the child and takes into account the relational dimension of care as well as communication with the family in the context of parenting support, other professionals, learners and caregivers”. They “participate in the reception and social integration of children with disabilities, suffering from chronic pathologies or at risk of exclusion or abuse”. The training lasts 1,540 hours (over a maximum period of two years), with 770 hours of theoretical and practical teaching in a public or private specialist training centre or as remote learning (limited to 70%), and 700 hours in a professional environment. This national diploma corresponds to *Baccalauréat* level.

The courses are organised in five competence blocks:

1. Support and care of the children in the activities of their daily life and social life
2. Evaluation of the state of health and implementation of appropriate care
3. Information and support of the persons and their context
4. Maintenance of the immediate environment of the person and the materials related to the activities
5. Work in a multi-professional team and processing of information related to care activities, quality/risk management.

They correspond to ten modules (see *Table 14* for the number of hours for each one). Students must be provided with individualised pedagogical support (7 hours), guided personal work and individualised pedagogical monitoring. Courses or practical work (35 hours) always aim to teach “the body language techniques necessary for the acquisition of skills”. “Health simulation tools” continue to be favoured in order “to promote practical and body language learning”.

Work-based training includes four placement periods (hospital, childcare, etc.), one at least with children with physical or mental disabilities and one at least with night work and weekend work experience: The first three placements have a duration of 5 weeks each, the final one: seven weeks. The evaluation of the placements must be taken into account for the validation of each block of competences.

Early Childhood Educational Support Person (AEPE)

The *Accompagnant éducatif/accompagnante éducative petite enfance* (AEPE) is a childcare professional for children under 6 years old. Since 2017, the *CAP Accompagnant éducatif petite enfance* (CAP AEPE) replaces the *CAP Petite enfance* (Ministry of National Education 2017a). This certificate (maintained at the same level) has been revised in order to strengthen the skills and the employability of AEPE (by public employers in particular) and to facilitate mobility within the 0–6 sector (between: school, *crèches*, leisure-time centres, as well as the home-based care sector). This CAP is acquired following four years of secondary school, as a two-year course at a *lycée professionnel* (or a growing number of other organisations) – some of them propose one year if the student has another CAP or a Baccalaureat.

Care, hygiene, food and safety of the child remain on the training curriculum but stimulating the child, child development and the relationship with the family have been expanded. This content is organised into **three professional units**:

- Supporting the development of young children
- Working in a collective setting
- Working in an individual setting together with the Health and Environment Prevention unit.

There are also **three general education units**, common to all CAPs (1. French, history, geography, moral and civic education; 2. mathematics, physics-chemistry; 3. physical and sports education, environmental health prevention, plus an optional foreign language test).

Linked to the two first professional units, the placements (14 weeks) must be carried out in two types of setting (0–2 years/2–5 years): *crèches*, family childcare, *écoles maternelles*, *accueils périscolaires*. After 1,169 hours of training (609 hours of courses + 560 hours of placements), the exam includes: one written and oral test (professional unit 1), one written test (professional unit 2) and an oral test (professional unit 3 setting). The other tests concern the general education units.

4.2.2. Pre-primary education sector (2–5 years)

Pre-primary Teachers

Since 2020, the *MEEF* for teaching in both *écoles maternelles* and primary schools continues to give little room to early childhood education and continues to be focused on didactics and disciplines.

Competences to be acquired during the two years of this Master’s degree diploma are always defined according to the 2013 Law (2013–595). Teachers – “actors in the educational community and the public service of national education” – are “multi-subject teachers, effective in the trans-

mission of fundamental knowledge and the construction of learning” and “reflective practitioners, agents of their own professional development”. They must be able to: master disciplinary knowledge and its didactics; master the French language as part of their teaching; build, implement and initiate effective teaching and learning situations that take into account the diversity of pupils; organise and ensure a mode of operation of the group that promotes learning and socialisation; assess pupil progress and learning. They also sharing common competences with all teachers throughout the education system (see *Table 15*).

Each *INSPE* and university attached to it compose their own course programme according to the national regulations (minimum of 800 hours, without the placements): at least 55% of the hours for teaching of fundamental knowledge at school, at least 20% for *polyvalence* and general pedagogy and at least 15% for initiation into research. The five areas defined nationally are:

- Disciplinary area
- Didactics (including digital training and teaching with digital technology)
- Job practice context
- Professional situation (with observation placement during year 1 and placement with class responsibility under supervision during year 2)
- Initiation into research (including thesis).

Plus: 1 observation placement during year 1 (6 weeks) and 1 placement in accompanied responsibility during year 2 (12 weeks). Placements are supervised both by the teacher from the school and by the teacher educator at *INSPE*. The *MEEF* also includes some common courses for teachers (pre-primary, primary, secondary) and educational counsellors (secondary schools): secularism and republican values, professionalism, combatting discrimination, etc. For their research dissertation, students must choose between several options for in-depth study (such as the inclusion of children with disabilities, literature for children, etc.) and are guided at university by a university professor.

During the two years, students have also to prepare for the recruitment examination (*CRPE*) which enables them to become a civil servant.

In each area of the *MEEF*, all units are assessed by continuous evaluation and/or a final exam. The *CRPE* includes written eligibility tests and oral disciplinary tests.

Year 1: 500 hours minimum of training (60 ECTS credits), plus a six-week placement

Year 2: 300 hours minimum of training (60 ECTS); plus a 12-week placement.

A variety of lecturers teach in *INSPE*: experienced Teachers, Heads, Teacher Educators, Inspectors, University Professors. The overall approach includes course work, placements with guidance and supervision, research, coaching.

Municipal auxiliary staff (ATSEM/ASEM)

The auxiliary staff of *écoles maternelles* must be able to: identify the children’s needs (from 2 years of age upwards), support children’s autonomy; apply rules of safety and hygiene, prepare pedagogical support following the teacher’s instructions; participate in class activities under the guidance of the teachers; ensure that cleaning rules are followed. Since 2017, with the *CAP AEPE*, they must acquire common competences and specific competences according to the context: pre-primary school; centre-based childcare; home-based childcare. The placements (14 weeks) must be carried out in two types of setting (0–2 years and 2–5 years). After 1,169 hours of training (609 hours of courses + 560 hours of placements), the exam includes: 1 written and oral test (professional unit 1), one written test (professional unit 2) and one oral test (professional unit 3 setting). The other tests concern the common general education units.

To become an ATSEM/ASEM, the holder of a CAP AEPE must pass an exam organised by a centre (*départementale de gestion*), which organises the exams for all territorial jobs. These include: one written eligibility test (multiple-choice questions) and an oral eligibility test. An internal exam (oral eligibility test) also exists for persons working in the public sector with at least two years of contact with 2–5 year-old children (limited to 30% of the vacancies). A third modality concerns persons with at least four years of contact with young children or as a leader of an association (one written and one oral eligibility test).

ATSEM /ASEM- agent-(terri- torial) – spécialisé des écoles mater- nelles	In <i>écoles maternelles</i> : <ul style="list-style-type: none"> – Identifying children needs (from 2 years of age upwards) – Supporting children’s autonomy – Applying rules of safety and hygiene – Preparing pedagogical support following the teacher’s instructions – Participating in class activities under the guidance of the teacher – Ensuring that cleaning rules are followed. <p>Developing, with <i>CAP AEPE</i>, common competences and specific competencies according to the context:</p> <ul style="list-style-type: none"> – Pre-primary school – Centre-based childcare – Home-based childcare 	CAP AEPE (2 years in a <i>lycée professionnel</i> or other organisations, after 4 years of secondary school). Care, hygiene, food and safety of the child as well stimulating the child, child development and relationship with the family have been expanded and are organised into 3 professional units: <ul style="list-style-type: none"> – Supporting the development of young children, – Working in a collective setting – Working in an individual setting) <p>plus</p> <ul style="list-style-type: none"> – A Health and Environment Prevention unit – 3 general education units common to all CAPs. <p>Placements (14 weeks) in two types of setting: 0–2 years and 2–5 years</p> <p>plus</p> <p>a local recruitment examination for becoming an <i>ATSEM</i></p> <p><i>Coursework</i>: 609 hours <i>Placements</i>: 560 hours Total = 1,169 hours</p>

4.2.3 Pre-primary leisure-time sector (2–5 years)

Leisure-time Facilitators

The *BAFA* for “voluntary” Leisure-time Facilitators consists of a general training session on the basics of leisure-time work (eight days minimum), a practical placement (holiday centre or a *centre de loisirs* experiment (14 days minimum), and an in-depth session (minimum six days) or qualifying session (minimum eight days).

The professional certificate *CQP* is obtained after three months of training shared between a centre and a workplace. The content is based on three components: welcoming children and families during out of school hours; designing animation projects for children; conducting out-of-school activities for children. The evaluation is based on a report of leisure-time activities and an observation of the workplace, followed by an interview with the jury.

Heads

To obtain the *BAFD* diploma, the training consists of two theoretical training sessions and two workplace sessions in the following order: general training session (basic concepts of leadership and building a personal training project: nine or ten days); placement as head or deputy head (14 days); improvement session (to develop skills: six days); placement as Head to polish skills: 14 days).

The professional diploma, *BPJEPS* (two specialisations: leisure-time work or sport) consists of around one year in a recognised training centre (around 620 hours in the centre/1,150 hours in workplaces). The content of the training consists of four competence units:

- To supervise any persons in any place and any setting
- To implement a leisure-time project as part of the setting’s programme
- To lead a leisure-time work activity and

- To mobilise the *éducation populaire* approach.

This diploma opens access to higher diplomas, *DE JEPS* and *DES JEPS*.

4.3 Alternative entry and qualification routes, system permeability

Numerous unqualified auxiliary staff are employed in the childcare, education and leisure-time sectors, as well as less qualified contractual teachers in schools. An increase in numbers is currently particularly strong in the context of increasing staff shortages.

A few years of acquired experience in the ECEC field allows access to training to acquire certain diplomas without necessarily having the prerequisite levels of study. Work experience also contributes towards a reduction in the length of training. Small changes in the entry modalities to training have been introduced to facilitate access to some diplomas.

In terms of IPE, validation of acquired experience (VAE) can be also used (except for the Paediatric Nurse diploma). Alternative pathways exist in all the sectors, such as apprenticeships. In this case the student must also be registered in an apprentice training centre (*centre de formation d'apprentis – CFA*). Most training courses are not free of charge and costs vary (they can be expensive in the childcare sector). The apprenticeship route is a way of reducing the costs while earning money. Funding and new funding initiatives linked to the shortage are diverse (by employers, regions, *Pôle employ* (job centre), etc.)

All qualified staff progress within their own category. Possibilities of system permeability are limited, both within each sector as well as between sectors, which are “separate universes” (Galtier 2013). In the childcare sector, any procedures aimed to support movement within the sectors depend mostly on the municipality’s training policy and demand high individual motivation and perseverance – private sector staff have even fewer opportunities. However new diplomas for auxiliary staff (Auxiliary Paediatric Nurses, *AEPE*) are opening up slightly more mobility perspectives.

4.3.1 Centre-based childcare sector (2–5 years)

Paediatric Nurses

The training costs vary from one training centre to another (up to more than €9,000 per year). Within the childcare sector, Paediatric Nurses with several years of experience as Centre Heads can apply to become municipal coordinators of *crèches* or municipal Early Childhood Coordinators and assume other responsibility in municipality’s early childhood departments. The national certificate of aptitude for management functions and heading a social intervention unit – *CAREFUIS* (*certificat d'aptitude aux fonctions d'encadrement et de responsable d'unité d'intervention sociale*, 400 hours) which can be obtained through VAE, can be useful.

Early Childhood Educators

The national Early Childhood Educator diploma costs are also varied (up to €5,000 annually). To become an *EJE*, acquired experience in childcare (at least 1 year) can be validated. The apprenticeship pathway is possible for less qualified persons working in the childcare sector (Thollon Behar and Mony 2016).

Within the childcare sector, with several years of experience as Centre Head, *EJEs* can also apply to become municipal coordinators of *crèches* or municipal Early Childhood Coordinators as well as for other responsibilities in municipal early childhood departments. The *CAREFUIS* can be useful.

Auxiliary Paediatric Nurses

The costs of their national diplomas vary from one training centre to another (up to more than €4,500 annually). Equivalence of modules or blocks of competences are given to holders of certain diplomas or titles (*CAP AEPE*; vocational Baccalaureate Services to people; life assistants for

families; etc.). The diploma can be obtained by validating the acquired experience (18 years old and a minimum of 1 year's experience). For *AEPE* or non-qualified workers, the apprenticeship pathway is possible (for an 18-month period maximum)

The holders of this diploma can then begin an *EJE* training as an apprentice.

Early Childhood Educational Support Person (*AEPE*)

Non-qualified workers can follow the training towards the *CAP AEPE* in a training centre or at the national centre for distance education (*CNED – centre national d'enseignement à distance*). The costs also vary (up to €2,500 per year). The *CAP* can be obtained through *VAE* (for home-based care providers, *BAFA* holders, etc.). The apprenticeship pathway is possible (from a minimum age of 16 years or being a job seeker).

Holders of the *CAP* are eligible to register for the qualification routes as Auxiliary Paediatric Nurse. They can become *ATSEM/ASEM* in *écoles maternelles* or enter the leisure-work sector.

4.3.2 Pre-primary education sector (2–5 years)

Pre-primary Teachers

Fees are around €250 for each year of the *MEEF*. State assistance for studies is given to students under certain social conditions. Parents of three children and high-level athletes can begin the Master's studies without a Bachelor's degree. The Master's degree can be obtained following a pre-professional course during the *licence* (year 2), including paid working time in the school of 8 hours per week. Students selected by rectorates, can be contractual teachers during the *MEEF* studies: with full responsibility, on a part-time basis (one third of the working hours) and €865 monthly earnings.

Holders of *MEEF + CRPE* can become Heads of schools, specialised Teachers, or pass examinations towards becoming *maîtres formateurs*, *conseillers d'éducation* or Inspectors.

Auxiliary staff (*ATSEM/ASEM*)

The *ATSEM* recruitment examination is accessible to holders of the *CAP AEPE* (cost of the *CAP AEPE* up to €2500), but also to parents of three children, high-level athletes, persons with two years of public service with children aged 2–5 years, or 4 years of experience in some other sectors. *VAE* allows *ATSEM/ASEM* to follow the Auxiliary Paediatric Nurse or *EJE* training. Since 2018, access to recruitment examinations for Leisure-time Facilitators is also open to *ATSEM* and access to *ATSEM* recruitment examinations is open for Leisure-time Facilitators.

4.3.3 Pre-primary leisure-time sector (2–5 years)

BAFA costs vary according to the training centres (up to €1,000 annually). Various financial aids (including from *CAFs*, family allowance funds) are possible under certain conditions. To face the increasing shortage of Leisure-time Facilitators (10%) several *BAFA* training sessions were cancelled in 2020 and 2021 due to the COVID crisis. Financial aid (€4 million) of €200 per student was granted in 2022 for acquiring the *BAFA* more quickly (Ministry of National Education and Youth Affairs 2022e). For the *CQP*, an exceptional funding assistance of €1,600 per Leisure-time Facilitator has been given to 2,500 practising *animateurs* with at least three years of work experience (unqualified or just with the *BAFA*) (Ministry of National Education and Youth Affairs 2022a).

Holders of *BAFA* can go on within the pre-primary leisure-time sector and beyond (sport, culture, social... sectors) with the professional diploma, *BPJEPS* (animation or sport) which open access to higher diplomas (*DE JEPS* and *DES JEPS*) and responsibilities, such as municipal coordinator of *accueils périscolaires*, head of a social centre, etc.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

All the initial training programmes are based on both courses and placements, but their proportion varies according to each kind of professional education. This element of IPE is regulated by national guidelines. Placement agreements are mandatory for all courses and study programmes. Their content can vary according to the specific diploma or to the training centre. The modalities of supervision of the students as well as the modalities of collaboration between the training centres and the ECEC settings also vary. There is no additional remuneration for the guidance and supervision of students – except the *maîtres formateurs*. These Tutor Teachers, who both teach in their schools and train *MEEF* students in their classroom as well as at the *INSPE*, receive an annual allowance of €1,250 (in 2021).

5.1 Centre-based childcare sector (0–2 years)

Paediatric Nurse

The placements of the students represent 710 total hours of the 1-year national training of paediatric nursing (1,500 hours). There are five placements (four weeks each) in hospitals, childcare centres, *PMI* and other settings. The placements are evaluated by the trainer tutoring the student and the head of the placement setting.

100 hours of reflection on the work placement experience are included in the 660 hours dedicated to theoretical and practical courses; 140 hours are spent in the IPE institution and are specifically related to their workplace experiences (Thollon-Behar and Mony 2016).

Early Childhood Educator

Placements represent the largest part of the 3-year national training of *EJEs*: 2,100 hours (60 weeks, total training: 3,600 hours). According to the reform in 2018, the four placements must achieve predefined objectives. The 1st placement (at least eight weeks during year 1) with an *EJE* mentor, aims to “understand the missions of a service, an establishment, an institution; identify the functions and activities of the *EJE*; identify the characteristics of a territory and its actors; identify the specificities of the target group; confirm the professional project”. Then, the 2nd, 3rd and 4th placements (total: 52 weeks; at least two-thirds with an *EJE* mentor) aim to implement “the acquisition of skills in connection with the professional reference system and the construction of an identity and professional position”. “By mobilising theoretical knowledge”, they have: to implement “a process of welcoming and supporting the child and their family; to be part of a multi-professional and multi-disciplinary teamwork; to analyse the institutional environment, the inter-institutional and partnership issues of cooperation and inclusion in networks of socio-professional actors; to create the conditions for the reception of young children and their families; to establish a daily personalised relationship with the young child and their family; to implement an educational project with the young child, in conjunction with the family; to create and lead individual or collective activities promoting play, expression, autonomy and socialisation; to develop professional writing within the framework of ethical rules and the rights of persons; to search, analyse and share information; to be part of a reflective approach” (Ministry of Solidarity and Health 2018, Annex III).

For each placement, the agreement required between the training centre, the student and the head of the recognised site has to specify the procedures for carrying out the practicum, its objectives, particularly in terms of professional learning, the evaluation procedures, the names

and qualifications of the supervising EJE, the procedures for organising tutoring, and the reciprocal commitments of the signatories. A supervisor from the training centre must monitor the students and the head of the host setting must appoint a local tutor/mentor. At the end of each placement, the local tutor (or/and head) assesses the competences acquired by the student on the criteria of a portfolio (in accordance with a detailed model). This evaluation must be taken into account for the validation of each block of competences of this diploma.

Auxiliary Paediatric Nurse

The new one-year national training of prospective Auxiliary Paediatric Nurses (2021) includes the same number of hours (770 hours: 22 weeks) for both courses and placements. Four placements (five weeks each, except the final one: seven weeks) are made in hospitals (maternity, paediatric), *crèches*, services with children with special needs and disabilities (at least one placement with these children is mandatory, whereas a placement in a maternity hospital is no longer mandatory). During these placements, the experience of night work and week-end work is required. The first three placements aim to explore three missions of Auxiliary Paediatric Nurses: “supporting the children in the activities of their daily and social life; collaborating in personalised care projects in their field of competence; contributing to risk prevention and interprofessional clinical reasoning”. The final placement aims at “the consolidation of the professional project and the strengthening of skills in order to validate all the skills areas”. The head of the host setting is supposed to appoint a tutor/mentor who supervises the student while a supervisory tutor at the training institution ensures the follow-up of the student. A portfolio approach is recommended for following and evaluating the student’s progress. An evaluation sheet template is provided for each placement (to be filled in and given to the student during an interview). These evaluations must be taken into account for the validation of each block of competences.

5.2 Pre-primary education sector (2–5 years)

Pre-primary Teacher

The *MEEF* includes 18 weeks in schools. During year 1, the 6-week placement consists of observation and progressive accompanied practice with the *maître formateur* or a voluntary host teacher designated by an Inspector and a tutor from the *INSPE*. The workplace activities must be prepared before the placement, then analysed during the training at the *INSPE*. During year 2, a 12-week placement of guided responsibility takes place. When the *CRPE* used to take place at the end of year 1, successful students worked (mid-time = 312 hours) under guided responsibility (and paid full time); the students who failed the *CRPE* continued to be supervised by their tutor. Since 2022, the *CRPE* takes place at the end of year 2 and the placement is now no longer paid. Students will receive only €1,260 gross for the school year, €126 paid each month for 10 months. However, some students selected by the rectorates can become a contractual teacher with full responsibility, on a part-time basis (one third of the working hours) and €865 monthly earnings). This is also possible from year 1, as well as from a professional *licence* level (Ministry of National Education and Youth Affairs 2022c).

5.3 Pre-primary leisure-time sector (2–5 years)

For the Leisure-time Facilitators, *BAFA* placements constitute the second of the three sessions of this training and half of the training hours (14 days minimum), under the responsibility of the head of the *accueil périscolaire* or the municipal hierarchy. Each of the three sessions of the *BAFA* is evaluated by the Director of the session and by the tutor of the placement. These three

written evaluations are then examined by the jury (comprising members of the regional delegation of youth and sport).

Placements for *CQP* (200 hours) also come under the responsibility of the Head of the *accueil périscolaire* or the municipal hierarchy. For the exam, an observation of the workplace is required, followed by an interview with the jury (alongside a report of leisure-time work).

For the heads, the *BAFD* diploma requires two workplace sessions (14 days) following two theoretical training sessions (10 then 6 days): the first placement as Head or Deputy Head, and the second placement as Head, to polish skills. The evaluation procedures are the same as for the *BAFA*.

The *BPJEPS* consists of around one year at a recognised training centre (around 620 hours in the centre/1,150 hours in workplaces).

6. Continuing professional development (CPD) of ECEC staff

Continuing education is a right for any actively employed or job-seeking person: it is free and remunerated. Access to continuing training can be at the initiative of the employer or at the initiative of the worker. Within the framework of the professional training reform (2015), continuing education is provided through a personal training account (*compte personnel de formation* – CPF). CPF, mainly financed by the employers, can be opened with the first job and consists of up to 24 hours of training during the first five years, then up to 12 hours during the next three years. This personal account is granted to anyone over the age of 16 who works, full or part time, in the public or private sector, as an employee or self-employed, but also who is looking for a job. Since 2019, the supply to the account is no longer calculated in days but in euros: €500 per year (€800 for employees with little or no qualifications). Eligible trainings are ones that are certified; they also include the supervision of validation of acquired experience, as well as trainings on specific content proposed by the certified training providers (public, associative, private). There is no minimum nor maximum duration of continuing education per year. CPD can take place during working hours with the agreement of the employer and with continued remuneration, or outside working hours, with a training grant. In addition, every two years, a professional interview with the employer is devoted to the prospects for professional development of each worker, and every six years an inventory is made of his/her professional career. Access to all diplomas in ECEC is possible not only for students (IPE) but also for workers in the field (or those not currently working) and job seekers (CPF). Beyond access to certified training, the CPF above all allows access to training activities aimed at improving knowledge and skills. CPD can take very varied forms (formal courses; centre-based activities; increasing online training since the COVID-19 crisis). Training offers tend to be marketed in the childcare sector; private providers are beginning to develop in the leisure-time sector, but not yet in the education sector. The most qualified professionals continue to have the most favourable access to CPD.

6.1 Centre-based childcare sector (0–2 years)

The qualifying diplomas for *puériculteur/puéricultrice*, *auxiliaire de puériculture*, *EJE* and *AEPE* can also be acquired through CPD courses. These may vary in duration, contents (communication, play, cultural activities, practice analyses, etc.); specific modalities depend on the provider's options.

A recent inquiry showed that when childcare professionals demand more CPD sessions, they wish for more offers focusing on the observation of children, i.e. on a central aspect of their expertise (APEMA 2022).

As part of the E. Macron strategy for preventing and combatting poverty, a national annual training plan for all childcare staff (*plan “Ambition Enfance-Egalité”*) was launched in 2021 (Gouvernement 2021; Feufeu 2021) around seven themes, partly taken from the *Charte nationale de l'accueil du jeune enfant* (National Charta for Childcare): language; food and nature, art and culture, occasional care, prevention of stereotypes, parental care, digital technology. A national component promotes access to training, while a local component, piloted by the departmental Commissioners for the fight against poverty, encourages the emergence of local projects: municipalities, associations, training centres, etc. are eligible to participate in this call for projects to set up specific partnerships (for instance: artistic workshops in the *crèches* of the Centre-Val de Loire; or the training of 130 staff in Tourcoing).

Studies on CPD in the childcare sector are lacking.

6.2 Pre-primary education sector (2–5 years)

Pre-primary Teachers

The *MEEF* is accessible through *VAE*, *VAPP* and Validation of Higher Education (*VES – Validation des études supérieures*). The *INSPEs* also offer teachers a certificate for specialist support, adapted teaching and the education of pupils with disabilities: the *certificat d'aptitude professionnelle aux pratiques de l'école inclusive – CAPA-SH*, including several options for becoming a specialised teacher. Teachers' professional experience is taken into account. The *INSPEs* also offer a certificate for becoming a Tutor Teacher- (*maître formateur*). Moreover, the *INSPEs* offer training modules as part of the local academic training plan (*plan académique de formation – PAF*). This plan modifies the national priorities detailed in the national training plan (*plan national de formation – PNF*) according to local issues and challenges. Teachers either apply to participate in this training and/or are selected.

All teachers participate in CPD (face-to-face or online) provided by Ministry of Education. 18 hours per year are compulsory. Of the 18 hours of educational activities integrated into the teachers' service, nine hours are devoted to hybrid training actions. *M@gistère* is an online or face-to-face continuing education system that offers hybrid, interactive training modules. The contents of the courses are: analyses of teaching sequences, videos, virtual classes, collective preparations of teaching sequences and self-assessment exercises. It brings together MOOCs (Massive Open Online Courses) and online training offered by universities. Another site, *Eduscol*, is a national portal for all teachers (resources and materials “scientifically and pedagogically validated”) and links to expert sites developed with the *Écoles Normales Supérieures (ENS)*. A Ministry of Education portal brings together national and academic resources (Ministry of National Education and Youth Affairs 2023). In addition, the *Canopé* network proposes educational resources in an innovative way (example: in Paris, a training course on bridge activities between *écoles maternelles* and *crèches* was carried out in 2021-2022 and continued in 2022-2023).

A national evaluation by the General Inspectorates indicates an inappropriate and inefficient „top down“ teachers' CPD (Cristofari, Lepivert, and Lussania 2017). A survey (2014-2018) by questionnaire and interview with more than 600 Paris Teachers, Teacher Educators and Inspectors (Barrère, Broccolichi, Corrège, Joigneaux, and Roditi 2018) focusing on experiences, (dis)satisfactions and expectations regarding the CPD of these professionals, indicates a dominant dissatisfaction: complaints by the oldest teachers, frustration of the most recent in the profession (limited access to CPD) and the desire to self-train through other channels made difficult through

lack of time. Among the reasons for dissatisfaction: the significant training needs were confronted with a limited institutional provision, or the share of training dedicated to new regulations was too low. If the training sessions are often described as useless or even discouraging, those that are appreciated are described as: in phase with the situations and/or the projects of the participants; provided by trainers mastering the theoretical and practical dimensions of the issues and taking into account the experiences and questions of the participants.

A recent synthesis of several reports and an international conference (Mons, Chesné, and Piedfer-Quêne 2021) confirms and questions the quality and access of the CPD organised by the Ministry of Education: it is still more accessible to Inspectors (97%) than to Teachers (71%) and Heads (76%); while participation in CPD has increased, its effects on teaching practices are limited (38% of school teachers consider that it has not had a positive impact). The CPD model is questioned as to the lack of consideration of the expression of needs (for 52% of teachers in 2018-2019, training content was imposed. These often short training courses are *ex cathedra* courses (only 7% of teachers had follow-up activities in the field) and there is too little focus on learning communities (only 38% of school teachers took part in training set up specifically for their school); the follow-up of CPD is not valued in the careers of staff (only 47% of Teachers had discussed training issues during their meeting with an Inspector); evaluations of the quality of CPD are not systematic (no means of evaluating their satisfaction for 45% of Primary School Teachers). So, whereas half of the Teachers attend courses outside the mainstream CPD provision “an ecosystem of informal continuing education has been formed in parallel”, and the lucrative private sector is still absent. The five axes of the 15 recommendations of this synthesis are:

- Encouraging staff to train, with training time credit and support for stimulating learning communities
- Strengthening the institutional ecosystem of the Ministry's training
- Including research in National Education training, with the possibility of obtaining a diploma
- Support, through mentoring and tutoring, new teachers, contractual teachers and professionals who are retraining in teaching without initial professional education in the field
- Valuing the investment of staff in their continuing education (discussion time in staff evaluations; compensation for taking on collective missions within schools on skills acquired during training, etc.).

Auxiliary staff (ATSEM/ASEM)

For the *CAP AEPE*, CPD is possible in centres like *GRETA (GRoupements d'ETAblishements)*, depending on the Ministry of Education for providing adult training, or other authorised public or private organisations.

6.3 Pre-primary leisure-time sector (2–5 years)

Through CPD, it is possible to prepare for the *BAFA* exams needed to become a “voluntary” or a professional Leisure-time Facilitator as well as for the *BAFD* for the heads. The growth of private offers in the CPD of professional Leisure-time Facilitators, alongside of the traditional public provision and associations’ offers, is challenging the relationship between the process of professionalisation and the structuring of the professional Leisure-time Facilitators’ training market – a comparison of three local markets indicates specific characteristics, differentiated and chaotic modes of regulation (Bock 2022).

In front of the insufficiency or difficult access to existing diplomas, the Education Inspectorate (Ministry of National Education and Youth Affairs 2020) recommended strengthening CPD (with

more clarification of the methods of organising CPD and the responsibilities of the various actors), systematising coordination times and the designation of territorial Advisers. The *Comité de filère* (Steering Committee), created in 2022, will be commissioned to find the ways and means of a commitment by all private and public employers, to leave no Leisure-time Facilitator without training after three years of professional practice.

Among the 25 measures of the recent plan of the Ministry of National Education and Youth Affairs (2022a), a one-off grant (4 million euros) was pledged in 2022 to train for the professional qualification certificate (CQP) for 2,500 Leisure-time Facilitators in practice for at least three years without qualification or with only the *BAFA* (support granted to the professional branch, up to €1,600 per Leisure-time Facilitator, to cover the teaching costs of training). This plan also facilitates the access of *ATSEM* to leisure-time professions and, more generally, provides better information on employment and training opportunities.

No studies are available on CPD in this sector.

7. Working conditions and current workforce issues

Working conditions are problematic in all the three sectors: low salaries, few career prospects, hardship at work, particularly among auxiliary staff. Remunerations are lower in the childcare and leisure-time sector than in the education sector. Single parenthood and the more generally worrying situation of poverty mean that some auxiliary staff are living in precarious conditions (Zaouche Gaudron 2021).

7.1 Remuneration

7.1.1 Centre-based childcare sector (0–2 years)

All workers in the public sector may have the status of a contractual worker or a local civil servant or, in the private sector, of an employee. In the public sector of childcare, the salaries of territorial civil servants depend on a national index grid, defined according to their rank and evolving every two to four years by changing levels.

The salaries vary according to the position in the hierarchy. The heads have the highest remuneration. Among the auxiliary staff, Auxiliary Paediatric Nurses have a better salary than the *AEPE*. Salaries tend to be higher in the private than in the public sector.

Paediatric Nurses

Their salary is lower if they work in *crèches* than in hospitals. However Paediatric Nurses find the work conditions better in *crèches* (they are Heads) than in hospitals, according to an enquiry of their national association which led to a *White Book* with 92 recommendations (ANPDE 2018). The average remuneration in the private sector seems to be a little bit better than in the public sector.

In the public sector, the gross monthly remuneration, according to their grade (each one includes several steps) was, in 2022 (Trouver un Métier 2022b):

- Grade 1: from €1,977 gross per month to €2,638 gross
- Grade 2: from €2,225 gross per month to €2,938 gross
- Grade 3: from €2,043 gross per month to €3,083 gross.

Paediatric Nurses receive bonuses and allowances, common to all civil servants, according to their status and personal situation. They can work up to 220 hours of overtime per year. In Paris, where flats are very expensive, some *crèches* have a free apartment for the Head (the other Heads receive a little compensation).

In the private sector, salaries are not fixed by a national index scale, they depend on the national collective agreement for their sector of activity. The average remuneration of beginning Paediatric Nurses is €2,200 gross per month (€1,716 net) and for experienced Paediatric Nurses, it is €2,800 gross per month (€2,184 net). They may receive conventional bonuses and allowances.

Early Childhood Educator

The remuneration of a municipal civil servant *EJE* depends also on their grade. In 2022 (Trouver un Métier 2022c), these were:

- Grade 1: from €1,710 to €2,516 gross per month
- Grade 2: from €1,879 to €2,765 gross per month
- Grade 3: from €1,907 to €2,849 gross per month.

In addition to this basic salary, there are also bonuses and allowances.

The *EJE* employed in the private sector earns on average €200 net more than the *EJE* who works in the public sector. As Heads of *crèches*, they receive a little additional compensation.

The salary is a little lower than that of a Paediatric Nurse. Example: in the region Ile-de-France, a Head with *EJE* training receives an average of €2,108 net per month, and Heads with a Paediatric Nurse training €2,357. Since some years, some *EJE* can access, as Heads, one of the Parisian *crèches* with a free apartment; the others receive a little additional compensation (like the Paediatric Nurses).

Auxiliary Paediatric Nurses

In 2022, the salaries (also a little bit better in hospitals) for those working in municipal *crèches* were (Trouver un Métier 2022d):

- Grade 1: Auxiliary Paediatric Nurse: €1,556 gross per month to €1,968
- Grade 2: Principal Auxiliary Paediatric Nurse: €1,640 gross per month to €2,216.

In addition to this remuneration, they receive a certain number of bonuses and allowances.

In the private sector, the salary varies according to the type of setting, region, etc. but it is generally lower.

AEPE

The salary of the holder of a *CAP AEPE*, who are all contractual workers, is around the level of the minimum wage. This remuneration, around €1,800 gross per month, does not increase very much. It is a little lower in the private sector.

7.1.2 Pre-primary education sector (2–5 years)

Pre-primary Teachers

Lower than teachers' average remuneration in Europe, the salaries of *professeurs /professeures des écoles* are the same for working both in *écoles maternelles* and in *écoles élémentaires* (but lower than that of Teachers in secondary education). In 2019, in the public sector, the estimated average net salary was €2,550 per month (gross salary: €3,160). Bonuses constitute 9% of the gross salary (less than in secondary education). Remuneration is 51% higher at the end of their

career (less than in secondary education). Salaries are lower in private schools, where the average net salary is €2,160 per month (gross: €2,760) in private schools under contract with the State (Department of Evaluation, Prospective and Performance 2021).

In 2022, according to their grades, public school Teachers earned (Emploi-Collectivites.fr 2022):

- Grade 1: €1,890 gross per month to €3,264
- Grade 2: €3,370 gross per month to €4,025
- Grade 3: €3,370 gross per month to €4,256.

Heads receive an additional sum of €108 per month, plus €42 (small schools), €59 (4 to 9 classes) or €75 (10 classes and more)

An annual allowance is provided in disadvantaged areas (2021): €1,733; and in very disadvantaged areas: €4,646. A Headteacher's bonus varies not only according to the size of the school but also to its location (disadvantaged area: between €600 and €1,880 per year; very disadvantaged areas: between €750 and €1350 per year).

The annual allowance for Tutor Teachers (*maîtres formateurs*) was €1,250.00, in 2021.

Auxiliary staff (ATSEM/ASEM)

As municipal civil servants, the salary of ATSEM (ASEM in Parisian schools), defined according to an index grid, evolves according to their seniority (level) and the notation by the municipality (Trouver un Métier 2022e):

- Grade 1: €1,556 gross per month to €1,968
- Grade 2: €1,640 gross per month to €2,216.

In addition, these civil servants also receive bonuses and allowances according to their professional and personal situation.

7.1.3 Pre-primary leisure-time sector (2–5 years).

The remuneration of Leisure-time Facilitators is generally at the minimum wage level, or just above, and bonuses are rare. The basic full-time gross monthly salary of Leisure-time Facilitators is €1,435. The gross monthly salary for a 20-hour part-time job is €820. Full-time appointments are rare: they generally work 15-20 hours per week. Disparities can be observed depending on the city and on the type of contract (short-term or permanent, part time or full time). Tenured or contractual workers in/with the municipal *écoles maternelles* have a remuneration, fixed by the index grid, which depends on their grade and evolves, like the other workers, every two years on average through changing levels: from €1,607 gross per month to €2,357 gross per month (indications for a full-time job). There are bonuses and allowances which depend on the personal and professional situation (Trouver un Métier 2022f).

7.2 Full-time and part-time employment in ECEC provision

In France, the legal working time is 35 hours per week, according to the labour code (*code du travail*) (Labour Code 2016a), and a maximum of: 10 hours per day, 48 hours per week (Labour Code 2016b). Overtime (either payable or recoverable and increased in both cases by 25% for the first eight hours and 50% beyond) is not taxable. It is possible in the childcare sector, but not for teachers in the *école maternelle* (rare in the *école élémentaire* but frequent in secondary education). In the leisure-time sector, there is a maximum of 140 hours per year.

Part-time work has increased since the 1970s in France, being progressively used to fight unemployment. Flexible working hours are primarily an issue concerning women employed in poorly protected sectors. Currently, women occupy eight out of ten part-time jobs (generally low-

skilled and low-paid positions). A recent study (Briard 2020) showed that for the 45 predominantly male professions (64% of men), part-time work concerns 3% of men and 16% of women; for the 24 predominantly female professions (70% of women), part-time work concerns 33% of women and 9% of men. Women with a Baccalaureate plus a 2-year diploma are those who make use of part-time work the most. Forced part-time work is over-represented in feminised professions. Moreover, chosen part-time work is more common among women, and among non-managerial staff in predominantly female occupations. It responds to family motivations for women and professional motivations for men (other parallel employment, training, studies). Women resort more to part-time work if they have young children and a spouse (especially a manager). In France, single parenthood has increased in all categories, so also among ECEC staff.

7.2.1 Centre-based childcare sector (0–2 years)

In *crèches*, professionals work full time or part time, overtime is possible (13 hours per week) (no precise date available).

7.2.2 Pre-primary education sector (2–5 years)

It is possible to work part time in schools: half-time (50%) or one day less per week (75%) or 80% under certain conditions. The authorisation is given for one year (renewable over three years). Then, the Teacher is automatically admitted to full-time employment (Ministry of National Education and Youth Affairs 2020). In 2020–2021, 10%-11% of Teachers (public-private) worked part time; more women (11%) work part time than men (3% in both sectors) as well as more tenured teachers (8.8%) than contractual teachers (0.8%). In public schools, 3% teachers work at 50%, 9% in private schools. Teachers working at 80% account for 7% in both public and private schools (Department of Evaluation, Prospective and Performance 2021).

No overtime is given to Pre-primary Teachers (very few to Primary Teachers, more frequent at the secondary level).

ATSEM/ASEM can work full-time or part-time and also overtime.

7.2.3 Pre-primary leisure-time sector (2–5 years)

Full time employment in this field is rare. However, employers can ask Leisure-time Facilitators to work up to 140 hours of overtime per year.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

7.3.1 Centre-based childcare sector (0–2 years)

To become a Head of a *crèche*, 3 years of experience as *EJE* or Paediatric Nurse are required. Being a Deputy Head in a large *crèche* is a way to gradually enter the position. Coordinators of Early Childhood have a role (unspecified) in supporting new Heads, particularly to promote the sustainability of ongoing projects (too often ephemeral). The staff, depending on its cohesion, and/or the *EJE* in the staff, can also provide support.

Concerning the procedures for welcoming new staff, there is no legal requirement for introductory measures. They vary from one *crèche* to another. On their arrival, the *EJE* and the auxiliary staff are accompanied by the Head and the colleagues. Placements carried out during their IPE, with support by a tutor at the training centre and a tutor/mentor in the *crèche*, are fundamental. During their placements, in France or other countries, *EJE* or auxiliary staff may experience innovative practices; they may then transfer them in the *crèches* where they will work if their Head and staff are sufficiently open to innovation.

7.3.2 Pre-primary education sector (2–5 years)

The support of young teachers begins during their placements as students (year 1 and year 2 of *MEEF*) with the guidance of a Tutor Teacher (*maître formateur*, who works both in the classroom and in the *INSPE*) and/or a voluntary host teacher (selected by the Inspector); also involved is the *conseiller pédagogique* who continues to support novice teachers, both as trainees, and before being tenured.

Linked to the recent recognition of the Headteacher's position, in 2022, the *référents direction d'école* (School Headship Advisers) in each Directorate of the Departmental Services of National Education, are required to support new school Heads. According to the Decree no. 2022-724, these Advisers, appointed for three years, are to give them advice and support and facilitate exchanges among heads.

7.3.3 Pre-primary leisure-time sector (2–5 years)

The Heads continue to support students who start working. The team of Leisure-time Facilitators also plays a significant role. Specific support for young Leisure-time Facilitators is one of the 25 measures included in the plan *Pour un renouveau de l'animation en accueils collectifs de mineurs* (Ministry of National Education and Youth Affairs 2022a).

7.4 Non-contact time

The working time of all ECEC professionals includes non-contact time (preparation work, documentation, staff meetings, cooperation with parents, networking in the community, etc.), which varies according to the local needs, the decisions taken by Heads, the setting provider, the nature of the projects in progress (with or without the families, partners, etc.), the involvement of each one. Only Teachers have precise service obligations. In all sectors, many professionals complain about lack of time and having to use their personal time.

7.4.1 Centre-based childcare sector (0–2 years)

There are no legal regulations for non-contact work, which vary according: to the *crèches*, their plans and dynamics; to the Coordinators' approach towards their work; to the orientations of the municipalities or private providers, and so on. However, in the public sector *crèches*, “pedagogical days” (with closure of the *crèche*) have become widespread (one to three days per year, as in Paris). Local authorities (like the *Département de Seine-Saint-Denis*) may provide an annual pedagogical day for all *crèches* in their area. Non-contact time in the private sector appears to be lower than in the public sector.

The recent Decree (2021-1131) provided for six hours per year for “practice analysis” with “an internal or external competent person”.

7.4.2 Pre-primary education sector (2–5 years)

In addition to longer holidays (school holidays), teachers do not work the legally required 35 hours per week in their workplace. According to the national regulations, they have 24 weekly hours of teaching with the pupils, plus 108 hours per year for: educational activities (36 hours); CPD (18 hours), including 9 hours of distance sessions on digital media; school councils (6 hours); and 48 hours devoted to teamwork, relations with parents, monitoring of pupils with disabilities, etc.

Teachers working in disadvantaged areas benefit from a reduction in their service with the children of 18 half-days per school year for teamwork.

The obligations for the *maîtres formateurs* are: 16 hours per week with the children; eight hours per week for students' training and support in the classroom and at the *INSPE*; plus 36 hours a

year to work on team consultation, relations with parents, developing and monitoring of projects.

There is no regulation for the *ATSEM*, who share their time, during the school hours and out of school hours, between the work with children, cleaning the classrooms, plus participating in meetings if they are included in the school projects.

7.4.3 Pre-primary leisure-time sector (2–5 years)

There is no regulation about non-contact time in this sector. Within the 25 measures of the plan *Pour un renouveau de l'animation en accueils collectifs de mineurs* (Ministry of National Education and Youth Affairs 2022a), one proposal recommends extra pay for preparation.

7.5 Current staffing issues

The three sectors, unattractive for a long time, are experiencing unprecedented staff shortages. With the COVID-19 crisis, the situation has worsened everywhere. The concern, shared at all levels (parents, professionals, providers, etc.), is reinforced in the childcare sector where many workers are about to retire. The "Giampino report" (2016) formulated a set of recommendations which have inspired certain measures in recent years. New measures were announced in July 2022 by the new government.

7.5.1 Centre-based childcare sector (0–2 years)

To cope with the historical shortage of childcare staff – their aging is stronger than in the two other sectors –, the Childcare Sector Committee (*Comité de Filière Petite Enfance*) – created in 2021 by the Ministry of Solidarity and Health and presided by the early childhood Advisers at the association of Mayors of France and members of the college for the defence and promotion of children's rights and which includes union and association representatives of professionals in public and private childcare – made 22 recommendations. They are based on a precise quantification of the shortage in *crèches collectives* in the spring of 2022 conducted by the National Family Allowance Fund (*Caisse Nationale des Allocations Familiales, CNAF*). The results (based on 15,986 *crèches collectives*) showed that the recruitment crisis affects 50% of *crèches*, especially in Paris and the Paris region, where some existing places can no longer be granted due to lack of staff. Even if the shortage is less severe for heads (although one *crèche* in ten is affected) than for the auxiliary staff in contact with children, this crisis severely impacts the conditions of work of the staff and thus quality of care. The shortage of *EJEs* is 17%, 45% of *Paediatric Nurse* posts are not covered, *AEPEs* are also lacking, although no precise percentage is available (CNAF 2022). Among its requests, the Childcare Sector Committee has demanded more places in training for all diplomas, and a *Paediatric Nurse* diploma was mentioned which restricts employment to childcare.

In July 2022, the new Minister of Solidarity announced short-term measures for 2022: a ministerial order (immediately published) which formalises previous derogations granted "on an exceptional basis" from 2022-2023. This states that if the search for a qualified employee lasts longer than three weeks, then an unqualified candidate can be recruited, up to a maximum of 15% of the workforce, who must be supported by in-house training, i.e. an "integration course" of 120 hours then by qualifying training within a maximum period of one year (MHP & MSADP 2022b). €500,000 have been pledged in support of the Childcare Sector Committee over 18 months, towards the construction of an Observatory on the quality of life at work in early childhood; a doubling of the local funding (an additional €3 million) of the plan *Ambition Enfance-Egalité* (for "the analysis of practices in all settings", said the Minister) and €2 million for a campaign to promote the early childhood professions. He announced that he will work with the

Minister of Education (on the *CAP AEPE*), with the regions (on the places available in the training of *EJEs* and Auxiliary Paediatric Nurses) and with the Departments about quantifying staff needs. In September, some measures were announced by the Minister but they concern only home-based providers. In May, following the General Inspectorate of Social Affairs's report (Bohic et al. 2023), the Childcare Sector Committee pleaded for a salary increase from 2023. Professionals are waiting for its propositions regarding pay.

7.5.2 Pre-primary education sector (2–5 years)

Pre-primary Teachers

The average age of Teachers in 2020 was 44 years (Department of Evaluation, Forecasting and Performance 2021). The average age of those admitted to the *CRPE* increased from 27.8 years in 2013 to 29 years in 2020. The absenteeism of registrants for passing the *CRPE* exam was high in 2020, 61% of registrants gave up. Success rates vary according to the academies: 14% (Toulouse) to 81% (Versailles, where the shortage is very high). In 2022, the results of the competitions confirm the staffing shortages for pre-primary and primary schools (particularly in the most vulnerable areas of the Paris region, where a second session was organised to recruit more Teachers in the academies of Versailles and Créteil). The long-standing decline in attractiveness for this profession is combined with an economic recovery which also puts it in competition with other professions. At the beginning of July 2022, the new Minister of Education, Pap Ndiaye, declared the need for a "shock of attractiveness" in order to no longer have recourse to contractual teachers. However, faced with the emergency, the academies have renewed and hired more contractual teachers for the 2022-2023 school year from Bachelor's degree holders. From 2023, remuneration will increase, said the Minister: at least €2000 net at the beginning for every teacher; and a bonus for those with some specific tasks (to be specified with the unions).

Auxiliary staff (*ATSEM/ASEM*)

The average age of auxiliary staff can be estimated at around 45 years.

The municipalities lack *ATSEM*, who protested during 2022 for better conditions, supported by parents. Relying on some reports which suggest that professional development opportunities are insufficient, the Government has introduced little changes towards a quicker progression within their career pathway and opened up access routes to this profession (internal exam or internal promotion to diverse municipal employees, including Leisure-time Facilitators) and allowances.

7.5.3 Pre-primary leisure-time sector (2–5 years)

The average age of the Leisure-time Facilitators is estimated at 25 years.

The shortage of Leisure-time Facilitators is increasing: in 2020, *Pôle emploi* recorded 94,180 recruitment intentions in this sector. Many municipalities (estimate: 80% in 2021) have great difficulties recruiting because the job offers only low pay, fragmented days and a significant workload. Job precarity is strong, as well as the lack of recognition and the costs of training for the certificate (*BAFA*). With the COVID-19 crisis, many people preferred to reorient themselves towards other sectors of activity. In 2022, the State Secretary for Youth and Engagement, together with around fifty organisations, employers and funders, launched the Plan "*Pour un renouveau de l'animation en accueils collectifs de mineurs*" (For a renewal of animation in centres for minors). Some of the 25 short and long-term measures are oriented towards more continuity in the child's day – Ministry of National Education and Youth Affairs 2022a). A *Comité de Filière Animation* (Animation Sector Committee), including representatives of the actors, the State, municipalities, the unions, etc., has been created. The mission of the Committee is articulated with

that of the Early Childhood Sector Committee. Among the short-term measures: a financial help to municipalities to increase leisure time activities on Wednesday afternoon (€53 million), as well as for the students, not only the age lowered to 16 years for beginning the *BAFA*, but also the “exceptional help” (€4 million) for paying and finishing the *BAFA* quickly (€120 each), and the support for *CQP* for 2,500 Leisure-time Facilitators who have been practising for at least 3 years (€1,600 each). The training, open to *ATSEM*, will include new modules of civic interest (citizen projects, sustainable development, inclusion/handicap...) – an experiment will be launched in 2022 for 200 training courses for deepening civic engagement (€100 each). A plan will propose paid hours for the preparation of the activities to Leisure-time Facilitators working at 80%. The Committee is called on to rethink the *BAFA* (reinforcement of public and free initial training, with associations more focused on continuing training; simplification of existing professional certification procedures by structuring them at infra-baccalaureate, baccalaureate, post-baccalaureate levels, corresponding to the levels of skills expected – coordination, team management and management – and articulated between them thanks to progressiveness via blocks of skills). It must also restructure the professional training; and find ways and means of a commitment by all employers, not to leave any Leisure-time Facilitator without CPD after three years of professional practice.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Over the past five years and currently, policy reforms and initiatives were/are aiming at the reduction of the severe shortage in all sectors, as detailed above, by a series of measures (Decrees and Orders) concerning the training (lowering of entry ages or requirements into training); expanding the group of potential candidates; providing financial support to students or salaries; facilitating measures for passing exams) as well as a few qualitative measures towards a more appropriate content of the training to make the job more recognised and more attractive. However, lowering the requirements threatens to reduce the quality of ECEC settings. And financial attractivity remains a big challenge.

Small advances have been noted to give more coherence within the childcare sector: introducing the same regulations for both centre-based and home-based provision (Decree 2021-1131); moving towards a common basis in the initial training; reforming the training of Auxiliary Paediatric Nurses. These are beginnings.

The renewal of the cultural and artistic policy in early childhood, in 2017 at the end of F. Hollande's presidency, led to an agreement between the Ministry of Culture and the Ministry of Solidarity and Health to introduce or strengthen both kinds of training (initial and continuing) in cultural/artistic stimulation for childcare staff and training in early childhood for arts and culture professionals (MCC and MFCWR 2017). Currently the changes are mainly on the side of the training of childcare professionals.

Very small advances have been made to decompartmentalise jobs, although much remains to be done in the French divided system.

Part of the professionalisation issues, particularly in the childcare sector, have been oriented by and included as part of the Plan against poverty launched by E. Macron in 2017 (14.2% of the population in France are affected, the overseas departments in particular. An inter-ministerial delegation was created to develop a National Strategy from 2018 and among the measures concerning early childhood, a training plan (*Ambition Enfance-Egalité*) inspired by the National

Charta (2019) and some recommendations of a report about Piloting quality in early childhood by the Supreme Council of Family, Childhood and Age (SCFCA 2019). Another report, *Les 1000 premiers jours* (Ministry of Solidarity and Health 2020), commissioned by E. Macron, is part of this Strategy and inspired the training plan; the Ministry of Culture is involved. The recent assessment of the four years and 35 measures of the National Strategy carried out by the evaluation committee (France Stratégie 2022) indicates the absence of improvement in inequalities in early childhood, despite the increase in the overall budget initially planned. The target of training 600,000 professionals (plan *Ambition Enfance-Egalité*) was not achieved (only 12%). In addition, the very diverse content and modalities of the funded trainings were questioned. Whereas some of them focus on early artistic and cultural training, others are linked to contested compensatory programmes, which continue to be supported (Institute Montaigne 2022). The evaluation committee addressed its recommendations to the new government, for 2023-2027, the first being to “continue or even amplify the measures whose effectiveness has been proven, and to abandon or reconfigure the measures which have not produced the expected effects”. The new Minister has announced a doubling of the local funding (an additional €3 million) of this training plan.

9. Recent country-specific research focusing on ECEC staff

Two recent edited volumes (Ulmann and Garnier 2020; Moisset 2019a) have brought together studies using different methodologies that shed light on the different characteristics of ECEC staff's work, its representations and its experiences. They have probably contributed to reforms of training in the childcare sector and towards sustaining prospects for openness between sectors. Another edited volume (Péralès et al. 2021)-was written during the first lockdown by Parisian staff from the three sectors (childcare, education, leisure-time facilitation). It documents ongoing experiments of bridging activities in the context of the Paris' territorial educational project (*PEDT*), showing the important roles of Early Childhood Coordinators as well as constructions of common repertoires of practices among practitioners in the three sectors. It contributed towards sustaining and extending the bridging process in the field.

The volume on the "invisible but nevertheless overinvested in social issues" work of ECEC staff (and students) (Ulmann and Garnier 2020) focuses on everyday practices, where they are played out, to better understand professionalism as a process emerging from the practices themselves and, beyond the myth of complementarity, socio-professional competition linked to the diversity of professionals and their statutory hierarchy. Among the seven contributions, where the researchers analyse what the professionals experience, think, mobilise or invent, three are reported here:

What images of work are conveyed in the initial professional education of Auxiliary Paediatric Nurses?

Source: Rodriguez and Ulmann 2020 (see *References* for full details)

Aims: To explore the links between training of *auxiliaires de puériculture* and their work in *crèches*.

Procedure: The data come from a previous ethnographic study conducted in two types of field: childcare centres and training centres (observations and interviews with students and trainers,

who are former *puéricultrices* in hospitals or *crèches*, and some co-analysis with them) (Ulmann, Rodriguez, and Guyon 2015). The authors focus on the “practical work” part of the 17-week training (+ 17 weeks of placement) offered to students over 17 who have passed an entrance examination (recognised as difficult). This practical work gives a large part to simulation: situations which reproduce professional situations by simplifying them (e.g. use of a doll to learn body care skills).

Selected findings: The results indicate that the representations of work transmitted by the trainers are based on the adequacy of technical skills, acquired by “capable” students, who have learned to hide their feelings in the relationship with children.

Implications: The authors question this rationalisation of practices compared to the flexibility required to act in a variety of contexts and to the opportunity to explore the subjective dimensions inherent in this work of caring for very young children. The co-analysis “opens the way to the co-construction of a reflection on work which, gradually, can lead to the design of pedagogical settings based on professional situations, not only to impose rational knowledge but also to question the obstacles to its implementation”. For the authors, “it is also necessary to think that training can be an instance for learning a profession but also for making it evolve. It would be a question of better knowing the real practice of *auxiliaires de puériculture* in order to identify the corpus of knowledge which is specific to it and which is in no way reducible to the medical knowledge which is provided to them in training”.

Surveys of care and education practices in work with young children

Source: Ulmann 2020 (see *References* for full details)

Aims: To analyse the links between organisations of activity in *crèches* and professional competence.

Procedure: This ethnographic study is based on participants and external observations in four *crèches*, during several weeks each (two municipal, one associative and one parental *crèche*), interviews with their heads and deputies, and discussions with the team.

Selected findings: The author notices a blind spot concerning organisational work, which is almost absent from the various training courses (*auxiliaires de puériculture*, *EJE...*) and tends to be delegated to the *crèche*, or to the personal choices of the heads. She notes the lesser autonomy of heads of municipal *crèches* compared with the parental *crèches*, the weight of managerial logic on the quality of work and the professional fatigue of heads and teams. She questions the procedure of requiring *crèches* to provide written documentation: Designed and used in very different ways, could it be an ersatz to the visibility of organisational work? She observes the importance of the place of heads in the organisation of the *crèche*, with different “styles of governance” based on their educational understandings and social and political ideologies: the staff of all *crèches* reported that they stay or leave depending on the work initiated by the head.

Implications: The author notes that training, referring to medical knowledge (for *auxiliaires de puériculture*), does not always make it possible to cope with the complexity of working with young children. Organisational work would seem to offer more resources to make their job better recognised. For the author, it is not the intrinsic complexity of the work that often produces fatigue or even the bitterness of a lack of recognition, but the lack of time reserved for collective work to reflect and experiment. Also, the training must “contribute to the development of thought in the professional space, as in the training space. Work can thus become a resource for training and the latter an opportunity to set this thought in motion, particularly by opening up new ways of seeing, acting and developing one's skills in, by and for work.”

Observing and talking about the quality of work with young children

Source: Garnier 2020 (see *References* for full details)

Aim: To better understand professionalism as a process emerging from everyday practices.

Procedure: The study is based on previous comparative research (with G. Brougère, S. Rayna, and P. Rupin 2016) using a visual methodology. The author focuses on the ways of verbalising and the words used by the different professionals to describe their work with children aged 2–3 years in one centre in the childcare sector (one *crèche* for 0–3 year-olds) and two classes for 2 year-olds in the education sector, in *écoles maternelles* (one bridging class and a classical *toute petite section* class). Participants: were one *EJE* and four *auxiliaires de puériculture* (staff of the 2-3 years old group, *crèche*); two part-time teachers and one *ATSEM* (staff of the *toute petite section* class, *école maternelle*); one teacher, one *EJE* and one *ATSEM* (staff of the the bridge class, *école maternelle*).

Selected findings: The study suggests what childcare teams and teachers do (or do not do), and what is (or is not) worth saying, to emphasise their work's importance or criticise it. The confrontation with the video concerning their settings and with the videos of the other settings shows differentiated relationships to the visibility and invisibility of work. For example, the visibility of the work with the teacher of the *toute petite section* consists in explaining what was done to get there (in the video) with the 2 year-olds and what is "behind" what children do (the teacher's "goals"); in the *crèches*, the teams insist on the quality of their professional "presence" at work. The diversity of terms rejected/chosen according to the categories of professionals marks the place of a specific "language culture". Words are more than a simple vocabulary used to label things, words are "action programmes", as argued by the author.

The edited volume compiled by Pierre Moisset (2019a) also explores different facets of the various professions and professionals of childcare: How do they enter the profession? What does childcare consist of? How do they live their occupation? The authors (researchers, trainers and professionals) discuss their important place in society and conditions for a better situation. Here are two examples which, among others, echo the contributions in the volume presented above:

The unique position of Auxiliary Paediatric Nurses

Source: Moisset 2019b (see *References* for full details)

Aims: To present the voices of *auxiliaire de puéricultures'* on their work in *crèches*.

Procedure: The study is based on a comparative research concerning the various professionals working in *crèches*. Using a questionnaire survey (939 participants, working in mostly public settings in 138 cities, with one half consisting of *puéricultrices* and the other half *EJE* and *auxiliaires de puériculture*) the author asked the professionals to describe the way they experienced their work, on the one hand with the children in the *crèches* and on the other hand with the team, the hierarchy, the parents.

Selected findings: Even though all the professionals express their fatigue and difficulties, the study shows that the *auxiliaires de puériculture* have a more disenchanted view of these two aspects of their work and their profession than the heads (*puériculteurs/puéricultrices* or *EJE*) and other qualified staff members. Thus, they more frequently describe their work as routine, boring and unrewarding, while declaring themselves more frequently stressed. Surprisingly, they are more pessimistic than professionals holding a *CAP PE*, for whom working in a *crèche* is a form of promotion and a way of accessing higher qualifications and, therefore, greater recognition. The author speaks of "the basin effect" among *auxiliaires de puériculture*, who come up

against a "glass ceiling", whereas with their experience, they feel competent to claim more responsibilities and latitude of action.

Implications: Rather than looking for alternative pathways such as the validation of acquired experience, allowing them to move towards the status of *EJE*, and so on, the author invites the participants to think about the recognition of their experience "without this going through new diplomas but by taking greater (and financially recognised...) responsibility within the *crèches*". He asks: "How to change the management of teams in *crèches* to give more possibilities and freedom of exercise to *auxiliaires de puériculture* and get them out of a position of exhausting and discriminating work routines in the long run".

Work organisation and working conditions in *crèches*

Source: Odena 2019 (see *References* for full details)

Aims: To identify the impact of three types of organisation on professionalisation, professional development prospects and/or the possibility of integration and participation in the team.

Procedure: The author draws on previous studies of the views of various qualified members of staff, mostly from 12 monographs on private *crèches* (with A.-M. Daune-Richard and F. Petrella 2007; Odena 2012) and 32 interviews in eight *crèches* – three associative, three private and two municipal – (Odena 2009).

Selected findings: In cases where the organisation of *crèches* is vertical and centralised (especially in the public or private sector), access to training is more hierarchical (easier for the most qualified personnel: *puériculteurs/puéricultrices*, *EJE*) and more fragmented (specific content for each category of staff), which is a source of frustration. In the private sector, training is more standardised, professionals suffer from not meeting other professionals. The associative sector, with a more horizontal organisation, is distinguished by training through projects, where all members of the team participate. These organisations impact the "making sense" of work organisation.

Creating bridges across sectors – quite an art!

Source: Péralès, Chandon-Coq, and Rayna (eds.) 2021 (see *References* for full details)

Aims: This edited volume, based on a shared process of practices analysis by voluntary staff (all categories), sustained by one researcher and two Early Childhood Coordinators (0–2 years) in charge of the municipal *crèches* of two Parisian *arrondissements*, plus one Coordinator of the leisure-time sector, document the emergence and development of experiments of bridging activities launched by these coordinators in the context of the Paris' *PEDT* (*Paris territorial Educational Project*).

Procedure: After making a picture of the history of shared activities, mixing children from *crèches*, *accueils périscolaires* and *écoles maternelles* (mainly the 2 and 3 year-olds) and their staff, in each *arrondissement* as well in the previous experience of the Coordinators, a series of multivocal stories constitute the essence of the book, making visible the collaborative procedures between staff, the evolutive and unique process and experience of each pair of settings, the whole dynamics and the supportive role of the Coordinators as well as staff from the culture sector in such often fragile and ephemeral projects, the creativity of the field, the rich experience of children, parents and professionals.

Selected findings: The collective writing experience, which required detailed observations, interviews with parents, as well as reflexive teamwork and partnership, and which helped to sustain the local network of ECEC settings and to valorise this field of work and its actors, contributed towards supporting and extending the process during and after the pandemic towards

more continuity and coherence in the life of the children attending ECEC collective settings in Paris simultaneously or successively.

Implications: New data continue to be provided concerning a smooth entry to school for 3 year-olds and reciprocal enrichment of professional practices, some of them are published in a professional journal (Benamer 2021; Jalet and Perez 2022; Soutra and Doucoure 2022; Benamer and Quémar 2023) as well as new experimentations in other *arrondissements* (Watanabe-Vermorel *et al.* 2022; Beauvois 2023), since the signature, including the Directorate in charge of the *crèches*, of the new *PEDT*.

Based on the same approach of documenting innovative experiences, another publication gives voice to both professionals of childcare and professionals of French museums which begin to open their doors to the under 3 year-olds, showing other ways of professionalisation of both kinds of staff as well as new ways for fighting the increasing cultural inequalities (Rayna 2022).

10. Workforce challenges – country expert assessment

The French ECEC system, which suffers from old problems that the pandemic has aggravated, is facing many challenges. The tensions present among childcare professionals (Odena 2009) and others are indeed redoubled in the context of staff shortages and in the face of the tensions existing at the level of the policies and the paradigmatic choices which underlie them, within the overall developing process of the marketisation of early childhood.

The **first** and immediate challenge concerns reducing the shortage of personnel in all the three sectors, thus linking it to the **second** challenge, that of the quality of ECEC provision, which in turn is associated with the **third** challenge, the permeability between the three sectors.

These linked challenges require taking quantitative and qualitative measures: a substantial increase in remuneration, more appropriate initial and continuing training, an improvement in working conditions which, together, should help to upgrade the status of the work and the professions concerned. In a training market with training that is intermittent (therefore ineffective) and increasingly provided by the private sector (with questionable proposals), other forms of training should be taken into consideration. These would include a long-term approach, based on methods of action research, with recognised and competent trainers or partners from other sectors, such as artists; they would also include the form of study travel (Pirard, Rayna, and Brougère 2020) to broaden perspectives and strengthen the agency of professionals and thus the quality of ECEC, where too many staff are above all operative workers.

Shared training and activities between the three sectors need to be expanded. The task is immense in a country which continues to think of reform on a sectoral basis and not (yet) for the whole 0–6 period. Real progress should, in fact, go through a grouping and therefore a reduction in the number of professions, with a vision crossing and really unifying the three sectors. The new Prime Minister has recognised a childcare system out of breath and deeply unequal, the difficulties of schools and of the municipalities (for the out-of-school leisure-time periods). The Early Childhood Coordinators need to be (better) trained in their tasks. Teachers need to be provided with more knowledge of early childhood and appropriate practices for working with young children, their parents, professionals of the care sectors, with ways of coping with diversity (Garnier 2016), with ways of moving towards more social justice (Joigneaux 2009).

Huge efforts need to be made in bringing about a common and consistent training, especially in relation to welcoming diversities and disabilities, to bridging activities between the three sectors, or to achieving equality between girls and boys⁸ which is lacking everywhere. The training of the trainers in each sector needs to be consolidated and include international perspectives. More research needs to be done on ECEC in order to inform policy makers more precisely, particularly about the necessity of CPD, as well as about innovative professionalising experiences or about the very invisible professionals such as those in charge of the individual support of children with disabilities, or about new and increasing collective settings still categorised as home-based provision (*Maisons d'assistances maternelles – MAM*).

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms chosen in this report for the main forms of centre-based ECEC settings are: **childcare centre** (*crèche collective*, 3 months–2 years)¹ and **pre-primary school** (*école maternelle*, 2–5)². Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in France

1770	Founding of the first centres for young children: the <i>écoles à tricoter</i> by Pastor Oberlin in Ban-de-la-Roche (Vosges)
1844	Establishment of the first <i>crèche</i> (childcare centre) in Paris by Firmin Marbeau
1826	The first <i>salles d'asile</i> , the forerunners of <i>écoles maternelles</i> , are founded in Paris for poor children. Ten years later there were 34 in Paris, and by 1935, 102 in the whole of France.
1848	Marie Pape Carpentier introduces a first separation from primary learning. After being director of a <i>salle d'asile</i> (in La Flèche, then Le Mans), she becomes the first director of a specific training centre for the heads of the <i>salles d'asile</i> .
1881	<ul style="list-style-type: none"> – <i>Salles d'asile</i>, renamed <i>écoles maternelles</i>, are integrated into the education system. Jules Ferry (Minister of Public Instruction) defines them as free of charge, secular and non-compulsory institutions. – Primary school teachers (trained in <i>Écoles normales d'institutrices</i>) replace the previous personnel in the <i>salles d'asile</i>. – <i>Écoles maternelles</i> continue to take in children from low social classes. – Pauline Kergomard, a general inspector of <i>écoles maternelles</i>, strongly defends play and the specificities of early learning.
1887	The training centres for teachers (<i>Écoles normales d'institutrices</i>) also include teachers for the <i>écoles maternelles</i> .
1905	With the development of the French Republican School (<i>l'École de la République</i>), private religious schools decline. Following the Law defining the separation between State and churches (Catholic and others), the State no longer pays for churches, priests etc., but private (mainly religious) schools continue to receive public funding if they have a contract with the State. Other private initiatives continue, but without public funding. Public <i>écoles maternelles</i> are free of charge (except for lunch and out-of-school hours).
1908	First curriculum introduced specifically for the <i>écoles maternelles</i> .
1910	Introduction of the first specialist inspectors for the <i>écoles maternelles</i> in each Département
1921	<ul style="list-style-type: none"> – Staff in <i>écoles maternelles</i> are given the same professional status as primary school teachers. – Creation of AGIEM (Association Générale des <i>Instituteurs d'École Maternelle</i>), the professional association of preschool teachers. – Revision of the preschool curriculum (the last until 1977)

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In the case of France, the relevant formats are **0–2** and **2/3–5** years, since children start the *école élémentaire* when they are 6 years old.

² To establish a degree of comparability between the SEEPRO-3 key contextual data reports, the term **pre-primary education** is used when referring in general to the *écoles maternelles* (2–5). In France, however, the *école maternelle* is integrated into the primary school for 2 to 11 year-olds (*école maternelle + école élémentaire = école primaire*).

Post 1945	Crèches, previously run by charitable organisations, are included in the state health system.
1975	<ul style="list-style-type: none"> – Entitlement to a place in pre-primary provision for 5 year-olds – Elected parents' committees are created in each <i>école maternelle</i>. – New regulations under the Minister of Health (Simone Veil) now allow parents, who were not authorised to enter <i>crèches</i>' rooms for hygienic reasons, to be admitted.
1977	New curricular objectives and methods are issued for the <i>école maternelle</i> and its three roles (education, early learning and care).
1980-83	Decentralisation moves – municipalities (<i>communes</i>) take over responsibility for crèche settings in cooperation with the state through the CAFs (<i>Caisses des allocations familiales</i>).
1986	<i>Contrat enfance</i> – state funding to provide diversification of crèche settings to meet family needs
1986	Orientations for the <i>école maternelle</i> : socialisation and early learning
1989	<ul style="list-style-type: none"> – Inclusion of the <i>écoles maternelles</i> in the 'primary school' (<i>école maternelle + école élémentaire</i>) – Definition of 3 cycles of learning from 2 to 12 (early learning cycle for pre-primary education) – Same training in university institutes for pre-primary and primary teachers, who are now called <i>professeurs des écoles</i> – Entitlement to a place in pre-primary provision extended to cover 3 and 4 year-olds, with priority of inclusion of 2 year-olds in disadvantaged zones – An inter-ministerial policy (Ministry of Culture and Ministry of Solidarities and Health) is launched to develop art and culture from birth (aims: democratisation of culture, fight against inequalities and exclusion, parental support, improvement of quality in care settings) through the collaboration of artists and practitioners of the culture sector with ECEC professionals and parents, with notably successful implementation.
1991	Another inter-ministerial policy (Ministry of Education, Ministry of Solidarities) launches classes and <i>actions passerelles</i> for bridging the care and education sectors. In reality this was not supported by the Ministry of Education, since its priorities at the time were the integration of <i>écoles maternelles</i> in the <i>école primaire</i> , the new school curriculum (2–12) with the implementation of the cycles of learning, assessments of children, the new common initial professional education/training for teachers of both schools.
1995	Curriculum for 'primary school' (<i>école maternelle + école élémentaire</i>). The <i>école maternelle</i> is presented as the foundation stage of the education system and as preparing for school.
2000	A new Decree recognises the educational role of crèches and parental participation.
2002	New curriculum for the <i>école maternelle</i> (within primary school): focus on language acquisition Assessment of children's learning (according to the curriculum)
2008	Revised national curriculum for <i>écoles maternelles</i>
2010	A new decree introduces flexibility in the care sector.
2013	Revised version of the 2008 curriculum for <i>écoles maternelles</i> . Play reappears as well as parents' participation and specific attention is given to 2 year-olds. Since 2013 municipalities are obliged to develop a local educational plan (<i>Projet Educatif De Territoire – PEDT</i>) towards more continuity in the diverse educational experiences of children and young people, during school hours and out of school hours, including children in <i>écoles maternelles</i> . Some municipalities (for instance Paris) also include children under 3 and support the development of <i>actions passerelles</i> (shared experiences) between <i>crèches</i> and <i>écoles maternelles</i> .
2016	Sylviane Giampino's report (<i>Développement du jeune enfant, modes d'accueil, formation des professionnels</i>) (Child development, care services, professionals' training) proposes 108 recommendations for the care sector.

2017	<p>Based on Giampino's report:</p> <ul style="list-style-type: none"> – The Ministry of Families, Childhood and Women's Right launches a <i>Cadre national pour l'accueil du jeune enfant</i>, with 10 principles. – The inter-ministerial policy on art and culture for young children was re-launched by the Ministry of Culture and Communication and the Ministry of Families, Childhood and Women's Rights.
2019	<p>Law endorsing compulsory attendance for 3 to 5 year-olds in the <i>école maternelle</i> comes into force.</p>
2020	<ul style="list-style-type: none"> – From 2020, Ministry of Culture and Ministries of Solidarities and Health participate in the National Strategy of Prevention and the Fight Against Poverty, launched in 2019, by stimulating and supporting actions, training etc. – Linked to the National Strategy (Poverty), the three ministries also participate in prompting actions within the framework of the "chantier des 1000 premiers jours", which includes care services.
2021	<p>The Decree on care settings (August 2021) regulates both <i>crèches</i> and home-based providers and adopts the <i>Charte nationale pour l'accueil du jeune enfant</i> as first curricular orientation for both. The decree introduces some deregulation in the staffing ratios, depending on the size of <i>crèches</i>.</p>
2022	<p>A "public service for early childhood" (<i>service public de la petite enfance- SPPE</i>) is one of President Macron's campaign commitments. After a consultation phase with key stakeholders, a National Council for the Refoundation of Early Childhood (<i>conseil national de refondation sur la petite enfance – CNR</i>) is established by the Ministry of Solidarity, Autonomy and Disabled Persons.</p>
2023	<ul style="list-style-type: none"> – January: Ministry of National Education and Youth affairs launches a new plan for the <i>école maternelle</i> (<i>Plan maternelle</i>) aiming for children's "success" and "flourishing" based on training, more continuity in ECEC, relationships with parents and the transition to primary school. – June: Prime Minister E. Borne announces the SPPE: 5.5 billion euros for 100,000 places in <i>crèches</i> by 2027 (target: 200,000 places in 2030): confirmation of municipalities and inter-municipalities as organising authorities within the framework of "a national strategy set by order of the Minister for the Family which determines in particular the priorities and multi-annual national objectives in terms of the quantitative and qualitative development of ECEC provision and training for early childhood professionals", with Departmental Family Services Committees (CDSF) responsible for monitoring the multi-year plan for the reception offer of the municipalities.

ECEC system type and auspices³

Early childhood education and care in France for children up to school entry at the age of 6 years is a so-called 'split' system, regulated by different jurisdictions. The centralised French education system, of which pre-primary education (*écoles maternelles*) for (2)3 to under 6 year-olds is a part, comes under the auspices of the Ministry of National Education and Youth Affairs (*Ministère de l'Éducation nationale et de la Jeunesse, MENJ*).

Educational institutions, both pre-primary and primary, are state-maintained, i.e. publicly funded and organised. Government responsibilities include provision for the continuing professional development of ECEC staff, curriculum content and inspections regarding quality and administration.

³ The Eurydice country report on ECEC in France³ provided orientation for legal and regulatory aspects. All other sources are indicated within the text and in the references section.

ECEC provision for children under 2/3 years of age (*l'accueil du jeune enfant*) is not part of the education system and, since 2022, comes under the jurisdiction of two ministries: the Ministry of Health and Prevention (*Ministère de la Santé et de la Prévention, MSP*) and the Ministry of Solidarity, Autonomy and Disabled Persons (*Ministère des Solidarités, de l'Autonomie et des Personnes handicapées, MSAP*). Decentralisation moves in the early 1980s led to the municipalities (*communes*) taking over local responsibility for the provision for under 3 year-olds, in cooperation with the state through the CAFs (*Caisses des Allocations familiales*). This was followed by a diversification of the traditional centre-based childcare settings (see section on *Main types of provision*).

General objectives and legislative framework

The overall system of early childhood education and care has been strongly influenced by two divergent philosophies: that of child protection and paramedical care in the provision for under 3 year-olds, and school dominance in the pre-primary education for 3 to 6 year-olds. These traditions still permeate the system, although more educational and family-related approaches have been finding their way into the various forms of provision for under 3 year-olds.

The Preamble to the French Constitution of 1946 states that it is a duty of the state to organise free, public and secular education at all levels (§13). The main aim of pre-primary education in the *écoles maternelles* is to support children in realising their full potential and to prepare them for school. A strong emphasis is placed on language acquisition and development and it is seen as the first stage in the process of mastering the basic skills of reading, writing, counting and respecting others (Ministry of National Education, Youth Affairs and Sport 2021).

Each child's entitlement to early childhood education and the duties of pre-primary institutions are to be found in the Education Act (*Loi d'orientation sur l'éducation, 1989, with amendments*), in the Law on the Restructuring of the School System (*Loi d'orientation et de programmation pour la refondation de l'École de la République, 2013*) and in the Law for a School of Trust (*Loi pour une école de la confiance, 2019*). A recent *Plan maternelle* (Ministry of National Education and Youth Affairs 2023) aiming for children's 'success' and 'blossoming' places a focus on training (all levels), continuity within ECEC, relationships with parents and the transition to primary school.

Childcare centres (*crèches collectives*) were legally bound by the 2010 Decree on Facilities and Care Services for Children under 6 years of age, which focused primarily on health and safety standards. The 2022 Decree (31 August; Ministry of Health and Prevention and Ministry of Solidarity, Autonomy and Disabled persons 2022) currently regulates both childcare centres and home-based childcare providers. Some deregulation (due to the lack of personnel) coexists with the introduction of the first curricular orientations (*Charte Nationale pour l'accueil du jeune enfant*), including eight principles concerning the children's well-being and two others concerning personal well-being, proposed as curricular framework since 2017 (Ministry for Families, Children and Women's Rights 2017), as well as the support of artistic and cultural education (MCC & MFCWR 2017). From 2020, Ministry of Culture and Ministries of Solidarities and Health participate in the National Strategy of Prevention and the Fight Against Poverty, launched in 2019, by stimulating and supporting actions, training etc. Linked to the National Strategy (Poverty), the three ministries also participate in prompting actions within the framework of the "*chantier des 1000 premiers jours*" [construction site of the first 1000 days], which includes care services (Ministry of Solidarities and Health 2020).

After a consultation phase, Prime Minister E. Borne announces on June 1st 2023, the creation of a public service for early childhood (*service public de la petite enfance- SPPE*), which was part of

President Macron's campaign commitments – at the crossroads of policies supporting the birth rate, of full employment, of equality between women and men and of equal opportunities from an early age. This project takes into account recommendations of SCFCA's three reports (2023 a, b, c), and from a General Inspectorate of Social Affairs report (Bohic et al 2023) on quality of care and prevention of abuse in crèches.

The announced SPPE pledges 5.5 billion euros for 100,000 places in crèches for 2027 (target: 200,000 places in 2030).

- The municipalities and inter-municipalities are confirmed as organising authorities, within the framework of "a national strategy set by order of the Minister for the Family which determines in particular the priorities and multi-annual national objectives in terms of the quantitative and qualitative development of ECEC provision and training for early childhood professionals".
- Departmental Family Services Committees (CDSF) are to be responsible for monitoring the multi-year plan for the services offered by the municipalities.
- In the event of difficulties, the CAFs can intervene to guarantee the opening of new places.

Further policy goals are

- To increase the number (and tasks) of *Relais Petite Enfance RPE* (one per municipality of more than 10,000 inhabitants) and *crèches* supporting the target of integrating 1,000 settings
- Support for local initiatives against the non-use of childcare facilities
- The development of various flexible facilities for child early socialisation before *école maternelle*.

The four axes to improve quality are:

- (1) Staff training (a common basis); a national research programme on child development to "enrich training"; increase in hours of practice analyses; obligation of pedagogical days
- (2) Micro-crèches: increase in the number of professionals and financing of quality-improvement projects
- (3) Increased quality controls
- (4) To increase the attractiveness of the professions and reduce staff shortages; creating an observatory of professions and the quality of life at work; increasing the training offer (involvement of the Regions); increasing wages.

Discussions are under way about the new law on full employment which includes an article with the above-mentioned measures for childcare and about the 2023-2027 agreement regarding the management of State objectives by the CNAFs.

ECEC entitlement and compulsory attendance

Since the Law for a School of Trust came into force in July 2019, attending an *école maternelle* has been compulsory from the age of 3. This means children not only have a right but a duty to receive "instruction". In the official text it is "instruction" which is compulsory, not attendance, although home schooling is rare; parents have to be granted permission and very few children experience home instruction.

Children under 3 years of age do not have an entitlement to ECEC and enrolment is voluntary. Primary school (*école élémentaire*) starts at age 6.

Main types of provision

Childcare sector

Childcare centres (*crèches*) in both public and private ownership accept children from the age of 2–3 months up to the age of 3. In order to open a facility for under-threes, approval is needed by the regional Maternal and Child Protection services (*Protection maternelle et Infantile, PMI*) based on meeting the required standards regarding health and safety. The recent report of the General Inspection of Social Affairs (Bohic et al. 2023) recommends the creation of posts of Pedagogical Counsellors in PMI (as well in municipalities).

Also included are the non-profit childcare settings founded by parent initiatives (***crèches parentales***) where parents take it in turn to care for up to 20 children under the age of 3. The most recent Decree (Ministry of Solidarity and Health 2021, 31 August) categorises *crèches collectives* according to their size: *micro-crèches* (max. 12 places), *petites crèches* (13–24 places), *crèches* (25–39 places), *grandes crèches* (40–59 places) and *très grandes crèches*.

These various forms of provision for under-threes are generally open from the beginning of September till the beginning of August (in a number of cities, some groups remain open during August). Daily opening hours are decided by the provider and services are usually available from 8:00 till 19:00.

Kindergartens (*jardins enfants*) are a kind of complementary facility to the *écoles maternelles*. They take up to 80 children aged 2 to 6 years. Although there are some municipal centres, these are mostly non-profit private centres (*jardins d'enfants associatifs*) which offer long opening hours similar to those of the childcare centres. They are staffed by qualified *éducatrices/éducateurs*, who introduce the children to educational activities. This type of institution, which exists only in some cities, will be abolished in 2024, due to the compulsory instruction. After that they can be transformed into *crèches*.

Multi-functional centres (*structures/établissements multi-accueil*) are *crèches* which provide more flexible care arrangements: alongside regular full-day places these can also be part-time or sessional arrangements within the same setting. They aim to accommodate the diverse needs of families, and to meet more specifically the needs of single parents, of parents looking for a job, and of parents working atypical hours.

Sessional care facilities (*halte-garderies*) for children up to age 3 are organised by local authorities or non-profit service providers. They are mostly used on a short-term basis by working parents, more rarely on an hourly basis by parents not working in the labour market. They can be linked with the *multi-accueil* settings.

Home-based childcare settings are the main form of ECEC provision for a maximum of four under 3 year-olds. They are provided by approved Childcare Workers (*assistant(e)s maternel(le)s agréé(e)s*) who are registered with the district authorities. Their employers are the parents. They can work alone, group themselves in associations and participate to activities with the children proposed by ***Relais petite enfance (RPE)*** (previous name: *Relais assistante maternelle*), a kind of resource hub which offers support and *accompagnement* (as well providing families with information about the various care settings in the area). Recently, a new form of full-time collective care arrangement known as ***MAM (Maisons d'assistantes maternelles)*** has been established, whereby two to four Childcare Workers are authorised to work together and care for “their” four children in accommodation outside their own homes, which they can rent or buy or which may be allocated by the municipality in the smaller cities.

Family crèche networks (*crèches familiales*) comprise several approved childcare workers and take up to a maximum of 150 children. The *crèches familiales* employ approved home-based childcare providers who welcome children to their home for part of the day and make regular

use of a centre-based setting for different activities. This type of setting is supervised and managed in the same way as *crèches collectives* (Eurydice 2022).

Open-door services (*lieux d'accueil enfants parents* – LAEP), which are similar to the *lieux de rencontre* in Belgium or the *CBF (centro bambini e famiglia)* in Italy, are municipal or associative settings for parents and children – and sometimes home-based Childcare Workers (if there is no RPE in the area). They are open on certain days of the week and admit under 3 year-olds together with a parent or guardian, aiming to support parents in the socialisation of young children before they enter the *écoles maternelle*. They are attended mainly by children who are not enrolled in a regular care setting.

In some sparsely populated areas there are **mobile services** (*services itinérants*) which provide materials for smaller settings.

Education sector

Pre-primary schools (*écoles maternelles*) are the main form of provision for children between 3 and 6 years of age and since September 2019 instruction has been mandatory for this age group. The children are usually organised into same-age classes divided into *la petite section* (2 and 3 year-olds), *la moyenne section* (4 year-olds) and *la grande section* (5 year-olds). A *toute petite section* (2 year-olds) may exist in some cities.

The school year starts at the beginning of September and ends at the beginning of July. The *écoles maternelles* are open for 24 hours a week: either 6 hours a day on Mondays, Tuesdays, Thursdays and Fridays or for nine half-days (including Wednesday mornings).

In 2022, the number of pre-primary settings in France totalled 12,881 (RERS 2023, 27).

Bridge classes in pre-primary schools (*classes passerelles in écoles maternelles*) for 2 year-olds are not the *toutes petites sections* mentioned above. In a *classe passerelle* three adults work together: an Educator (*EJE*), a Primary Teacher and a Classroom Assistant (*agent territorial spécialisé des écoles maternelles* – ATSEM). The group size is lower than in the *toutes petites sections*. This kind of provision has been established in disadvantaged areas for children who have not previously attended a care setting.

The idea behind this early schooling for 2 year-olds (*scolarisation précoce*) is to offer a publicly maintained and accessible service in order to pursue the objective of promoting equal opportunities from the earliest age. In 2016, the government launched an information campaign for families, mobilising the CAFs, to accelerate the education of children under 3 years of age, the various partners concerned (local education authorities, municipalities, PMI, family allowance funds, associations) having to co-operate regularly in order to raise awareness among the most vulnerable families of the benefits of early schooling and to inform them of places available near their homes (Gouvernement 2016).

Children's groups in primary schools are available for 5 year-olds in rural areas. If there are enough places, 4 year-olds may also attend. Sometimes these children's groups cooperate to enable the founding of an *école maternelle* and the children are transported there.

Provider structures

The greater majority of ECEC provision in France for children aged 0 to 5 years is state-maintained or state-subsidised. In terms of provision for 3 to 5 year-olds, a total of 12,881 *écoles maternelles* were publicly run in 2022, whereas only 43 were private, most of which were state subsidised. Overall, only 13.3% of children attended a private institution in 2022; at 26.2%, the

share of 2 year-olds was the largest (see *Table 1*). Only 0.9% of children were enrolled in non-subsidised private institutions in 2020 (RERS 2023, 29, 75, 84).

Table 1

France: Number of children in pre-primary schools (*pré-élémentaire*) by age and provider, 2022

	Public	Private	Share of children in private (total) settings in %*	Total
2 year-olds	53,692	19,076	26.2	72,768
3 year-olds	639,175	94,535	12.9	733,710
4 year-olds	656,056	97,682	13.0	753,738
5 year-olds	670,718	99,579	12.9	770,297
Total	2,019,641	310,872	13.3	2,330,513

Participation rates in regulated provision

Childcare sector

Home-based ECEC provided by approved childcare providers remained the predominant form of provision (54% of the provision). Institutional settings (childcare centres, micro-crèches, family crèches and parental crèches) are the second largest contributor, providing places for 35% of children under 3 years of age (+19 %-points compared to 2013). *Écoles maternelles* are the third largest contributor, providing places for 5% of under 3 year-olds (SCFCA 2023, 63).

Table 2

France: Places for children under 3 years of age in regulated ECEC provision, 2020

Setting	Number of places
External home-based childcare provision	710,500
Childcare provision in parental home	46,900
Childcare centre (<i>crèche collectif/familial/parental, micro-crèche</i>)	479,000
Pre-primary school (<i>école maternelle</i>)	71,200
Total	1,307,600

Source: SCFCA 2023, 63

According to Eurostat data, the enrolment rates of under 3 year-olds attending a centre-based ECEC setting increased considerably between 2005 and 2022 – from 32% to 56.2%. The high participation rate of children aged 3 up to school entry remained at the high level of more than 90% (see *Table 3*).

Table 3

France: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005-2022

Year	Weekly attendance	0 to under 3 years, in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	16	56
	Over 30 hours	16	39
	No enrolment in ECEC	68	5
2010	1 to 29 hours	17	47
	Over 30 hours	26	47

Year	Weekly attendance	0 to under 3 years, in %	3 years to minimum compulsory school age, in %
	No enrolment in ECEC	58	6
2015	1 to 29 hours	16.0	36.9
	Over 30 hours	25.7	56.7
	No enrolment in ECEC	58.2	6.4
2022	1 to 29 hours	18.7	32.3
	Over 30 hours	37.5	61.4
	No enrolment in ECEC	43.7	6.3

Source: Eurostat 2023b, deviations in the sums due to rounding

Education sector (ISCED 02)

In 2022, 2,231,383 children aged 3 to under 6 years attended a pre-primary education setting. According to national statistics, 9.9% of 2 year-olds attended an *école maternelle*, whereas nearly all 3- to under 6-year olds were enrolled (see Table 4).

Table 4

France: Number and enrolment rates of children attending *écoles maternelles* by age, 2022

Age groups	Number of children	Enrolment rate, in %
2 year-olds	69,978	9.9
3 year-olds	726,257	98.0
4 year-olds	746,007	100.0
5 year-olds	759,119	100.0
3 to 5 year-olds	2,231,383	99.7

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 1.29% of GDP in 2020, 0.6% allocated to childcare and 0.7% to pre-primary education (OECD 2023).

Centre-based **childcare** settings generally receive subsidies from the Family Allowance Fund (*Caisse d'Allocations familiales*) which partly cover running costs. Additionally, parents pay income-related monthly fees. In 2017, for example, a dual-income family earning two minimum wages paid a monthly fee of €133 for a place in a crèche (Eurydice 2023).

The running costs of the *écoles maternelles* are generally covered by the municipalities, which are primarily responsible for buildings and equipment, whereas the State, the Ministry of Education, is responsible for staff salaries. Attendance is free of charge, but meals or additional childcare arrangements have to be paid by the parents. Municipalities may apply income-related sliding fee scales. The fees are minimal in private subsidised pre-primary settings.

Parents who choose family day care as their preferred form of provision receive a monthly child care allowance which varies according to the status of the family day carer, the child's age and the parents' disposable income.

In 2022, a couple with two children spent about 10% of net household income on childcare costs (OECD.Stat 2023).⁴

Staff to child ratios and group size

The maximum number of children in any one form of provision in the childcare sector is regulated according to the specific setting. *Crèches* generally have no more than 60 places, *micro-crèches* a maximum of 9 places, parental crèches a maximum of 20 places which can be expanded to 25 in exceptional conditions, kindergartens a maximum of 80 places, and family crèche networks a maximum of 150 places (Eurydice 2023).

The trend towards smaller classes also continued in the 2022 school year: the national average was 22 children per class in public settings and 24.9 in private settings (overall: 22.4) (DEPP 2023, 48).

Curricular frameworks

Childcare sector

In 2017, a “National Framework for the Care of Young Children” (*Cadre national pour l'accueil du jeune enfant*) was published by the Ministry for Families, Children and Women's Rights (Ministry for Families, Children and Women's Rights 2017). It provides guidelines for working with under 3 year-olds, both in home-based and centre-based childcare settings. This first curricular framework was introduced in the national regulation in 2021 (Decree 31 August 2021, Ministry of Solidarity and Health 2021). Based on the principles in the guidelines, each childcare setting develops its own pedagogical programme which has to be approved by the *département* authorities for maternal and child protection. The *PMI* is required to verify the process through compulsory visits to the setting.

In order to facilitate the transition for 2 or 3 year-olds to the *école maternelle*, collaboration between families, childcare staff and teachers in the *école maternelle* at the local level is recommended in the recent action plan published by the Ministry of National Education and Youth Affairs (2023).

Education sector

The first official curriculum for the *école maternelle* was published in 1908 – decades before most other European countries. In recent years, the mandatory guidelines have been regularly revised, the last edition of the new curriculum being published in 2021 (Ministry of National Education, Youth Affairs and Sport 2015, 2021).

The French primary school curriculum is organised around three cycles – the ‘cycle of early learning’ (*cycle des apprentissages premiers*) for pre-primary education and the two other cycles for primary education.

The ‘cycle of early learning’ includes five specific areas of learning: (1) mobilising language in all its dimensions – oral and written; (2) acting, expressing oneself, understanding through physical activity; (3) acting, expressing oneself, understanding through artistic activities; (4) learning to think in a structured way; (5) exploring the world. For each of these learning areas the curriculum

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

provides a general definition and educational objectives in order to support effective progress in learning.

Expected outcomes at the end of the *école maternelle* are formulated for each of the five dimensions. For example, for the first dimension (oral and written language), it is expected that each child is able to (Ministry of National Education, Youth Affairs and Sport 2021):

- Communicate with adults and other children through language, making themselves understood
- Express themselves in syntactically correct and precise language and rephrase to be better understood
- Practise various uses of oral language: telling, describing, evoking, explaining, ask questions, suggest solutions, discuss a point of view
- Recite several rhymes and poems from memory and in an expressive way
- Understand written texts with no other help than the language heard
- Demonstrate curiosity about the written word. Be able to repeat the words of a written sentence after being read by an adult, the words of the known title of a book or text
- Participate verbally in the production of a written document. Know that writing is not the same as speaking
- Identify regularities in oral language in French (possibly in another language),
- Manipulate syllables
- Discriminate between sounds (syllables, vowel sounds)
- Recognise the letters of the alphabet and know the correspondences between the three ways of writing them: cursive, script, block capitals. Copy using a keyboard
- Write their first name in cursive, without a model
- Write a word on their own using letters or groups of letters borrowed from known words.

Digital education

There are indications in the national pre-primary curriculum that digital technology should be integrated into the children's learning experiences. For example, in the 'language' dimension of the curriculum it is recommended that children contact each other using digital tools (European Commission/EACEA/Eurydice 2019, 100).

Since 2015, children are thus required to know how to use digital media which, "like other media, have their place in the *école maternelle* provided that the objectives and their methods of use are supporting a learning activity" (Ministry of National Education, Youth Affairs and Sport 2015) For the cycle of early learning, this includes the learning areas of language (practice transcribing known words, sentences, short texts and entering them on the computer) and digital arts as well as exploration of the world (learning to manipulate a computer mouse, using a digital tablet, etc.).

Documents accompanying the curriculum, for example those issued by the Rennes Academy (2015), offer some guidelines and indicate the potentials and precautions, e.g. "Real and concrete manipulations are essential"; "Digital should never replace the relationship"; "Handling digital tools allows children to acquire work habits that they can transfer".

Monitoring – evaluation

Child-related assessment

There are no national regulations for the assessment of children under the age of 3. Ongoing observations are loosely based on the National Framework for the Reception of Young Children (2017) and the staff team meets regularly to discuss practices.

In the *écoles maternelles*, teaching staff monitor each child's progress against the expected outcomes in each of the five learning dimensions of the pre-primary curriculum. Observations are documented in written form (and are passed on to other settings if the child changes school). A report for each child has to be produced annually, accompanied by a kind of school report (*livret scolaire*) which follows the child through to the end of primary school. At the end of the final year in pre-primary education, a summary of each child's achievements is made according to a national framework of criteria set out in a decree from December 2015. Competences in each of the five learning areas are assessed according to three categories: no success as yet; on the way to success; often succeeds.

Centre-level assessment

There are no regulations or recommendations for centre-level assessment in childcare services for the under 3 year-olds. However, they take place and focus on topics such as teamwork, the quality of leadership, staff satisfaction with working conditions, and parental satisfaction.

In the *écoles maternelles*, staff are expected to evaluate their own setting-specific programme aligned to the national curriculum for pre-primary education (European Commission/EACEA/Eurydice 2019, 126).

External evaluation

The Ministry for Solidarity and Health is responsible for the inspection of **childcare settings** for under 3 year-olds, which is delegated to the local child protection services. Besides assessments of the buildings, equipment and hygiene and safety requirements, staff qualifications are also checked as well as the specific working conditions. Evaluations are conducted primarily through visits.

In the French education system, external evaluations are compulsory. The Ministry of Education is responsible for the inspection of the *écoles maternelles*, which is organised by local educational authorities. Inspections fall under the responsibility of two inspectorates: the General Inspectorate of National Education (*Inspection Générale de l'Éducation Nationale*, IGEN) and the General Inspectorate of Educational Administration and Research (IGAENR). The Directorate of Evaluation, Prospective Planning and Performance (*Direction de l'Évaluation, de la Prospective et de la Performance*, DEPP) is responsible for educational statistics, conducting evaluations of school achievements and developing criteria for staff self-assessment.

Evaluations focus on curriculum content, teaching methods and learning. Management and staff are also assessed. The heads of the *écoles maternelles* are responsible for producing an annual report which is submitted to the local authorities. The frequency of inspections is not generally regulated, but they usually take place every two or three years. The results are rarely publicised. There is no standardised protocol for the external evaluation of pre-primary education, although the Ministry of Education provides indicators (European Commission/EACEA/Eurydice 2019, 126).

Inclusion agenda

Children with special educational needs and disabilities

– *Childcare sector*

Children under 3 years of age with disabilities can access mainstream childcare services (Decree 2005-1752). There is no legal obstacle to admitting a child with disabilities into *crèches*. Refusal to do so can constitute discrimination or a breach of equality in the delivery of public services (EASNIE 2021). If necessary, the admission of a young child with disabilities can be supported by a medical-educational service, the child and maternal protection service (PMI) or even by a hospital service. When a child's health requires specific or serious medical care, it is also possible to admit them to a childcare centre offering medical services (EASNIE 2021).

Regional centres for persons with disabilities (*Maisons départementales des personnes handicapées, MDPH*) were founded in 2005. A multi-disciplinary team (medical doctors, therapists, etc.) assesses the specific needs of the child in question and proposes an individual educational plan in close collaboration with the parents.

Since 2019, all childcare settings caring for at least one child with a recognised disability are eligible for the 'disability inclusion bonus'. The bonus is capped at 1,300 € per place. It is intended to cover extra costs such as staff training or special equipment. About a quarter of places in *crèches* benefited from this bonus in 2019 (European Commission 2021, 107).

In 2020, the association *Ebullescence* launched a network of specially designed and equipped inclusive ECEC settings to cater for the special needs of children aged 18 months to 6 years old with neurodevelopmental disorders (cerebral palsy, autism, motor or language disorder). A special focus will be given to daily meetings between the specialist staff involved, as well as close co-operation with the parents (European Commission 2021, 112).

– *Education sector (ISCED 02)*

In the education sector, children under 6 years of age with (special educational needs and) disabilities are mostly included in mainstream settings, or may have a place in an 'inclusion class' (*Unité localisée pour l'inclusion scolaire, ULIS*). Children with disabilities are enrolled in public or private pre-primary settings as a priority. Help from external support services can be arranged. The law also provides for enrolment in specialised settings, either for a specific length of time or through the education process (EASNIE 2021).

In 2022/23, a total of 30,372 children under 6 years with disabilities attended a mainstream pre-primary class and only 157 an inclusion class. The number of children in the inclusion classes increases significantly according to the age of the children. The majority of ULIS-groups (94%) are located in publicly run *écoles maternelles* and schools.

Table 5

France: Number of children under 6 years (*premier degré*) with (special educational needs and) disabilities according to age and type of ECEC provision, 2022/23

	Regular class	Inclusion class
	Number of children	Number of children
2 and 3 year-olds	4,056	16
4 year-olds	10,270	64
5 year-olds	16,046	77
Total number of children	30,372	157

Children with a migration background

In 2022, over 7.8% of the total population in France were of non-French origin of whom roughly two thirds (72%) came from countries outside the EU27. In the age group of the under-fives there were 9.7% children with a non-French citizenship, of whom a good 80% came from non-EU27 countries (Eurostat 2023c).

Children who are new arrivals to France are included in mainstream classes in *écoles maternelles* and schools. No special language tuition is provided for children with a background of migration but the pre-primary curriculum has a strong focus on language enhancement and development in general.

A 2014 study on access to *crèches* briefly mentions: “collective childcare facilities for young children seem to favour a mix of migratory origins”, although this criterion is not elaborated on. The children of mothers of non-French nationality who are not cared for at home are more likely to be enrolled in a *crèche* than those born to French parents. This is also the case for the children of immigrant mothers. This could also be due to a stronger desire on the part of the latter to use this type of structure. The migratory origin of the father seems to matter less, showing that the characteristics of the mother seem more decisive than those of the father for the granting of a place in a *crèche* (Le Bouteillec et al. 2014). Since schooling is compulsory from the age of 3, children with a migration background are obliged to attend an *école maternelle* (or be taught at home) from that age, as are all other children in France.

Parental leave arrangements⁵

Compulsory **Maternity leave** (*congé de maternité*) is fully paid for 16 weeks up to a monthly limit of €3,666. At least two weeks must be taken before the expected date of birth.

Paternity leave (*congé d'accueil à l'enfant*) is granted for 25 fully paid working days under the same conditions as maternity leave; these must be taken within the six months following the child's birth. Only 60% of fathers took paternity leave, although the figure is as high as 98% in the middle income brackets.

Parental leave (*congé parental*) can be taken up by both parents – also at the same time – up to the child's third birthday. A monthly allowance (*PreParE*) is paid of €422.21 if the parent is not working, €272.94 if working less than 50% and €157.45 if working 50 to 80%. A monthly income and working hours related tax-free allowance (*PreParE*) is paid. *PreParE* is paid up to a maximum of six months per parent of a single child following maternity leave, with two or more children it is paid until the child is 3 years old, for a maximum of 24 months. When taking Parental leave, parents may work for 16 to 32 hours per week. Parents can take part-time Parental leave simultaneously and receive benefit at the same time from the *PreParE*, but the total amount of payment cannot exceed €398,79.

There are no national statistical data about the uptake of parental leave. However, research studies suggest that in 2021 approximately 98-99% of those taking parental leave are mothers. 52% of recipients of *PreParE* did not work at all, 48% worked part time.

⁵ The brief summary in this section is based on the country note for France by Danielle Boyer and Jeanne Fagnini in the *International Review of Leave Policies and Research 2023* (see *References*).

Current challenges for the ECEC system in France

Country expert assessment by Sylvie Rayna

Challenges facing the ECEC system in France remain similar to those documented in the previous SEEPRO study (Rayna 2018). A central issue is the strong division between the care and education systems. It remains to be seen whether the new recent ‘light-touch’ attempts towards more continuity (e.g. through the initiatives and *classes passerelles*) will be further developed in the coming years.

Another continuing challenge is the absence of an early years specialisation in the initial professional education (IPE) of Pre-primary Teachers. There is currently no sign of a change to amend this. Some progress is being made regarding the IPE of the diverse practitioners in the care sector, but this still remains limited. There are no signs of introducing a specialist training for Early Childhood Coordinators.

Equality issues concerning access to care provision also remain significant as well as the ongoing privatisation tendencies (linked with less quality).

The discourse of ‘social investment’ in early childhood and ‘evidenced based’ rhetoric have penetrated recent policies of the *CNAF: Caisses nationales d’Allocations familiales*, linked to the aim of developing parental support, social cohesion, and the fight against poverty. Current debates are highlighting the tensions underlying such trends.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in France totalled 67,871,925. This represents a steady rise over the past 20 years (2000: 60,545,022; 2010: 64,658,856; 2020: 67,320,216) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13) (Eurostat 2023d)⁶.

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Children under 6 years of age

Table 6

France: Number of children under 6 years of age, 2022

Age	Number of children
under 1 year-olds	696,229
1 year-olds	695,404
2 year-olds	715,241
3 year-olds	725,778
4 year-olds	743,186
5 year-olds	766,394
Total 0 to under 6 year-olds	4,342,232

Source: Eurostat 2023a

In 2022, 3.1% of the total population were children under the age of 3, and 6.4% were children under 6 years of age. The share of young children in the total population has been significantly above the EU average for more than 20 years.

Table 7

France: Children under 6 years of age – share in total population from 2000 to 2022, in %*

Year	Comparison France/EU	Under 3 year- olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	France	3.7	3.7	7.4
	Ø EU15 ⁷	3.2	3.2	6.4

Single households with children under age 6

In 2022, the greater majority of households in France (84.2%) with children under 6 years of age were couple households. Households headed by a single parent accounted for 6.9% of all households, the larger majority being single mother households (5.9%).

Table 8

France: Households with children under age 6, 2022

Household type	Total households	Total households, in %*
All households	6,246,400	
Couple households	5,260,300	84.2

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Other household type	553,200	8.9
Single households, total	432,900	6.9
Single households, women	365,800	5.9
Single households, men	67,100	1.1

Employment rates of parents with children under 6 years of age

In France, in 2022, the overall employment rate for men (15-64 years) was 76.6% and for women 70.6% (Eurostat 2023e).

In 2022, 68.4% of women and 88.9% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were slightly above the EU-average (87.2%) and those of mothers were more clearly above the EU-average (63.6%) (Eurostat 2023h, own calculations).

Table 9a

France: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers in %	Fathers in %
France	65,0	88,3

Children at risk of poverty or social exclusion¹⁰

In 2022, 28.3% of children under 6 were at risk of poverty or social exclusion. This proportion was significantly above the EU27 average (23,3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 21% (EU: 21.6%). In 2020, 6.8% of children under 6 and 3.8% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023 f, g). Single parent families (41%) and families with three or more children (29.1%) were particularly affected (Eurochild 2021).

In 2021, a national training plan was launched as part of the national poverty strategy, which is primarily intended to improve the qualifications of ECEC professionals.

About the authors

Pamela Oberhuemer, Honorary Senior Research Fellow, Thomas Coram Research Unit, University College London. For over 30 years a full-time researcher at the State Institute for Early Childhood Research (IFP) in Munich with a focus, among others, on intercultural pedagogy and international ECEC system policies; lead researcher of the first SEEPRO study on ECEC workforce profiles in Europe. Rapporteur for the first OECD *Starting Strong* studies (I and II). Long-term co-editor of the research journal *Early Years*. Multiple editorial, scientific and professional board memberships. Besides book and journal publications on ECEC professional issues, numerous invited addresses in Europe and beyond.

Inge Schreyer, doctoral degree in psychology, has worked for more than 20 years as a researcher at the State Institute for Early Childhood Research and Media Literacy (IFP) in Munich. Her research topics in projects funded by the federal government and the federal state of Bavaria have included: service provider quality, workplace quality of ECEC settings, pedagogical counselling on quality issues, and evaluating a digitalisation campaign in Bavarian kindergartens. She contributed to the first SEEPRO study and took over the lead of the two follow-up projects beginning in 2015 and 2021.

Sigrid Ebert, state-certified educator, qualified psychologist, organisational and personnel developer. As Chair of the Pestalozzi-Froebel Association, she was a member of the "Initial and continuing professional education" committee of the national Youth Welfare Working Group (*Arbeitsgemeinschaft Jugendhilfe*) and of the Federal Youth Council (*Bundesjugendkuratorium*). Expert commission member in the Robert Bosch Foundation funding programme for the initial education and professionalisation of ECEC staff.

1. (E)CEC¹ governance in Germany

In the Federal Republic of Germany, early childhood education and care settings for children up to compulsory schooling at age 6 are part of the child and youth welfare system. The decision to exclude kindergartens from the public education system was made some 100 years ago, when the Imperial Youth Welfare Act 1922 (*Reichsjugendwohlfahrtsgesetz*) assigned them to the welfare sector (Franke-Meyer 2024). With the exception of the 40-year post-war era, when kindergartens in the German Democratic Republic (East Germany) were part of the public education system, this decision has been maintained up to the present day.

Federalism and subsidiarity are core political and organisational concepts underpinning the structures, legislation, regulation and funding of early childhood education and care in Germany. The subsidiarity principle evolved over time from the traditional provider structures in the social welfare sector. According to this principle, public authorities are only obliged to provide social services if non-governmental agencies are unable to do so, and this is still the case today for roughly two-thirds of ECEC provision. Childhood care and education services (*Kindertagesbetreuung*) in Germany comprises not only centre-based *early childhood* settings (nurseries, kindergartens, mixed-age centres) and home-based ECEC provision, but also out-of-school education and care services for school-age children. Collectively, centre-based services are called *Kindertageseinrichtungen*².

In the context of federal and decentralised administrative structures, responsibilities for the ECEC system are shared between the federal government (*Bund*), the regional parliaments of the 16 federal states (*Länder*) and local government bodies – in partnership with voluntary, non-governmental child and youth welfare provider organisations (*Freie Träger der Jugendhilfe*), which receive state subsidies in order to carry out their function independently.

At the **federal level** the main responsibility lies with the Federal Ministry for Family Affairs, Senior Citizens, Women and Youth (*Bundesministerium für Familie, Senioren, Frauen und Jugend*), which by law has a ‘stimulatory competence’. At the **regional level**, youth authorities (*Landesjugendbehörden*) in the 16 federal states (*Länder*), which are usually located within the respective Ministry of Social Affairs or Ministry of Education, implement federal legislative requirements and regulate issues not included in the federal law. At the **local level** the municipalities (districts, towns, boroughs) are responsible for the organisation, provision and funding of ECEC services in cooperation with various provider agencies, mainly with welfare associations and church affiliated organisations. This multi-level policy-making often results in considerable regional differences.

¹ Throughout this report, we will refer to “ECEC” in most cases as (E)CEC. The brackets signalise that the early childhood sector in Germany is integrated into the broader field of child and youth welfare, which also includes childhood care and education services for children up to the age of 14.

² Literally translated, *Kindertageseinrichtungen* are ‘children’s day centres’. *Kita* (pronounced ‘keeta’) is an abbreviated and commonly used form in Germany.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in (E)CEC provision

The (E)CEC workforce in Germany consists of two main occupational groups: (Early Childhood) Educators and (E)CEC Co-workers/Assistants. Childhood Pedagogues are a third, much smaller but nevertheless forward-looking professional group. Staff with a professional qualification from a vocational technical college³ specialising in social pedagogy (Educators) represent the largest group overall.

(Early Childhood) Educators (*Erzieher:innen*)

As in previous years, state-certified Educators were the largest group of staff (63.1%, not including administrative staff⁴) in childhood care and education facilities in 2023. In the eastern federal states and Berlin the proportion was higher (75.2%) than in the western federal states (60.1%) (Destatis/Genesis 2023, own calculations)⁵.

Educators are core professionals in the system of early childhood education and care and are employed mainly as group leaders, but also as centre leaders/managers. Entry requirements for their initial professional education (IPE) at a vocational technical college specialising in social pedagogy are an intermediate secondary school leaving certificate, or an educational qualification recognised as equivalent, or a completed relevant vocational qualification. In most cases the course of studies lasts three years in full-time form. Although *Fachschulen* (in Bavaria: *Fachakademien*) are located in the tertiary education sector (if the duration of training is more than 2,400 hours), they are not part of the higher education system.

Childhood Pedagogues (*Kindheitspädagoginnen, Kindheitspädagogen*)

Childhood Pedagogy study programmes leading to a degree at Bachelor level are a comparatively recent development in Germany, as is the ongoing construction of a professional self-image as academics in the (E)CEC field (Schneider 2016). Since 2003-2004, study programmes have been offered by higher education institutions across the country, mostly by universities of applied sciences (*Hochschulen für angewandte Wissenschaften* or *Fachhochschulen*). However, around 20 years later, in 2023, among the 5.7% staff in (E)CEC settings with a higher education degree only 1.5% were Childhood Pedagogues (Destatis/Genesis 2023).

ECEC Co-workers/ Assistants (*Sozialpädagogische Assistenzkräfte*)

Three types of qualified co-workers are employed as supplementary staff in ECEC settings: Childcarers (*Kinderpfleger:innen*), Social Assistants (*Sozialassistentinnen/Sozialassistenten*), and Socio-pedagogical Assistants (*Sozialpädagogische Assistentinnen/Assistenten*). Together with other staff in social services (3.3%), they make up 13.5% of the total workforce (FKB 2023, 178f, own calculations).

³ Strictly speaking, the term in German is “school”. However, in the international context this can be misleading and we have therefore chosen the term “vocational technical college” for *Fachschulen/Fachakademien*, also in order to distinguish them from “vocational schools” (*Berufsfachschulen*).

⁴ In this report, administrative, housekeeping and technical staff are not included in the data from Destatis/Genesis 2023.

⁵ The cut-off date for all Federal Statistical Office figures (Destatis/Genesis 2023) is 01.03.2023. However, at the time of reporting, some of the more detailed data were only available in the 2022 edition (Destatis 2023), with a cut-off date of 01.03.2022.

As a rule, the entry requirement for initial professional education programmes is a lower secondary school leaving certificate, with courses lasting between two and three years on a full-time basis - depending on federal state regulations (see FKB 2023; WIFF 2018).

Other personnel

In addition to the two largest occupational groups (Educators and ECEC Co-workers/ Assistants) and the numerically marginal group of Childhood Pedagogues, a number of other types of personnel with varying professional qualifications also work in (E)CEC settings. These are, for example, persons with a university degree in social pedagogy/social work or educational science; or persons with a vocational technical college qualification (e.g. in curative education) (see also *Chapter 3, Table 2*). Depending on the size and the respective provider of the (E)CEC setting, administrative staff, technical staff or staff responsible for preparing meals may also be employed.

Table 1 provides an overview of the main occupational groups in (E)CEC centres and categorises the **core professionals**, i.e. those with group or centre responsibility, according to one of five professional profiles (see *Box 1* at the end of this chapter).

Table 1

Germany: (E)CEC staff in centre-based settings

Job title	Main (E)CEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<p>(Early Childhood) Educator <i>Erzieherin, Erzieher</i></p> <p><i>Profile:</i> Social and Childhood Pedagogy Professional</p>	<p>Nursery 0–2⁶ years</p> <p>Kindergarten 2/3–5 years</p> <p>Age-integrated centres 0–5 or 3–9 or 0–12/14 years</p> <p>Out-of-school education and care services 6–14 years</p>	<p>Core professional</p> <p>Group leader</p> <p>Centre leader</p>	<p>0–12/14 years up to 27 years</p>	<p>Route 1 Usually 3 years full-time at a tertiary-level vocational technical college (<i>Fachschule/ Fachakademie</i>) specialising in social pedagogy – specific length varies between federal states</p> <p>Route 2 (since 2012) <i>Dualised model:</i> 3-4 years divided between a specialist vocational technical college and a paid work placement in a socio-pedagogical institution (see <i>Chapter 4.3</i>)</p>

⁶ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years, as in Germany.

Job title	Main (E)CEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
				ECTS credits: n/a ⁷ EQF/DQF level: 6 ISCED 2011: 655

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including (E)CEC, usually 0–12 years, but sometimes including adults)

⁷ n/a not applicable

- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre Leader

A qualification beyond the regular initial professional education (IPE) is not generally required for the responsible position as head of an (E)CEC setting in Germany. Professional requirements on the part of the federal state or the service provider are not only different, but also often not very specific. In some federal states, for example, the position of Centre Leader is to be filled by a "suitable person", although the criteria for this are not precisely described and the decision is left to the respective provider (Strehmel und Ulber 2012; Strehmel 2017).⁸

At the same time, the range of responsibilities of a Centre Leader is very demanding and involves both pedagogically-oriented and administrative tasks. These include the implementation of the respective federal state curricular framework, quality development, operational and organisational management and development, staff management and cooperating with the service provider, the legal guardians and with all other partners in the neighbourhood and region. Despite this, the role of *Kita* management is neither defined uniformly nor in detail (Anders et al. 2021). Moreover, the division of tasks between the provider and the Centre Leader is rarely clarified in a binding manner. However, the representative AQUA study showed that Centre Leaders are more satisfied with their work and feel less burdened if this is clearly regulated (Schreyer et al. 2014).

Not all Centre Leaders are able to devote themselves fully to management tasks: in 2022, just over half (55.7%) were partially released from pedagogical work, 44.3% were fully released (FKB 2023, 202).

"Strong leadership" is one of the seven core fields of action prescribed in the new *Act on the Enhancement of Quality and Participation in (E)CEC - KiQuTG (2023)*⁹ – known as the *KiTa Quality Act* – which the federal states can select for improvement measures with additional funding from the federal government. This field of action was selected as a priority by half of the 16 federal states under the *Good Childcare Act* (BMFSFJ 2020a). With further funding from the federal government (around 530 million euros for the "Strong leadership" field of action), the work previously started will be continued in 2023 and 2024 (BMFSFJ 2023a).

Although there is no universally agreed framework for the position of Centre Leader in German (E)CEC settings, the concept of distributed leadership is seen in professional circles as fitting the governance structure and tradition of early childhood education and care in Germany. Distributed leadership does not necessarily mean the functional distribution of tasks (see *Chapter 2.3*), but an ongoing process of dialogue and of developing a common vision in the team (Anders et al. 2021, 76).

2.3 Centre-based posts of responsibility

The establishment of designated posts of responsibility in (E)CEC settings has not been common practice in Germany so far. At most, the position of deputy leader is fairly common in larger facilities. However, due to the expanding field of work and the associated need not only for well-

⁸ In Bavaria, since July 2023, a change in the law means that it is no longer necessary to be trained as an Educator to work as an ECEC Centre Leader. While the Ministry of Social Affairs sees this as a flexible option for providers, professional associations such as the Verband Kita-Fachkräfte Bayern e.V. (2023) fear a downgrading of established quality standards.

⁹ Amendments to the *Good Childcare Act* (KiQuTG 2019)

qualified but also highly motivated professionals, the idea is gaining in importance. There is widespread agreement nationally and internationally that ECEC occupations need to be made more attractive (BMFSFJ 2018; OECD 2019). This attractiveness includes promotion grades, career advancement opportunities and corresponding remuneration mechanisms. In addition to the management of (E)CEC settings, a dossier by the German Youth Institute (Deutsches Jugendinstitut) based on results of the *Weiterbildungsinitiative Frühpädagogische Fachkräfte, WiFF* (see *Chapter 8* for more details) elaborates the following fields of activity as potential designated posts (Kalicki et al 2019, 1): language education; inclusion of children with disabilities; intercultural education and multilingualism; children in poverty; and cooperation with families. The German Association for Public and Private Welfare also recommends not only horizontal, theme-oriented designated posts of responsibility with higher remuneration, but also possibilities for increased vertical differentiation, e.g. positions as deputy leader, pedagogical quality officer, practical guidance for trainees or child protection officers. All these posts should require a "certified qualification" (Deutscher Verein 2022).

The implementation of these ideas requires close cooperation between the responsible decision-makers (relevant authorities, employers, collective bargaining partners) as well as the qualifying support systems (initial and continuing professional education and training institutions and organisations).

2.4 Co-ordinating and supervisory staff

ECEC counsellors have a supporting, coordinating and, to some extent, controlling role in the German (E)CEC system. However, specialist counselling is currently structured very differently across the federal states and ECEC service providers in terms of mandate and licence (Kaiser und Fuchs-Rechlin 2020, 12).

As a rule, ECEC counsellors are employed by and act on behalf of the providers of (E)CEC settings, occasionally they are also employed by the Youth Welfare Office. Although their contributions to the field in terms of professional pedagogical support, advising centre leaders and service providers, staff development and quality enhancement as well as in a steering capacity are undisputed in professional circles (cf. Deutscher Verein 2012; Preissing et al. 2017), a specified job description at the level of professional policy is rather rare and the legal frameworks in the federal states vary greatly.

According to a survey commissioned by the Federal Ministry for Family Affairs, Senior Citizens, Women and Youth of 367 ECEC counsellors, the five most common professional tasks are: Quality assurance and development (84%); pedagogical and professional advice (82%); organisation of continuing professional development (57%); giving advice to the provider (57%); knowledge transfer between research and professional practice (51%). From their own perspective, ECEC counsellors currently need support measures themselves, such as: the opportunity for more collegial dialogue, a reduction in the number of ECEC centres to be supervised, as well as more time and opportunities for their own professional development (BMFSFJ 2017).

For years, a controversial issue and repeated demand has concerned the need for a clear division of tasks between advisory and supervisory roles. In some federal states and in some larger municipal (E)CEC centres, both are in the hands of the same person. Moreover, the advisory role of the federal state Youth Welfare Office with regard to management and operating licences is also referred to as "specialist counselling", although this is clearly a supervisory task.

The system of ECEC counselling can successfully support both providers and settings in their development of quality, personnel and organisation. However, the great heterogeneity of the specialist counselling system also harbours obstacles: For example, only two federal states (Thuringia and Saxony) have regulations regarding the qualification of specialist counsellors. There is

also great variation in terms of the qualifications themselves - these range from further training courses lasting several days to a university education as a prerequisite; the scope of the specialist counselling services offered is also rarely specified (cf. Kaiser und Fuchs-Rechlin 2020; Kaiser, Lipowski und Fuchs-Rechlin 2022).

2.5 Specialist support staff

Cooperation with specialist support services is an integral part of an inclusive concept of (E)CEC. Such services include psychological, child psychiatric, medical and speech therapy diagnostics (Heimlich und Ueffing 2018). Depending on the need, specialised support staff can come to the (E)CEC setting according to a plan agreed with setting and parents. Specialists from early intervention centres for children with disabilities or children at risk of becoming disabled are key cooperation partners who either visit the (E)CEC setting or offer therapy sessions to the children concerned on their own premises. Specialists from the migration social services and general social services can also be important contacts. As a rule, cooperation takes place on an off-site basis.

3. Structural composition of (E)CEC workforce: qualifications, gender, ethnicity

In general, the rapid expansion in the childcare and education field, particularly in ECEC, has been accompanied by a steady growth in the workforce. In 2022, 587,536 persons (full-time equivalent) were employed in (E)CEC centres. Since 2018, an additional 83,710 staff have joined the workforce (FKB 2023, 165). Despite the increase and the shortage of qualified staff (see *Chapter 8.5*), there has been no increase in the employment of unqualified, non-specialist staff (i.e. people with no professional qualifications or with qualifications from non-related fields).

Persons with an award from a tertiary-level specialist vocational technical college comprise almost two thirds of staff working in (E)CEC settings and are thus by far the largest group of professionals. Staff with a higher education degree account for only a small part of the workforce at roughly 5.7%, whereas the share of staff with an upper secondary vocational award is more than double that at 13.3%, as indicated in *Table 2* (FKB 2023, 178f).

Academics with a relevant qualification worked in 40.3% of *Kitas* in 2022, while Educators were employed in 99% of (E)CEC centres (FKB 2023, 58, 201). However, the distribution varies considerably across the federal states. 19.3% of Centre Leaders had a higher education degree in 2022 (31.8% in the eastern *Bundesländer*; 16.0% in the western federal states (FKB 2023, 204).

The proportion of male staff in the workforce remains relatively low at 7.9%; a higher proportion (approximately 20%) work in out-of-school settings than in early childhood settings. The proportion of male staff in leadership positions is slightly lower at 7.3% than the overall share among ECEC staff (FKB 2023, 172, 227).

Data on the proportion of persons with a background of migration are not systematically compiled. According to the Early Education Staffing Barometer (see *Chapter 8*), around 17.7% of the early childhood workforce were persons with a migration background compared with 24% of all persons in the employment market (FKB 2023, 102, 228). According to data from the Federal Statistical Office, there are 21.2 million people in Germany who meet the definition of "persons with a migration background" (Destatis 2021), including 11.4 million who have a non-German nationality. This corresponds to around a quarter of the total population (Friederich und Gisdakis 2021).

Table 2

Germany: Structural composition of the workforce in (E)CEC settings, 2022, 2023

Staff categories	Overall distribution in workforce, in %
2023: Staff with a relevant higher education degree	
– Childhood Pedagogues (no disaggregated data on the proportion of Bachelor/Master degrees)	1.5
– Social Pedagogues/Social Workers (University of Applied Sciences degree)	2.6
– Social Pedagogues; Pedagogues (University degree)	1.2
– Remedial/Special Needs Pedagogues (University of Applied Sciences degree)	0.4
<i>Total</i>	5.7
2023: Staff with a relevant post-secondary qualification (specialist vocational technical college)	
– Educators	63.1
– Other post-secondary award (e.g Curative/Remedial Educators)	3.0
<i>Total</i>	66.1
2023: Staff with a relevant upper secondary qualification (vocational school)	
– Childcarers	10.2
– Social/Socio-pedagogical Assistants	3.3
<i>Total</i>	13.5
2023: Staff with other, non-specialist qualification (including short qualification routes in the social and health care services)	5.4
2023: Trainees	5.4
2023: Staff with no formal IPE	2.4
Specialist support staff (e.g. Language Therapist or Special Needs Educators)	Mostly off-site, no systematically compiled data available
2023: Proportion of male staff in (E)CEC centres	7.9*
2022: in <i>Kitas</i> without school children	7.0*
2022: in <i>Kitas</i> with school children and other children	9.2*
2022: in <i>Kitas</i> with only school children (<i>Horte</i>)	20.5*
2022: Proportion of male staff as Centre Leaders	7.3*
2022: Proportion of male staff among persons with a higher education degree	9.3*
2022: Proportion of male staff among persons with a tertiary-level vocational qualification as Educator	6.7*
2022: Proportion of male staff among persons with an upper secondary vocational qualification	
2022: Childcarers	4.1*
2022: Social/Socio-pedagogical Assistants	11.2*
(E)CEC staff with a migration background	17.7** (2019)

Sources: FKB 2023, 172, 178f, 205, 227f; *Destatis/Genesis 2023, **Destatis 2021, own calculations. Federal Statistical Office definition: "A person has a background of migration if he/she or at least one parent does not possess German nationality at birth".

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

(Early Childhood) Educator (*Erzieherin, Erzieher*)

The initial professional education pathway to become a state-certified **Educator** is not a field-specific, specialised training for the age group 0 to 6 years, but a generalist route for work in settings in the entire child and youth welfare sector. This covers the age group 0 to 27 years and includes children's homes, residential youth groups, facilities for persons with special educational needs, youth work facilities and complementary childcare services in all-day schools. This vocational programme is classified in Germany as "further vocational training", which leads to a federal state certified post-secondary vocational qualification. Key documents issued by the Standing Conference of the Ministers of Education and Cultural Affairs are the framework agreement on *Fachschulen* (KMK 2002/2021), the Competence-oriented Qualification Profile (KMK 2011/2017) and the Curriculum for *Fachschulen* for Social Pedagogy (KMK 2020a).

State-certified Educators represent by far the largest occupational group in the (E)CEC workfield, accounting for almost 63.1% of the staff in (E)CEC settings. About half (46%) of the Educators work as group leaders, 6.3% have a position as Centre Leader (Destatis/Genesis 2023, own calculations).

The IPE institutions providing courses for this profession – *Fachschulen für Sozialpädagogik*, in Bavaria *Fachakademien* – officially belong to the **tertiary** education system, but not to the **higher** education system. In the school year 2021/2022, there were 693 *Fachschulen/ Fachakademien* specialising in social pedagogy in Germany, of which just under half (47.5%) were public and 52.5% private institutions (FKB 2023, 239).

Due to the sovereignty of the *Länder* in educational affairs, the IPE admission criteria vary considerably between federal states. However, the basic requirement for attending a *Fachschule* is always an intermediate school leaving certificate or a completed relevant vocational training, from which the required duration of the IPE course is calculated. Thus, a **full-time IPE course** for persons with an intermediate school leaving certificate usually lasts three years (including one year of work experience).

In 2011, the traditional post-secondary VET qualification was classified in the German Qualifications Framework (DQR) at the same level as the Bachelor's degree from higher education institutions - at level 6. Among field experts in Germany, this was seen as a backward step with regard to the professionalisation of the early childhood education field (see e.g. Stieve und Kägi 2012). It was also argued that academic studies should be seen as a necessary requirement for systematic and critical thinking, which is also important for the profession of early childhood educators (Rauschenbach 2013).

Since 2012, an additional pathway into the profession of state-certified Educator has been introduced: a **dualised work-integrated and remunerated** model called 'practice-integrated training' (PIA), during which students are paid for the time spent in an (E)CEC work placement (see also *Chapter 4.3*).

Since the end of 2020, according to a resolution of the Standing Conference of the Ministers of Education and Cultural Affairs (2020a), the *Länder* can "provide for" the term "Bachelor Professional in Social Services" to be used in addition to the occupational title "State-certified Educator". The application procedure is regulated by the federal states.

Table 3

Germany: (Early Childhood) Educator

<p>Title in German: <i>Staatlich anerkannte Erzieherin, staatlich anerkannter Erzieher</i> (Bachelor Professional in Social Services) Profile: Social and Childhood Pedagogy Professional</p>
<p>Entry requirements: Intermediate school-leaving certificate or a completed and relevant vocational training (considerable differences between the <i>Länder</i>)</p> <p>Initial professional education: The IPE course at a post-secondary specialist vocational technical college for social pedagogy comprises at least 2,400 hours of teaching and at least 1,200 hours of college-supported practical experience. It usually lasts three years in the full-time form and correspondingly longer in the part-time form. The practical training takes place in various socio-pedagogical fields of work (KMK as amended in 2021, 26).</p> <p>Award: State-certified Educator; in some cases: Bachelor Professional in Social Services (at the discretion of the federal state). Usually regarded as a general university entrance certificate or specialist university entrance certificate.</p> <p>ECTS credits: n/a EQF/DQF level: 6 ISCED 2011: 655</p> <p>Main (E)CEC workplaces: Nursery (0–2 years), kindergarten (2/3–5 years), age-integrated centre (0–5, 3–10, 10–12/14 years), out-of-school care and education setting (<i>Hort</i>, 6–14 years)</p> <p>Recent dualised practice-integrated and remunerated qualification routes: Introduced in Baden-Württemberg in 2012; by 2020 in varying formats at least as a pilot project in all federal states except Mecklenburg-Pomerania (Weltzien et al. 2021, 7).</p> <p>Entry requirements: As a rule, intermediate school leaving certificate</p> <p>Initial professional education: 3 to 4 years (depending on <i>Land</i> and previous experience) at a <i>Fachschule/Fachakademie</i> for Social Pedagogy and simultaneously in an early childhood setting in an employment relationship subject to social security contributions</p> <p>Award: State-certified Educator (<i>staatlich anerkannte Erzieherin/staatlich anerkannter Erzieher</i>)</p> <p>ECTS credits: n/a EQF/DQF level: 6 ISCED 2011: 655</p> <p>Main (E)CEC workplaces: see above</p>

Childhood Pedagogue (*Kindheitspädagogin/ Kindheitspädagoge*)

Two major triggers leading to a demand for more (E)CEC personnel with an academic degree were on the one hand Germany's mediocre rankings in international comparisons of educational achievement (e.g. the OECD PISA studies) and on the other hand the fact that the required initial professional education in the majority of European countries, at least for staff working in pre-primary education (3–5/6 years) and increasingly for those working with under 3 year-olds (Oberhuemer, Schreyer, and Neuman 2010) was a Bachelor's degree. With the reform of higher education in Europe through the Bologna process, BA and MA structures were also introduced in Germany. Beginning in 2003/2004, Bachelor programmes in childhood pedagogy and early childhood education were established at German higher education institutions, followed in a number of cases by Master's degree programmes (see Hechler et al. 2021).

In 2021, there were a total of 76 Childhood Pedagogy Bachelor's and 14 Master's degree programmes at 61 locations (FKB 2023, 122, 125, 247). 57.9% of the study programmes were offered at public universities of applied sciences, 21.1% at private higher education institutions. Half (51%) of all Bachelor's degree programmes in childhood pedagogy were designed as full-time programmes in 2021, while the other half were offered in dualised or part-time form.

Nearly all (95%) focus on early childhood or childhood pedagogy, 55% focus in particular on management and leadership (FKB 2023, 122, 125, 247).

Full-time studies usually take 3 to 3½ years (6 or 7 semesters).

Admission requirements, specialisations and the duration of studies vary depending on the federal state and the higher education institution. Most HEI's require a general higher education entrance qualification for the Bachelor's programme, although this can also be achieved by completing lower secondary education with four to five years of professional experience in a similar subject or by passing an aptitude test.

A Bachelor's and/or Master's degree in (Early) Childhood Pedagogy opens up broad fields of work. Childhood Pedagogues are often employed in areas of child and youth welfare such as: family counselling, integration initiatives, immigration authority, adult education, research. In 2023, among the 5.7% of staff in (E)CEC settings with a higher education degree, only 1.5% were Childhood Pedagogues (Destatis/Genesis 2023; own calculations).

Table 4

Germany: Childhood Pedagogue

<p>Title in German: <i>Staatliche anerkannte Kindheitspädagogin / staatlich anerkannter Kindheitspädagoge</i> Profile: Social and Childhood Pedagogy Professional</p>
<p>Entry requirements: General or vocational university access eligibility, in some cases also a successfully completed Educator IPE programme</p> <p>Professional education: 3 to 3½ years at a University of Applied Sciences, University of Teacher Education¹⁰, Professional Academy (Dual HEI)¹¹, or in some case at a University</p> <p>Award: State-certified Childhood Pedagogue (Bachelor, title varies according to federal state and higher education institution) – a subsequent 2-year Master's study programme can be followed.</p> <p>ECTS credits: 180 or 210 (120 ECTS credits for a Master's degree)</p> <p>EQF/DQF level: 6 (or 7 - Master)</p> <p>ISCED 2011: 6 (or 7 - Master)</p> <p>Main (E)CEC workplaces: Nursery (0–2), kindergarten (2/3–5 year), age-integrated centre (0–5, 3–10, 10–12/14 years), out-of-school care and education setting (<i>Hort</i>, 6–14 years)</p> <p><i>Additional fields of work:</i> Child and youth welfare, family counselling, integration initiatives, immigration authority, adult education, research</p>

(E)CEC Co-workers/ Assistants (*Childcarer, Social Assistant, Socio-pedagogical Assistant*)

Childcarers, Socio-pedagogical Assistants and Social Assistants together accounted for 13.5% of the total staff in (E)CEC in 2023 (Destatis/Genesis 2023). The training programmes completed at vocational schools are regulated by state law. In the 2021/2022 school year, there were 234 vocational schools for childcare and 467 vocational schools for social assistance in Germany. IPE courses for prospective Childcarers were offered in eight federal states in 2022, while vocational routes for future Social Assistant staff were offered in 13 federal states (FKB 2023, 234).

The usual entry qualification for the mostly two- or three-year training is a basic secondary school leaving certificate (*Hauptschulabschluss*). In some *Länder* the courses are designed in such a way that, after completion, the student can immediately enrol for a qualifying course to become an Educator. In some cases, an intermediate or higher school leaving certificate is awarded on completion.

¹⁰ Only in Baden-Württemberg

¹¹ Only in Baden-Württemberg, Hesse and Saxony

Table 5

Germany: Childcarer, Social Assistant, Socio-pedagogical Assistant

Titles in German:
<i>Staatlich geprüfte¹² Kinderpflegerin, staatlich geprüfter Kinderpfleger</i> <i>Staatlich geprüfte Sozialassistentin, staatlich geprüfter Sozialassistent</i> <i>Staatlich geprüfte Sozialpädagogische Assistentin,</i> <i>staatlich geprüfter Sozialpädagogischer Assistent</i>
Entry requirements: 9 years compulsory schooling with basic secondary school leaving certificate or intermediate school certificate; some <i>Länder</i> also require an interview and/or a written entry examination.
Initial professional education: 1–3 years upper secondary vocational school (depending on federal state regulations and previous experience)
Award: State-certified (or state-recognised) Childcarer or Social Assistant or Socio-pedagogical Assistant.
In some <i>Länder</i> it is possible to complete the course with an intermediate school certificate (Childcarer) or secondary school certificate (Social Assistant).
ECTS credits: n/a
EQF/DQF level: 4
ISCED 2011: 354
Main (E)CEC workplaces: Nursery (0–2), kindergarten (2/3–5), age-integrated centre (0–5, 3–10, 10–12/14), outside-school-hours care and education setting (<i>Hort</i> , 6–14). Social Assistants also work in social care institutions with persons of all ages, e.g. in hospitals or in mobile care services.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

(Early Childhood) Educator (*Erzieherin/Erzieher*)

Since 2011, IPE courses leading to the award of state-certified Educator at tertiary-level colleges specialising in social pedagogy have been based on a “Competence-oriented Qualification Profile” (KMK 2011/2017). The profile defines professional standards, knowledge and includes the competence categories (social competence, independence, knowledge, skills) of the German Qualifications Framework (DQR 2014).

Table 6

Germany: Competence-oriented Qualification Profile in IPE leading to the award of State-certified Educator (see KMK 2011/2017, 15-28, adapted)

Knowledge areas (selection)	Competences and skills (selection)
1. Understanding children, adolescents and young adults in their living environments and forming pedagogical relationships with them	
<i>Leaving certificate holders possess</i> <ul style="list-style-type: none"> – Broad and integrated knowledge about different methods of observation – In-depth specialist knowledge about the influence of socio-economic circumstances on the life worlds of children, adolescents and young adults – Thorough knowledge about the mandate of the complementary and compensatory role of settings in relation to the family. 	<i>Leaving certificate holders possess skills related to</i> <ul style="list-style-type: none"> – Analysing and assessing developmental trajectories and socialisation processes in children, adolescents and young adults and – taking into consideration the key determining factors of behaviour, experiences and learning – to independently plan and organise developmental and educational stimulation – Identifying one’s own role as Educator in the developmental and educational processes of

¹² In Baden-Württemberg and Saarland the occupational title is „State recognised Childcarer“.

Knowledge areas (selection)	Competences and skills (selection)
	<p>children, adolescents and young adults, reflecting on this role and drawing consequences for pedagogical procedures</p> <ul style="list-style-type: none"> – Conceptualising, planning and organising pedagogical programmes independently which are linked to the life worlds of children, adolescents and young adults.
2. Stimulating, supporting and guiding developmental and educational processes	
<p><i>Leaving certificate holders possess</i></p> <ul style="list-style-type: none"> – An in-depth understanding of education and development as part of an individual, lifelong process within the framework of their social-pedagogical mandate of ‘education, upbringing and care’ – Broad and integrated knowledge which provides them with a complex understanding of developmental, learning, educational and socialisation processes – In-depth knowledge about didactic approaches for the competent guidance of children, adolescents and young adults in specific learning areas. 	<p><i>Leaving certificate holders possess skills related to</i></p> <ul style="list-style-type: none"> – Reflecting on and developing further their own educational experiences and competencies in different areas of education and learning – Organising the inside and outdoor spaces in socio-pedagogical settings with the aim of creating a stimulating learning environment – Using a wide range of tools and approaches from the various educational and learning areas in a targeted way and evaluating their effectiveness.
3. Guiding pedagogical work in groups	
<p><i>Leaving certificate holders possess</i></p> <ul style="list-style-type: none"> – Broad and integrated knowledge about group psychology and about group work as a classical approach in social pedagogy – In-depth specialist knowledge in selected areas about didactic and conceptual approaches to education, upbringing and care in small groups in the classical fields of work in child and youth welfare – Thorough knowledge of the legislation frameworks relevant for socio-pedagogical work. 	<p><i>Leaving certificate holders possess skills related to</i></p> <ul style="list-style-type: none"> – Systematically observing, analysing and assessing group behaviours, group processes, group relations and their own professional action – Conceptually embedding participation strategies for children, adolescents and young adults – Recognising conflicts and supporting children, adolescents and young people in solving them in an independent way.
4. Building educational partnerships with parents and caregivers	
<p><i>Leaving certificate holders possess</i></p> <ul style="list-style-type: none"> – Broad and integrated professional knowledge about various models, approaches and forms of partnership in education and upbringing – Specialist knowledge about community support and counselling systems for families and caregivers – Relevant knowledge about forms and methods of public relations work in social services. 	<p><i>Leaving certificate holders possess skills related to</i></p> <ul style="list-style-type: none"> – Identifying the individually different needs and resources of families and caregivers, assessing them in a systematic way and reviewing framework structures and provision accordingly – Planning and organising needs-based parental education and counselling activities together with other field specialists – developing, carrying out and evaluating public relations strategies for social service settings.
5. Developing organisations and teams	
<p><i>Leaving certificate holders possess</i></p> <ul style="list-style-type: none"> – Broad and integrated professional knowledge about structures and forms of team work and about other elements of organisation development 	<p><i>Leaving certificate holders possess skills related to</i></p> <ul style="list-style-type: none"> – Participating in needs and status analyses for the socio-pedagogical institution in order to include these in programme planning

Knowledge areas (selection)	Competences and skills (selection)
<ul style="list-style-type: none"> – Integrated specialist knowledge about relevant legislation and the funding and provider structures of settings in the field of social pedagogy as well as about current developments – Thorough knowledge about the links between employment, tariff and contract legislation in the field of social-pedagogical work. 	<ul style="list-style-type: none"> – Analysing their own team situation according to specific criteria in order to develop this further and, if necessary, to organise support – Reflecting on the sustainability of processes in team and organisation development.
6. Cooperating in networks and organising transitions	
<p><i>Leaving certificate holders possess</i></p> <ul style="list-style-type: none"> – Broad and integrated professional knowledge about child and youth welfare institutions and other specialist services and educational institutions – Broad and integrated professional knowledge about support systems and networks – Research-based knowledge about attachment patterns and their meaning for transition procedures. 	<p><i>Leaving certificate holders possess skills related to</i></p> <ul style="list-style-type: none"> – Investigating relevant resources in the community for the target group – Coordinating goals for cooperation with network partners and integrating them into their own workplace procedures – Organising transitions systematically on the basis of research evidence and conceptual frameworks.

The following basic principles are considered to be defining for all social pedagogy occupations:

- *Participation* (including age-appropriate decision-making by children)
- *Inclusion* (as a multidimensional concept of heterogeneity and diversity and also as a basis for planning educational activities)
- *Prevention* (supporting children, adolescents and young adults to cope with different life phases)
- *Language enhancement* (ongoing support of language development), and
- *Values transmission* (guidance in the development of personal values based on the Basic Law/Constitution and the constitutions of the *Länder*).

Each federal state implements the Qualification Profile in accordance with state law. The orientation for this is a cross-state curriculum (see *Table 7*). The competences described in the curriculum of the respective federal state are mandatory for the work of the vocational technical colleges and academies in the field of social pedagogy. The curriculum is also structured into six learning fields, which are based on the competence-oriented Qualification Profile (see also *Autorengruppe Fachschulwesen 2011*).

Table 7

Germany: Curricular framework for initial professional education leading to the award of state-certified Educator (KMK 2020a, 18, 25-42)

Fields of learning and content	Number of teaching hours
General education/non-specialist subjects	Minimum 360
Occupation-related areas of learning	Minimum 1800
<p>1. <i>Ongoing development of professional identity and professional perspectives</i></p> <ul style="list-style-type: none"> – Biographical work, motive for occupational choice, methods of self-assessment – Professionalisation history of the Educator profession – Fields of work and provider system in child and youth welfare – Education, upbringing and care as mandates of child and youth welfare in a changing society – Societal and legislative context of expectations and requirements regarding the professional role, cross-curricular tasks of social pedagogy work – Requirements, organisation and places of learning in IPS 	Minimum 80

Fields of learning and content	Number of teaching hours
<ul style="list-style-type: none"> – Learning and working strategies in self-organised learning – Self-management and health prevention in professional work – Employment and tariff framework legislation – Professional organisations and trade unions – Professional prospects, continuing professional development 	
<p>2. <i>The pedagogy of relationships and working with groups</i></p> <ul style="list-style-type: none"> – Image of human being, image of the child, pedagogical values – Explanatory models for educational guidance – Attachment theory – Pedagogy of building relationships – Foundations of group pedagogy – Observation and documentation of group processes – Didactic principles and approaches of working in groups in the field of child and youth welfare, e.g. Froebel, Montessori, Reggio, contextual approach (<i>Situationsansatz</i>), Social Group Work – Chances for shaping the life worlds and everyday lives of groups in child and youth welfare fields of work – Models and approaches towards a participatory pedagogy – Communication and leading discussions – Conflicts and conflict solutions in everyday pedagogy – Legislative framework for social pedagogical group work such as supervision, child and youth protection, health protection, data protection. 	Minimum 240
<p>3. <i>Living environments and diversity – awareness, understanding, inclusive approaches</i></p> <ul style="list-style-type: none"> – Changing conditions and influences on socialisation – Diversity of life worlds and living conditions and their significance for pedagogical work – Explanatory theoretical models for human experiences and behaviours, such as behavioural and learning theories, psychoanalytical models, systemic approaches, resilience concept – Special developmental needs in children, adolescents and young adults, such as physical and intellectual impairments, giftedness – Basic ethical principles of human life – Basic issues in educational anthropology, such as educational goals, consent and emancipation, normality and abnormality – Pedagogical approaches towards promoting and managing inclusion in selected child and youth welfare settings, such as diversity pedagogy, anti-bias education – Resource-oriented support and guidance of children, adolescents and young adults who are in need of special education, support and opportunities – Observation and documentation strategies in resource-oriented processes of guidance and educational support – Legal frameworks relating to inclusion, such as the UN Convention on the Rights of the Child, the UN Convention on the Rights of Persons with Disabilities, German Social Code Book VIII, German Social Code Book X – Planning support according to German Social Code Book IX 	Minimum 240
<p>4. <i>Professional organisation of a social pedagogical approach to education in different learning areas</i></p> <ul style="list-style-type: none"> – Explanatory models for (self-) education, development and learning – Developmental domains and developmental tasks in different life phases (childhood, adolescence, young adulthood) – Aspects of diversity in developmental and educational processes – Education mandate of the German Social Code Book VIII 	Minimum 600

Fields of learning and content	Number of teaching hours
<ul style="list-style-type: none"> – Curricular frameworks for childhood education and care in the <i>Länder</i> – Instruments for the observation and recording of developmental and educational processes – The role of Educators in the areas of education – Domain-specific and didactical knowledge of the areas of learning – Meaning of the areas of learning for the development of children, adolescents and young adults – Organising learning environments and identifying educational chances for different target audiences – Planning, implementation and evaluation of resilience-oriented and resources-based educational activities in different fields of work. 	
<p>5. <i>Organising educational partnerships with parents and caregivers and supporting transitions</i></p> <ul style="list-style-type: none"> – Social transformation of the family – Diversity in family life worlds and living conditions – Rights and duties of parents – Models, approaches and forms of educational and childrearing partnerships – Forms of work with families – Methods of leading discussions and consultations with parents and caregivers – Presentation and moderating techniques – Supporting family upbringing – Support in upbringing – Endangerment of children’s welfare and protection mandate – Support and consultancy systems in the neighbourhood – Family education provision – Concept and organisation of the family centre – Life course transitions/ transitions theory – Models and approaches towards organising transitions in the child and youth welfare field. 	Minimum 80
<p>6. <i>Developing institution and team, networking</i></p> <ul style="list-style-type: none"> – Provider structures, funding and legislative frameworks of social pedagogical institutions – Organisational models and development – Quality development – Programme development – Conceptual frameworks for organising everyday life in child and youth welfare settings – Teamwork and team development – Role and functions in teams/ leadership tasks – Multi-professional teams – Conflict solutions and support models for teams – Public relations work – Networking in the neighbourhood – Networks in child and youth welfare fields of work and with other educational institutions. 	Minimum 80
Elective modules	Minimum 120
Total hours/areas of learning	Minimum 2.400
Placements (practica) in child and youth welfare settings	Minimum 1.200

Childhood Pedagogue (*Kindheitspädagogin / Kindheitspädagoge*)

Both the target competences and the curricula in degree programmes leading to the award of Childhood Pedagogue differ between higher education institutions¹³. With a view to the competence requirements specifically for working in the early childhood field, a “typical” catalogue was developed by a research team in Freiburg on the basis of HEI curricula, research on normative guidelines, secondary analyses, and their own case studies (Fröhlich-Gildhoff et al. 2014).

In 2022, an informal core curriculum for the childhood pedagogy study programmes was developed by an expert group (*Studiengangstag Pädagogik der Kindheit*). Ten study units are outlined, each assigned with a minimum number of credits (FBTS 2022).

Despite the fact that the number of degree programmes has been expanding for around 20 years or so, (there are now also Master's programmes at 20 university locations), a detailed analysis of the study programme development, the support offered for young academics, the research topics and resources and the professional background of university professors suggests that the systematic status of childhood pedagogy within the educational sciences cannot yet be considered as complete (Hechler et al. 2021).

In this chapter, four Bachelor's and two Master's programmes in (early) childhood pedagogy are presented as examples.

Table 8

Germany: Four full-time Bachelor programmes specialising in (Early) Childhood Pedagogy

Higher Education Institution	Federal state	Provider	ECTS credits
(1) University of Applied Sciences and Art, Hildesheim	Lower Saxony	Public	180
(2) Catholic University of Applied Sciences, Berlin	Berlin	Private (Catholic)	210
(3) Protestant University of Applied Sciences, Rheinland-Westfalen-Lippe, Bochum	North Rhine-Westphalia	Private (Protestant)	180
(4) University of Applied Sciences, Magdeburg-Stendal	Saxony-Anhalt	Public	180

1) University of Applied Sciences and Art, Hildesheim

Bachelor programme: Childhood Pedagogy

The degree programme focuses on competences primarily for working in the fields of pedagogy, psychology and health, communication and counselling, social and childhood research as well as law and child protection. Guided field practice is integrated into the course and close links exist to local (E)CEC providers.

The course programme is organised in six study areas composing different numbers of modules:

1. General foundations
2. Pedagogy
3. Psychology and health
4. Scientific work
5. Professional orientation
6. Specialisation/in-depth focus

¹³ An overview of the study programmes in Germany can be found in the study programme database of the WiFF Professional development initiative for early childhood staff. For each degree programme there is a brief overview of the contents as well as access to the respective module handbook (WiFF 2023a).

The standard period of study of six semesters can be shortened by two semesters if the applicant is a state-certified Educator; the course can also be completed part time.

Further information: <https://www.hawk.de/de/studium/studiengaenge/ba-kindheitspaedagogik-hil-desheim>

2) Catholic University of Applied Sciences, Berlin

Bachelor programme: Childhood Pedagogy (B.A.) – curricular outline

Fields of study

Theoretical and empirical foundations of childhood pedagogy

- History, theory and understanding of the childhood pedagogy profession
- Propaedeutics and empirical research in the social sciences
- Child development, socialisation research and discourses of difference

Specific approaches in childhood pedagogy

- Practice, didactics and methods in childhood pedagogy
- Focal topics of study and practical projects (elective)
- Key skills, foreign language competence

Disciplines related to childhood pedagogy

- Educational sciences, psychology
- Sociology, social policy, law
- Anthropology, ethics

Target competences

- To professionally advocate for good and equitable living conditions for all children and their families, as well as for child- and family-friendly institutions and living spaces
- To protect the rights of children and to counteract all threats to the best interests of the child as well as all forms of discrimination and disadvantage
- To work in partnership with parents, to advise families, to develop support for families and to contribute to a better work-life balance
- To critically reflect social and political developments, to stand up for human/children's rights, social justice, the appreciation of diversity, the realisation of inclusion and principles of sustainability
- To contribute to the generation of knowledge and quality development in fields of childhood pedagogy through basic, empirical and evaluative research

Further information: <https://www.khsb-berlin.de/de/node/67044>

3) Protestant University of Applied Sciences, Rheinland-Westfalen-Lippe (Bochum)

Bachelor programme: Early Childhood Education (B.A.) – curricular outline

Brief portrait

The course content is designed to help students develop a personal pedagogical profile and a professional pedagogical attitude. The degree programme therefore provides opportunities for acquiring theoretical and practice-related knowledge on the one hand, and offers space for theory-based reflection on the other.

Course content

- Basic knowledge of early childhood education and related disciplines
- Research work
- Diversity/inclusion
- Focus on a specific educational area (visual arts and media, music, language, psycho-motor skills)

- Political, legal and administrative framework, community networking, everyday work, professional theory and personal professionalism
- Basics of centre management
- Practical research project and methods of empirical research
- Bachelor's thesis

The programme qualifies students for management positions in the early childhood sector, e.g.

- Group management/management of (E)CEC settings for children (kindergartens, family centres, etc.)
- Work in welfare associations or in local authorities and state institutions (e.g. specialist counselling, offering continuing professional development)
- Working in projects (e.g. inclusive education, intercultural work)
- Supporting and qualifying professionals providing home-based (E)CEC services

Further information: https://www.evh-bochum.de/ba_elementarpaedagogik.html

4) University of Applied Sciences, Magdeburg-Stendal

Bachelor programme: Childhood Pedagogy – Praxis, Leadership, Research (B.A.)

Aims of study programme

The study programme is geared towards the acquisition of theoretically and empirically based competence to work in fields of employment related to childhood education. Students are prepared for direct pedagogical work with children from the time they enter an (E)CEC centre until the end of out-of-school care. In addition, they are qualified for work with families, counselling and the promotion of community networking.

Leadership competences are acquired during the study programme. These enable students to take on challenging tasks in multidisciplinary teams. Students possess comprehensive skills in the field of research. These enable them to provide a scientific backing for educational practices. The specialist knowledge gained can be transferred to new practical issues and thus applied to the professional development of practice in the (E)CEC setting. In addition, students acquire the ability to reflect on their own professional self-development.

Course content

Knowledge acquisition is interdisciplinary and based on critical reflection of the theory-practice relationship as well as on a broad understanding of methods. Current research findings from all disciplines and subject areas relevant to childhood development and its support by public institutions are used. These include the educational and social sciences as well as basics of developmental psychology, exemplary in-depth knowledge of educational processes and didactics as well as systematic knowledge of key tasks of (E)CEC practices such as group dynamics, conflict resolution, methods of participation, quality development or early support.

A basic understanding of the social, political, structural, legal and institutional frameworks of education, upbringing and care in childhood is important as a basis for an academically qualified and thus innovation-open and flexible practice. The main focus of the study programme is on conceptual work and action research.

Two **field-based practica** are integrated into the degree programme. The first (15 days in full-time employment) takes place during the lecture-free period between the 1st and 2nd semesters. Within the framework of the module "Fields of work and professional identity", the content focuses on exploring a professional field relevant to childhood education. The second internship (30 days in full-time employment) takes place in the lecture-free period between the 4th and 5th semester. The module "Observation and documentation" focuses on the application and testing of instruments of observation and documentation in everyday practice.

Further information: <https://www.hs-magdeburg.de/studium/bachelor/kindheitspaedagogik-praxis-leitung-forschung.html>

Table 9

Germany: Two Master's study programmes in (Early) Childhood Education and Upbringing

Higher education institution	Federal state	Provider	ECTS credits
1) University of Education, Ludwigsburg	Baden-Württemberg	Public	120
2) University of Leipzig	Saxony	Public	120

1) University of Education, Ludwigsburg

Master's programme: Early Childhood Education and Upbringing (M.A.) – curricular outline

Course content

The Master's study programme in Early Childhood Education and Upbringing has two main focal points: leadership/management and educational research. The programme is a research-oriented, consecutive Master's degree course which builds on a completed initial relevant professional qualification.

A. Management: Leadership, counselling and development	B. Educational research: Research, counselling and development
Educational and social science theories	Educational and social sciences
Management, research, counselling and development	Developing and organising educational institutions: Management Counselling, leadership and coaching
Educational research and development in pedagogical institutions	Foundations and methods of educational research Perspectives on educational research
Research-based learning: project and research workshop with study-related electives	Research workshop: Developing research questions, supervising projects

Elective course profiles

Course Profile A Management, Research, Counselling and Development	Course Profile B Educational Research, Leadership, Counselling and Development
<i>Modules only for students with a focus on Management Strategy and Management Procedures</i>	<i>Modules only for students with a focus on Educational Research and Development of childhood educational institutions</i>
Management procedures in early childhood education settings	Didactics research and development
Staff and organisational management	Consolidation of subject-specific knowledge and didactics in 1-2 compulsory areas (language; art, visual culture; music; natural sciences and technology; social sciences; mathematics; religion, ethics)

Further information: <http://www.ph-ludwigsburg.de/11652.html>

2) University of Leipzig

Master's programme: Professionalising Early Childhood Education (M.A.) – curricular outline

Structure and content

The study programme includes four semesters of on-site studies in full-time or part-time format. Students possess 120 ECTS credits during the course of studies in 13 compulsory modules, one elective module and the Master's thesis. Two field-based **compulsory practica** of at least 240 hours are required.

Course content is structured into three areas:

1. Professionalisation

- Professionalism
- Leading a conversation and counselling
- Management and leadership
- Learning and teaching in the life course

2. Early childhood education

- Teaching methods in the early years
- Pedagogical quality
- Interdisciplinary perspectives on health and illness in the life course
- Interdisciplinary consolidation (elective module)

3. Theory, empiricism and practice

- Praxeological research
- Supporting module for the practica phases
- Supporting module for the Master's thesis phase

Childcarers, Social Assistants, Socio-pedagogical Assistants (*Sozialpädagogische Assistenzkräfte*)

Competences

A *Competence-oriented Qualification Profile for the IPE of (E)CEC staff working as Assistants* was published for the first time in 2020 (KMK 2020b). It sets out the professional standards and fields of action for the occupational groups of Childcarers, Social Assistants and Socio-pedagogical Assistants. The competences described in the qualification profile are binding for implementation in the *Länder*. The fundamental dimension of "professional attitude" is presented here, along with a selection of the knowledge and skills areas for the six fields of action of the competence profile.

Table 10

Germany: Competence-oriented Qualification Profile for IPE leading to (E)CEC Assistant staff awards (KMK 2020b, extracts)

Professional attitude
<p><i>Leaving certificate holders</i></p> <ul style="list-style-type: none"> – Are open, curious, attentive and tolerant towards the world, themselves and other people – Show empathy for children, their families and their different circumstances – Take into account the importance of emotional bonds and social relationships in their educational work – Behave democratically – Communicate appropriately – Build pedagogical relationships and manage them professionally – Develop a pedagogical ethos, take responsibility for their own actions – See themselves as role models in their actions – Understand the children as subjects of their development – Respect and observe cultural backgrounds and the diversity of goals and values in the education, upbringing and care of children – Reflect critically on what they have experienced – Reflect on the biographical aspects of their own actions and are able to perceive their own and other people's needs – Inform themselves about unknown facts and find their own ways of learning – Reflect on their own professional development process and understand the development of their professionalism as a lifelong process

<ul style="list-style-type: none"> – Work responsibly in a team and contribute their own ideas – Support the core professionals in planning and managing projects – Cooperate with all participants in the field of work – Take joint responsibility for the development and support of children – Deal with open work processes and uncertainties in professional action in a way appropriate to the situation. 	
Knowledge areas (selection)	Competences and skills (selection)
1. Perceive children in their living environments and develop pedagogical relationships to them	
<p><i>Award holders possess</i></p> <ul style="list-style-type: none"> – Basic professional knowledge from relevant disciplines – Consolidated professional knowledge about the influence of culture, religion, living conditions, social and institutional norms and rules on the behaviour and experiences of children – Consolidated professional knowledge about bonding theories and the shaping of pedagogical relationships which are supportive for their development. 	<p><i>Award holders</i></p> <ul style="list-style-type: none"> – Regard children in their individuality and personality as subjects of pedagogical work and support their desire to learn new competences – Build up and shape relationships to children which support their development and bonding on the basis of perceptions and observations – Use verbal and non-verbal forms of communication with children in a targeted and situation-appropriate way and reflect on the influence of these on the children.
2. Support developmental and educational processes	
<p><i>Award holders possess</i></p> <ul style="list-style-type: none"> – Consolidated subject knowledge of educational areas (e.g. language education, music education, mathematics and science education, physical activity and health, ecological and sustainable education, media education) on the basis of the respective curricular framework – Consolidated knowledge about observation and documentation procedures relating to the developmental status and processes of children – Consolidated didactic-methodical knowledge for the planning, implementation and reflection of pedagogical activities. 	<p><i>Award holders</i></p> <ul style="list-style-type: none"> – Take into account the variety and diversity of cultural, religious and personal educational needs in their pedagogical work – Assist in the analysis of the living and learning environments of children and in the derivation of action goals for the socio-pedagogical work – Design an environment conducive to development, taking into account the living environments and the resulting individual needs and group interests of children.
3. Support groups in a pedagogical way	
<p><i>Award holders possess</i></p> <ul style="list-style-type: none"> – Consolidated subject knowledge of group dynamics and consider these when shaping educational activities – Consolidated subject knowledge of inclusive and diversity-conscious and gender-sensitive pedagogy in the context of current developments in the field – Consolidated subject knowledge of didactic-methodical approaches to education, care and upbringing in small groups in the field of social pedagogy. 	<p><i>Award holders</i></p> <ul style="list-style-type: none"> – Plan and shape activities that enable equal and equitable experiences in mixed-sex and same-sex groups – Assist in the planning of stimulating learning environments and consider the respective composition of the group – Recognise conflicts between children and support them in solving these independently, using the conflict as a chance.
4. Co-operate with parents and caregivers	
<p><i>Award holders possess</i></p> <ul style="list-style-type: none"> – Consolidated knowledge about family life situations in their socio-spatial contexts as well 	<p><i>Award holders</i></p>

<p>as the influences of cultural and religious environments and ethnic affiliation</p> <ul style="list-style-type: none"> – Consolidated knowledge of different models, methods and forms of cooperation with parents and caregivers – Consolidated knowledge of legal and institutional frameworks for the cooperation with parents and other caregivers. 	<ul style="list-style-type: none"> – Describe areas of responsibility as a social pedagogy assistant in the context of cooperation with parents and caregivers – Participate in the identification and assessment of individually different needs and resources of families and caregivers – Reflect on their own professional and personal competences in relation to working with parents and other caregivers and derive consequences for their own further knowledge-building.
<p>5. Assist in supporting transitions</p>	
<p><i>Award holders possess</i></p> <ul style="list-style-type: none"> – Consolidated professional knowledge about designing transitions – Consolidated knowledge about legislation for early childhood settings and child and youth welfare services in Germany – Basic professional knowledge about child and youth welfare institutions and support systems. 	<p><i>Award holders</i></p> <ul style="list-style-type: none"> – Assist the team in the development of centre-specific strategies for the design of transitions – Assist in the co-operation with other settings and services – Reflect on the implementation and quality of transition practices according to specific criteria.
<p>6. Carry out care and support measures</p>	
<p><i>Award holders possess</i></p> <ul style="list-style-type: none"> – Basic knowledge about legislation and documentation requirements regarding assessments on the endangerment of child welfare according to Book VIII of the Social Code – Consolidated knowledge of age-appropriate and healthy nutrition for children as well as the effect of different influences on the nutritional behaviour of children – Consolidated knowledge of hygiene measures and control systems with regard to hygiene regulations (food hygiene, workplace hygiene). 	<p><i>Award holders</i></p> <ul style="list-style-type: none"> – Participate in the implementation of measures in the context of child protection, safety, health and hygiene on the basis of observation and documentation as well as legal regulations and check their compliance – Guide children towards healthy, ecological and sustainable behaviour – Carry out care measures and activities in such a way that the emotional, social, cognitive and motor development of the child is supported.

Curricular content

The curricula for the professional training of state-certified Assistants differ depending on the federal state, the type of vocational school (*Berufsschule* or *Berufsfachschule*) and the specific course focus.

This is illustrated in the following three examples.

Bavaria

The curriculum for the *Berufsfachschule für Kinderpflege* (2010) for Childcarers is divided into six learning areas: (1) Perceiving persons and situations, observing and explaining behaviour; (2) Recognising and meeting everyday needs; (3) Planning, implementing and reflecting on educational activities; (4) Stimulating and accompanying educational processes; (5) Shaping relationships and communication; (6) Cooperating with all those involved in the educational process (StMUK 2010). The training qualifies students for pedagogical work in various socio-pedagogical fields of work, especially in the care, education and upbringing of children from infancy to early school age (StMBW and StMAS 2014).

Rheinland-Palatinate

The subject-related teaching of the curriculum for the *Höhere Berufsfachschule* specialising in Social Assistance (2019) comprises seven learning fields: (1) Finding their way and engaging in professional situations (approx. 80 teaching hours); (2) Observing, understanding and stimulating children's educational and developmental processes (200 teaching hours); (3) Perceiving, understanding and stimulating educational and developmental processes of people with disabilities (120 teaching hours); (4) Using play, movement and nature experiences for educational processes; (5) Enabling musical and creative educational processes; (6) Supporting healthy eating and conducting, guiding and supporting domestic activities; (7) Conducting, guiding and accompanying health-promoting and care activities. Part of the training is a 12 to 16-week practicum in a socio-pedagogical institution. Award holders can work in (E)CEC centres and special education institutions (Ministerium für Bildung Rheinland-Pfalz 2019).

Saxony-Anhalt

The curriculum of the *Berufsfachschule – Sozialassistenten* (2017) for trainee Social Assistants is structured according to eight learning areas: (1) Developing professional identity and perspectives (60 to 80 teaching hours); (2) Applying different learning and working techniques (40 to 60 teaching hours); (3) Understanding pedagogical and psychological processes and applying them in a professional way (240 to 280 teaching hours); (4) Helping to shape needs-oriented support for people in the areas of health and care in selected life situations (180 to 200 teaching hours); (5) Helping to design needs-oriented support for people in the areas of nutrition and food preparation (200 to 220 teaching hours); (6) Structuring, reflecting on and participating in educational, upbringing and care processes (260 to 300 teaching hours); (7) Designing musical-creative activities and using media for pedagogical purposes (160 to 200 teaching hours); (8) Assisting in quality assurance measures and conceptual tasks (40 to 60 teaching hours). Award holders can work in a variety of socio-pedagogical settings: (E)CEC centres, after-school and extended, all-day schools, residential homes for children and young people, psychiatric clinics for young people, convalescent homes, outpatient family care, care homes for the elderly and disabled and children's wards in hospitals (Ministerium für Bildung Sachsen-Anhalt 2017).

4.3 Alternative entry and qualification routes, system permeability

Diversification of initial professional education formats

Due to the shortage of qualified staff for the constantly expanding field of early childhood education and care, which has been the case for more than ten years, new IPE formats have emerged which are offered alongside the traditional qualifying routes in this field. A trend can be observed in the federal states to offer as many qualification paths as possible in parallel. In general, a pluralisation of IPE formats can be observed (BMFSFJ 2021a; FKB 2023, 132).

Dualised work-integrated qualification pathways for (E)CEC trainees

Since 2012, a new qualification pathway for trainee **Educators** has been developing. The "practice-integrated and remunerated training" (PiA) was launched in Baden-Württemberg with the aim of creating more training places and at the same time attracting new target groups to train for work in (E)CEC (Ministerium für Kultus, Jugend und Sport Baden-Württemberg 2012). By 2017, the pilot project had become part of the regular programmes on offer.

By the end of 2020, this IPE format existed in all 16 federal states except Saxony-Anhalt, either as a pilot model or as a regular offer (Weltzien et al. 2021, 7). The entry requirement is usually a secondary school leaving certificate or an equivalent qualification as well as one year of prac-

tical work in a socio-pedagogical institution. Students conclude a three-year training employment contract with the service provider of the (E)CEC setting and receive a monthly remuneration – since 2019, €1,140 in the first year of training, €1,202 in the second year and €1,303 in the third year (Erzieherin-ausbildung.de 2023). In 2018, a milestone was reached, when this training format was included in the scope of the collective agreement for public service trainees (König et al. 2018, 49).

In Bavaria, a similar model has been on offer since 2016/2017, known as "Educator training with an optimised work component" (OptiPrax; Bayerische Staatsregierung 2017). The pilot project is intended to raise the attractiveness of the Educator profession. The students conclude a training contract with the (E)CEC provider agency, which also pays them. The minimum entry requirement is an intermediate school leaving certificate. In three different training variants (all with at least 2,400 hours), the title of "state-certified Educator" or "Bachelor Professional in Social Services" can be awarded within three to four years, depending on the trainee's previous education.

In Baden-Württemberg, since the school year 2020/2021, the classic **Childcarer** qualifying route will also be supplemented by a practice-integrated and remunerated training format, initially as a pilot project at two vocational schools (Ministerium für Kultus, Jugend und Sport Baden-Württemberg 2020). The job title awarded will be changed to "state-certified Social Pedagogy Assistant". The education/training lasts three years and is divided into a theoretical component at the vocational school (3 days per week) and a practical component in an (E)CEC setting (2 days per week). The students enter into a training contract with an (E)CEC centre and receive an allowance paid by the centre provider.

Part-time options for trainee Educators

Another alternative route to become a state-certified Educator is to study part time at a vocational technical college for social pedagogy. This is possible in all federal states. The number of hours remains the same and the duration is extended accordingly (KMK 2002/2021). The college-based part of the IPE then lasts between three and four years, the work placement between one and two years. The same admission requirements apply as for a full-time college-based training.

System permeability

Chapter 4.1 illustrated that existing qualification routes for work in (E)CEC settings range from vocational school pathways (Assistant Co-workers) over specialised tertiary-level college courses (Educators) to higher education degree programmes (Childhood Pedagogues). They are thus located at all levels of the vocational education and training (VET) system (Fuchs-Rechlin and Rauschenbach 2020, 5).

Whereas in the past, changing from one level of the system to the next was more or less impossible, this has improved in recent years. In some higher education programmes, a completed IPE as a state-certified Educator is credited as part of a higher education degree. At the University of Lüneburg, for example, 40 ECTS credits are taken into account for participation in the Social Work degree programme, shortening the study programme by two semesters. The Frankfurt University of Applied Sciences also offers 30 ECTS credits to Educators wishing to study for a Bachelor's degree in Social Work (ErzieherIn.de 2015). These examples can be viewed as a new form of system permeability which makes it possible for interested persons to obtain a formally higher qualification.

Upskilling courses for work as a “Pedagogical Specialist in (E)CEC centres”

In Bavaria an extensive development programme has been introduced – alongside the classical IPE routes – for a step-by-step qualifying pathway into work in the ECEC field (see IFP/StMAS 2024). An initial part of this programme was an upskilling module for working as a “Pedagogical Specialist in (E)CEC centres” introduced in 2017.

The target groups of this upskilling course are Childcarers, Curative/Remedial Educators, Primary School Teachers, persons seeking career changes and applicants from other countries with a relevant academic degree. Entry requirements are an award as state-certified Childcarer or support worker, a minimum age of 25 years and, depending on the previous qualification, three years of work experience (in a post at least 50% of a full-time post). Primary School Teachers who have successfully completed the First State Examination or lateral entrants with a relevant academic degree only need to have had two years of work experience; for Primary School Teachers with the Second State Examination, no teaching experience is required. The course comprises a nine-month extra-occupational module phase ending in a theoretical examination and a six-month supervised internship in an (E)CEC centre. Those who pass the Certificate are awarded the title of “Pedagogical Specialist in (E)CEC centres”, which is included in the “Professions Register for (E)CEC centres” (*Kita Berufeliste*) administered by the Bavarian State Youth Office (Zentrum Bayern Familie und Soziales 2022).

5. Guided workplace experience (practicum) in the initial professional education of core professionals

(E)CEC settings as a “site of learning” (*Lernort Praxis*) have not traditionally had a clear profile in the IPE of Educators, the largest group of core professionals in Germany. Even though the Conference of Ministers for Youth Affairs drew attention in the late 1990s to the significant role of the workplace component in IPE (JMK 1998) and three years later potentially strengthened the status of this learning site (JMK 2001), establishing a formal guarantee of the joint and equal responsibility of college and (E)CEC centre as sites of learning has been slow in getting off the ground, although the topic has featured in the professional literature for some time (Ebert 2002; Oberhuemer 2015; Flämig et al. 2015; Ebert et al. 2018).

The focus of this chapter is primarily on the work based component of the initial professional education of (Early Childhood) Educators. This will be followed by a brief reference to the work based phases in Childhood Pedagogy degree programmes.

(Early Childhood) Educator (*Erzieherin / Erzieher*)

The relevant framework agreement of the Standing Conference of the Ministers of Education and Cultural Affairs (KMK 2020b) stipulates a minimum of 1,200 hours of field practice in socio-pedagogical working environments for the traditional full-time college-based training of Educators at the *Fachschule*. This corresponds to one third of the total course length.

A variety of organisational models can be observed both in full-time, part-time and practice-integrated IPE formats (König et al. 2018). Despite the different regional and institution-specific framework conditions, there are basically two basic forms of full-time college-based training for Educators (cf. also Janssen 2010). About half of the *Länder* prefer an **additive** training model, i.e. a two-year primarily theoretical component at the *Fachschule/Fachakademie* followed by a

one-year work placement in an (E)CEC centre or other socio-pedagogical field of activity. Otherwise, within the framework of an **integrated** training model, the work based component is incorporated in specific phases over a period of three years.

In the additive model, the practicum takes place in an (E)CEC setting chosen by the trainee. Here they work full time and conclude a corresponding employment contract with the service provider as the employing organisation. The host setting usually also has a contract with the relevant vocational technical college. In some federal states, the internship, which usually lasts one year, can be shortened to six months if the trainee Educator already possesses relevant practical experience. Some *Länder* waive the internship altogether if the person has already completed a relevant course of training, such as the Childcarer qualifying route.

The trainees are professionally supervised in the (E)CEC setting by a core professional (often called 'practice guidance'), and also receive support from the vocational technical college providing the IPE. In most cases, further theoretical knowledge is provided on one day per week or alternatively in compact courses.

Up to now, there has been no agreed position title¹⁴ for the professionals who take on the practical support in the (E)CEC setting. Until fairly recently, there was no qualification requirement, task profile or remuneration for these professionals (Oberhuemer 2014). In the meantime, however, all federal states require a certified professional training as a basic qualification for this activity. In 12 federal states, further requirements are also placed on the mentor in the form of professional experience (between 'two' and 'several' years) and in four federal states, proof of specific further training is required (König et al. 2018, 47f). In Rhineland-Palatinate, a framework agreement on practical guidance has applied to all service providers since 2006.

In the (E)CEC setting, the trainee Educators participate in practical projects and gather experience in guided activities. Together with the professional supporting them, they reflect on these and their own role. Teachers from the vocational technical college visit the students and observe and evaluate their practice. The grades given for the practicum help decide on admission to the final examination.

Childhood Pedagogue (*Kindheitspädagogin / Kindheitspädagoge*)

In the case of higher education degree programmes for prospective Childhood Pedagogues, the decision on the weighting of the practice component lies with the respective higher education institution. In a joint resolution of the Ministers of Education and the Ministers of Youth and Family Affairs of the *Länder* (KMK/JFMK 2010), an accompanying practical component of at least 30 ECTS credits is recommended for a study programme of 180 ECTS credits. As a rule, this minimum recommendation is a requirement for the state recognition of the professional title "*Kindheitspädagogin, Kindheitspädagoge*" (Stieve et al. 2014, 81). However, some higher education institutions give more weight to this practical component. For example, at the Emden University of Applied Sciences in Lower Saxony (Hochschule Emden-Leer 2019), a total of 45 ECTS credits are allocated to this part of the programme. It consists of two internships (9 and 12 ECTS credits respectively), a practical project (11 ECTS credits) and a six-week internship abroad with preparatory and follow-up seminars (13 ECTS credits).

¹⁴ Examples include training leader or training supervisor, practice mentor or mentor (König et al. 2018, 44).

6. Continuing professional development (CPD) of ECEC staff

A number of European studies indicate that continuing professional development (CPD) is more effective when it is oriented towards the current competence needs of staff and when it is provided on a regular, supervised and long-term basis (CARE 2015; Eurofound 2015; Sharmahd et al. 2017; Jensen and Iannone 2018). Furthermore, a systematic review of the international literature on the effectiveness of different approaches to CPD in early childhood education has shown that training approaches which combine coaching with new knowledge and opportunities to reflect on practice are most likely to improve quality in early childhood settings (Rogers, Brown, and Poblete 2017).

Continuing professional development in Germany may be theme-oriented or competency-oriented, course-based or setting-based, provide specialist training for a specific designated role, or focus on a specific target group.

This chapter will foreground general aspects relating to the framework conditions for CPD for those working in (E)CEC centres rather than referring to specific occupational groups. In general, however, it can be stated that in comparison to (Early Childhood) Educators, the other relevant occupational groups (Childcarers, Social Assistants, Socio-pedagogical Assistants, also Childhood Pedagogues) have so far been the focus of relatively few CPD providers (see e.g. Buschle und Gruber 2018).

Legislation and regulation

In accordance with the federal structures in Germany, there is no nation-wide framework setting out specifications for the continuing professional development of staff working in early childhood settings, but there are recommendations issued by the Conference of Ministers for Family and Youth Affairs (see e.g. JFMK/KMK 2010). Continuing professional development is anchored in relevant legislation of the *Länder* as a funding-worthy instrument of quality improvement, although views regarding the scope and intensity of steering procedures vary considerably. Beyond this, the non-governmental provider organisations in the non-profit sector, which in Germany have a dual role as employer and CPD provider, have their own provider-specific requirements and conditions regarding the CPD of early childhood personnel.

Main forms

A comparative study on the continuing professional development systems in six European countries (Oberhuemer 2012) differentiates between non-formal and formal professional development.

In Germany, the main forms identified in three nationwide WiFF studies (Behr und Walter 2010; Baumeister und Grieser 2011; Buschle und Gruber 2018) are mostly **non-formal** professional development activities. These mainly aim to deepen professional and personal competences within the workplace and the field in general; they are not conceptualised as cumulative and credit-bearing qualifications with formal certification for the purpose of career advancement.

Both Behr und Walter (2010) and Baumeister und Grieser (2011) have found that the vast majority of CPD seminars for Educators are short-term events of up to three days. Other, less frequently occurring formats are: team-based or in-house seminars; seminars lasting three to five days; training series that extend over a period of around twelve days and are sometimes offered

on a modular basis; supervision offers; quality circles; distance learning courses or e- or blended learning offers; excursions and study trips; specialist conferences.

Due to the predominant participation in short-term events, a recent study (Gessler und Gruber 2022) therefore investigated the question of whether the knowledge acquired by early education managers and specialists in continuing education is sustainable in the sense of knowledge transfer (see *Chapter 9* for a project description).

Forms of **formal CPD** include courses for which a provider-specific certificate is awarded (e.g. leadership competence) which can be important for career progression within the practitioner's employer structures; in some cases, a state-recognised certificate may be awarded. In Rhineland-Palatinate, for example, in the context of the introduction of official curricular guidance in early childhood education, a cooperation initiative established by the relevant Ministry for employers/providers, municipal umbrella organisations, the state-wide parent committee and the trade unions led to a mutually agreed professional development series (of at least 15 days). For some years now, a series of linked qualification modules has also been offered for providers of (E)CEC facilities. The current offer is called: "Management and quality development of (E)CEC settings – Tandem training for (E)CEC providers and centre leaders in 4 modules - with certification option" (KitaAkademie Rheinland-Pfalz e.V. 2024).

Advanced courses of study with an early childhood specialisation which can be carried out alongside work, or Master's study programmes, are also formal categories of CPD. However, a nationwide framework system of modules for which agreed credits are awarded and which lead to career progression, or an accredited system of cross-provider modules which are recognised as an entry point to advanced studies, have not as yet been established – at least not as a visible system (Oberhuemer 2012, 77). There are as yet no binding quality standards for competence-oriented CPD (Meyer 2018).

In recent years, there have been repeated calls in the professional policy debate for further and advanced training which, in addition to increasing permeability within the ECEC system, also enable career advancement and are better remunerated. For horizontal differentiation, the German Association for Public and Private Welfare (2022) recommends the creation of positions, e.g. as "Specialist Educators", who support and advise the team and management on various topics (inclusion, language) (see also *Chapter 2.3*). Functional positions with more responsibility and also higher pay (e.g. as quality officer, practicum guidance mentor) would promote *vertical* differentiation. These positions should be linked to a "certified qualification". Although these proposals are discussed positively in the professional community, their financing and implementation still depends very much on the specific circumstances of the *Länder* and the providers (Deutscher Verein 2022).

CPD providers

In general, the continuing professional development market for the ECEC sector in Germany is rather confusing and is characterised by a great variety of continuing education and training (CET) providers. Alongside public providers (federal government, *Länder*, municipalities) and private commercial providers, it is primarily the non-profit providers (church organisations, political parties, trade unions, employers' associations, professional associations and welfare organisations) that offer further training for staff in ECEC settings or maintain CET institutions (Buschle und Gruber 2018). According to the nationwide survey by Beher and Walter (2010, see above), the heterogeneous group of non-profit providers is by far the largest group providing CPD for (Early Childhood) Educators in Germany.

The individual CET institutions in Germany are also diverse. They include one-person companies, welfare organisations, educational institutes/academies, adult education centres, public authorities, scientific academies/institutes, church and religious communities, vocational schools, business enterprises, universities, professional or trade associations and business-related CET providers (Beher und Walter 2010, 9). In some *Länder*, vocational technical colleges are also recognised as official CET providers.

Leave entitlement

Leave entitlement for participation in professional development activities is regulated in different ways in each *Land* – both for core practitioners and assistant staff. In most *Länder* it is possible for employees to apply for educational leave. Employees are generally entitled to five days of fully paid leave per year. According to a link posted on the German Education Portal (*Deutscher Bildungsserver*), these entitlements do not apply in Bavaria and Saxony (cf. InfoWeb-Weiterbildung 2024). In a representative survey of 1430 ECEC settings, 67% reported a specified number of days for participation in CPD (Geiger 2019, 81). However, the current staff shortages in the sector are a barrier towards making use of leave entitlement (Buschle und Gruber 2018, 62).

Obligatory or optional?

As a rule, CPD is not a compulsory requirement for ECEC staff in Germany. Only a few federal states have a regulation in this regard (e.g. in Mecklenburg-Western Pomerania a training obligation of five days and in Thuringia of two days per year is enshrined in law).

In general, an employer is neither obliged to offer nor to arrange CPD activities. This excludes agreements that are set out in the employment contract (Advocard 2023).

Funding support

With regard to the coverage of costs for CPD, this usually depends on the agreements between employee and employer. The employer is not automatically obliged to bear the costs. The modalities for CPD are often stipulated in the employment contract. If the employer makes attendance mandatory, they must also bear the costs (Personalwissen 2023).

In the early childhood education and care sector, this means that the willingness of providers to cover the costs can vary greatly. A representative survey of 1,430 childcare facilities revealed that 65% of childcare facilities have a budget for further training (Geiger 2019, 81). In two thirds (66%) of the facilities surveyed, the costs of training are covered in full and in 39% in part (Geiger 2019, 82).

Access to CPD

Overall, the pedagogical staff in ECEC show a high willingness and motivation for further professional development (Buschle und Gruber 2018). Unfortunately, they are not infrequently prevented from participating by high workloads, lack of time, high costs of events and staff shortages in the institution (König und Buschle 2020). According to the estimates of the CPD providers in the nationwide WiFF survey (Beher und Walter 2010, 30), almost half (46%) were "completely" of the opinion that work pressures are a considerable barrier to participation in CPD. Between 43% and 47% of the respondents said that paid time off was far too rare and that participation fees and other costs were not met adequately by the employers of early childhood staff.

Supporting the CPD of (E)CEC Assistants is a matter for the individual employer, i.e. service provider.

CPD and career advancement

Until now, no coherent system of career advancement through continuing education and training has been established in Germany, not even for Centre Leaders in ECEC. Nevertheless, the growing complexity and ever widening fields of responsibility of Centre Leaders are recognised by those responsible for ECEC settings and an increasing number of CPD options focusing on management and leadership are being provided (see below).

Within the framework of the study "Career paths in ECEC" (Weßler-Poßberg et al. 2022), commissioned by the Federal Ministry for Family and Youth Affairs, a modular concept for different specialist careers in the ECEC professions is presented. Proposals for longer-term development opportunities that build on initial professional education and experience are based primarily on the fact that a lack of development opportunities is the most common reason for dissatisfaction among ECEC professionals. **Horizontal** career paths (in the field of language, digital or inclusive education), **diagonal** career paths (positions in student practicum guidance, quality development) and **vertical** career paths (management of childcare facilities, extracurricular all-day care) are mentioned as examples. Curricula are available for the qualifications (ten 2-day blocks, half of which are self-study), but also exemplary cost calculations. A final certificate of achievement (20-30 ECTS credits) can facilitate credit transfer to a university degree programme.

Key content focus of CPD for core professionals

In principle, the setting of topics in the CPD market is fast-moving (König und Buschle 2020). Compared to the "hot topics" identified by Baumeister und Grieser (2011) in an analysis of 96 CPD programmes of the larger providers, only a few years later a number of shifts and new priorities could be identified (Buschle und Gruber 2018). 15 topic areas appeared particularly often in the programmes: Developmental, educational and learning processes (696); reflection, attitude, self-image, role (560); communication, holding conversations, conflict management (528); cooperation with parents, families (412); music, dance, creativity, art, culture (388); children up to three years, crèches (376); leadership, management (328); methods of pedagogical work (321); inclusion, integration, participation (301); stress management, self-management, time management (288); language education, multilingualism (279); religion, philosophy, mourning (245); personnel development, team development (223); observation, documentation (221); body, movement, sport (214). It was found that compared to earlier studies, topics such as 'documentation and observation' had moved more into the background, whereas 'reflection', for example, had gained in importance. 'Cooperation with parents and families' continued to be highly ranked. The focus on pedagogical work with children under 3 years of age and current education policy topics such as inclusion have increased in importance. It was noticeable that there were comparatively few offers on the topics of 'digital education' or 'education for sustainable development'.

Research on CPD

Key findings of the aforementioned study by Buschle und Gruber (2018) included the following: The professionals perceive CPD as an important factor for high quality in ECEC. This is also reflected in the high level of participation - even if often only in terms of shorter courses. Above all, responding to constantly changing challenges cannot (only) be taught in the context of initial professional education. The motives for participation are listed as: own interest, suggestion of

the Centre Leader, obligation. In most cases, however, participants do not attend CPD primarily because they expect a career advancement or a better salary (Friederich und Buschle 2021).

Cooperation initiatives

In some federal states, regular inter-agency cooperation in the field of CPD for Educators and ECEC Assistants has been established. An example from Bavaria: The *FORUM Fortbildung* convened by the State Institute for Early Childhood Research and Media Literacy (IFP) was founded as early as 2001 as a working group including representatives of continuing education and training provision, initial professional education, and research. It can be seen as a special example of continuous and state-wide cooperation to promote the conceptual and organisational advancement of CPD opportunities for the (E)CEC field. Since 2010, all offers of the participating associations and organisations can also be viewed as a CPD database on the IFP website (www.ifp.bayern.de). This enhances the state-wide and cross-agency transparency for ECEC professionals considerably. The idea and concept of the database originated in *FORUM Fortbildung* and is financed by the Bavarian State Ministry for Family, Labour and Social Affairs (StMAS).

Current policy debates

In recent years, the CPD of early childhood education staff has been a consistent topic in professional policy discussions in Germany. This is emphasised in a number of studies dedicated to the upgrading of social professions in general and the career advancement of Early Childhood Educators in particular. For example, a study by prognos AG on behalf of the Federal Ministry for Family and Youth Affairs (Weßler-Poßberg et al. 2022) presented a modular concept for various specialist careers in the socio-pedagogical professions. In the Sinus Youth Survey (2020), young people were asked about their views on the occupational field of early childhood education and care. They considered it to be varied but not very attractive in terms of career opportunities. Also, a brochure published by the Federal Ministry of Family and Youth Affairs on the systemic relevance of the ECEC occupational field and also a project called "Mehr-Wert" (More Value) of the Fraunhofer Institute for Labour Economics and Organisation (cf. BMFSFJ 2021c) deal with the upgrading of ECEC occupations, stressing the need to strengthen their attractiveness.

7. Working conditions and current workforce issues

7.1 Remuneration

The pay of staff in (E)CEC centres varies according to the service provider they are employed by. Whereas in the private, mostly non-profit sector it is generally the providers who decide on the level of earnings, in the public sector pay is usually bound by collective bargaining agreements. Private ECEC service providers are not bound by these agreements, so the salary is a matter of negotiation. The same applies to the number of days granted for holiday leave, special payments and more (Schuhmacher 2023). However, many private providers base staff salaries on the public sector agreements (TVöD) – and the current high demand provides the pedagogical staff with a good basis for negotiation.

The public sector (TVöD) pay grades are based on job characteristics, such as “Educator with demanding tasks” (e.g. Educators who work with children with special needs), “Group Leader” or “Centre Leader in a setting with more than 100 places”). Depending on the length of service,

increments are added to the basic salary. After one year of service on the first scale point, a person advances to scale point 2; after three years, to scale point 3; after four years each, to scale points 4 and 5; and after five years, to scale point 6. This means that ECEC staff do not reach the highest seniority scale point until 17 years after starting their career (Infoportal öffentlicher Dienst 2023b). In most cases, employees also receive a Christmas bonus and staff may be paid extra for living in specific cities/locations.

After the most recent public sector collective bargaining round at the end of 2023 for the year 2024, the basic starting salary of a **Childcarer** with demanding tasks is now €3,091.81 gross per month, and that of an **Educator** with demanding tasks is €3,371.39 (compared to €2,599.20 in 2017). In the highest salary scale for each occupation the gross basic salaries increase to €3,925.36 and €4,902.44 respectively. The **Centre Leader** of a setting with more than 180 places has a starting salary of €4,458.20; in the highest salary scale the respective amount is €6,576.36 (compared with €5,446.34 in 2017) (Infoportal öffentlicher Dienst 2023a, see *Table 11*).

Table 11

Germany: Salaries of ECEC staff, 2022/23 (valid from 01.03.2024 until 31.12.2024)

Staff categories	Salary Scale 1 / Scale 6
Childcarer	
S 2/3 (regular)	€ 2,719.14 / € 3,237.95
S 4 (with demanding tasks)	€ 3,091.81 / € 3,925.36
Educator	
S 8a (regular)	€ 3,303.85 / € 4,409.39
S 8b (with demanding tasks)	€ 3,371.39 / € 4,902.44
Centre Leader	
S 13 (in settings with 40–70 places)	€ 3,756.97 / € 5,169.65
S 18 (in settings with over 180 places)	€ 4,458.20 / € 6,576.36

Source: Infoportal öffentlicher Dienst 2023a

Since **Childhood Pedagogues** do not as yet have an agreed job classification, the collectively agreed classification for “other employees” who “perform corresponding activities based on equivalent skills and experience” is used for these Bachelor graduates. This means that grouping is often a matter of negotiation and is often done in the same way as for Educators with (particularly) demanding tasks. In general, a university degree does not have a great impact on the salary of (Early Childhood) Educators. Persons with degree-level qualifications earn significantly more in business or research (Infoportal öffentlicher Dienst 2023b).

However, compared to the salaries of Primary School Teachers (most of whom are civil servants), the pay of professionals in ECEC centres is still significantly lower, with the differences between the western and eastern *Länder* decreasing overall. In 2022/23, a civil servant teacher (entry-level salary A12) earned between €3,619.23 gross (Mecklenburg-Western Pomerania) and €4,107.37 (Brandenburg) per month (Infoportal öffentlicher Dienst 2023c, valid until 30.09.2023).

Teachers in salaried employment are rather rare (mostly in temporary positions) and are paid nationwide (except in Hesse, where a separate collective bargaining agreement applies) according to the collective bargaining agreement of the federal states (TV-L, in municipalities TVöD). The starting gross salary averages €3,990.46 (EG11, January 2023) (GEW 2023). Both civil servants and salaried teachers are paid according to activity and level of professional experience between €3,520.65 gross (Mecklenburg-Western Pomerania) and €3,979.84 (Bavaria) per month (Infoportal Öffentlicher Dienst 2022c).

7.2 Full-time and part-time employment in (E)CEC provision

According to the Early Education Staffing Barometer, a total of 722,043 persons worked in (E)CEC facilities in 2021 (FKB 2023), including out-of-school settings. Full-time employees work 38.5 hours per week or more, part-time employees work less than 38.5 hours per week. There are virtually no differences between the public and independent provider sectors. The decision to work full time or part time is agreed between the provider and the professional.

In 2022, very large regional differences were recorded: in the western federal states, 32.9% worked full time, in the eastern states (including Berlin) only 21.6%. One possible reason for this could be that many staff in the eastern federal states reduced their working hours to part time a few years ago in order to retain their jobs. On average, 34.1% of early childhood education professionals (excluding administrative staff) worked full time in 2023 (Destatis/Genesis 2023). If all employees in (E)CEC settings are taken into account (not only educational professionals, but also administrative, housekeeping and technical staff), 30.1% of staff were in full-time employment in 2023 (Destatis/Genesis 2023). The proportion varied considerably in 2022: from 15.6% in Brandenburg to 42.2% in North Rhine-Westphalia, including administrative staff (Destatis 2023, own calculations).

Table 12

Germany: Pedagogical staff – full-time and part-time employment in (E)CEC centres, 2023

Number of working hours	Number of employees (excluding administrative personnel)	Proportion in %
38.5 and more	253,755	34.1
32 to under 38.5	144,353	19.4
21 to under 31	213,810	28.7
10 to under 21	109,318	14.7
under 10	23,657	3.2
Total	744,893	

Source: Destatis/Genesis 2023

7.3 Support measures in the workplace for newly qualified and newly appointed staff

There is no binding system of mentoring, coaching or supervision for newly qualified or newly employed (Early Childhood) Educators in Germany. Induction concepts and measures are the responsibility of the setting providers. In principle, specialist advisers/counsellors employed by the provider organisation offer support measures in the workplace in the broadest sense. On the one hand, these counselling staff are an integral part of the staff in the system of early childhood education and care in Germany, on the other hand, there is no legal protection, no binding task profile across all providers and no binding qualification requirements for this coordinating area of responsibility (see also *Chapter 2.3*).

7.4 Non-contact time

Non-contact time varies considerably across the federal states and may also be regulated by the individual service providers. A survey by the trade union ver.di of 19,250 ECEC professionals in 2021 showed that only slightly more than half (58.6%) have fixed availability times in the duty roster, and 28.9% have no hours set aside for preparation and follow-up. There are significant

differences between the federal states: for example, in Bremen and Hamburg there are no regulations on non-contact time, in Baden-Württemberg they are very clearly specified with at least ten hours per group/week (Ver.di 2021, 13; KVJS 2021).

7.5 Current staffing issues (e.g. staff shortages, recruitment, age composition of workforce)

There has been a considerable shortage of staff in the German ECEC system for years. There are many reasons for this: on the one hand, the expansion of places since 2013 after the introduction of the legal entitlement for one year-olds to a place in centre-based or home-based provision led to a higher demand for qualified workers. In addition - especially in the eastern federal states - a large group of professionals will soon retire and for whom no adequate replacement is available. Dissatisfaction with the working conditions, mainly with the pay, has led to many graduates of the Childhood Pedagogy Bachelor's degree course only staying in the ECEC sector for a short time and, where possible, looking for a job in higher education teaching or research. In the last 15 years, around 800,000 new places in (E)CEC have been created in Germany. Nevertheless, evaluations by the German Youth Institute as part of the National Education Report 2022 found that the biggest gap in terms of staff shortages is expected to be in 2025: There will then be a shortage of up to 73,000 specialist workers, particularly in western Germany (Rauschenbach et al. 2022).

The Bertelsmann Foundation's current monitoring report shows that there will be a shortage of up to 383,600 places in 2023: far more in the western federal states (362,400) than in the eastern part of the country (21,200) and especially places for under 3 year-olds (271,000 in total). To cover this need, 98,600 people would have to be recruited (Bock-Famulla et al. 2023).

In addition, the relatively constant average age since 2012 and rather high average age in 2023 of both E()CEC staff (40.8 years) and Centre Leaders (47 years) means that many specialist staff will retire in the coming years for reasons of age (Destatis/Genesis 2023, own calculations, excluding administrative staff).

The lack of staff is particularly noticeable in urban conurbations, whereas in rural areas it can happen that groups have to be closed because too few children attend the settings.

In order to further increase IPE capacities, an urgent priority would be to increase the number of teaching staff in the *Fachschulen* for social pedagogy, as intended in North Rhine-Westphalia. The shortage of qualified ECEC personnel has thus also reached the level of initial professional education (Fuchs-Rechlin und Rauschenbach 2021).

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Professional Development Initiative for Early Childhood Educators (WiFF)

In 2008, the Federal Ministry of Education and Research and the Robert Bosch Foundation in cooperation with the German Youth Institute launched a comprehensive professional development initiative for early childhood educators called WiFF (*Weiterbildungsinitiative Frühpädagogische Fachkräfte*). With the new *WiFF-Transfer* line of action, the initiative has been extended until the end of 2026. This makes it one of the most far-reaching – if not the most far-reaching – professionalisation initiative for early childhood personnel in Europe (Oberhuemer 2014, 22).

The professional development initiative supports the professionalisation both of ECEC staff as well as the ECEC system as a whole in a number of ways (WiFF 2023b). These include specialist reports, field evaluations and research studies providing up-to-date knowledge on current topics in ECEC as well as promoting competence-oriented CPD by observing and analysing the ongoing professionalisation process. In addition, the initiative is committed to improving the links between vocational and higher education skills acquisition so that educational pathways can be better connected. Specialists from initial and continuing education, policy development, provider associations and academia are involved in order to keep the discourse on quality in ECEC alive.

Through specialist conferences and workshops, WiFF also acts as a professional network for the growing number of stakeholders in the field of early childhood education and care. Moreover, WiFF exchanges ideas twice a year in an open-door group with representatives from the social and education ministries of the federal states as well as with staff and heads of the vocational technical colleges for social pedagogy (WiFF 2023d).

Staff monitoring – The Early Education Staffing Barometer

A sub-project of the Professional Development Initiative for Early Childhood Educators (WiFF) is The Early Education Staffing Barometer (FKB 2023). The first edition of this comprehensive compilation of data was published in 2014; the fifth edition became available in October 2023. The Barometer provides detailed information on staff in ECEC settings and their qualification structures, on ECEC teams, on the employment market, on IPE pathways into ECEC, diversity in staff composition and future staffing requirements. There is also a comprehensive appendix of tables with data, some of which are also broken down by federal state.

The data sources include employment, earnings and higher education statistics, as well as child and youth welfare and education statistics.

Federal programme “Staffing Campaign”

As already reported, there has been a significant shortage of staff in the ECEC sector in Germany for some time now. In order to recruit new staff and retain existing professionals, the Federal Ministry for Family Affairs, Senior Citizens, Women and Youth funded a "Staffing Campaign" from 2019 to 2021 (BMFSFJ 2023b). Three programme priorities were developed: (1) paid practice-integrated training, (2) practicum guidance and (3) promotion bonus. The evaluation through representative online-supported written surveys as well as focus groups and telephone interviews included 500 providers per programme area and resulted in recommendations for action (Weltzien et al. 2021 – see *Chapter 9* for details of the research findings).

State by state monitoring – a Bertelsmann Foundation initiative

The private monitoring initiative by the Bertelsmann Foundation, which has been published every two years since 2008, is based on data from official child and youth welfare statistics and surveys of the responsible state ministries. The status quo of the ECEC systems in the 16 federal states is analysed according to three key areas: "Ensuring participation", "Using investments effectively" and "Promoting education - ensuring quality" (cf. Bock-Famulla et al. 2023). Online, it is also possible to compile individual comparisons across the *Länder*. Furthermore, data on the personnel working in ECEC are also presented and supplemented by analyses of staff-related topics, such as the “Staffing Radar for Kita and Primary School” (*Fachkräfte-Radar*), which was launched in 2021 and will be published bi-annually, detailing staffing trends and predicting staffing needs.

Federal programme “Language Kitas” (“Sprach-Kitas”)

The core themes of the federal programme “Language Kitas: Because language is the key to the world” (2016 to mid-2023) are language education integrated into everyday life, inclusive education and cooperation with families. Since July 2023, responsibility for the programme is now in the hands of the federal states, which aim to continue it mostly from their own funds or from funds from the fields of action set out in the Kita Quality Act (Das Portal der Kinder und Jugendhilfe 2023).

Since 2021, there has been a new focus within these fields of action on the use of digital media and on media pedagogical issues - especially in ECEC settings attended by an above-average proportion of children with language support needs. In addition, digital education and digital communication formats are to be enhanced in the qualification of professionals. In each “Sprach-Kita”, an additional professional is employed who is accompanied by external specialist advisers. In 2020, 6,360 additional professionals in “Sprach-Kitas” and 503 accompanying expert advisers, each with a half-time position, were funded (BMFSFJ 2021b). The Free University of Berlin and the University of Bamberg examined the implementation and effects of the programme in an accompanying evaluation. 1,069 Centre Leaders, 1,018 Educators and 102 specialist advisers were included. In 2021, a further 77 specialist Counsellors/advisers, 576 Centre Leaders and 547 additional Educators took part in an online survey. Recommendations for successful implementation emphasised the cooperation in tandems between ECEC teams and specialist counsellors (*Fachberatung*), the provision of CPD courses on digitalisation issues and intensive preparation of Educators for their supporting and advisory role. At the same time, it was pointed out that further efforts are needed in terms of improving the digital infrastructure of ECEC settings (BMFSFJ 2021d).

Overall strategy for the continuing professionalisation of socio-pedagogical staff

In a joint meeting in October 2023, the Conference of Ministers of Youth and Family Affairs (JFMK) and the Conference of Ministers of Education and Culture (KMK) viewed the recruitment, long-term retention and personnel development of a sufficient number of qualified staff for child and youth welfare as the greatest challenge for the near future. A joint working group will focus on the following priorities (MBS Brandenburg 2023):

- Initial professional education
- Continuing professional development
- Higher education qualifying pathways
- Professional fields of employment
- Development and career opportunities
- Attracting new target groups
- Recognition of staff with non-German qualifications
- Shortening the duration of IPE while maintaining quality standards
- Modularisation and digitalisation of IPE
- Permeability of IPE programmes

“In order to make optimum use of the potential options for recruiting and retaining pedagogical staff, training and qualification options must be considered in addition to quantitative issues, particularly with a focus on child and youth welfare. In view of the increasing heterogeneity of staff, there is also a need for agreement on the necessary quality assurance measures. In addition, it is important to establish continuing learning opportunities through targeted CPD offers for pedagogical staff in order to retain qualified staff” (MBS Brandenburg 2023).

9. Recent country-specific research focusing on (E)CEC staff

TALIS Starting Strong Survey

Source: DJI 2023 (see *References* for further details)

Background and aims: Germany is participating in this international study for the second time. The TALIS study is led by the OECD and the OECD Network on Early Childhood Education and Care. Sixteen countries from five continents are participating; seven, including Germany, are focussing not only on professionals who work with 3 to 6 year-olds, but also with under 3 year-olds. For Germany, the study is being conducted by the International Centre for Early Childhood Education and Care (ICEC) at the German Youth Institute (DJI). Funding comes from the Federal Ministry for Family Affairs, Senior Citizens, Women and Youth (BMFSFJ) and the European Union (EU). The first survey took place in 2018, with evaluations of 520 Centre Leaders and 2,572 ECEC professionals (see Turani et al. 2022) and will be supplemented by a second study in 2024, which will enable an analysis of the strengths and weaknesses and special features of the ECEC systems.

Procedure: For Germany, the relevance of the OECD questionnaires was tested in 2023 in a pilot study with 60 ECEC centres and 350 Educators and Centre Leaders. In spring 2024, a total of around 500 randomly selected ECEC centres with 3,000 staff and centre managers will be surveyed nationwide. Topics include working conditions and stress, aspects of initial and continuing education, pedagogical practices and settings, diversity in the ECEC centre, digitalisation in ECEC, learning environment, work organisation and climate, and pedagogical management tasks.

Selected findings: Results are not yet available; they are expected from 2025 onwards.

Implications: As with the 2018 study, it can be assumed that the findings of the new study will also contribute to keeping an eye on and further developing the importance of everyday practice, diversity, leadership and the recruitment and retention of pedagogical staff in the field of early childhood education and thus improving quality in order to adequately meet the existing challenges in Germany.

Evaluation of the federal programme "Staffing Campaign"

Source: Weltzien, Hohagen, Kassel, Pasquale und Wirth et al. 2022 (see *References* for further details).

Background and aims: Against the background of the acute shortage of qualified staff in the field of early education and care, a federal programme "Staffing Campaign" (2019-2021) was launched. The aim was to promote the recruitment and retention of staff.

Procedure: The evaluation of the campaign focused on three programme areas: the recently introduced remunerated practice-integrated training (PiA); professional practice guidance; and a promotion bonus as a means of retaining existing staff. A mixed-methods design was developed which gave equal weighting to various qualitative and quantitative methodological approaches. In the quantitative part, the experiences and assessments of PiA trainees, practice supervisors, college lecturers, centre leaders, and ECEC providers were combined in statistical analyses. The initial sample was 500 ECEC providers per programme area. Qualitative methods were used during the process to deepen the findings and included the reconstruction of perspectives. Results were combined and triangulated and an overall evaluation of the federal programme conducted.

Selected findings: Key findings are as follows: (1) The remunerated practice-integrated model of training proved to be a successful strategy for recruiting young talent and was rated very positively by trainees, centre managers and college staff. Binding agreements between vocational technical colleges and the workplace learning location are seen as an important aspect of this. However, the Centre Leaders were particularly critical of the pro-rata crediting of trainees to the staffing ratio and the ECEC providers were critical of the unclear funding situation at the end of the programme. (2) Professional guidance and supervision increased the quality of the training practice, especially if the mentors were appropriately qualified and released for two hours per week for these activities. Challenges arose here due to staff shortages or turnover, unclear task allocations and – depending on the specific framework conditions of the institution - correspondingly adapted personnel development measures or financial structures. (3) All participants considered a promotion bonus for existing professionals to be an effective method of retaining professionals, which increases appreciation and job satisfaction. On the provider side, however, it was pointed out that a bonus could also lead to team conflicts if there are no transparent criteria for allocation. In addition, the collective bargaining system, which does not provide for bonus payments, is likely to stand in the way of continuity.

Initial education and training of Educators: “a permanent construction site”

Source: Mende und Fuchs-Rechlin 2022 (see *References* for further details)

Background and aims: Due to inconsistent federal and state statistics, there is little data available on changes in the vocational technical college landscape and the initial education and training of prospective Educators. The data generated in the study aim to give these key aspects more visibility.

Procedure: A total of 293 vocational technical colleges (56% of which are publicly funded) took part in an online survey in 2021. The questionnaire was answered in roughly equal parts by college and department heads (41.9% and 40.4% respectively), heads of educational programmes and deputy college heads. Among other things, the survey asked for information on the college structure and organisation; on the teaching staff; on the training to become an Educator; on capacities and entry requirements; on costs and funding; on cooperation between learning locations; on forms of organisation and on assessments of the education and training to become an Educator.

Selected findings: The number of publicly funded institutions is currently decreasing and only accounts for 46% of all training colleges for EC Educators. They are more frequently located in the western federal states and in rural areas and are more inclined to participate in pilot projects or offer examinations for external applicants than the private vocational colleges. Due to expanded access opportunities to education, an increased diversity of students can be observed: the proportion of beginners with a higher education entrance qualification has increased.

Offers of different IPE options are distributed differently across the vocational colleges, with more options being available in public institutions. Nationwide, there are four main types of IPE: 1) full-time IPE (51%), 2) practice-integrated training (PiA, 22%), 3) part-time IPE alongside work (19%) and 4) part-time IPE (4%) - 4% could not be allocated. Even though overall responsibility lies with the vocational technical colleges, numerous institutionalised forms of cooperation between college and (E)CEC settings can now be observed, and thus also active, structural cooperation between learning locations. Colleges providing full-time and PiA training are the most satisfied with this type of cooperation.

Implications: The four IPE formats identified appeal to different groups of people and each offers advantages and disadvantages. It would be desirable to standardise these formats nationwide, to formulate orientation standards and to include them in the KMK framework agreement.

It would be important to define what a specific format should stand for, which would, however, require common terminology and cross-state agreements. Since, unlike other dual professions, the professional preparation of prospective Educators is not subject to ongoing monitoring, and also due to heterogeneity and federalism, it is difficult to observe and analyse developments in a continuous way.

International ECEC professionals and team-oriented centre development

Source: Robert Bosch Foundation 2023; Faas et al. 2021 (see *References* for further details)

Background and aims: The aim of the project was to raise awareness and improve the way ECEC centres handle diversity. Specifically, it involved, among other things, the targeted qualification of professionals from other countries, the creation of a cross-centre network on migration-specific topics and the removal of barriers to the recognition of equivalence of qualifications.

The "Diversity Welcome" project was initially implemented in Baden-Württemberg (BBQ - Bildung und Berufliche Qualifizierung gGmbH) and has also been running in Thuringia since 2023.

The scientific monitoring of the first project run focussed on the investigation of conditions for the successful implementation of the project, such as reaching ECEC professionals with a migration background who have obtained a pedagogical qualification abroad; the willingness of providers and ECEC centres to employ such staff; the comparison with IPE structures and job profiles in other countries; and the on-site activities in the early education field in terms of integrating professionals with a migration background with educators, children and parents in ECEC centres.

Procedure: A multi-perspective and multi-method research design was adopted. In addition to literature research, online research and expert interviews, standardised online questionnaires were used as evaluation instruments. In sub-project A, all 23 authorities for the recognition of non-German qualifications were contacted for a standardised survey, but only eight of them agreed to participate. In sub-project B, between January and June 2020, 12 ECEC centre managers and 65 professionals were surveyed using online questionnaires, and guided interviews were conducted with 11 professionals undergoing the recognition process, 12 centre leaders and 7 field trainers.

Selected findings: The programme addresses relevant social, labour market and education policy issues and problems and is seen as innovative and conceptually sustainable. Nevertheless, the recognition procedure is seen as a complex process and specific hurdles continue to arise, especially for professionals from countries outside the EU – even after the Immigration of Skilled Workers Act was introduced in 2020.

The equivalence assessment and the associated concept of “substantial differences” introduced by the EU are viewed critically. Above all, the rather deficient view of qualifications acquired abroad further exacerbates the problem of different educational and professional systems as well as the different organisation of ECEC systems and associated professional profiles. There is also a lack of transparency for all stakeholders, as different authorities are responsible for equivalence assessment throughout Germany.

It should be noted that causal relationships between the analysed variables cannot be verified and the small sample sizes also represent a limitation of the study.

Implications: Although the question of the impact of a measure is important, it does not do justice to the “Diversity welcome” programme or its complexity if it is assessed solely in terms of its effects. For the most part, the programme has succeeded in conceptually anchoring aspects of culturally sensitive and prejudice-conscious pedagogy in the participating ECEC centres and in raising awareness of the opportunities for the integration of professionals with a migration background in the centre teams. It is recommended that further training measures continue

to be provided for the professionals in the recognition process and that parallel further training and process support be provided to support organisational and team development in the participating ECEC centres. At the same time, however, more specific options and methods should also be made available to the centre teams in order to be able to provide even more targeted guidance and support to the professionals in the accreditation process in their day-to-day work.

Licence for multi-professionalism in times of staffing shortages?

Source: Grgic und Friederich 2023 (see *References* for further details)

Background and aims: Against the background of the prevailing shortage of qualified staff in ECEC centres, the loosening of the so-called “skilled worker catalogues” of the federal states for occupational groups without a specifically (socio-)pedagogical qualification is examined. The question of whether and under what conditions multi-professional teams can promote professionalisation in early education is investigated. The definition of the term “multiprofessionalism” is analysed: On the one hand, in the sense of interdisciplinarity, people from other professional groups can take on specifically designated positions in the ECEC centre; on the other hand, people with different professional qualifications can also carry out the same tasks in the ECEC setting. It was investigated how these professionals can be integrated into the respective team and what added value they represent for ECEC centres.

Procedure: Using a multi-stage qualitative content analysis, the licensing laws of the federal states and their legal basis were examined and categories were formed with regard to authorised occupational groups and professional positions.

Selected results: Professional theory and also professional policy arguments may speak in favour of different professions working together in teams, but attention must be paid to the specific implementation, as the term “multiprofessional” is variously used: as cooperation between different professional groups with different qualification levels from the same professional field, or from different professional fields.

Three types of staff catalogues could be distinguished in the federal states: 1) narrowly defined, socio-pedagogically oriented (Bremen and Saarland); 2) academically extended, pedagogically oriented (Bavaria, Brandenburg, Hesse, Lower Saxony, Saxony, Saxony-Anhalt, Schleswig-Holstein, Thuringia); and 3) multi-professionally oriented, with further vocational technical college qualifications (Baden-Württemberg, Berlin, Hamburg, Mecklenburg-Western Pomerania, Rheinland-Palatinate, North Rhein-Westphalia).

The highest rates of ECEC staff with a higher education degree (9-11%) are to be found in states with an academically extended, pedagogically oriented specialist staff catalogue (Saxony, Thuringia, Hesse). In federal states with a multi-professionally oriented catalogue of skilled workers, there is also a “downward opening”. These persons (e.g. with therapeutic or healthcare qualifications) are sometimes limited in their deployment or are required to be re-qualified with regard to the pedagogical content knowledge they bring with them (compared to the minimum 1,000 hours of pedagogical content in the initial professional education of Educators, only between 50 and 300 hours) and subsequently supported by the ECEC Centre Leader and the team. It was not possible to establish clear advantages or disadvantages for the deployment of people with “non-specialist” qualifications in ECEC centres, as a wide range of conditions need to be met for this to happen.

Implications: Multi-professional teams cannot therefore contribute to solving the shortage of qualified staff or to improving quality or professionalisation per se, as the resources required for successful integration into the team are generally not available in the ECEC centres – particularly in the face of acute staff shortages.

10. Workforce challenges – country expert assessment

Country expert assessment by Sigrid Ebert

Changing demands on the professional education and upbringing of children in early childhood settings, mostly a women's task, have been part of social modernisation processes in Germany for over 100 years. The *Conference of Ministers for Youth and Family Affairs* of the 16 federal states, the body responsible for child and youth welfare, has repeatedly positioned itself in terms of social change. One example: "In (E)CEC facilities, the education of young children needs to be challenging at a complex level, enhanced through everyday practices and supported through a caring environment. This represents a new interpretation of bringing up children. It recognises children as the subject of their education and at the same time makes demands on adults to ensure that sustainable and legitimate cultural experiences are made available to children for their own self-education" (JMK 2001a).

In the course of successive **legal entitlements** for the institutional support of children in (E)CEC services (nurseries, kindergartens, out-of-school care services), this system of "supervised childhood" as a public responsibility underpinning family upbringing is assessed in educational and social science discourses from the point of view of effectiveness. Support encompasses the upbringing, education and care of the child, it relates to the child's social, emotional, physical and intellectual development and it starts with the child (Federal Ministry of Justice 1990, SGB VIII, §22, para. 3). From a child policy perspective, this is about the child's right to a "good childhood". Beyond this, the coronavirus pandemic has revealed that childhood education and care settings in Germany must also be measured against whether they are perceived as a visible and socially significant part of a satisfying childhood (BJK 2008).

The current high demand for qualified staff in childhood education and care settings can be attributed on the one hand to the fact that more and more children from the age of two are spending an increasing amount of time in ECEC settings and that young schoolchildren are also increasingly attending various forms of all-day care outside school hours (König 2021). At the same time, the diverse lifestyles of children and their families place new demands on the pedagogical work of professionals which they need to encounter through a pedagogy designed to reflect children's real-life situations. The well-being of children is the "starting point and goal of pedagogical quality" (Reker und Spiekermann 2021). In the 16 federal states, curricular frameworks are available to support professionals in shaping this everyday informal learning culture. However, the **density of interaction quality** is the deciding factor and challenge in providing individual support for each child (Pestalozzi-Fröbel-Verband 2023). In turn, this pedagogical quality depends on the number of children for whom an Educator is responsible (staff to child ratio), and this varies considerably across the federal states. The extent to which the "knowledge and skills" of an Educator come into play is a question of time with and proximity to the individual child and of co-operation within the team.

In the context of centre-based ECEC, the concept of care tends to have a custodial connotation: "The care and upbringing of children are the natural right of parents and their primary duty" (Federal Ministry of Justice 1990, SGB VIII §1, 2). Nevertheless, in addition to education and upbringing, the responsibility for children's well-being in the sense of "care", is part of the professional identity of Educators. They observe and experience in their pedagogical interactions with children that the more children are enabled to be self-effective on an everyday basis and the more they are enabled to help shape their living and learning environment, the greater their

wellbeing. It is crucial that they feel respected and recognised as a valuable member of the community of people who learn, live, play and work in the ECEC centre in a context of secure relationships. This **concept of agency** is the "key to a successful educational biography" (Schleicher 2019) and also applies without restriction to children under the age of 3 as well as to children of primary school age ("good all-day care").

The societal significance of the social professions, to which the Educator profession belongs, is undisputed (Deutscher Verein 2020). Educators represent the strongest occupational group within the qualifications pyramid of social professions. However, parallel to the current expansion of places in ECEC, the field is facing an **acute shortage of qualified staff**, especially in the western German federal states. There is even talk of a "dramatically worsening skills gap" (Rauschenbach et al. 2022). According to forecasts, this staffing shortage of Educators could reach a peak of up to 73,000 by 2025.

In particular, the shortages are experienced most strongly in ECEC settings for children under 3 years of age, meaning that the quality standards achieved to date can hardly be maintained under the given conditions, especially with regard to the staff to child ratio (FKB 2023). Moreover, the curricular framework programmes include little guidance in terms of the specific pedagogical competences needed by staff when working with nursery-age children (Pestalozzi-Fröbel-Verband 2023), despite the fact that more and more parents with under 3 year-olds wish to see them attend an ECEC centre (FKB 2023).¹⁵

However, when it comes to the **conflicting demands of professionalism and staffing shortages**, it is the federal structures of the system of professional education and training which pose the greatest challenge to quality control for ECEC system. The newer "dualised" training formats, which combine time in a vocational technical college with a paid workplace in an ECEC setting, aim to ensure that as many people as possible are recruited for the Educator profession. These prospective professionals are counted towards the staffing ratio with the aim of retaining them in the centre in the long term.

There is also currently a broad debate in Germany as to whether the current **vocational programme of professional education/training** actually imparts or can impart the professional skills in the necessary breadth and depth that are required in the context of the increased and still rising expectations of the quality of socio-pedagogical work in ECEC settings (Ebert et al. 2018; Kalicki et al. 2019). A recent survey conducted by the Paritätischer Gesamtverband shows that the confidence of service providers in the quality of the outcomes of the vocational education/training route is only middling (Der Paritätische Gesamtverband 2022). This is the case despite the fact that with the framework specifications of the Standing Conference of the Ministers of Education and Cultural Affairs of the *Länder* significant steps have been taken to sharpen the competence profile and professional profile of Educators (KMK 2017; KMK 2020b).

The current aim of the federal government is to re-evaluate the social professions in terms of their professional expertise and social significance. Through "performance-related remuneration and career options ... female and male professionals are to be recruited and retained in this occupational field in the long term and gender-specific attributions are to be replaced by a widely perceived professionalism and a modern understanding of the profession" (BMFSFJ 2020b, 15ff). A broad alliance of experts under the leadership of the Federal Ministry for Youth Affairs is now to develop an **overall strategy for professionals in ECEC and all-day childhood care and education for school-age children** as part of a participatory and consecutive process.

¹⁵ The revised version of the *Common Framework of the Federal States for Early Education in ECEC Centres* now includes a separate section on "Pedagogical focus areas for children under three" (KMK 2022, 21-22).

A standardised national framework for initial, continuing and further education/training is envisaged to enable coherent management of the system and, as a result, help to secure the supply of qualified staff. The success of such an "overall strategy" will depend not least on whether it is possible to overcome the stumbling blocks and hurdles of the German Qualifications Framework (Ebert 2012; Rauschenbach 2013) in line with the guiding principle of "lifelong learning". It is hoped that a strategic concept that takes into account the interactive type of work demanded in the person-related health and social care professions will enable tailor-made specialist and project careers on the basis of a coordinated organisational and personnel development concept in ECEC settings and all-day care and education provision for school children (FKB 2023).

The effects of the pandemic as well as the current political discussion about a "basic child support programme" are challenging child and youth welfare services to become more open to children and families affected by poverty. This is not just about the child's right to a place in ECEC, but also about the fact that, in order to realise the children's right of support in their development, childhood education and care settings contribute to "creating positive living conditions for young people and their families (...)" (Federal Ministry of Justice 1990, SGB VIII, § 1, (3)). However, such a task requires additional qualifications, such as a "specialist for working with children in poverty and cooperation with families" (Kalicki et al. 2019); this in turn would require closer cooperation between ECEC providers and higher education institutions.

In conclusion, it must be stated that it was only in the wake of the post-PISA debate that Germany began to take a long-term look at its public early childhood education and care services and – associated with this – to consider qualification requirements beyond the current generalist profile of professionals. The Daycare Expansion Act, which came into force in 2005, also changed the focus to the quality of childhood education and care settings and to the need for strengthening initial and continuing education and training for professionals. To date, however, the vocational education and training system in Germany has not succeeded in providing graduates with a professional profile that corresponds to their professional tasks and requirements (Janssen 2010). For this reason, a **renewed "National Quality Initiative"** in the system of (early) childhood education and care, such as the one which was launched over 20 years ago, is arguably an urgent priority.
