About the author:

Sara Barros Araújo is associate Professor at the Polytechnic University of Porto, School of Education and researcher at the Centre for Research and Innovation in Education. She is Vice-President of the Technical-Scientific Council and Coordinator of the Master study programme in Early Childhood Education. Main research interests include early childhood pedagogy, teacher education and professional development.

1. ECEC governance in Portugal

The Portuguese ECEC system comprises two main sectors: provision for children up to the age of 3, encompassing nurseries (*creches*) and childminders/nannies (*amas*)¹, and centre-based pre-school provision for children from 3 years up to primary school age (6 years) (*estabelecimentos de educação pré-escolar* or *jardins de infância*).

Governance is characterised by a split system: the 0–2² sector (both centre-based and home-based) is governed by the Ministry of Labour, Solidarity and Social Security (MLSSS) (*Ministério do Trabalho, Solidariedade e Segurança Social*) and the 3–5 sector is governed by the Ministry of Education (ME) (*Ministério da Educação*). The pre-school sector (3–5) is part of the Portuguese education system as defined by the Education Act (Law 46/86, 14 October). Both sectors are centralised, i.e. responsibilities at the level of ECEC financing, monitoring and curriculum development are set at the national level. However, a partial decentralisation process came into force in 2018 (Law 50/2018, 16 August), establishing the transference of some competences to municipalities, namely the implementation of leisure time activities (*atividades de animação e apoio à família*) and the recruitment of auxiliary staff in the pre-school public sector.

An exception to the split system is the Autonomous Region of Madeira, where an integrated network of public and non-profit ECEC institutions for 0–5 children is under the pedagogical coordination of the Regional Secretariat of Education, Science and Technology (Regional Legislative Decree 16/2006/M, 2 May).

The Portuguese split system has been the focus of debate over the last few years and some initiatives are worth mentioning. The first is the publication by the Portuguese National Council on Education³, in 2011, of a set of recommendations on the education of children up to 3 years of age (Vasconcelos 2011). The document stresses the need for the 0–2 sector to be integrated into the education system (requiring an amendment to the Education Act), progressive responsibility of the ME in this sector, and an articulated form of shared governance by the two ministries until full governance through the ME is reached. More recently, a civic movement led by the Association of Professionals of Early Childhood Education (*Associação de Profissionais de Educação de Infância* [APEI]) presented a petition at the Assembly of the Republic in March 2021 with over 14,000 signatures proposing a change to the Education Act in order to integrate the 0–2 sector into a unitary system of early childhood education.

At a more formal level, the publication by the Directorate-General of Education of educational principles for the 0–5 phase is noteworthy, safeguarding the unity and continuity of early childhood pedagogy. These common educational principles were integrated in the updated and revised edition of the Curriculum Guidelines for Pre-School Education (Lopes da Silva et al. 2016). Moreover, an inter-ministerial collaboration is taking place between the ME and the MLSSS on establishing a pedagogical framework for children up to 3 years of age which is being developed by a team of invited experts.

¹ Corresponding to family day care ECEC or licensed home-based ECEC (OECD 2017, 60)

² **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the **seeepro3** reports: **0–2** years for settings for children **up to** 3 years of age and **3–5** years for pre-primary settings in countries with a primary school entry age of 6 years.

³ The National Council on Education (*Conselho Nacional de Educação* – CNE) is an independent advisory body on educational issues that produces statements and recommendations according to its own agenda or as a response to requests from Parliament or the Government (<https://www.cnedu.pt/pt/>)

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Regular contact staff in Portuguese ECEC provision are:

Educador/a de infância (Early Childhood Teacher)

The specific professional profile of the Early Childhood Teacher was legally established in 2001, through the Decree-Law 241/2001, 30 August. This document set the legal framework for the organisation of the initial education/training of teachers. Early Childhood Teachers are qualified to work with children from 0–5 years, both in the *estabelecimentos de educação pré-escolar/jardins de infância* for 3 to 5 year-old children and in the *creches* for 0 to 2 year-olds. Their professional qualification includes a three-year Bachelor's degree in Basic Education followed by a three-semester Master's degree in Pre-School Education **or** a four-semester Master's degree in Pre-School and Primary Education (for further information, see section 4). In the latter case, the professional is qualified for working with children up to 10 years of age, both in early childhood education and primary education.

Assistente operacional (Auxiliary Staff)

The Portuguese Education Act establishes that auxiliary staff should have completed compulsory education, corresponding to a minimum of 12 years of schooling. In some cases, municipalities may give priority to staff with a related qualification.

The functions of auxiliary staff are described in Decree-Law 184/2004, 29 July (annexe III) and include the logistical support of the Early Childhood Teacher, hygiene and cleaning of spaces, space security and surveillance/supervision of children indoors and outdoors, and guaranteeing the opening and closing times, including welcoming the children and being present when they are picked up by their parents. Moreover, Portuguese regulations do not prescribe the need for an Early Childhood Teacher in 'rooms for infants' (*berçário*), which means that the direct work with babies up to 12 months is guaranteed by two auxiliary staff members per group.

Dinamizador/a das atividades de animação e apoio à família (Facilitator of Leisure-time Activities)

The Facilitator of Leisure-time Activities is responsible for ensuring the accompaniment of pre-school children before and after the five-hour daily period of pedagogical activities and during the school holidays (Ordinance n. 644-A/2015, 24 August). Providing leisure-time activities in pre-school institutions is mandatory and is implemented by municipalities, including the recruitment of professionals (Law 50/2018, 16 August). The planning of these activities comes under the responsibility of the schools in collaboration with municipalities. The Early Childhood Teachers with group responsibility must ensure pedagogical supervision and accompaniment of the implementation. The general guidelines for leisure-time activities stress their playful, cultural and educational nature, as well as the need to involve families and the community in order to promote their contextualisation, adequacy and diversification (Vilhena and Lopes da Silva 2002). The Facilitators of Leisure-time Activities must have completed compulsory education.

Besides these professional profiles working in centre-based ECEC provision, services for children up to the age of 3 also include the *ama* (childminder/nanny). The *ama* is a person who provides individual care for infants and toddlers in her/his own residence during the family working time. The activity of these professionals is governed by the Ministry of Work, Solidarity and Social Security (MWSSS) and can only be developed through an authorisation issued by this Ministry. Minimum qualifications include upper secondary education (corresponding to compulsory education) and short term units of training from the National Qualifications Catalogue in the domain of support services for children and youth. This new requirement was established by a legal framework for the *amas'* professional activity that came into force in 2015 (Decree-Law 115/2015). This framework also determined the liberalisation of this activity, which was technically and financially under the responsibility of the MWSSS before 2015.

Table 1 presents an overview of the staff in daily direct contact with children in centre-based ECEC provision.

Table 1

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

The characteristics of ECEC leadership vary across sectors. In the public sector, for 3–5 children, ECEC settings are part of school clusters⁵ or non-grouped schools. ECEC services can operate in establishments exclusively dedicated to ECEC or can be grouped into schools jointly with primary education classrooms. Each pre-school establishment or school has a coordinator, who is designated by the director of the school cluster among the teachers working there full-time. In

⁴ n/a = not applicable

⁵ School clusters are organisational units with their own administration and management bodies, integrating pre-school establishments and schools from different teaching levels and cycles (Decree-Law 137/2012, 2 July).

schools that integrate both pre-school and primary school classrooms, the coordinator can either be an Early Childhood Teacher or a Primary School Teacher. The relevant Decree-Law stipulates the coordinators' competences: These are to:

- Coordinate educational activities, in agreement with the director
- Comply with and enforce the decisions of the director and exercise the powers delegated by him/her
- Transmit information to teaching and non-teaching staff, and to students; and
- Promote and encourage the participation of parents and guardians, local and municipal interests in educational activities (Decree-Law 75/2008, 22 April, 2351)

The private sector, both non-profit and for-profit, is regulated by the Decree-Law 152/2013, 4 November, which stipulates the existence of a pedagogical leadership with the following competences:

- Represent the school before the Ministry of Education in all matters of pedagogical nature
- Plan and supervise curricular and cultural activities
- Promote compliance with study plans and programmes
- Ensure the quality of teaching
- Ensure the education and discipline of students (6350).

The qualification required to take up this role is a higher education academic degree and adequate professional qualifications or, in place of the latter, pedagogical experience of at least three years. No additional specific qualification is required.

Nurseries/infant-toddler centres have a specific legal framework set out in Ordinance no. 262/2011, 31 August. The document establishes that each nursery is coordinated by a *director/a técnico/a* (Technical Director) with the following responsibilities:

- Develop a management model that guarantees the operation of the infant-toddler centre
- Supervise the recruitment of new professionals
- Promote the continuous improvement of the services provided (including quality management)
- Manage, coordinate and supervise professionals
- Implement staff education/training programmes
- Encourage the involvement of the technical team and families in the planning and evaluation of activities
- Ensure collaboration with external entities and services.

In many cases, the Centre Head is also a core practitioner with responsibility for a group of children and pedagogical responsibility for the activities carried out in 'baby rooms' (*berçário*) by auxiliary staff. The technical director is, preferably, an Early Childhood Teacher, but can also be a professional with a degree in another domain of the Educational Sciences or the Human and Social Sciences. No additional specific qualification is required.

2.3 Co-ordinating and supervisory staff and centre-based posts of responsibility

Coordinating and supervisory structures also vary according to sector. In the public pre-school sector, the educational coordination and pedagogical supervision is part of the pedagogical organisation of each school cluster or grouped school, and intends to guarantee the coordination,

supervision and accompaniment of educational activities, to promote collaborative work and to carry out the performance evaluation of the teaching staff (Decree-Law 75/2008, 22 April). The role of the coordinator of the department of pre-school education aims to guarantee the articulation and management of curricular activities related to the Curriculum Guidelines for Pre-School Education (Lopes da Silva et al. 2016), the organisation, accompaniment and evaluation of the groups'/classes' activities, the pedagogical coordination and the performance evaluation of Early Childhood Teachers.

In nurseries, both non-profit and for-profit, the evaluation and inspection of services are carried out by the Institute of Social Security (ISS), under the superintendence of the MLSSS. The ISS is responsible for evaluating the quality of care and verifying the conformity of services provided, namely in what concerns the conditions of installation and housing, adequacy of equipment, food and sanitary conditions (Decree-Law 64/2007, altered by Decree-Law 99/2011 and Decree-Law 33/2014; Ordinance 196-A/2015). The evaluation is carried out by specialist support staff from the ISS through on-site visits (a minimum of one visit every two years) and analysis of relevant information. The evaluation and inspection activities can encompass the collaboration with other entities (e.g. health authority) with a focus on health, safety and sanitary conditions.

2.4 Specialist support staff

In Portugal, the specialist support for children from birth up to 6 years involves two systems: (a) the National Early Childhood Intervention System (*Sistema Nacional de Intervenção Precoce na Infância*), under the coordinated work of the Ministry of Labour, Solidarity and Social Security, the Ministry of Health and the Ministry of Education, in cooperation with families and professionals working in nurseries and pre-schools; (b) the services governed by the Ministry of Education that provide support for children/students from pre-school to the end of secondary education.

The National Early Childhood Intervention System was established in order to guarantee the necessary support for children up to 6 years of age with physical or functional issues that limit personal growth and participation in typical activities for their age and social context or who are in serious risk of developmental delay, as well as their families. In this system, the role of the local intervention teams (*Equipas Locais de Intervenção – ELI*) is particularly relevant. These are composed by professionals from education (Early Childhood Teachers), health (Nurses, Paediatricians), social services, therapists and Psychologists) working at a municipal level. According to Decree-Law 281/2009, 6 October, these teams are responsible for:

- Identifying children and families immediately eligible for the National Early Intervention System
- Monitoring the situation of children and families who, although not immediately eligible, present risk factors
- Referring ineligible children and families that lack social support
- Elaborating and implementing individual plans of intervention
- Identifying communities' needs and resources, and organising formal and informal social support networks
- Coordinating with services of child protection
- Ensuring adequate transition processes to other programmes, services or educational settings for every child, and
- Coordinating with Early Childhood Teachers from nurseries and pre-schools attended by children involved with early childhood intervention.

In the case of the services under the auspices of the Ministry of Education, legislation on inclusive education was established by Decree-Law 54/2018, 6 July (for further details, see *chapter 8*) proposing a shift towards a more integrated, holistic and continuous vision of the educational approach, based on universal design for learning and a multi-level approach. The professionals working in these services supporting learning and inclusion are Special Education Teachers (*docentes de educação especial*), specialised support staff (such as Occupational and Speech Therapists, Physiotherapists, Psychologists, Interpreters and Teachers of Sign Language, and experts on mobility and orientation training) and auxiliary staff, preferably with specialised training. Specifically, the Special Education Teacher supports the Early Childhood Teacher in the definition of strategies of pedagogical differentiation and in identifying multiple means of motivation, representation and expression, through collaboration and co-responsibility. The Special Education Teachers must possess a higher education degree in teaching (preferably, in early childhood education, but not mandatory) and a specialised training course in special education at a university or polytechnic institute. These courses are accredited by the Scientific and Pedagogical Council of Professional Development and have a minimum of 250 contact hours. In order to gain access to these courses, besides the teaching certification, candidates must have at least five years of teaching practice.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

The available compiled data on the structural composition of the ECEC workforce is focused on the professionals working in pre-primary settings (public and private) under the governance of the Ministry of Education. This information is reported in documents issued by the Directorate General of Education and Science Statistics (*Direção-Geral de Estatísticas da Educação e Ciência*). No systematically compiled national data is available for the 0–2 sector.

Table 2

Portugal: Structural composition of ECEC workforce in early childhood settings (3–5) under the Ministry of Education: qualifications, gender, ethnicity

Staff categories	Year / Proportion of workforce, in %
Early Childhood Teachers with a higher education degree (N=17,065):	2019/20 ¹
– Three-year bachelor degree or equivalent	18.3
– Four-year bachelor degree (<i>licenciatura</i>) or equivalent	77.8
– Master’s or Doctoral degree	3.8

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Early Childhood Teacher (*educador/a de infância*)

The Early Childhood Teacher's initial professional education is characterised by a sequential model that integrates a Bachelor's degree in Basic Education (*Licenciatura em Educação Básica*) and a professional Master's degree in Pre-school Education (*Mestrado em Educação Pré-Escolar*) or Pre-school and Primary Education (*Mestrado em Educação Pré-Escolar e Ensino do 1.º Ciclo do Ensino Básico*). This model was established at the national level in 2007 within the changes brought about by the Bologna Process and is currently regulated by Decree-Law 79/2014, 14 May, altered by Decree-Law 112/2023, 29 November. The access to the 1st cycle of studies, Bachelor in Basic Education, requires successful completion of secondary education and national exams in Portuguese and Mathematics. Entry requirements for the 2nd cycle of studies, corresponding to a Master's degree, are the successful completion of the Bachelor's degree in Basic Education, as well as proficiency in oral and written Portuguese and on the essential rules of logical and critical argumentation. Depending on the higher education institution (HEI), the assessment of the latter may be carried out through written or oral tests, interviews, documentary

evidence, or a combination of these. More recently, Decree-Law 112/2023 allowed access to the Master's degrees to the candidates that have completed 75% of the required ECTS in the respective staff profile.

The Bachelor's degree in Basic Education is common for all candidate teachers, from the early childhood education to the secondary level of education. Course length is six semesters, corresponding to 180 ECTS credits. During the 2nd cycle of studies, two options are available for candidate Early Childhood Teachers: (a) a professional Master in Pre-School Education, lasting three semesters (90 ECTS credits), which qualifies for working with children aged 0–5 years (EQF Level 7); (b) a professional Master in Pre-School and Primary Education, lasting four semesters (120 ECTS credits), which qualifies for working with children aged 0–10 years (EQF Level 7).

Table 3

Portugal: Early Childhood Teacher

Job title in Portuguese: <i>Educador/a de infância</i> Profile: Early Childhood Pedagogy Professional <i>or</i> Pre-primary and Primary Education Professional
Entry requirements: Bachelor's degree in Basic Education Professional studies: For working with children 0–5: 3 semesters at a HEI; for working with children 0–10: 4 semesters at a HEI Award: Master's degree in Pre-School Education (<i>grau de Mestre em Educação Pré-Escolar</i>) or Master's degree in Pre-School and Primary Education (<i>grau de Mestre em Educação Pré-Escolar e Ensino do 1.º Ciclo do Ensino Básico</i>) ECTS credits: 90 / 120 (depending on the Master's degree) EQF level: 7 ISECD 2011: 75 Main ECEC workplace: nurseries, pre-primary settings (and primary schools, if qualified through the Master in Pre-School and Primary Education)

Auxiliary staff (*assistente operacional*)

Auxiliary staff are required to have completed compulsory education that corresponds, in Portugal, to 12 years of schooling (secondary education). This formal requirement is set at the national level. No specific pedagogical requirements need to be met. In some cases, recruitment through the municipalities privileges additional preparation, such as a specialist course for gaining the title of 'Specialist in Educational Activities' (*técnico de ação educativa*) (EQF Level 4) or a three-year secondary vocational course specifically focused on child support (*técnico de apoio à infância*) (EQF Level 4). Recruitment may also take place through employment centres, as a measure to promote the professional integration of unemployed persons.

Portugal: Auxiliary staff

Job title in Portuguese: <i>Assistente operacional</i>
Entry requirements: Secondary education leaving certificate (<i>diploma de nível secundário de educação</i>) Professional studies: No specific professional requirements need to be met, although related vocational qualifications may be favourable for recruitment. Award: No specific professional award ECTS credits: n/a EQF level: 3 or 4 (in the case of completion of a vocational course) ISECD 2011: 3 Main ECEC workplace: nurseries, pre-primary settings

Facilitator of Leisure-time Activities (*dinamizador/a das atividades de animação e apoio à família*)

The Facilitators of Leisure-time Activities are required to have completed compulsory education. This formal requirement is set at the national level. By law, no specific pedagogical requirements need to be met, although some municipalities privilege additional pedagogical preparation on recruitment. Thus, this professional group is characterised by a wide diversity, ranging from unqualified staff with a secondary education diploma to professionals with a higher education diploma in early childhood education.

Table 5

Job title in Portuguese: <i>Dinamizador/a das atividades de animação e apoio à família</i>
Entry requirements: Secondary education leaving certificate (<i>diploma de nível secundário de educação</i>)
Professional studies: No specific professional requirements need to be met, although related vocational qualifications may be favourable for recruitment.
Award: No specific professional award
ECTS credits: n/a
EQF level: 3
ISECD 2011: 3
Main ECEC workplace: pre-primary settings, school clusters or non-grouped schools

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

In this section, the focus is on the IPE programmes for Early Childhood Teachers, since no specific IPE requirements are needed for the auxiliary staff or the Facilitators of Leisure-time Activities. The IPE programmes for Early Childhood Teachers are developed according to a sequential or biphasic model comprising a Bachelor's and a Master's degree, as stipulated in Decree-Law 79/2014, 14 May. After completion of the Bachelor's degree, the candidate Early Childhood Teachers can choose between two professional masters (see *Chapter 2.1*). The presentation of competences, curriculum and pedagogic-didactic approaches will take into consideration the basic initial qualification and the two second-stage options.

Competence specifications

The professional preparation of candidate teachers is based on general principles stipulated in the Education Act, the curriculum guidelines for pre-school education and the curriculum matrices for basic and secondary education, the student's profile at the end of compulsory schooling, essential learning defined for each discipline and teaching cycle, and general guidelines of educational policy (Decree-Law 79/2014, 14 May, altered by Decree-Law 112/2023, 29 November). The **Bachelor in Basic Education** (*Licenciatura em Educação Básica*) constitutes the first stage of professional preparation for teachers working in pre-school and the first, second and third cycles of basic education. It aims to promote generic and transversal competencies that prepare for assuming a professional role in a diversity of educational contexts. Competencies encompass:

- Observing and evaluating educational contexts (formal and non-formal)
- Knowing and understanding the professional profiles of the Early Childhood Teacher and Basic Education Teacher

- Developing educational projects and resources
- Mobilising knowledge for working in early childhood, basic education and non-formal education contexts in an integrated and contextualised way
- Reflexive, investigative and critical competencies.

The **Master in Pre-School Education** (*Mestrado em Educação Pré-Escolar*) focuses on the professional specialisation of Early Childhood Teachers working with children from birth up to 6 years. Despite the course descriptor (*educação pré-escolar* corresponds to the 3–5 sector), the entity that formally evaluates and accredits higher education courses in Portugal, the Agency for Assessment and Accreditation of Higher Education (*Agência de Avaliação e Acreditação do Ensino Superior* – A3ES) has been emphasising the need to reinforce the education/training of educators for working in provision for under 3 year-olds. The competencies that the prospective Early Childhood Teacher needs to develop are closely aligned to the general and specific professional profile of the Early Childhood Teacher (Decree-Law 240/2001, 30 August and Decree-Law 241/2001, 30 August, annex 1).

For example, the intended general learning outcomes (knowledge, skills and competences) of the Master in Pre-School Education of School of Education of the Polytechnic Institute of Porto are to:

- Mobilise scientific, pedagogical and cultural knowledge in the design, development and evaluation of a curricular project
- Organise the educational environment in its various pedagogical dimensions
- Encourage the development of positive and stimulating interactions with children
- Develop systematic participant observation and regulatory reflection (about contexts, processes and learning outcomes)
- Plan and evaluate educational activities that are adequate for the development of integrated learning, considering strategies of pedagogical differentiation
- Develop strategies of collaborative and team work
- Promote actions that facilitate continuity of learning (with families, community and other different levels of education)
- Problematisate the demands of professional practice in a grounded, reflexive and ethical way, considering a lifelong learning approach.

The **Master in Pre-School and Primary Education** (*Mestrado em Educação Pré-Escolar e Ensino do 1.º Ciclo do Ensino Básico*) is a two-year programme (four semesters) and focuses on the professional specialisation for both early childhood and primary education. The competencies to be developed by the prospective Early Childhood Teacher/ Primary Teacher are aligned to the professional profile (Decree-Law 241/2001, 30 August) of the Early Childhood Teacher (annex 1) and the Primary Teacher (annex 2).

Curriculum

The IPE components are prescribed in Decree-Law 79/2014 and encompass:

- (1) Teaching subject (*área de docência*): this component is focused on the knowledge that is needed for *teaching* in specific content areas or disciplines;
- (2) General education (*área educacional geral*): includes the knowledge, skills and attitudes common to all teachers that are relevant for their work in the classroom, in the educational institutions and in cooperation with families and communities. It includes curricular units in the

- domains of developmental psychology, basic cognitive processes (particularly those involved in reading, writing and mathematics), curriculum and assessment, citizenship education, organisational studies, inclusive education and the use of digital technologies in education;
- (3) Subject-specific didactics (*didáticas específicas*): encompasses the skills (knowledge, abilities and attitudes) related to specific content areas or disciplines;
- (4) Cultural, social and ethical dimension (*área cultural, social e ética*): includes raising awareness of the world's contemporary problems (e.g. freedom of expression, respect for ethnic minorities, values of gender equality), extending knowledge and culture beyond a specific teaching area, learning about data collection methods and the critical analysis of data, hypotheses and theories, and raising awareness for the ethical and civic dimensions of teaching activity. This component does not have formally allocated ECTS credits and should be integrated into the other components of education/training.
- (5) Initiation into professional practice (*iniciação à prática profissional*): includes observation and cooperation in educational institutions and supervised practice in ECEC settings (see Chapter 5).

Minimum ECTS credits are distributed as follows, according to the cycle of studies, as prescribed by law:

Table 6

Portugal: IPE of Early Childhood Teachers, curriculum structure

Education/ training components	Minimum ECTS credits per component		
	Bachelor in Basic Education	Master in Pre-school Education	Master in Pre-School and Primary Education
Teaching subject	125	6	18
General education	15	6	6
Subject-specific didactics	15	24	36
Initiation into professional practice	15	41	54

The particular focus of the Bachelor in Basic Education is on the knowledge needed for *teaching* in certain content areas or disciplines. The distribution of the 125 ECTS credits prescribed by law is as follows: Portuguese (30 ECTS credits); Mathematics (30 ECTS credits); Natural Sciences, and History and Geography of Portugal (30 ECTS credits), Expressive Arts (Music, Visual Arts, Drama) and Physical/Motor Expression (30 ECTS credits). The HEI is free to allocate the remaining 5 ECTS credits to selected content areas.

The components of subject-specific didactics and initiation into professional practice integrate fewer ECTS at the Bachelor's level than at the Master's level (see Table 6). Specifically, the integration of field-based experiences into the Bachelor's programme varies across the HEI, with some institutions offering observation and cooperation experiences throughout the three years and others tending to provide these experiences only in the final year of the course.

At the Master's level, subject-specific didactics and, in particular, the initiation into professional practice constitute the core of the plan of studies. Subject-specific didactics include curricular units in the domains of Mathematics, Spoken Language and Introductory Writing, Natural and Social Sciences, Artistic Education (Music, Visual Arts, Drama/Theatre, Dance) and Physical Education. The component of *initiation into professional practice* includes curricular units of Supervised Educational Practice (*Prática Educativa Supervisionada*) in early childhood settings and, in the case of the Master in Pre-School and Primary Education, also in primary schools.

The plan of studies also integrates a curricular unit on Methods of Research in Education that intends to support the candidate teachers' learning in the contexts of practice. In most cases, a curricular unit of Early Childhood Pedagogy or Early Childhood Education Methodology is also allocated to the plan of studies.

Pedagogic-didactic approaches

The Education Act stipulates guiding principles for (early childhood) teacher education that include: the need for an integrated approach at the level of scientific and pedagogical preparation, and articulation of theory and practice; methodological practices similar to those that the educator will use in pedagogical practice; the encouragement of an attitude that is both critical and active in relation to social reality; education/training that favours or stimulates innovation and research in relation to educational activity; and participation in education/training that leads to a reflective and continuous practice of self-learning (Article 33).

The pedagogic-didactic approaches in IPE programmes can vary across HEIs. In a study conducted by Almeida and Lopo (2015) in 17 Portuguese higher education institutions, two tendencies were identified in the Bachelor in Basic Education: (a) a cluster of institutions with a profile characterised by the use of artistic and physical-motor experimentation, problem solving strategies, the use of authentic materials (materials that can be manipulated and worksheets) and the diary as an element of written assessment; (b) a cluster of institutions characterised by the use of experimental activities / laboratory practices and simulation as activities to stimulate the appropriation of knowledge, and by the use of a project approach to assess learning.

At the Master's level, the curricular units of Supervised Educational Practice constitute the core of these programmes, fuelled and supported by other curricular units, namely the subject-specific didactics. The practicum periods aim for the construction of professional knowledge, competences and attitudes, and are sustained by active and heuristic-hermeneutic approaches, intending the integration of the conceptual and experiential components of education/ training. Research processes are valued throughout the professional preparation that encompass several hours at the workplace and theoretical-practical classes and seminars at the HEI. A triadic model of supervision is frequently used, involving the prospective Early Childhood Teacher, the cooperating educator and the supervisor of HEI, aiming at stimulating students' critical and reflexive analysis and the articulation between theory and practice.

4.3 Alternative entry and qualification routes, system permeability

The exclusive entry requirement for a Master's degree in early childhood education is a completed three-year Bachelor's degree in Basic Education (Decree-Law 79/2014). Decree-Law 112/2023 allows access to the Master's degrees to the candidates that have completed 75% of the required ECTS in the respective profile. The professionals that hold a three-year or four-year Bachelor's degree in Early Childhood Education, i.e., all professionals who qualified as Early Childhood Teachers before the Bologna Process, are formally recognised as fully qualified early childhood core practitioners. This has led to a scenario of coexistence of different levels of qualification within the profession, with 18.3% of core professionals holding a three-year Bachelor's degree, 77.8% a four-year Bachelor's degree or equivalent, and 3.8% a Master's or Doctoral degree (see *Table 2*). There is a growing tendency for younger practitioners to hold higher qualifications.

For those with a non-specialist qualification, the options are limited to the completion of the Bachelor in Basic Education followed by a professional Master's degree. This is the case, for example, for auxiliary staff who are motivated to become an Early Childhood Teacher.

Since 2015, it is also possible to obtain a formal authorisation for working as a childminder if the candidate possesses an upper secondary education diploma and completes short term units of training from the National Qualifications Catalogue in the domain of support services for children and youth. Auxiliary staff who worked in a nursery (*creche*) during a minimum period of one year over the previous two years can also become a childminder.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

The guided workplace experience (practicum) in the IPE of core professionals is regulated at a national level through Decree-Law 79/2014, 14 May. This component is termed *Initiation into Professional Practice* and corresponds, at the Master level, to the Supervised Teaching Practice (*prática de ensino supervisionada*). According to the legal framework, this component is organised around the following principles: It “(a) includes the observation and collaboration in education and teaching situations and the supervised practice in the activity room or classroom, in early childhood education institutions or in schools; (b) provides experiences of planning, teaching and assessment, according to the functions that are attributed to the teacher, inside and outside the classroom; (c) is developed in nurseries or pre-school classrooms, as well as in groups or classes of the different levels and cycles of studies that are covered by the recruitment group for which the cycle of studies prepares; if possible, it should be carried out in more than one educational institution (...); (d) is conceived within an educational perspective that values the articulation between knowledge and the way of transmitting it, with a focus on students’ learning; (e) is conceived in a perspective of professional development of students and in promoting an attitude oriented towards the permanent progress of their students’ learning” (Art. 11, 6).

ECTS credits and duration: As stated previously (see Table 6), the *practicum* is differentially distributed across the Bachelor and the Master programmes, with a visible reinforcement in the plan of studies of the latter. The number of ECTS credits allocated to this curricular component is specified in Decree-Law 79/2014. Thus, HEI must take into account the following specifications:

- Bachelor in Basic Education – a minimum of 15 ECTS credits (divided among different age levels, including formal and non-formal educational settings)
- Master in Pre-School Education – a minimum of 41 ECTS credits (divided between nurseries and preschools/kindergartens depending on the decision of the individual HEI, whereby only the practicum in preschools is mandatory).
- Master in Pre-School and Primary Education – a minimum of 54 ECTS credits (equally divided between the two education levels).

Following these ECTS specifications, each HEI establishes the number of hours and overall organisation of time blocks. Generally, at the level of the Master’s programmes, the students spend three or four days per week (five hours a day, following the hours daily attributed to the teaching component) in ECEC centres and one or two days per week in HEI, attending classes (theoretical-practical, tutorial meetings, seminars).

Cooperation between / complementary roles of IPE institutions and ECEC centres: Decree-Law 79/2014 also establishes the conditions for the cooperation between the IPE institutions and ECEC centres, designated as cooperating schools (*escolas cooperantes*). It states the need for a

formal, multi-annual cooperation protocol between the two institutions. This protocol should include the following (Art. 22):

- Levels and cycles of education and teaching in which Supervised Teaching Practice is carried out;
- Identification of the cooperating supervisors (*orientadores cooperantes*) and any compensatory payments made available to the cooperating ECEC centre
- Number of places available for students
- Roles, responsibilities and competences of all stakeholders, including students
- Conditions for the supervised teaching practice in the activity rooms, accompanied by a cooperating supervisor
- Conditions for the participation of students in other curricular and organisational development activities outside the activity room, provided that they are supported by cooperating supervisors
- Counterparts made available to the cooperating schools by the HEI.

The legal framework stipulates that the HEI should assure that the ECEC centres possess the necessary human and material resources in order to guarantee the quality of the practicum experience. Moreover, the HEI should actively participate in the development of the quality of the cooperating institutions, in collaboration with their management structure.

Students' skills and competences: Decree-Law 79/2014 does not specify the skills and competences students are expected to develop throughout the guided workplace experience. However, the principles inherent to the component of Initiation into Professional Practice emphasize the importance of observation, planning, teaching, assessing and collaboration processes throughout the practicum experiences. Also, these principles stress the focus on children's learning through the articulation between theoretical and practical knowledge, and state the importance of adopting a perspective of continuing professional development. According to the Education Act, this component, like the overall preservice teacher education programmes, should consider the set of professional competences that are needed according to the professional profile defined by law. In the case of the Early Childhood Teacher, the professional profile is defined by Decree-Law 240/2001 (general professional profile of teachers from pre-school to secondary education), and, especially, the Decree-Law 241/2001 that establishes the specific professional profile of the Early Childhood Teacher. The Curriculum Guidelines for Pre-School Education (Lopes da Silva et al. 2016) should also be considered closely, namely its:

- Four core pedagogical principles (a) viewing development and learning as inseparable strands in the child's progress; (b) recognising the child as a subject and an agent of the educational process; (c) addressing inclusion and pedagogical differentiation in order to be responsive to all children; (d) articulating the different domains of the child's learning and development within a holistic approach
- Guidelines for the organisation of the educational environment
- Guidelines for guaranteeing educational intentionality (through processes of observation, planning, action and assessment/evaluation)
- Guidelines for safeguarding educational continuity and transitions.

Student assessment: Students' self-assessment can include a variety of forms such as oral and written reflexion (individually or collaboratively), field-based journals, portfolios, etc. The responsibility for the students' external assessment is attributed to the teacher who is responsible for the curricular unit of Supervised Teaching Practice, integrating information provided by the cooperating supervisor and the pedagogical director/coordinator. The students' assessment

must also encompass a practicum report subjected to public presentation and discussion before a jury.

Mentoring/ supervising staff: Decree-Law 79/2014 establishes the criteria for selecting cooperating supervisors. These should be chosen by the HEI, following the previous acceptance on the part of the cooperating supervisor and the leader of the cooperating institution. Furthermore, the cooperating supervisor should possess appropriate training and experience for the role and its functions; possess a minimum of five years of professional practice in ECEC contexts and, preferably, post-graduate studies in early childhood education, specialised education/ training in pedagogical supervision and professional experience in supervision. The legal framework does not specify a recommended time allocation for supervision/ mentoring activities. In some cases, this specification is included in the cooperation protocol and can vary across institutions.

The cooperating supervisors are not remunerated for their work as practicum supervisors. The HEI is requested to pay the travel expenses of the cooperating supervisor whenever there is the need to participate in education/ training activities and seminars, as well as to collaborate with the cooperating schools in the professional development of its Early Childhood Teachers, especially the cooperating supervisors.

Current debates: As stated previously, the IPE of Early Childhood Teachers is developed through a sequential model in which the guided workplace experience is located predominantly in the final stage of the education programme, i.e., at the Master's level. According to Vieira et al. (2021) this mirrors a theory-to-practice rationale in which the practicum is *conceived as a curricular space devoted to applying theoretical knowledge to teaching* (11-12). Some authors have been arguing that this post-Bologna model may potentially be hindering the candidate teachers' opportunities to be engaged in research processes (Flores 2011, 2015) and to develop recursive dialogues among values and beliefs, practices and theories (Araújo 2022) throughout the first three years of IPE (Bachelor's degree).

The anticipated shortage of teachers in the Portuguese context, including Early Childhood Teachers, in the next ten years (see *Chapter 7.5*), has given rise to discussions around the introduction of alterations to the current legal framework that regulates IPE, including the component of Supervised Educational Practice. A tentative move was made through the publication of Decree-Law 112/2023, 29 November, that was revoked on 19 January 2024 due to massive criticism and pressure from higher education institutions.

6. Continuing professional development (CPD) of ECEC staff

The Portuguese Education Act recognises continuing professional development as a right for all educators and teachers and emphasises its importance in complementing and updating initial professional education within a perspective of life-long learning. It also states the need for in-service education to be sufficiently diversified in order to ensure this complementary role of deepening and updating professional knowledge and competences, as well as enabling career mobility and progression.

Legislation and regulation: Decree-Law 22/2014, 11 February, establishes the legal framework for the CPD of teachers and defines the system of coordination, management and support. As far as ECEC is concerned, this decree-law regulates the CPD of core practitioners working in the 3–5 sector (with the exception of private institutions not affiliated to school clusters). Decree-

Law 22/2014 establishes the following seven principles for CPD: “(a) Promoting the improvement of teaching quality and the outcomes of the educational system; (b) Contextualising education/ training projects and provision; (c) Relating to the needs and priorities of schools and teachers; (d) Prioritising the scientific and pedagogical dimensions; (e) Maintaining the scientific and pedagogical autonomy of the education/ training entities; (f) Strengthening institutional co-operation between basic and secondary education establishments, higher education institutions and scientific and professional associations; (g) Promoting a culture of monitoring and evaluation oriented towards the improvement of the quality of the education/ training system” (1287). Besides these principles, the decree-law regulates different aspects of CPD: aims; domains; modalities; duration; mandatory activities; education/ training entities; accreditation and qualifications of educators/ trainers; rights and duties of trainees; processes of accreditation and certification; evaluation, recognition, certification and monitoring; competences and composition of the Scientific and Pedagogical Council of Professional Development (SPCPD); role of the inspection system; and guidance and support for continuing education/ training activities.

In the case of other ECEC professionals, namely those working in the 0–2 sector (both private non-profit and private for-profit) and non-qualified co-workers, the national Labour Law is applied (Law 7/2009, 12 February). The last revision of the Labour Law (Law 93/2019, 4 September) establishes the right to a minimum of 40 hours per year of continuing education/ training for Portuguese workers.

Main forms: Decree-Law 22/2014 stipulates the following forms of CPD for core professionals: education/ training courses (*cursos de formação*), workshops (*oficinas de formação*), study circles (*circulos de estudos*), short-term activities (*ações de curta duração*), professional placements (*estágio*) and projects (*projeto*). Independently of their form, these activities must be accredited by the SPCPD (*Conselho Científico-Pedagógico de Formação Contínua*).

Other CPD activities can include specialised courses in higher education institutions (also accredited by the SPCPD), congresses, seminars, and research activities that confer a higher education degree (academic Master or Doctoral studies).

CPD providers: The main providers of CPD across the country are the education/ training centres from school clusters (*Centros de Formação de Associação de Escolas*, CFAE), higher education institutions, the education/ training centres of non-profit professional or scientific associations, central services of the Ministry of Education, and other accredited non-profit public, private or cooperative entities. According to the last available report of the Scientific and Pedagogical Council of Professional Development, in December 2020 there were 263 accredited providers: 89 education/ training centres from school clusters, 78 higher education institutions, 55 professional associations and 41 other unspecified entities (*Conselho Científico-Pedagógico da Formação Contínua* 2020).

Leave entitlement: The national Labour Law stipulates that CPD activities (40 hours per year, as stated previously) are to be completed during working hours, confer the right to remuneration and count as time of effective service. This also includes hours spent in attending classes and in assessment activities, under the student-worker status, as well as absences within the scope of processes of recognition, validation and certification of professional competences.

For Early Childhood Teachers working in the 3–5 sector (public, and private and social solidarity settings affiliated to a public school cluster), the leaves for CPD activities developed by the central and regional services or by the school clusters are granted during working hours, preferably during non-contact time. For CPD activities initiated by the Early Childhood Teacher, leaves may not exceed five consecutive days or eight intercalated days per school year. A one-year special leave (*licença sabática*) can be authorised in order to participate in continuing education/ train-

ing activities, complete specialised courses or develop applied research. The authorisation is dependent on the following conditions: having a permanent post, having a performance assessment equal or superior to ‘Good’ and working uninterruptedly as an Early Childhood Teacher for a minimum of eight years.

Obligatory or optional? The 40 hours of CPD for Portuguese workers are mandatory, according to the Labour Law. More specifically, CPD activities are obligatory for Early Childhood Teachers working in 3–5 public sector, influencing performance assessment and career progression. In this case, 50% of CPD activities must focus on the scientific and pedagogic dimension and at least one fifth of those activities must be accredited by the Scientific and Pedagogical Council of Professional Development.

In terms of specific CPD offers for the heads of ECEC provision, HEIs offer specialisation courses accredited by the SPCPD in domains such as School Organisation, Education Organisation, and Pedagogical Supervision and Training of Trainers, that can better prepare professionals for leadership roles. Master’s and Doctoral degrees in these areas are also offered in several higher education institutions. Shorter continuing education/ training activities are available in the following areas: School Administration and Educational Administration, and Leadership, Coordination and Pedagogical Supervision.

Funding support: CPD activities mandatory by law are free of charge for the ECEC professionals. The costs for the remaining CPD activities, including Master’s and Doctoral studies, are usually covered by practitioners.

Access to CPD: The most regular problem regarding access opportunities to CPD, both for core practitioners and for qualified and non-qualified co-workers, is the lack of specific opportunities for ECEC continuing education/ training. When available, the most common difficulty is associated with the need to ensure a temporary replacement, given the shortage of staff. According to the most recent report from the SPCPD (Conselho Científico-Pedagógico da Formação Contínua 2020), the pandemic also led to a decrease in CPD activities.

CPD and career advancement: The participation in specific forms of CPD can benefit the Early Childhood Teacher at the level of career progression: the completion of a Master’s degree reduces by one year the time legally demanded of permanence in a given professional position. The completion of doctoral studies reduces that time by two years. In both cases, the degree must be completed in a scientific area directly related to early childhood education, including Educational Sciences. Also, the result of teacher performance assessment must be at least ‘Good’.

Key content focus of CPD for core professionals: No nationally compiled data are available on the main topics that are currently in focus in CPD activities offered in the public sector mainly by the CFAE. Information provided by the Association of Professionals of Early Childhood Education (*Associação de Profissionais de Educação de Infância – APEI*), the main private non-profit provider of CPD for core practitioners, shows that over the last five years the three main topics of CPD were: curriculum (organisation, management and assessment/evaluation), literacy, and expressions (arts, drama, motor).

The foreseen creation and publication of the pedagogical guidelines for the education and care for infants and toddlers is likely to have an influence on nationwide CPD initiatives for this particular sector.

Concerning the definition of priorities in CPD and the practitioner’s participation in this process, Decree-Law 22/2014 foresees, as core principles, the contextualising of the various levels of education and of the provided offer, as well as linking CPD to the needs and priorities of schools and teachers. However, the lack of studies on CPD hinders the possibility to have a clearer picture on the practitioners’ participation on defining the key content focus of CPD.

Research: Research focusing on the CPD activities for ECEC staff and their impact is practically non-existent. No large-scale research projects over the past five years were identified.

Current debates: In the current panorama of teachers' shortages in the short-term, the debates are particularly focused on initial professional education. However, CPD activities of ECEC staff continue to be a focus of attention. Concerning core practitioners, a recommendation from the National Council on Education (Faria et al. 2019) on the qualification and valorisation of Early Childhood Teachers and teachers from primary and secondary education emphasised the need to implement context-based CPD initiatives, with a strong focus on the problems identified by (early childhood) teachers, on collegiality and on research developed by professionals aiming at improving pedagogical practices. It also recommends the implementation of long-term reflection-based modalities, following international evidence on CPD and ECEC quality (e.g. Peleman et al. 2018).

The National Council on Education also published recommendations on the situation of auxiliary staff, calling attention to their important role within the education communities, as well as the relevance of their qualification and professional development, namely in the field of inclusive education (Percheiro, Almeida, and Rodrigues 2020). Indeed, the CPD of all staff in inclusive education has also been a relevant cornerstone in the national agenda, including teachers, leaders, specialist support staff, auxiliary staff, and also families.

Finally, some debate around new forms of CPD is to be highlighted, namely the initiative from the SPCPD to explore the advantages and risks of adopting the Massive Open Online Courses (MOOC) as a CPD format in teacher CPD (see Conselho Científico-Pedagógico da Formação Contínua 2021 for further information in Portuguese).

7. Working conditions and current workforce issues

7.1 Remuneration

In terms of remuneration, there are differences between core practitioners working in public sector pre-primary education (3–5) and in the private sector non-profit or for-profit centre-based services for over and under 3 year-olds. This disparity is due to the split system that characterises ECEC provision in Portugal (see *Chapter 1*). This division leads to differences in the financing systems of each Ministry and in the practitioners' salaries. The salaries of Early Childhood Teachers working in the public sector depend on the professional positions and pathways established in the Career Statute of Pre-school, Basic and Secondary Teachers (Decree-Law 41/2012, 21 February). This statute establishes the same positions, remuneration rates and career progression requirements for all teaching professionals in the public sector (from pre-school to secondary education). When the Framework Law on Pre-School Education, Law no. 5/1997, 10 February (*Lei Quadro da Educação Pré-Escolar*) came into force, the Ministry of Education stated the intention to provide identical professional conditions for early childhood educators working in the private sector. This was realised through a salary supplement provided by the Ministry of Education for these professionals, in order to reduce the disparities between the two sectors. In spite of this initiative, remuneration differences still persist.

In the case of posts of responsibility, Centre Heads in the public sector have a reduction in the number of working hours. In the non-profit private sector, a higher salary is paid to the Technical

Director/ Pedagogical Director (close to 10% more). Student mentors/ supervisors receive no monetary reward.

7.2 Full-time and part-time employment in ECEC provision

The vast majority of Portuguese Early Childhood Teachers work full-time. In spite of the absence of data on this specific issue, part-time employment is a rare occurrence among ECEC staff. In the pre-school public sector, the revision of the Career Statute of Pre-school, Basic and Secondary Teachers foresees the reduction of the contact time (*componente letiva*) in the following cases: (a) Early Childhood Teachers who have reached the age of 60 may request a five-hour reduction in their respective weekly contact time; (b) those who have completed 25 and 33 years of service can request the granting of total exemption from the contact time component for a period of one school year. The most recent amendment to the General Law on Labour in Public Functions allows for part-time employment (*meia jornada*). The Early Childhood Teachers can benefit in the following cases: (a) if they are 55 years of age or older and have grandchildren under the age of 12; (b) if they have children under 12 years of age or, regardless of age, with a disability or chronic illness.

Working hours may differ between the public and private sectors. In general, most Early Childhood Teachers in both sectors work 35 hours, 25 of them in direct contact with children (*componente letiva*), although the number may vary more in the private sector. The professionals working in private for-profit centres tend to work more hours than the educators working in the other sectors.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

The Career Statute of Pre-school, Basic and Secondary Teachers stipulates a probationary period, corresponding to one year, mandatory for all Early Childhood Teachers entering a permanent post in the public sector. This probationary period aims at verifying the teacher's competencies regarding the required professional profile; it is carried out in the educational setting in which the (pre-school) teacher is employed. During this period, the Early Childhood Teacher is accompanied and supported by an experienced ECEC core practitioner in the pedagogical, didactical and scientific domains. This senior teacher is designated by the coordinator of the curricular department and should preferably possess specialised training in the fields of educational organisation and curriculum development, pedagogical supervision or the training of trainers. The provided accompaniment should encompass: (a) support in the elaboration and implementation of an individual work plan including scientific, pedagogical and didactic components; (b) support in the planning of pedagogical activities, as well as in reflection about pedagogical practice and its improvement; (c) produce a report on the activities carried out, including classroom observations; (d) participate in the assessment of the teacher throughout the probationary period.

Despite this legal framework, the support measures in the workplace for newly Early Childhood Teachers have received little attention over the years. Some debate has arisen on the induction period of teachers, with the National Council on Education publishing a technical report that brought together national and international perspectives for a deeper reflection on the nature and models of the induction period (Faria et al. 2016) and for a “systemic and global view of the *continuum* of initial teacher education, induction and in-service education” (Flores 2021, 135).

7.4 Non-contact time

Early Childhood Teachers in the public sector – and also most in the private non-profit sector – are granted ten hours of paid non-contact time dedicated, among other activities, to planning, staff meetings, work with parents and the community, research and CPD activities.

7.5 Current staffing issues

A shortage of Early Childhood Teachers in the next few years is currently the most debated challenge relating to the ECEC workforce. In recent years, the accentuated aging of Portuguese teachers, including Early Childhood Teachers, has been identified as a critical issue (DGEEC and Direção de Serviços de Estatísticas da Educação 2021; Faria et al. 2019; Rodrigues et al. 2019). The most recent statistics, referring to the school year 2019/2020, show the following panorama regarding the Early Childhood Teachers in the public sector, by age range: <30 years: 3,4%; 30-39 years: 16%; 40-49 years: 26%; 50-59 years: 41,3%; <60: 13,3% (DGEEC, Direção de Serviços de Estatísticas da Educação (DSEE), and Divisão de Estatísticas dos Ensinos Básico e Secundário (DEEBS) n.d.). This circumstance is associated with other critical issues, namely the lack of attractiveness of the teaching profession and the decline in the number of candidates to pre-service programmes in HEI (Faria et al. 2019; Rodrigues et al. 2019). In a diagnosis study on the need for teachers from 2021 to 2030 (Catela Nunes et al. 2021), a reduction of 61% of pre-school teachers in the public sector due to retirement was estimated. This is the highest reduction in all teaching levels. The same study concluded that early childhood education is the educational level with a higher need for recruitment (54%) up to 2030/31.

Current debates on ways to ameliorate these circumstances are being conducted, particularly focused on introducing changes to legislation that regulate initial professional education (Decree-Law 79/2014) in order to increase the number of ECEC teachers being prepared in HEI.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Over the last five years, no policy reforms and initiatives relating directly to ECEC staffing and professionalisation were identified. However, relevant legislation on inclusive education came into force in 2018, altering the principles and intervention approach to inclusive education, with an impact on ECEC professionals and settings. More recently, important changes to the legal framework that regulates the IPE of Early Childhood Educators were introduced through decree-law 112/2023, 29 November, that was, meanwhile, revoked due to intense criticism from HEI. Changes to this legal framework are expected in the near future.

Decree-Law 54/2018, 6 July

This new legal framework aims at the realisation of the right of children to an inclusive education that responds to their potentialities, expectations and needs, “within the framework of a common and plural educational endeavour that provides everyone with the sense of participation and belonging in authentic conditions of equity” (2918). It entails the following guiding principles: (a) universal educability; (b) equity; (c) inclusion; (d) customisation; (e) flexibility; (f) self-determination; (g) parental involvement; (h) minimum interference. The adopted methodology is based on universal design for learning and on a multi-level approach to access the curriculum. This approach includes: flexible curricular models, systematic monitoring of the effectiveness of

the continuum of implemented interventions, dialogue between teachers and parents/caregivers, and a choice of measures to support learning, organised at different levels of intervention, according to the educational responses necessary for each learner to acquire a common base of competences while valuing their potential and interests (2919). These levels of intervention are: universal measures, corresponding to the responses that the school mobilises for all students, aiming at promoting participation and improved learning (e.g. the promotion of pro-social behaviour); selective measures, aiming at fulfilling the needs for learning supports not provided by universal measures (e.g. differentiated curricular pathways); and additional measures, aiming to respond to intense and persistent communication, interaction, cognitive or learning difficulties that require specialized resources of support to learning and inclusion.

This legislation also recognises the role of the Early Childhood Teacher within a multidisciplinary team to support inclusive education, as well as the right of this professional to support provided by the learning support centres, a support structure that aggregates human and material resources, knowledge, skills, and competencies of the school (Article 13).

In the context of the implementation of Decree-law 54/2018, a monitoring system was created, CPD processes were developed and a practical manual for professionals was produced by a team under the auspices of the Directorate-General of Education (2018). This manual intends to clarify aspects related to the implementation of the decree-law specially at a methodological level, including practical situations and materials to support the professionals' observation, self-reflection and self-assessment.

The recent OECD background country report on Portuguese inclusive education (Ministry of Education 2022) recognises the impressive progress that the country has made on this matter, but also identifies teachers' preparation for inclusive education as an area in which further improvements are needed, both at the level of pre-service and in-service education.

9. Recent country-specific research focusing on ECEC staff

Professionalism of early childhood teachers working in baby rooms

Source: Tadeu, B., and A. Lopes 2021 (see *References* for full details)

Aims: The study examines the professional identities of Early Childhood Teachers who develop their professional activity in baby rooms.

Methods: The methodology was qualitative and interpretative. Seven educators, seven assistants and seven parents participated in focus groups, one for each type of participant. These discussion groups intended to explore perceptions, perspectives and conceptions about the socio-educational role of baby rooms and professionals, were moderated by a researcher and were guided by a script focused on predefined themes. In the case of early childhood teachers, the themes were: (a) socio-professional and training trajectories; (b) perceptions of professionalism and valued aspects in practice; (c) the lived world of work and (d) conceptions of children and childhood.

Selected findings: Concerning the main influences on professional identities, two main categories were identified: socio-professional and training trajectory, and the experience of the world of work. Within the first category, results indicated that three educators attributed importance to the influence of primary socialisation, namely the knowledge acquired within the family con-

text and the choice of their training paths. One of the educators referred to the minimal attention of HEI institutions to training for work with infants and toddlers in comparison with the preparation for pre-school education. Concerning the second category, all participants identified the main distinguishing features of practice in baby rooms as individualised routines and respect for the individual interests, rhythms and needs of babies. Tensions and inequalities were addressed by all participating Early Childhood Teachers, namely a lack of recognition as teachers, the exclusion of their work from service record, and the lack of legislation to place professional educators in baby rooms. The majority of educators referred taking on mainly a supervisory role, following up the work of assistants/auxiliary staff working directly with babies. Also, they identified that the burden of technical management and the multiplicity of tasks, functions and duties created a negative effect at the level of their physical and psychological well-being, resulting in a certain withdrawal from practice. Results also show the commitment of all professionals to their work, including their efforts towards pedagogical intentionality.

Implications: The study reinforces the need for changes in the Portuguese legal framework in order to make the placement of early childhood educators in baby rooms mandatory. It also emphasises the need to pay attention to educators' physical and emotional well-being given its impact in children's well-being. Finally, it reinforces the need to address team work in baby rooms, actively involving assistants and educators.

Assessment of workplace-based learning in the ECEC professional Master

Source: Araújo, S. B., and A. P. Antunes 2021 (see *References* for full details)

Aims: To examine ECEC candidate teachers' pathways of professional learning during a practicum through the use of a reflection-based instrument, in two different phases: interim regulatory assessment and final assessment. The study presents a composite research question: what was the professional Master students' learning progression on core professional competences at the level of: (i) observation; (ii) planning; (iii) action and (iv) reflection?

Methods: Participants were 62 students attending a professional Master course in Pre-school Education at a Portuguese HEI. Data were collected through the use of the Assessment Grid on the Learning Processes in Supervised Pedagogical Practice (AGLP_SPP), a reflection-based instrument used in the interim regulatory assessment and the final assessment of students' professional learning. Its construction took into consideration the Portuguese specific profile of the professional performance of an early childhood educator (Decree-Law 241/2001, Annex No. 1), the guiding principles of Pedagogical Practice of the HEI, and selected theoretical and methodological underpinnings, namely ECEC curricular approaches. The AGLP_SPP was organised in four domains and 25 dimensions: (1) observation (5 dimensions); (2) planning (6 dimensions); (3) action (9 dimensions) and (4) reflection (5 dimensions). The assessment based in the AGLP_SPP aimed at a collaborative and co-participatory analysis of the professional learning processes, both retrospectively and prospectively, with the participation of the student in her/his own assessment being highly valued.

Selected findings: The study shows a positive evolution of the Master students on core professional competences in the domains of observation, planning, action and reflection. However, in the observation domain (observation of the child and group(s), recording practices, and self-observation and observation of others) students showed more difficulty in reaching excellency in their practices. Lower results in the dimension "partnerships with families and community" in the interim regulatory assessment indicated the need to intensify students' learning opportunities on the collaborative work with families and communities during the first phase of the practicum. Once the assessment of workplace-based learning is relevant for the quality evaluation of

pre-service education programmes, the results also indicate the perceived effectiveness of the education processes undertaken within the ECEC Master programme.

The study also reveals that students' participation in their own assessment contributes to their professional learning and to strengthen their perception of the trustworthiness and transparency of the assessment process.

Implications: Results of the study show implications for the IPE of prospective Early Childhood Teachers, calling attention for the need to involve the students in the assessment of their professional learning during and after the field-based practicum. This participation is not stipulated in the legal framework that regulates IPE in Portugal. Also, the formative nature of assessment and evaluation in ECEC contexts creates a challenge for HEI in order to put into place a repertoire of assessment instruments and procedures through which the students can experiment first-hand the values and practices that she/he will develop in the ECEC contexts.

The place of the pedagogical practicum in the post-Bologna initial professional education of ECEC teachers

Source: Figueira, S. 2017 (see *References* for full details)

Aims: This study aimed: (a) to understand how the pedagogical practicum was conceived and developed in four Portuguese higher education institutions; (b) to understand the conceptions of the HEI teachers regarding the pedagogical practicum in the IPE of Early Childhood Teachers; (c) to know and evaluate the component of pedagogical practice according to the students' perspectives.

Methods: This qualitative study was developed in four Portuguese HEI. The participants were teachers, students and coordinators from the Master course in Pre-school Education of each institution. Techniques of data collection included documentary analysis of core documents (e.g. regulation of the pedagogical practicum), questionnaires for students and teachers, and semi-structured interviews for the coordinators of the Master programmes. Qualitative and quantitative data analysis were conducted.

Selected findings: Results indicated that the participants recognised the importance and central place of pedagogical practice in IPE. Students considered that the time allocated to initiation into professional practice in the Bachelor's degree in Basic Education was *insufficient* or *very insufficient*; on the contrary, their assessment of the *practica* in the Master's degree in Pre-school Education was positive, affirming its relevance for learning to become an Early Childhood Teacher. Teachers and coordinators confirmed the central relevance of pedagogical practice and the necessary links between all the course subjects to this component of the Master programmes. Globally, results also show that the organisation of *practica* in an alternating model (between the ECEC centres and HEI) made possible a consistent relationship between 'theory' and 'practice' and encouraged students' reflexivity. Finally, the active role of the student was unanimously recognised, as well as the importance of developing research processes throughout the pedagogical practice.

Implications: The study draws considerations on the need to strengthen the links between the *practica* and the other curricular units of the ECEC study programmes. It also recognises the lack of studies and the fragile body of evidence existing in Portugal and the need to conduct more research on this topic.

10. Workforce challenges – country expert assessment

An overview of the previous sections of this report suggests in conclusion that early childhood education has not been a priority in Portuguese public policies over the last five years. One exception is the political decision to legally guarantee free places in public pre-schools for all children from the age of 3 (Legislative Order n. 6/2018, 12 April), as well as the gradual extension of free places for all children attending non-profit nursery provision and home-based ECEC (Law n. 2/2022, 3 January). Critical circumstances associated with the COVID-19 pandemic have exacerbated the difficulties faced by different structures and dynamics related to the ECEC workforce. The next step is to identify some trends, tensions and challenges that will be critical for the Portuguese ECEC workforce in the next years.

Towards an integrated ECEC system: As outlined in *chapter 1*, Portugal has a split-sector ECEC system, maintaining a division between the 0–2 sector and the pre-school sector in terms of governance. This core characteristic of the Portuguese system creates disparities between the two sectors, impacting more negatively on the working conditions and socio-professional status of the professionals working with infants and toddlers. In 2021, a civic movement led by the Association of Professionals of Early Childhood Education (APEI) delivered to the Assembly of the Republic (AR) a petition with over 14,000 signatures demanding that the education and care of children under 3 years be fully integrated into the Education Act as part of the education system. However, the discussion of this issue in the AR has not yet created changes in the political panorama. The creation of an integrated ECEC system under the governance of the Ministry of Education remains a priority challenge.

Increase public investment in the 0–2 sector: The problems identified in this sector in the last SEEPRO report persist, i.e. lack of a national pedagogical framework, weak pre-service and in-service education/training of professionals, poor working conditions. The lesser attention that this sector has been receiving is also visible in terms of the scarcity of information available on provision for infants and toddlers, preventing a more comprehensive characterisation of the workforce profiles. Improving the availability and accessibility of data on this sector is strongly recommended. On a positive note, it is worth mentioning that the political programme of the current government included prospective investment in this sector and that an inter-ministerial initiative is being launched, combining the efforts of the Ministry of Education and the Ministry of Labour, Solidarity and Social Security, in order to produce pedagogical frameworks for working with infants and toddlers, aligned with the existing frameworks for pre-school education.

Improve IPE and CPD opportunities for ECEC professionals: As for IPE, continuous monitoring of HEI programmes needs to be carried out, in order for pre-service education/training to be consistently responding to the specificities of the professional profile of Early Childhood Teachers. In a time of relevant changes to the legal framework that regulates the professional qualifications for teaching in order to face the anticipated shortage of (early childhood) teachers, efforts should be made to avoid pervasive effects that could undermine HEI programmes quality and the overall quality of pedagogical practices. The attraction of students to the profession is also dependent on the working conditions, public image and prestige of these professionals. Improving these central aspects constitutes a relevant challenge for all stakeholders. As for CPD

opportunities, it is important to underline the much-needed inclusion of Early Childhood Teachers in large-scale national CPD programmes, something that has been somewhat neglected in recent years. Incremental CPD opportunities for the 0–2 sector, for assistants and leaders should also constitute a priority endeavour. Moreover, investing in research initiatives on these issues, as well as on other ECEC professionalisation and staffing issues, remains a challenge in the Portuguese context.

As we extensively know, ECEC can make relevant contributions towards more equitable, inclusive and sustainable societies. In Portugal, as in other countries, this cannot be met without creating the conditions for the rhetorical intentions to be converted into decisions and actions that really make a positive differential in the lives of young children, professionals and families.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC provision are: **nursery** (*creche*, 0–2) and **kindergarten** (*jardim de infância*, 3–5)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Portugal

1882	Opening of the first official kindergarten working according to Froebelian principles
1911	Decree law that establishes the educational function of early childhood education, together with families
1936	Under the dictatorship regime, early childhood education schools were extinct; the education of young children was fully assigned to families – especially to mothers
1950 onwards	The first – mostly Catholic – training institutions are established for staff wishing to work professionally with young children.
Up to the 1970s	Early childhood education continues to be viewed primarily as a private family matter.
1973	Comprehensive reform of the education system
1978	First kindergarten opened under the auspices of the Ministry of Education
1979	<ul style="list-style-type: none"> – Publication of the Kindergarten Statutes – Publication of the Statutes for the training institutions (public) for early childhood teachers
1986	<ul style="list-style-type: none"> – Education Act, integrating the pre-school sector (3–5) – Initial professional education of early childhood teachers is carried out in polytechnic higher education institutions
1997	<ul style="list-style-type: none"> – Definition of the legal framework for the development and expansion of the national network of pre-primary education – The Framework Law establishes kindergartens as an official part of the education system. – Publication of the Curricular Guidelines for Pre-primary Education
2001	Publication of the professional profile of the Early Childhood Teacher
2006	Creation of the PARES programme that allows for the expansion of the national network of ECEC settings for under 3 year-olds
2008	Definition of specialised support (special education) in public and private kindergartens
2009	Legal entitlement to at least one year in kindergarten for 5 year-olds comes into force.
2011	Publication of guidelines by the Ministry of Education on assessment and evaluation in pre-primary education.
2015	Revision of the Framework Plan New legislation on the conditions for becoming a childminder
2016	Publication of the revised version of the Curricular Guidelines for Pre-primary Education
2016/2017	Legal entitlement to a place in kindergarten is extended to 4 year-olds.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Portugal): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

2018	<ul style="list-style-type: none"> – Introduction of legal entitlement for 3 year-olds – New legislation on inclusive education
2022	<ul style="list-style-type: none"> – Progressive extension of entitlement for the 0–2 sector (<i>creche</i>) is introduced. – A working group is set up to develop national pedagogical guidelines for the 0–2 sector (<i>creche</i>) under the auspices of the Ministry of Education and the Ministry of Labour, Solidarity and Social Security.

ECEC system type and auspices²

Portugal has a separately organised system of early childhood education and care with two different sectors. ECEC settings for children under 3 (ISCED 01) are the responsibility of the Ministry of Labour, Solidarity and Social Security (MLSSS – *Ministério do Trabalho, Solidariedade e Segurança Social*). The Ministry of Education (*Ministério da Educação*) is responsible for pre-primary education in kindergartens for children between the ages of 3 and school entry and for ensuring the quality of education. Pre-primary education is legally considered the first stage of the education system. The Ministry of Education and the Ministry of Labour share responsibility for the supervision, monitoring, organisation and operation of ECEC settings.

General objectives and legislative framework

The Portuguese Constitution establishes the right of every individual to education, regardless of gender, race, language, religious, political, ideological convictions or sexual orientation.

Objectives for ECEC for under 3 year-olds emphasise child well-being and holistic development, as well as support for parents in balancing their work and family life.

Legislative decrees of 2011 (Ordinance 262/2011, 31 August) with amendments introduced in 2012 (Ordinance 411/2012, 14 December) and in 2023 (Ordinance 190-A/2023, 5 July) set out the conditions for the operation of day nurseries.

The main objectives of pre-primary education include promoting children's personal and social development, supporting their integration into different social groups and their communication and critical thinking skills, and ensuring equal opportunities. Also in focus are the well-being and safety of children, the identification of special needs and the support of parents in the educational process. Early childhood education and care is understood as complementary to parental education. A strong emphasis is therefore placed on close cooperation with parents.

According to the Act on Early Childhood Education (*Lei-Quadro da Educação Pré-Escolar*, 1997) (Law 5/1997, 10 February), this is the first stage of the education system in Portugal in close cooperation with families. In addition, the Basic Law on Education (*Lei de Bases do Sistema Educativo*, 1986) (Law 46/1986, 14 October) with amendments until 2023) defines pre-primary education as being for children between 3 years of age and school entry and should take place in kindergartens.

² The Eurydice country report on ECEC in Portugal provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the *chapter References*.

ECEC entitlement and compulsory attendance

Attending ECEC provision during the early childhood phase up to school entry is not compulsory in Portugal. For under 3 year-olds, there is no legal entitlement to a place in ECEC provision.

From the age of 3 onwards, children have a legal right to a place in a kindergarten for 25 hours a week (Normative Order 6/2018, 12 April, with amendments of Normative Order 10-B/2021, 14 April).

Compulsory schooling begins at the age of 6.

Main types of provision

Childcare sector (ISCED 01)

Nurseries (*creches*) offer places for children between 3 months and 3 years. Each setting decides on its own opening hours; the majority are open from 7:00/8:00 to 18:00/20:00. 87% of nurseries are open 10–12 hours a day; 42.4% of children spend 6–8 hours a day at the nursery and 45.8% 8–10 hours a day (MLSSS 2023, 36).

Registered **childminders** (*amas*) provide home-based services for children up to the age of 3. These services are organised and monitored by the Ministry of Labour, Solidarity and Social Security. Minimum qualification requirements came into force in 2015 (Decree-Law 115/2015, 22 June). They include a certificate of compulsory education and short-term training units in supporting children and young people.

At least four home-based providers may join together to form a **family childcare service** (*creche familiar*), which operates within the framework of a social or non-profit institution.

Education sector (ISCED 02)

Kindergartens (*jardins de infância*) for 3 to 6 year-olds usually provide educational activities for approximately five hours daily, and also additional recreational activities and family support. Required opening hours are up to 17:30 for at least eight hours per day. Some have longer opening hours to meet the needs of parents.

In order to reach children in rural or remote areas, in rare cases **mobile early education provision** (*educação pré-escolar itinerante*) may be available for 3 to 5 year-olds, deploying professionals in changing locations (European Commission/EACEA/Eurydice 2019, 188).

Provider structures

In Portugal, a public and a private network of ECEC settings complement one another. The private sector consists of both non-profit and for-profit provision. In order to ensure that children can attend centre-based settings beyond the 25 free hours, a cooperation between the Ministry of Education, the Ministry of Labour, Solidarity and Social Security and the Network of Private Institutions for Social Solidarity (*Instituições Particulares de Solidariedade Social*, IPSS) was formed.

Childcare sector (ISCED 01)

Most nurseries are under private (non-profit or commercial) ownership, with operating licences approved by the Ministry of Labour, Solidarity and Social Security. The national coverage (Portuguese mainland) rate in 2020 was 52,9%, with lower coverage rates in large urban centres like Lisbon and Porto.

In 2021, 77% of nurseries were private-non-profit, while 23% were private-for-profit. 101,191 children attended nurseries (MLSSS 2023, 25f).

Education sector

In 2022, well over a half (60.3%) of Portuguese kindergartens were public services: of a total of 5,767 settings, 3,475 were publicly run (Pordata 2023). 2,292 kindergartens were privately run. Also, of the children over 3 years enrolled in kindergartens in 2021, more than half (53.9%) attended public settings, 28.9% private non-profit, mostly IPSS-affiliated institutions, and 17.2% private-commercial institutions (Eurostat 2023e).

Table 1

Portugal: Number and shares of children in kindergartens (3 years to statutory school age) by provider type, 2021

Provider type	Number of children	Shares, in %
Public	135,372	53.9
Private non-profit	72,618	28.9
Private for-profit	43,070	17.2
Total private	115,688	46.1
Total	251,060	

Source: Eurostat 2023e

Participation rates in regulated ECEC settings

Over the past 15 years, a significant increase in participation rates can be observed in both age groups (4 months to under 3 years and 3 years to statutory school entry). While in 2005 only 30% of under 3 year-olds and 46% of over 3 year-olds were enrolled in a centre-based setting, in 2022 over half (52.5%) of under 3 year-olds and over 3 year-olds (57.6%) attended ECEC provision (see Table 2).

Overall, children under the age of 6 spend an average of 39 hours a week in an ECEC setting (European Commission/EACEA/Eurydice 2019, 68).

Table 2

Portugal: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005–2022

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	3.6	18.5
	Over 30 hours	26.3	27.5
	No enrolment in ECEC	70	54
2010	1 to 29 hours	4.5	10.1
	Over 30 hours	27.0	71.0
	No enrolment in ECEC	68.6	19.0
2015	1 to 29 hours	3.9	5.8
	Over 30 hours	39.2	86.5
	No enrolment in ECEC	57.0	7.7
2022	1 to 29 hours	2.3	3.9
	Over 30 hours	50.2	53.7
	No enrolment in ECEC	47.5	42.4

Source: Eurostat 2023b, slight deviations from 100% due to rounding

National statistics reveal that in 2022, a total of 259,030 children attended kindergarten and were cared for by 17,260 professionals, of whom only 1% were men (Pordata 2023).

Broken down by age group, Eurostat reports that more than three quarters of 3 year-olds attend a kindergarten, 93.9% of 4 year-olds and almost all 5 year-olds (see *Table 3*).

Table 3

Portugal: Number and enrolment rates of children in nurseries and kindergartens, by age, 2021

Age	Number of children in kindergartens (ISCED 02 settings)	Enrolment rates in kindergartens, in %
Under 2 years	n.d.	
2 year-olds	n.d.	
3 year-olds	68,533	78.3
4 year-olds	83,253	93.9
5 year-olds	86,534	99.0
6 year-olds	12,740	15.1

Source: Eurostat 2023g, j

The enrolment rate for children under 3 years of age was 48.8% in 2021. Of the overall percentage of children attending nurseries, 17% were infants (up to 1 year of age) and nearly 81% were toddlers (1–2 year-olds) (MLSSS 2023, 37). However, the enrolment rate varies widely across the country: for example, demand is significantly higher than supply in Lisbon and Porto, while in rural areas supply often exceeds demand.

Financing and costs for parents

National data indicate a projected share of 4.6% of GDP for ‘education’ in Portugal for 2021 (Pordata 2023). In 2019, 0.34% was allocated to the early education sector (OECD 2023).

The financing of pre-primary education is the joint responsibility of the Ministry of Education, the Ministry of Labour, Solidarity and Social Security and the municipalities. The educational programme of the public pre-primary network is completely financed by the state. For ECEC settings in the private solidarity network (IPSS), the state covers the costs of educational units and ensuring pedagogical quality. Childcare beyond the state-funded 25 hours and other private facilities are financed by parents through income-related fees. Low-income families can receive financial support under certain circumstances (European Commission 2020, 51).

In 2022, a new legal framework (DRE 2022] came into force stipulating the progressive extension of free access to childcare until 2024. 25 hours in kindergartens are free of charge for parents, beyond which they also pay income-related fees regulated by law.

For children under the age of 3 who attend non-profit nurseries with a cooperation agreement with the MLSSS, there is a fixed annual state contribution of €304.23 (2022). In addition, it is regulated by law (Law 2/2022) that from 1 September 2022, the first year in nurseries will be free of charge for all children, followed by the second year in 2023 and the third year in 2024. Furthermore, in September 2023, the *Creche Feliz* (Happy Nursery) programme was launched, which offers free access to all nurseries for children born after 1 September 2021. This applies to low-income parents nurseries which are part of the pool of participating nurseries in the social and solidarity network.

In 2022, a couple with two children spent about 6% of net household income on childcare costs³ (OECD.Stat 2023).

Staff to child ratios and group size

In **childcare settings** for under 3 year-olds children are usually divided into same-age groups. The maximum number per group is 10 children if they cannot walk, 14 children who can walk or are under 24 months old, or 18 children between 24 and 36 months. If there are too few children for this type of grouping, mixed-age groups with a maximum of 16 children can also be formed. Two assistants are responsible for ten children at most under 1 year, one core pedagogue and one assistant for 14 children between 1 and 2 years, and one core pedagogue and one assistant for 18 children over 2 years.

Groups in **kindergartens** consist of a minimum of 20 and a maximum of 25 children. If there are children with special educational needs in the group (maximum two per group), the maximum number is 20, with one core pedagogue and one assistant per group. The ratio in groups with 1 year-olds is 14 children maximum per core pedagogue or assistant, with 2 year-olds 18 children and with 3, 4 or 5 year-olds 25 children.

In special education facilities the maximum group size is 15 children.

In 2022, one member of teaching staff was responsible for an average of 15 children in kindergarten (Pordata 2023).

Curricular frameworks

Childcare sector

There is no pedagogical framework for **nursery settings**, although the Directorate General of Education and the Institute of Social Security are currently working on pedagogical guidelines for this age group. However, the Curriculum for Pre-primary Education, updated in 2016, indicates that the general pedagogical approaches and principles should apply to the whole period before compulsory schooling (European Commission/EACEA/Eurydice 2019, 95). According to legal regulations of 2011 and 2012, each nursery setting is obliged to implement its own pedagogical projects in each group, which serve to plan and accompany activities that are geared to individual children's needs and include fostering motor, cognitive, personal, emotional and social skills. In addition, there is a focus on nutrition, hygiene and safety aspects.

Education sector

The reference framework for work in **kindergartens** is the Curricular Framework for Pre-primary Education (*Orientações Curriculares para a Educação Pré-Escolar*, OCEPE), updated in 2016, which sets out pedagogical principles and organisational aspects. Three content areas are particularly emphasised: (1) social and personal aspects, including the development of attitudes and values; (2) expression and communication, including artistic expression, spoken language, introduction to writing, as well as mathematics and physical activity; and (3) knowledge of the world, including learning about different sciences by practising how to search for information in a systematic way.

³ The calculation is based on the following fictitious model: two parents working full-time (average income); two 2 and 3 year-old children in full-time care; relevant care allowances included.

Professionals can choose the methods they think best suit the children's interests and needs. To support professionals, the Ministry of Education provides various booklets on working with the curricular framework. To facilitate the transition to primary school, the learning areas of the curriculum are aligned with those of primary school.

Digital education

In the Curricular Framework for Pre-primary Education, the section on "knowledge of the world" also mentions the technological world. The use of technology in kindergarten is seen as a learning tool that makes it possible to gather information, to communicate with others or to organise. As digital media have a strong appeal to children and play an important role in their daily lives, it is important that they are supported from an early age to look critically at this influence, to understand the potential and risks and to know how to protect themselves. Media education is linked to other content areas and implies that the child is not only a consumer but also a producer, thus broadening their knowledge and perspective on reality. Professionals are required to start from children's existing knowledge and introduce them to new areas in a playful way. Children should therefore be supported in recognising technological resources in their environment, in explaining their functions and uses, and in using various technical media carefully and safely in their everyday lives.

Monitoring – evaluation

In general, evaluation procedures in the education system are the responsibility of the General Inspectorate of Education and Science (*Inspecção-Geral da Educação e Ciência*, IGEC), the Directorate of General Education and Scientific Statistics (*Direção-Geral de Estatísticas da Educação e Ciência*, DGEEC) and the Institute of Educational Evaluation (*Instituto de Avaliação Educativa*, IAVE). IGEC provides supervision, audits and technical oversight throughout the education system and also proposes quality improvement measures. The DGEEC ensures the analysis of statistical data, supports strategic planning and evaluates the results; IAVE creates and coordinates evaluation instruments.

Child-related assessment

No specific assessment measures are required for children **under 3 years** of age. However, professionals observe each child and discuss these observations with parents.

Current curricular guidelines reinforce the formative assessment of children in **kindergartens**. It is seen as an integral part of education and an ongoing process. It is neither about grading children's learning according to standards nor about making a value judgement about the child. The instruments used (e.g. conversations, learning histories, portfolios) should make it possible to observe, record and assess the children's learning and developmental progress based on the areas defined in the curricular framework. In this way, the educator can take measures, if necessary, to better adapt the educational processes to the needs of the children. These assessments take place at different points in time and the perspectives of the children themselves and the parents are also taken into account.

Centre-based internal evaluation

In ECEC settings for **under 3 year-olds**, self-evaluation is recommended but not compulsory (European Commission/EACEA/Eurydice 2019, 126).

Self-evaluation measures in **kindergartens** are mandatory and cover, among other things, the results of educational projects and the implementation of curricular strategies. Centre leaders are responsible for preparing a report at the end of each kindergarten year. Self-evaluation procedures follow set criteria such as staff satisfaction with working conditions, teamwork or availability of materials. The results are included in the external evaluation of ECEC settings.

External evaluation

Quality assurance measures in both sectors include, for example: overall quality, quality of staff, implementation of the curriculum (only in kindergartens), equipment, compliance with safety rules and children's performance. For this purpose, checklists are mainly used in nurseries, in kindergartens also questionnaires or self-reflection reports.

ECEC settings for under 3 year-olds are externally evaluated by the Institute for Social Security (*Instituto da Segurança Social*) through on-site visits (a minimum of one visit every two years) and an analysis of relevant information (European Commission/EACEA/Eurydice 2019, 125).

External evaluations of kindergartens are conducted by IGEC in cycles; each institution is evaluated once every five years. Two IGEC inspectors and two external experts look beyond aspects of self-evaluation to examine leadership and management, child development, educational planning and outcomes. They use different methods such as document analysis, statistics, questionnaires, observations, interviews and on-site visits. Each area is assessed using a 5-point scale. In kindergartens, the opinions of children and parents are also included. A manual on inspection suggests that the children's views should be taken into account, especially with regard to their preferred activities, their freedom in choosing these activities and their interactions with professionals (European Commission/EACEA/Eurydice 2019, 132). The evaluation reports are published and the institutions have the opportunity to comment on them.

Inclusion agenda

Children with special education needs and disabilities

Law 54/2018 newly regulates the inclusion of children with special educational needs. The main aim is to provide all children with the support they need and to place them in mainstream settings whenever possible (European Commission 2020, 104). In addition, the support of children under 6 with special needs has been regulated by law since 2009 through the National Intervention System in Early Childhood Education (*Sistema Nacional de Intervenção Precoce na Infância – SNIPI*). This law focuses primarily on the individualised support of all children with special care needs and also their families. The corresponding training of the professionals is also discussed. This system, coordinated jointly by the Ministry of Labour, Solidarity and Social Security, the Ministry of Health and the Ministry of Education in cooperation with families and municipalities, provides facilities for children from birth to 6 years of age through local resource centres, as well as in cooperation with families and experts working in nursery centres or in kindergartens. For children with disabilities, Individual Education Plans (*Plano Educativo Individual, IEP*) are drawn up, which include both the necessary measures and evaluation aspects. As a rule, these children have priority in the allocation of places in kindergartens. Each ECEC setting is required to establish a multidisciplinary team that supports inclusive education and provides appropriate measures.

The majority of children with disabilities attend regular institutions, only about 1% of the children who cannot be adequately supported there attend special institutions.

Children with a background of migration – Children from Roma Communities

In 2022, only 6.8% of the population had a non-Portuguese citizenship. Of these, three quarters (745.8%) came from countries outside the EU27(2020). In the age group up to 5 years, these proportions were 3.2% and 79.6% respectively (Eurostat 2023c).

In 2021, 29.2% of the group with a non-Portuguese background were persons from Brazil who held the status of right of residence, followed by 6% persons from the United Kingdom, 4.9% from Cape Verde, 4.1% from Romania and 3.9% from Ukraine (INE 2023, 7).

Guidelines for Portuguese as a second language in pre-primary education for children over 3 years of age have recently been introduced. There is an agreement with Romania to provide Romanian language and culture services to help children better understand their cultural identity (European Commission/EACEA/Eurydice 2019, 114f).

The RISE (Roma inclusive school experience) project, which has been implemented in kindergartens and other settings since 2019, aims to develop innovative strategies for the inclusion of Roma children in educational institutions. Within the framework of the National Strategy for the Integration of Roma Communities (*Estratégia Nacional para a Integração das Comunidades Ciganas*, ENICC – 2018-2022), professionals in kindergartens receive guidelines and training to facilitate their work with Roma children. However, in 2020, attendance rates of Roma children were still well below average (European Commission 2020, 133, 136).

Parental leave arrangements⁴

There are two options for **Maternity leave**, called "Initial Parental leave" (*licença parental inicial*) since 2009, of which 42 days are compulsory for the mother after giving birth: (1) either 120 days with full pay or (2) 150 days with 80% of pay. If each parent takes at least 30 (or twice 15) consecutive days, the time is extended to 150 days (with 100% payment) or 180 days (with 83% payment). If the father takes at least 60 consecutive days, the percentage increases to 90%.

The basis is the average income of the first six months before the Maternity leave and the payment into a social security scheme. 15 days during the fifth month can be taken by both parents at the same time. After the first 120 days, parental leave can also be combined with part-time work.

Fathers receive 35 days of fully (without upper limit) paid **Paternity leave** (*licença parental exclusiva do pai*), of which 28 days are compulsory and seven must be taken immediately after the birth. The remaining 21 days must be taken consecutively or in periods of at least seven days each.

The so-called **Supplementary Parental leave** (*licença parental complementar*) amounts to three (non-transferable) months per parent and is usually unpaid. It can be taken until the child's 6th birthday and also in different time blocks. Only unpaid Parental leave can be taken by both parents at the same time. It can also be taken part-time and combined with part-time work (three months each per parent, non-transferable) until the child is 12 months old.

In 2022, 45.9% of fathers shared the "Initial Parental leave" with the mother. 69.5% of couples chose the option with six months paid at 83%. In 2022, 68.3% of fathers took the non-compulsory days of Paternity leave. Only 13.6% of parents took Supplementary Parental leave directly following Maternity leave in 2022; this proportion decreased significantly since 2020.

⁴ The brief overview in this chapter is based mainly on the country note for Portugal by Mafalda Leitão and colleagues in the *International Review of Leave Policies and Research 2023* (see References).

Current challenges for the ECEC system in Portugal

Country expert assessment by *Sara Barros Araújo*

Providing access to and professionalising the 0–2 sector

Despite public investment in the expansion of services for infants and toddlers, access to these services remains a challenge. In 2021, the coverage rate in Portugal (mainland) was 52,9%, with identified disparities among regions (from 86,9% in the district of Guarda to 37,1% in the second largest Portuguese urban centre, Porto) (MLSSS 2023, 30). The need to increase access, particularly in large urban centres, persists as a critical challenge. At the level of public policies, the integration of the 0–2 sector into the education system, resulting in an integrated system of early childhood education and care (0–6) under the governance of the Ministry of Education, continues to be identified as a high priority. The professionalisation of this sector should encompass measures in order to improve the working conditions, the professional preparation and, overall, the status of the professionals working with infants and toddlers. Two recent positive initiatives related to this topic should be highlighted: the current process of creation of national pedagogical guidelines under the coordinated efforts of the ME and MLSSS and the implementation of the national programme “Happy Nursery” (*Creche Feliz*), with the aim of a progressive extension of entitlement for the 0–2 sector. Concerning the latter, monitoring mechanisms are advised in order to identify its strengths and needed adjustments.

Improving the working conditions of Early Childhood Teachers

Over the last months, the country has witnessed several public manifestations of dissatisfaction from teachers (strikes, demonstrations, interventions in the media), led by teachers’ unions and demanding the urgent improvement of their working conditions. Among others, main demands are being made over the need to revise the recruitment and mobility model, to provide fair wages and to revise the retirement conditions for Early Childhood Teachers and Primary Teachers. Meetings have been held in order to find the most adequate and feasible solutions to improve the professionals’ working conditions, the overall social status of the profession and its attractiveness for future teachers.

Reinforcing the specific professionalism and identity of ECEC

This remains a challenge in the Portuguese context and is related to the struggle against a colonisation through methodologies of a transmissive nature that are particularly used in primary education, resulting in a process of pervasive ‘schoolification’ that can be observed very early in children’s experiences. This brings with it the need to rethink several aspects at the level of educational policies, particularly those that regulate the initial professional education/training of Early Childhood Teachers. Indeed, critiques have emerged regarding the sequential model introduced by the Bologna Process at the level of Early Childhood Teachers’ pre-service education, characterised tendentiously by a disciplinary logic and a lack of units of pedagogical practice (*practica*) throughout the first three years of studies, two aspects that are likely to compromise professional learning and the specific identity of ECEC professionalism.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Portugal was 10,352,042. It increased slightly from 2000 to 2010, decreased between 2010 and 2019 and increased again slightly from 2020 onwards (2000: 10,249,022; 2010: 10,573,479; 2020: 10,295,909) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries was in France (1.84), and the lowest in Malta (1.13). At 1.35, Portugal was well below the EU27 average (Eurostat 2023d)⁵.

Children under age 6

Table 4

Portugal: Number of under 6 year-olds in the total population, 2022

Age	Number of children
Under 1 year-olds	79,911
1 year-olds	78,254
2 year-olds	81,207
3 year-olds	83,354
4 year-olds	84,634
5 year-olds	87,335
Total 0 to under 6 year-olds	494,695

Source: Eurostat 2023a

In 2022, 2.3% of the total population were children under 3 years of age, and 4.8% were children under 6 years of age. These proportions are now well below the EU27 average, whereas before 2015 they were around the same level as these.

⁵ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>)

Single households with children under age 6

Almost two thirds (65.6%) of all households with children under 6 in Portugal in 2022 were couple households. Single-parent households accounted for 4.4% – almost exclusively single mothers (4.3%).

Table 6

Portugal: Households with children under age 6, 2022

Household type	Total households	Share of all households, in % ⁺
Total households	962,500	
Couple households	631,800	65.6
Other types of households	288,000	29.9
Total single households	42,700	4.4

Employment rates of parents with children under 6 years of age

In Portugal, in 2022, the overall employment rate for men (15-64 years) was 78.6% and for women 74.4% (Eurostat 2023l).

In 2022, 75.4% of women and 86.0% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were slightly above the EU-average (87.2%) and those of mothers well above EU-average (63.6%) (Eurostat 2023f).

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 7a

Portugal: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Portugal	69.6	86.7
Highest rate of employment in 27 EU countries ⁷	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2022	
	Mothers, in %	Fathers, in %
Portugal	75.4	86.0
Highest rate of employment in 27 (2020) EU countries ⁸	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Children at risk of poverty or social exclusion⁹

In 2022, 17.6% of children under 6 in Portugal were at risk of poverty or social exclusion. This proportion was slightly lower than the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 20.1% (EU: 21.6%). In 2020, 8.2% of children under 6 suffered from severe material deprivation – also higher than the EU27 average of 6.1%. For the total population, it was 3.9% (EU: 4.3%) (Eurostat 2023h, i).

About the authors

Laura Elena Ciolan is a doctoral university lecturer at the University of Bucharest, Faculty of Psychology and Educational Sciences, Department for Teacher Education. Research interests include early education, primary education pedagogy, class/group management, psycho-pedagogy of play, and coaching. She is a trainer in adult education, in mental health and a career development consultant. She has completed a training programme for international certification as a supervisor in counselling. She is an educational consultant for private educational institutions; author of materials for teachers and the general public interested in children's development and education.

Anca Petrescu is a doctoral university lecturer at the Faculty of Psychology and Educational Sciences of the University of Bucharest. She is a graduate of the Faculty of Letters (Romanian-French section) of the University of Bucharest and a Doctor in Educational Sciences. Her doctoral thesis focused on the training of foreign language teachers in primary and pre-school education in Romania, following the paradigm changes that have emerged regarding the professionalisation of this category of teaching staff.

Cristian Bucur is a doctoral university lecturer at the Faculty of Psychology and Educational Sciences of the University of Bucharest and Director of Study Programmes within the Department of distance and part-time education for the Pedagogy programme in primary and pre-school education. Research interests and teaching include psychology, child psychology, adolescent and adult psychology, age psychology, special psycho-pedagogy, children with learning difficulties, educational psychology, social psychology, personality psychology.

Tania Maria Colniceanu is a research assistant at the University of Bucharest Learning Centre, a graduate in Primary and Pre-school Education Pedagogy and of the Master's programme "Early Education" at the University of Bucharest, where she is a PhD student focusing on "Learning and wellbeing in pre-school education in Romania." She has extensive experience with early-age students and in coordinating the Coaching Laboratory within the Learning Centre with Professor Laura Ciolan.

1. ECEC governance in Romania

In recent years, early childhood education and care in Romania has gone through considerable changes at the governance level. Pursuing an integrated approach towards early education has been further strengthened through the National Education Act 1/2011, modified by law 17/2022. The Act (article 27) was amended to include nurseries as part of the national pre-university education system and to offer children between the ages of 11 months and 3 years integrated education, care and supervision services.

Since September 15, 2021, nurseries come under the auspices and guidance of the Ministry of National Education (*Ministerul Educației Naționale*) – MEN – through the County School Inspectorates, regardless of whether they are assigned to a state kindergarten. Furthermore, on April 28, 2022, Decision 566 of 2022 included strategies for the organisation and operation of nurseries and other early education units, thus creating a legislative framework to support an integrated approach.

Since nurseries/crèches became part of the education system in the 2021-2022 school year, the draft Government Decision approving strategies for organising and operating nurseries and other early education units has proposed the following:

- Where local public authorities (LPA) request nursery provision, this should be included within the available early childhood education units (kindergartens) and included in the school network of pre-university education.
- Ensuring the strategic coordination of the nurseries for which the local public authorities do not request districting status and for which the LPA takes on the role of founding legal entity; in such cases, strategic coordination is carried out by delegating responsibility to a kindergarten through the school inspectorate.
- Ensuring, upon request, the strategic coordination of the nurseries remaining under the responsibility of local public authorities as social services.
- Ensuring the necessary personnel for the development of early childhood education by the Ministry of Education, in compliance with quality standards and the legislation in force; starting from the 2021-2022 school year, Childcare Educators from state nurseries that come under the coordination of the Ministry of Education can, for the next four years, occupy the position of Childcare Educator, provided they meet the specific requirements of the Ministry of Education’s framework for the recognition and attestation of professional skills.
- Regulation of aspects regarding the enrolment of children, the number of children in the group, the types of staff and their duties, the partnership with parents and other partners at the central/local level, as well as aspects regarding the educational environment and the content of education in the units that offer childcare services and early pre-school education.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Staff in nurseries

Staff in nurseries currently comprise the following categories:

- Management staff: Director / Centre Head
- Pedagogical staff: Educator – Early Years (*educator-puericultor*)
- Specialist support staff, e.g. Medical Assistant
- Non-specialist staff: administrator, caregiver, cook, etc.

Two main groups of staff work directly with the children on a daily basis:

Educatori–puericultori (Educators – Early Years) hold a professional qualification acquired at a Pedagogical High School. Pedagogical High Schools are vocational upper secondary education institutions offering qualifications at EQF level 4 and ISCED (2011) levels 3 and 4. Some staff in nurseries may also hold a higher education Bachelor's degree (three years) in educational sciences (Pedagogy of Primary and Pre-primary Education), mainly where services for the under 3 year-olds are offered in groups affiliated to kindergartens. In recent years, Pedagogical High Schools have also organised a form of tertiary non-university qualification route for those already holding a high school graduation diploma from regular high schools.

Îngrijitori (Caregivers) complete a form of upper secondary education and a compulsory in-service training module of at least 30 hours focussing on early childhood education and care and parenting. Beyond that, there are no minimum requirements regarding initial professional studies for Caregivers in nurseries. There is currently no formal obligation for nurseries/crèches organised as independent institutions to have staff holding a specialist higher education qualification, although employing staff with the appropriate qualifications should be a necessary prerequisite for quality in early education for children under 3 years of age.

Although the staffing requirements for work in nurseries/infant-toddler centres are not formally regulated, some universities have started to offer specialist degrees in early childhood education. A relevant example here is the University of Bucharest, Faculty of Psychology and Educational Sciences, which has been offering a two-year Master's degree in Early Childhood Education since 2013.

Staff in kindergartens

At the level of pre-primary education/kindergartens (3 to 6 year-olds), three main categories of staff may be working in direct contact with the children, each having followed a different qualification route.

Educatoare (Educators – Early Years) complete a specialist (early childhood education) qualification at a Pedagogical High School (upper secondary vocational). Persons with this qualification are still working in the system, although this specific route is not available any more as a stand-alone qualification. This route is now viewed only as a precursor to becoming a fully qualified Pre-primary Teacher, since in order to gain a permanent position in a kindergarten, the completion of a Bachelor study route in Pedagogy of Primary and Pre-primary Education is now the formal requirement.

Institutori (Elementary Teachers) complete a short-term higher education degree (three years) awarded by the University College of Elementary Teachers (*Colegiul Universitar Pedagogic de Institutori*). This award originates from the pre-Bologna system (up to 2005), when regular

higher education degrees took four to six years to complete. The title of *Institutor* could also be held by qualified Educators (*educatoare*) who had completed a higher education diploma after their initial studies, regardless of the specialisation they had followed.

As from 2005 this qualification has been replaced by:

Profesori pentru învățământul Primar și Preșcolar (Primary and Pre-primary Teachers) with a higher education degree and a dual specialism. The first graduates with this specialism completed their studies in 2008.

Although the minimum requirement for working in a kindergarten as a core professional is now a Bachelor's degree, the staff in kindergartens may have any one of the above-mentioned qualifications.

For early childhood education and care in **nurseries** in Romania, required staff qualifications are still not clearly defined. From the viewpoint of the authors of this report, the specialisation of "Childcare Educator" (see below) needs to be reintroduced in upper secondary schools with a pedagogical profile.

According to Law no. 17/2022, Art. 41 (Portal Legislativ 2022), the **Childcare Educator** in early education units in nurseries is broadly expected to carry out tasks according to the Early Education Curriculum approved by the Ministry of National Education. These include the following:

- Care and psychomotor stimulation; supporting the development of socio-affective behaviour; training and improving verbal behaviour; supporting cognitive development and learning skills and attitudes
- Recording each child's progress in an observation notebook and progress assessment sheet
- Actively collaborating with parents/legal representatives and holding information and training programmes to develop parental skills (Government of Romania 13/2022a)
- The activity of the Childcare Educator is coordinated by the Teachers' Council within the ECEC unit designated by the County School Inspectorate.

During recent years, the changes in early education in nurseries in Romania have led to new regulations regarding the training process of **non-teaching staff** who interact directly with the children.

The term 'non-teaching staff' refers to assistant staff not specifically educated/trained as teachers. Through the draft Government Decision of September 10, 2021, "non-teaching staff of the early childhood education unit must complete a specific professional training module in early education, with a duration of at least 30 hours, once every 5 years. The module includes the following topics: principles of early education, holistic approach to the child and teamwork and educating and supporting families to develop parenting skills" (Government of Romania 13/2022a, Project HG approval methodology nurseries, Art.36, 12).

The guidelines for the organisation and operation of nurseries and other early childhood education units approved by Government Decision no. 1252/2012 provide a framework regarding the activities of the nursery. However, the current Decision no. 566/2022 no longer specifies an employee to child ratio, so there are no staffing requirements based on the number of children in the group. The only exception is in the case of the Childcare Educator; however, this staff category is on the verge of extinction, given that today, in Romania, we only have 2–3 classes per year of Childcare Educators in the few remaining pedagogical high schools with an educator-childcare specialisation.

In terms of older types of certification, these may be graduates from pedagogical high schools, post-secondary pedagogical schools, university colleges of teachers or other equivalent schools with a specialisation in pre-school and primary education.

In the Ministerial Order 5573/2011, Art.32 and Art.33, the functions of **auxiliary teaching staff** are listed, and among those assigned to early education are the following: medical assistant, social assistant and a school doctor employed by the institution.

In terms of further non-teaching staff, among those who interact directly with young children are: cook, caretaker and night supervisor, the latter being a position found in nurseries with a weekly schedule.

Table 1 shows ECEC staff working in direct contact with children in centre-based settings and also categorises the core professionals (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this chapter).

Table 1

Romania: ECEC staff in centre-based settings

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
(Primary and) Pre-primary Teacher <i>Profesor pentru învățământul preșcolar</i> <i>Profile:</i> Early Childhood Pedagogy Professional	Kindergarten and nursery <i>Grădinițe, creșă</i> 1–5 years ¹	Core pedagogue with group responsibility	1–5 years	3 years at university <i>Award:</i> Bachelor's degree ECTS credits: 180 EQF Level: 6 ISCED 2011: 6
Educator <i>Educatoare</i> <i>Profile:</i> Pre-primary Education Professional	Kindergarten <i>Grădinițe</i> 3–6 years	Core pedagogue with group responsibility	3–6 years	<i>Since 2005:</i> 3-year university programme <i>Award:</i> Bachelor's degree ECTS credits: 180 EQF level: 6 ISCED 2011: 6 <i>Up to 2005:</i> 5 years upper secondary pedagogical high school route ECTS credits: n/a ² EQF level: 4 ISCED 2011: 3, 4
Elementary Teacher <i>Institutor</i>	Kindergarten <i>Grădinițe</i> 3–6 years	Core pedagogue with	3–6 years 6–11 years	3 years at higher education college

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3-, 4- and 5 year-olds in countries with a primary school entry age of 6 years, as in Romania

² n/a not applicable

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
(since 2005 replaced by „Early Childhood Teacher“ qualification, but still working in kindergartens and primary schools)	Primary school 6–11 years	group responsibility		<i>Award:</i> Short cycle university degree ECTS credits: 180 EQF Level: 5 ISCED 2011: 5
Childcare Educator <i>Îngrijitor copii</i> <i>Profile:</i> Early Childhood Pedagogy Professional	Nursery / Kindergarten <i>Creșă /Grădinițe</i> 1–5 years	Core pedagogue (nursery) Qualified co-worker (kindergarten)	1–5 years	Upper secondary education ECTS credits: n/a EQF Level: 4 ISCED 2011: 4
Early Childhood Assistant <i>Asistent educatoare</i>	Nursery/ kindergarten <i>Creșă /Grădinițe</i> 1–5 years	Non-qualified co-worker	1–5 years	Since 2021: Mandatory attendance at a 30-hour course every 5 years
Medical Doctor <i>Medic</i>	Nursery/ kindergarten <i>Creșă /Grădinițe</i> 1–5 years	Provides first aid in medical situations	1–5 years	Faculty of Medicine, University, 4 years ECTS credits: 240 EQF Level: 6 ISCED 2011: 6
Assistant Medical Nurse <i>Asistent medical</i>	Nursery/ kindergarten <i>Creșă /Grădinițe</i> 1–5 years	Daily triage of children	1–5 years	Post-secondary studies, 3 years ECTS credits: n/a EQF Level: 5 ISCED 2011: 5

Worth mentioning here is the fact that, at the level of National Agency for Quality Assurance in Higher Education, an initiative was registered to set up a new undergraduate degree (Bachelor level) on early childhood education, correlated with previous degrees in pre-school and primary education. This initiative led to approval of new quality standards for this degree, and a number of universities are working now to set up the programme.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)

- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Concerning the management of ECEC services, this has not undergone considerable changes in recent years. **Directors/Centre Heads** (*Director/șef de centru*) are trained professionals with educational and management responsibilities to ensure the continuous improvement of quality at the institutional level. Since 2012 (see Government Decision 1252/2012), new conditions have been in place for applicants for this position: they need to have a higher education award (Bachelor level) in one of the following areas: economics, law, administration, medicine, sociology, psychology or educational sciences, with a minimum of two years of work experience in the field of ECEC. This is a significant change in terms of formal requirements.

The Director's duties are set out in the National Education Law no. 1/2011, with subsequent amendments and additions, and related documents.

Specific tasks of an ECEC director include:

- Ensuring that the stated objectives of the educational unit correspond with those established at the national and local level
- Submitting an annual report on the quality of education in the educational unit, drawn up by the evaluation and quality assurance committee; this report, approved by the board of directors, is presented to the teachers' board and the parents' committee/association; it is brought to the attention of the local public administration authorities and the school inspectorate
- Preparing, in accordance with the law, job descriptions for subordinate personnel
- Being responsible for the selection, employment, periodic evaluation, training, motivation and termination of employment of the staff in the unit, as well as the selection of non-teaching staff
- Showing appreciation to the teaching staff, during inspections for obtaining teaching degrees, as well as for awarding merit grades
- Coordinating the collection of statistical data for the national system of education indicators, transmitting these to the school inspectorate, and being responsible for entering the data into the Integrated Information System of Education in Romania (SIIR)
- Approving the kindergarten service schedule of auxiliary teaching and/or non-teaching staff
- Specifying their duties in the organisation and operation regulations of the educational unit
- Controlling, with the support of the managers of the methodological commissions, the quality of the instructive-educational process, by checking documents, assisting in classes and participating in various extracurricular educational activities.

In the course of a school year, the director performs four weekly periods of teaching assistance, so that each teacher is assisted at least once per semester. The director also monitors the continuing professional development of the staff in the unit (National Education Act – amended 2022, Art. 97, 45).

The Director (or deputy director) of a kindergarten is usually selected through a competition. Applicants are required to meet new formal requirements set out in the Education Act 1/2011 and subsequent regulations issued by the MEN: a higher education award (Bachelor's degree), a minimum of four years' professional experience in the field and membership in the National Registry of Management Specialists. To be registered as a management specialist, a person must

have competencies in educational management and administration acquired through initial or continuing professional education.

2.3 Centre-based posts of responsibility

There are no centre-based posts of responsibility in **nurseries/crèches** beyond the Centre Leader and the core staff.

In **kindergartens** (and schools), the position of Mentor Teacher is a designated post. These Pre-primary Teachers have a contract with the university responsible for the initial professional education of prospective kindergarten teachers. They are remunerated for the time spent with students during their workplace-based learning periods.

There has been some debate relating to the qualification and tasks of these teacher with a mentorship role. An occupational standard was developed at national level and there was an attempt to build a national registry of mentor teachers. However, lack of financial resources at the MEN have hindered this initiative. However, some effects can be seen, despite the fact that the formal status of mentors has not yet been clarified. One example is at the University of Bucharest where a new Master's programme in *Mentoring in education* has been offered since 2015, preparing interested teachers from schools and kindergartens for this work.

2.4 Co-ordinating and supervisory staff

In the early education system in Romania, there are supervisory and coordinating staff, and the roles may vary according to the administrative levels. County School Inspectorates and the Ministry of Education and Research have monitoring and coordination responsibilities at national and county level. At the level of individual institutions such as kindergartens, school inspectors and educational counsellors provide support and guidance.

Educational counsellors are appointed through County Educational Resource and Assistance Centres (*Centrul Judeţean de Asistenţă şi Resurse Educaţionale – CJRAE*) or, in the case of Bucharest, the municipality. Kindergartens have access to the services of a counsellor from one of these offices, who in general have a Master's degree in one of the following: school counselling, educational counselling, career development, educational management, psychological counselling. The county offices and the municipality of Bucharest offices provide counsellors with support and guidance in their specialty and evaluate their activities with educational institutions such as kindergartens.

The responsibilities of educational counsellors in kindergartens vary depending on the specific needs of the institution and community. In general, these responsibilities can include: individual and group counselling to both children and parents to address specific aspects of child development; working as a team with teachers to identify children's needs and concerns and develop appropriate strategies and resources; identifying potential problems of children and developing appropriate intervention plans; providing support for children transitioning to kindergarten or experiencing significant changes in their educational environment; providing information and resources to parents to help them support children's development at home and deal with various challenges; creating and delivering programmes or activities that support children's social-emotional development; providing support in crisis situations, such as behavioural problems or traumatic events; working with other professionals or organisations to provide additional support and resources when needed.

The “Inspectors for Pre-school Education” carry out two types of inspection in the nursery and kindergarten. The first is a specialised thematic inspection twice a year, during which an evaluation of the professional competences/professional activity of the teaching staff is carried out

at the level of the discipline/studies taught or the educational activities they support. The focus is on the quality of teaching activities and professionalism.

The second type is the general inspection. This focuses on the general evaluation of the performances of different educational institutions in terms of educational policy goals and the standards for their implementation. The main objective of the general school inspection of pre-university education units is the entire activity of the specific unit as a provider of educational services.

The pre-school education inspectors have knowledge of the ECEC system through information sent to the inspectorates by the Romanian Ministry of Education.

2.5 Specialist support staff

Both nurseries/crèches and kindergartens can benefit from the services of professional support staff, mostly hired from County Centres for Educational Assistance and Resources. In rather exceptional cases, these support staff are employed directly by ECEC providers.

Profesor logoped (Logopaedic/Speech Therapy Teachers), with professional studies in special needs education, psychology or pedagogy, support the staff, as well as children and families.

Profesor consilier (Counselling and Guidance Teachers) with a professional higher education degree in educational sciences, psychology, sociology or social work may provide psycho-pedagogic support, counselling and guidance directly for children, but also for regular staff and families.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

As a consequence of the pandemic and the corresponding lack of specialists to compile statistical information, the most recent statistical data on early childhood education and the qualification of staff in Romania were collected in 2019–2020.

Table 2

Romania: Structural composition of ECEC workforce, 2019/20

Categories	Year/proportion of staff, in %
Staff with a specialist three-year (or longer) higher education degree	No systematically compiled national data for core pedagogues in nurseries and kindergartens Kindergarten heads: 96.2*
Staff with a specialist vocational qualification (upper secondary, post-secondary)	No systematically compiled national data for core pedagogues in nurseries and kindergartens Kindergarten heads only, including those of kindergartens attached to schools: 3.8*
Staff with a non-relevant qualification	Kindergartens only: 8.4*
Unqualified staff	No national data available
Male practitioners	2016: 0.4% of total staff in nurseries and kindergartens (144 out of 35,084)*
Staff with a minority ethnic background or a 'background of migration'	No systematically compiled national data

Source: INS 2021 *Data for the local/county level (Bucharest) only.

In the 2019-2020 school year, of the 55.3 thousand persons working in early childhood education centres, 66.3% were teaching and auxiliary teaching staff, and 33.7% were non-teaching staff. Of the total teaching staff in kindergartens, 2.6% also held management positions. In addition, about 500 persons were management staff in kindergartens without teaching duties. Of the 34.9 thousand teaching staff in early childhood education (0.9% more than in the previous school year), 97.0% were qualified teaching staff (INS 2021, 26).

64.1% of teaching staff worked in urban and 35.9% in rural areas. The highest age bands among Pre-primary Teachers were 40-44 years (17.2%) and 35-39 years (15.0%). On average, each teacher was responsible for 15 children in the 2019-2020 school year; in urban areas for 14 children and in rural areas for 18 children. For the duration of the pandemic, no reliable data were collated on the structural composition of the ECEC workforce.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Despite the fact that staff with a wide variety of qualifications are still working in the ECEC field, the current official requirements for initial professional studies for ECEC staff in Romania have been narrowed down to two main routes:

- For those working in nurseries/infant-toddler centres (*educator-puericultor*) this is the Pedagogical High School upper secondary vocational route or a post-secondary vocational study route for graduates of non-pedagogical high schools. After passing an entrance examination, graduates from these two routes can study for a Bachelor's degree (Pedagogy of Primary and Pre-primary Education).
- For those working in kindergartens (*Profesor pentru învățământul primar și preșcolar*) this is the higher education route (Bachelor's degree) offering a double specialisation for work in kindergartens and primary schools; graduates are also eligible for a position as Educator (*educator-puericultor*) in a nursery/infant-toddler centre. Support staff (Speech Therapists, Counsellors), who are mostly employed by county administrations and provide services for ECEC provision in their area, are also required to have a higher education level qualification.

It is still possible to work as a Caregiver (*îngrijitor*) in settings for under-threes without having a formal qualification, and sometimes also as auxiliary support staff in kindergartens, mainly in those with an extended-day programme (7:30 to 16:00-18:00).

The main IPE programme for ECEC staff in kindergartens is the Bachelor's degree in Pedagogy for Primary and Pre-primary Education (three years, 180 ECTS credits). The majority of kindergarten staff now has this level of qualification, since special pathways offered by universities attracted non-Bachelor professionals to complete their studies with a higher education diploma. Moreover, the management of ECEC settings has been offering staff with higher education qualifications a higher salary.

Romania: Elementary Teacher

Job title in Romanian: <i>Institutori</i> Profile: Pre-primary and Primary Education Professional
<p>Entry requirements: Upper secondary school leaving certification: <i>Bacalaureate</i> and higher education entrance examination</p> <p>Professional studies: 3 years of study at a <i>Colegiul Universitar Pedagogic de Institutori</i> (University Pedagogical College for Elementary Teachers) – short-term university degree (pre-Bologna system)</p> <p>Award: Certificate as an Elementary Teacher (Pre-school and/or Primary)</p> <p>ECTS credits: 180</p> <p>EQF level: 5</p> <p>ISCED 2011: 5</p> <p>Main ECEC workplace: Kindergartens (3-6 years) and primary schools (6-11 years).</p> <p>Note: An alternative route to obtain this qualification used to be successful graduation from a Pedagogical High School (<i>Bacalaureate</i> + professional certificate) and a course of studies at any type of higher education institution (Bachelor level). This route was closed in 2005, when the Bachelor’s degree for Pre-primary and Primary Teachers was established.</p>

4.2 Competences, curricula and pedagogic-didactic approaches in initial professional education programmes

This section refers to the current qualification routes for core pedagogues in nurseries (*educator-puericultor*) and in kindergartens (*Profesor pentru învățământul primar și preșcolar*).

Educator – early years (*Educator-puericultor*)

This upper secondary vocational qualification was strengthened by the Government Decision (1252/2012) on the organisation and functioning of nurseries and other early childhood education institutions, which specifically required that this should be the minimum requirement for pedagogical staff. The duration of vocational high school studies is four years and the leaving certificate has two components: the Bacalaureate (final exam at the end of high school and prerequisite for accessing higher education) and the professional certificate (professional examination granting access to qualified jobs in nurseries/crèches).

The main responsibilities expected to be carried out by these professionals are:

- Caregiving and stimulating activities to increase the child’s autonomy
- Activities focused on the social-emotional development of the child
- Training and development of oral expression
- Activities focussing on enhancing the child’s attention span and receptivity
- monitoring and documenting the developmental progress of the children;
- Active cooperation with parents/legal representatives of the children.

Curricular areas:

This IPE route comprises a combination of classic general subjects, allowing graduates to take their Bacalaureate exam and eventually go on to higher education studies, and also professional subjects and professional practice in ECEC institutions.

The first two years of study comprise curricular areas such as language and communication, mathematics and sciences, but also social-humanistic disciplines, including general psychology, child and family psychology, pedagogy, early childhood education, and professional practice. More specialised professional subjects are included in the last two years of study: hygiene and child growth/care, child pathology (0–3 years), play and learning, special needs education, psychology of education, child protection and children’s rights. All these are complemented with practice-oriented educational/learning activities in different areas: language, sciences, technology, arts, music and drama. Field-based placements take place for at least three to four hours per week and can also be organised as compact week(s) during the semester.

Primary and Pre-primary Teacher (*Profesor pentru învățământul primar și preșcolar*)

In Romania, all teachers in the pre-university education system have to have a higher education qualification. The profession of Pre-primary (and Primary) Teacher is regulated by law and preceded by a three-year Bachelor’s degree in Pedagogy of Primary and Pre-primary Education. The degree can be offered by public and private higher education institutions if they have been accredited by the National Agency for Quality Assurance in Higher Education, according to the official standards approved in 2016 (see ARACIS 2016). The agency has stringent compulsory criteria and quality indicators for these degree programmes in terms of curriculum, human resources, facilities etc.

Competences/didactic approaches:

The key competences to be acquired are described in the table below. They are based on a national framework, using the example of the University of Bucharest. The objectives of the Bachelor programme for prospective Primary and Pre-primary Teachers comply with identified professional needs and with the roles and specific competences that define the activity of educational science specialists (see also the pedagogical perspective outlined by Stan 2014). Since the academic year 2013–2014, the study programme has focused on professional and transversal competences, in accordance with the standards defined at national level by the Romanian National Qualifications Framework (NQF).

Table 8

Romania: Primary and Pre-primary Teacher – Competence specifications (University of Bucharest, based on NQF)

General competences
<ul style="list-style-type: none">– Planning and developing educational programmes adapted to the primary and pre-primary education levels and to the target group– Assessing educational programmes for primary and pre-primary education– Group / classroom management and capacity to manage educational projects specific for primary and pre-primary education– Offering counselling, guidance, psychological and pedagogical assistance to different stakeholder groups (children, families, teachers, employees, etc.)– Self-assessment and continuous improvement of professional practices and career evolution.
Instrumental competences
<ul style="list-style-type: none">– Utilising pedagogical knowledge appropriately in designing educational and instructional activities: concepts, models, methods, techniques, scenarios and educational alternatives– Identifying and using educational concepts, models and strategies for appropriate pedagogical methods– Identifying and comparing theories, models and specific techniques and instruments necessary in educational assessment– Analysing specific concepts, theories, models and techniques for designing targeted interventions in counselling, guidance and psychological and pedagogical assistance of various target groups– Conducting pedagogical research to inform theory and practice and reflecting on professional practices aiming at continuing improvement– Interpreting and explaining various pedagogical theories, models and contexts from an educational manager's perspective– Promoting reflective practice based on students/children's learning and on one's own professional development– Creating educational projects/programmes regarding the efficient organisation of the learning environment and of the resources used, in accordance with the principles and specific functions of the educational management.
Interpersonal competences
<ul style="list-style-type: none">– Conducting educational programmes through the appropriate use of specific concepts, theories and methodologies, adapted for different age-groups– Applying standard methods of assessment in educational activities with children / adults and using these to improve process quality.– Analysing, interpreting and explaining evaluation data both at the individual and institutional levels– Designing educational programmes in order to identify, analyse and respond to specific educational needs

– Developing good professional practices and being involved in the process of drafting research projects, taking into account specific methodological norms and principles.
Systemic competences
<ul style="list-style-type: none"> – Analysing, interpreting and correlating intra-/interdisciplinary practices and applying pedagogic knowledge in the designing of educational activities and didactic resources on different levels (macro, meso, micro) – Explaining and interpreting educational contexts/situations and converting the knowledge, abilities and skills into pedagogical planning – Analysing and interpreting various educational contexts through the use of scientific concepts, paradigms and theories regarding persons with special educational needs – Carrying out educational activities in a methodologically appropriate way in accordance with the National Curriculum framework – Designing and applying evaluation tools, analysing and interpreting the results; providing arguments for the choice of methods, techniques and the instruments employed – Transferring the results of an evaluation into practice to support institutional or individual development – Creating alternative evaluation strategies for specific teaching and learning processes.

The following competences can be seen as the expected synthesis of the learning processes at the BA programme level:

- Designing, carrying out and assessing teaching and learning activities
- Designing, carrying out and assessing extracurricular activities and educational partnerships
- Psychological and pedagogical assistance for the pupils in a situation regarded as at risk, single parent families, parents who work abroad, parents with very low wages etc.)
- Accomplishing the optimal collaboration between the school and the families of the children, as well as with the local community
- Performing management and resource management at class level
- Institutional management and marketing
- Design and evaluation of social and educational projects
- Expertise in designing and implementing the curriculum and the initial and continuous training programmes.

Curricular areas:

The curriculum of this programme is strongly regulated by the National Agency for Quality Assurance in Higher Education through a set of specific standards. The most recent standards, approved in 2016 and covering around 75% of the total study programme, create a common national curriculum framework. Approximately 25% of the programme content is decided on by each university. The standards state some basic/fundamental subjects, valid for all degrees in educational sciences, but also a large number of study areas/disciplines specific to this particular degree. Practical training should cover at least 15% of the total duration of the study programme.

Table 9

Romania: IPE curriculum for prospective Primary and Pre-primary Teachers – first year of studies (University of Bucharest, Department for Teacher Education, Study programme in Pedagogy of Primary and Pre-primary Education)

Subject	ECTS credits
I. Basic disciplines	
Fundamentals of Psychology	5
Fundamentals of Pedagogy	5
Fundamentals of Special Psycho-Pedagogy	5
Information and Communication Technologies	4

Didactics of Practical Abilities	4
Professional Practicum (Pre-school Education)	5
Professional Practicum (Primary Education)	5
II. Complementary subjects	
One Optional – Package B Intercultural Education Educational management	3
TOTAL ECTS CREDITS	60

Students are awarded an additional 10 ECTS credits for the Bachelor of Arts Degree final examination. For successful finalisation of studies, they need to pass a written exam on fundamental knowledge of primary and pre-primary education (curriculum, instructional design, evaluation and assessment, communication and group management), and to defend a research-based Bachelor dissertation paper in front of a committee.

4.3 Alternative entry and qualification routes, system permeability

From the moment in which the profession of **Teacher for Primary and Pre-primary Education** was regulated, the flexibility of the routes decreased.

Regarding the *educator-puericultor* in crèches/infant-toddler centres, persons who have not completed the classical route of four years Pedagogical High School but have graduated from a different kind of high school and have a *Baccalaureate* diploma, can enrol for two years at a 'post-high school' offering the same specialisation. These post-high schools are not permanent, but are organised on demand, when employers are in need of professionals. The main issue in

Romania is that service provision for the under-threes is extremely low, and kindergartens, although they can form nursery groups since 2012, are reluctant to do so, as local authorities are not sufficiently financing this cycle of education. So this particular position, if available in nurseries, is open also to other higher education graduates in educational sciences; however, the take-up is low, mainly because of the very low salary level.

In terms of the **Primary and Pre-primary Teachers**, some flexibility is offered through open and distance learning programmes, which also have to be accredited by the National Agency for Quality Assurance in Higher Education, and also through professional reconversion programmes. The latter can be organised by universities for professionals working in kindergartens (or primary schools) who have a teaching certification in a different domain (i.e. teacher of biology, geography, languages, etc.) and therefore work as ‘unqualified’ staff in a kindergarten or primary school. These studies take two years to complete and are awarded 120 ECTS credits. They are organised as modules in a blended learning approach.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Educator – Early Years (*Educator – puericultor*)

The IPE programme for Educators includes three to four hours per week compulsory workplace-based learning/professional practice in the field (three hours in the first two years and four hours in the last two years of study). The structure and content of this field-based practicum relates to the progressive stages of professional development: first observational practice, then practising professional skills under supervision, and finally designing and delivering educational activities under supervision. There are no clear standards regarding workplace-based learning in IPE for this level. The weekly hour allocations can also be organised as compact modules.

Primary and Pre-primary Teacher (*Profesor pentru învățământul primar și preșcolar*)

For Primary and Pre-primary Teachers, national standards require a minimum of 15% professional practice in the IPE curriculum and the ECTS credits allocated. This means that in order to meet the standard requirement, every study programme should have at least 27 ECTS credits allocated to professional practice. It is common for kindergarten placements to take place in specified institutions selected jointly by the university as the training provider, and the local school inspectorate as the main beneficiary of qualified staff. Professional practice periods are coordinated by an academic from the university side, who assists students in all stages and evaluates them at the end, but also by a mentor teacher from the kindergarten, who has a contract with the university and is remunerated for his/her work with the prospective kindergarten teachers. All universities providing the Bachelor’s degree have their own network of placement kindergartens with experienced mentors. Nevertheless, the students do not have a sufficient number of sustained periods of time during their studies for working in these placement kindergartens. Workplace-based learning at IPE level tends to be fragmented and thus lacking in impact in the long run.

Key skills and competences to be acquired during professional practice include (but are not necessarily limited to) the following:

- Understanding group dynamics and developing strategies for high quality interactions with children
- Designing and adapting learning experiences according to specifications in the curriculum, delivering and assessing them
- Developing reflective practice skills to improve one’s own professional practices.

In general, students are asked to maintain a portfolio to document both their observational and research skills, but also their capacity to take responsibility for working professionally with children. The teacher mentor in the kindergarten assesses the student’s performance and informs the academic supervisor at the university. The university tutor then undertakes the final evaluation of the student based on the mentor’s evaluation, the quality of the portfolio and the progress made over the course of the semester (professional practice is assessed each semester).

There are two significant current debates and prospective reforms in Romania. The first is related to the **qualification and role of Teacher Mentors** in the kindergartens. An occupational standard was developed at national level with multiple roles for mentors and there was even an attempt to build a national registry of mentor teachers. But the initiative is not being followed up because of the lack of financial resources at the MEN. However, some effects can be seen, despite the fact that the formal status of mentors has not yet been clarified. One example is at the University of Bucharest where a new Master’s programme in *Mentoring in education* has been offered since 2015, preparing interested teachers from schools and kindergartens.

The second debate has started at the policy level, refocusing attention on a provision in the Education Act 1/2011 which called for a change in the institutional model for teacher education by introducing *didactic Master programmes*. One of the key ideas of these programmes is to spend the final semester as a **compulsory internship** in an educational institution. One reason for this could be the current procedures for newly qualified teachers, who have to wait for two years in order to take a final qualifying exam which confers teacher certification and makes them eligible for taking up a permanent teaching position.

6. Continuing professional development (CPD) of ECEC staff

Continuing professional development for educational professionals working in services for the under-threes is not regulated at the national level but remains the decision of each institution and local authority. Taking into account the very low coverage of this service and the limited number of staff hired, a broader framework is possibly not yet needed. However, the various CPD opportunities available for Pre-primary and Primary Teachers do not apply to the pedagogical staff in nurseries/infant-toddler centres, where CPD is mostly offered in form of various projects and not as a coherent system. Moreover, the participation in CPD is unequal and there are still some professionals who avoid it (see Lucian Ciolan 2014, 57).

Primary and Pre-primary Teacher (*Profesor pentru învățământul primar și preșcolar*)

The CPD of Primary and Pre-primary Teachers is located within a broad and comprehensive system organised and coordinated at the national level by MEN.

According to the Education Act 1/2001, CPD is **both a right and an obligation** for teachers, and can be realised in the following ways:

- Programmes and activities for the continuous improvement of scientific, pedagogical and didactic skills
- Training programmes in the area of management, leadership and evaluation of education
- Training courses and exams for teaching awards II and I (see below)
- Professional reconversion programmes for persons with a non-specialist background
- Studies corresponding to a degree specialisation.

Both pedagogical and management staff in pre-university education are **required to participate in credit-awarding training programmes every five years** after passing the final qualifying exam (*definitivat*) which confers teacher certification.

Accumulating credits has an impact both on salaries and **career advancement**. For instance, participation in CPD and credit accumulation is one of the key criteria for awarding teachers a salary supplement, called ‘merit award’ (*gradație de merit*). This is obtained through an open competition and is based on the teacher’s professional achievements over the last five years. The stipend adds around 25% to the salary for a duration of five years.

In order to accumulate credits, teachers have to participate in accredited training courses. At the national level, MEN has a specialised accreditation body for teacher and management training courses in pre-university education: This *Specialised Commission for Accreditation* is composed of twenty independent experts appointed through an open call for a duration of five years, with the possibility of two mandates. These experts work closely with the permanent staff in the Ministry of National Education responsible for CPD (Directorate for Continuing Training). The Commission is asked to evaluate the course proposals submitted by different providers. Once accredited, these courses are included in the register of accredited training providers and are assigned a specific number of professional transferable credits.

Graduates of the study programme *Pedagogy of Primary and Pre-primary Education* can benefit from CPD activities in public institutions, primary and pre-primary education units, County Teachers’ Centres (regional CPD provider), professional associations and trade unions. According to the regulations in force, the **CPD provider** can be an educational institution, public or private, a non-governmental organisation or even a private company specialising in CPD. The training courses they submit for accreditation to the national responsible body should comply with the professional standards for the teaching profession and with the regulatory framework for accreditation of training providers, provided by Ministerial Order no. 5561/2011 *Methodology for accreditation and periodical evaluation of CPD providers and their programmes*.

Teachers’ Centres (known as ‘Teacher Training Houses’ – *Casa Corpului Didactic*) are important CPD providers at the local/county level and are part of a national network financed by Ministry of National Education.

In synthesis, the offer of accredited CPD should fall under one of the programmes for different categories of personnel (mostly for Pre-primary Teachers) described in the table below.

Table 12

Romania: CPD courses for Pre-primary Teachers

Year	Name of the course	Description	Targeted personnel	ECTS credits
2020-2021	Family–school communication management A creative approach to the curriculum in early education	Workshop on how time constraints are the biggest obstacle to the level of parental involvement. Good communication with the teacher to find suitable and collaborative ways to improve this situation.	Pre-primary Teachers and auxiliary teaching staff	15
2020-2021	A creative approach to the curriculum in early education	Curriculum for pre-school education involves planning early education based on the diversity of contexts and areas of development.	Pre-primary Teachers	12
2020-2021	Digital tools for online work with young children	The course responds to the need to ensure optimal conditions for Pre-primary Teachers to carry out online activities and to have a consistent set of digital tools so that they offer young children a variety of learning contexts.	Pre-primary Teachers	10
2020-2021	Designing and carrying out activities integrated in early education	The course responds to the need to develop the skills of Pre-primary Teachers in the design and development of activities according to the current Curriculum for early education.	Pre-primary Teachers	12
2020-2021	Online teaching methods, tools and strategies in early education	The training programme aims to support teachers in carrying out teaching – learning – assessment activities in the online environment by identifying important aspects regarding the design of online activities, the utilisation of online teaching resources and platforms, as well as by identifying and practising some methods, means and strategies of carrying out curricular and extracurricular activities in the online environment.	Pre-primary Teachers	10
2020-2021	Modern guidelines in pre-school education	Developing the professional skills of teachers in order to design and carry out educational activities appropriate to the age and individual needs and potentials of young children.	Pre-primary Teachers	25
2020-	Creativity and innovation	Creativity and innovation are	Pre-primary	22

Year	Name of the course	Description	Targeted personnel	ECTS credits
2021	in the instructional-educational process	broad, complex and multifaceted concepts that can be applied in several fields. Their multi-disciplinarity, variety of approaches and conceptualisations are covered.	Teachers	
2019	Communication strategies at the level of the educational unit	Two situations are identified: supporting children to develop optimally and helping them to overcome a crisis situation.	Pre-primary Teachers Auxiliary teaching staff Management, guidance and control staff	16
2020	Net Time – Useful, creative, safe use of the Internet	The training and development of pre-university teaching staff in digital competence and the skills needed for useful, safe and creative use of the Internet and smart technologies in teaching, as well as in the overall instructional-educational process	Teaching staff in pre-university education including Pre-primary Teachers and auxiliary teaching staff in early education	15
2019	INDOOR and OUTDOOR non-formal education	Outdoor education is an organised form of education and prepares the child for outdoor life, based on the philosophy, theory and practice of experiential education and environmental education.	Pre-primary Teachers	22
2021-2022	Learning management based on interdisciplinary and transdisciplinary principles	Article 68 of 1 of Law 1/2011 stipulates that education should have as its essential objective the formation of fundamental skills, including skills in the field of methods and strategies for managing didactic activities. In order to transmit these skills to children, pre-university teachers must acquire a series of related methods, techniques and strategies.	Pre-primary Teachers	22
2020	Learning through play and exploration workshop	The purpose of the workshop programme is to contribute to the development of cognitive, affective, psychomotor skills and to the development of students' motivation for learning	Pre-primary Teachers Primary School Teachers	18

Year	Name of the course	Description	Targeted personnel	ECTS credits
2021		accessible education that fulfils its purpose of addressing all children without discrimination.	Teachers Primary School Teachers	
2020-2021	Prevention of language disorders in pre-schoolers and young schoolchildren	In order to promote the education and development of pre-schoolers' verbal expression, it is necessary that the educational activity is carried out in such a way that the pre-schoolers are stimulated to participate in the activities both verbally and mentally.	Pre-primary Teachers Primary School Teachers	10

Overall, however, the number of courses specifically targeting ECEC staff is not extensive, particularly courses funded by the national or local authorities. Public investment in CPD in recent years mostly took the form of Structural Funds projects, but this situation created considerable disparities in terms of access, which was much easier for professionals working in large cities than for those in rural environments. The financing of CPD is currently a critical issue. Investment at the national level is restricted to projects and the modest funding of the Teacher Training Houses. Investment at the local/institutional investment is very limited and staff participation in CPD is compromised by the very low level of their income.

Considering the need for continuing professional development for implementing the Early Education concept, the situation regarding the development of training programmes within the School Inspectorates is in most cases not at an up-to-date level. Recent research shows that in some School Inspectorates no training projects for early education have been carried out since 2015 or even 2011, which does not correspond to the ideal of guiding Pre-primary Teachers towards supporting the holistic development of the child at an early age in reaching their maximum potential, or in the innovative use of resources for enhancing the quality of teaching.

7. Working conditions and current workforce issues

7.1 Remuneration

In the last three years, statistics have shown that fewer and fewer graduates of pedagogical high schools and later graduates of primary and pre-primary education study programmes choose to stay in education, one of the prime reasons cited being the salary.

Currently, teachers are paid according to the Salary Law No. 153/2017, which includes the salary of all budget categories. Salaries are very low compared to other budget categories.

The most recent data, presented in the specialised media by the authorities, show that the lowest monthly salary in pre-university education would be 2,647 lei (€542), for a teacher with short-term higher education and teaching degree I. The highest, without increments and other benefits, such as that of a teacher with long-term higher education and teaching grade I, is 4,709

lei (€965) per month. The annual average gross starting salary of a Pre-primary Teacher working at ISCED 02 level is €8,027 and for a teacher at the top of the range €15,644 (Salary Law No. 153/2017, art.45).

7.2 Full-time and part-time employment in ECEC provision

The majority of professional staff employed in ECEC works on a full-time basis, since there is little flexibility in terms of employment regulations. The regular working week comprises 40 hours, whereas the time for direct interaction with children varies according to the type of institution and the way the service is regulated. For instance, both short programme (around four hours per day) and extended programme (around eight hours per day) kindergartens exist. In the latter case, professional staff may work in shifts if the opening hours exceed the regular working hours of the staff. There are no national statistical data available specifically on full-time and part-time employment in nurseries and kindergartens.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

In the light of new policy initiatives related to the teaching profession, the induction of newly qualified teachers/educators is under debate again. After taking up their first job, teachers usually have a probationary period of two years (see end of *Chapter 5*), after which they take an examination called *definitivat*, which is both the final certification as a professional, and also the first step in career development. However, because of the lack of investment in this area, the amount of support they receive in the workplace varies considerably. After graduation and hiring, there is a mentorship system dedicated for entry level professionals called *mentorat pentru stagiatură*. Although not very structured and regulated, this approach is institution-based and supports the integration and improvement of professional practices during the teacher's early career.

7.4 Non-contact time

The contractual obligations of both professional staff working in nurseries/crèches and in kindergartens include responsibilities which are not necessarily related to direct contact with children, such as participation in training and professional development activities, mentoring for other newly employed professionals, etc. In fact, staff responsibilities, mostly in kindergartens, diversified considerably in recent years, creating an increasing workload and pressure for the profession. There are no compiled national data available, but it can be estimated that a kindergarten teacher spends an average of two hours per day on this type of activity.

7.5 Current staffing issues

In terms of ECEC services for children under 3 years of age there is both a shortage of available provision and a shortage of qualified staff. The main reasons for the latter are the low salaries and the challenging work conditions.

In kindergartens/pre-primary education, the share of qualified staff is rather high, giving the system a certain level of stability. Basically, there is no shortage of qualified staff at the national level, particularly if the large number of study programmes in Pedagogy for Primary and Pre-primary Education accredited over the last few years are taken into account. However, the staffing situation in small urban and more isolated rural areas is a different matter, where providers have difficulties to recruit qualified staff. The main problem is twofold: one is related to the low level of income, and the other one is the inequality of qualified staff supplies in different areas.

Statistics show that of the total staff in pre-university education (290,087 persons), 19% work in early childhood/pre-school education). 208,642 are teaching staff, 20,941 auxiliary staff, and 7,484 administrative staff (World Vision 2022).

According to experts, the high level of aging of the teaching staff reflects a social phenomenon that the entire economy will feel in the next 10-15 years.

An overloaded or unsuitable curriculum, bureaucratic obligations, low support from the Ministry of National Education and insufficient digital equipment for schools are problems indicated by teachers as the main obstacles to performance in the World Vision survey (2022).

The greater majority (96%) of the surveyed teachers stated that they wished to be consulted through questionnaires regarding decisions in the field of school education (75% to a great extent and 21% to an average extent). To respond to this need, World Vision launched the "Civic School Inspectorate" project through which it will create the first integrated online consultation platform for teachers, students and parents in Romania. As part of the project, the organisation created a first online consultation questionnaire, completed by 375 of the 570 teachers registered in the first week after the launch. According to World Vision: "For the respondents to the questionnaire, the main obstacles that prevent them from achieving higher performance with students are "loaded schedule" (46%) or "inappropriate schedule" (20%), "bureaucratic obligations" (35%) or "low support at the ministry level (decisions, frequent disruptive changes)" (24%), the insufficiency of "schools' digital equipment" (30%), but also the "lack of a stimulating environment" (30%). Last but not least, teachers mention the "lack of parental involvement" (25%) and the "socio-economic problems of the families" (25%)" (World Vision 2022).

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

A number of recent events, studies and documents strengthen confidence in the increasing importance of and support for the early education sector, not only at the level of governance, but also at the level of strategic partners, mobilisers with expertise and enabling agencies. Some examples:

- The Government Ordinance article 9, paragraph (2) has been amended and now specifies that the state provides basic funding for preschoolers, both in state education and in accredited private and denominational education (as for students in accredited private and confessional compulsory general education). Funding is based on the standard cost per preschooler or per pre-school, depending on calculations made according to the methodology developed by the Ministry of National Education.
- Delegates from Romania participate in the European Commission ECEC Working Groups such as the "EC Thematic Working Group for Early Childhood Education and Care". The latter aimed to support Member States to implement the 2019 Council Recommendation for high-quality ECEC systems and its main component, the EU Quality Framework for ECEC. It mainly supports peer-to-peer learning in quality measurement, monitoring and evaluation and will follow up the ET2020 working group which focused on inclusion, staff professionalisation and managing the COVID-19 pandemic in the early education and care sector. The most recent Working Group runs from 2021–2025 (European Commission 2023).
- In 2021, the Government's Emergency Ordinance (GEO) no. 100 of 10.09.2021 (Portal Legislative 2021) specifies that "with subsequent amendments and additions, it is regulated that

the pre-school level is part of early education, more than that, nurseries established by decision of the local council, under its subordination, are part of the public educational system. As a result of these legislative changes, the takeover of nurseries within the education system is to be carried out starting from the 2019-2020 school year.” According to GEO 100/2021, administrative, financial, and managerial measures are needed to support the proper functioning of nurseries within the national education system. Without these, the legitimate right of parents/ legal representatives to enrol children in fully functioning nurseries within a reliable education system may be negatively affected.

9. Recent country-specific research focusing on ECEC staff

There has been little large-scale funding of research on early childhood education and care in Romania. UNICEF Romania continues to support reports and studies about this age level which are very much needed and appreciated; however, they tend to be mostly policy-focused rather than practice-focused.

Effects of a teacher-focused educational intervention on children’s wellbeing

Source: Rodawell – Romanian-Danish Centre for Children’s Wellbeing 2017, research and development project coordinated by the University of Bucharest, 2016-2019) (see *References* for further details)

Aims and background: The aim of this investigation was to devise, implement and measure the effects of a multi-component educational intervention targeted at 4 to 10 year-old children recruited from two kindergartens and two primary schools located in areas of Bucharest that are lower-than-average in terms of socioeconomic living conditions. This was a longitudinal research study that compared the wellbeing and academic performance of children enrolled in two state education settings. In the first group the children were exposed to enhanced educational intervention; in the second (control) group the age-matched children did not experience the intervention programme. The intervention built on the success of the RODACIE programme that was developed by Romanian and Danish education experts and piloted during 2011-2015 with economically-disadvantaged pre-schoolers. The project was conducted by members of the Faculty of Psychology and Education Sciences at the University of Bucharest in collaboration with a team of educational researchers and trainers from VIA University College in Denmark.

Procedure: One of the main goals was to provide teachers with intensive training sessions in key areas which address both the content taught in class and the learning and relational environment. During the 12 months of intervention teachers were offered opportunities for “formative evaluation” while the intervention team offered on-going and direct support for transferring new skills to students in class. Design: Two groups: control and intervention; Pre-(baseline), mid-term (six months into the intervention) and post-intervention measurement (at the end of the programme). Sample: 247 children in the intervention group (89 in kindergartens; 158 in primary schools); 191 children in the control group (93 in kindergartens; 98 in primary schools). Instruments: Well-validated and widely-implemented instruments were used to assess the children’s emotional, behavioural and social functioning.

Findings and implications: This research produced a comprehensive final report on the wellbeing of children at risk in nursery and primary schools. The final conclusions particularly emphasised a high level of vulnerability in emotional and social indicators. The research data led to the creation of a "Wellbeing Barometer" to be used as a self-assessment and diagnostic tool in kindergartens and primary schools in Romania.

National and European impact study on early childhood education

Source: ACEDO – Association Centre for Education and Human Rights 2022 (see *References* for further details)

Aims: In the Effective Social Dialogue project for Alternative Public Policies in Early Education (2014-2020) the documentation activity began with a study at the national level, to understand the needs, opportunities and current situation of early education. Early education in Romania is a priority for public policies, but currently faces insufficient funding and a new curriculum adapted to the 0–3 age group but put into practice by teachers unprepared to carry out educational activities for this age segment. The study also addresses children's access to early childhood education services, especially in rural areas.

Procedure/Methods: 200 discussions with education experts, carried out through interviews and questionnaires. In parallel to the survey, examples of inspiring practice from Europe are presented, where early education is a basic pillar in the growth and education of the future adult, being a service developed through the contribution of the community.

Selected findings: The national and European impact study on the early education of children in nurseries identified the main characteristics and needs of early education in Romania. During the interviews with early education specialists, we identified that there is a desire for involvement at the national level. The quantitative study highlighted the fact that early education in Romania is on a good path, although it requires attention to address aspects related to: infrastructure, curriculum, staff qualifications, access to early education and social inclusion.

Implications: Among the examples of inspiring practices from other countries that would benefit nursery provision in Romania are the following:

1. Italy – Reggio Emilia model of early education – pedagogy of listening, encouraging children to discover and undertake activities on their own
2. Spain – Inter-generational projects with the involvement of grandparents/elderly in the activities of children aged 0-3 years
3. France – Stimulating the creation of private nurseries by private companies
4. Slovenia – Language workshops for the integration of immigrants or inclusion of vulnerable groups
5. Finland – Flexible programme, where nurseries offer the possibility to use their services during the evening, night or weekend.

Project for Early Education Reform (P.R.E.T.)

This is a national project co-financed by the Government of Romania and the Development Bank of the Council of Europe (BDCE), with a budget of 105 million Euros. Originally, P.R.E.T. it was supposed to take place between 2007 and 2016, but the duration of this programme was extended until 31 Dec. 2021.

Source: P.R.E.T. 2023. The project for the reform of early education (2017-2021) (see *References* for further details)

Aims: The main objective of this project is to improve the infrastructure of the most disadvantaged kindergartens, so that they reach a minimum standard of operation, as well as to ensure the necessary spaces for the units that suffered from the process of retrocession of nationalised buildings. The project will finance the rehabilitation and furnishing of underprivileged kindergartens, as well as the construction and furnishing of new kindergartens in certain locations. The possibility of equipping preparatory classes with special equipment will also be analysed.

Within the project, approximately 53,000 children across the country will benefit from the renovation and construction works. The further training and professional development of kindergarten staff (managers, teachers, nurses, administrators and other categories) is also included.

More specifically, the Early Education Reform Project aims to:

- To improve the current infrastructure of the early education system for children from 3 to 6/7 years by renovating and developing kindergarten settings
- To improve the quality of early education by supporting teaching staff and providing appropriate teaching materials
- To make the educational system more efficient by creating Resource Centres for Education and Development, as well as through developing the educational management system of the Ministry of Education.

Procedure/Methods:

- Equipping kindergartens with: didactic material (maps, boards, models); educational games; books/brochures
- Establishment of the network of Resource Centers for Education and Development (CRED)
- Establishment of specific services for children aged 0-6/7 with disabilities and special needs
- Increasing the capacity of medical staff and local authorities to monitor, evaluate and develop educational policies.
- Specific training modules will be organised for educators (approx. 35,000 people), ECEC staff – carers/assistants/medical staff (approx. 13,000), managers (approx. 2,500) and parents.

Intended outcomes:

The results and effects of the programme were monitored and evaluated with the help of indicators that reflect key aspects of programme implementation, such as:

- Improving kindergarten management
- Improving visibility by raising the level of parents' knowledge about their children's performance
- Improving the existing infrastructure through renovation works
- Improving teaching staff practices in the system
- increasing the quality of educational services
- Renovating 340 kindergartens and equipping them with specific equipment, as well as with special access paths for children with disabilities
- The construction of 410 new kindergartens, equipped with specific equipment, as well as with special access paths for children with disabilities
- Providing CPD sessions for all Pre-primary Teachers
- Providing training for all kindergarten directors
- Providing training of all caregivers/assistants/administrators etc. in kindergartens
- Establishing 318 Resource Centres to offer a complex package of services in support of the community

- Monitoring/tracking the proportion of the 13,000 kindergartens equipped with didactic material, games, etc.
- Monitoring/tracking the number of children from urban and rural environments who benefit from rehabilitation works/new constructions.

10. Workforce challenges – country expert assessment

If we analyse the current challenges in the field of early childhood education and care in Romania, at least three key aspects need to be highlighted:

- Romania faces an **aging workforce**, which reflects a social phenomenon that the entire economy will feel in the next 10–15 years. However, the situation is particularly alarming since there do not seem to be any affirmative measures in place to compensate the situation in the future. This situation is leading to a fluctuation in numbers and also to a low level of new entries into the education system (Economed.ro 2022).
- **Qualification requirements for staff working with children under 3 years of age.** Here the challenge is to clearly define and regulate the type of professional, their level of study and their responsibilities in nurseries as a result of the new regulatory framework, which situates nurseries within the national education system under the supervision of the Ministry of Education. Do all professionals working with this group need a higher education qualification? What will the envisaged new degree in early childhood education look like? How will a motivational structure to attract young persons into the profession be developed and implemented? There are many questions on the table of decision-makers, who are currently working towards a new Education Act.
- **Continuing training and career progression for early childhood professionals.** At the moment ECEC staff are working in a rather chaotic system, comprising legacies and remaining elements of the past, but also integrating new realities, some of them being still under construction. This issue links to the need to enhance the attractiveness of the profession and also to create a clear and quality-oriented system for continuing training and professional development.

The early education system in Romania is at a crossroad. Currently an object of large-scale investments, of regulatory framework changes and of high public pressure for good quality service delivery, ECEC in Romania stands a good chance of making progress and contributing to social stability, economic development, family wellbeing and good quality education in early childhood.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC provision are **nursery** (*creșă*, 0–2) and **kindergarten** (*grădinița*, 3–5)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Romania

1866	Legislation on elementary, primary and secondary and higher instruction contained for the first time specific norms on setting up <i>gradina de copii</i> (kindergartens).
1881	First kindergarten based on Froebelian principles established
Up to 1909	133 kindergartens work according to Froebel's philosophy.
1910	<ul style="list-style-type: none"> – First curricular framework for early childhood education is issued. – Introduction of free enrolment and compulsory attendance for 6 year-olds
1939	In the Act on the Organisation and Operation of Primary and Regular Education, the term <i>gradina de copii</i> is explicitly used for kindergartens that are compulsory for children between 5 and 7 years of age.
1955	Around 19% of 3 to 6 year-olds attend a kindergarten.
Up to 1970s	Expansion of early childhood provision to accommodate growing demand
1974	<ul style="list-style-type: none"> – Enrolment rates rise to 42%. – A curriculum for educational and instructional activities in kindergarten is developed and issued at the national level
1981	75% of 3 and 4 year-olds and 90% of 5 and 6 year-olds attend a kindergarten.
1990	Reform of the education system – introduction of new educational standards and move away from the ideological legacy of communism
1990-1994	The first kindergarten groups based on alternative pedagogies are set up: Jena, Montessori, Waldorf, Step by Step.
1995	The first Education Act after the collapse of communism (Law 84/1995) comes into force, consolidating the statute of kindergartens as part of the pre-university education system for 3 to 7 year-olds.
2000	A new framework curriculum and 'lesson plans' for the three kindergarten age groups is adopted and the statute of preparatory groups for school is consolidated.
2003	New legislation extends compulsory education in Romania to 10 years, including a pre-primary year preceding school entry.
2005	Professionals working in kindergartens are qualified at higher education level as 'teachers for pre-primary and primary education', having the same statute as other teachers within the education system.
2011	A new National Education Act comes into force.
2012	Integration of the compulsory preparatory class for 6 year-olds into primary schools, effectively lowering the statutory school age by one year
2019	A new curriculum for the entire ECEC phase (0 to 6 years) is introduced.
2020	<ul style="list-style-type: none"> – The year preceding school entry is made obligatory for 5 year-olds. – Early childhood education and care is included in the National Defence Strategy 2020-2024.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years, as in Romania.

2021	<ul style="list-style-type: none"> – Amendments to the Education Act come into force. – Nurseries now become part of the national pre-university education system and offer children between the ages of 3 months and 3 years integrated services of education and care. Childcare workers from the state nurseries that fall under the auspices of the Ministry of Education from the school year 2021-2022 can access (up to 2025) the position of Childcare Educator if they comply with the conditions stipulated in the formal recognition and certification of professional skills for this position issued by the Ministry of Education.

ECEC system type and auspices²

Early childhood education and care in Romania comes under the responsibility of different ministries. While kindergartens for children aged 3 years to school entry are assigned to the Ministry of National Education (*Ministerul Educației Naționale* – MEN), responsibility for the care sector for under 3 year-olds is organised in a more complex way. Responsibility for nurseries (*creșă*) is shared by the Ministry of Education with the Ministry of Labour and Social Justice (*Ministerul Muncii și Justiției Sociale*), the Ministry of Health (*Ministerul Sănătății*) and with local authorities. In cooperation with the Ministry of National Education, the District School Inspectorates (*Inspectoratul Școlar Județean*) monitor and coordinate the kindergartens (*grădiniță*) and the preparatory class and are also responsible for the evaluation of the education system and partly for funding. However, this is primarily in the hands of the municipalities, as is the management and organisation of the facilities, including staff, materials and equipment.

General objectives and legislative framework

Overarching social policy goals, in addition to ensuring equal opportunities and social inclusion, are access to education without discrimination and the right of all – including national minorities – to their identity and culture. Education is based on dignity, tolerance and respect for fundamental rights.

The main laws governing the early childhood sector are the National Education Act (*Legea educației naționale*, No. 1/2011, with amendments of 2021; Ministry of National Education 2021) and the Social Work Act (No. 292/2011). The two main sets of regulations are the Methodology for the Organisation of Nurseries and Other Pre-Primary Institutions (No. 9/2018) and a revision of the Regulations on the Organisation and Operation of pre-Kindergarten Education Institutions, presented to the public in draft form in 2019.

By including early childhood education and care in the National Defence Strategy (2020–2024), the government highlighted the importance of early childhood education. This comprehensive legislation codifies and operationalises previous laws, and also includes compulsory preparatory classes (Eurochild 2021).

² The Eurydice country report on ECEC in Romania provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

ECEC entitlement and compulsory attendance

Since September 2020, ECEC attendance is compulsory for 5 to 6 year-olds and voluntary for under 5 year-olds. As from September 2023, compulsory enrolment will also apply to 4 year-olds and from 2030 to 3 year-olds.

In Romania, there is currently no legal entitlement to a place in an ECEC setting for children under 5 years of age. There is also no national policy to guarantee a place for every child. However, the Education Act (2011, as amended) states that municipalities and school inspectorates must ensure that sufficient places are available.

Primary schooling begins at the age of 6.

Main types of provision

According to national statistics, in 2022 there were only 45 free-standing nurseries in Romania, compared to a total of 1,241 kindergartens, of which more than 88.9% and 92.7% respectively were located in urban areas. However, the national statistics also report a considerable number of 'other' nursery and kindergarten/pre-primary education units attached to schools. If these 'other' units are included, then 92.4% of all nursery settings are located in urban areas and only 31.4% of kindergarten settings. 7,164 of the 'other' kindergarten settings are in rural areas (INSSE 2023a, SCL101D).

Childcare sector

Nurseries (*creșă*) admit children from 3 months to 3 years, who are usually placed in same-age groups. Nurseries are mostly privately run and are primarily found in cities. Some facilities also accept older children to ensure the continued employment of their staff. They are coordinated and financed at the local level.

Since 2007, it has been regulated by law (Law No. 263) that children in nursery settings experience age-appropriate educational activities based on their individual needs and that the relevant health and safety standards are met. Professionals work closely with parents, offering support and helping to identify potential risks to children at an early stage. Most nurseries are open between 7:00 and 17:00, but opening hours can also be adapted to parents' needs.

Education sector (ISCED 02)

Kindergartens (*grădinița*) are attended by children between 3 and 6 years of age, who learn and play in same-age groups. The regular programme in a kindergarten usually lasts five hours per day, the extended programme ten hours, including meals and rest breaks. Beyond the regular provision, there are also a few settings which provide for overnight stays from Monday to Friday.

Provider structures

If all units are counted together, then 93.8% of nursery settings and 94.3% of kindergarten settings are publicly funded. To open private facilities, an individual or legal entity must sign a contract with a school inspectorate and go through an accreditation process. After that, they too can benefit from state subsidies. They must also comply with the same legal regulations as public settings.

Table 1

Romania: Number and distribution of ECEC settings by provider type, 2022

Setting	Provider type	Number of settings	Total	Relative share in %*
Nursery	Public	31	45	68.9
	Private	14		31.1
'Other' nursery units attached to schools	Public	363	375	96.8
	Private	12		3.2
Kindergarten	Public	748	1,241	60.3
	Private	493		39.7
'Other' kindergarten/pre-primary education units attached to schools	Public	9,223	9,336	98.8
	Private	113		1.2

Table 2

Romania: Number and proportion of children in ECEC settings by provider type, 2022

	Provider type	Number of children	Relative share in %*
Nurseries	Public	26,385	97.7
	Private	615	2.3
	Total	27,000	
Kindergartens	Public	482,363	92.4
	Private	39,463	7.6
	Total	521,826	

Source: INSSE 2023a, SCL103H, *own calculations

Participation rates in regulated ECEC settings

According to Eurostat data, only roughly 12% of children under 3 years of age attended ECEC settings in 2022. This share nearly doubled since 2010. The proportion of children between the ages of 3 and 6 attending ECEC settings increased only slightly, from two-thirds in 2010 to 67.8% in 2022. The low attendance rate of children under 3 years of age can at least partly be explained by the lack of available provision.

Table 3

Romania: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2010–2022

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2010	1 to 29 hours	4	49
	Over 30 hours	3	17
	No enrolment in ECEC	92	34
2015	1 to 29 hours	4.2	50.9
	Over 30 hours	5.2	7.3
	No enrolment in ECEC	90.6	41.8
2022	1 to 29 hours	8.0	50.7
	Over 30 hours	4.3	17.1
	No enrolment in ECEC	87.7	32.2

Source: Eurostat 2023b; slight deviations in the sums due to rounding

In 2020, national statistics indicate the attendance rate of 0 to 2 year-olds at 5.7% and at 76.9% for 3 to 5 year-olds (INSSE 2023a, SCL102A).

Table 4

Romania: Number and enrolment rates of children in nurseries and kindergartens, by age, 2022

Age	Number of children in nurseries	Enrolment rates in nurseries, in %	Number of children in kindergartens	Enrolment rates in kindergartens, in %
1 year-olds	6,295	3.3		
2 year-olds	17,684	9.0		
3 year-olds	3,021	1.5	157,574	77.3
4 year-olds			160,083	76.7
5 year-olds			170,538	82.1
6 year-olds			33,631	16.4

Source: INSSE 2023a, SCL103A, *calculated based on INSEE – POP105A

Compared to the previous school year, there was an increase of 1.7% in the enrolment rate in nurseries and kindergartens in 2022/23 (INSSE 2023b).

Financing and costs for parents

In 2019, 0.4% of GDP was spent on early childhood education (OECD 2023). In 2020, only 2.8% of the gross domestic product was spent on education as a whole, the lowest share in the EU (Eurochild 2021).

Early education facilities are usually financed through municipal budgets. Kindergartens are also partly financed through state budgets (e.g. salaries), whereas salaries in crèches come exclusively from the municipalities.

The funding of so-called pre-university educational institutions (including kindergartens) comprises basic funding, supplementary funding and additional funding. Basic funding comes from the state budget and covers, among other things, salaries, materials and operating costs, and is based on the standard costs for each child. Supplementary funding comes from municipal budgets and includes for example, costs for evaluations or for health and safety. Additional funding is paid as a lump sum by the Ministry of Education to institutions which have provided special services.

Since 2021/22, private ECEC settings also receive basic funding from the state. In addition, institutions – including public ones – can fall back on their own sources of income, such as donations or sponsors.

According to the Education Act, public ECEC settings are free of charge for parents – but they pay for meals (between €2 and €4 per day) if enrolment is for 10 hours per day or in weekly programmes. For disadvantaged families, these fees are reduced or waived. For private, non-subsidised facilities, fees are set by the provider and cover the costs of staff salaries, equipment, meals, etc.

Since 2020, special credits are available to companies that cover childcare costs for their employees up to €300 per month, as part of an amendment to the tax code (Eurochild 2021).

In 2022, a couple with two children spent about 7% of net household income on childcare costs³ (OECD.Sstat 2023).

Staff to child ratios and group size

In both nurseries and kindergartens, children are usually grouped according to their age. 'Junior groups' (*grupa mică*) include children from 3 months to 1 year in nurseries and 3 to 4 year-olds in kindergartens. 'Middle groups' (*grupa mijlocie*) include 1 to 2 year-olds in nurseries and 4 to 5 year-olds in kindergartens. 'Senior groups' (*grupa mare*) include 2 to 3 year-olds in nurseries and 5 to 6 year-olds in kindergartens. 2 year-olds enrolled in kindergartens can either attend a group with only 2 year-olds if there are enough children of that age, or they are included in the group with 3 year-olds. In some cases, mixed-age groups are formed if same-age grouping is not possible.

If there is a child with special educational needs in a group, the group size is reduced by three children. In groups where there are only children with special educational needs, the group size is eight to 12 children. If children with severe disabilities are among them, smaller groups of four to eight children are formed.

Table 5 shows the maximum number of children in a group per qualified professional.

Table 5

Romania: Number of children per group and qualified professional

Age	Maximum number of children per group	Maximum number of children per qualified professional
Under 1 year	7	4
1 year-olds	9	5
2 year-olds	9	6
3 to 5 year-olds	20	20

Source: Eurydice 2023, 4.2

As a rule, one qualified professional is responsible for a group, regardless of the age of the children. In ECEC settings that are open 10 hours a day, two professionals work in five-hour shifts. In private facilities, the staffing ratio may be lower if there is also an assistant or two professionals per group at the same time.

Curricular framework

In 2019, a new early childhood curriculum (*Curriculum Pentru Educația Timpurie*) was introduced (Ministerial Decision No 4694/02), addressing for the first time the early childhood phase from birth to 6 years as a whole. Professionals can adapt it to the specific interests, needs and potentials of the children.

The following basic principles form the fundamental values of the curriculum: child-centred education; respect for children's rights; active learning; integrated development; interculturality; equality and equity; education as interaction between professional and child.

³ The calculation is based on the following fictitious model: two parents working full-time (average income); two 2 and 3 year-old children in full-time care; relevant care allowances included.

Five learning areas are outlined: (1) physical development, health and personal hygiene, (2) socio-emotional development, (3) cognitive development and knowledge about the world, (4) language development, communication and initial literacy skills, and (5) learning skills and attitudes. All learning activities are based on play.

For children under 3 years of age, the focus is on thematic activities, routines and transitions as well as games and activities of choice. These are offered for a certain number of hours in the centre depending on the age of the children. For example, for children under 1½ years of age, two hours of child-initiated play are provided daily, 2½ to three hours of routines and transitions are provided on two to three days, and 10 to 15 minutes of thematic activities are provided daily, initiated by the professional while taking into account the interests and reactions of the children.

For children in kindergartens, the focus is on experiential learning, games and activities of choice and personal development activities. Again, these activities are offered to the age groups for a specific number of hours and are aligned with the children's interests. The professionals decide on the organisation of the learning activities and the methods used.

Digital education

The acquisition of digital competences is not explicitly mentioned in the new education plan. However, it is recommended, as far as the available resources allow, to address this in the activities of the ECEC centre.

Monitoring – evaluation

The responsibility for monitoring and evaluating the entire education system lies in the hands of the Ministry of Education. Quality standards for the early education system, which are also the basis for external evaluations, are developed by the Romanian Agency for Quality Assurance (*Agentia Romana de Asigurare a Calitatii in Invatamantul Preuniversitar – ARACIP*) and implemented on the basis of government decisions. The agency is also responsible for the accreditation of new settings and for external evaluations in terms of structural issues, which are carried out at least once every three years. The district school inspectorates are responsible for evaluation of educational processes.

Child-related assessment

The assessment of children's progress from birth to 6 years is based on the reference standards approved by the Ministry of Education.

In **kindergartens**, an initial assessment is carried out during the first two weeks of each kindergarten year. For this purpose, the staff make a note of their observations and conversations with children and parents. They also record their assessments during the year and discuss them with the parents. On an everyday basis, staff use a variety of methods to assess each child's activities. At the end of the kindergarten year, a final evaluation is carried out. Based on these final evaluations, decisions are made about the planning for the next year. At the beginning and at the end of the kindergarten period, staff fill out a standardised form for each child, which describes the respective stage of development and which is also used during the transition to primary school. This long-term evaluation form is given to the parents and can also be viewed by the primary school teacher.

Centre-level internal assessment

Internal evaluations are carried out by the Commission for Evaluation and Quality Assurance (CEAC). This exists in all educational institutions and consists of representatives of staff, trade union, community, children and parents. CEAC produces an annual report and makes recommendations for quality improvement. This report is also published on the website of the Quality Assurance Agency.

Criteria for self-evaluation procedures include the organisational development of the institution, the educational programme, curricular and extra-curricular activities, the quality of teaching-learning processes, staff training, community relations and European dimensions in education. There are no prescribed methods for self-evaluation, the results are used at the institution level for further planning. At the regional level they are used, among other things, for the use of financial resources and they are also included in the annual reports of the external evaluations.

External evaluation

External evaluations – for public and private educational institutions and, since 2019, also for nursery settings – are carried out by the Agency for Quality Assurance (ARACIP) on the basis of national quality standards. There are three types of external evaluation: (1) for the preliminary accreditation of a setting; (2) for accreditation after completion of an entire educational cycle. After that, the educational institution receives all the rights established by law; (3) a regular evaluation every five years enables the assessment of the quality level of the educational institutions, comparing the minimum level standards for educational activities with the optimal level reference standards.

During each external evaluation visit, two to four evaluators assess the level of quality using documents, statistics, observations, interviews or questionnaires. Prior to the visit, the institution must send data and documentation proving that the standards have been observed. ARACIP analyses the data and the evaluation team, which must be from a different district than the institution being evaluated, visits the institution for two to three days. They assess the building, the management, the learning activities and the staff and conduct interviews with the stakeholders. The regular external evaluation of ECEC settings is carried out on the basis of an "efficiency/value-added index", which shows the evaluation results taking into account the specific context, socio-economic background of the institution, infrastructure, etc. An evaluation report is then prepared and published on the ARACIP website, which is the basis for the final evaluation. The settings receive a quality certificate.

Since 2020, a simplified, de-bureaucratized and also digitalised evaluation for ECEC settings has been in force.

Inclusion agenda

Children with special educational needs and disabilities

Children with special educational needs or disabilities can attend a regular or a special group in a mainstream ECEC setting or separate special education facilities. For the latter, they undergo a detailed assessment. However, the accompaniment and support of the children is always aimed at being able to place them in a mainstream setting.

If necessary, and if supported by a specialist's diagnosis, a child can be assigned a support worker. Regional education boards also coordinate language therapy centres for several schools

and institutions and also employ certified language therapists to provide methodological support to professionals working with children with language difficulties. Above all, more attention should be paid in future to ensuring that professionals are well prepared to integrate children with special educational needs, to involve their parents and to provide an appropriate infrastructure in the institution.

The Draft Pre-University Education Act 2022 (Art. 48, Paragraph (2), 34) provides for a National Centre for Inclusive Education, subordinate to the Ministry of Education, with its own budget, financed from its own revenues and from subsidies from the state budget (Proiect Legea 2022).

Children with a migration background – children from Roma communities

Of the total population in Romania in 2022, only 1.3% had a non-Romanian citizenship; of these, 8.3% came from other EU27-countries. In the case of children under 5 years of age these shares were 1.1% and 10% respectively (Eurostat 2023c). According to the Education Act, ethnic minorities have a right to receive education also in their home language. However, learning Romanian is compulsory for all. The most common additional language in both age groups is Hungarian.

In the national statistics for 2022, only 235 children (0.05%) in kindergartens are listed as Romani-speaking, Romanian is the family language of 92.7%. The majority (94.4%) of children in day nurseries also speak Romanian, with only 5.6% speaking Hungarian (INSSE 2023a, SCL103B). However, it is known that the attendance rate of Roma children is particularly low. Already in 2015, 63% of Roma children aged 3 to 6 years were not enrolled in a kindergarten, compared to 33% of non-Roma children. The project "Ready Set Go!" was implemented from 2014 to 2018 in 11 municipalities in Romania. The main aim was to improve the attendance rate of Roma children through special support and information. By the end of the project, 570 Roma children who previously had no opportunity to attend a kindergarten had attended for two years (Vandekerckhove et al. 2019).

Parental leave arrangements⁴

Maternity leave (*concediul de maternitate*) is granted for 18 weeks. 63 days maximum can be taken before birth. Six weeks after birth are compulsory. The maternity allowance is paid at 85% of the gross income of the last six months before the birth – with an upper limit of 12 times the national minimum gross salary per month, if social security was paid during this period. The birth allowances of RON 2,500 (€505.01) introduced by the city of Bucharest in 2017 will continue, and several cities and municipalities have developed similar programmes.

Fathers are entitled to ten days of fully (without upper limit) paid **Paternity leave** (*concediul de paternitate*). If the father can prove that he has completed a course on child care at an accredited state institution, Paternity leave can be extended further five days.

Parental leave (*concediul pentru creşterea copiilor*) is a family entitlement and lasts until the child is 2 years old. It is paid at 85% of the net household income of the last year before the birth, with a minimum of RON 1,495 (€302) and a maximum of RON 8,500 (€1,717.03) per month. If both parents take Parental leave, one parent must take two months, otherwise the entitlement to paid time is reduced to 22 months. If the parent returns to work before the child is 6 months old, he or she receives a monthly insertion incentive of 1,794 RON (302.40€) or RON 777 (€156.96) until the child's 3. birthday if he/she return to work when the child is 2 years old

⁴ The brief overview in this section is based mainly on the country note for Romania by Raluca Popescu and Rosa Maria Radogna in the *International Review of Leave Policies and Research 2023* (see References).

No data are currently available on the take-up of Paternity leave. In terms of insertion incentive, a slight increase has been observed since 2021 (86,071 persons in January 2023 vs. 83,678 in 2021), but the pre-pandemic level has not yet been reached (91,176 in 2020).

Current challenges for the ECEC system in Romania

Country expert assessment by Laura Ciolan

The main current challenge for the ECEC system in Romania is the very **low level of coverage and provision for the age group 0–3 years**. This is due to a number of issues presented in the ECEC Workforce Profile for Romania. Following the transfer of financing and all logistical matters to the local authorities, without sufficient preparation, some municipalities have not been able to secure resources for this service or they have neglected it. In our view, this low number of services, combined with rather poor educational quality, is directly impacting on the daily lives of the families, on early child development, but also, indirectly, on the national economy. Uniting the delivery of early childhood services for the youngest children, coordinating the educational function of these institutions and securing the necessary funding are the key measures needed for ensuring a better system.

Securing highly qualified professionals for the earliest years represents the second main challenge, since currently the personnel in infant-toddler centres do not necessarily have the appropriate education and training as professionals. Moreover, the providers of IPE are not highly motivated to organise such programmes since there are not many working places available. This vicious circle could be broken if education for the age group 0–3 was clearly regulated and funded and if the institutions were staffed with high quality professionals. Further challenges in this respect can be found in the ECEC Workforce Profile report.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Romania was 19,042,455. It has thus steadily decreased over the past 20 years (2000: 22,455,485; 2010: 20,294,683; 2020: 19,328,838) (Eurostat 2023a).

Total fertility rate

In 2021, the average total birth rate in the EU27 (as of 2020) was 1.53. The highest total birth rate of the 33 SEEPRO3-countries was in France (1.84), the lowest in Malta (1.13). At 1.81, Romania was well above the EU27 average (Eurostat 2023d)⁵.

⁵ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Children under age 6

Table 6

Romania: Number of under 6 year-olds in the total population, 2022

Age	Number of children
Under 1 year-olds	173,783
1 year-olds	188,474
2 year-olds	197,312
3 year-olds	203,772
4 year-olds	208,681
5 year-olds	207,827
Total 0 to under 6 year-olds	1,179,849

Source: Eurostat 2023a

In 2022, 2.9% of the total population were children under 3 years of age, 6.2% were children under 6 years of age. These proportions are above the EU27 average. The shares of children under 3 years decreased in the last 20 years, whereas those of children from 3 to 6 years increased slightly.

Table 7

Romania: Distribution of under 6 year-olds in population by age compared with EU averages, 2000 to 2022, in %*

Year	Comparison Romania/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Romania	3.1	3.1	6.2

Single households with children under age 6

In 2022, just under half of households in Romania (46.6%) with children under 6 years of age were couple households. Households headed by a single parent accounted for only 1.2% of all households, almost all being single mother households (1.1%).

Table 8

Romania: Households with children under age 6, 2022

Household type	Total households	Share of all households, in % ⁺
Total households	1,954,000	
Couple households	852,000	43.6
Other types of households	1,079,300	55.2

⁶ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Household type	Total households	Share of all households, in % ⁺
Total single households	22,700	1.2
Single households, women	20,900	1.1
Single households, men	1,800**	0.1

Employment rates of parents with children under 6 years of age

In Romania in 2022, the employment rate (15-64 years) of men as a whole was 76.1%, that of women 57.3% (Eurostat 2023j).

In 2022, 46.3% of women and 78.5% of men with children under 6 were in employment (18-64 years). The shares of employed fathers were thus well below the average (87.2%) of the 27(2020) EU countries, as were those of mothers than the EU average (63.6%) (Eurostat 2023f).

Table 9a

Romania: Employment rates of parents with children below age 6 compared with other EU countries, 2010 and 2022

	2010	
	Mothers in %	Fathers in %
Romania	57.0	82.4
Highest rate of employment in 27 EU countries ⁷	Denmark: 82.7	Netherlands: 93.4

Children at risk of poverty or social exclusion⁹

In 2022, more than one third (36.3%) of children under 6 in Romania were at risk of poverty or social exclusion. This proportion was significantly higher than the EU27 average (23.3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 34.4% (EU: 21.6%). In 2020, 20.5% of children under 6 suffered from severe material deprivation – also well above the EU27 average of 6.1%. For the total population, it was 14.3% (EU: 4.3%) (Eurostat 2023g, i).

In 2021, the National Alliance for Zero Child Poverty was launched, working in partnership with different social actors to reduce child poverty (Eurochild 2021).

About the author

Tatiana Volkova, psychologist, project manager at WFS Bildungs gUG in Berlin, Germany. She has many years of experience in the Russian research and education system in varying project management, methodological, pedagogical and scientific research positions. Her research interests include topics such as inclusion, psychophysiology, psychology of the child-parent relationship, social-pedagogical support of children with special needs, bi(multi)lingual education, developing teacher competences, quality issues in education.

1. ECEC governance in the Russian Federation

The contemporary system of education in the Russian Federation consists of curricula and state educational standards and administrative regulations for different levels. It also comprises management organisations, both non-departmental and subordinate institutions. Early childhood education and care – mostly called pre-school education in this report – is the first stage in the formal education system of the Russian Federation. The state policy of the Russian Federation in the field of pre-school education is therefore an integral part of the national education system.

According to the federal law "On Education in the Russian Federation" (Parliament of the Russian Federation 2012), pre-school education can begin when children reach the age of 2 months. Primary school education begins when children reach the age of 6 years and 6 months. At the request of the parents or legal representatives, children can be admitted to primary school at an earlier or later age. For example, they may start later in the case of health reasons, but no later than 8 years of age.

In 2013, on the basis of the Federal Education Act, a Federal State Educational Standard for Pre-school Education (FGOS, Ministry of Education and Science 2013a) was approved.

The main mechanisms for the implementation of state measures are defined in the Federal Education Act (Part 2 of Article 89), which states that the management of the education system, among other things, includes:

- Building a network of federal executive authorities, executive authorities of the Russian Federation and local self-government bodies
- Implementing strategic planning for the development of the education system
- Adopting and implementing federal and regional reform programmes aimed at developing the education system.

All educational programmes at pre-school, primary general, basic general and secondary general education levels build on each other. By order of the Ministry of Education of the Russian Federation No. 1028 dated November 25, 2022, the federal educational programme for pre-school education was approved. The Federal Educational Programme for Pre-school Education is a standard that was developed in order to create a unified federal educational framework for the upbringing and development of pre-schoolers and to provide children and parents with equal and high-quality conditions for pre-school education throughout Russia. The programme came into force on January 1, 2023 and will be followed by all kindergartens as from September 1, 2023 (Ministry of Education of the Russian Federation 2022).

Individual pre-school settings independently develop and adapt their educational programmes in reference to the Federal State Educational Standard (FGOS) and in accordance with the requirements of the Federal Educational Programme for Pre-school Education. Different programmes can be developed for different groups of children with different lengths of attendance as well as adaptive programmes for children with special needs. The specific content depends on the age and individual characteristics of children and can be implemented in various types of activities (communication, play, cognitive research activities).

Attending a pre-school setting is not compulsory.

Although the legal framework is in a state of flux, ECEC is currently a unified system beginning at the age of 2 months. ECEC for children aged 0–3 years is now officially part of the system and

its regulations and comes under the responsibility of the Ministry of Education. Since 2018, the Ministry of Education and Science is split into the Ministry of Education and the Ministry of Science and Higher Education. Article 67 of the Federal Law "On Education in the Russian Federation" declares that enrolment in an ECEC institution can begin when children reach the age of two months (Parliament of the Russian Federation 2012).

Controlling organs are now separated into different state agencies:

- Responsible for the quality of education (legal regulations, control and supervision of educational activities, recognition of foreign qualifications) is the Federal Service for Supervision in Education and Science (*Rozobrnadzor*), a sub-division of the Government of the Russian Federation.
- The Federal Service for Supervision of Consumer Rights Protection and Human Welfare (*Rospotrebnadzor*) inspects kindergartens regarding nutrition, hygienic standards, rooms and equipment. It also checks the documentation (e.g. medical certificates of staff) of an ECEC institution.

In the education system of the city of Moscow (Moscow has the status of a city of federal significance), there are some significant differences from the general all-Russian education system and from 2022, the city is developing its own educational standard.

As part of the implementation of the Decree of the Government of Moscow No. 86 dated March 22, 2011 (Government of Moscow 2011), an organisational reform was held which created so called "educational complexes". These units comprise (several) schools (sometimes including vocational education and training schools) and pre-school institutions located in the same neighbourhood. In some cases, an educational complex may consist of up to 10,000 children. The term "school" refers to all the buildings included in the educational complex. Currently (2023), all (municipal) kindergartens are part of an educational complex. The main goal of such a structural model is to create, in a single educational space, a system of continuous development, education and upbringing of children from 2 months or 1½ years (depending on the form of early childhood education chosen by the family) to 18 years of age. Pre-school children continue to attend a kindergarten building in this "school" complex (Belousova and Volkova 2023).

The director of such an educational complex is the director of the lead school in the complex, and a senior methodologist is appointed to manage the pre-school groups (kindergartens). Mostly these are former kindergarten directors who changed job positions after the establishment of such a complex (Volkova et al. 2021).

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Education sector

The ECEC workforce in educational institutions (kindergartens) comprises the following categories of staff: Educators (= Kindergarten Teachers), Senior Educators (= Senior Kindergarten Teachers), Music Teachers, Physical Education Instructors, Speech Therapists, Special Needs Teachers, Educational Psychologists and other pedagogical workers.

The **Kindergarten Teacher/Pre-primary Teacher** (*pedagog doshkol'nogo obrazovaniy/vospitateľ*) – often called 'Pre-school Teacher' in official translations – is directly responsible for the everyday activities and health of the children. They plan and hold classes and organise games,

walks and leisure time activities according to the children's age. They establish conditions in the group for a successful implementation of the curricular framework. Together with the Music Teacher and Sports Teacher, they prepare festive days, entertainment and sports activities. In addition, they work with parents on issues of bringing up children and motivate them for active cooperation with the kindergarten. They also coordinate the preventive vaccinations which children receive in the pre-school institution with parents.

In 2013, an Order was issued by the Ministry of Labour and Social Protection of the Russian Federation (No. 544n dated October 18, 2013, revised 2021) "On approval of the Professional Standard 'Teacher'", which applies to pedagogical work in all educational institutions, including kindergartens and includes a section on the "Pre-school Teacher" (Ministry of Labour and Social Protection of the Russian Federation 2013). In accordance with the current legislation since January 1, 2017 the Professional Standard has to be applied by employers in the following areas: development of personnel policy and personnel management, organisation of training and certification of employees, the conclusion of employment contracts, the development of job descriptions and the establishment of wage systems (Ministry of Labour and Social Protection of the Russian Federation 2014). In everyday practice, when hiring Pre-school Teachers, employers are more often guided by the unified qualification handbook of positions of managers, specialists and employees, section "Qualification characteristics of positions of education staff" (Ministry of Health and Social Development of the Russian Federation 2010 (revision 2011)). Currently, the Professional Standard "Teacher" (and the requirements that Pre-school Teachers must meet) tends to be applied only when certifying educators.

Junior Kindergarten Teacher / Kindergarten Teacher Assistant (*mladshiy vospitatel' / pomoshchnik vospitatelya*)

Junior Kindergarten Teachers support Kindergarten Teachers in their work (including participation in conducting classes organised by the Kindergarten Teacher), whereas the Kindergarten Teacher Assistants do not participate in educational activities. The latter often only have a school leaving certificate. Otherwise, their duties are similar:

- Wet cleaning of the group, locker rooms, sleeping areas and other premises twice a day
- Ventilating the group and sleeping area in accordance with the established schedule, observing the quarantine disinfection regime
- Helping the caregiver change children's clothes for sleeping time, physical education and holiday activities
- Under the guidance of an educator, encouraging cultural and hygiene skills and habits in children, cleaning the play area, tidying beds
- Preparing material for classes with children together with educators, cleaning up after them, helping to take children to clubs, classes and other activities
- Controlling the cleanliness of children's bed linen, towels and replacing them according to schedule
- Monitoring the safety of the property of the group and the kindergarten
- Making requests in a timely manner if malfunctions of furniture or plumbing equipment are detected
- Checking that no food or household chemicals are in places accessible to children
- Conducting group and sleeping room window cleaning twice a year
- Sanitising carpets according to schedule
- Helping in the kitchen if no kitchen worker is available
- Performing the duties of caregivers occasionally in their absence
- Staying with the children during quiet hours if the educator is, for example, at a meeting

- Helping to look after the outside area of the kindergarten (e.g. gardening)
- Cleaning outside play areas during the summer
- Assisting in the preparation of matinees (calendar-themed holidays) and various events
- Monitoring their own appearance and that of the children.

Music Teachers (*pedagog po musike*) organise and conduct music classes, literary and musical matinees or evenings; identify musically gifted children and work with them individually and in a group; participate in morning gymnastics, physical education and entertainment; provide musical accompaniment to organised games for children in the second half of the day; conduct musical and didactic, theatrical and rhythmic games.

Sports Teachers conduct physical education classes, during which they are fully responsible for the safety of pupils; supervise the physical activity of children during the day; control the hygienic conditions for the classes together with the nurse; organise information sessions with parents on issues of physical education. Like other teachers, the Physical Education Teacher is guided by approved programmes that take into account the age level of the children and the individual capabilities of each child.

Swimming Instructors (if the kindergarten has a swimming pool) conduct classes in the pool in accordance with the programme. Very young children are taught not to fear water, and from middle pre-school age they begin learning different styles of swimming (crawl, breaststroke, "dolphin"). The instructor is responsible for the safety of the children in the water. Together with the nurse, he/she controls the hygienic condition of the pool. The instructor helps children with undressing and taking a shower and accustoms them to strict adherence to hygiene requirements.

Childcare sector

Public nursery centres (*yaslye*) are integrated into kindergartens and in these particular settings the children are educated and cared for by **Kindergarten/Pre-primary Teachers** (*doshkolnyj pedagog/vospitatel*) and **Junior Kindergarten Teachers** or **Kindergarten Teachers' Assistants**. This means that these children have access to the same qualified staff as older children. However, in privately-run childcare settings, the staffing situation is different as most of these settings do not have to adhere to government regulations. On the one hand, some of these elite settings attract highly educated staff through higher salaries. On the other hand, some of the very small private settings employ staff who have little more than an Assistant qualification.

Childcare worker/Nanny: By the Order of the Russian Ministry of Labour dated December 05, 2018 No. 769n (Ministry of Labour and Social Protection of the Russian Federation 2018), the Professional Standard 'Nanny (Child Care Worker)' was approved. These workers belong to the category "Supervising and caring for children in organisations and at home" (i.e. caring for infants up to the age of 1; caring for young children from 1–2 years; looking after children of pre-school age from 3–6 years; babysitting and caring for children of pre-school age with disabilities). However, this position does not apply to kindergarten staff.

Nurses (non-teaching staff) must have a secondary education specialising in "Nursing" or "General Medicine" with an additional certificate "Nursing in Paediatrics". The Head Nurse may need additional certificates, determined by the leader of the pre-school setting. They can work in nursery centres or in kindergartens.

Table 1 shows the whole range of staff employed in ECEC settings in both the education and childcare sectors and also categorises the core professionals (i.e. staff with group or centre responsibility) according to one of five ECEC profiles adapted from the original SEEPRO study (see Box 1 at end of this section).

Table 1

Russian Federation: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits ¹ EQF level ISCED level
Pre-primary education sector				
Kindergarten Teacher / Pre-Primary Teacher <i>Doshkolny pedagog/Vospitatel</i> Profile: Pre-primary Education Professional	<i>Detskij sad</i> Kindergarten public and private 2/3–5/6 years ² <i>Gruppy kratkovremennogo pribyvanija</i> Sessional services 1½–4 years	Core pedagogue with group responsibility	2–7 years	3-year post-secondary vocational qualification in the field of pedagogy and early childhood education ECTS credits: n/a ³ EQF level: n/a ISCED 2011: 4 Optional, not required: University degree ECTS credits: n/a in Russia EQF level: n/a ISCED 2011: 6
Junior Kindergarten Teacher / Kindergarten Teacher Assistant <i>Mladshiy vospitatel'/pomoshchnik vospitatelya</i>	<i>Detskij sad</i> Kindergarten public and private 2/3–5/6 years	Non-specialist co-worker	2–7 years	3-year post-secondary vocational qualification or only a school leaving certificate and professional training in the field of education and pedagogy (for Kindergarten Teacher Assistant)

¹ Some parts of the Russian higher education system are not aligned with the Bologna system (e.g. ECTS credits). Also, references to the European Qualifications Framework (EQF) or the International Standard Classification for Education (ISCED) are not commonly used. The ISCED levels stated in this report are estimated classifications.

² **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the Russian Federation the corresponding formats are **0–2** years and **3–5/6** years since children usually start school when they are 6 years of age. But it is also possible to start earlier or later.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)

- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

The administration of the pre-school institution includes the Kindergarten Head, the Senior Educator (Kindergarten Teacher) and the Deputy Head.

According to the Federal Act on Education, Centre Heads/Principals perform managerial tasks and are responsible for pedagogical, financial and legal issues. They are not involved in the daily educational programme. An important duty includes managing the work with parents, who can, for example, seek advice from the Principal and propose own initiatives for working with children in terms of safety precautions or for organising additional educational services and activities.

The recently established “educational complexes” in the Moscow area (see *Chapter 1*) are managed by one director – the director of the School. Heads become administrators/heads of pre-school units, senior methodologists, etc. according to the specific structure of the organisation. As with all staff positions, they have to have the appropriate certification/attestation to prove their knowledge and skills.

2.3 Centre-based posts of responsibility

Senior Kindergarten Teachers are responsible for supervising the implementation of educational programmes and educational/pedagogical processes in the kindergarten. Together with the Kindergarten Head, Senior Kindergarten Teachers are responsible for managing the kindergarten team, including:

- Participating in the selection of personnel, in the development and implementation of development programmes and pedagogical plans
- Providing groups with teaching aids, games, toys
- Organising cooperation with other early childhood institutions, schools, children's institutions, museums, etc.

Senior Kindergarten Teachers conduct professional development activities for the teaching staff: open classes for pedagogical workers, seminars, individual and group consultations. In addition, they participate in work with parents.

Deputy Head for Educational Work: In some cases, this position can be found in the staff list of a kindergarten instead of a Senior Kindergarten Teacher. However, there is a difference: a Senior Teacher deals exclusively with issues relating to the educational process whereas the focus of the work of a Deputy Head is on administrative and management issues.

The **Deputy Head of the administrative and economic department (supervisor)** manages the maintenance of the kindergarten. They monitor the condition of the premises, are engaged in the purchase of furniture, utensils, equipment and toys. They also supervise work on the improvement and landscaping of the territory and monitor the implementation of fire prevention measures and safety conditions for children and adults. Before taking up such a position, the relevant attestation is needed.

2.4 Co-ordinating and supervisory staff

Representatives of various state authorities (labour inspection, fire supervision, prosecutor's office and police, education committees) are authorised by the regulator to implement methods

of monitoring the quality of work in kindergartens. The federal government agency *Rospotrebnadzor* is responsible for assessing pre-school educational organisations for compliance with established standards.

2.5 Specialist support staff

Educational Psychologists have the task of supporting the intellectual, somatic and social well-being of children in pre-school institutions. This work includes:

- Helping children, parents and teaching staff to solve specific problems
- Conducting psychological diagnostics, determining the degree of disorders (mental, physical, emotional) in the development of pupils, identifying violations of social behaviour development
- Providing the relevant psychological and pedagogical support
- Participating in the planning of developmental and remedial educational activities
- Promoting the development of creatively gifted students
- Shaping the psychological culture of teachers, as well as children and their parents.

Speech Therapists are responsible for:

- Ameliorating disorders in the development of children's speech
- Examining pupils to determine the characteristics of disorders
- Conducting group and individual remedial sessions.

In some kindergartens, this position is held by a teacher with qualifications in another specialist field (sport, ecology, fine arts, theatre and drama, rhythmic, teaching a foreign language, etc.). They are part of the regular staff of a kindergarten and may receive a bonus for extra work.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

In 2022, 75.3% of pre-school education teaching staff in Russia were Kindergarten Teachers. They are the core professionals in terms of the educational work with children in pre-school educational institutions. The remaining 24.7% of qualified staff are specialist support professionals such as Speech Therapists, Sports Teachers, Coordinating Teachers, etc.

Table 2a indicates that in 2022, just over half of regular Kindergarten Teachers and the greater majority of Senior Kindergarten Teachers had a university degree. In terms of the specialist support staff, the greater majority had a higher education qualification. *Table 2b* shows the absolute numbers of ECEC staff.

Table 2a

Russian Federation: Structural composition of the workforce in the pre-primary education sector

Staff categories	Proportion of workforce, 2022, in %	
Kindergarten staff with university degree	Kindergarten Teachers	51.4
	Senior Kindergarten Teachers	89.5
Specialist support staff with university degree	Special Needs Teachers	98.1
	Speech Therapists	97.9

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Education sector

In accordance with Part 1 of Art. 46 of the Federal Law of December 29, 2012 No. 273-FZ “On Education in the Russian Federation” (Parliament of the Russian Federation 2012), persons with a secondary vocational or higher education and meeting the qualification requirements specified in the qualification reference books (Ministry of Health and Social Development of the Russian Federation 2010) and (or) professional standards (Ministry of Labour and Social Protection 2013) have the right to engage in pedagogical activities.

Qualification requirements for the positions of "Educator" (Kindergarten Teacher) and "Junior Kindergarten Teacher (Kindergarten Teacher Assistant)

In 2010, a Unified Qualification Directory for the positions of managers (Kindergarten Heads), specialists (Kindergarten Teachers and specialist support staff) and employees (non-pedagogical workers) was approved through an Order of the Ministry of Health and Social Development of Russia dated August 26, 2010 No. 761n. The section in the Directory on "Qualification requirements for the positions of Educators" states the following requirements for Educators, Senior Educators and Kindergarten Teacher Assistants:

Educators (Kindergarten Teachers) – a higher vocational education or secondary vocational education in the field of Education and Pedagogy and no requirements for previous work experience (Ministry of Labour and Social Protection of the Russian Federation 2016)

Senior Educators (Senior Kindergarten Teachers) – higher professional education in the field of study "Education and Pedagogy" and relevant work experience for at least five years

Junior Kindergarten Teachers / Kindergarten Teacher Assistants – completed secondary general education and vocational training in the field of education and pedagogy without specific requirements for work experience. The Kindergarten Teacher Assistants/Junior Kindergarten Teachers belong to the category of ‘educational support personnel’.

Currently, the activities of Kindergarten Teachers are regulated by two main documents: The Professional Standard ‘Teacher’ (section Professional Standard ‘Pre-school Teacher’) and the Federal State Educational Standard for Pre-school Education (FGOS DO).

The **Professional Standard ‘Teacher’**, which was approved in 2013 (Ministry of Labour and Social Protection of the Russian Federation 2013), is used by employers to organise and manage all aspects of employment (see *Chapter 2.1* for details). It regulates the work of kindergarten teaching staff and the requirements for professional knowledge and skills, including a description of performance competences needed to carry out job duties. It also includes requirements regarding compliance and mandatory duties.

Requirements for job applications as Kindergarten Teacher according to the Professional Standard ‘Teacher’

Option 1: Higher or secondary vocational professional education in "Education and Pedagogical Sciences" (profile pedagogical education).

Option 2: Relevant general higher or secondary vocational education plus additional professional education with a specific profile.

Specific prerequisites for taking up employment are the absence of a criminal record and diseases (with the permission of the medical commission).

The following gives a brief description of the initial professional education of Kindergarten Teachers, Kindergarten Heads and specialist support staff in the kindergarten sector.

Childcare sector

Although the childcare sector for under 3 year-olds is not as regulated as the pre-primary sector and a three-year post-secondary vocational education is sufficient for working in settings for under-threes, staff mainly have the same qualifications as their colleagues working with older children in order to be more flexible in terms of job opportunities.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

The Professional Standard (Ministry of Labour and Social Protection of the Russian Federation 2013) contains a description of the professional activities and competences of Kindergarten Teachers as well as the knowledge and skills necessary to perform job duties. These are summarised below.

Professional duties of Kindergarten Teachers⁴

According to the Professional Standard 'Teacher', Kindergarten Teachers have the following professional duties:

- Regulating children's behaviour to ensure a safe educational environment
- Implementing modern, interactive forms and methods of educational work
- Setting educational goals that contribute to the development of children, regardless of their abilities and character
- Designing and implementing educational programmes
- Providing educational opportunities for various types of activities for children (educational, play, work, sports, artistic, etc.)
- Designing situations and events that develop emotions and values (the culture of experiences and value orientations)
- Creating and maintaining the atmosphere and traditions of life in an educational organisation
- Developing children's cognitive abilities, independence, initiative, creativity; an attitude of citizenship, ability to work and live in the conditions of the modern world; a healthy lifestyle culture
- Developing tolerance and behaviour skills in a changing multicultural environment.

To perform these duties they need **competences** such as:

- Providing educational activities for children, taking into account cultural differences, gender, age and individual characteristics
- Communicating with children, respecting their dignity, understanding and accepting them
- Managing a group in order to involve children in the process of education and upbringing, motivating their educational and cognitive activities
- Analysing requirements in the group, maintaining a professional, friendly atmosphere in the children's group
- Protecting the dignity and interests of pre-schoolers, helping children who find themselves in a conflict situation and / or adverse conditions
- Finding the value aspect of educational knowledge and information, ensuring its understanding by children
- Organising excursions, etc.
- Collaborating with other educators and specialists in order to solve educational problems
- Utilising constructive educational efforts of parents (legal representatives)

⁴ Author's summary based on the Professional Standard 'Teacher', section "Pre-school teacher" (Edition 2021).

- Supporting families in solving issues of bringing up children.

Tasks of Kindergarten Teachers when implementing early education programmes

- Participating in the development of the main general educational programme of the setting in accordance with the Federal State Educational Standard (FSES) of pre-school education
- Participating in the creation of a safe and psychologically comfortable educational environment; sustaining the emotional wellbeing of the child
- Planning and implementation of educational work in a group in accordance with the FSES of pre-school education
- Organising and carrying out pedagogical monitoring of children’s development based on the educational programme
- Participating in the planning and adaptation of educational tasks (together with a psychologist and other specialists) based on the results of monitoring, taking into account the developmental characteristics of each child in the group
- Implementing the pedagogical recommendations of specialists (psychologist, speech therapist, special needs teacher, etc.) in working with children who experience difficulties in mastering the programme
- Supporting psychological readiness for schooling
- Organising activities for young children: topics, cognitive tasks, games and role-playing, establishing rules, creating diverse opportunities for the development of children’s free play, including the provision of time and space for playing
- Organising constructive interaction among children in various activities; creating conditions for children to freely choose activities, participate in joint activities, share materials.

As a prerequisite for this, Kindergarten Teachers need the following **competences**:

- Organising appropriate activities for young children
- Supporting children’s physical, cognitive and personal development in accordance with the educational programme
- Utilising the methods and means of analysing psychological and pedagogical monitoring assessing the developmental results of educational programmes in children and the appropriate support necessary for the next levels of education;
- Performing all types of developmental activities for pre-schoolers (playing, productive, cognitive, discovery-oriented)
- Building partnerships with parents, utilising methods and means for their psychological and pedagogical education
- Using information and communication technologies necessary and appropriate for the planning, implementation and evaluation of educational work.

In accordance with the Professional Standard ‘Teacher’ (2013 version), Kindergarten Teachers must have the following knowledge and take it into account in their professional activities:

- Fundamentals of legislation on the rights of the child, laws in the field of education and the Federal State Educational Standard for Pre-school Education
- History, theory, patterns and principles of education systems, the role and place of education in the life of the individual and society

- Fundamentals of the methodology of educational work, the basic principles of the activity approach, types and techniques of modern pedagogical technologies
- Specifics of pre-school education and the fine points of organising work with young children
- Main psychological approaches: cultural-historical, activity and individual; fundamentals of pre-school pedagogy, including classical systems of pre-school education
- General patterns of child development in the early years
- Features of the formation and development of children's activities in the early years
- Fundamentals of the theory of physical, cognitive and personal development of children in the early years
- State of the art trends in the development of pre-school education.

4.3 Alternative entry and qualification routes, system permeability

Persons with a non-pedagogical diploma who wish to work as a Kindergarten Teacher in a kindergarten have to take professional retraining courses lasting between 1½ and 10 months, depending on the programme and intensity of training. The minimum number of hours is 250.

Professional retraining courses include the following curricular areas: pedagogical basics; theory and methods of education; Federal Standard for Education; didactics and methods of education research and science; pre-school pedagogy; psychology of the early years; methods of teaching in kindergarten.

Persons with a pedagogical diploma without a specialisation in pre-school pedagogy can also be employed in a kindergarten. In reality, they often require specialised training which can take place both online and offline. The minimum length of the advanced training programme is 16 hours, whereas the minimum number of hours for a complete professional retraining programme is 250, as already stated (Order of the Ministry of Education and Science of the Russian Federation 2013b).

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Guided workplace experience is an integral part of the initial professional education of prospective Kindergarten Teachers.

There are several types of practica for students:

1. **Educational and fact-finding.** These allow the student to move from theory to real experience and actually learn how the daily work of a Kindergarten Teacher is conducted. The main tasks of the student are to get acquainted with the institution; to understand how the work is organised; to observe how the teacher works with children. At the end of the practicum, the student is expected to conduct several independent classes with children under the supervision of the Kindergarten Mentor. The main purpose of this type of practice is to gain initial work experience.
2. **In-depth.** This kind of practicum involves a deeper study of the activities of the teacher; considerable participation of the student in the process of working with children and self-reflection of this involvement.
3. **Pre-diploma.** The student's final practicum is mainly focused on developing the necessary knowledge and skills for writing and defending a graduation project for the diploma award.

The first two types set similar goals and objectives for trainee Kindergarten Teachers. The main tasks are:

- Acquaintance with the educational institution and legal documentation
- Acquisition of knowledge on safety management
- Acquaintance with the daily routines in kindergarten
- Evaluation of educational processes in kindergarten
- Study of job descriptions of Kindergarten Teachers
- Observation and analysis of the work with children
- Study the documentation of the group
- Participation in the educational process as an assistant teacher
- Learn about the tasks of Kindergarten Heads.

The third type of practicum pursues other tasks than educational:

- Obtaining the necessary experience to start a professional activity
- Checking the readiness of a student for independent work as a Kindergarten Teacher
- Preparation for writing a graduation thesis.

As a result of this final practicum the student will be expected to:

- Be able to carry out independent professional activities in kindergarten
- Effectively set and competently solve pedagogical problems
- Know and be able to use the basic pedagogical methods and techniques
- Effectively and rationally use the material and methodological base of a particular kindergarten
- Know how to interact with parents
- Use a creative approach when planning educational work with children
- Use psychological and pedagogical knowledge when interacting with individual children and the team
- Develop an individual style of teaching
- Develop scripts for matinees and theatrical performances.

Individual practicum plan: The plan for the implementation of practical activities is drawn up jointly by the supervisor and the student and is approved by the Kindergarten Head or Deputy Head.

The supervisor prescribes in detail in the plan on what dates and days the trainee must complete certain tasks:

- Master the theoretical part of the practice (get acquainted with the structure of the kindergarten, study regulatory documents, undergo safety briefing, etc.)
- Carry out practical work (classes on motor skills, logic, modelling, physical exercises, development of musical abilities, etc.)
- Analyse their activities within the period of work in kindergarten and write a report.

The result of the implementation of the individual plan is a **practicum diary**, which is an extended calendar plan, confirmed by the personal signature of the supervisor from the kindergarten.

The terms of the practicum are established by the IPE institution in accordance with their curricula. The evaluation of practical activities is carried out on the basis of a written report of the student trainee and the report of the responsible supervisor from the kindergarten.

Stages of student practice: The student's practice period is divided into three stages:

- **Orientation.** This is the period of student familiarisation with the practicum programme and a specific pre-school educational institution, the trainee's adaptation to the professional and pedagogical environment: children, teachers, kindergarten administration.
- **Basic.** This implies solving the professional and pedagogical tasks of the student which are reflected in the practicum plan. As a rule, a student needs to conduct five different classes for pre-schoolers (for physical, environmental, mathematical, artistic and speech development), conduct pedagogical communication with children on a daily basis and demonstrate the ability to organise and supervise a role-playing game, a walk, an evening of entertainment.
- **Analytical.** Summing up the results of teaching practice, writing a detailed report on practical activities.

Practicum reports comprise a diary; feedback or details from the Kindergarten Supervisor; written report of the trainee. The practicum diary is an extended practicum schedule with student comments and a supervisor's signature under each completed item. The evaluation then is written by the Kindergarten Supervisor and certified by seal and signature of the Kindergarten Head. The student's report on the practicum must contain the following sections:

- Details of the kindergarten: name and address, types of groups and age category of pupils, priorities and mission, principles of work, material and technical equipment. Optional attachments are the Kindergarten Teacher's job description and other documents.
- Description of work in the kindergarten for the practicum period: plan of each lesson, lesson objectives, children's wellbeing, results, teacher's comments, shortcomings during the process of holding the lesson, amendments
- Analysis of the educational and pedagogical process in a particular pre-school educational institution. Suggestions for its improvement. This section is only required for the third type of practicum (pre-diploma).

Place of internship and labour regulations: Students who combine education with work activities have the right to undergo educational, industrial, including pre-diploma practice, at the place of work. The corresponding contract for training is drawn up in an agreement between the educational institution that sends a student to practice and the placement kindergarten. The specified contract determines the procedure for the internship. At the same time, in the organisation to which the student is sent for internship, it is recommended to issue an order for the student to undergo internship.

An obligation to pay for the practicum of a student is not established by law. The legislation allows for the possibility of the absence of an employment contract between a student-trainee and an organisation. In accordance with paragraph 15 of the "Regulations on the practice of students mastering the basic professional educational programmes of higher education", if there is a vacant position in the organisation (in this case a kindergarten) where the work meets the requirements for the content of the practice, a fixed-term employment contract can be concluded with the student to fill such a position (Ministry of Education and Science of the Russian Federation 2015)

When deciding whether it is necessary to sign an employment contract with a student trainee, one must proceed from whether labour relations actually arise between the organisation and the student, or whether the student is only studying during the internship and whether there is a vacancy in the organisation. If, during the internship, the student is entrusted with a specific

type of assigned work in a vacant position and undertakes to adhere to the internal labour regulations, such relations, subject to Article 15 of the Labour Code of the Russian Federation, must be qualified as labour in accordance with the requirements of the current legislation by concluding an employment contract. In such a case, the student receives remuneration (Articles 15, 135 of the Labour Code of the Russian Federation 2001 (Parliament of the Russian Federation 2001)). However, if a student is only studying, an employment contract is not concluded.

6. Continuing professional development (CPD) of ECEC staff

Legislation and regulation

All teachers, including Kindergarten Teachers, are required by law to participate in CDP courses (also through remote study) of at least 16 to 250 hours' duration once every three years. The duty is enshrined in the Order "On approval of the Procedure for organising and implementing educational activities for additional professional programs" (Ministry of Education and Science of the Russian Federation 2013b). In accordance with the law "On Education in the Russian Federation", pedagogical workers have the right to additional professional education in the field of pedagogical activity at least once every three years (article 47, part 5 Parliament of the Russian Federation 2012). The same law (paragraph 5, part 3 of Art. 28) states that the organisation of additional professional training for teachers is within the competence of an educational organisation. According to the Labour Code of the Russian Federation, in order to exercise the right to additional training, employer and employee enter into an agreement for receiving education on the job or with a break from work (Article 198 of the Labour Code of the Russian Federation 2001; Parliament of the Russian Federation 2001).

Main types of CPD

There are different types of advanced training for Kindergarten Teachers. They can take place both online and offline. For example:

- Short lectures and seminars up to 24 hours
- Short courses up to 72 hours dealing with highly specialised topics. In general, the courses use an integrated approach in which theoretical lessons alternate with practical exercises.
- Long courses from 100 hours: These are more general programmes that address a large number of issues.
- Internships and joint scientific activities. This format implies a practical part.

At the end of any formal training, certification is carried out. If the teacher successfully passes it, they receive a certificate of advanced training.

CPD providers

These may be any of the following:

- Government chartered centres and institutes of continuing professional education: These offer various topics with a narrow and general focus. Usually, both the lecturers and developers of such institutions are practitioners, conveying pedagogical experience and not only theoretical knowledge.

- Private providers for educational services: They need to be licensed by the local ministry of education.
- Higher educational institutions: such institutions teach doctoral candidates and post-doctoral fellows who are engaged in research and development in the field of advanced education. Most programmes require presence in person.
- Research institutes, laboratories and research centres: They offer a large selection of short courses. The emphasis in these courses is on the theoretical part. When choosing a course, it is important to make sure that the course programme complies with the federal state education standard (FSSES) and professional standards.

Leave entitlement

Teachers try to take their refresher courses during working time. These may be on-the-job courses (for example, in the evening after work or at weekends); or leave with a break from work, when the employer provides teachers with additional study leave for the duration of their studies. All teaching staff have more vacation than employees in other sectors – between 42 to 56 calendar days. Teachers working in a regular kindergarten are granted 42 days of leave. If the teacher works with groups of children with disabilities and other special needs, the leave is increased to 56 days. Teachers working in the Far North and areas equated to it are granted an additional 16 to 24 days.

Obligatory or optional?

Kindergarten Teachers can take advanced training courses at their own request (optional) or at the request of the Centre Leader (obligatory). They are obliged to participate in CPD as often as required by the employer and go through programmes directed by the administration. The training programme is chosen by the management, taking into account their own plans and strategies for the development of the pre-school institution. Attendance at CPD courses is a mandatory prerequisite for submitting an application for a status and salary upgrade.

Funding support

For all forms of mandatory advanced training as required by law, the costs are covered. For advanced training required by the management of the pre-school organisation, the costs are paid and the Kindergarten Teacher retains the position and average salary if absence from the workplace is necessary. If the Kindergarten Teacher wishes to participate in an additional programme on a specific topic, but there is no obligation or need on the side of the employer, then teachers have to cover the costs themselves.

Access to CPD

The Law "On Education in the Russian Federation" (§ 5, part 3 of Art. 28) states that the organisation of additional professional training for teachers is within the decision-making competence of an educational organisation. Teachers can take advanced training courses at their own request or at the request of the kindergarten management. Only those educators who have a higher pedagogical education or a post-secondary education in the field of Pedagogy can take advanced training courses. Those with lower or non-pedagogical qualifications do not have these rights. Instead they can take professional retraining courses, which are another type of professional education.

Content focus

The content of seminars differs according to the profile of the CPD provider and by region.

Current popular topics are:

- Implementation of the federal state standard for pre-school education
- Work profile of educators in the education and upbringing of children with special health conditions in the context of the implementation of the federal educational standard
- Psychological and pedagogical support for young children
- Working with education quality assessment tools
- Technologies of effective communication in the work of an Educator

Topics which are gaining in importance are health prevention, physical wellbeing and burnout prevention

CPD and career advancement

Attestation of teachers

Attending formal CPD courses plays an important part in preparing for the teacher's attestation. All teaching staff must be certified for suitability for the position held. This procedure is mandatory for all teaching positions. Attestation is carried out in order to establish the so-called first qualification category or the highest qualification category. This is performed on initiative of the employee and confirms their professional level. The procedure for assigning a category is determined by an order of the Ministry of Education.

The main goal of the attestation of teaching staff is to motivate teachers for professional growth and maintain the quality of education. In addition, the Ministry of Education identifies several more specific tasks:

- Stimulating continuous improvement of the level of qualifications of teachers
- Identifying the need for additional education among employees
- Increasing the efficiency and quality of teaching activities
- Developing mentoring and methodological assistance.

The qualification category is the main indicator of a teacher's professionalism and a prerequisite for career advancement. It reflects the teacher's competence and influences the level of payment. Employers pay special attention to the category when a candidate applies for a vacancy.

Career beginners start with the status of a **young specialist**. This is seen as the entry level. After starting work, a Kindergarten Teacher can apply for an upgrade and for the attestation. The attestation commission pays attention to which advanced training courses the teacher has taken, participation in professional pedagogical competitions (for example, the All-Russian professional competition "Pre-school Teacher of the Year of Russia" or other intracity, regional professional events), participation together with children (sometimes also with their parents) in any sports and creative competitions, availability of articles in specialised publications and awards additional points for such kind of activities and achievements.

The qualification categories are approved by a commission affiliated to the regional ministry of education. The decision on assignment is made at the regional level. In the city of Moscow, for example, the centre of independent diagnostics of the Moscow Centre for Educational Quality is responsible for assessing and testing professional competences (suitability for the position held). This assessment is a useful tool for both self-evaluation and for motivating teachers to

improve their skills level. The results are published on the Centre's website. Qualification categories are documented in the work book and are retained until their expiry date when transferring to another organisation, including one located in another region of the Russian Federation. It stimulates the employee to pay attention to continuing professional development over a longer period of time. It is much easier to apply for a job in a private kindergarten for a well-paid position if you are highly qualified. Moreover, to work in a private kindergarten with a specific pedagogical approach, such as the Montessori system or Waldorf pedagogy, certified proof of suitability can be studied in advanced training programmes.

In addition to the fact that advanced training is provided for by law, it is also useful for the teachers themselves. Specialists who regularly attend refresher courses provide more professional services and receive higher pay for their work.

Advanced training allows Kindergarten Teachers to:

- Feel more confident at work
- Extend work responsibilities, e.g. organising classes in drawing or English for an additional fee
- Work with children with special needs. These Educators receive 15-20% more salary and 14 additional vacation days.
- Get a job in a private kindergarten, where the salary level can be higher than in a public institution
- Take up a post in a specialised kindergarten – for example, in a kindergarten that works according to the Montessori system
- Upgrade basic qualifications.

From 1st September 2023, a new order of the Ministry of Education of the Russian Federation "On approval of the procedure for attestation of teaching staff of organisations engaged in educational activities" came into force (and is valid until the end of August 2029).

In accordance with the new order, the following changes have been made to the attestation procedure for teaching staff:

- Qualification categories established from September 1, 2023 will be valid with no fixed term of duration.
- Qualification categories established prior to the entry into force of the Order are retained for the period for which they were established. If a Kindergarten Teacher is in the first qualification category, the deadline for applying for the highest qualification category is now without a specific time limit for the application to be made. In cases of a refusal to establish the highest qualification category, the employee retains the first qualification category, being able to apply for the highest category after one year. The basis for establishing the first and highest qualification categories has not changed.
- Attestation for compliance with the position held for employees who do not have qualification categories is, as before, mandatory and takes place within the educational organisation every five years.
- Attestation commissions consist of at least five people, excluding the Centre Head. For the first and highest qualification categories the commission should include at least seven people, including a representative of the relevant trade union and specialists to carry out a comprehensive analysis of the professional activities of teachers.
- New qualification categories have been introduced: "Teacher-Methodologist" and "Teacher-Mentor".

- The list of information specified in the application has been updated. Teachers now have to indicate information about the level of education (qualification), the results of professional activity, the available qualification categories, and also indicate the position for which they want to be certified for compliance with the position held for employees who do not have qualification categories.
- The presence of awards, titles, insignia, information about awards will need to be confirmed. Conducting attestation in order to establish the qualification categories of employees with titles and awards, or who are winners of skills competitions for pedagogical workers, is carried out on the basis of supporting information.
- Information about the established qualification category is entered by the employer in the work book. Qualification categories are also the basis for differentiation of remuneration of educators (Ministry of Education of the Russian Federation 2023).

At the moment, applications for attestation by all teaching staff are submitted to regional authorities in the field of education or the certification commission; this includes the opportunity of submission of an application through the web governmental Portal of State and Municipal Services (“Gosuslugi”). However, the service of filing an application through State Services is not available in all regions and the organisation of the process may vary in the regions.

For example, each teacher in the Moscow education system has their own personal electronic account on the portal of the Moscow e-school. Moscow e-school is the unified educational platform for teachers (including Pre-school Teachers), children and parents and is integrated into the portal of Moscow city services (“Mos.ru”); accordingly, the teacher submits an application through this portal and complete their teaching portfolio digitally.

According to the Ministry of Education of the Russian Federation the amendments should help to restore order in the field of advanced training of teachers and retraining of personnel, to build a unified system of scientific and methodological support for teaching staff in order to increase the prestige of the profession and ensure the quality of educational outcomes (Rg.ru 2020).

Research on CPD

The quality of education in a pre-school organisation largely depends on the teacher’s professional competence (see Volkova and Mansarliyskaya 2020).

The Federal Service for Supervision in Education and Science (*Rosobrnadzor*) collects, processes and analyses information in terms of monitoring quality in the education system and identifying violations (Decree of the Government of the Russian Federation dated August 05, 2013 No. 662). Since 2014, pre-school settings all over Russia have been monitoring their educational activities with various instruments – but the procedures and requirements are highly variable in different regions. *Rosobrnadzor* initiated a national study on the quality of pre-school education in 2016–2018. In a longitudinal study the international tool “ECERS-R” (Rating scale for a comprehensive assessment of the quality of education in pre-school educational organisations) was used. The authors correlate the assessment of the quality with educational activities and conditions of the educational environment, focusing on the needs of children and ways to meet these needs. The findings of the study indicate various problems with the quality of educational activities, the quality of work with the children's families and other work issues of a pre-school setting. Now what is needed is a management system that specifically focuses on the evaluation and monitoring of quality in the pre-school education field.

In 2020, the Federal State Budget Scientific Institution “Institute of Developmental Physiology Russian Academy of Education” conducted a study on the knowledge and professional competences of teachers of pre-school educational organisations concerning the main patterns of age-related development and appropriate educational activities.

The conclusions of the study indicate a low level of knowledge regarding psychophysiological patterns of child development necessary for solving pedagogical problems. In recent years, the cycle of disciplines that provided the Kindergarten Teacher with knowledge about the patterns of age development, about age characteristics, about the physiological and psychophysiological foundations of the educational process and other important issues that the teacher needs to know has been reduced (see Volkova 2022).

Currents debates on CPD

Taking into account the analysis of the current state of the CPD system (including advanced training and retraining) of teachers in the Russian Federation and the need to improve it, in the summer of 2022 the federal government approved new “Concepts for the training of pedagogical personnel for the education system for the period up to 2030” (Government of the Russian Federation 2022a, b).

7. Working conditions and current workforce issues

7.1 Remuneration

According to Rosstat (2022a), the average salary of a Kindergarten Teacher in 2022 was 42,912 RUB (€580) an increase from 35,714 RUB (€410) in 2020. However, there are 59 regions which fall below this level. There are strong regional disparities due to economic strength but also location. While salaries in the High North (Chanti Mansisk or YAMAO) are far above the average (72,808 RUB (€981) and 89,435 (€1,205), in other areas such as the Northern Caucasus region they are at 25,435 (€342) (Dagestan) and 28,725 (€387) (Ingushetia) (Rosstat 2022a).⁵

Periodically, the salary of teachers at all levels of education is indexed in accordance with changes in the country's economy.

The difference in the amounts by region depends not only on the economic situation in the country and in the selected regions. When calculating wages, several factors that affect the final result are taken into account: work experience (after 3 years, the salary of a kindergarten employee increases by 5%, after 5 years by 10%), number of shifts and actual hours worked.

Salary indexation for state employees was carried out in 2021. According to the "Main Directions of the Budget, Tax and Customs Tariff Policy for 2020 and for the planning period of 2021 and 2022 prepared by the Ministry of Finance (Ministry of Finance of the Russian Federation 2019), the federal budget is calculated taking into account the annual increase in the salaries of certain categories of state employees (since January 1) for the forecasted increase in the average monthly salary.

⁵ It must be noted that the actual rouble exchange rate is very volatile and politically dependent. The real purchasing power is currently difficult to predict. Russia's minimum wage currently stands at 13,890 RUB (€188) a month. Therefore, the following values are used for conversion:

	2022	2021	2020	2019	2018	2017
1 Euro =	74,2 RUB	87,2 RUB	82,7 RUB	72,5 RUB	74 RUB	65,9 RUB

Russian Federation: Expenditure on ECEC, 2012–2020 (in RUB)

This increase in wages applies to employees who work in the public sector, specifically noted among others in Decree of the President of the Russian Federation No. 597 of 05.07.2012 (President of the Russian Federation 2012). In particular, these include teachers, doctors, kindergarten teachers, scientists, etc.

In accordance with the Decree of the Government of the Russian Federation (Decree of the Government of the Russian Federation Decree No. 3544-r of December 11, 2021), more than 2.9 billion roubles (€28,2 Mill.) were allocated from the federal budget to increase the salaries of employees of educational institutions (Government of the Russian Federation 2021).

Calculation of the teacher's salary

In order to calculate the salary of an educator (Kindergarten Teacher), it is necessary to know the basic salary, general pedagogical and continuous work experience, additional education, quarterly bonuses, incentives, regional allowances ranging from 15 to 35%, qualification category. These factors are calculated by the local self-government authorities. This means that they differ according to region. The qualification allowance is calculated according to the qualification group.

The following factors influence the salary increase:

- Working hours up to 12 hours for five days a week (if the teacher works in two shifts, replacing another employee)
- Conducting group meetings, additional classes
- Night shifts in boarding schools
- Organising and holding foreign language classes with children
- Work in specialised groups (speech therapy, ophthalmology) – an allowance of 15-20%
- Part-time job with another position – an increase in salary of 10%.

Besides the official statistics there is also a low income sector in the ECEC field. This includes mainly low or non-qualified staff or part-time workers. These jobs are published in private job portals such as www.gorodrabot.ru and others. Salaries offered for 2022 indicate a median of 28,564 RUB (€477 a month), with the majority earning around 15,000 RUB (€250) per month.

7.2 Full-time and part-time employment in ECEC provision

In Russia, nearly all Kindergarten Teachers work full time; part-time posts are rare, but may be established. In accordance with the Order of the Ministry of Education and Science (2014), norms of hours of pedagogical work for the wage rate and on the procedure for determining the teaching load of pedagogical workers, a reduced duration of no more than 36 hours per week was established for pedagogical workers. The duration of the working time of a regular Kindergarten Teacher is 7 hours 12 minutes a day.

If the kindergarten is fully staffed, each group is accompanied by two teachers who work in close cooperation to each other. A teacher has a seven-hour working day and can work in two shifts: the first shift starts early in the morning – from 7:00 to 14:00, the second starts at 12:00 and ends at 19:00. In the period from 12:00 to 14:00 both Kindergarten Teachers work together. During this time, the teacher, who works in the morning, reports about the first half of the day: who needs additional attention, which of the children have been vaccinated, what issues to discuss with parents, etc. The duration of the working time of the pre-school teacher of the general developmental group is 7 hours 12 minutes a day.

At the same time, a **Kindergarten Teacher's Assistant** is allocated to each teacher, who deals with cleaning the premises, as well as caring for children.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

At the regional level, support for ECEC staff is organised through special centres set up by the regional governments (e.g. by the state ministry of education) that provide, for example, psychological advice or crisis intervention. Training on the job, when entering the employment market directly from initial professional education, is organised within the organisation. Mostly the Pedagogical Supervisor gives help and advice. To support teachers there are opportunities for professional growth through advanced training at the expense of the employer and the mentoring system.

7.4 Non-contact time

Preparation and reporting is mainly done during the sleeping time of the children. Officially there is no extra time calculated in working contracts to fulfil non-teaching duties. Budget permitting, bonuses may be granted for tasks outside the regular kindergarten activities.

7.5 Current staffing issues

Young people are attracted to professions which provide a certain amount of stability in status and income, particularly in times of economic constraints, which has been the case since the early 1990s. The profession of Kindergarten Teacher is neither a high status profession (Yurchenko 2013), nor do these teachers have a steady and nation-wide or region-wide regulated income. There is no overall Russian remuneration system for Kindergarten Teachers. Attendance rates in kindergartens have been rising, leading to a stronger demand for qualified staff. These shortages are being addressed by providing possibilities for the 'requalification' of professionals who lack knowledge and experience in early childhood pedagogy.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

1. With the Decree of the Government of the Russian Federation (2022a) of June 24, 2022 N 1688-r, a new "Concept for the training of pedagogical personnel for the education system for the period up to 2030" was approved. This concept defines the goals, principles, tasks, main activities and mechanisms for implementing the state policy of the Russian Federation in the field of training teachers for the education system, including Kindergarten Teachers.

The concept was developed in order to implement the Decree of the President of the Russian Federation of July 21, 2020 N 474 "On the national development goals of the Russian Federation for the period until 2030" and the basic principles of the national system of professional development of teachers of the Russian Federation, including the national system of teacher growth, approved by the order Government of the Russian Federation dated December 31, 2019 N 3273-r.

This concept is the basis for organising learning activities of educational organisations of: higher education; vocational education; teacher professional development; federal executive authorities and executive authorities of the constituent entities of the Russian Federation in charge of educational organisations.

2. An Order of the Ministry of Labour and Social Protection of the Russian Federation dated April 19, 2021 No. 250n "On approval of the Professional Standard 'Head of an educational organisation (management of a pre-school educational organisation and a general educational organisation)'" came into force on March 1, 2022 and is valid until March 1, 2028.

Further recent Orders relating to the Professional Standard 'Teacher' (on specialist staff and the utilisation of digital technologies) do not specifically refer to the work of Kindergarten Teachers.

Reducing the bureaucratic burden on Kindergarten Teachers (educators)

The Federal Service for Supervision in Education and Science conducted a study in 60 constituent entities of the Russian Federation and analysed working documents, mostly compiled by Kindergarten Teachers (educators) during their professional activities. The list included 52 documents that the educator was expected to fill out and prepare (children attendance tables, thematic planning of work with children, an annual work plan, various reports and monitoring, personal teaching portfolio for certification, etc.). This increase in paper work detracts from the immediate task of working with young children.

Specialists from the Federal Service for Supervision of Education and Science consider it necessary to reduce the volume of documentation and monitoring procedures.

It is expected that by November 1, 2023, amendments will be made to Federal Law 273 (The Education Act "On Education in the Russian Federation") on establishing the powers of the Ministry of Education and the Ministry of Science and Higher Education to authorise reference documentation and other requested information), and by December 1, 2023, Orders will be issued by the Ministry of Science and Higher Education, the Ministry of Education, Federal Service for Supervision in Education and Science (*Rosobrnadzor*) on establishing lists of documentation, monitoring, information systems. From March 1, 2024, an abbreviated list of documentary evidence will be issued for institutions of early childhood education and care (kindergartens), schools, institutions of secondary vocational education and universities (Federal Service for Supervision in Education and Science 2023).

9. Recent country-specific research focusing on ECEC staff

The problem of staffing Russian kindergartens

Source: National Research University "Higher School of Economics" 2017 (see *References* for full details).

Aims and background: To investigate problems of staffing and the quality of qualifications of Kindergarten Teachers

Methods: Series of in-depth interviews on staffing issues with heads of pre-school educational organisations and representatives of educational authorities.

Selected findings: The first part presents an analysis of the material security of the employees in ECEC settings; the characteristics of their age and skills level are given. In the second part, on the basis of in-depth interviews, it is shown how the heads of pre-school educational institutions

and representatives of educational authorities assess the current situation, how the load is distributed on Kindergarten Teachers in pre-school education, how the load and payment has changed over the past three years.

Implications: The profession of Kindergarten Teacher in public kindergartens remains a low-paid profession. Moreover, young teachers earn noticeably less than their older counterparts. Despite the fact that they are facing increased demands and expectations, their salary level remains at the same low level. In private kindergartens, wages are somewhat higher. A slightly higher salary attracts more dynamic and qualified staff. In private kindergartens, staff tend to be younger (30-40 years old) and mostly with higher education. Less high workloads are another significant advantage of private kindergartens – on average, there are one and a half times fewer children in a group.

The system of pre-school education during the pandemic COVID-19 in Russia

Source: Centre for Socialisation and Personalisation of Children's Education FIRO (Federal Institute for the Development of Education) at RANEPa (Russian Academy of National Economy and Public Administration under the President of the Russian Federation), 2020 (see *References* for full details: Tarasova and Pestrikova 2020).

Aims and background: Studying the readiness of educational staff to organise remote activities of pre-school educational institutions in conditions of quarantine and self-isolation.

Methods: 8,815 people took part in the anonymous online survey: teachers, teaching staff and specialists of pre-school educational organisations from 83 administrative regions of the Russian Federation. The survey participants included 5,695 Kindergarten Teachers (65% of the sample), 796 Centre Heads (9%), 1,160 Methodology Teachers (13%) and 1,164 other pedagogical workers (13%) – comprising 446 Speech Therapists, 284 Music Teachers, 252 Educational Psychologists and 162 specialists in physical education.

Selected findings: An analysis of the survey data confirms that pre-school workers demonstrate a fairly high level of activity and responsibility in the performance of their professional duties in the changed working conditions. At the same time, they lack experience in implementing this format of pre-school education and appropriate methodological support.

Implications: The research indicates that an in-depth analysis is required which takes into account the risks of implementing educational programmes for young children remotely, highlights factors affecting the effectiveness of online learning and identifies the possibilities of various methods, techniques and technologies of distance learning in kindergartens. Moreover, the findings suggest that kindergarten staff need appropriate CPD provision focusing on this issue.

The level of knowledge of teachers of pre-school educational organisations about the main patterns of age-related development and appropriate educational activities

Source: Institute of Developmental Physiology Russian Academy of Education 2020 (see *References* for full details: Volkova 2022)

Aims and background: The study aimed to analyse the knowledge and professional competences of Kindergarten Teachers regarding the psychophysiological patterns of child development in educational work.

Methods: A survey was conducted in ten regions of the Russian Federation. The study involved 2,691 Kindergarten Teachers (educators), as well as 52 Primary School Teachers of different ages. The work experience of teachers varied from less than 5 to 20 years or more.

The results of the survey were processed using the STATISTICA 10 statistical package. Descriptive statistics, frequency statistics, and the cross-tabulation method were used (to describe associations between age and teaching experience). The correlation between age, teaching experience, the choice and number of correct answers was computed using the Spearman rank correlation coefficient and Cramer's V coefficient. When analysing the responses to the open-ended questions, a descriptive research method was used.

Selected findings: In the course of the analysis of teachers' answers, "risk zones" were identified in the professional competences of teachers regarding knowledge related to the main patterns of the child's age-related development, the rational and effective organisation of the educational process, the formation of school-significant functions and knowledge of the psychophysiological foundations of school readiness. The results of the study showed that the level and quality of knowledge of Kindergarten Teachers do not depend on their age and teaching experience. Kindergarten Teachers have a fairly high level of knowledge on general issues of pre-school pedagogy, developmental psychology and physiology. However, an insufficient level of knowledge was revealed in matters of integrating knowledge of developmental physiology and psychology with the influence of sociocultural conditions of growing up. A very low level of knowledge was noted in matters of age-related psychophysiology concerning the preparation and readiness for schooling.

Implications: In order for Kindergarten Teachers to fully understand how children develop, how their cognitive abilities are formed, how the brain develops, a focus on age-related psychophysiology and pedagogical physiology should continue to be included in the initial professional education of Kindergarten Teachers.

10. Workforce challenges – country expert assessment

In accordance with the "Concept for the training of pedagogical personnel for the education system for the period up to 2030" (approved by order of the Government of the Russian Federation (2022a, b) of June 24, 2022 N 1688-r), the network of higher education institutions that implement initial teacher education/training programmes is developing, implementing and translating "best practices" in pedagogical settings. During the implementation phase in 2014–2017 this became a comprehensive issue for the modernisation of teacher education. Within the framework of new federal state educational standards for higher education, study programmes in modular design were developed, the practical subject and research components of pedagogical education and its educational orientation were strengthened, and a system of independent assessment of the professional competences of graduates was proposed.

All this is the base of the requirements of the federal state educational standards of general education and the Professional Standard 'Teacher'.

At the same time, the content, technologies, management and infrastructure of Kindergarten Teacher education require constant transformation associated with the changes taking place in the general education system and with the need to ensure the outstripping pace of changes in the teacher training system. Challenges remain to ensure the quality of teaching staff, including:

- Imbalance in the quality and conditions of initial professional education (IPE) in different educational organisations and the lack of unified approaches to the mechanisms and tools for assessing quality

- The gap between the pace of renewal of the content and infrastructure of IPE and the pace of renewal in the general education system
- Lack of advanced scientific research in the field of education for shaping modernised content in the IPE of pedagogical personnel
- Insufficient correspondence of the results of the training of a graduate (young teacher) to the current needs of the education system, society and state
- Weak involvement of employers, including regional education systems, in the process of training teachers
- Shortage of teaching staff, insufficient level of training of graduates of educational institutions of higher education in the IPE programmes for teaching staff
- Lack of comprehensive measures for the early career guidance of school pupils for the teaching professions.

To solve these problems, it is necessary to implement a set of measures related not only to improving the system of training teachers, but also with measures to support teachers at all stages of the life cycle of the profession, including those provided for in the implementation of the basic principles of the national system for the continuing professional development of teachers in the Russian Federation, approved by the Order of the Government of the Russian Federation of December 31, 2019 N 3273-g.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the term used in this report for the main type of centre-based ECEC provision is **kindergarten** (*detskije sady*, 0–6/7)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Russia

1860	The first, mostly private, kindergartens are established in Russia from this time onwards, some of them attached to schools, and strongly influenced by the pedagogical ideas of Pestalozzi and Froebel.
1866 – 1917	The first non-fee-paying "people's kindergarten" is established in St. Petersburg in 1866, as well as the first fee-paying private kindergarten for children of the educated classes. Since this time, Western pioneers such as Friedrich Froebel and later Maria Montessori had a continuing influence on the professional work of early childhood educators.
1917	<ul style="list-style-type: none"> – Even before the October Revolution, attempts were made to establish a public education system. After the revolution, all institutions are nationalised. – "Declarations on early education" – Between 1918 and 1920 the number of kindergartens rises from 400 to 4,823.
1920s and 1930s	<ul style="list-style-type: none"> – Lev Vygotsky's ideas start to influence the philosophical principles of (early childhood) education – and continue to do so up to the present day. – Children start school when they are 8 years old.
From 1927 to early 1950s	During the period of Stalinist rule, many progressive thinkers are repressed and deported. Education, including early childhood education, becomes increasingly influenced by propaganda.
1932/34	First national curricular guidelines for kindergartens to ensure continuity between early education and school.
1930s and 1940s	The humanist ideas and moral ("character") education approaches of A.S. Makarenko, one of the most influential Soviet pedagogues, contribute towards the shaping of the education system in the context of communist ideals. He developed the idea of collective learning processes which included new group structures, combining various stages of development, and integrating methods of aesthetic and activity education. He is considered to have established the structure of the Soviet education system.
1950s and 1960s	In 1959, a new type of early childhood educational institution is established – the nursery-kindergarten (<i>yasly-sad</i>), which, at the request of parents, children can attend from 2 months to 7 years. During the Khrushchev and Brezhnev eras, resources are allocated towards building a competitive science and research sector.
1964	A new comprehensive education programme becomes mandatory for kindergartens.
1980-2010	School entry age is reduced to 7 years (optionally also for 6 year-olds).

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. For Russia, the relevant formats are **0–2** years and **3–5/6** years. Whereas children usually start school at 6, earlier or later enrolment is also possible.

1985	The Standard Educational Programme for Kindergartens (<i>Tipovaya Programma Vospitaniya v Detskom Sadu</i> , 1962) is revised and specifies for all Soviet kindergartens what children learn as well as the didactic-methodological approaches of the professionals.
1989	Another revision of the curricular programme under <i>perestroika</i> allows under the "new vision for early childhood education" (<i>Novaya Kontseptsiya Doshkol'nogo Vospitaniya</i>) more variation in terms of educational content and methods.
Early 1990s	Alternative educational programmes that place more emphasis on play and creativity appear, such as Golden Key (" <i>Zolotoy klyuchik</i> "), Step by Step (" <i>Shag za shagom</i> "), Waldorf or Montessori.
1990s until 2005	<ul style="list-style-type: none"> – In the context of <i>perestroika</i> and economic upheaval, investment in education falls, as did the social level and status of the skilled workers. – A new curriculum for kindergartens (1989) is introduced. This is the basis for the 1992 Early Education Act and the 1996 amendments regarding the "quality and function of early educational institutions and the development of children's psychological and physical health, their intellectual and personal development and care for the emotional well-being of each child". At the same time, under Boris Yeltsin, the first steps towards inclusion are taken – Many private, fee-paying settings are founded.
2012	<ul style="list-style-type: none"> – The Education Act "On Education in the Russian Federation" codifies the right of all citizens to education. – Children from the age of 2 months to 7 years are legally entitled to a free place in an early education setting. – Children can start school between 6½ and 8 years of age.
2013	Ministerial Order "On the Validation of a Federal State Standard for Early Childhood Education".
2014	<ul style="list-style-type: none"> – The state programme "On the Development of Education" puts a special emphasis on early childhood education. – The Federal Standard (FGOS OV2) changes the policy agenda for children with special needs to full inclusion.
2018	The Ministry of Education and Science is divided into two separate ministries: the Ministry of Education and the Ministry of Science and Higher Education.
2022	Ministerial Order "On the validation of the federal educational programme for preschool education"

ECEC system type and auspices

The system of early childhood education and care in the Russian Federation is characterized by multi-level governance. Responsibilities are divided between the Ministry of Education (*Ministerstvo prosveshcheniya Rossiyskoy Federatsii*) and the regional ministries of education of the administrative units or so-called 'subjects' of the Federation (provinces, republics, regions (*kraja, oblasti*), autonomous republics, autonomous districts (*avtonomnye okruga*), cities of federal significance).

The Ministry of Education is responsible for issuing and implementing state regulations and legislation for educational provision, including ECEC settings, as well as for the development of quality assessment methods (Ministry of Education of the Russian Federation 2019).

The regional ministries of education are responsible for implementing national education strategies through steering and management strategies and by allocating funds. The municipalities are responsible for the organisation and co-funding of kindergartens. Each

kindergarten is responsible for the implementation of the education programme (Bertram and Pascal 2016, 115).

Kindergartens are the main form of educational provision up to school entry age. The Education Act stipulated that early education can start from the age of 2 months. However, most parents do not send their children to kindergarten until the end of paid parental leave, i.e. when they are 18 months old.

General objectives and legislative framework

Supporting vulnerable children and reducing social disadvantages and inequalities is seen as an important goal of the early childhood education system. ECEC settings are also seen as support measures for balancing parental employment with family duties. Preparation for school and citizenship are also stated goals (Bertram and Pascal 2016, 24, 160). Article 63 of the Education Act (No. 273, Parliament of the Russian Federation 2012, see also below) confirms the early education sector as the first, non-compulsory, stage of general education.

The aims of early childhood education in general are to promote the development of motor, intellectual, moral, aesthetic and personal characteristics; educational programmes should take into account the age-appropriate individual characteristics of children (see also chapter *Curricular Framework*).

The relevant legislation for the early childhood education of 3 to 7 year-olds (ISCED 02) is the Education Act 2012 No. 273 "On Education in the Russian Federation", with amendments from 2023 (Parliament of the Russian Federation 2012). It forms the basis for all education policies and sets out the general and curricular regulations for the education system. Among other things it also emphasises the need for the ongoing reform of regulations and legislation, taking into account the needs of individuals and society (Federal Centre for Educational Legislation 2021).

Based on the Education Act, the main document which regulates early childhood education is the Federal Standard for Early Childhood Education (Ministerial Order No. 1155) 17 October 2013, *Federal'nyye gosudarstvennyye standarty obshchego obrazovaniya*, known as FGOS DO; Ministry of Education and Science of the Russian Federation 2013), which is based on the Russian Constitution and the UN Convention on the Rights of the Child. It sets mandatory requirements and regulates the activities of ECEC settings in general. These include the implementation of the education programme which can be adapted in individual cases. The overall focus is on equality of opportunities, including children with special needs and supporting families.

Goals of the Federal Standard for Early Childhood Education (FGOS DO) are to:

- Raise the social status of early childhood education
- Work towards creating equal opportunities for each child (including taking into account the rights of children with a non-Russian background and children with disabilities)
- Guarantee a high level of overall quality in early childhood education
- Create a unified system of early childhood education and care based on the unity of mandatory requirements for the implementation, structure and outcomes of educational programmes for ECEC.

Educational activities in kindergartens are carried out according to the main general educational programmes for Preschool Education (Order No. 373, 2020). The new, unified, Federal Educational programme (Order No. 1028, 2022) came into force in 2023 and is the basis of work for all kindergartens from September 1, 2023. The purpose of this programme is the flexible development of the child during the preschool years, taking into account age and individual characteristics, based on the spiritual and moral values of the multinational peoples of Russia

and on historical and national cultural traditions (Ministry of Education of the Russian Federation 2022).

ECEC entitlement and compulsory attendance

All children from the age of 2 months have a right to a place in an early education setting; however, most parents are not yet aware of this and therefore rarely take advantage of it (Bagirova 2021). This means that, as a rule, the early childhood education system in Russia begins at the age of 3. Attendance is free of charge and not compulsory.

Compulsory schooling usually starts at age 7, but may vary between 6½ and 8 years.

Main types of provision

Although all children from 2 months to 8 years have a legal right to a place in a public ECEC centre, there is no publicly funded full-time provision for the under 2 year-olds. Altogether, there are hardly any stand-alone settings for this age group. Since these few settings are exclusively in the private sector, they tend to be cost-prohibitive for parents.

In accordance with paragraph 29 of the Order of the Ministry of Education and Science of the Russian Federation of October 27, 2011 No. 2562 “On Approval of the Model Regulations on a Preschool Educational Institution” (Ministry of Education and Science 2011), “the number and ratio of age groups of children in a preschool educational institution is determined by the founder.” This means that the founder, represented by the municipality (city authorities), has the right to decide who to admit to kindergarten and nursery and who not to admit. (Aif.ru 2014).

ECEC settings/groups for children under 7 years of age can have a general developmental *or* compensatory *or* health-promoting *or* a combined orientation. In this section, the regular forms of ECEC provision (kindergartens) are presented first, followed by commercial and home-based ECEC settings and ending with a brief description of the specialised early childhood education programmes.

Kindergartens (*detskije sady*) are the main form of ECEC provision for children aged 3–6/7 years. They also exist as multi-age centres (2 months to 7 years). Although parents can apply to enrol their child in a kindergarten from the age of 2 months, most of the younger children in kindergartens (public and private) are at least 1½ years old.

Most kindergartens offer full-day, part-time and extended hours services and are open 12 hours a day. Basically, there are five models: up to 5 hours per day (short day), 8 – 10 hours per day (extended short day), 10½ – 12 hours (full day), 13 – 14 hours (extended day), and around the clock. At the request of the parents, it is possible to organise the work of the groups also on weekends and holidays. However, only groups that are open for longer than three hours work according to the educational programme.

Kindergartens vary greatly in size, with nearly half attended by no more than 75 children. A full-day programme (from 7:00 till 19:00) includes 1½ to 3 hours of quiet time, four meals, outdoor activities twice a day, and a combination of educator-initiated activities in accordance with the objectives of the educational programme and free play. Children play and learn together in same-age groups.

According to a Parliamentary report, 240 kindergartens were built in 2022 and more than 1,000 in the past three years that provided more than 150,000 children with a place in an ECEC institution. Plans are underway to establish 69 settings (13,200 places) in 2023 for children under 3 years of age and 36 settings (5,400 places) for 3 to 7 year-olds as well as 2,000 places in private settings. This will contribute towards reducing the shortage of places and increase availability for families. The Ministry of Education notes that the accessibility of pre-primary education for children aged 3 to 7 years is currently 99.6%. For children aged 2 months to 3 years, the availability rate has increased over the past year and exceeded 98% (Aif.ru 2023). These accessibility rates include *all* forms of publicly registered childcare, including those in home-based family kindergartens or those in short-stay groups.

Part-time or short-stay groups in kindergartens (*grupy kratkovremennoe pribyvanieya*) cater mainly for children between 1½ and 5 years of age. They are usually organised in mixed-age groups (1½ to 3 years and 3 to 5 years). For children from 1½–3 years, these short-stay groups are provided for three to four hours/day with lunch (9:00–12/13:00), sometimes together with a parent. However, only a relatively small number of kindergartens have such a group with a special programme for the youngest children.

They are set up both as preparatory groups prior to kindergarten attendance and as an alternative to full-day attendance. These groups are also attended by children with special needs who are unable to attend full-day kindergarten. Most special needs groups are supervised by special education teachers who support the development of social and communicative skills in relationships with other children and adults. Although attendance times are shorter, these groups must also adhere to the Federal Standard (FGOS DO) and take into account specific age structures and developmental differences.

Part-time programmes are provided in both public and private institutions; some are offered only in the evening or at weekends or during holidays. So-called "clubs" (see chapter *Provider structures*) also offer such part-time programmes. These then belong to the rather loosely regulated system of supplementary education and provide either activities that are rarely offered in kindergartens, such as foreign languages or dance, or activities that complement the educational programme, such as mathematical or linguistic activities. They are also used by children in addition to regular kindergarten attendance (Bodrova and Yudina 2018).

Family kindergartens (*semeynyi detskiy sad*) are a form of home-based provision for children from 2 months to 7 years. This form of ECEC is part of public ECEC provision. In large families with three or more children between 2 months and 7 years of age, additional children of the same age can be cared of in the family home. This form of provision was created in 2007 and became popular all over Russia, also as a means of social support. They are usually registered as a section of a municipal kindergarten. If the parents have a pedagogical qualification they are considered educators and have to submit reports on their work; they receive the same salary as an educator in the kindergarten to which they are affiliated. If they do not have a pedagogical qualification their duties are only supervision and caring of the children and their salaries are lower (Volkova and Chervova 2011; Tsapenko et al. 2012).

Private-commercial childcare settings are generally run fully through private funding, but there are also some examples of a mixed-funding model (public subsidies and private financing). The Ministry of Education is investigating possibilities to subsidise places in private institutions if there are not sufficient places in a public one. These private settings do not offer the official educational programme and are open between 3 to 5 hours and 24 hours. Because the sector is only lightly regulated, different business models have been able to proliferate and large franchises now offer childcare provision across the country.

Certified nanny. The project "Professional nannies (babysitters) for children!" provides for the issuance of a certificate to parents with children from 1.5 to 3 years old to receive services from a certified specialist. At the same time, the task of the state is to train and certify those who wish to work as a nanny. This project was initiated by the Civic Chamber of the Russian Federation and realised since 2018, so that, with the assistance of the state, babysitting services become available to a wide range of families. Certification of babysitting services provides a guarantee the quality of care and supervision of children. In 2020-2021, 28 regional centres for the training of professional nannies were established; 350 nannies were trained and 161 nannies were certified, respectively (Oprf.ru 2021).

Early development centres. There are many early development centres (mostly fee-paying ones), precisely because the state kindergartens do not provide opportunities (or too few) for young children under 3 years old. Parents can also sign up for such centres and choose a development topic through the public services web portal, where a navigator for various early development centres is offered.

Early childhood specialist provision

Besides regular kindergartens, there are a number of other kinds of educational provision for young children:

- Kindergartens prioritising one or several directions of child development (intellectual, artistic and aesthetic, physical etc.)
- Health support kindergartens prioritising health improvement measures and procedures, particularly for children with a long-term illness
- Compensatory groups attended by children with special needs and children with disabilities
- Combined groups attended by healthy children and children with disabilities together
- Child development centres – kindergartens which emphasise the physical and psychological development, and adaptation and health improvement of all children in the centre
- Consultation points in government kindergartens where specialists provide psychological and pedagogical support for parents of children not attending preschools
- Early child care services which provide medical/social and psychology support for young children with developmental delays or from disadvantaged/vulnerable families
- Children's support centres, which provide pedagogical work directed to the early ages from 6 months to 3 years; these centres are mainly affiliated to kindergartens
- *Legotheka*, open for children from 2 months to 7 years not enrolled in the public preschool system because of health or developmental problems who need support in psychosocial, health or pedagogic issues.

Provider structures

Most ECEC settings are publicly funded settings provided by regional governments or municipalities. There are some private facilities run by organisations or legal entities. These must be licensed and are not subsidised through government funds. They are regulated in terms of health standards, the centre-specific educational programme and regional criteria. Private facilities are usually more flexible in their daily programme and also in terms of curriculum. However, private institutions that offer both care and education are subject to stricter rules. This is why many private facilities register under the name "club" – which is supposed to offer only care, but also includes educational elements (Bodrova and Yudina 2018). There are no national statistical data for this type of setting.

From 2015 to 2017, the number of private settings increased by 78% (from 8,166 to 14,547). They often provide various additional activities compared with regular kindergartens – more recently digital technology or parent-child activities such as yoga (Seliverstova 2021).

In 2019, a total of 2.6% of kindergartens had a private provider. The demand for private kindergarten places increased by 23% – mainly also due to the Corona pandemic (Invest Foresight 2021).

Although private kindergartens are eligible for state support if they offer places to children who cannot be admitted to a municipal kindergarten, they tend to avoid doing this because of the increased monitoring this may involve.

In 2022, a Ministry of Education report stated that a total of 139,296 children of different preschool ages were enrolled in private ECEC institutions or development centres. Most of these children (132,452 children; 1.89% of the age group) attended settings, which are licensed to carry out educational activities (not just development activities), whereas 6,844 children attended services that did not follow an educational programme (Ministry of Education of the Russian Federation 2023a, 15-16).

Participation rates in regulated provision

Following a decline between 2005 and 2010, enrolment rates for under 3 year-olds started to increase again, reaching 19% in 2017 and 24.2% in 2019 (Rosstat 2022a), although with considerable regional differences (Baskaeva and Tatrova 2020). While in 2021, overall 26.9% of under 3 year-olds were enrolled, the rates ranged from 53% in the Komi Republic to only 7.5% in the Republic of Dagestan (Rosstat 2022a).

In 2021, 73.2% of children aged 1–6 years were enrolled in early childhood education institutions. Again, regional differences are significant: while in the Ural Federal District 82.9% attended an ECE institution, the share in the North Caucasian District was only 51.6% (Statista 2023c). Whereas in 2021, 7.34 million children were enrolled in a kindergarten, indicating a slight decrease since the previous year (Statista 2023b), by 2022 numbers had decreased further to just over 7 million children (see *Table 1*).

Table 1

Russian Federation: Number of children enrolled in ECEC institutions, 2019 to 2022

	2019	2020	2021	2022
Number of children in organisations providing preschool education programmes and childcare services	7,606,700	7,442,900	7,340,600	7,008,100
Number of children in private settings	n.d.	n.d.	109,234	105,028
Enrolment rate: under 3 years	24.2%	25.2%	26.9%	n.d.
Enrolment rate: 3–6 years	84.9%	85.5%	87.8%	n.d.
Enrolment rate: 1–6 years	69.4%	70.7%	73.2%	n.d.

Source: Rosstat 2022c, Tab 1,6,11 (data sets incomplete in May 2023)

According to the report of the Ministry of Education of the Russian Federation on the implementation of strategic planning documents for 2022, on average the coverage rate of available and publicly provided preschool education (including family kindergartens and short-

stay groups) for children aged 1½–3 years as of January 1, 2023 was 98.19%, a rise of 1.94% since January 2022

The total number of children aged 1½–3 years registered in state or municipal kindergartens was 623,312 on January 1, 2023, 12.93% less than one year earlier. Measures to achieve accessibility for this age group in all regions of the Russian Federation are being carried out primarily through the creation of additional places in preschool institutions within the framework of both federal state and national projects.

On average in the Russian Federation, the indicator of accessibility of preschool education for children aged 3 to 7 years as of January 1, 2023 was 99.66%, a slight rise (0.08%) since January 2022. The number of children aged 3 to 7 years who are not provided with a place in kindergartens amounted to 19,236 in January 2023, 5,653 (22.1%) less than at the beginning of January 2022 (Ministry of Education of the Russian Federation 2023, 11-14).

Financing and costs for parents

In 2019, 3.7% of GDP was spent on education. In 2020, spending increased to 4% and fell again to 3.6% in 2021 (Rosstat 2023c, 189). The share spent on early childhood education and care 0–6 years is not specified.

Overall, public institutions are financed through state and municipal budgets. Current policy tries to make educational institutions less dependent on state subsidies and to initiate competition among them. Therefore, in many regions, salaries are dependent on national assessments of educational institutions and successful management of available financial resources (Volkova 2018). Private non-profit kindergartens are operated within a state educational institution and financed with public and private funds.

Government funding – both in public and independent settings – is used primarily for salaries, materials, and building maintenance. It also subsidises reduced fees for parents. Parents receive at least 20% of the average parental contribution for the first child, 50% for the second and 70% for the third and each additional child (Bertram and Pascal 2016, 61).

Educational sessions in kindergartens are free of charge for parents of children aged 3 years and over. This includes meals and materials and the basic educational programme, and also applies to some programmes for under 3 year-olds. Care services as well as additional activities such as dance, foreign languages etc., as well as support from speech therapists or psychologists, have to be paid for. For children with special educational needs, foster children, children from military families and low-income families, the costs are subsidised (Bodrova and Yudina 2018).

Fees for public full-day kindergartens are fixed and cost between RUB 1,900 and 2,700 (€28,82 to €40,96²) per month in 2017, depending on the region. Parents have to pay fees for private institutions, as they do not receive any state subsidies. In contrast to state-run facilities, staff salaries are higher, child groups are smaller and fees are significantly higher (up to €1,000 or €1,500 per month).

Although private facilities are significantly more expensive, there are indications that many parents are willing to bear these costs and/or pay for additional hours (Seliverstova 2021).

In 2018, a couple with two children spent about 2% of net household income on childcare costs³ (OECD.Stat 2023).

² Average exchange rate in 2017: 65,91 RUB/EUR

³ The calculation is based on the following fictitious model: two parents working full-time (average income); two 2 and 3 year-old children in full-time care; relevant care allowances taken into account.

In terms of consolidated government spending on ECEC, a monthly average of RUB 197.150 bn (approx. €2,01 billion)⁴ was spent between January 2005 and July 2022 (CEIC 2022).

Table 3 shows the allocation of expenditure for childcare and early education. In particular, expenditure on early childhood education programmes such as short-stay groups and family kindergartens has increased in recent years.

Table 3

Russian Federation: Expenditure on ECEC, 2012–2015–2020 (in RUB)

Year	Expenditure on early education	Expenditure on childcare	Total expenditure
2012 (1€ = 30,84 RUB)	RUB 144.737.400.000 EUR 4.693.171.206	RUB 254.509.000.000 EUR 8.252.561.608	RUB 399.246.400.000 EUR 12.945.732.815
2015 (1€=60,93 RUB)	RUB 166.317.700.000 EUR 2.729.652.060	RUB 306.944.000.000 EUR 5.037.649.762	RUB 473.656.800.000 EUR 7.773.786.312
2020 (1€=82,7 RUB)	n.d.	n.d.	RUB 987.000.000.000 € 11.934.703.748

Staff to child ratios and group size

Currently, the number of children per group is determined by the size of the rooms and not by the number of professionals. A typical kindergarten is divided into four room areas: living/playing/learning; sleeping and resting; washing; and cooking/household. According to the regulations of the Sanitary Rules SP 2.4.3648-20 "Sanitary and epidemiological requirements for organisations of education and training, recreation and rehabilitation of children and youth" (Ministry of Justice of the Russian Federation 2020) at least 2.5 square metres of space must be available for a child up to 3 years of age, and at least 2 square meters for a child from 3 to 7 years of age, not including furniture in each case. That is, the larger the room the more children can be accommodated (up to 25 and more). Furthermore, there might be extra rooms for music, sport, laundry room, eating. Other regulations regarding the staff to child ratios do not exist at present.

In a 12-hour day, two professionals usually work in two shifts (7:00–14:00 and 12:00–19:00) in one group. During the two-hour overlap the teacher who works in the morning informs the teacher who works in the afternoon about important issues.

Each professional has an assistant (assigned to the junior staff) who is responsible for cleaning, ensuring that hygiene rules are observed, preparing materials or supervising the children when the group leader is absent.

As a rule, an additional teacher (for music or sport) is present, which reduces the number of children per staff member somewhat.

In 2021, one kindergarten teacher was responsible for an average of 14 children (Statista 2023f). Surmounting the challenge of large group sizes and high child-adult ratios suggests that teachers will need to master instructional strategies designed for working with large groups of children (Bodrova and Yudina 2018, 68).

⁴ Please note that the exchange rates are average rates that differ considerably due to high volatility/political situations.

Curricular framework

On November 25 2022, a new Federal Educational Programme for Preschool Education was approved by the Ministry of Education of the Russian Federation and came in force in January 2023 (Ministry of Education of the Russian Federation 2022). From September 2023, all kindergartens are obliged to work according to this programme. This new Federal Educational Programme for Preschool Education is also designed for working with children from 2 months to 3 years. Age categories according to the programme are: 2 months to 1 year; 1 to 3 years and 3 to 7 years.

In 2013, the Federal Standard for Early Childhood Education (FGOS DO) was adopted as the basis for curricular work in **kindergartens**. Within this framework, a broad and balanced approach to the curriculum is encouraged, including personal and emotional development as well as respecting diversity and individuality; social development and citizenship; learning dispositions; physical and health education; language and communication; reading and literacy; mathematical skills; understanding the natural world; science; technology and the digital world; and second/foreign language acquisition.

The general pedagogical approach foregrounds play-based learning, creativity, communication and experiential learning. Parental involvement is encouraged. Recognising specific developmental and learning difficulties at an early stage also constitutes an important goal of early childhood education. Activities are appropriate to the age and needs of the children and also take into account ethnic-cultural aspects. Based on these principles, each institution develops its own curriculum, supported by guidelines published by the Ministry of Education.

This framework represents a clear departure from the teacher-led pedagogy that prevailed in most Soviet and post-Soviet institutions.

The Federal Standard also defines the conditions for positive child development: Direct communication with each child ensures emotional well-being, children are free to choose activities, friendly interactions prevail between children regardless of their cultural or religious background, each child's individual development is evaluated and parents are involved in educational issues (Shiyan et al. 2018).

Digital education

The project "Modern Digital Educational Environment in the Russian Federation" is included in the State Programme of the Russian Federation "Educational Development" for the period 2018 to 2025 (No. 1642, 2017) – based on the Education Act (No. 273, Parliament of the Russian Federation 2012) and the State Education Standard FGOS DO. Digital media are mentioned as a means of interaction between professionals, children and families. The organisation of a modern digital environment in ECEC settings is seen as contributing to the implementation of the key principles, goals and objectives of the Federal State Standard for Preschool Education (FGOS DO). However, there are no concrete statements on the promotion of digital competences before school enrolment.

During the period of the COVID-19 pandemic, the Russian ECEC system accumulated extensive experience in interacting with families and children through digital technologies, including forms of online teaching with children through multi-media (Volkova and Mansarliyskaya 2020).

Monitoring – evaluation

Child-related assessment

Following the adoption of the Federal Standard for Early Childhood Education (2013), it is explicitly forbidden to use data on children's performance in the evaluation of the quality of the educational programme. The assessment of children is reserved for formative purposes only (Bodrova and Yudina 2018). However, there are explicit expectations of what a child should be able to do at a certain age (see chapter *Curricular Framework*).

Centre-based self-evaluation

Instruments for self-evaluation by professionals are currently being developed, as well as instruments that allow outsiders (e.g. parents) to assess the programmes (Bodrova and Yudina 2018). For example, several kindergartens are piloting the ECERS-R rating scale to assess the learning environment, team self-reflection or staff-child interaction. Another initiative uses observations, parent surveys and document analysis to assess, among other things, programme content, staff qualifications, how inclusive the setting is, or the quality of the buildings (Bodrova and Yudina 2018).

External evaluation

Federal and regional supervisory agencies are responsible for inspections.

The main authority at the federal level is the Federal Education Supervision Agency (*Federalnoe agentstvo po obrasovaniyu*). It has three main tasks: to ensure that the federal standards are met; to issue licences; and to carry out state accreditation. Each level of administration reports to the next higher level. Quality assurance is a legal duty of regional administrations. Inspections of kindergartens and schools focus on compliance with regulations (room size, heating, equipment, meals, safety aspects) and on educational standards (organisation of daily routines and learning processes), management and financing. The results are communicated to the institutions and providers and also published on the internet. Professionals usually consider this kind of administrative monitoring as a bureaucratic burden, as the reports are not used to set up a system of quality improvement, but only to make sure that the regulations of the Federal Standard is followed.

The Federal Agency for Supervision in Education and Science *Rospotrebnadzor* carries out planned inspections in kindergartens. A commission consisting of a representative of the agency, an education inspector, an expert in the field of early childhood education and an observer mainly inspects the kitchen in kindergartens as well as the food, its preparation and storage with regard to hygienic and health-related aspects. Furthermore, the size of the rooms, lighting, sports equipment as well as medical and training certificates of the professionals and the bookkeeping are checked.

According to the Regulation on Monitoring the Education System (2013, No. 662, §5), *Rospotrebnadzor* is responsible for collecting, processing and analysing information regarding the quality of education. From 2016-2018, the agency conducted a longitudinal study in kindergartens using the Early Childhood Environment Rating Scale (ECERS-R) to measure quality. It was found that, for example, the quality of the educational activities carried out or the quality of the work with parents is not satisfactory – which is partly due to the fact that kindergartens have been using a variety of their own monitoring instruments since 2014. However, in order to improve the quality of education in ECEC settings, it will be necessary to create a uniform monitoring system based on reliable data and which involves all stakeholders.

Inclusion agenda

Social inclusion – children with special educational needs and disabilities

During the Soviet period, the state stimulated and supported the deepening of differentiation in the system of education for children with disabilities. There was a well-developed compensatory system to support the development and education of children with special needs, with disabilities and child invalids. In recent years the integration of children with disabilities into the general education system has been underway. Therefore, 'inclusion' is often narrowly understood, only as the joint education of children with developmental disabilities with normotypical children (Volkova and Hentschel 2020).

Moving towards developing the country's educational sector in line with an inclusive ideology and acceptance of differences and diversity, Russia ratified the Convention on the Rights of Persons with Disabilities in 2012 (Bahdanovich Hanssen and Erina 2021). Early childhood education for children with special needs and disabilities is also governed by a Federal Standard (FGOS-DO). The Ministerial Decisions of 19.12.2014 (No 1598 and 1599) published by the Ministry of Education and Science, as well as the ratification of the UN Convention on the Rights of Persons with Disabilities, officially ended the segregation of children with special educational needs. Article 28 of the National Education Law ("On Education in the Russian Federation," 2012) details the role of state and municipal authorities providing for these children, as well as the conditions of educational activities for children with special/complex needs (Bahdanovich Hanssen and Erina 2021). Every child with special needs has the right to attend a regular kindergarten, and kindergartens, like schools, are obliged to accommodate children with special educational needs at the request of parents. Nevertheless, the number of inclusive settings is relatively small. In addition, the term "inclusion" is interpreted in different ways (Bodrova and Yudina 2018) and is mostly defined in medical terms; inclusion in a broader sense is only gradually being accepted by society at large (see Volkova and Hentschel 2020).

Concerning the historical development of Russia and its multi-national population, the multi-cultural/multi-confessional component of 'inclusivity' can be considered quite well developed. Russia is a multi-national (multi-ethnic) state, as reflected in the Constitution of the Russian Federation (Volkova and Topaj 2020), with four main religions: Christianity, Islam, Buddhism, Judaism and with a freedom of choice of religion in general. Due to this historical path of the country, living with cultural diversity has a long tradition. However, in terms of understanding inclusion as the joint education of normo-typical children and children with disabilities, there have been certain difficulties along this path in Russian society. Russian educational organisations have encountered a number of problems when wishing to implement inclusive practices. These include a lack of teachers' special needs qualifications, a lack in teachers' attention to normatively developing children and a lack of acceptance of children with disabilities by healthy children (Volkova and Hentschel 2020.)

Before children with special educational needs are enrolled in a kindergarten, a medical diagnosis of their needs is made, based on which the child then receives appropriate support, e.g. from speech or physiotherapists, psychologists or other specially trained staff. Children with severe physical and/or mental disabilities are assisted by a support worker who is paid by the state. Mobility and access to the building is also provided.

Kindergartens can choose their own strategies and approaches – based on the national curriculum. For children with disabilities, adapted, individual educational programmes are created. In addition, the "National Action Strategy for Children 2012-2017" (President of the Russian Federation 2012a) was adopted in 2012, in which, among other things, child protection and equal opportunities for all are high priorities. One of the goals concerns reducing the number of separate special needs institutions in order to promote inclusive education.

Regional psychological-medical-educational commissions diagnose the child's condition and expected to assist families in creating conditions for the comprehensive support of children with disabilities. Also, regional state organisations work with parents to assess each child's needs and provide appropriate support, such as the State Psychological and Pedagogical Centre in Moscow. The main goal of the Centre's activity is to provide high-quality psychological, pedagogical, and social support, free of charge, including complex assistance to children with disabilities.

Non-governmental organisations also support parents in their demand for quality education for children with disabilities (Bahdanovich Hanssen and Erina 2021). The parents of children with special needs can apply to support services provided by these non-governmental organisations. These are available on the website of the "general government services" (*gosudarstvennykh i municipalnykh uslug* (Public services 2023), accredited by each regional government. Such organisations provide both free and paid services, depending on the family situation. In accordance with the law, paid social services are aimed primarily at citizens who have no grounds for being provided with free social services (Parliament of the Russian Federation 2013). The regional ministries of education are currently involved in the implementation of these Decisions and organising training for professionals. In rural areas there are still problems with access, but in large cities like Moscow and St. Petersburg the inclusion agenda is well organised – from early childhood to adulthood.

The psychological-medical-pedagogical commission also determines the conditions according to which the education of children with disabilities is organised, such as the support of visually impaired, hard of hearing or physically disabled children by assistants or by the provision of certain materials. The following specialised support staff can be included in the staff calculation: Specialists for learning disabilities, for education of the deaf and visually impaired, for speech therapy as well as psychologists and assistants for each group. Each group is also supported by at least one tutor.

According to Bahdanovich Hanssen, and Erina (2021), networks and non-governmental organisations (NGOs) have been formed to develop parental involvement capabilities and promote inclusion in education. For example, NGOs support families with children with SEN, developing parent awareness of various aspects of inclusion and in independently monitoring legislation implementation (UNESCO 2021, 138); and the All-Russian Organisation of Parents of Disabled Children (VORDI), a public association created in 2018, helps to implement parents' initiatives to create decent living conditions in society and social and educational inclusion of children with disabilities. With the support of the government, it implements federal projects on social support for families with children and adults with disabilities or holds competitions inviting non-profit organisations whose activities are aimed at supporting families raising children and adults with disabilities. (VORDI 2020, 2023).

In 2022, a total of 86,863 children up to 7 years of age with disabilities were enrolled in early education settings. Out of a total of 7 million children in ECEC settings, this corresponded to 1.2% (Rosstat 2023f). In 2020, 21.8% of ECEC settings had a barrier-free environment (Rosstat 2022h, 23).

In compensatory groups, a certain maximum number of children per group should not be exceeded (see *Table 4*).

Table 4

Russian Federation: Maximum number of children in compensatory ECEC settings

Groups with ...	Below 3 years	3 years and above
Children with severe speech disorders/ visual impairment	6	10 (6 for blind children)

Groups with ...	Below 3 years	3 years and above
Children with phonetic speech disorders		12
Children with hearing impairment	6	8
Children with visual impairment	6	10
Deaf children	6	6
Children with disorders of the musculoskeletal system	6	8
Children with intellectual disabilities	6	10 (8 in the case of severe mental disability)
Children with autism / with complex multiple disabilities	5	5

Source: Ministry of Justice of the Russian Federation 2020

In combined groups attended by children with and without disabilities, there should be no more than 10 children under and over 3 years of age, of which no more than three should be children with disabilities. If there are 15 children over the age of 3 in a group, there should be a maximum of four children with disabilities, and if there are 17 children, there should be a maximum of five. Care must be taken to ensure that the children in a group do not belong to more than three different disability categories. When combining children with various developmental disabilities, the orientation of the adapted educational programmes of preschool education and the possibility of their simultaneous implementation in one group are taken into account.

It is allowed to organise different-age groups of compensatory or combined orientation for children from 2 months to 3 years and from 3 years and older, taking into account the possibility of observing a daily schedule corresponding to the anatomical and physiological characteristics of children of each age group, with a maximum occupancy of 6 and 12 children, respectively (Ministry of Justice of the Russian Federation 2020).

Table 5

Russian Federation: Number of children with disabilities in state-subsidised early childhood settings, 2020

Age	Number of children
Under 1 year	90
1 year-olds	458
2 year-olds	3,360
3 year-olds	8,495
4 year-olds	14,766
5 year-olds	19,745
6 year-olds	22,657
7 year-olds and above	13,878
Total	83,449

Source: Rosstat 2021b

The multi-national indigenous population of Russia and children with a migration background

Citizens of Russia historically have different ethnic origins, officially 193 different ethnic groups (nationalities). In 2020, the four largest minority groups were Tatars (3.6%), Ukrainians (1.3%), Bashkirs (1.2%) and Chuvash (0.8%) (Rosstat 2023d, 97). According to the 2021 census, 71.7% of the population is ethnically of Russian origin – a decrease of 6% since the 2010 census (The Jamestown Foundation 2023).

In accordance with the "Strategy of the State National Policy of the Russian Federation for the period up to 2025", one of the priorities is preserving the ethnocultural and linguistic diversity of the Russian Federation (President of the Russian Federation 2012b).

The 193 ethnic groups use – alongside Russian as the state language – approximately 277 languages (according to other sources 295) and dialects (Koryakov et al. 2022; Ministry of Science and Higher Education of the Russian Federation 2021). At the same time, 105 languages are used in the state education system, of which 24 are used as the language of instruction and 81 as a subject language (President of the Russian Federation 2012b). According to data on language proficiency among residents of the Russian Federation, excluding Dagestan, about 56-57 indigenous languages are used in Russia. And taking into account the 24 languages of Dagestan, this number increases to about 80. Local languages in the regions of the Russian Federation also include: Ukrainian, Kazakh, Azerbaijani, Armenian, Finnish, German (Ministry of Science and Higher Education of the Russian Federation 2021).

Both during the period of the Soviet Union and in modern Russia, there are public kindergartens with an ethno-cultural component in order to maintain the culture and language of native ethnic groups and regional nationalities. Kindergartens provide a number of support programmes for children of ethnic minority groups (Bertram and Pascal 2016, 79). Educational activities can also be offered in a minority language or in a foreign language if they are aligned with the educational programme.

Since 2013, early childhood education has been offered along the nomadic routes in the north in so-called nomadic camps. In 2018, 64% of children from indigenous ethnic minorities were prepared for school (UNESCO 2022).

In accordance with the guidelines for the implementation of the new Federal Educational Programme for Preschool Education (Ministry of Education of the Russian Federation 2022), the implementation of the federal programme is also possible in the native language of students.

Migrant population in Russia

In 2021, 667,922 persons in the total population were of non-Russian (citizenship) origin (0.5% out of 146,171,015) (Rosstat 2023d and own calculations). These included:

- 606,190 persons from CIS ("commonwealth of independent states") countries (mostly from Tajikistan (126,840), followed by Ukraine (122,669)
- 8,250 persons from EU countries (mostly from Germany (2,404), followed by Latvia (1,193); and
- 53,482 persons from other countries, mostly from India (7,132), followed by Georgia (6,506), China (6,465), and Vietnam (5,426) (Rosstat 2023c, 90, 108).

According to the "Concept of the State Migration Policy of the Russian Federation" for the period up to 2025 (President of the Russian Federation 2018), priority tasks are to assist migrants (adults and children) in the process of their social and cultural adaptation and integration. For educational institutions this includes teaching children the Russian language and creating an infrastructure to facilitate their adaptation and integration into the host culture (Volkova and Topaj 2020).

In addition to supportive, educational initiatives, there are also a number of social measures, including those related to language. In the Moscow Metro, for example, signs are duplicated in Uzbek and Tajik to make it easier for labour migrants from these countries to navigate.

The number of specifically ethnic or religious kindergartens for migrants is low. Immigrants often live and work illegally in Russia. Enrolment in a kindergarten is always linked to the place of registration. However, since most immigrants are not legally registered, their children are not

entitled to attend kindergarten or school. The only alternative is private institutions, but these are usually too expensive.

Curricular guidelines to support staff in this area primarily address children with a migration background and bilingual children (UNESCO 2021, 97).

Parental leave arrangements⁵

Maternity leave (*otpusk po berennosti i rodam*) is not mandatory and lasts 140 days (70 days before and 70 days after birth). In the case of a difficult birth or a twin birth, this period is extended to 156 and 194 days respectively. During this period, the average income of the last two years is paid, up to a monthly limit of RUB 83,299 (€842.54), with a minimum of RUB 16,252 (€164.38).

There is no legal entitlement to **Paternity leave**.

3 years of **Childcare leave** (*otpusk po ukhodu za rebenkom*) after birth is a family entitlement. 40% of average earnings during the two years preceding the birth are paid until the child is 18 months old (minimum RUB 8,591.47 (€86.90) and maximum RUB 33,281.80 (€336.63). Since 2023, unemployed persons receive a minimum childcare benefit of RUB 8,591.46 (€86.90) per month if their household income does not exceed the regional subsistence minimum. Beyond receiving the allowances during the childcare period, it is also possible to work part-time.

Women can apply for the so-called **Maternity capital** (*materinskij kapital*), which in 2023 was 586,946.72 RUB (€5,963.78) for the first child and 188,681.53 RUB (€1,908.45) for the second child. This amount is not paid in cash; it is used e.g. for improving housing conditions or for the education of the children. In some regions, also a regional maternity capital is paid.

Only 9.4% of mothers took three or more years of Childcare leave in 2019 (Seliverstova 2021). 2% of the persons taking parental leave were men in 2019. Beyond that, no detailed information on take-up is available.

Current challenges for the ECEC system in Russia

Country expert assessment by Tatiana Volkova

Creating a stable remuneration system and improving working conditions

According to government sources, 1,623 kindergartens for 235,100 children were built and put into operation between 2019 and 2023 (Government of the Russian Federation 2023). This has made it possible to significantly reduce the shortage of places in kindergartens in the regions and increase their availability for families.

On the one hand, considerable attention is being paid to the expansion of early childhood education and care. On the other hand, the problem of kindergarten teachers' salaries remains. According to Rosstat, teachers in preschool institutions in Russia receive approximately 46,000 roubles (approx. €525⁶) per month. However, this amount is nominal, while the real salary in different areas varies between 14,000 and 30,000 roubles (€160–€342). In cities with a population of one million, the recorded average slightly exceeds the average for the country as

⁵ The brief overview in this section is based mainly on the country note for the Russian Federation by Anna Bagirova in the *International Review of Leave Policies and Research 2023* (see *References*).

⁶ Conversion rate May 2023

a whole: in St. Petersburg – 59,441 roubles (€678); in Novosibirsk – 46,512 roubles (€531) (Kp.ru 2023).

The work of an educator is undoubtedly a socially important work. This profession is one of the most popular and in demand. However, working conditions are often harsh and staff turnover high. Difficulties often encountered include: large groups due to staff shortages, with only one kindergarten teacher working from 7:00 to 19:00 and sometimes without an assistant (meaning that clearing up and cleaning also fall on the teacher); documentation tasks; frequent psychological discomfort due to parents' expectations regarding preparing children for school; issues of traumatised children; a frequent lack of professional qualifications among educators to work in inclusive groups (for normotypical children and children with disabilities). This leads to high levels of burnout among educators. Unfortunately, the work in early childhood settings is viewed by policy makers to be more of a “mission” or a “vocation” rather than an appropriately remunerated profession.

Ensuring quality in the initial professional education of early childhood staff

In the current socio-economic situation, the need for newly qualified pedagogical staff is leading to a focus on secondary vocational education rather than on higher education. It is necessary to establish a nationwide system of assessing the quality of education not only in preschool settings but also in the institutions responsible for the initial professional education of teachers.

In accordance with the "Concept for the training of pedagogical personnel for the education system for the period up to 2030" (the concept was approved by Order of the Government of the Russian Federation of June 24, 2022 N 1688-r (Government of the Russian Federation 2022), the current network of **higher education institutions** implementing teacher education/training programmes has a productive experience in the development, implementation and translation of best practices in pedagogical and general education. This experience was in part gained, during the implementation of a comprehensive project for the modernisation of teacher education from 2014–2017. Within this framework and on the basis of the requirements of the Federal State Educational Standards of general education and the Professional Standard of the teaching profession, new standards of higher education were developed. These included a modular programme design, improving the practical orientation and research components of pedagogical education, and proposing the independent assessment of the professional competences of graduates.

At the same time, the content, technologies, management and infrastructure of teacher education require constant adaptation and transformation associated with the changes taking place in the general education system. Challenges remain to ensure the quality of teaching staff. These include addressing the:

- Imbalance in the quality and conditions of initial professional education (IPE) in different educational organisations (vocational and higher education) and the lack of unified approaches regarding mechanisms and tools for assessing quality
- Gap between the pace of renewal of the content and infrastructure of teacher preparation and the pace of renewal of general education
- Lack of advanced scientific research in the field of education for reforming the content of the IPE of pedagogical personnel
- Insufficient correspondence of the results of the training of a graduate (young teacher) to the current needs of the education industry, society and state
- Weak involvement of employers, including regional education systems, in the process of training teachers

- Shortage of teaching staff and insufficient training of higher education graduates working in teacher education programmes
- Lack of comprehensive measures in the early career guidance of school leavers directing them towards the teaching professions.

To solve these problems, it is necessary to implement a set of measures related not only to improving the system of initial professional education, but also to supporting teachers at all stages in their professional life cycle. This includes the basic principles of the national system of professional growth of teachers in the Russian Federation, approved by the Order of the Government of the Russian Federation of December 31, 2019 N 3273-g (Government of the Russian Federation 2019).

Issues of social inclusion and readiness of teachers to work under new conditions

Inclusive education is both a promising and a problematic area of work for modern educational organizations which is rapidly developing in large cities in Russia. Whereas previously, children with developmental disabilities were isolated and pupils allocated to groups according to their abilities, the modern practice of education calls for inclusiveness (Volkova and Prochukhayeva 2019).

A Russian psychologist and defectologist and a member of the Russian Academy of Education, V. I. Lubovsky, has referred to the dismantling of the correctional system that was successfully developed in the Soviet education system (Lubovsky 2017). At the beginning of the implementation of inclusive principles in education, problems of rejection and aggression on the part of both parents and teachers arose, who did not know how to act under the new conditions and expectations.

One of the serious tasks of modernising preschool education and developing inclusion is to find optimal models for the readiness of educators to work with children with special needs. In this regard, the readiness of educators to carry out professional activities in the context of the implementation of the Federal State Educational Standards for Preschool Education is of great importance. The issues of readiness of a teacher to support children with special needs are reflected in a number of documents such as the Federal Law “On Education in the Russian Federation”, “On the Social Protection of Disabled Persons in the Russian Federation”, “National Strategy for Action in the Interests of Children for 2012-2017”, Federal State Educational Standards for Preschool Education. These emphasise the importance of supportive conditions, goals, objectives, means and methods of working with children with special needs in a regular preschool educational environment.

Beyond this, there are problems of working conditions and the prevention of professional burnout of teachers in ECEC settings. In the context of modern trends in education, when the principles of the tolerance and an inclusive approach are at the forefront, it is important for teachers to have both meta skills and the ability to solve several problems at the same time, using an interdisciplinary approach. To do this, teachers need to constantly learn, develop and improve their level of professional competence, to know the main stages, patterns of development and features of the psychophysiology of children, including pupils with developmental disabilities (Volkova 2020).

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

During the times of political and economic transformation during the 1990s, the birth rate dropped drastically and, in connection with a high mortality rate, led to a significant drop in population figures. Since about 2009, population numbers have started to rise again, although during the last few years they have decreased slightly (2000: 146,890,128; 2005: 143,474,219; 2010: 141,914,509; 2015: 146,443,000; 2020: 146,443,000). In 2021, the total population in Russia was 145,764,000 (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate among SEEPRO-3 countries was in France (1.84), and the lowest in Malta (1.13)⁷ (Eurostat 2023b). At 1.50, the Russian Federation was slightly below the EU27 average in 2021 (The World Bank 2021). The birth rate fell steadily from 1988 (2.12) to 1999 (1.25), after which it rose again. After a renewed decline in 2016 it rose again (Rosstat 2022d) and has remained stable since 2019 (macrotrends 2023). Through the Maternity Capital (see section on Parental Leave), the state has tried to make having children more attractive to women. However, the latest official demographic data recorded the largest drop in the birth rate in Russia's modern history. According to Rosstat, only 96,131 children were born in the country in April 2023. This is the country's lowest figure since the beginning of the 21st century (Rosstat 2023e).

Children under age 6

Table 6

Russian Federation: Number of children under 3 years and 3 to under 6 years, 2022

Age	Number of children
Under 1 year	1,393,821
1 year-olds	1,433,365
2 year-olds	1,478,871
3 year-olds	1,602,814
4 year-olds	1,688,798
5 year-olds	1,886,882
Total 0 to under 6 year-olds	9,484,551

Source: Rosstat 2022e

In 2022, the share of children under 3 years of age was 2.7%, that of under 6 year-olds 6.5%. These proportions were well above the EU27 average.

⁷ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>).

Single households with children under age 6

No national data are available on the number of single-parent households with children under 6 years of age.

Based on the results of the 2020–2021 All-Russian Population Census, there are 4,854,000 single mothers and over 1,128,000 single fathers in Russia raising children under 18 years of age (Rosstat 2022f, 28).

According to the same Census, there are 27.7 million children under the age of 18 in Russia. 88% of these children live with parents, of whom 61.5% live with both parents, 31.3% with their mothers and 7.3% with their fathers. Since the 2010 census, the proportion of single families increased: the share of single mothers rose from 28.9% to 31.3% and that of single fathers almost doubled from 3.7% to 7.3% (Tinkoff Bank 2023).

Employment rates of parents with children under 6 years of age

In the Russian Federation, in 2022, the overall employment rate for men (15-70 years) was 70.4% and for women 55.6% (BRICS 2023). These relatively low overall employment rates are due to the fact that not all economic activities are registered in the statistics.

In 2021, 67.1% of women with preschool-aged children were employed (Rosstat 2022h, 29). This share is above the EU-average (64% in 2021) (Eurostat 2023c, own calculations). There are no data available on employed fathers with children under 6 years.

Table 8a

Children at risk of poverty or social exclusion

The number of persons earning the minimum wage (January 2023: RUB 16,242 (€185), Statista 2023d), decreased in 2022 to 9.8% (from 13.5% in mid-2019) of the population; subjectively 72% assessed their income as being below it. In a Rosstat survey, 29.6% described their material situation as (very) poor (Russian Analytical Digest 2021). 60% of those living below the subsistence level are families with children. This means that about a quarter of children live below the poverty line (The Borgen Project 2021).

According to national statistics, in 2019, 23.6% of children under 18 lived in families with less than the subsistence minimum (RUB 11,653, €136 in 2019). The most affected by poverty were children from large families (48.3%), followed by children in rural areas (44.5%) and children from low-income families (32.8%) (Rosstat 2021a, 2023a; Reshetova 2021).

In January 2023, the monthly subsistence minimum was 15,669 RUB (€180) for the working age population and 14,375 (€165) on average (Statista 2023e). The population with incomes below the poverty line in the second quarter of 2022 amounted to 17.6 million people, or 12.1% of the country's population (Rosstat 2023b).

Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-eqf>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the author

Lidija Miškeljin, PhD, is associate professor at the University of Belgrade Faculty of Philosophy – Department of Pedagogy and Andragogy. Her main focus in research and teaching includes early childhood education, ECEC systems and programmes, contemporary issues in ECEC, as well as various cultural understandings and images of children through interdisciplinary perspectives.

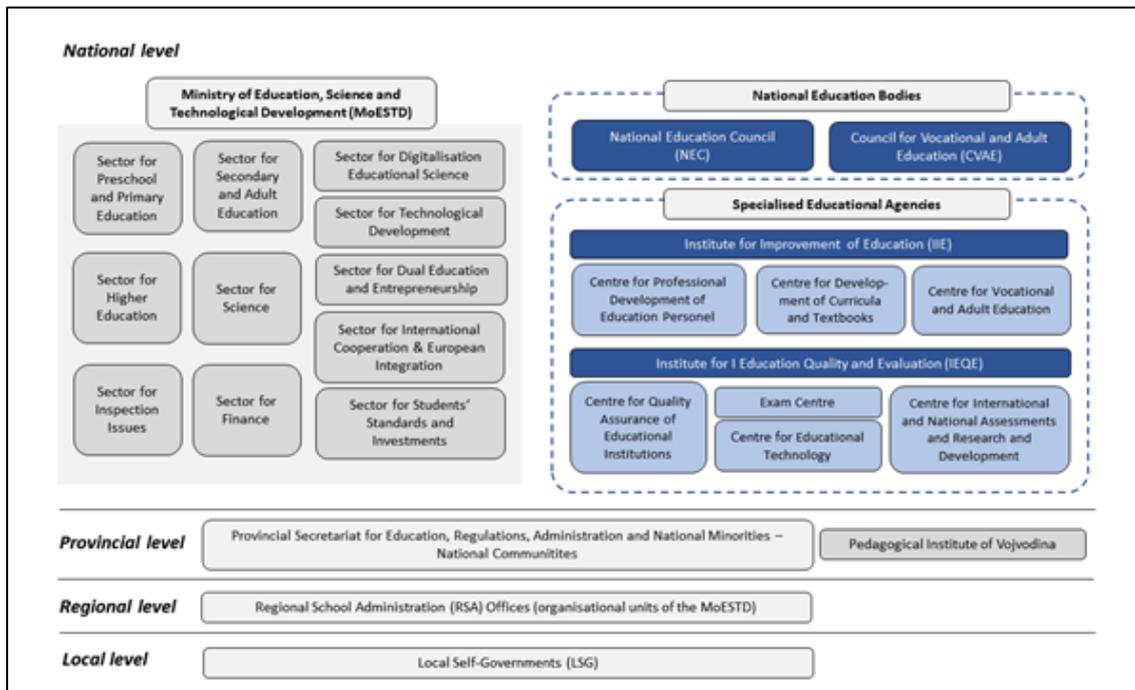

1. ECEC governance in Serbia

Serbia has an administratively integrated system¹ of Early Childhood Education and Care – ECEC (*predškolsko vaspitanje*) under the responsibility of the Ministry of Education (MoE). Since the adoption of the Law on the Foundations of the Education System (LFES) in 2003 (Official Gazette 2021g – 2003 with amendments in 2021), ECEC is an integral part of the education system and the first phase of formal education.

The jurisdiction over ECEC at the national level is unified under the MoE (*Figure 1*) (LFES, Official Gazette 2021g), with specialized units within the Ministry. Agencies and institutes with special jurisdictions in monitoring, development and advancement of the education system at the national level are the National Education Council – for Preschool, Primary and Secondary General and Artistic Education (NEC), the Institute for Improvement of Education (IIE) and the Institute for Education Quality and Evaluation (IEQE). Institutes are responsible for “developmental, advisory, research and professional activities in preschool education at the national level” (Official Gazette 2021g).

Serbia: System of Education Governance

Source: MoESTD 2018

Beside general regulations applied to each level of education (see *Figure 2*), the Law defines the ECEC curricular framework as well as guidelines for diversified types of services and programmes, duration of ECEC, enrolment of children, roles of ECEC teachers and other staff in the ECEC sector, their qualifications, working conditions and professional development. Under the

¹ At the same time, the ECEC settings are separately organised and the qualification requirements for staff working with children up to three years of age differ from those for staff working with 3 to 6 year-olds.

Law on Preschool Education (LPE, Official Gazette 2021h), the work of ECEC institutions is multifunctional and besides early education and care, which is its main function, it includes child nourishment, prevention and health care, and social care of the child and family.

Early childhood education and care in Serbia is delivered by ECEC institutions (*predškolska ustanova*) that are founded on the municipality level by the government, provincial government or local-self government (LSG), with the status of public ECEC institutions, or by other public or private bodies with the status of private ECEC institutions. ECEC institutions can comprise a number of facilities in which ECEC centres are established. The number of centres within one ECEC institution can differ (from one to more than twenty), depending on the number of preschool children, family needs and local resources. As an exception, ECEC can be realised in the primary school if there is no other ECEC facility in the local community.

Figure 2

Serbia: Structure of the Education System including ECEC

ISCED 2011	Age	Level	STRUCTURE OF THE EDUCATION SYSTEM IN SERBIA					
8		Higher Education	III Cycle	PhD Studies (180 ECTS)				
7	19-23/24		II Cycle	Master Academic Studies (60-120 ECTS)	Integrated Academic Studies (First and second Cycle)	Specialist Academic Studies (60 ECTS)	Master Applied Studies (120 ECTS)	Specialist Applied Studies (60 ECTS)

1	7-11		Grades 1-4 (Class-based and subject-based teaching)					
0	5.5-6.5/7	Early Childhood Education and Care	Pre-primary Programme (Compulsory)			Duration: minimum 9 months		
	3-5.5		Kindergarten (<i>vrtić</i>)					
	0.5-3		Nursery (<i>jaslice</i>)					

Source: Baucal, A. et al. 2016

Early Childhood Education and Care (ECEC) covers children from 6 months to 6½ years of age. The only obligatory part is the year before starting school for children aged 5½ to 6½ years.

An ECEC centre can be organised in the following way in terms of the hours of attendance:

- All-day – from 9 to 12 hours per day
- Half-day – 4 hours per day in the obligatory year before starting school
- Half-day – up to 6 hours per day in regular settings
- Half-day – up to 6 hours per day, up to three times a week
- 24-hour service – overnight stays over a period of several days (Official Gazette 2021h).

ECEC for children from 6 months up to 3 years are organised in nurseries (*jaslice*), for children from 3 up to 6½ years of age in kindergartens (*vrtić*) and compulsory attendance for children from 5½ to 6½ years of age in a kindergarten (full day or half day) or, in some cases, in a primary school on a half-day basis.

The same curricular framework, adopted in 2018 (“Years of Ascent“, Official Gazette 2018a), applies to all ECEC setting types (see Key Contextual Data report for more details).

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

In Serbia, different professionals are eligible to work in ECEC institutions. The legislative framework regulates their educational background, qualifications and professional development. Pursuant to the Law on Preschool Education, Teachers, Nurses/ Nursery Teachers, Expert Associates, Associates and Pedagogical Assistants are eligible to work in ECEC institutions (LPE, Official Gazette 2021h). Professionals engaged in ECEC are:

- ECEC Nurses (working with children aged 6 months – 3 years)
- ECEC Teachers (working with children aged 3 – 6.6 years)
- Expert Associates (specialist support staff: Pedagogue, Psychologist, Speech Therapist, Pedagogue for visual/music arts and physical education);
- Associates (Social Worker, Nutritionist, Nurses for preventive health care; Defectologist (in developmental – special needs – educational groups).

A breakdown of the employees’ professional profiles, areas of work and qualifications is presented in *Table 1*, which also categorises the core professionals (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see *Box 1* at end of this chapter).

Table 1

Serbia: ECEC staff in centre-based settings

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
ECEC Nurse <i>Medicinska sestra vaspitač</i> <i>Profile:</i> Health Care Professional	<i>Predškolske ustanove</i> Nurseries 6 months–2 years ²	Core professional with group responsibility	6 months–2 years	Completed vocational secondary school education, paramedical track ECTS credits: n/a ³ EQF level: 3 ISCED 2011: 3
ECEC Teacher (sometimes called Kindergarten Teacher) <i>Vaspitač</i> <i>Profile:</i> Pre-Primary Education Professional	<i>Predškolske ustanove</i> Kindergartens 3–6 years	Core professional with group responsibility	3–6 years	3 or 4 years at a higher education institution <i>Award:</i> Bachelor's degree (professional/applied) <i>or (optional)</i> Second degree of university studies <ul style="list-style-type: none"> • Master's degree • Specialist academic degree • Specialist professional studies ECTS credits: 180/240/300 EQF level: 6/7 ISCED 2011: 6/7
Special Needs Teacher <i>Defektolog-vaspitač</i>	<i>Predškolske ustanove</i> Kindergartens 3–6 years	Education of children with disabilities	3–6 years	Master's degree (4+1 years, university) ECTS credits: 300 EQF level: 7 ISCED 2011: 7
Pedagogist (Expert associate) <i>Stručni saradnik – pedagog</i>	<i>Predškolske ustanove</i> ECEC centres 6 months–6 years	Enhancement and support of educational work and provision of expert assistance to	Broad focus (children and adults)	Master's degree (4 +1 years, university) ECTS credits: 300 EQF Level: 7 ISCED 2011: 7

² **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In the case of Serbia, these formats are **0–2** and **3–6** years because school generally starts at age 7.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

Table 1 illustrates how many different professionals work in Serbian ECEC institutions, but the core professional staff specifically qualified for working with children up to 6½ years of age and who work with them full-time are the ECEC Teachers (*vaspitači*).

The activities of ECEC are conducted by a teacher and expert associates, while the activities regarding nutrition, care, preventive health and social protection, are conducted by associates.

Everyday pedagogical work is conducted by ECEC Teachers (*vaspitači*), ECEC Nurses and Special Needs Teachers. Specialist support staff – Pedagogists, Psychologists, Pedagogues for visual arts, musical arts and physical education and Speech Therapists, implement quality-improving activities. Their task is to enhance educational processes through advisory work and other activities, to provide professional support to children, parents, legal guardians and teachers on education issues, and to engage in other forms of support.

Activities regarding child care, nutrition, health and social care in a preschool institution are performed by a Health Care Professional, Nutritionist and Social Worker.

Pedagogical Assistants provide help and additional support to children concerning their needs, cooperate with the teachers and professional staff, parents and legal guardians.

Teachers and expert associates holding relevant educational degrees and a completed work induction programme and those who have passed the license exam are entitled to a work license in ECEC (Official Gazette 2021g). Pursuant to the Law on the Foundations of the Education System, after a minimum of one year and/or a maximum of two years of internship, teachers and expert associates employed in an ECEC institution or those who completed an internship in an ECEC institution are eligible to take the license exam. The Rulebook on Work Permits for Teachers, ECEC Teachers and Expert Associates (Official Gazette 2022) regulates the following: the work induction programme for ECEC teachers and expert associates, the verification method and procedure for candidates’ mastering the programme, the programme for acquiring the work

permit (license), the method for verification of the candidate's command of that programme, the licensing exam costs and the administrative authority before which the licensing exam is to be taken, licensed teachers' register content and method of register keeping, and the license form for ECEC Teachers and expert associates.

Persons with an illegal or criminal record are banned from working with young children.

2.2 Centre leader

Qualifications, election and duties of the director of the ECEC institution are defined by the Law on the Foundations of the Education System (Official Gazette 2021g).

The director of an ECEC institution can be a person who has:

- An appropriate education as an ECEC teacher or expert associate (Master's academic studies, Master's professional studies, Specialist academic studies in the field of pedagogical sciences or interdisciplinary; multidisciplinary, transdisciplinary second-degree studies that combine units and corresponding scientific, i.e. professional, or pedagogical sciences fields)
- Completed training and has successfully passed an exam for becoming the director of an ECEC institution
- At least eight years of work in the institution in the field of education.

In accordance with the LFES, the standards are applied to the licensing procedure for directors. They are also the basis for developing training programmes, examination programmes for directors and for self-evaluation.

In the Rulebook on Competence Standards of Directors of Educational Institutions, directors' competences are defined as "functionally integrated knowledge, capacities, skills and a system of values which are the basis for carrying out work and tasks in ECEC institutions, primary and secondary schools" (Official Gazette 2013). According to the Rulebook, competence standards for directors were designed to establish criteria which would provide successful management, organisation, implementation and supervision of work in the education institutions.

The standards are divided into six groups: (1) Managing the process of care and learning of children in an ECEC centre/institution, i.e. managing the pedagogical and educational process; (2) Planning, organisation and supervision of work at an education institution; (3) Monitoring and improving the work of the employees; (4) Developing cooperation with parents/carers, the executive body, the relevant workers' union and the wider community; (5) Managing the finances and administration of the education institution; (6) Ensuring that the educational institution is run according to the law. There is a short description of every standard and a list of indicators which define competences in more detail. Assessment of whether the standards have been met depends on the fulfilment of the indicators.

The standards and indicators are designed for the Heads of all types of education institutions. A distinction between standards for the directors of ECEC institutions and school principals is made only in the first group of standards, which outline differences between working in the different types of education institutions.

2.3 Centre-based posts of responsibility

Posts of responsibility are defined by the Law of Preschool Education (Official Gazette 2021h). They refer to tasks regarding work with children with special educational needs and disabilities (ECEC Teacher with the support of expert associates and a Special Needs Teacher), with children of national minority groups or children from migrant families (ECEC Teacher together with social welfare associates).

Social work in an ECEC institution includes the following tasks: prevention activities, identification of the child's social context; support to parents so that they can adequately realise their parental function and improve the quality of family relations; monitoring of family needs for adequate forms of ECEC in their local communities; creating conditions for increasing the coverage of children in local communities with various diversified programmes; support to parents and children with developmental difficulties in their exercising of rights to protection and support in all the social welfare systems (social protection, child protection, medical care, etc.) and in the process of their inclusion in ECEC institutions; participation in the process of developing an inclusive approach in ECEC institutions and in the community; coordination of the implementation of the General and Special Protocol on Child Protection from Violence, Abuse and Neglect; work with families in which domestic violence, abuse and neglect have been detected; cooperation with local self-government and relevant institutions on all the issues related to the realisation of the social function of ECEC institutions.

2.4 Co-ordinating and supervisory staff

Inspection and expert pedagogical supervision of education institutions and institutes are defined by the LFES. Inspection and expert pedagogical supervision of education institutions, including ECEC, are carried out by the MoE. Regional School Administration Offices are established within the MoE, "for the purpose of performing expert pedagogical supervision, external evaluation of the work of institutions, support for development planning and improvement of the quality of the work of institutions, planning and quality assurance" (Official Gazette 2021g, art. 31). There are 16 Regional School Administration Offices in Serbia, and each office has jurisdiction over one to three administrative units (districts). A community or municipal education authority carries out inspection and supervision of ECEC centres and schools within the authority and jurisdiction stipulated by the law. This means that inspection and supervision are performed by an education inspector.

2.5 Specialist support staff

Expert associates – Pedagogists, Psychologists, Pedagogues for visual arts, musical arts and physical education and Speech Therapists – implement professional activities to improve the educational work of the ECEC institution. According to the Rulebook on the programme for all forms of work as an expert associate in an ECEC institution (Official Gazette 2021b) the goal of the work of an expert associate in an ECEC institution is to develop the culture of the preschool institution as a learning community and the quality of educational practice.

Qualification requirements for expert associates are defined by the Law on Preschool Education: Master-level studies, postgraduate academic studies and postgraduate specialist studies (Official Gazette 2021h).

The number of expert associates engaged by an ECEC institution is determined in the Rulebook on Detailed Conditions for the Beginning of Work and Pursuit of Activities in ECEC Institutions (Official Gazette 2019a). According to this Rulebook, **each ECEC institution should have an expert associate** – a Pedagogist or a Psychologist. ECEC settings comprising between 24-48 educational groups, full or half day, may engage an additional Pedagogist or Psychologist. ECEC institutions with more than 48 groups, full or half day, may engage another expert associate with a different profile: Speech Therapist or a Pedagogue for visual arts, musical arts and physical education. According to the Catalogue of jobs and titles in the public sector (Official Gazette 2018c), the role of a Speech Therapist as an expert associate in a preschool institution is defined as follows: "The Speech Therapist, by applying theoretical and practical knowledge, contributes

to the realisation and improvement of educational work in the institution in accordance with the goals and principles of ECEC.“

The Rulebook on Competence Standards for expert associates in ECEC institutions and their professional development defines expert associates' competences as the unity of knowledge, skills and values. "Knowing, doing and being are dimensions that are integrated in the daily professional practice of an expert associate" (Official Gazette 2021a). In the same document, the competence of an expert associate is defined through the following areas: (1) strategic (developmental) planning and monitoring of ECEC practices; (2) cooperation and togetherness; (3) development of reflective practices in ECEC institutions; (4) developing the quality of the current real programme; (5) own professional activity and professional development.

The presence of highly qualified Pedagogists and Psychologists as expert associates in ECEC institutions provides the possibility of improving the quality of ECEC. However, practice has shown that the existing situation of a single expert having to cover a large number of groups, combined with the spatial "dispersion" of settings of a single service provider and deficiencies in the initial professional education of expert associates impedes the potential of these specialist support staff for enhancing quality (Baucal et al. 2016).

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

In the 17 municipalities of the capital city of Belgrade, there are 17 ECEC institutions. All other cities and municipalities have one ECEC institution per city/municipality. According to national data for 2022/23, there are currently 461 ECEC institutions (163 state-owned and 298 private) with 2,853 facilities (2,417 state-owned and 418 private) in 11,511 educational groups (Statistical Office of the Republic of Serbia 2023).

In these 461 ECEC institutions, there are 32,084 employees, including 15,775 ECEC Teachers and 5,362 ECEC Nurses. By way of contrast, in 2014 there were about 25,000 employees who were employed to deliver ECEC services to 189,304 children. Alongside the Teachers and ECEC Nurses, 3% of the workforce comprised expert associates and 31.1% other employees.

The ECEC profession is still predominantly female. The data is indicative of an insufficient number of male teachers in the ECEC institutions, which account for less than 2% of employed teachers. The structural composition of ECEC employees in Serbia is presented in *Table 2*.

Since the Statistical Office of the Republic of Serbia does not follow all the data related to different kinds of ECEC employees, the data shown in *Tables 2* and *3* represent the number of persons employed in public ECEC institutions.

Table 2

Serbia: Persons employed in public ECEC institutions, by staff qualifications and gender, 2022/23

Staff categories	Total	Women, in %	Men, in %
ECEC Teachers	15,775	98.2	1.8
ECEC Nurses	5,362	99.8	0.2
ECEC Special Needs Teachers	120	93.3	6.7
Expert associates	972	91.3	8.7
Associates	813	86.1	13.9

Staff categories	Total	Women, in %	Men, in %
Pedagogical and other assistants	201	85.6	14.4
Administrative staff	1,386	82.1	17.9
Technical support staff	7,455	90.1	9.9
Total	32,084	95.3	4.7

Source: Statistical Office of the Republic of Serbia 2023, own calculations

Due to the fact that the Statistical Office of the Republic of Serbia does not follow all the data related to the structural composition of the ECEC workforce and no reliable national data is available on the qualifications of staff in public ECEC institutions, the data shown in *Table 3* represent only the total number of staff in each category for 2015 (no more recent data available). Staff with a vocational education work predominantly as ECEC Nurses, administrative and technical staff. Support staff such as cooks, cleaners or janitors are predominantly non-qualified persons.

Table 3

Serbia: Structural composition of ECEC workforce in public ECEC institutions, 2015

Staff categories	Total
Staff with higher education degree	17,834
Staff with specialist higher qualification	10,181
Staff with specialist vocational qualification (post-secondary)	889
Staff with secondary vocational school (upper secondary)	9,444
Staff with non-specialist qualification	3,118
Male staff (including male administrative staff)	
Staff with a background of migration	No systematically compiled national data

Source: Statistical Office of the Republic of Serbia 2023, own calculations

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

ECEC Teachers (*Vaspitač*)

According to the Law on Higher Education (LHE), ECEC Teachers acquire the necessary education to work with children through academic and applied studies based on accredited study programmes (Official Gazette 2021c). Study programmes for the first degree level are basic academic studies, basic applied studies and specialist applied studies. Study programmes for the second degree level are master academic studies, master applied studies and specialist academic studies. Tertiary institutions carrying out higher education for the ECEC Teacher profession are the following: Academies of Applied Studies, Colleges and Colleges of Applied Studies and University Faculties. An Academy of Applied Studies may provide basic applied studies, master applied studies and specialist applied studies if having at least five accredited study programmes for applied studies in at least two fields. Colleges of Applied Studies refer to independent higher education institution that provide basic applied studies, specialist applied studies and

master applied studies. University Faculty refers to higher education units within a university carrying out academic study programmes and developing scientific and artistic research, i.e. professional work in one or more areas.

Since 2005, studies for prospective ECEC Teachers in Serbia have been transformed significantly through the implementation of the Bologna process. The major change was raising all initial ECEC Teacher education programmes to the tertiary level.

Since then, Serbia has a binary higher education system, meaning that initial education of ECEC Teachers is realised through two different types of studies:

(a) applied studies consisting of programmes leading to a professional qualification offered by 5 colleges (*Visoka škola strukovnih studija*) and 5 academies of applied studies (*Akademija strukovnih studija*); and

(b) academic studies are conducted solely at six faculties in five universities.

Applied studies for ECEC Teachers are divided into the following categories (LHE, Official Gazette 2021c):

- Undergraduate applied studies lasting three years and granting, upon their completion, 180 ECTS credits
- Master applied studies, lasting two years and awarding at least 120 ECTS credits if the scope of the first degree course of studies of at least 180 ECTS credits has been realised (total 300 ECTS credits)
- Specialist applied studies, lasting at least one year and granting, upon their completion, at least 60 ECTS credits.

Academic studies for ECEC Teachers are divided into the following categories (LHE, Official Gazette 2021c):

- First cycle undergraduate academic studies, lasting four years and granting, upon their completion, 240 ECTS credits. A student who completes first-degree academic studies with at least 240 ECTS credits acquires the professional title of Bachelor with Honours.
- Master academic studies, lasting at least one year and granting, upon their completion, at least 60 ECTS credits. A student who completes these second-degree academic studies acquires the academic title of Master.

This practice has resulted in a great variety of educational profiles and titles. Additionally, it has resulted in inconsistencies among the study programmes according to their types, duration and content, as well as in the quality, taking into account the available staffing potential compared with a large number of schools and faculties (see *Tables 4a* and *4b*). In a recent situational analysis (Baucal et al. 2016), this issue was emphasised as one of the weaknesses of the ECEC system, as was the necessity to introduce measures aimed at the mutual alignment of study programmes and defining competencies that the students need to acquire to become professional teachers.

Table 4a

Serbia: Initial education for ECEC Teachers in colleges and academies by types of study programme⁴

Colleges and Academies of Applied Studies	Type and duration of study programme	ECTS credits	Title upon completion of studies
Preschool Teacher Training College, Novi Sad	Basic applied studies 3 years (6 semesters)	180	Bachelor of Applied Science Vocational ECEC Teacher EQF/ISCED 6

	Master academic studies, 1 year (2 semesters)	60	Master's degree Master of Arts in ECEC Teacher Education EQF/ISCED 7
Faculty of Teacher Education in Prizren – Leposavić University of Priština – Kosovska Mitrovica	Basic academic studies, 4 years (8 semesters)	240	Bachelor's degree Teacher in ECEC institutions EQF/ISCED 6
	Master academic studies, 1 year (2 semesters)	60	Master's degree Master Teacher in ECEC institutions EQF/ISCED 7
Pedagogical faculty in Vranje, University of Niš	Basic academic studies, 4 years (8 semesters)	240	Bachelor's degree ECEC Teacher EQF/ISCED 6
	Master academic studies, 1 year (2 semesters)	60	Master's degree Master ECEC Teacher EQF/ISCED 7

⁵ The data shown in the table represent data from the official websites of the Colleges/Faculties

For all above-mentioned undergraduate studies, an entrance condition for enrolment in a Bachelor's study programme is to have a high school leaving certificate, approved entrance examination scores, and acceptance to the study programme. Rules for entrance examinations and admission are set in connection with the Statute of College/Academy or Faculty (at most faculties and colleges the entrance exam contains a test of general knowledge and testing speech, physical and musical abilities. The capability testing is eliminatory).

An entrance condition for enrolment in a follow-up Specialised Professional Studies or Master's study programme is the completion of study in a Bachelor's programme (180 or 240 ECTS credits). Rules for entrance examinations and admission are set in connection with the College or Faculty statutes.

Serbia: Nurse

Job title in Serbian: <i>Viša medicinska sestra na preventivi</i>
Entry requirements: completion of 4 years at gymnasium or vocational secondary school and final exam (= university entrance exam) Professional studies: 3 years of study at a college of applied sciences Award: Bachelor Total ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main ECEC workplaces: Working with children, parents and professionals in the field of protection of children’s health and a healthy environment.

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

In Serbia, all institutions of higher education must have a work permit for pursuing higher education and comply with the standards and procedures defined by the Law of Higher Education and Regulation for Accreditation of Higher Education Institutions.

The list of general and subject-specific competences is the integral part of Standards for Accreditation of study programmes of the first and second levels of higher education (National Council for Higher Education 2019).

Standard 4. Competences of graduated students By mastering the study programme, students acquire general and course-specific skills needed for good quality professional, scientific and artistic activities. The qualification description stemming from the study programme corresponds to a certain level of the National Qualifications Framework.
Guidelines for the application of standard 4: 4.1 By mastering the study programme, the student acquires the following general abilities: <ul style="list-style-type: none"> – Analysis, synthesis and foreseeing/predicting solutions and consequences – Mastering methods, procedures, and research processes – Development of critical and self-critical thinking and approaches – Application of knowledge in practice – Development of communication skills and abilities, as well as cooperation with a narrower social and international environment – Professional ethics 4.2 By mastering the study programme, the student acquires the following course-specific abilities: <ul style="list-style-type: none"> – Basic knowledge and understanding of the discipline of the relevant profession – Solving concrete problems using scientific methods and procedures – Linking basic knowledge from different fields and their application – Monitoring and application of new development in the profession – Development of skills and abilities in the use of knowledge in the appropriate field – The use of information and communication technologies in mastering the knowledge of the respective area

4.3. Learning outcomes are described according to descriptors of learning outcomes of the National Qualifications Framework (ibid)

Ten Colleges and Academies of Applied Sciences (*Visoka škola strukovnih studija/Akademija strukovnih studija*) and six Faculties (5 Universities) (listed in *Table 4a*) provide Bachelor-level studies for future ECEC Teachers. All colleges and faculties in Serbia have adapted the list and publish their own list of competence specifications for graduates. Most study programmes emphasise professional and subject-specific competences to enable students to acquire concrete and applicable knowledge and skills in a particular field.

The conceptual frameworks for individual study programmes in colleges and faculties (goals and mission, competence specifications, intended outcomes) for most of them are presented on the institution websites. One example is given for each type of study here. The others can be accessed via direct links.

ECEC Teachers (*Vaspitač*) – Bachelor Applied programme

Competency specifications

Preschool Teacher Training College „Mihailo Palov“ Vršac

This college offers a study programme for future ECEC Teachers which was designed and accredited within the Teach programme *Harmonization of Preschool Teacher Education Curricula in Serbia 2013 – 2016*, supported by the European Commission (EACEA) within the Tempus project (VSS 2016).

General competence specifications (VSS 2019)

The basic competence that future educators need to develop is **self-reflexivity**; this enables self-evaluation and the adaptation of practice to the context and changes in it and aims at modifying practice in line with changes in pedagogical concepts and current social opportunities.

At the end of their course of studies, graduates are expected to apply knowledge in educational work with children of preschool age and to refer to the appropriate professional literature. Specified general competences are to:

- Analyse, synthesise and foreseeing solutions and consequences
- Compile and interpret contemporary theoretical knowledge in the field of pedagogy, psychology, methodology, and have the ability to reflect on relevant social, scientific or ethical issues related to pedagogical processes
- Master the methods, procedures and processes of research
- Develop critical and self-critical thinking and approaches
- Link basic knowledge from different fields and their applications in working with children of preschool age
- Have developed the capability for teamwork and be able to transfer knowledge to others
- Solve concrete educational problems using scientific methods and procedures.

Subject-specific competence specifications (ibid)

By mastering the study programme, the student acquires the following subject-specific abilities:

- Knowledge of the appropriate profession
- Application of scientific methods and procedures in solving certain problems
- Planning educational work
- Efficient and flexible organisation of time and space: the layout of the classroom for a variety of activities (places for play and for quiet activities), the appropriate choice of teaching and didactic materials, flexible scheduling of activities and transitions between them
- Organisation of learning and teaching

- Pedagogical guidance of the group
- Monitoring effects of the educational process
- Applying and linking knowledge from different fields
- Applying and monitoring innovations in the profession
- Information and communication skills.

ECEC Teachers (*Vaspitač*) – Master (applied programme)

Academy of Technical – Preschool Teacher Education Applied Studies – Department in Pirot

“The purpose of the master's vocational study programme is to educate a Master Educator who will develop existing programmes through an integrated curriculum at the institutional level by organising ... activities in accordance with the life context of the child, changes in society, kindergarten and to the family, thus creating a stimulating the environment for achieving the planned goals. Based on framework documents, the future Master Educator will to be able to produce original and constructive solutions to specific problems in educational practice.” (Academy of Technical Educational Vocational Studies 2022).

General competence specifications (ibid)

Upon completion of a Master Applied programme students will achieve following competences:

- The ability, knowledge and skills of leading, organising and coordinating educational activities and developing an integrated curriculum in a preschool institution and competence for innovative and modern ways of solving specific problems in educational practice
- The ability to plan, design, create, implement and evaluate an open curriculum model for educational work based on an integrated and holistic approach
- Communication skills and the ability to communicate analytical and research results from the domain of the organisation of educational work
- Knowledge and skills about the teacher's professional ethics and active contribution to the development of the social community
- Knowledge of methodology, pedagogy, psychology and methods in order to conduct research and use research methods in educational work.

Specific competence specifications (ibid)

Upon completion of a Master Applied programme students will achieve following competences:

- Knowledge and skills related to the coordination of work with children with developmental disabilities and approaches for encouraging creative expression
- Interpret evaluation data and be able to implement the implications for further work
- Critically observe and interpret the latest trends in the theory and practice of their profession, linking new scientific knowledge to the previously acquired and applying them in practice
- The ability to spot problems or the need for changes, plan changes, organise a team and provide adequate conditions for implementing changes, coordinate individual activities within the team, create an action plan and, based on objective possibilities, ensure the necessary conditions for its implementation
- Knowledge and skills of transforming and modelling content, activities and different strategies in order to construct an integrative curriculum
- Develop skills in conducting research projects and approaching the methodology of research, interpretation and conclusions; the ability to write and publish articles.

ECEC Teachers (*Vaspitač*) – Bachelor Academic programme

Competency specifications

Faculty of Education in Jagodina, University of Kragujevac (2020)

„The study programmes at the Faculty of Education of the University of Kragujevac, Jagodina are designed according to examples of good practice in European higher education institutions (following primarily the Finnish educational system, but also the Slovenian and Greek ones). The main goal of the study programme is to provide the necessary knowledge about modern theoretical concepts about childhood, learning and children’s development in the early years and professional competences that will enable teachers to carry out high-quality educational work in preschool institutions.”

General competence specifications (ibid)

The student:

- Knows and understands the theoretical achievements in the field of preschool education
- Develops skills and flexibility in the use of knowledge from the field of preschool education
- Is capable of solving specific educational problems using scientific methods and procedures
- Uses information and communication technologies to master the necessary professional knowledge
- Monitors and implements innovations from the profession.

ECEC Teachers (*Vaspitač*) – Master (academic programme)

Faculty of Education in Sombor, University of Novi Sad (2022)

The Master of Arts in Preschool Teacher Education study programme aims at providing students with extensive knowledge of relevant scientific and professional fields, as well as the implementation of contemporary didactic and teaching methodologies in their independent research and scientific work. They are aware of the need to master various modes of independent study and permanent professional development.

Competence specifications (ibid)

The general competences of ECEC Teachers include developing critical and self-critical thinking, analysis, synthesis and foreseeing solutions to any problem in the educational process, development of communicative skills and cooperation with the narrow social and international environment, as well as mastering the methods, procedures and processes of scientific and professional research.

The following general and subject-specific competences of the Master of Arts in Preschool Teacher Education result from the above mentioned objectives of this study programme:

- Ability to independently obtain knowledge and profoundly understand relevant concepts of the broader domain of didactic and teaching methodology sciences in the area of preschool education
- Ability to competently and rationally plan, create and successfully implement educational activities in an ECEC institution
- Ability to plan as a team and organise teaching methodology research (to generalise results and improve educational activities of an ECEC institution)
- Keeping up with and implementation of innovations in the area of didactic and teaching methodology science in solving educational problems in teach preschool children;
- Successful usage of contemporary IT in the process of education

- Establishing successful cooperation and communication with the environment of the ECEC institution (cooperation with parents in order to keep them well-informed and improve the level of the children’s education culture).

Curricular areas

The credit system at the colleges and faculties conforms to the European Credit Transfer System (ECTS). One academic year corresponds to 60 ECTS credits. The study courses correspond to 3 – 14 ECTS credits, while the elective section of the study programme corresponds to 48 ECTS credits, which is 20% of the entire study programme. Study programmes consist of compulsory and elective subjects. The study programme contains subjects from the group of academic-general (approximately 15%), theoretical-methodological (approximately 20%), scientific and professional (approximately 35%) and professional-applicative (approximately 30%).

A total of 60 ECTS credits per year corresponds to the average total student engagement within the 40-hour working week during a school year. Student engagement consists of:

- Active classes (lectures, exercises, practica, seminars, practical lessons, mentoring, consultations, presentations, projects, etc.)
- Independent work
- Colloquium
- Exam
- Other forms of engagement in accordance with the general statutes of the College/Faculty (methodical and professional practice, publishing activity, etc.).

Approximately, 45% of the programmes are made up of lectures, 15% seminars, while 40% are allocated to practical experiences in ECEC settings. However, each faculty has its own study programme, with specific courses, learning outcomes, structures and quality criteria.

Table 9 presents a selection of curricular areas from the 16 higher education institutions in Serbia.

Table 9

Serbia: Curricular areas of relevant study programmes (selection)

	Group of courses
Bachelor applied studies	
Compulsory courses	Academic General General Pedagogy, Preschool Pedagogy, General Psychology, Developmental Psychology, Psychology of Childhood and Adolescence, Inclusive Pedagogy, Serbian Language and Communication, Children’s Literature, Professional Identity, Philosophy, Foreign Language, Ethics, ICT in early education, Health Education, Physical and Medical Education, etc.
	Theoretical-Methodological Organisation and Structure of the Educational Process, Methodology of Pedagogy Research, Introduction to Scientific Work, Integrated Preschool Curriculum, Integrative Approach to Educational Content, Children’s Play, etc.
	Scientific, e.g., Artistic-professional Sociology of Childhood, Anthropology of Childhood, Visual Arts, Music Arts, Kinesiology, Drama in Education, Vocal-instrumental teaching, Orchestra, etc.
	Professional Applicative Methods of Arts Education, Methods of Speech Development, Methods of Introducing Environment, Methods of Music Education, Methods of Physical Education, Methods of Initial Mathematical Concepts, etc.
Elective subjects	Art workshop, Child and Computer, Visual Culture, Games Workshop, Drama Workshop, Preschool as an Open System, The Inclusion of Socially Deprived

	Group of courses
	Children, Pedagogic Documentation, Child Subculture, Team Work, Models of Preschool Teacher Professional Development, etc.
Bachelor academic studies	
Compulsory courses	Academic General General Pedagogy, General Psychology, Serbian Language and Communication, Foreign Language, Preschool Pedagogy, Developmental Psychology, Family Pedagogy, Inclusive Pedagogy, Philosophy, Health Education, Physical and Medical Education, Philosophy of education, etc.
	Theoretical-Methodological Pedagogy/ didactics, Theory of Education, Basics of Methodology of Pedagogical Research, Pedagogical Methodology, Research in Pedagogy, Action Research in Preschool Education, Methodology of Qualitative and Quantitative Pedagogical Research, etc.
	Scientific, e.g., Artistic-professional Sociology, Visual Arts, Music Arts, Kinesiology of a child, Drama in Education, Vocal-instrumental teaching, Orchestra, Vocal-instrumental practicum, etc.
	Professional Applicative Didactics of Art Activities, Preschool Didactic, Methods of Arts Education, Methods of Speech Development, Methods of Introducing Environment, Methods of Music Education, Methods of Physical Education, Methods of Initial Mathematical Concepts, etc.
Elective subjects	Ethics, ICT in Early Education, Media Education, Culture of Speech and Communication, Fundamentals of Natural Sciences and Ecology, Play and Dance, Puppet and Stage Art, Multimedia Techniques in Education, etc.
Specialist/Master Applied studies	
Compulsory courses	Educational work with children with developmental disorders, Observing Children's Development, Organisation and Structure of the Child's Play, Inclusion of Children in Need of Health Support, Methodology of Pedagogy Research, Introduction to Research Work, Methods of Arts Education, Methods of Speech Development, Methods of Introducing Environment, Methods of Music Education, Methods of Physical Education, Methods of Initial Mathematical Concepts, Specialist/Master Thesis, etc.
Elective subjects	Performing Arts with children, School Readiness, Self-evaluation and development planning in inclusive practice, Values of childhood, Corrective Gymnastics, Spatial Expression Capabilities of Preschool Children, Comparative Study of Education, Academic Writing, etc.
Master academic studies	
Compulsory courses	Theoretical Problems of Didactics, Comparative Approach to Methodology in Primary and Preschool Education, Methodology of scientific and technical research, The curriculum of preschool education, ICT in teaching, Foreign language learning, Methodology for the development of scientific and technical work, Contemporary methodology of preschool education, Research work, Master's thesis, etc.
Elective subjects	Selected thematic units on (adapted): Teaching methods of speech development, teaching Preschool Mathematics, methods of Presentation and Display, methodology of Music Teaching, methodology of Visual Arts Teaching, Academic Writing, methods of physical education, ICT as a Didactic Tool, etc.

Pedagogic-didactic approaches

Based on insights from the study programmes presented, we can conclude that there is a defined list of competences as isolated sets of knowledge, skills and attitudes and emphasis is on their accumulation. Competency acquisition is the individual responsibility of students and

subject teachers. Student assignments become more demanding during each year of study, but the competences to be developed remain more or less the same. This reflects the technocratic approach to the practice of education based on the discourse of competences based “on the division of theory and practice which involves the production of a professional knowledge corpus through theoretical considerations and research transmission of knowledge (through initial education and training) and then appliance in practice, which is seen as regulated and controlled on the basis of scientific evidence (evidence-based practice)” (Pavlović Breneselović 2014). However, competency should not be seen as the sum of isolated knowledge, skills and attitudes, but as praxieological theory built through a reflexive reconsideration of theory, practice, and interpretative framework in a given context. “The basis of competency is autonomy and critical reflection, so competency develops primarily through research of one's own practice, professional networking, collaborative actions in the practice, and not through external training by experts” (Pavlović Breneselović 2014).

Moreover, curricular areas of study programmes are structured according to the disciplinary model, which is not in line with contemporary approaches, theoretical settings and programmes of early childhood education based on a holistic approach to the child, integrated and situational learning aimed at promoting the well-being of the child (Krnjaja and Pavlović Breneselović 2013). Disciplinary knowledge is translated into curriculum subjects through educational outcomes and is not in line with competences defined for the whole study programme.

The content and methods (pedagogy) of the study programmes for the initial professional education of ECEC teachers in Serbia has not been aligned with the postulates of the professional roles of teachers, with the concept of the ECEC educational programme given in the ESD goals 2020 and in the National ECEC Curriculum Framework, according to which: the teacher is the creator and researcher of the programme; the curriculum is to be developed and evolved and not prescribed; the emphasis is placed on the openness of the ECEC setting to the local community and to families; the need to diversify the programme and the forms of ECEC is of primary interest (Baucal et al. 2016).

4.3 Alternative entry and qualification routes, system permeability

Formal opportunities for moving up and across qualifications frameworks, as well as alternative pathways of entry into ECEC work, are not developed in Serbia. ECEC workers can continue their professional development by entering advanced formal education study routes or through life-long learning activities, without possibilities of changing their professional position or work-place.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Since the profession of an ECEC Teacher is a regulated profession, the minimum amount of field-based studies is set by law and has to be taken into account when drawing up the curriculum and in the accreditation process of the programme in general. The Law on Higher Education (LHE, Official Gazette 2021c – 2005 and amendments in 2008, 2010, 2012, 2017 and 2021) provides a legal basis for the full implementation of the Bologna Declaration and the Lisbon Convention. The curriculum of each higher education institution for each study programme is defined at the institutional level according to criteria for the accreditation of study programmes for teacher education.

The mandatory accreditation system for study programmes of colleges and faculties in Serbia is implemented by the Commission for Accreditation and Quality Assurance (CAQA). The CAQA was formed in 2006 as an independent body of the National Council for Higher Education. It is the only formally recognised body responsible for the external quality assurance for higher education in Serbia. The CAQA carries out two types of evaluation processes: the accreditation of higher education institutions and study programmes and the external quality control of higher education institutions (auditing). The CAQA prepares the standards for all evaluation processes (accreditation at institutional and study programme level, auditing, initial accreditation, and self-evaluation of HEIs) that have been adopted by the National Council for Higher Education.

The Law on Higher Education introduced the ECTS as the mandatory credit system to be used by all higher education institutions in all degree programmes, for both credit transfer and accumulation. The ECTS system is fully implemented in all HEIs. Every study programme contains a precise description of the courses and the number of ECTS. This is based on the student workload required to achieve the expected learning outcomes. Each methodology course has some classes directed to field-based learning (between 15 and 45 per semester).

There are two main forms of placement, which vary slightly according to the HEI:

- *Integrated practice* takes place throughout the three or four years under the supervision and monitoring of higher education teachers.
Students are expected to be in an ECEC setting one day per week and undertake specific assignments (e.g. observation of different aspects of educational processes, analysing, visits, interviews)
- *Block practika* take place during each semester (from one to four weeks during the final year).

These placements in ECEC settings are organised as a separate course which takes place outside the regular teaching process. Students choose the setting for the practicum individually. The time they spend at the workplace is supervised and evaluated by an experienced teacher (mentor) in the ECEC setting and by higher education teachers at the college/faculty. The mentor is expected to support the work of the student through planning, preparing and evaluating the student's activities. Specific qualifications or working conditions for this position have not been developed. This mentoring role is taken on by motivated ECEC teachers who coach students voluntarily, i.e. without additional payment.

All students are obliged to provide documentation as defined in the course syllabus. The mentor is obliged to evaluate the quality of the student's practice through a written report. At the end of the practicum, the student hands in the various forms of documentation to the responsible higher education teacher, who checks whether all obligations have been fulfilled. This is the only formalised procedure of self-evaluation and evaluation of the student's practice. However, each higher education teacher can give the students special assignments connected with specific lectures or courses.

Despite the differences that exist in defining competences that students should develop during professional practice, common to all is to provide students with the practical application of acquired knowledge, skills, strategies and working methods related to the future occupation. Students are expected to:

- Carry out educational work in the ECEC setting independently (organise the physical and social environment, plan and perform activities with children)
- Demonstrate their ability to monitor and evaluate children's activities and well-being
- Apply the knowledge and skills acquired during their IPE in an integrated way
- Develop a capacity for continuously evaluating and self-evaluating their own work and that of the teachers
- Demonstrate their sensitivity for children, parents, colleagues and other professionals who work in the ECEC setting.

Work placements are also part of some Specialist and Master applied and Master's academic study programmes. The main aim at this stage is for students to qualify themselves for independent working with specialist methodological knowledge and skills, as well as for the reflection and improvement of ECEC theory and practice. For example, at the Faculty of Education in Užice, University of Kragujevac (2020), during the second year of study, students spend 165 hours (4 weeks or 20 days) in an ECEC setting (6 ECTS credits). During the practicum, students are expected to develop the ability to:

- Implement activities in pre-school institutions independently and critically reflect on their own pedagogical practice
- Improve their own work based on the results of their own research and research of others
- Master the techniques and "tools" of further personal education and training using modern IT tools and
- Master academic writing skills.

It can be concluded that workplace-based learning in the IPE of core practitioners is not sufficiently defined in Serbia. This can be deduced from the low and unsynchronised number of ECTS credits allocated for this part of IPE, from the lack of formal procedures for organising and evaluating these processes, and from the lack of qualification requirements for field-based mentors, who are not well recognised and supported.

Based on some particular insights, available research and analyses, we can conclude the following:

- ECEC teacher education reflects the weaknesses of the education system in general in Serbia: it is based on decontextualised learning and on a division between theory and practice, where the emphasis is placed on acquiring theoretical knowledge instead of competency development. The research study entitled "Harmonization of Educational Programs for Educators in Western Balkans Countries" (Panić 2008) has confirmed insufficient levels of practicum in the study programmes for educators (from 10% to 15%), assessed as inadequate for the development of professional competences.
- The current structuring of the programmes of initial professional education according to a disciplinary model and teaching methodologies and the lack of integration of field-based experiences are not in compliance with contemporary approaches, theoretical postulates and programmes of preschool education based on a holistic approach and on integrated and situational learning aimed at strengthening the child's well-being and the development of learning dispositions.

6. Continuing professional development (CPD) of ECEC staff

The Law on the Foundations of the Education System (2003) defined the system of professional development in Serbia for the first time (LFES, Official Gazette 2021g – 2003 with amendments in 2004 and 2009 with amendments in 2010, 2013 and 2017, 2018, 2019, 2020 and 2021.). The Law also created an institutional framework for PD by establishing a Centre for Professional Development (CPD), which initially functioned as an independent institution. Through the amend-

ments of the LFES in 2004 it has now become an organisational unit of the Institute for Improvement of Education (IIE). Regional Centres still have an important place in the system of professional development.

PD reflects the concept of lifelong learning and the EU priorities relating to PD, Key Competences⁶, and Education and Training 2020⁷ (Eur-Lex 2016).

Under the Law, there are three main institutions that have the mandate to conceptualise and implement the system of professional development:

- MoE: Development of the regulatory framework
- Institute for Improvement in Education: Strengthening of the continuous competence improvement and professional development system of employees working in ECEC, elementary and secondary education
- Regional Centres: Investment in the delivery systems of CPD and other services.

The professional development system has the following main components:

- **Accreditation** of CPD activities and other skills-building interventions
- **Standards for teachers' licensing** which require teachers to participate in CPD activities
- A **mentoring system** to support newly-qualified teachers
- A **career advancement system**, which provides incentives for teachers to progress.

The framework for the CPD system is set up by the Rulebook on the Continuing Professional Development and Career Advancement of Teachers, Educators and Expert Associates (Official Gazette 2021d).

Main principles

- CPD is obligatory
- CPD is part of career advancement and personal development
- The teacher has autonomy in the planning of professional development
- The CPD system is market-oriented.

Main forms of CPD

- (1) Professional training programmes
- (2) Specialist meetings, such as: congresses, one-day meetings, conferences, counselling, symposia, roundtables, webinars
- (3) Summer and winter schools
- (4) Professional study trips.

The concept of professional development consists of professional training courses and career advancement to acquire a certain professional title: Pedagogical Counsellor, Independent Pedagogical Counsellor, Senior Pedagogical Counsellor and Superior Pedagogical Counsellor. Hence, the concept is reliant on the educators themselves and their “individual professionalism” (Hargreaves 2000). This concept sets professional development apart from the development of practice in an ECEC centre and apart from changes in the system shaped by educational policies.

⁶ Key competences in the shape of knowledge, skills and attitudes appropriate to each context are fundamental for each individual in a knowledge-based society. They provide added value for the labour market, social cohesion and active citizenship by offering flexibility and adaptability, satisfaction and motivation. Because they should be acquired by everyone, this recommendation proposes a reference tool for the European Union (EU) countries to ensure that these key competences are fully integrated into their strategies and infrastructures, particularly in the context of lifelong learning.

⁷ “Education and Training 2020” (ET 2020) is a strategic framework for European cooperation in education and training (Eur-Lex 2009). It provides common strategic objectives for Member States, including a set of principles for achieving these objectives, as well as common working methods with priority areas for each periodic work cycle.

In general, there are no specific forms of CPD for different core practitioners and qualified co-workers (Nurses, Teachers, Expert associates, Associates). The forms for the qualified workers who do not have regular contact with children in the classrooms (such as Psychologists, Pedagogues, Social Workers etc.) are the same as those mentioned above. In many cases, CPD is provided for all of them at the same time, especially if the CPD activity is **workplace-based** and out of working hours. In the case of CPD activities outside the workplace, ECEC providers have to cope with certain problems regarding the replacement of staff during CPD attendance and the costs for travelling.

The Rulebook defines professional development as the “continuous development of competences of teachers, preschool teachers and expert associates to improve the quality of their work, the advancement of children’s and students’ development and the levels of students’ outcomes” (Rulebook on Continuing Professional Development and Career Advancement of Teachers, Educators and Expert Associates, Official Gazette 2021d). This definition ignores the four pillars of professional development, which have been defined as: (1) Reflective practitioners who develop by and through continuously reflecting on their practices; (2) Professional development as part of the education system which is in a continuous state of transformation; (3) Professional development as the development of partnerships and different roles; (4) The ECEC centre as a learning community where professional development takes place and at the same time contributes to the development of the ECEC centre as a community (Krnjaja and Pavlović Breneselović 2013).

The Rulebook promotes formal CPD programmes, as these are the only kind which can award credit points. This means that ECEC Teachers and Expert Associates cannot earn points for any form of CPD which they undertake together with their colleagues within the context of their practice.

According to the Rulebook, compulsory CPD activities are defined in the first and second group of forms (see Main forms of CPD). Within a five-year period, an ECEC teacher is obliged to earn at least 100 points by participating in different CPD activities, out of which at least 80 points should be earned by completing accredited formal programmes (Official Gazette 2021d). To fulfil this requirement, an ECEC teacher has the right to a 24-hour paid leave from work within a one-year period. According to the Rulebook, various forms of CPD at the ECEC centre are considered to be the duty of every ECEC teacher and Expert Associate within the 40-hour working week.

For the formal training programmes, quality criteria have been set out and the procedure of programme accreditation is carried out by the Institute for the Improvement of Education (IIE) in compliance with the Standards for In-service Training Programmes’ Accreditation and issues a Programme Catalogue for teachers, ECEC teachers, expert associates and principals.

In accordance with the Rulebook, an ECEC Teacher cannot earn any points by undergoing forms of CPD focused on developing an ECEC setting into an open system and which emphasise the importance of reflective practice embedded in action research, projects, study visits, creating a pilot ECEC centre or developing innovative approaches in the ECEC settings. This means in effect that the Rulebook and the Programme Catalogue are not in compliance with the Law on Pre-school Education.

The Rulebook is also not in compliance with the concept of mentoring, envisaged as a stage in professional development, with a process which includes critical thinking about one’s own work, or with developing partnerships and experience-based and reflexive learning. Transformation of the roles of the mentor and the inductee into work, which is a vital part of the mentoring concept, is not supported through the points system of CPD as set out in the Rulebook. It means that learning together with other colleagues is devalued.

7. Working conditions and current workforce issues

7.1 Remuneration

There are two main differences between ECEC Teachers and other teachers in Serbia. Firstly, the qualification requirement for primary and secondary school teachers is a Master's degree, whereas for ECEC Teachers it is a Bachelor's degree. Secondly, the salaries of teachers in schools are the same across the country, whereas the salaries of ECEC teachers are highly variable.

Traditionally and according to public perception, the social status of the ECEC Teachers' profession is ranked lower than that of the school teachers and professors. Teachers in schools (primary and secondary) are paid at a nationally agreed level, whereas ECEC Teachers are paid according to local regulations (because municipalities are responsible for ECEC in Serbia). This means that the source of salaries for teachers in schools is the national budget, while the sources of salaries for ECEC teachers are municipal budgets which fund the specific ECEC institution. In both Strategies of Education Development 2020 and 2030, the poor social standing and low economic status of the profession were pointed out as key issues producing additional ramifications on the quality of candidates interested in taking up this profession.

Provisions of the Law on Preschool Education lay down that the basis for salary calculations and payment in ECEC institutions cannot be lower than those for primary school education, but that they could be increased from the funds of the institution or of the local self-government unit. Since ECEC teachers' salaries are provided by the local self-government, substantial inequalities at the regional level mean that the net salaries of ECEC Teachers range from RSD 50,234 (approx. €428) to RSD 75,030 (approx. €640) (Infoplate Serbia 2023).

Pursuant to the Regulation on Coefficients for Calculation and Payment of Employees' Salaries in Public Services (Official Gazette 2021e), the Government prescribed the wage rates and coefficients for educational degree levels and jobs in ECEC in the same way as for the primary and secondary education teachers' professions.

7.2 Full-time and part-time employment in ECEC provision

A full-time job in Serbia amounts to 40 hours per week. The structure of the working hours of teachers, expert associates and associates in ECEC institutions are regulated by the Law on the Foundations of the System of Education and bylaws. According to this law, within the framework of weekly full-time work, the pedagogical norm for ECEC teachers is 30 hours per week pedagogical and educational work and activities with children (75% of the working hours).

The structure and schedule of ECEC Teachers', Pedagogues' and Psychologists' obligations within the working week are determined by the institution in its annual work plan. 82% of teachers in ECEC settings across Serbia work full-time.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Pursuant to the LFES (Official Gazette 2021g), upon expiry of a minimum of one year and/or a maximum of two years of internship, teachers and expert associates employed in the ECEC institution or those who completed internship in the ECEC institution may take the license exam.

The Rulebook on Work Permits for Teachers, ECEC Teachers and Expert Associates (Official Gazette 2022) regulates the following: the work induction programme for ECEC Teachers and expert associates, the verification method and procedure for the candidate's mastering of the programme, the programme for acquiring the work permit (license), the licensing exam costs and the administrative authority before which the licensing exam is to be taken, the licensed teachers' register content and the method of register keeping for ECEC Teachers and expert associates and the license form.

A mentor is appointed to work with the trainee. A senior teacher or expert associate with the same degree and type of education as the intern, who has a license and one of the prescribed titles or at least five years of work experience in the field of education and training, can be appointed as a mentor by the director of the institution. The mentor introduces the trainee to the job by providing assistance in the preparation and implementation of educational work; by observing educational work for at least 12 hours during the internship; by analysing the educational work in order to monitor the trainee's progress; by providing assistance in preparation for checking the mastery of the programme (Official Gazette 2022).

Pursuant to the Rulebook, the licensing exam is taken before a commission of four members comprising a representative of the relevant higher education institution, two education advisors of the Ministry or an advisor-coordinator of the Institute for the Improvement of Education/Institute for Quality Evaluation of Education, or an advisor or expert associate and a person from the legal profession employed by the MoESTD. The exam comprises a written account of an activity with children in the case of a teacher or an essay in the case of an expert associate. It also includes an oral exam to verify the acquired knowledge, skills and capacities levels for independent educational work, the ability to cope with concrete situations in practice, as well as the candidate's knowledge of the relevant legislation in the field of education.

7.4 Non-contact time

As stated previously, according to LFES, ECEC Teachers work in direct contact with children for 30 hours per week. The rest of the time (ten hours) is allocated for the planning, programming and evaluating of work, preparation, organisational and material resources, collaboration with parents and other participants of ECEC processes and for professional development.

7.5 Current staffing issues

Reliable national data regarding staff shortages, recruitment and the age distribution in the workforce are not available.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Even though the initial professional education (IPE) of teachers in the Western Balkans has gained importance in previous years and has been undergoing substantial reforms, colleges for ECEC Teacher Education in Serbia have not fully entered into these processes. As a result, this educational sector faces numerous challenges in aligning its study programmes to the European education area and is failing to introduce the necessary innovations in teaching methodology and practical learning. The sector is characterised by heterogeneous curricula and substantial differences in approaches to teaching methodology and training.

Policy reforms and initiatives relating to IPE

One fairly recent reform initiative was realised through the TEACH project *Harmonization of Pre-school Teacher Education Curricula in Serbia 2013 – 2016*, supported by the European Commission (EACEA) (VSS 2016). The TEACH project focused on the harmonisation of the IPE programmes of four colleges of applied studies for ECEC teacher education in Serbia. Specific project objectives were: to harmonise curricula and have them certified at all participating colleges through re-accreditation and the enrolment of a new student intake; to improve the transversal skills of teachers through the training of trainers and improve the teaching methodology and entrepreneurial competences of teachers through identifying learning outcomes and methods of achieving them.

In June 2021, the Government of Serbia adopted the Strategy for the Development of Education (SDE) in Serbia by 2030, which is a step towards the harmonisation of education policies with policies relating to science, technical and technological development in contemporary society. The SDE in Serbia 2030 has two general goals. The first refers to pre-university education, and the second to higher education:

- Increasing the quality of teaching and learning, equity and accessibility of pre-university education and upbringing, and strengthening the effectiveness of educational institutions
- Increasing the quality and improving the relevance and equity of higher education.

In 2021, the Law on the National Qualifications Framework was adopted. The National Qualifications Framework of Serbia (NQFS) has 8 levels and 4 sublevels and defines four qualification types:

- General basic education and secondary education
- Vocational education and adult education
- Academic higher education
- Vocational higher education.

The National Qualifications Framework enables the regulation of the system of qualifications in the Republic of Serbia for all levels and areas of education, thus achieving greater flexibility and accessibility, above all within different levels of education. Establishing a National Qualifications Framework ensured the comparability and recognition of qualifications obtained in the Republic of Serbia with those in other countries.

Despite this, more serious reforms of the initial professional education of ECEC Teachers have not been made. There is a need to reform the system and curricular framework for the IPE of ECEC teachers (both in structure and content) in accordance with contemporary approaches towards early childhood education, the profession of an ECEC Teacher, the practices in ECEC institutions and the ECEC programme. At the curricular level, changes in content and pedagogical approach in initial education of teachers need to be aligned with contemporary postulates on key competences of professionals in education for the 21st century (e.g. through practitioner inquiry and ongoing exchange, enhancing the capacity for self-evaluation as a continuous process of developing the quality of practice and not as a technical issue according to the model of external evaluation, transforming the culture of the preschool institution into a community of learning), as well as with contemporary understandings of childhood, children and learning.

Policy reforms and initiatives relating to ECEC staff

Piloting the new ECEC Curriculum Framework “The Years of Ascent” (2016 – 2018) (Official Gazette 2018a), conducted by the Institute of Pedagogy and Andragogy at Belgrade University, the Ministry of Education, Science and Technological Development, the Institute for the Improvement the Education and UNICEF.

The project's objective was to improve the quality of early childhood education through the development of a new ECEC Curriculum Framework. It is being piloted in three ECEC settings (Novi Sad, Čačak, Zemun) with the following aims and stated outcomes:

- Developing and finalising the ECEC Curriculum Framework
- Developing training programmes for teachers and centre leaders regarding the implementation of the new curriculum
- Developing competence standards for ECEC Teachers
- Preparing guidelines for the implementation of “The Years of Ascent”.

The initiative **Support to preschool education system reform – SUPER (2019 – 2021)** (Vlada Republike Srbije 2019) was commissioned by the Serbian Ministry of Education, Science and Technological Development, implemented by Particip GmbH in a consortium with IB (Internationaler Bund), VBJK in Belgium and the Centre for Interactive Pedagogy (CIP), and financed by EU funds. The purpose of this project was to contribute to the reform of the ECEC system by providing support to the Ministry of Education, Science and Technological Development and Local Self Governments to develop ECEC as part of lifelong learning through planning and managing ECEC more effectively at the local level and implementing modern pedagogical approaches. The stated outcomes are:

- Strengthening the professional capacities of local governments to plan and manage early childhood education and care
- Strengthening the professional competences of ECEC staff for delivering high-quality and inclusive pre-primary education and
- Advancing the legislative framework in the field of early childhood education and care.

The Inclusive Early Childhood Education and Care project (2019 – 2022) (MoESTD 2022) is being implemented by the Ministry of Education and financed from loan proceeds of the World Bank. The objective of the project is to improve access to quality early childhood education and care services for all children aged 3 to 6½ years, especially those from socially and economically disadvantaged backgrounds. The project is expected to directly benefit children aged 0 to 6½ years and their families, ECEC institutions, local communities (local self-governments, health care centres, social work centres, etc.), government institutions involved in preschool education and care, etc. Major components of the ECEC project are: Expanding the supply of available places; strengthening the quality of ECEC services; and supporting young children and families. The component on strengthening the quality of ECEC services is focused on enhancing the quality of the ECEC system, characterised by a holistic approach to supporting the learning, development and well-being of children. It comprises the following activities:

- Support to the implementation of the new ECEC Curriculum Framework
- Improvement of the initial professional education of ECEC Teachers, professional development and advancement opportunities for practitioners in ECEC settings, as well as the improvement of leadership competence in the settings
- Improvement of monitoring and evaluation, aimed at better informed data-based decision-making, including the improvement of the Education Management Information System (EMIS), of self-evaluation and external evaluation procedures, of technical assistance in developing a strategy for offering more diverse ECEC services and regulating them at the local level.

9. Recent country-specific research focusing on ECEC staff

There are three research institutes in Serbia primarily pursuing educational research: the Institute for Pedagogical Research in Belgrade⁸, the Institute for Psychology at the University of Belgrade – Faculty of Philosophy, and the Institute for Pedagogy and Andragogy at the University of Belgrade – Faculty of Philosophy. Research projects in the field of education are also implemented within the Department for Pedagogy of the Faculty of Philosophy at the University of Novi Sad, the Teacher Education Faculty in Užice, the Centre for Pedagogical Research at the Department for Pedagogy of the Faculty of Philosophy in Nis, and the Teacher Education Faculty in Belgrade.

However, there is no consolidated database on institutions and organisations conducting research in the field of ECEC, or a consolidated database on the projects implemented in this field. This is a consequence of a non-transparent system and the lack of a single ECEC portal; the weak recognition of developmental projects in the field of scientific research; the lack of transparency in the work of the research institutions; and insufficient networking among the research institutions and projects.

There are few research studies to report on that were conducted during the past five years. These first three studies therefore draw on slightly older research focusing on ECEC staff, whereas the three projects presented in the context of the COVID-19 pandemic are more recent.

Children as co-researchers in ECEC settings

Source: Pavlović Breneselović 2015, conducted by the Institute of Pedagogy and Andragogy (see *References* for full details)

Aims: To investigate children’s perspectives on the quality of kindergarten practices and to develop a child-led perspective of quality.

Procedure: A participatory research methodology that involved children as co-researchers using the Mosaic approach. The research relied on participative research techniques and involved 50 children (30 girls and 20 boys) aged 5–7 years from 30 ECEC centres in different regions of Serbia and in Belgrade (25 children from 11 Belgrade kindergarten and 25 from 19 kindergartens throughout Serbia).

Selected results: The study presented a synthesis of kindergarten practice quality, taking into account data obtained through consulting with children, regarding kindergarten ‘schoolification’, segregation, child well-being and (non)differences. The study identified the school-oriented kindergarten practice both ideologically (kindergarten as preparation for school) and pedagogically (clear division of play and learning activities and reducing the understanding of learning to teaching). The analysis indicated that contemporary kindergarten practices do not sufficiently support any of the three dimensions of well-being (subjective, psychological and social) and illustrated gender stereotypes and gender typology as well as discriminative practice regarding both boys and girls.

Implications: The study provides guidelines on quality development in ECEC setting practices through changes in the structural dimensions (group size, child/teacher ratio and space), through an enhanced curricular framework, through a change in the culture of the institution in

⁸ Projects realised by the Institute for Pedagogical Research are predominantly focused on school education. There is no data on the Institute’s web site on any projects implemented in the field of early childhood education and care.

the direction of a learning community, through strengthening child participation, through the joint participation of children and adults and through reflexive practice.

Mentorship as practitioner collaboration

Source: Miškeljin 2016, conducted by the Institute of Pedagogy and Andragogy (see *References* for full details)

Aims: Perceiving and understanding the perspective of the mentors involved in the project “Kindergarten without borders 2 – quality inclusive pre-school education in Serbia” at several levels: the practice of preschool upbringing and education, their role in the team in the ECEC institution and in the local community, their role in the programme and the project, and the given concept of mentors in the project.

Procedure: Research methodology involved nine mentors using a focus group interview and a semi-structured questionnaire.

Selected results: The study showed that mentors recognise a developed mentoring and support system for ECEC centres as important in the processes of introducing and initiating changes in everyday ECEC and developing quality.

Implications: The conclusion states that it is necessary to change the concept of professional development in order to ensure support in the process of changing practices and developing quality in all dimensions of ECEC settings.

ECEC Teachers’ perspectives on professional development

Source: Pavlović-Breneselović, and Krnjaja 2012, conducted by the Institute of Pedagogy and Andragogy in partnership with the Serbian Association of Preschool Teachers (see *References* for full details)

Aims: To analyse the perspective of educators on the practice of professional development from the point of view of a systemic approach and develop a model of transformation of the professional development system.

Procedure: A survey technique using a questionnaire containing closed and open-ended questions and an assessment scale (total of 11 items). Questionnaires were filled out by 130 teachers from kindergartens throughout Serbia, randomly selected during student internships and at a professional meeting of ECEC teachers.

Selected results: The study showed that the existing system of professional training (CPD) in Serbia has the characteristics of a mechanistic approach to the improvement of essential skills. It is being realised solely through seminars; it is detached from teachers’ everyday practice; it is characterised by a patronising approach on the part of the experts; and it is detached from implementation and the improvement of practices.

Implications: The existing system of professional training in Serbia has essential characteristics of the industrial model of training: implementation through seminars, separation from practice, expert patronage, individual responsibility and lack of connection with changing and improving the practice of kindergartens. The improvement of the system of professional training is a matter of comprehensively defining and establishing four mutually connected and conditional dimensions: (1) professional training, (2) professional progress, (3) improvement of practice and (4) education policies that promote a culture of change and development at the level of the entire education system. Proper professional development is not a matter of personal achievement – it is inseparable from improving kindergarten practice. It is possible only if change, development and improvement are the backbones of education policy in all segments.

Projects related to the COVID-19 pandemic outbreak

In the midst of the global crisis caused by the COVID-19 pandemic, the Faculty of Philosophy in Belgrade launched the research project "Humans and Society in Times of Crisis" in 2020 with the aim of examining the implications of the current crisis on various aspects of human life and different spheres of social reality. In addition, based on the consideration of crises that have occurred in the recent or distant past and in different social contexts, the aim of the project is to reflect on possible solutions to the current crisis and formulate visions of the so-called post-COVID society. The "times of crisis" in the project heading can thus equally represent time that has passed, the time in which we live, but also the time that awaits us. One of them – "Education in the time of the COVID-crisis: where we are and where to go next" (University of Belgrade 2021) – consists of 16 research papers authored by teachers and researchers of the Study Group for Pedagogy of the Faculty of Philosophy. It focuses on the field of education in the time of the COVID-19 crisis, a time that in a drastic way shows the sensitivity and vulnerability of education as a social practice, the weaknesses of existing educational systems and the limitations of institutional educational practices. At the same time, it has reanimated the awareness of the vital importance and potential of education that we count on precisely in times of crisis.

Regarding ECEC there are four significant research projects:

ECEC in the time of the corona virus crisis: physical isolation and the "tunnel effect"

Source: Krnjaja 2021 (see *References* for full details)

Aims: The paper analyses the attitude towards children in ECEC settings during the corona crisis.

Procedure: Thematic analysis was used in the research conducted by 23 students of the third year of bachelor studies in Pedagogy together with their subject teacher, as part of the research student work on the subject Preschool Pedagogy during March and April 2021. The research collected various e-publications and materials in a digital form intended for children, which deal with the coronavirus and which were prepared or recommended by educators and professional associates: worksheets/picture books for children (5), manuals for children (2), a poster for children (1), songs written by educators (5), suggestions for games/experiments for parents and children to play together (3), stories written or recommended by educators (4) and video clips (3). In the study, e-publications for children were analysed: *Korona's playroom in the „Forest Villa“*, *The story of the shell and the butterfly: the coronavirus and me*, *Petra against the virus*, *Korona's picture book* and *The day when everything stopped*.

Selected results: Incoherence and absence of conceptualisation regarding a consistent and correct interpretation of the term "coronavirus" were observed in four of the five analysed e-publications. In only one e-publication, the coronavirus is interpreted as "an invisible organism transmitted between people". In terms of the participation of teachers/authors, insufficient willingness was observed to share their feelings and experience with the child as participants in the community facing a problematic situation and then to provide protection and support for the child's safety. Only in one picture book are children instructed to strengthen self-regulation to feel safe. The participation of the teachers/author is dominantly accompanied by an advisory and didactic attitude towards the child.

Implications: Facing the unexpected during the corona crisis in preschool education, we see the necessity of critically reviewing attitudes towards children and identifying ways to overcome perceived weaknesses. The culture of using e-publications requires a clear articulation of what we strive for in education and what we expect from the child.

Remote kindergarten in the time of the COVID-19 crisis from the children's perspective

Source: Mitranić 2021 (see *References* for full details)

Aims: To explore the children's perspective on the "remote" kindergarten during the corona pandemic through activities in which the children were engaged; peer relations; relations with the teacher.

Procedure: Consultations with 13 children: 6 boys and 7 girls – aged 5–7 years, from different kindergartens and cities in Serbia, on the issues of activities that were realised through digital platforms in the specified period, the ways in which relationships with peers and kindergarten teachers were established and the suggestions that children would make for a possible transformation of work in a digital environment.

Selected results: Most of the activities realised for the children were not meaningful – neither did they decide on the activities, nor did they find meaning and purpose in them. Even in certain activities that thematically touched on the pandemic situation (such as the lengthy "Everything will be fine"), children did not recognise the connection with life experience – with their environment, their understanding of the world and the current situation. By talking about the possibilities in the event of re-isolation, the children indicate the necessity of breaking out of established patterns and "quick solutions" when devising ways of working and the importance of creating, imagining, researching, and playing as experiences that they want to experience and share with us.

Implications: The children's perspective of the "remote" kindergarten in the time of crisis shows us, again and again, the intertwining of actions with the question of the quality of relationships. In relationships with others, children create and express themselves and develop a sense of purpose and meaning. This research raises the following question: Is the lack of purpose and meaning that children show about the "remote" kindergarten experience mainly due to the lack of feedback and reactions from peers and adults and the absolute lack of dialogue about what we can do and why. From the conversation with the children, it is recognised that "it is not the same" when the peers and the teacher are not there – the kindergarten group is not just an organisational unit. It is a community and learns as such, living and transforming.

Approaches of educational policy to preschool education in times of crisis

Source: Miškeljin 2021 (see *References* for full details)

Aims: Starting from an understanding of early childhood education as a holistic process of care, education and support involving the development of individual potentials and achieving continuity of human culture and social progress, the paper analyses the policy approaches to preschool education during the COVID-19 pandemic in terms of two key measures taken by education policymakers: closing and opening ECEC institutions.

Procedure: In order to understand the approaches, as well as their variations in the design of immediate measures in relation to preschool education and education, the research focuses on looking at the broader European context through a cross-national presentation of educational policy measures for the prevention of the spread of the COVID-19 pandemic in relation to preschool education in Norway, Sweden, Finland, Germany and Italy.

The criteria for selecting countries were: an integrated approach to ECEC, an approach based on the principles of equality and respect for diversity, unified jurisdiction for ECEC and availability of data on official websites. In the second part of the study, the educational policy approaches regarding preschool education and education during the COVID-19 pandemic crisis are analysed through the adopted measures of the educational policymakers in Serbia.

The approach in the research is based on the settings of the narrative analysis of the educational policy in a time of crisis concerning two key events: the closing and opening of preschool institutions.

Selected results: In a cross-national presentation of educational policy measures in relation to the closure and opening of ECEC institutions, the following approaches are distinguished: equal opportunities and the right to preschool upbringing and education; caring for children of working parents; medical model of care; and accessibility. In adopting a set of recommendations and guidelines specifically intended for ECEC institutions, educational policymakers in Serbia, focusing on procedural issues such as disinfection of spaces, accessories and equipment, not using toys that cannot be washed and disinfected, delegated expertise to practitioners, which provided little help in deciding of the implementation of direct educational work in the changed circumstances caused by the current situation.

Implications: Emphasising "lost learning opportunities" and the transmissive model of information and knowledge transfer, "a well-known and safe pedagogical format", leads to schooling, and not to promoting support, care for others, connection and "living together" as essential functions of early childhood education.

10. Workforce challenges – country expert assessment

Based on the analyses presented, one of the key workforce challenges in the Early Childhood Education and Care (ECEC) system in the Republic of Serbia is related to the great variety and confusion among different educational profiles and job titles of staff in ECEC. Furthermore, the discrepancy between educational practice on the one hand, and the initial professional education of future ECEC teachers on the other, shows that norms that are a measure of the relationship between theory and practice are expressed in diametrically opposite meanings, e.g. abstract or concrete, universal or specific, generalised or situational, true or unverifiable, objective or subjective, formal or informal, proven or possible (Korthagen 2010 cited in Krnjaja 2019). As presented in one research study (Krnjaja 2019), practitioners and students often feel they are not offered the theory they need to prepare for their practice and often seem unable to integrate the provided theory with their approach. Hence, the theory remains an incomprehensible language for them with no direct relation to their daily practice (Krnjaja 2019).

On that note, one more challenge is directly related to the above and refers to the guided workplace experience (practicum) in the initial professional education of ECEC Teachers. This is an essential dimension of the professional development of both students and their teacher-mentors. It is an integral part of the practice of ECEC, where prospective teachers get to know their profession practically through active participation in various daily activities in the ECEC institution. However, this topic is insufficiently researched, and little is written about it in our professional and scientific community. Bearing in mind that quality in ECEC is seen as a system (Pavlović Breneselović 2014), the proposals could go in the direction of establishing a dialogue between the ECEC institution and the colleges/faculties in which they strive to build a joint, shared vision of the role of professional practice in the initial education of ECEC teachers.

As a final challenge, but by no means the least important, we would like to highlight the inertness and slowness in the process of transformation and harmonisation of the initial professional education of ECEC Teachers in accordance with contemporary approaches to preschool education and the profession of an ECEC Teacher as outlined in the ECEC Curriculum Framework "Years of

Ascent” (Official Gazette 2018a) as well as in the Standards of competences of ECEC teachers and their professional development (Official Gazette 2018b).

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC provision are **nursery** (*jaslice*, 0–2), **kindergarten** (*dečji vrti*, 3–5½) and **preparatory pre-primary programme** (PPP, *pripremni predškolski program*, 5½–6)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Serbia

1844	– First custodial institution for young children established in Subotica, Vojvodina – First Froebel-inspired 'playschool' opens in Subotica.
1891	The Child Protection Act includes 2 years of training for playschool educators in Hungary (to which Vojvodina belonged at the time).
1890	Goals and activities of playschools are officially defined for the first time in the "Guidebook of Serbian Religious Playschools". The focus is on preparing children for school entry (at age 7) and their physical development. However, playschools are still welfare institutions rather than educational ones.
1898	Under the National Schools Act, a Curriculum for Playschools was prescribed based on the Froebel and Montessori pedagogical concepts – playschools now have a mandate to prepare children between the ages of 5 and 7 for school through play and organised activities.
Up to 1914	Gradual expansion of playschools
1918 to 1945	Playschools become secular institutions and are no longer affiliated to the church.
1929	The Public Education Act – kindergartens become an integral part of the education system.
As from 1940	A one-year training for educators in the Serbian language is introduced and becomes obligatory.
1948	Regulations on the establishment of ECEC centres
1950	The magazine "The Pre-school Child" was established and published quarterly
1952	Rulebook for preschool institutions foresees two types of regulated institutions for children: (1) nursery settings involving daily attendance, and (2) pre-primary settings involving a half-day educational programme.
1957	Under The Republican Law on Kindergartens, the two types of preschool institutions are merged into one and renamed 'kindergartens'.
Post WWII	ECEC is influenced by the Soviet programmes and Soviet pedagogy, including Vygotsky's theories. Kindergartens become public (state) institutions.
1961/62	Pre-school Pedagogy is included as a scientific discipline at Belgrade University.
1970s and 1980s	Enrolment rates rise gradually.
1971	"The Pre-school Child" – a practice-oriented magazine – is reissued in a new format, now publishing scientific articles alongside more practical ones.
1972	The Early Education Act is adopted.
1974	The Child Protection System is introduced – Kindergartens develop into institutions providing support appropriate to the needs of families and children and are

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. The SEEPRO-3 editors have chosen the following age-inclusive format: **0–2** years for settings **up to** 3 years of age and **3–5** years for pre-primary settings in countries with a primary school entry age of 6 (3, 4 and 5 year-olds). In the case of Serbia, these formats are **0–2** and **3–5½** years.

	defined as part of a unique system of child protection. The Early Education Act characterises a state and centrally regulated system both at the federal level of the Socialist Federal Republic of Yugoslavia (SFRY) and at the republic level of the former Serbian Republic (being one of the six republics of Yugoslavia).
1975	A new official programme for ECEC is launched, following on from those in 1952, 1959 and 1968, each introducing specific 'reforms'.
1976	The <i>Framework Programme on teaching and educating children in preschool institutions and preparing children aged 6 to 7 years for primary school</i> is adopted, which highlights, among other things, the importance of play in children's learning and development.
1979 – 1982	A detailed evaluation study called "Basic characteristics of development and educational processes in kindergartens in Serbia" is published, the first programme evaluation ever to be carried out in Yugoslavia. It was funded by the Self-Management Community of Interest of Child Care in Serbia, which at that time was in charge of the overall policy of social childcare. It represents the first official policy in the field to draw on scientific research.
1984 – 1996	Based on the results of the evaluation study, a series of projects on different aspects of ECEC are conducted. Kindergartens start to envisage the child as an active, interactive, creative person; addressing the needs of individual children is emphasised.
1992	The Act on the Social Care of Children is adopted.
1994	A <i>Framework Programme for the preschool education of children up to 3 years of age</i> is adopted
1996	A <i>Framework Programme for the preschool education of children from 3 to 7 years of age</i> is adopted, giving an official choice between two programmes: Model A (constructivist approach, the curriculum applied in an open system of teaching and education) and Model B (cognitive-developmental programme approach).
1999	ECEC comes under the jurisdiction of three national ministries: Ministry of Education, Ministry of Social Affairs and Ministry of Health.
2003	ECEC becomes part of the formal education system and now falls under the jurisdiction of the Ministry of Education. The Education System Foundations Act places a focus on democratic principles, respect for children's rights, age equity, and protection against discrimination.
2005	A general strategy of 'Quality education for all' is introduced – but there is still a lack of understanding of the value of early childhood education.
2006	The preparatory preschool programme (PPP) becomes compulsory for all children and free if children participate in a daily 4-hour programme, in accordance with the amendments of the Education System Foundations Act.
2006	Revised <i>Framework Programme for preschool education</i> is adopted, divided into three interconnected units for (1) Children up to 3 years, (2) Children from 3 years up to the preparatory programme and (3) The Preparatory Preschool Programme.
2007	The 2-year professional education course for educators is extended to 3 years, with the option of completing an additional year for a specialisation.
2010	The Early Education Act is adopted with the goals of supporting overall child development, strengthening the educational role of families, creating equal access opportunities, and promoting democracy and openness.
2011	In the document 'Development and improvement of quality in pre-school, primary and general secondary and arts education – 2010-2020', quality assurance through standardisation and assessment are emphasised more than quality development.
2012	The 'Strategy for the development of education in Serbia up to 2020' aims to create good conditions for the well-being of all children before they enter school. The 'Policy on evaluation and self-evaluation of pre-school institutions' contributes towards improving setting quality.

2018	<ul style="list-style-type: none"> – The <i>Preschool Curriculum Framework ‘Years of Ascent’</i> is adopted – founded on contemporary theoretical perspectives on childhood, early childhood learning and development, contemporary curriculum theories, cross-national analysis of ECEC curricular documents and examples of inspiring high-quality preschool education programmes worldwide. It defines the approaches necessary for early childhood education and care (see section on <i>Curricular Framework</i>). – <i>Guidelines of various pre-school education programmes</i> are updated to include current theories on education in (early) childhood and relevant international reports. – <i>Rulebook on Competence Standards for ECEC teachers</i> is adopted.
2019	Amendments to the Early Education Act are adopted.
2020	Amendments to the Education System Foundations Act are adopted.
2021	<ul style="list-style-type: none"> – ‘Strategy for the Development of Education in Serbia by 2030’ is adopted. – Rulebook on competence standards for Expert Associates (specialist support staff) in preschool institutions adopted – Rulebook on programme of all forms of work of Expert Associates in preschool institutions adopted – Rulebook on conditions for realising educational programmes and other forms of work and services provided by the preschool institution adopted – Professional guidelines for the further development of preschool programmes adopted

ECEC system type and auspices²

Serbian ECEC is organised as an integrated system³ for children between 6 months and 6 years. Since 2003, overall steering policies for ECEC institutions (*predškolsko vaspitanje i obrazovanje*) come under the jurisdiction of the national Ministry of Education (*Ministarstvo prosvete*).

Local government authorities are responsible for the provision of ECEC services. Local government assemblies set up a network of state ECEC institutions according to the criteria specified in the Education System Foundations Act (*Zakon o osnovama sistema obrazovanja i vaspitanja*, Official Gazette 2021b). With regard to the organisation and implementation of educational activities, municipalities and ECEC institutions can also make their own decisions.

General objectives and legislative framework

The overarching goals of early childhood education are to support:

- The overall development and well-being of young children, by stimulating their potential and enhancing their experiences of and knowledge about themselves, others and the wider environment
- The upbringing role of the family
- Integration into society
- The development of children’s potential as a crucial factor of individual and societal progress.

² The Eurydice country report on ECEC in Serbia provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

³ Not, however, in terms of staffing requirements for work with under 3 year-olds and 3 to 6 year-olds.

The following principles of ECEC are referred to in legislation: availability, democracy, openness, a holistic approach, authenticity, development of various forms of ECEC provision (Bogovac 2018).

Based on the Education System Foundations Act (Official Gazette 2021b), the field of early childhood education is regulated mainly by the Early Education Act (*Zakon o predškolskom vaspitanju i obrazovanju*) (Official Gazette 2021a). The preparatory preschool programme (*pripremni predškolski program – PPP*), which has been compulsory since 2006/2007, is regulated by a by-law issued in 2006.

ECEC entitlement and compulsory enrolment age

There is no legal entitlement to a place in a nursery (from 6 months to 3 years of age) or kindergarten (from 2 to 5½ years of age). Attendance at both ECEC settings is voluntary, whereas the preparatory pre-primary programme (PPP) is compulsory for the year preceding primary school. Primary schooling begins at 7 years of age.

Main types of provision

“ECEC institutions” (*predškolska ustanova*) in Serbia offer **multi-purpose, integrated services** for young children and families. According to the Early Education Act, each ECEC institution has to provide education, care, social and health protection and a compensatory pre-primary programme. Besides early childhood education for different age groups of children (nurseries, kindergartens, pre-primary groups), nutrition, preventive health care and social protection of children are provided within the institution/settings. The specific options are determined by the needs of children and their parents, institutional capacities and resources provided by the local authorities. The umbrella term “ECEC institution” thus covers a wide range of facilities for young children and families with multiple functions. These services are available in each municipality.

Local government in Serbia is realised within local government units (municipalities, cities and Belgrade city) (Vujadinović et al. 2016). ECEC institutions are public services established and founded by the government, province government or local self-government. However, they may also be founded by a separate legal entity or an individual and then have the status of private ECEC provision. One ECEC institution (*predškolska ustanova*) may include different numbers of ECEC settings with a minimum of 5 and up to 100 educational groups. The number of ECEC centres within one ECEC institution can differ (from one to more than twenty), depending on the number of preschool children, family needs and local resources. The early childhood settings (*dečji vrtić*) include:

Nurseries (*jaslice*) for children aged between 6 months and 3 years, who attend on a full-day or half-day basis. A full-day programme lasts between 9 – 12 hours per day; half-day programmes are open for up to 6 hours.

Kindergartens (*dečji vrtić*) for children from 3 to 5½ years of age, who also attend on a full-day or half-day basis.

Preparatory pre-primary programme (PPP – *pripremni predškolski program*): compulsory pre-primary groups for children in the year before starting primary school between 6½ and 7 years of age. In order to attend this programme, children must be at least 5½ years old. The programme lasts for a minimum of nine months for 4 hours a day and can be offered either in kindergartens or in schools. It aims to ease the transition between early childhood education

and primary school, to address socio-cultural differences among children, and to provide children with activities for enhancing their social and cognitive skills. In 2022, there were 1,749 groups offering a 4-hour/day programme and 1,796 offering a full-day programme (SORS 2023a).⁴

Private ECEC provision is available and is usually organised in settings with mixed-age groups, except for the pre-primary groups (PPPs). They include some Waldorf and Montessori settings.

In 2022, there were 461 ECEC institutions altogether, maintaining 2,835 facilities (2,417 public, 418 private) and 11,511 educational groups – a significant increase since 2005, when there were 289 ECEC institutions and 1,873 facilities (SORS 2023a, b).

There are no national statistics which differentiate between settings for under 3 year-olds and over 3 year-olds.

Provider structures

Most ECEC settings are public services; at the same time, there are also a number of facilities managed by private entities. Public services are established by the local governments. Private service providers of the compulsory preschool programme (PPP) must be accredited by the Ministry of Education.

In 2022, most children (88.1%, 201,885) attended public provision (SORS 2023b).

Although there are more private service providers than public ones, they maintain significantly fewer centre-based settings. The number of children attending public services is approximately 7,5 times larger than those attending private provision.

Recently, the number of private facilities has been increasing, also because of increased demand. In 2017, 172 private providers ran 203 ECEC settings attended by 11,078 children (Bogovac 2018). By 2022, numbers had increased to 298 private ECEC institutions, with 418 facilities attended by 27,145 children (see *Table 1*).

Table 1

Serbia: Number of centre-based settings and children enrolled by provider type, 2022

	ECEC institutions	Centre-based facilities	Children enrolled
Public	163	2,417	201,885
Private	298	418	27,145
Total	461	2,835	229,030

Sources: SORS 2023a, b

Participation rates in regulated provision

In 2022, 25.1% (57,478) of children under 3 years of age and 74.9% (171,552) of 3 to 6 year-olds attended an ECEC setting. Almost all children in the relevant age-group (97.3%, 62,958) attended the pre-school preparatory programme. More than half (59.5% in 2021) attended the full-day programme (SORS 2023b). In 2022, 6,983 children were unable to attend an ECEC setting due to a lack of places (SORS 2023a).

⁴ All statistical indicators in this report refer to Serbia excluding Kosovo.

However, attendance rates vary greatly by children's backgrounds: in 2018, while 63.9% of children had access to early childhood education, this was the case for only 27% of children from rural areas, 9% from low-income families, and 6% of Roma children (UNICEF 2019).

Children from disadvantaged backgrounds, or children of single parents, are generally given priority for admission or their parents pay lower fees (European Commission/EACEA/Eurydice 2019, 61).

Table 2

Serbia: Number of children and attendance rate in ECEC settings by age, 2022

Age group	Number of children	Attendance rate, in %
6 months – under 2 years	25,977	25.1
2 to 3 year-olds	31,501	
3 to 4 year-olds	39,358	74.9
4 to 5 year-olds	41,476	
5 to 5.5 year-olds	29,016	
5.5 to 6.5 year-olds	58,116	97.3
6.5 to 7.5 year-olds	3,586	
Total	229,030	

Source: SORS 2023a, b

In 2021/22, over two thirds of children (68.1% – 152,296) attended an ECEC setting for more than 9 hours per day; only 7,425 (3.3%) children attended for less than 6 hours. 28.5% (63,719) attended a pre-primary programme; nearly 60% of these attended the fee-paying full-day programme (37,889, SORS 2023a, own calculations).

According to Eurostat data, in 2021, more than 80% of children under 3 years of age were not enrolled in an ECEC setting. Those enrolled usually attended for more than 30 hours per week. The share of children from the age of 3 until compulsory school age who do not attend a centre has decreased slightly over the last seven years, but still amounted to over 40% in 2021. In this age group, more than a third of children spend more than 30 hours a week in a centre (Table 3).

Table 3

Serbia: Participation rates in ECEC centre-based settings by age and duration of attendance, 2015 to 2021

Year	Weekly attendance rate	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2015	1 to 29 hours	2.0	19.7
	Over 30 hours	12.0	33.1
	No enrolment in ECEC	86.0	47.2
2021	1 to 29 hours	2.7	23.9
	Over 30 hours	15.3	34.5
	No enrolment in ECEC	82.0	41.7

Source: Eurostat 2023b

Financing and costs for parents

In 2017, 3.98% of the gross domestic product was spent on education, 0.65% on the ECEC sector (Eurydice 2023).

The funding model for ECEC institutions is decentralised and predominantly covered by the local self-governments. Full-day programmes in public ECEC services are usually funded up to 80% by the local government and up to 20% by parents. For children without parental care and children with disabilities, participation is covered by the national level and for children from materially deprived families, participation is covered by local self-government (LSG). The four-hour compulsory preparatory pre-primary programme is financed at the national level.

Private institutions do not receive state subsidies; they are financed solely through parental contributions, although there may be local government support for subsidising the costs of some private institutions in some local communities (e.g. Belgrade, Novi Sad, Niš).

Parents pay income-related monthly fees for enrolment in public institutions ranging from 5,950 to 9,705 RSD (between 50 and 80 €). Participation in the full-day ECEC programme costs 7,770 RSD (65€). The cost for attending private ECEC settings ranges from €150 to €400 per month (Eurydice 2023).

The compulsory pre-primary programme is free of charge.

Staff to child ratios and group size

The composition of the groups in the ECEC settings may be same-age or mixed-age – except in the pre-primary groups (PPP), which are only attended by children between 5½ and 6½ years of age. The number of groups depends on the number of children and is determined by the respective management and varies from 5 to more than 100 depending on the institution.

The maximum group size supervised by two qualified member of staff depends on the age composition of the children:

Table 4

Serbia: Maximum group size in ECEC settings by age

Age group	Maximum group size
6 months to 1 year	7
1 to 2 years	12
2 to 3 years	16
3 to 4 years	20
4 to 5½ years	24
5½ to 6½ years	26

Source: Eurydice 2023

Exceeding the group sizes by up to 20% is still in accordance with the law (Bogovac 2018).

In a regular group, the number of children with disabilities is limited to two. The total number of children in the group is then reduced by three children for each child with a disability.

Curricular framework

In Serbia, there has been a national-level curricular framework for ECEC settings since 1976. Educational activities in each ECEC centre are carried out in line with the national curricular framework. Children with special educational needs and disabilities are entitled to an Individual Education and Care Plan developed by the ECEC centre staff.

In 2018, a new conceptual framework for ECEC (*Years of Ascent – Pre-school Curriculum Framework*) was developed by the Institute of Pedagogy and Andragogy at the University of Belgrade, in cooperation with the Institute for Improvement of Education, the Ministry of Education, Science and Technological Development, and UNICEF (MoESTD 2018). The detailed document is structured in two main parts:

- (1) 'Conception of the Preschool Curriculum Framework', which includes the underlying theoretical postulates and values, the overall educational goals and child-focused goals and
- (2) 'From the Curriculum Framework to the Real Curriculum', which focuses on three areas central to developing the curriculum in practice: Supporting children's well-being (relationships, participation in different kinds of activities); contextual factors (physical environment and key persons – peers, family, community, teacher); and key teacher strategies (planning, teamwork, monitoring, documentation and evaluation).

The Framework is founded on theoretical postulates of socio-cultural theory, sociology of childhood and post-structuralism. These share the common perception of childhood as a visible social category and as being valuable *per se* and is based on the holistic idea that all children have unique abilities and equal rights to have their uniqueness recognised and acknowledged. Children are seen as competent individuals whose potential is nurtured through supportive and stimulating relationships with adults; as active participants in the community of peers and adults; and as creative and playful beings who are eager to learn. Whereas children were traditionally seen as "vulnerable and in need of protection" and the programme as "child-centred" or "educator-centred", the emphasis is now shifting towards a practice based on the quality of relationships and shared participation (Bogovac 2018; Krnjaja and Pavlović-Breneselović 2014). Based on a democratic and inclusive approach, education is understood as an integrated process of education and care embedded in each segment of joint cooperation between adults and children and an orientation towards long-term goals. The focus of evaluation is not primarily on the learning outcomes of the children, but rather on the quality of the key elements of the curricular framework.

The aims of the curriculum include ensuring that all children have equal opportunities for learning and development; feel accepted and safe; can build trusting and respectful relationships; develop basic skills for lifelong learning (e.g. curiosity, resilience, self-confidence, positive identity); and have the opportunity to explore a wide range of learning areas. Ensuring that families can actively participate, and that the well-being of all children is supported are two further aims.

Key specified competences for lifelong learning in ECEC include:

- Communication in the mother tongue (e.g. through early literacy)
- Communication in a foreign language (e.g. by embedding a foreign language in different activities)
- Mathematical, scientific and technological skills (e.g. by promoting logical thinking, encouraging exploration)
- Digital literacy
- Learning to learn (e.g. through reflective practice)
- Social and civic competences through the development of a sense of community
- Initiative and enterprise (e.g. through free play, support in problem solving)
- Cultural awareness and expression (e.g. by developing a cultural identity, encouraging expression of different ideas)-

Digital education

Digital literacy is included as a key competence in the newly developed Pre-school Curriculum Framework (*Years of Ascent*). It is seen to develop through a meaningful use of digital technologies as tools that empower children to access information, as a means for expression and representation, and for the documentation of different activities. Digital competence also includes developing an appropriate attitude towards the culture and use of digital technologies.

Monitoring – evaluation

In general, the Ministry of Education is responsible for the monitoring of educational institutions and supervises the work of the Institute for the Improvement of Education and the Institute for Education Quality and Evaluation, which are in charge of external evaluations of educational institutions.

Quality standards for ECEC centres were defined and adopted by the National Education Council. The role of the quality standards for ECEC centres in Serbia is to provide “an equal and objective assessment of the quality of work in ECEC centres and to enable high quality, consistent and effective implementation of the legal requirements” (Rulebook on evaluating the quality of the institution's work 2019, Official Gazette 2019). The quality framework in Serbia contains standards and indicators both for external and internal evaluation based on national quality standards, including four areas of evaluation, 15 standards and 64 indicators (Quality Standards of the Institution's Work 2018, Official Gazette 2018). In the recently issued Preschool Curriculum Framework *Years of Ascent* (MoESTD 2018), monitoring and evaluation in early education settings are referred to as the documentation and assessment of children's work. The quality of curriculum implementation is evaluated according to the following key dimensions: learning environment; quality of relationships; learning through participation; inclusion, diversity and democratic values; and cooperation with the family and the local community. Self-evaluation does not serve to assess the work of the ECEC Teachers or Expert Associates (specialist support staff), but instead, the data obtained in this way are the basis for a joint re-thinking and changing of practices (MoESTD 2018).

Child-related assessment

For ECEC programmes, there are no official regulations for formative or summative child-related assessment, and there are no specific recommendations for settings for under 3-year-olds. In settings for the 3 to 6-year-olds, the emphasis is not so much on children's performance but on a holistic understanding of their development and learning. "The purpose of monitoring children is not to assess their development capacities and achievements but to obtain a more complete understanding of children's development and learning and provide further support for their well-being" (Preschool Curriculum Framework *Years of Ascent* 2018, MoESTD 2018). The methods suggested are documenting observations, children's 'products', photos, picture books or video clips in the child's portfolio. Importance is placed on the children's own views and those of their parents.

Centre-level assessment

In Serbia, internal self-evaluation is strongly framed (European Commission/EACEA/Eurydice 2019, 128). Internal evaluation is required for all educational institutions as the results are used for external evaluation. It is carried out in predetermined intervals, in accordance with internal

educational institution plans. Self-evaluation standards and procedures are defined by the Ministry and other responsible bodies (Eurydice 2023). They include the following key dimensions: educational work, support to children and family; professional learning community; leadership and organisation.

Internal quality assurance is a continuous process of re-thinking and re-evaluation of current practices, of identifying ways for improvements, further development and management. It is performed each year for some areas of evaluation (specific areas in focus), while an overall quality assurance procedure (with all areas of evaluation included) is conducted every four to five years. The internal evaluation covers a whole set of inputs provided by the institution leadership, ECEC teachers, other staff, parents, children and the local community. The Internal Evaluation Team is in charge of the internal evaluation process (data collection, planning, reporting, etc.). Support to the Team is given by the district school authority and the Institute for Education Quality and Evaluation.

External evaluation

External evaluation is carried out through expert pedagogical supervision at least once every five years in cooperation between the Ministry of Education and the Institute for Education Quality and Evaluation (Rulebook on evaluating the quality of the institution's work, 2019, Official Gazette 2019). In practice, external evaluation is done by members of the Institute who have been trained for external evaluation. All the areas of quality which are defined by quality standards for work of centres are evaluated and graded, ranging from 1–4. It is also prescribed that the centre should draw its Plan for Quality Improvement based on the external evaluation report it has received from the Institute (Baucal et al. 2016; Bogovac 2018).

Inclusion agenda

Children with disabilities have a right to enrolment in a regular ECEC setting, the right to an individual education plan and to the provision of additional support. Not more than two children with disabilities can be included in one ECEC group. In such a case, the regular group size of children is reduced by 3.

In some cases, ECEC centres have to cope with an insufficient number of expert associates compared with the number of groups and children. At the same time, ECEC teachers and specialist support staff are often insufficiently empowered to enact inclusive practices in the early years. There is a lack of instructional guidance for practitioners on social inclusion and for the early identification of developmental disorders and disabilities, of methodology for appropriate stimulation as well instructions on strengthening resilience in early childhood.

The inclusion of children from vulnerable populations (children with disabilities, children from migrant families, national minorities) needs to be increased in ECEC institutions and diversified programmes. Inclusive education in ECEC needs additional systemic and comprehensive efforts through inter-sectorial collaboration. It would be extremely important to develop institutional learning and professionalise the decision-making process at all levels of the system in order to meet the needs of different vulnerable groups of children and to provide sustainable impact on their development and learning in early years (Baucal et al. 2016).

Two recent policy initiatives will be presented below which have focused on improving the entire ECEC system, including the inclusion of children with special educational needs and disabilities.

The first is the "Inclusive Early Childhood Education and Care" project launched in 2018 by the Ministry of Education Science and Technology (Ministry of Education 2023). This policy initiative primarily seeks to improve equality of access to high quality early childhood education and care services for all children aged 3 to 6½ years, especially those from socially and economically disadvantaged backgrounds. With 47 million euros, conditions are to be created through:

- Improving access to ECEC services for all children ages 3 to 5½ years, with a focus on the most disadvantaged ones, by increasing the supply of high-quality preschool places in at least 30 municipalities
- Enhancing the quality of an ECEC system characterised by a holistic approach towards supporting the learning, development and well-being of children through the implementation of the new Preschool Curriculum Framework
- Improving the initial education of ECEC teachers, professional development and career advancement of practitioners in ECEC institutions
- Improving the competences of principals in ECEC institutions
- Improving ECEC monitoring and evaluation.

Grants were awarded to at least 30 municipalities to be used for funding projects in the local communities aimed at improving coordination and cooperation among relevant actors in providing ECEC services.

The second (EU funded) policy initiative "Support to Preschool Education System Reform in Serbia – SUPER" was launched by the Ministry of Education, Science and Technology in 2019 (Government of the Republic of Serbia 2019). This project aims to improve the quality of inclusive preschool education in 50 local municipalities through improved access, in particular for vulnerable groups. Strategies include:

- Locally adapted action plans that respond to community needs, particularly to the needs of vulnerable groups
- Improving networking capacities to optimise the use of available resources
- Providing awareness-raising material to promote ECEC services, particularly to increase the inclusion of vulnerable groups
- Strengthening the professional competences of ECEC staff through appropriate CPD for ECEC Teachers and Expert Associates
- Harmonising the Preschool Curriculum Framework and the new bylaw for pedagogical documentation
- Capacity building for self-evaluation (recognised as a challenging issue in ECEC in Serbia)
- Developing the legislative framework in accordance with the new laws and Preschool Curriculum Framework.

Based on a systematic approach towards implementing the SUPER project, special attention was paid to ensuring internal and external coherence, synergy, and effectiveness to ensure sustainability. This was achieved through various synergy efforts. These included the implementation of the activities of the project "Inclusive early childhood education and care" and the EU-funded project "Equipment of ECEC facilities", as well as support of the curriculum implementation process. This made it possible to provide furniture, IT equipment and didactic resources to all 50 institutions involved in the SUPER project, as well as to five institutions that were designated as cluster centres within the framework of the inclusion project.

Children with special educational needs and disabilities

Inclusive education has been actively pursued since 2010/11. The Education System Foundations Act (2003, last amended 2020) stipulates that there must be no discrimination or segregation,

that Individual Education Plans are drawn up and that children with special needs should be included in regular ECEC provision as far as possible. However, they may also attend a so-called development group if they can only receive the appropriate educational, health or social support there.

Children with a migration background – Children from Roma communities

According to the 2011 Census, Serbia is a relatively ethnically homogeneous society: ethnic Serbs accounted for 83% of the total population, while ethnic minorities included Hungarians (3.5%), Romani (2.1%) and Bosnians (2%) (OECD Library 2020).

Children from national minorities may attend pre-school and childcare settings in their national language or a dual-language setting.

In terms of legislation, there are no different categories for migrants and refugees in Serbia. After the refugee wave of 2015, persons from Syria constituted the largest group, followed by immigrants from Iraq and Afghanistan. Since the closure of the Balkan route, it is now primarily single men from Afghanistan, Pakistan, Algeria and Morocco who seek asylum in Serbia.

In September 2017, approximately 700 children from families with a migrant background started their schooling in Serbia, 130 of them in one of the 12 primary schools in the country capital, Belgrade (Feinstein International Center 2018).

There are no accessible data available regarding the number of children in ECEC settings with a non-Serbian background.

Parental leave arrangements⁵

Maternity leave (*porodiljsko odsustvo*) lasts 28 compulsory days before the birth and three months afterwards. This period is remunerated at 100% of the former average income on which social security contributions were paid during the 18 months prior to this period. The minimum pay is 39,866.67 RSD (€340.05).

A supplementary **Childcare leave** (*odsustvo sa rada radi nege deteta*) per family can be taken after the end of maternity leave for the first and second child for 8.2 months – it ends 365 days after the start of maternity leave. With the mother's consent, this time can also be transferred to the father, but it cannot be taken at the same time by both parents. Under special circumstances (long term illness of a child of a child needing special care), one parent may stop working or work part-time until the child is 5 years old. This time is compensated in the same way as Maternity leave or with salary compensation for hours not worked. Otherwise, an unpaid period can be taken until the child is 3 years old, during which time the health insurance, including the employer's payments, continues.

There is no legal entitlement for either **Paternity leave** or **Parental leave**.

In 2022, only 14 fathers received Maternity leave benefits and only 373 took the Supplementary childcare leave. Further statistical data on take-up is not available.

⁵ The brief summary in this section is based on the country note for Serbia-by Marian Pantelić in the *International Review of Leave Policies and Research 2023* (see References).

Current challenges for the ECEC system in Serbia

Country expert assessment by *Lidija Miskeljin*⁶

The systemic approach that education policy in Serbia has adopted towards improving the ECEC system, as well as building inclusive early childhood education and care of high quality, has enormous potential in terms of sustainable education reform. At the same time, it carries challenges and risks because it requires coordinated action at all levels of the system. The concept of a competent ECEC system implies taking responsibility at every level of the system. Implementing shared responsibility would mean:

- Ensuring the coherence of reform initiatives and measures through coordination and harmonisation of all projects and activities in the field of early childhood education and care
- Focusing on strengthening the internal capacities of the ECEC institutions for ongoing development and change. This includes transforming the culture of the ECEC institution into a community of learning and establishing model centres of inspiring practices as centres of horizontal learning and dissemination.
- Focusing on the continuing professional development of practitioners, with an emphasis on strengthening the capacity for reflective practice; enhancing the capacity for self-evaluation as a continuous process of developing the quality of practice and not as a technical issue according to the model of external evaluation; harmonising the CPD programme offers with the contemporary approach and the Preschool Curriculum Framework.
- Reform of the initial education of ECEC Teachers (both in structure and content) in accordance with contemporary approaches towards early childhood education and care, the profession of an ECEC Teacher, institutional practices and programme.
- Ensuring the inter-departmental and inter-sectoral cooperation and coordination at the central (various ministries) and the local level (social protection, health care and employment) regarding ECEC, i.e. strengthening co-operation between the Ministry of Education, Ministry of Health, Ministry of Finance and Ministry of Public Administration and Local Self-Government to act in line and to issue harmonised instructions to the Local Self-Governments regarding ECEC
- Ensuring coherency and coordination between the Ministry of Education with Local Self-Governments to align different relevant legal provisions (e.g. sanitary inspections, etc.) regarding ECEC as well as a coherent and regular communication between the Ministry of Education, the LSGs and the ECEC institutions to implement the policy priorities and reform initiatives set by the Ministry of Education.
- Focusing on strategic development and planning of the ECEC system at the local level: this would mean supporting LSGs to better plan their ECEC services and networks in terms of implementing different measures aimed at ensuring accessibility, equity and quality in ECEC as well as enhancing the overall responsibility of local self-governments regarding early childhood education and care (Pavlović-Breneselovic and Miskeljin 2021).

⁶ Adapted from the Final Project Report --- Support to preschool education system reform SUPER

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population of Serbia was 6,797,105. Over the last 20 years it has consistently decreased slightly (2000: 7,527,952; 2010: 7,306,677; 2020: 6,926,785) (Eurostat 2023a).

Total fertility rate

In 2021, the average of the total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate in the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). With 1.52, Serbia is exactly on average (Eurostat 2023c)⁷.

Children under 6 years of age

Table 5

Serbia: Children under 6 years of age according to age group, 2022

Age	Number of children
Under age 1	61,887
1 year-olds	61,367
2 year-olds	64,065
3 year-olds	63,623
4 year-olds	64,515
5 year-olds	64,313
0 to under 6 year-olds, total	379,770

Source: Eurostat 2023a

The share of children under 3 in the total population in 2022 was 2.8%, that of children under 6 5.6%. These proportions were approximately in line with the EU 27 average.

Table 6

Serbia: Children under 6 years of age – share in total population compared with EU average, 2000 to 2022, in %

	Comparison Serbia/EU	Under 3-year olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Serbien	2.8	3.2	6.0
	Ø EU15 ⁸	3.2	3.2	6.4

⁷ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

⁸ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

	Comparison Serbia/EU	Under 3-year olds	3 to under 6 year-olds	0 to under 6 year-olds
2005	Serbien	3.1	2.9	6.0
	Ø EU25	3.1	3.1	6.2
2015	Serbien	2.8	2.8	5.6
	Ø EU28	3.0	3.2	6.2
2022	Serbien	2.8	2.8	5.6
	Ø EU27(2020)	2.7	2.9	5.7

Single households with children under age 6

In 2022, over one third (35.1%) of households with children under 6 were couple households. Households with single parents accounted for only 0.6% – almost exclusively single mothers.

Table 7

Serbia: Households with children under age 6, 2022*

Household type	Total households	Share of total households, in % ⁺
Households – total	811,400	
Couple households	284,400	35.1
Other types of households	522,000	64.3
Single households, total	5,000	0.62
Single households, women	4,500	0.55
Single households, men	500	0.06

Employment rates of parents with children under age 6

In Serbia, in 2022, the overall employment rate for men (15-64 years) was 71% and for women 57.9% (Eurostat 2023e).

In 2022, 64.4% of women and 78.3% of men (18-64 years) with children under 6 were employed. Compared with the average of the 27 EU-countries (2020), the shares of employed fathers were thus below the EU-average (87.2%); those of mothers corresponded with the EU-average (63.6%) (Eurostat 2023d).

Table 8a

Serbia: Employment rates of parents with children under 6 compared with EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Serbia	43.6	72.0

Children at risk of poverty or social exclusion¹¹

In 2021, 23.9% of children under 6 were at risk of poverty or social exclusion. This proportion was above the EU27 average (23.5%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 28.4% (EU: 21.7%). In 2020, 10.3% of children under 6 and 8.8% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023e, f), and 8.2% of the children lived in extreme poverty (Eurochild 2021).

Single parent households and households with more than three children are at higher risk of poverty (41.6% and 51.9% respectively) (Eurochild 2021).

About the authors:

Monika Miňová, PhD, is a former teacher and kindergarten principal. Currently, she is a member of the Department of Preschool and Elementary Pedagogy and Psychology at the Pedagogical Faculty of Prešov University. She is the president of the Slovak Committee of the World Organisation for Preschool Education (OMEP). Research interests include pre-primary education, pedagogical diagnostics and didactics, kindergarten management and marketing, alternative approaches in education and cooperation between schools and institutions.

Zuzana Lynch, PhD, works at the Faculty of Education, Matej Bel University in Banská Bystrica. In her pedagogical and scientific research activities she focuses on early childhood education and care. Particular interests include the pre-school curriculum and inclusive education. She has participated in several national and international projects. Currently she is working on the issue of improving the conditions of education of 2 year-olds in kindergartens.

Milena Lipnická, Associate Professor, works at the Faculty of Education of Matej Bel University in Banská Bystrica, with a focus on the pedagogy of early childhood and pre-primary education. She edited the publication "Care for children up to three years of age" and led a research project on the upbringing and education of 2 year-olds in kindergartens. She has participated in national research projects and in the development of state-approved didactic materials.

1. ECEC governance in the Slovak Republic

A split system characterises ECEC in Slovakia. Since 2017, the care and education of children up to 3 years of age (ISCED 01) has fallen within the remit of the Ministry of Labour, Social Affairs and Family¹, which is responsible for the management and financing of childcare provision for this age group. “Childcare settings for children up to three years of age” (Act 448/2008, NR SR 2008b) are set up to reconcile work and family life. Alongside centre-based provision, more informal services may be arranged by a childcare provider in different settings: in the child’s home, in the provider’s home, in a setting organised by the parents’ employer, or in a unit attached to a childcare centre. This social service is provided by municipalities, self-governing regions (VUC)² or natural persons.

ECEC for children aged three years and older (ISCED 02) is provided by kindergartens (Act 245/2008, NR SR 2008a), which come under the Ministry of Education, Science, Research and Sport. The Ministry of Education regulates legal measures, develops national education programmes, monitors quality and provides funding. Children aged 3 to 6 are admitted to kindergartens. If there is free capacity, 2 year-olds may also be admitted. A kindergarten may be established by a municipality, self-governing region, regional school administration office, state-recognised church or religious society, another legal entity or natural person, or central government authority.

Since September 2021 (Act 209/2019, NR SR 2019a), pre-primary education has been compulsory for all 5 year-old children, i.e. for those due to attend primary school one year later. The introduction of compulsory attendance means that ECEC providers have had to expand their capacities. Grants from European funds have been earmarked for this purpose (*Increasing the Capacity of Kindergarten Infrastructure*). However, capacity remains insufficient and many younger children are still unable to attend kindergarten.

Compulsory pre-primary education may also be provided during the transitional period from 1 September 2021 to 31 August 2024 in “pre-primary education settings” that are registered in the pre-primary education settings database administered by the Ministry of Education.

All kindergartens included in the Slovak Republic’s network of schools and school settings are financed from tax revenues received by municipalities and self-governing regions (Act 371/2020, NR SR 2020).

¹ Nursery settings used to fall under the health portfolio, but were separated from the health system in the 1990s through reforms and legislative changes. Conditions for the management of nursery provision have not been adequately regulated in legislation for several years.

² The Slovak acronym VUC (*Vyšší Územný Celok*) stands for ‘higher territorial units’, a new administrative (legal) term enshrined in the Constitution which was created after the division of powers between the Slovak Republic and the Czech Republic (formerly Czechoslovakia).

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Specific job categories are regulated by legislation for staff working directly with children in settings for under 3 year-olds (Act 40/2017, NR SR 2017) and for staff in kindergartens (Act 138/2019, NR SR 2019b).

Table 1 provides an overview of staff working in direct contact with children in these settings. The core practitioner (Kindergarten Teacher/Pre-primary Teacher) is also categorised according to one of five profiles adapted from the original SEEPRO study (see Box 1 at the end of this section).

Table 1

Slovak Republic: Regular staff in ECEC settings in direct contact with children

Job title	Main ECEC workplace settings and age range ³	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Kindergarten Teacher / Pre-primary Teacher <i>Učiteľ/ka materskej školy, Učiteľ/ka predprimárneho vzdelávania</i> Profile: Pre-primary Education Professional	<i>Materská škola</i> Kindergarten 3–5 years <i>Základná škola s materskou školou</i> Primary school with kindergarten 3–5 years	Core practitioner with group responsibility Kindergarten Head Deputy head of primary school	3–5 years	Route 1 4 years upper secondary vocational school (<i>stredná pedagogická škola</i>) specialising in pedagogy (<i>pedagogická a sociálna akadémia; pedagogická a kultúrna akadémia</i>) Award: School leaving exam certificate with stated specialisation (<i>vysvedčenie o maturitnej skúške</i>) ECTS credits: n/a ⁴ EQF level: 4 ISCED 2011: 354 Route 2 School leaving exam certificate of general secondary or secondary vocational education (<i>vysvedčenie o maturitnej skúške</i>)

³ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In justified and professionally assessed cases, this may be 7 years of age in the Slovak Republic.

*The same qualification requirements apply to Health Professionals.

Childcare sector

According to relevant legislation, the main duties of **Childcare Workers** in settings for children up to 3 years of age are: Providing a service to support the reconciliation of family and work life for children's parents; supporting physical and intellectual development in the child's best interests; performing specialist activities in the scope of social services established by law appropriate to the child's age and health condition, individual needs and abilities; developing a child's abilities and personal characteristics and guiding them in their upbringing and socialisation. They

cooperate in education and care for children with their parents or legal representatives (Act 448/2008, NR SR 2008b).

Education sector

Kindergarten Teachers provide education according to the kindergarten curriculum and are responsible for the quality of that process. They support the all-round personal development of children, develop their abilities and skills for life, and provide specific guidance in accordance with the child's individual and age-related characteristics (Act 245/2008, NR SR 2008a). They work on the basis of current scientific knowledge, values and goals of education. They direct and evaluate education, and provide counselling and specialist assistance related to education (Act 138/2019, NR SR 2019b).

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Childcare sector

In **ECEC settings for children up to the age of 3**, statutory representatives (service providers) are required to have a Level 2 university education, as they are providing social services in a group setting where proper operating conditions have to be ensured. These include sufficient staffing, materials, technical equipment and financing; moreover, they are responsible for the safety, protection and appropriate care of children, while unconditionally respecting their rights. For persons who were working in existing settings up to the end of February 2017, a full secondary general or vocational education is sufficient as a qualification requirement (Act 448/2008, NR SR 2008b). Centre Leaders coordinate the provision of ECEC to children up to three years of age according to the children's needs and the conditions of the setting. In doing so, they have to comply with legislation issued by the Ministry of Social Affairs and Family and the Ministry of Health that governs the organisation and conditions for children's activities and protects their health and safety.

Education sector

Centre Leaders or head teachers in **kindergartens** (from now on referred to as Kindergarten Heads) have to meet the following requirements (§ 39 [3] Act 138/2019b):

- They must have the qualifications needed for the relevant teaching or specialist category and subcategory, the minimum being a full secondary vocational education (Decree 1/2020 MŠVVŠ SR 2020).

- They must fulfil the conditions to be classified at the career level of an independent teacher or independent specialist⁵ (§ 29 Act 138/2019b) (see Table 7 for a breakdown of career levels).
- They must fulfil the conditions for acquiring the professional competences necessary to be employed in senior teaching staff or senior specialist staff positions.

Formal training for a Kindergarten Head's position is designed to develop professional senior teaching staff and/or senior specialist staff competences (§ 47 Act 138/2019, NR SR 2019b). On its website, the Ministry of Education publishes a list of professional development providers of courses designed to qualify teachers for managerial functions (www.minedu.sk). The list may include:

- Universities offering school management study programmes
- Methodology and pedagogy centres
- Catholic methodology and pedagogy centres
- Registered churches or religious societies that have founded centres.

Professional development courses for designated posts or functions are organised for a duration of at least 220 hours. The programme is structured as a basic module and extension modules. Applicants must complete the basic module before they can take up a position as a Kindergarten Head. The extension modules may be completed no later than five years after taking up the position. The professional development programme ends with the defence of a final thesis and passing a final examination before a three-member board appointed by the provider's statutory body. Graduates receive a certificate of completed education for managerial functions. Transitional provisions applied until the end of 2022 (§ 89 Act 138/2019, NR SR 2019b), during which successful completion of the basic module was not required.

Another requirement for applying to be a Kindergarten Head is at least five years' teaching experience. Applicants are also required to meet the conditions of integrity, medical fitness and have to be proficient in the Slovak language (Act 138/2019, NR SR 2019b). The Kindergarten Head is appointed by the founding entity, who also sets out employment conditions for the term of the position and determines salary conditions. A Kindergarten Head's term of employment is usually five years. The founding entity can also dismiss the head of a kindergarten.

Kindergarten Heads are responsible for the management of the setting, handling both administrative and pedagogical tasks. Their job description can be divided into several areas. Duties in the area of **management and organisation** include supervising compliance with legislation related to school funding regulations, children's health, occupational safety and other activities. They are responsible for both teaching and non-teaching staff involved in the running of the kindergarten. Kindergarten Heads are obliged to create appropriate personnel, material and social conditions for their employees. They supervise all employees and evaluate the results of their work, analysing the educational work of employees through their own observations and on the basis of inspections and reports from representatives (if any). These are discussed with the employee concerned and conclusions are drawn about the employee's further activities.

In the **education process**, Kindergarten Heads are responsible for the admission of children to kindergarten and for creating the appropriate conditions for their education and learning. They

⁵ Of the four career levels in the Slovak Republic, **newly qualified** staff (teachers or specialist staff, first level) are all graduates who are starting their careers and carry out their work under the supervision of the service provider. An **independent teacher** (second level) has successfully completed adaptation education or has practised for at least two years in an educational facility abroad or in Slovakia. This employee can carry out his/her work independently. The third and fourth career levels comprise teaching or specialist staff with **1st** or **2nd** **certification** respectively.

ensure that educational activities are carried out in accordance with the national curriculum (State Pedagogical Institute 2016). On the basis of its principles and objectives, they develop, in cooperation with other teaching staff, a centre-specific curriculum that takes into account the kindergarten's local conditions. Kindergarten Heads constantly strive to raise the level of education the kindergartens provide, motivate teaching staff to seek further education and coordinate projects within the setting. They create conditions for providing education opportunities for children with special needs.

Kindergarten Heads are responsible in the area of **management and handling the kindergarten budget** for the efficient and effective use of budgeted funds. They are responsible for the appropriate management of property administered by the kindergarten setting. Depending on whether the kindergarten has legal subjectivity status⁶ or not, Kindergarten Heads also require a certain degree of economic and legal competence when working with the founding entity (service provider).

Kindergarten Heads also **work directly with children on a regular basis**. Direct teaching time depends on the number of groups the kindergarten has (*Table 2*). In ECEC, hours are defined as 60 minutes, whereas at all other school levels, an hour is defined as 45 minutes (Government Regulation 201 /2019, Government of the Slovak Republic 2019).

Table 2

Slovak Republic: Kindergarten Heads' direct working hours with children according to the number of kindergarten classes

Type of setting	Number of kindergarten classes	Hours of direct work with children per week
Kindergarten	1	23
	2	20
Kindergarten for children with special educational needs	3 – 4	17
	5 – 6	14
	7 – 10	12
	11 – 12	10
	13 – 14	9
	15 – 16	8
	17 – 18	7
	19 or more	6

Source: Annex 6 to Government Regulation 201/2019 (Government of the Slovak Republic 2019)

Kindergartens with four or more classes/groups also have a designated **Deputy Kindergarten Head** position (Decree 541/2021, MŠVVŠ SR 2021b). While the appointment and dismissal of Kindergarten Heads are covered in education legislation, there are no provisions in the case of Deputy Kindergarten Heads. This position is created by the kindergarten itself and governed by generally binding labour legislation.

Kindergarten management is the lowest level of management in education. The way a kindergarten is managed depends largely on the personality and approach of the Kindergarten Head. Although the Kindergarten Head is hierarchically at the top of the organisational structure, kindergarten management can take on various features. In practice, democratic, liberal and authoritarian management styles can be observed. The choice of a particular style also depends on

⁶ These are mainly state-owned kindergartens which have extended competences defined by the founder in the field of legal, labour and economic management.

how the school's staff is structured, their level of maturity and acquired professional competences. The professional development modules for senior teaching staff (mentioned earlier) also focus on staff management and team leadership.

The two bodies advising a Kindergarten Head – the Pedagogical Council and the Methodological Circle (see *Chapter 2.3*) – provide a basis for ensuring that the kindergarten is managed democratically (§ 2 Decree 541/2021, MŠVVŠ SR 2021b). The School Council as a self-governing body consisting of representatives of the service provider, legal representatives of children (parents, legal guardians), and the staff of the kindergarten also contributes to democratic governance. These three advisory bodies are described in more detail in the next section.

2.3 Centre-based posts of responsibility

There are a number of designated posts of responsibility in Slovak kindergartens (Act 138/2019, NR SR 2019b). They include the following focus areas:

Class leaders: There are usually two teachers in each kindergarten class, both teachers are fully qualified practitioners, but only one of them is designated by the kindergarten head as the **class teacher**. Each kindergarten class has its own class teacher. One teacher cannot be the class teacher for more than one class. Teachers may rotate in this role. They receive a supplement for this function. The *class teacher* is responsible for teaching and coordinating activities in the respective kindergarten class/group. Tasks include keeping pedagogical records and creating conditions for the development of positive relationships among the children and between children and staff. The class teacher also cooperates in an advisory role with legal representatives and with other teaching and specialist staff.

Induction of newly qualified staff: The person responsible for supervising the probationary period of newly qualified staff may be an induction teaching staff member or a *specialist staff member for induction*. Induction into practice cannot be made across professions, only within the scope of one's own qualification (teacher to teacher, special educator to special educator, school psychologist to school psychologist, and so on). The induction person provides an assessment at the end of the period detailing the extent to which the newly qualified member of staff has acquired the necessary professional competences.

Supporting children from socially disadvantaged milieus: The kindergarten *specialist in education* provides educational activities for children from socially disadvantaged backgrounds. They guide colleagues in helping and assisting these children, obtaining the necessary information in this area. They also organise the training of kindergarten core practitioners.

Sport: The *specialist in sport* supports the development of children's sports skills and the basic acquisition of a particular type of sport in accordance with the kindergarten curriculum. The position is occupied by a teaching staff member who meets the qualification requirements for teaching physical education and sport, has completed specialised training in the relevant sport or has acquired professional competence in the relevant field according to a special regulation.

Team support: The *support team coordinator* coordinates staff activities; supports cooperation of teaching and specialist staff with legal representatives and employees of counselling and prevention facilities; plans individual and group activities for children for the kindergarten support team to implement, evaluates their effectiveness and ensures and assesses interaction between members of the kindergarten support team and other teaching staff.

Digital education: The digital coordinator provides advice and expert assistance in introducing new digital methods in the work with children, gives feedback to staff on the application and use of digital tools in education, and provides training in the use of digital content or forms of work with digital content.

2.4 Co-ordinating and supervisory staff

The pedagogical work in kindergartens is coordinated and related tasks are distributed according to continuously updated guidelines from the Ministry of Education. They respond to societal needs and issues, such as measures during the COVID-19 pandemic and currently the refugee crisis resulting from the war in Ukraine. The development of inclusive practices is also topical. It is in these areas that internal advisory boards are helpful for the decision-making of the Kindergarten Head, and each kindergarten has these boards of collective responsibility.

Three examples of internally coordinated activities:

- 1. Pedagogical Council:** Members include all the teaching staff working in the setting. The council discusses both educational and organisational matters, such as proposals related to improving the quality of the kindergarten, reflecting on the current demands of parents and the community. All staff have the opportunity to shape the mission of the kindergarten and participate in the development of its curriculum and project plans. They may also comment on management issues and staff assessments (Decree 541/2021, MŠVVŠ SR 2021b).
- 2. Methodological Circle:** This is established if the kindergarten has at least two classes. It comprises all teaching and specialist support staff and is led by a teacher with at least five years of teaching experience. The methodological circle focuses primarily on didactic issues of working with young children. It focuses on opportunities for innovation and also on developing professional competences among the staff. At joint meetings, the head of the circle coordinates activities so that staff can develop their knowledge and skills in a wide range of areas to meet current needs. Areas for improvement are diverse and include promoting inclusive education, strategies for working with children from socially disadvantaged backgrounds, developing pre-reading literacy, strengthening media literacy, communicating with parents, counselling and prevention, providing constructive feedback, and formative assessment. If a methodological circle cannot be established, the Pedagogical Council discusses such pedagogical and didactic issues (Decree 541/2021, MŠVVŠ SR 2021b).
- 3. Kindergarten Council:** A Kindergarten Council is established in each setting as an initiative-taking, advisory and self-governing body which promotes the public interests of the children, their parents, teachers and other kindergarten staff. Consisting of 5–11 members, neither the Kindergarten Head nor the Deputy Kindergarten Head can be on the council. The council publicly scrutinises the kindergarten's activities, commenting on them and on the service provider's activities in terms of kindergarten-specific issues. It comments on both the setting's conceptual plans and on possible closure of the setting. The greatest power vested in the Kindergarten Council is the election and petitioning for the removal of the Kindergarten Head (Act 596/2003, NR SR 2003; Decree 291/2004, Ministry of Education of the Slovak Republic 2004).

External specialised coordination activities support and improve the educational process for children and staff. They are provided by institutions and facilities established by the Ministry of Education. The National Institute of Education and Youth, established on 1st of July 2022, unites into one entity several institutions, including: the *National Institute for Education in Bratislava* (www.statpedu.sk) and *The Methodology and Pedagogy Centre* in Bratislava with branches across Slovakia (www.mpc-edu.sk). Support is also provided by counselling and prevention facilities (Decree 24/2022, MŠVVŠ SR 2022). For many years, Slovak kindergartens cooperated primarily with the *Centre for Counselling and Prevention*, which provides comprehensive psychological, special educational, diagnostic, educational, counselling and preventive care for children and youth throughout the Slovak Republic. Kindergartens mainly use the centre's counselling

services, while specialist support staff, such as speech therapists, are invited to regular speech therapy screenings to identify and correct speech problems of kindergarten children as early as possible.

The State School Inspectorate inspects the pedagogical management at the national level (www.ssi.sk). It monitors the quality of education, including the inspection of compliance with binding legal regulations, and it inspects the spatial conditions and material equipment of the setting and the professional development of teaching staff. The SSI contributes to the external evaluation of the education system. Its remit also includes providing counselling and expertise in remedying identified deficiencies.

2.5 Specialist support staff

In **ECEC settings for children up to the age of three**, Centre Leaders recruit specialist support staff depending on the services they decide to provide for children.

Other specialist staff who may work in **kindergartens** include the following (Act 138/2019, NR SR 2019b), although it must be said that they are more likely to work in schools than in kindergartens. A team comprising all the listed professional staff is the exception rather than the rule. However, if some of these staff do work in a kindergarten, their activities are coordinated by the pedagogical or professional staff member supervised by the Kindergarten Head.

Psychologist (§ 24 [1]): This position is tied only to counselling centres, the psychologist is not part of the kindergarten staff. Psychologists diagnose psychological issues in special educational settings, school educational counselling and prevention or social assistance settings; provide individual or group psychological counselling, prevention and intervention to children and pupils with a focus on education; and provide psychological counselling to legal representatives, teaching and specialist staff and families.

School Special Pedagogue (§ 21 [3]): These specialist support staff carry out diagnostic activities; provide special educational interventions to children in kindergarten; provide professional advice and consultation to children, parents and pedagogical staff; contribute to the creation of the child's individual learning programme; carry out direct educational activities and cooperate with professionals from the centres of counselling and prevention.

Kindergarten Psychologist (§ 24 [2]): Diagnoses psychological issues in kindergartens and ECEC settings apart from school educational counselling and prevention settings; provides individual, or group psychological counselling, prevention and intervention to children and pupils with a focus on education; provides psychological counselling to legal representatives, teaching staff and specialist staff; works to overcome barriers in education and upbringing of children.

Special Education Pedagogue (§ 25 [1]): Diagnoses psychological issues in a special educational setting, school educational counselling, prevention or social assistance setting; engages in special education diagnostics and provides individual or group counselling and intervention to children and pupils with special educational needs and to children with developmental risks; provides curative education for children with learning and behavioural disorders; and provides special pedagogical counselling to legal representatives, teaching staff and specialist staff. He/she is not an employee of the kindergarten, but of the counselling centre.

Special Education Field Pedagogue (§ 25 [2]): These specialist support staff are not employed by the kindergarten but by the counselling centre. They make regular visits to education institutions in the region and may also visit children in the home environment. They engage in special pedagogical, diagnostic, counselling, preventive, educational and methodical activities for children with disabilities; in methodological activities; and provide consultations and special pedagogical counselling to legal representatives.

Speech Therapist and School Speech Therapist (§ 27 [1]): Diagnoses speech therapy issues, provides intervention and counselling to children and pupils with impaired communication skills, and provides speech therapy counselling to legal representatives, teaching staff and specialist staff.

Therapeutic Pedagogue (§ 27 [2]): Provides therapeutic educational assistance to children and pupils with at-risk psychological, emotional or social development and behavioural disorders, as well as therapeutic educational assistance and counselling to legal representatives, teaching staff and specialist staff.

Social Pedagogue (§ 27 [3]): Engages in preventive activities; provides counselling and intervention with a focus on children and pupils with at-risk behaviour, at risk of socio-pathological phenomena and from socially disadvantaged backgrounds; provides counselling to legal representatives, teaching staff and specialist staff; diagnoses socio-pedagogical issues in the environment and of relationships; raises awareness and engages in other socio-economical activities.

An amendment to the Education Act approved by the National Assembly in May 2023 provides for the introduction of a new position in schools, that of a **Social Worker**. The role of the Social Worker will be to support children and parents in disadvantaged/precarious social situations.

3. Structural composition of the ECEC workforce: qualifications, gender, ethnicity

Childcare sector

Childcare Workers comprise the main component of the workforce in **childcare settings** for children under 3 years of age. Most of the settings are private and the number of the qualified staff varies considerably. In 2021, 490 full-time staff (92.2% of whom were women) cared for 1,768 children under 3 years in non-public settings. In public settings, with a total of 855 children, 278 full-time staff were employed (see *Tables 3 and 4*).

Table 3

Slovak Republic: Number of providers and children by provider type, 2019-2021

Year	Public providers ⁷				Non-public providers		
	Number of providers		Number of children		Number of providers	Number of children	
	0–1 year	1–3 years	0–1 year	1–3 years	0–3 years	0–1 year	1–3 years

Slovak Republic: Structural composition of staff in kindergartens (qualifications, gender, ethnicity) 2021/2022

Staff categories	Kindergarten Teachers	Teaching assistants and specialist staff	Total	Proportion of workforce, in %
Staff with specialist higher education degree (BA)	322	21	343	1.8
Staff with specialist higher education degree (MA)	711	218	929	5
Staff with specialist higher education degree (PhD)	23	0	23	0.2
Staff with specialist upper secondary education (Complete secondary education)	1,351	17	1,368	7.3
Staff with specialist vocational qualification (post-secondary)	31	0	31	0.2
Staff with non-specialist qualification/ Unidentified qualification	15,507	476	15,983	85.5
Unqualified staff	None – all staff must meet the statutory qualification requirements			
Men	0.3%			
Staff with a background of migration	No systematically compiled national data			

Source: Based on data from the information system of Ministry of Education; personal communication with Juraj Ždiňák in April 2023 (Ždiňák and MŠVVŠ SR/Sekcia informačných technológií 2022)

Statistical data on the **pre-primary education** workforce are collected on a regular basis. The *Centre for Scientific and Technical Information* of the Slovak Republic and the Ministry of Education are responsible for collection and processing these data. This may lead to a distorted picture of reality because some of the data do not have to be entered into the Ministerial information system. For example, data related to the qualification levels in the previous SEEPRO-R report reported that ECEC staff included 10.5% of teachers with a Bachelor's degree and 17.6% with a Master's degree, whereas recent data from the Ministry of Education suggests that only 1.8% of staff have a Bachelor's degree and 5% a Master's degree and that 85.5% of staff had not provided information about their qualification level (see *Table 5*).

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Childcare sector

Childcare Workers employed in settings for under 3 year-olds require a completed secondary vocational education focused on childcare (Decree 64/2015, MŠVVŠ SR 2015) or a completed secondary education not focused on childcare plus the completion of an accredited course of childcare for children up to three years or up to six years lasting at least 220 hours. Childcare Workers, as well as teaching and specialist staff members in the education system, have to meet the basic requirements of integrity, medical fitness and a good command of the Slovak language.

Table 6

Slovak Republic: Childcare Worker

Job title in Slovak: <i>Opatrovateľ/ka</i> Profile: Social Care/ Health Care Professional
Entry requirements: Completed general or vocational upper secondary education Professional studies: Upper secondary vocational education specialising in pre-primary pedagogy or in health and care or completed secondary general education plus 220 hours accredited course for Childcare Workers Award: School leaving exam certificate (<i>vysvedčenie o maturitnej skúške</i>) or certificate of completion of the course above ECTS credits: not applicable EQF level: 4 ISCED 2011: 344, 454 Main workplace settings: ECEC settings for children under 3 years (centre-based and home-based)

Education sector

Kindergarten Teachers meet the qualification requirements if they have completed a secondary vocational education in teacher training for kindergartens or a Bachelor's, Master's or Doctoral degree in teacher training or pedagogical science (Decree 1/2020). *Table 7* illustrates possible qualification pathways.

Table 7

Slovak Republic: Kindergarten / Pre-primary Teacher

Job title in Slovak: <i>Učiteľ/ka materskej školy, Učiteľ/ka predprimárneho vzdelávania</i> Profile: Pre-primary education professional
Route 1: Entry requirements: Completed lower secondary education, entrance exam (music, art, language, physical education) Professional studies: 4 years of upper secondary vocational studies at a secondary pedagogical school or pedagogical and social academy or pedagogical and cultural academy (<i>stredná pedagogická škola, pedagogická a sociálna akadémia, pedagogická a kultúrna akadémia</i>) specialising in pre-primary pedagogy Award: School leaving exam certificate (<i>vysvedčenie o maturitnej skúške</i>) ¹

Job title in Slovak: *Učiteľ/ka materskej školy, Učiteľ/ka predprimárneho vzdelávania*
Profile: Pre-primary education professional

ECTS credits: not applicable

EQF level: 4

ISCED 2011: 354

Main workplace settings: Kindergarten (*materská škola*), 3-5 years; primary school with kindergarten (*základná škola s materskou školou*), 3-5 years; kindergarten for children with special educational needs (*špeciálna materská škola*), 3-5kin years; school clubs for children, 6-15 years

Route 2:

Entry requirements: Completed upper secondary education

Professional studies: 2 years' post-secondary studies at a secondary pedagogical school or pedagogical and social academy or pedagogical and cultural academy specialising in pre-primary pedagogy

Award: School leaving exam certificate (*vysvedčenie o maturitnej skúške*)¹

ECTS credits: not applicable

EQF level: 4

ISCED 2011: 454

Main workplaces: see above

Route 3:

Entry requirements: Completed upper secondary education (*vysvedčenie o maturitnej skúške*)¹ and university admission procedures

Professional studies: 3 years at university²

Award: Bachelor in Pre-primary and Primary School Education; can be followed with a 2-year Master's degree programme (Master in Pre-primary Education) and a 3-year doctoral programme (Doctor of Philosophy in Pre-primary Education)

ECTS credits: 180 (BA), plus 120 (MA), plus 180 (PhD)

EQF level: 6 (BA), 7 (MA), 8 (PhD)

ISCED 2011: 655 (BA), 767 (MA), 864 (PhD)

Main ECEC workplaces: see above. Graduates with a Master's degree can work as centre leaders of kindergartens, inspectors, methodological experts; graduates with a Doctoral degree mainly work at universities or other specialised institutions.

¹ The school leaving certificate is a condition for higher education

² Students specialising in special education/ pedagogy may work in the classes/schools for children with special educational needs

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Childcare Workers: competences and course content

The courses followed by Childcare Workers usually focus on child care, basics of health and hygiene requirements, legal awareness and practical teaching skills. Specific competences acquired relate to childcare in settings and home environments, methods and forms of educational activities, basic knowledge in pedagogy, psychology and patho-psychology, principles of preventing injuries and child safety, first aid, care of a sick child in the home environment, acquisition of hygienic habits, principles of a good lifestyle, ethical principles in childcare work and requirements for working with children in centre-based settings.

Kindergarten Teachers: competences and course content at upper secondary level

The initial professional education of Kindergarten Teachers at upper secondary level includes the fundamentals of pedagogy, psychology and didactic theory and their practical implementation. The specific skills teachers acquire are focused mainly on the all-around development of a child's personality, methods and methodologies of education, human rights and diversity, responsible use of information, specific education of disadvantaged children, applying skills in practice, design, organisation, implementation of educational activities, evaluation, hygiene and safety, health care, creating and protecting the environment, kindergarten culture, pro-social behaviour, creativity, independence, professional communication and cooperation, self-regulation, self-control and professional development.

Kindergarten Teachers: competences and course content at university level

At its core, IPE at university level includes systematic knowledge about the phenomena of pedagogical reality, educational processes and their influencing factors, education determinants, recognising and evaluating pedagogical reality, pedagogical and didactic approaches and concepts, knowledge of solving various pedagogical situations and reflecting on relevant psychological and social science knowledge. It includes scientific knowledge of the disciplines in selected educational areas. The main topics focus on the education system; legal and curricular provisions; inclusive education; development of scientific, cultural and language literacy; methodical and methodological competences; digital technologies and the application of diagnostic, intervention and evaluation tools.

The pedagogical and didactic approaches found in the IPE programmes are based on humanistic pedagogy and psychology; democratic values in society and in education; human rights and freedoms; inclusive approaches; responsibility; and on personal and social constructivism. They develop the areas and range of knowledge, skills and competences relevant to the teacher's professional competence according to the relevant level of the Slovak National Qualifications Framework. With these foundations, Kindergarten Teachers can practice their profession at a high professional and scientific level.

4.3 Alternative entry and qualification routes, system permeability

People in different professions can also become Childcare Workers or Kindergarten Teachers if they follow one of two qualification routes within the vocational or higher education and training system.

- **A two-year post-secondary qualification** is an alternative to obtaining a secondary-school pre-primary school qualification at pedagogical and social academies. These prepare graduates with minimum qualification requirements for working in the ECEC field.
- **A two-year post-university qualification** is organised as an **extension course** (§ 43 Act 138/2019, NR SR 2019b). It is an alternative path for obtaining a university qualification to become a teacher in pre-primary or primary education. It is provided by universities with the relevant accredited study programme. The condition for admission to the extension course is a completed Master's degree in teaching and non-teaching study programmes with a completed two-year supplementary course on pedagogy. It ends with a final exam.

Opportunities for men and women to prepare for the profession and in professional development are equal. They can progress equally in their careers according to legislation (Act 138/2019, NR SR 2019b). However, interest by men in the teaching profession has always been generally low. This is especially true for kindergartens, where only 0.3% of teaching and specialist staff are men.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

In the IPE of prospective childcare workers in ECEC settings for children up to three years of age, there is no practicum specified by law.

Guided workplace experience in kindergartens – *teaching practice* – takes place mainly at “training kindergartens”. Public vocational schools and universities preparing teaching professionals conclude a cooperation agreement with these kindergartens; however, there is no legislation governing this practice. Teaching and specialist staff at training kindergartens do not have to complete a specific qualification course to guide students during practice teaching. However, they have to be independent teaching or specialist staff at the first or second certification level (Act 138/2019, NR SR 2019b).

Remuneration for supervising teaching practice in kindergartens

A performance agreement governs remuneration. Kindergarten Teachers are remunerated for supervising and supporting trainee Kindergarten Teachers as provided in the conditions stipulated in the agreement with the training institution or with a trainee Kindergarten Teacher. The amount is regulated by the budget issued by the Ministry of Education, Science, Research and Sport. The methodology for allocating subsidies for the relevant year is published on the Ministry of Education’s website. According to the regulations for 2022 (MŠVVŠ SR 2021a), the amount is set at €10.63 per hour. The financial remuneration for conducting practice teaching can also be assigned by a Kindergarten Head. Such remuneration is usually paid at the end of a calendar year when service providers release funds for this purpose. In the case of a state kindergarten with a legal subjectivity or in private kindergartens, funding may be set aside in the budget for this purpose by the Kindergarten Head.

Teaching practice in upper secondary training programmes for Kindergarten Teachers

Guided workplace experience is provided by both secondary schools and secondary vocational schools throughout the programme. In the 1st year, students spend two weeks (10 days) in a kindergarten class/group. Students are allocated five teaching hours per day and complete a total of 50 teaching hours for the entire continuing teaching practice. In the 3rd year of study, trainee teachers have guided workplace experience lasting three weeks (15 days). One day comprises six teaching hours, 90 hours in total.

Teaching practice in university study programmes for Kindergarten Teachers and Teaching Assistants

Guided workplace experience as offered by universities is reflexive and oriented towards the profile of the study programme graduate (Act 131/2002). There are several types of practice teaching for students. They take place according to agreements and plans in cooperation with or university. *Table 8* shows an example of the practicum component in the Bachelor study programmes for Preschool and Primary Education at two universities.

Table 8

Slovak Republic: Characteristics of teaching practice in two Bachelor's degree study programmes for Kindergarten Teachers and Teaching Assistants

Matej Bel University, Faculty of Education (Banská Bystrica)				University of Prešov, Faculty of Education (Prešov)			
Type of teaching practice	Year of study	Hours	ECTS credits	Type of teaching practice	Year of study	Hours	ECTS credits
Initial teaching practice in kindergartens	1st	13	3	Initial teaching practice in kindergartens	1st	60	3
Continuing teaching practice in kindergartens 1	2nd	39	3	Continuing teaching practice in kindergartens 1	2nd	60	3
Continuing teaching practice in kindergartens 2	2nd	52	3				
Assistant practice teaching in the 1st year of a primary school**	3rd	39	4				
Continuing teaching practice in kindergartens 3	3rd	80	6	Continuing teaching practice in kindergartens 2	3rd	60	6*

* Credits are earned either for continuing practice teaching in a kindergarten or in a children's school club.

** BA study programmes also prepare students to be a Teaching Assistant in both primary schools and kindergartens

Skills and competences of kindergarten trainees at university level

The skills and competences expected from kindergarten trainees are determined by the profile of a graduate with a Bachelor's degree in teacher training and pedagogical science.⁸ Trainee Kindergarten Teachers who have completed guided workplace experience should be able to do the following:

- Identify the developmental and individual characteristics and educational needs of a child
- Accept the individuality of a child
- Have basic practical experience in identifying psychological and social factors of their learning
- Accept the diversity of students in a socio-cultural context.

The trainees are familiar with:

- Generally binding legal regulations related to the work of a teacher
- Pedagogical and other documentation
- Other conceptual and strategic documents and materials of a kindergarten.

The trainees:

- Can record, analyse and solve various pedagogical situations
- Have the skills to plan, design, manage and organise the educational process effectively
- Have basic methodological skills in the profile educational areas or specialisations

⁸ For more information, go to www.portalvs.sk – (<https://www.portalvs.sk/sk/studijne-odbory/zo-brazit/ucitelstvo-a-pedagogicke-vedy#details-level-p>)

- Can use information and communication technologies in the educational process effectively
- Can apply an appropriate method of pedagogical assessment and evaluation
- Can modify their activities and make them more efficient
- Can communicate and cooperate with parents, foster parents, community, etc. efficiently.

Evaluation of teaching practice

Several forms of self-assessment and external evaluation of students are used during teaching practice. Secondary school students use more methodologically oriented evaluation procedures. University students reflect on pedagogical practice in more detail and at a deeper theoretical level. The main means for (self)assessment of a kindergarten trainee is a **portfolio** that contains, for example, features of the training kindergarten (philosophy, profiling, environmental characteristics), an overview of binding pedagogical documents, records and transcripts from observing educational activities, analysis of didactic procedures, design and implementation of teaching situations/educational projects, analysis and reflection of their own teaching, professional development plan for newly qualified teachers, and personal SWOT analyses of strengths and weaknesses in teaching skills.

A student's own **reflexive diary** during teaching practice is also a means of (self)assessment. Students are continuously assessed by the supervisory training teacher. When their guided workplace experience is completed, a structured final evaluation is prepared. It mainly assesses the quality of the particular student's outputs, preparation and reflection during teaching practice. A student's active participation in the colloquium is also included in the final evaluation, which is conducted in the form of a focus group. The students reflect on their own work during teaching practice and actively assess the relationship between study and practice.

6. Continuing professional development (CPD) of ECEC staff

Legislation and regulation

The Slovak Republic has a highly regulated system of CPD for pre-primary education, located within the same regulatory framework that applies to primary schools. There is no such framework for staff working in childcare centres for children up to 3 years of age.

Act 138/2019 (NR SR 2019b) on teaching and specialist staff provides both the **right** and **obligation** for continuing education as part of professional development. CPD enables the acquisition, deepening, improving and expanding of diverse professional competences. These include acquiring competences for carrying out specialised activities or for qualifying for the post of Centre Leader or Kindergarten Head, acquiring competences needed for promotion to higher career levels, or meeting the qualification requirements needed for additional responsibilities.

Professional development programmes for teaching and specialist staff in the school system are provided by Professional Development Teachers. They are not employees of schools, but of the Methodology and Pedagogy Centres, which are directly managed by the Ministry of Education of the Slovak Republic. Professional Development Teachers participate in the development of programmes and professional standards based on research, provide counselling and cooperate with kindergartens in professional development. They manage related certification audits and serve on examination and certification boards. Professional Development Teachers lecture on teaching; their role includes being a professional development methodologist and they consult

on the teacher certification procedure (Act 138/2019, NR SR 2019b). They must likewise meet the set qualification requirements of at least the 2nd level of university education in the field and the second certification (see *Table 9*).

Professional development plan

CPD takes place within the kindergarten's approved professional development plan. It is issued by the Kindergarten Head and approved by the Pedagogical Council. The training plan can be supplemented and modified for as long as it remains valid in accordance with the setting's current possibilities and needs. The maximum time frame is five years.

Providers and main types of CPD

The professional development of teaching and specialist staff takes place through CPD courses, scientific research, publishing, or creative and artistic activities as well as through self-education. CPD in the educational system is organised as training to qualify for specialised posts of responsibility and includes adaptive, pre-certification, innovation and refresher training.

Refresher training is designed according to the needs of the school's founding entity to maintain or refresh the professional competence required for a specific position, to acquire new knowledge and information about changes in legislation, educational programmes, pedagogical documentation and other documentation and to acquire new knowledge and skills in a specific area of work. Either the school or the founding entity of a kindergarten provides refresher training. It is organised as a simple programme approved by the Kindergarten Head. The academic supervisor is a teaching or specialist staff member with a 2nd certification.

Certain kinds of CPD are offered free of charge in Methodology and Pedagogy Centres. Act 138/2019 (NR SR 2019b) determines the requirements of training programmes accredited by the Ministry of Education, Science, Research and Sport. Particular types of training may be provided by a university or organisation established by the Ministry of Education or another government agency, a Catholic education and catechetical centre, a school, a school setting, a social assistance setting, an employer granted a certificate of competence to provide practical training in the system of dual education and by other legal entities that have education in the scope of their activities. Participants receive a state recognised certificate of completion for each type of professional training.

Various other types of professional seminars, courses, trainings and activities are also available for the ECEC sector employees. They are usually organised by commercial and third sector entities. They are not coordinated by state standards and a completion certificate is not issued.

Leave entitlement for CPD

Teaching and specialist staff are entitled to five working days' paid leave for professional development per calendar year, another five working days' leave to prepare for and take the first or second certification examinations, and yet another five working days' leave to participate in a career advancement module to become a Kindergarten Head or another managing role. Employers may allow teaching staff to take a sabbatical for a maximum of one school year if they have been employed for a minimum of ten consecutive years. They are not entitled to a salary or pay while they are on sabbatical, but their return to the position they held when they went on sabbatical is guaranteed (Act 138/2019, NR SR 2019b).

Releasing employees for training is most difficult in one-class kindergartens and when there is a higher rate of illness among staff. Online training minimised this problem during the COVID-19 pandemic because it took place mostly after the teachers' working hours.

Financing CPD

Some types of professional development training are self-financed by staff. These include the costs for taking the basic module for career advancement if the teacher had not completed it during the pre-certification period. Teachers also pay for adaptive education if it is not provided by the kindergarten, but instead by an organisation established by the Ministry of Education. The kindergartens' founding entities will pay staff for extended study if it is part of the setting's professional development plan. The law provides for other forms of education within the professional development plan financed by employers. Professional development is also supported by financial benefits when training is completed. Teachers receive supplemental pay amounting to 6% for extension studies, 12% for state language examinations passed, 3% for specialised training and 3% for innovation training. Supplemental pay for professional development is for seven years to a maximum of 12%, of which a maximum of 9% is for innovation training.

CPD and career advancement

In the professional development of teaching staff (also Kindergarten Teachers) and specialist staff, there are opportunities for career progress according to qualifications frameworks, career levels and positions (see *Table 9*).

Table 9

Slovak Republic: Career levels and positions of teaching and specialist staff

Career level	a) Newly qualified teaching or specialist staff
	b) Independent teaching or specialist staff
	c) Teaching or specialist staff with 1st certification
	d) Teaching or specialist staff with 2nd certification
Career positions	Specialised activities of teaching staff
	Induction teaching staff, class teacher, leader of methodological circle, supervisor, school support team coordinator
	Specialised activities of specialist staff
Staff head	Teaching staff head: Headteacher, deputy headteacher, head educator
	Specialist staff head: Headteacher, deputy headteacher, specialist department head

Source: Own processing according to Act 138/2019, NR SR 2019b

Main topics of CPD

Act 138/2019 (NR SR 2019b) recommends focusing the content of refresher training in kindergartens on school curriculum changes, inclusive education, and the digitisation of education and training.

The State School Inspectorate (Štofková Dianovská et al. 2021) requires the focus to be on improving the quality of educational activities, the activities and tasks of the Kindergarten Head's advisory bodies and school management, and inclusive education and teamwork, including cooperation with families. In view of the pandemic, it was important to focus on online education through various forms of active remote learning. An analysis of teaching staff needs (Methodology and Pedagogy Centre 2013) carried out for the *Inclusive Model of Education at the Pre-primary Level of the School System*, a national project, shows teachers wishing to be educated in such topics as adapting learning tasks to individual needs and abilities of children from marginalised Roma communities (MRC); creating teaching resources (tools, worksheets, etc.) individually adapted to the needs and possibilities of MRC children; preparing children for adverse life

situations of MRC children; connecting kindergarten education with life experiences of MRC children; teaching children using materials available in an MRC child's home environment while also planning educational activities; how to facilitate problematic adaptation and socialisation of MRC children; child diagnostics; and knowledge of socially and culturally conditioned behaviours of MRC children.

At present, the focus has shifted to the acceptance of Ukrainian children in the kindergarten environment, where attention needs to be paid to communicating with children and family members, explaining to the children the situation in Ukraine and taking note of the flood of information on how to help them adapt ('Slovak Government – Children from Ukraine are Coming to Your School, What to Do/For School Headteachers', Verejná Správa SR 2022) and identifying their educational needs, among other things.

Research projects on CPD

The Methodology and Pedagogy centre, working in cooperation with the National Institute for Education, was involved in implementing Professional Development of Teachers (TEACHERS), a national project. Its main goal was to support the professional development of teaching and specialist staff in introducing and implementing changes in kindergartens and schools, including crisis and post-crisis situation management and the impact caused by interruptions in kindergartens due to the COVID-19 pandemic. The project was completed on 31 December 2022.

Current debates on CPD

The issue of professional development is still topical, especially in a period of upcoming changes and amendments to laws and decrees dealing with the issue. Professional organisations such as the Slovak Committee of the World Organization for Early Childhood Education (*SV OMEP*), the Society for Preschool Education (*Spoločnosť pre predškolskú výchovu*), the Kindergarten Development Council (*Rada pre rozvoj materských škôl*) and the Slovak Teachers' Chamber regularly comment on proposals for changes in the legal status. Sometimes compromise agreements are successfully reached, but at other times proposals and well-founded arguments are not accepted.

7. Working conditions and current workforce issues

7.1 Remuneration

Remuneration of staff in kindergartens and primary schools is regulated by 2019-18526:1-B2001 on salary tariffs of teaching and specialist staff (MŠVVŠ SR 2019). Its annexes list pay classes depending on the length of credited experience. Kindergarten Teachers and specialist staff are remunerated under the same rules as their primary and secondary school colleagues. In terms of remuneration, it makes no difference at what level of school and education teachers work, but rather what initial professional education they have, their pedagogical experience in education and what career level in professional development they have achieved. Salaries includes variable components, such as supplemental pay for a specific career position and function, working shifts, running classes and management. Bonuses can be paid from the founding entity's budget, usually allocated at the end of a calendar year.

At the end of 2021, the average monthly salary in Slovakia for teachers was €1,211 (Statistical Office of the Slovak Republic 2022). The salary earned by a newly qualified teacher has been

€881.50 since 1 September 2019, with the tariff rate (€831.50) + 6% supplemental pay amounting to €50 (MŠVVŠ SR and The Education Policy Institute 2019).

7.2 Full-time and part-time employment in ECEC provision

Direct educational activities of teaching and specialist staff are regulated by Government Regulation 201/2019 (Government of the Slovak Republic 2019). They may work full time or part time for a definite or indefinite period as set out in the employment agreement with the kindergarten's founding entity or statutory representative. They can be employed by several kindergartens and schools, up to a maximum of 48 hours per week. Time spent teaching includes two components: direct educational activities and education-related activities. The base work week for a kindergarten teacher's direct educational activities teacher is 28 hours, with each hour lasting 60 minutes. Usually, two teachers in a class take turns in alternating their working hours between morning and afternoon shifts. Statistically, both teachers are reported as one full-time teacher in one class. Part-time employment is very rare and not statistically documented.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

According to Act 138/2019 (NR SR 2019b) *adaptive training* is intended for newly qualified teaching staff or specialist staff who have completed a post-secondary qualification (see *Chapter 4.3*). Newly qualified teachers have to work under the supervision of a staff member responsible for induction, whose supervision lasts a minimum of six months and a maximum of two years. Newly qualified teachers can get further help from colleagues in the kindergarten support team. At least once a year, their employer may offer preventive psychological counselling and counselling aimed at managing aggression, self-knowledge and conflict resolution (Act 138/2019, NR SR 2019b). Mentoring and coaching are not established by law. It depends on the founding entity whether and in what quality they are provided to their staff.

A simple induction programme is established that is approved by the Kindergarten Head or a statutory representative of a government education agency. The academic supervisor of adaptive training is the Kindergarten Head or the Professional Development Methodologist (see *Chapter 2.3*). Training starts no later than five days after the date of hiring, regardless of whether the new employee is qualified for the position or not. It ends with a recommendation for the newly qualified or specialist staff member before a three-member examination board as outlined in the adaptive training programme, and a report. The newly qualified staff member then becomes an independent employee ("independent teacher").

Teaching and specialist staff have the same protective status as other public sector employees in connection with the performance of work activities. Their right is to be provided with the conditions required for their jobs, in particular protection against acts of violence by children, legal representatives and other persons, against socio-pathological behaviour of management staff, founding entities, legal representatives and other persons and unprofessional interference while they are working.

7.4 Non-contact time

A Kindergarten Teacher is granted 9.5 hours out of the paid working time of 37.5 hours per week for non-teaching activities. The time is usually spent preparing for educational activities, providing a learning environment, collecting and creating tools, keeping pedagogical documentation, personal files and portfolios of children, providing consultation and pedagogical counselling, cooperating in the school support team and with legal representatives, working in a Methodical

Circle (see *Chapter 2.4*), participating in operational work briefings and meetings of the Pedagogical Council, managing the school library, if any, improving and decorating the school premises and participating in the city's, municipality's or community's pedagogical activities. They carry out these activities according to current kindergarten management requirements and also following the kindergarten curriculum and its regulations.

7.5 Current staffing issues

In terms of staff recruitment, employers are obliged to advertise teaching and specialist staff vacancies by publishing information about them on their websites, or on the website of the founding entity or regional office. There is usually a selection procedure for the employer to select from registered applicants. Some regions, especially those with high living costs like Bratislava, have a shortage of teachers. Employers in these regions mainly have a recruitment process, not a selection process, but this is a matter for the founding entities and not a systemic national solution. Therefore, it is usual for teachers to work until retirement age. Most teachers are women aged around 50 years (CVTI SR 2021). Teaching's attractiveness among young people is declining in the light of low salaries and high demands on competences and responsibilities in the profession.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Political reforms and initiatives related to ECEC staffing and professionalisation are based on the *National Programme for the Development of Education* (MŠVVŠ SR 2018), which was prepared from tasks outlined in *Learning Slovakia* (Burjan et al. 2017).

One of the programme's priorities is to increase the quality of education and strengthen the social status of teachers in the context of international comparisons and global trends. This also applies to pre-primary teachers. There has been a long-term professional discussion about whether secondary-level education is sufficient for the performance of this profession, and whether, within a reasonable time horizon, such as 10 years, it would be desirable to achieve qualification requirements for the 1st or 2nd level (Bachelor or Master) of university education. This is a topical question, especially with regard to the compulsory part of pre-primary education. At the same time, finding a solution is difficult because of the declining attractiveness of the teaching profession. The current challenge is to ensure an overall sufficient number of qualified kindergarten teachers.

Another ECEC initiative is the *Recovery and Resilience Plan* (Ministry of Finance of the Slovak Republic 2021), which also includes a reform aimed at "preparing and developing teachers for new content and forms of teaching". Its grant programme for universities (Ministry of Finance of the Slovak Republic 2022) will support new teacher training programmes in the field of inclusive teaching, teaching pupils with different home languages and the development of digital competences. At the regional level, it will finance the establishment of regional teacher support centres.

9. Recent country-specific research focusing on ECEC staff

Attitudes of Kindergarten Teachers to professional development

Source: Hall, Renáta, Peter Drál, Petra Fridrichová, Miroslava Hapalová, Stanislav Lukáč, Jozef Miškolci, and Katarína Vančíková 2019 (see *References* for full details)

Aims: To define problems in Slovak education and propose an internally coordinated reform of the entire education system – from pre-school, through primary, secondary and higher education, to lifelong learning, based on detailed research findings.

Methods: More than 400 individual and 20 group interviews, together more than 500 respondents; questionnaires with approximately 5,000 respondents (teaching and specialist staff in education in Slovakia and abroad).

Selected findings: The study analyses the overall state of education in Slovakia. ECEC staff related findings suggest that Kindergarten Teachers have different attitudes regarding compulsory professional training. One third of the respondents attend CPD voluntarily, one third under certain conditions and one third are not interested in continuing professional development. Salary increases motivate several teachers to learn. However, they criticise the insufficient choice of accredited programmes free of tuition fees. They see a problem in the insufficient funding of programmes that attract their interest (mostly by non-profit organisations). The teachers have management support for further education, but they feel they cannot respond flexibly to the choice of courses. These are taken according to a plan aligned with the school's operation and vision. The findings of the study have also affirmed a strong feminisation in the ECEC sector, with the teachers experiencing excessive workload and little social appreciation.

Implications: The authors of the study have proposed a set of measures for the entire education system in Slovakia. Their study has initiated a discussion among professionals and ordinary people, provided stimuli for changes in the content and forms of education, and stimulated the need for changes in preparation for the teaching profession and the further education of teachers.

Inclusive education in kindergartens

Source: Alberty Ladislav, Peter Drál, Vladimír Klein, Emil Komárik, Milena Lipnická, Alica Petrasová, Viera Šilonová, and Miron Zelina 2019 (see *References* for full details)

Aims: To promote inclusive education, to provide equal access to quality education by improving the professional competences of teaching staff and specialist staff and to improve children's outcomes.

Methods: Separate questionnaires for learning about the views of Kindergarten Heads, Teachers and Teaching Assistants on the conditions for an inclusive model of education in the kindergarten environment. 48 directors of the 50 participating kindergartens took part in the first evaluation phase and 43 Kindergarten Heads and 64 teaching staff in the second evaluation phase.

Selected findings: According to the final report (Alberty et al. 2019), in the 2nd evaluation, both Centre Leaders and Teachers expressed the opinion that, in practice, the national project had significantly strengthened in kindergartens the personnel, material-technical and curricular conditions of inclusive education of children from socially disadvantaged backgrounds. Centre leaders expressed the importance of the education of teaching staff and staffing ratios in the inclusive education of children from socially disadvantaged backgrounds. Kindergartens need Special Pedagogues (Heads 79.59%; Teachers 76.56%), School Psychologists (Heads 67.35%; Teachers 65.08%), and to a lesser extent Social Pedagogues (Heads 55.10%; Teachers 62.50%). More than

half of the Kindergarten Heads (55.10%) and Teachers (50.76%) expressed the opinion that the number of teachers in inclusive education of children from socially disadvantaged backgrounds should be increased to three per class and the number of children in such classes should be reduced to 16 children or less per class. They require teamwork in pre-primary education.

Implications: The National Institute for Education is currently developing a system of inclusive education support measures that would implement continuing education programmes for teaching and specialist staff. The project continues in two national projects: *Assisting Professions in the Education of Children and Pupils* and *Professional Development of Teachers (Teachers)*.

Professional development of Kindergarten Teachers

Source: Methodology and Pedagogy Centre/ State Pedagogical Institute – Metodicko-pedagogické centrum/ Štátny pedagogický ústav⁹ 2020 (see *References* for full details)¹⁰

Aims: To support the professional development of teaching and specialist staff in the implementation of changes in schools and kindergartens, including crisis and post-crisis situation management and impacts related to school interruption due to the COVID-19 pandemic.

Methods: Online questionnaire, group interviews (focus groups), 291 respondents including 60 Kindergarten Teachers were involved

Selected findings: The final report of the preliminary survey (Methodology and Pedagogy Centre/ State Pedagogical Institute 2021) states that within further education, Kindergarten Teachers are most interested in the topics of pedagogical diagnostics, the use of inclusive approaches in the educational process, educating children with special educational needs, creating and developing a positive climate in the classroom, team teaching, ICT teaching, self-reflexive and self-assessment competences and self-development topics (such as dealing with difficult communication and conflict situations), managing stress, fatigue and burnout, emotional intelligence, professional portfolios. For CPD activities, teachers prefer morning working hours and in-person teaching. They consider exercises, trainings and experiential forms of education, workshops, creative workshops, demonstrations and exchanges of experience between participants to be effective. In remote education, they mostly used the website "We teach at a distance" and materials from the National Institute for Education and The Methodology and Pedagogy centre. Education during the pandemic has also confirmed the need to train teachers for remote forms of learning.

Implications: University study programmes are currently being harmonised in teacher training according to new accreditation rules. These also reflect requirements for the development of digital competences in kindergarten teachers and for the flexible implementation of various forms of professional development.

⁹ From 1.7.2022 the two organisations merged. Currently they operate under the name of the National Institute of Education and Youth.

¹⁰ For more information about the project see the implementer's website (www.mpc-edu.sk/sk/project/teachers/o-projekte) and (www.statpedu.sk/sk/o-organizacii/projekty/narodny-projekt-profesijny-rozvoj-ucitelov-teachers/)

10. Workforce challenges – country experts' assessment

Potential challenges for workforce development in early childhood education and care in Slovakia include the following:

- **High quality inclusive pre-primary education.** To educate teachers in this area and prepare them practically for the pedagogical consideration of children's diverse educational needs as well as to cooperate in school support teams and with legal representatives for the children and the community.
- **Institutionalised education and care for children from 0 to 3 years of age,** with special attention to children from marginalised Roma communities. To prepare teachers for various forms of non-formal education and participation in school, health and social activities as well as in communities.
- **Adequate remuneration.** Appropriate salaries in education are seen as a strong motivating factor for joining the profession and keeping young teachers in it. This is an important factor to attract talented students for the study route as a kindergarten teacher.
- **University educated teachers** in compulsory pre-primary education to ensure a smooth transition of children from pre-primary to primary education. The teachers should have the competences for the process that requires a higher level of scientific and critical thinking.

In the Slovak Republic, the Ministry of Education, Science, Research and Sport, the Association of Towns and Municipalities of Slovakia and the Union of Slovak Cities are discussing the current state of education with several professional organisations. These include the Slovak Committee of the World Organisation for Early Childhood Education (SV OMEP), the Society for Preschool Education, the Council for Kindergarten Development, and the Slovak Chamber of Teachers.

Discussions are also being held within the above organisations. In particular, the SV OMEP (www.omep.sk) and the Society for Preschool Education are organising professional and scientific conferences and workshops for employees in the ECEC sector. Thus, they are contributing to the dissemination of knowledge, inspiring them with examples of practice from abroad and enabling them to reflect upon their own work.

The most recently discussed topic is the planned introduction of a legal right to a place in kindergarten for all children from 4 years (2024) and 3 years (2025) of age.

Early childhood education and care (ECEC)

Please note:

The terms used for the main forms of centre-based ECEC settings in this report are **childcare centre** (formerly: *detské jasle*, currently: *zariadenia starostlivosti o deti do troch rokov veku dieťaťa*, 0–2) and **kindergarten** (*materské školy*, 3–5)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Slovakia

1829	First children's care home founded by Countess Therese Brunswick
1872	First childcare institution founded – with a focus on child protection, instilling a sense of cleanliness and orderliness and the development of age-appropriate skills.
1881	The Hungarian Act XV states that 3 to 6 year-olds are to attend an ECEC institution if their parents are unable to care for them at home on a regular basis.
1913-14	Towards the end of the Austro-Hungarian Empire there are 416 ECEC institutions in the Slovak region.
1918	After the founding of the Republic of Czechoslovakia an expansion phase follows, but by 1937 the number of ECEC settings had decreased to 160.
1948	At the onset of the communist regime there are 1000 ECEC institutions in Czechoslovakia.
1952	Childcare centres for under 3 year-olds come under the auspices of the Ministry of Health.
1950s and 1960s	Age-integrated centres are set up for 3 to 6 year-olds and under 3 year-olds under the auspices of the Ministry of Education.
1970s and 1980s	Employer-based childcare facilities and co-operatives are set up.
1970	There are 561 childcare centres and 2645 kindergartens in the Slovak region.
1980	Ten years later the total has risen to 973 childcare centres and 3723 kindergartens.
1989	At the time of the collapse of the communist regime, 92 % of 3 to 6 year-olds are enrolled in one of the 4052 kindergartens.
1993	Childcare centres for under 3 year-olds are removed from the auspices of the Ministry of Health.
1994	Over a period of 5 years, the number of kindergartens decreases by 709 to 3343.
2001-2006	330 ECEC services are closed down, mostly those for under 3 year-olds.
2008	– Kindergarten (<i>materská škola</i>) becomes the first stage in the education system. – ECEC settings for under 3 year-olds come under the responsibility of the Ministry of Labour, Social Affairs and Family.
2009	Fundamental changes introduced in the professional and career development of teachers. Lifelong learning is made compulsory.
2014 -2016	– Expansion of provision begins: by 2015/16 there are 2935 kindergartens. – Demand exceeds supply and there is an extreme shortage of places.
2019	Amendments to the Education Act regarding kindergartens – the professional development system for teachers is updated, including compulsory and non-compulsory forms

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3-, 4- and 5 year-olds in countries with a primary school entry age of 6 years. In justified and professionally assessed cases, this may be 7 years of age in the Slovak Republic.

2021	Amendments to the Education Act – Attending a kindergarten one year before school enrolment becomes compulsory for 5 year-olds. Compulsory pre-primary education can also be organised in an individual form in the home environment.
2023	On 9 May 2023, deputies of the National Council of the Slovak Republic approved a major amendment to the Education Act ² . <ul style="list-style-type: none"> – As from the 2024/2025 school year, all 4 year-olds are entitled to a place in kindergarten. As from the 2025/2026 school year, this will also apply to all 3 year-olds. – A new profession – Social Worker – is established as a support team member. – Kindergarten Teachers will be obliged to complete compulsory innovative training in the field of pre-primary education pedagogy in the range of 50 to 100 hours; it must be completed the teachers within seven years from the beginning of their employment as a pedagogical employee.

ECEC system type and auspices³

In the separately organised system of early childhood education and care, kindergartens for children aged 3–5/6 years come under the auspices of the Slovak Ministry of Education, Science, Research and Sport (*Ministerstvo školstva, vedy, výskumu a športu*). The Ministry is responsible for overarching regulations relating to educational goals, supervision, evaluation and financial budgets. Organisation at the local level is the responsibility of the municipalities or private and religious founders of kindergartens.

Until 1993, day nurseries for under 3 year-olds came under the auspices of the Ministry of Health. Between 1993 and 2017, no ministry was responsible for the few, almost exclusively privately run ECEC facilities for this age group. Since March 2017 (Act No. 448/2008), settings for under 3 year-olds are now the responsibility of the Ministry of Labour, Social Affairs and Family (*Ministerstvo práce, sociálnych vecí a rodiny*) (2021c). The providers of ECEC are state, private or church affiliated. Municipal facilities receive financial subsidies from the Ministry and can also support private ECEC settings through their own resources.

General objectives and legislative framework

Childcare centres for under 3 year-olds are subject to the Act on Social Services (*zákona o sociálnych službách*, 2008), updated in 2021. These childcare facilities for children up to 3 years of age provide routine childcare and upbringing. This is a service that enables working and studying parents to reconcile work and family life. The service is also provided for children with disabilities up to 7 years of age.

Equal opportunities and lifelong learning are fundamental principles of the education system, including kindergartens for 3 to 6 year-olds. Everyone has a right to education, including ethnic minorities, whose culture and language must be taken into account in education provision.

Kindergartens are regulated by the Education Act (*školský zákon*), as amended in 2021. The most important change is that the so-called ‘zero classes’ for 5 year-olds, a substitute provision mainly for children with a socially disadvantaged background who had not attended kindergarten, lost

² Ministry of Education, Science, Research and Sport 2023

³ The Eurydice country report on ECEC in Slovakia provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

their relevance with the introduction of compulsory education for 5 year olds in kindergarten and were abolished.

Following the introduction of compulsory pre-primary education, Decree No. 541/2021 (*vyhláška o materskej škole*) was amended to provide for a changed organisation of pre-primary education.

However, Slovak education is facing further changes. On 9 May 2023, deputies of the National Council of the Slovak Republic approved a major amendment to the Education Act which still has to be approved by the President of the Slovak Republic. Under the amendment, "introductory classes" may be established in primary schools from the 2023/2024 school year (Ministry of Education, Science, Research and Sport 2023).

ECEC entitlement and compulsory attendance

In the Slovak Republic, there was no legal entitlement to a place in an ECEC setting for children under 5 years of age before 2023.

The above-mentioned amendment to the Education Act introduces entitlement for the first time. The Ministry of Education has thus responded to the demands of parents to ensure access to quality and affordable pre-primary education for all children. In the 2024/2025 school year, all 4 year-olds will be eligible for admission, and from the 2025/2026 school year, all 3 year-olds. Since September 2021, attendance has been compulsory for children who are 5 years old by 31 August. Statutory primary education starts at the age of 6.

Main types of provision

Childcare centres (*detské jasle*) admit children aged 6 months to 3 years. In 2016, the Ministry of Labour changed their name from 'nurseries' to 'childcare services for children up to 3 years' (*zariadenia starostlivosti o deti do troch rokov veku dieťaťa*). Under 3 year-olds can also be cared for in mother-and-child centres or in **home-based provision** (*opatrovateľ detí*) run and managed by private individuals, parents' associations or local authorities. The respective providers decide on opening hours and daily schedules.

Kindergartens (*materské školy*) accept children between 3 and 6 years of age in full-day groups (up to 12 hours) or half-day groups (up to 5 hours). If capacities allow, 2 year-old children are also accepted. Most kindergartens are open from 6:00 to 18:00. Kindergartens are usually self-contained institutions, but they may also be integrated into primary schools (*základná škola s materskou školou*). The kindergarten year runs from 1 September to 31 August. During the school holidays, the opening hours are agreed with the parents. However, due to staff holidays and renovations, they remain closed for at least three weeks during the summer. For children with special educational needs who cannot attend a regular institution, there are separate special needs kindergartens (*špeciálna materská škola*). Zero grades in primary schools were abolished as from 2022/2023. 5 year-old children are required to attend compulsory pre-primary education in kindergartens. Compulsory pre-primary education can also be organised individually in the home environment with a partial supervision by the kindergarten. Children not able to attend kindergarten because of a disability receive full support by the kindergarten.

Some kindergartens follow specific approaches to pedagogy such as forest or nature kindergartens, or Montessori kindergartens; a pilot programme for the latter was completed in 2016.

In 2022, there were a total of 3,137 kindergartens in Slovakia attended by 178,830 children. Of these, 60,630 children were enrolled in compulsory pre-primary education (CVTI 2023a).

Provider structures

Municipalities are the providers of most kindergartens; some are state-owned, others are established by the local education authority. Private kindergartens can be established by individuals or legal entities, or by churches or church organisations registered with the state. Private providers play a significant role in facilities for under 3 year-olds (European Commission/EACEA/Eurydice 2019, 42).

If private kindergartens are included in the network of schools and educational institutions under the Ministry of Education, they receive funding from the state budget. They must implement pre-primary education in accordance with the applicable legal standards. This means that education must also be carried out in accordance with the national curriculum. Since 2007, private kindergartens receive funding from the municipalities (Act No. 564/2004 Coll.) and since September 2009—they have been bound to the national curricular programme. The provider is responsible for the educational programme specific to the institution.

The majority of the 3,137 kindergartens in Slovakia in 2022 (89.0%) were publicly funded and operated as full-day settings (96.7%). Only 7.4% were run by private providers and 3.6% by church-affiliated providers (see *Table 1*). Private settings receive state subsidies but may also set fees for parents. 93.7% of enrolled children attended the settings full day (CVTI 2023a).

Table 1

Slovakia: Number of kindergartens and number of children enrolled by provider type, 2022

Provider type	Kinder-gartens	Distribution of Kindergartens by provider*	Full-day Kinder-gartens	Children enrolled	Children attending full day	Distribution of children by full-day attendance*
Public	2,793	89.0	2,702	162,254	151,583	93.4
Private	232	7.4	227	10,169	9,687	95.3
Church-affiliated	112	3.6	112	6,407	6,220	97.1
Total	3,137		3,041	178,830	167,490	93.7

Source: CVTI 2023a *own calculations

Participation rates in regulated ECEC settings

Until 2010, only very few children under the age of 3 were enrolled in an ECEC setting, which can at least partly be explained by the comparatively long parental leave (see chapter on *Parental leave*). Another reason is the fact that most of the childcare centres for under 3 year-olds had closed down in the 1990s. Between 2010 and 2022, the proportion of children attending ECEC settings fell from 3% to 2.4%). However, the proportion of children between the ages of 3 and school entry who attended an institution rose significantly from 67% to 85% between 2005 and 2022 (see *Table 2*).

Table 2

Slovakia: Enrolment rates in ECEC centre-based settings by age and weekly duration of attendance, 2005–2022

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	0	10
	Over 30 hours	3	57
	No enrolment in ECEC	97	33
2010	1 to 29 hours	0	8
	Over 30 hours	3	64
	No enrolment in ECEC	97	28
2015	1 to 29 hours	0.2	14.0
	Over 30 hours	0.9	53.6
	No enrolment in ECEC	98.9	32.5
2022	1 to 29 hours	0	11.3
	Over 30 hours	2.4	73.7
	No enrolment in ECEC	97.6	15.0

Table 3

Slovakia: Number of children in kindergartens by age and provider type, 2022

Age	Public	Private	Church-affiliated	Total
Under 3 years (in childcare centres)	6,573	1,276	297	8,146
3 year-olds	36,566	2,593	1,457	40,616
4 year-olds	43,842	2,624	1,765	48,231
5 year-olds	50,793	2,572	2,019	55,384
6 year-olds	23,746	1,074	856	25,676
7 year-olds and older*	734	30	13	777
Total	162,254	10,169	6,407	178,830

Source: CVTI 2023a

*7 year-olds in kindergarten are children for whom compulsory school attendance has been deferred, based on assessment and recommendation by experts in the Centres for Educational Guidance and Prevention

Broken down by age group, the highest attendance rates in 2022 were among 5 year-olds, followed by 4 year-olds (see Table 4).

In 2021, there were 157 non-public ECEC-settings for children under 3 which were attended by 1,796 children. Most of them were between 1 and 3 years old, only 52 children under age 1 were enrolled (Ministry of Labour, Social Affairs and Family 2021a). In the same year, 45 public ECEC-settings provided for 855 children (15 under age 1) (Ministry of Labour, Social Affairs and Family 2021b).

Table 4

Slovakia: Number of children and enrolment rates in kindergartens by age, 2022

	Number of children in the population*	Number of children in kindergartens**	Share of children in kindergartens, in %***
Under 1 year-olds	55,087	8,146	4.8
1 year-olds	57,527		

	Number of children in the population*	Number of children in kindergartens**	Share of children in kindergartens, in %***
2 year-olds	58,365		
3 year-olds	59,683	40,616	68.1
4 year-olds	60,493	48,231	79.7
5 year-olds	60,650	55,384	91.3
6 year-olds	59,629	25,676	43.1
7 year-olds	58,366	777	1.3

Source: * Statistical Office of the Slovak Republic 2023, ** CVTI 2023a, ***own calculations

In 2022, a total of 178,830 children were cared for by 17,811 qualified teachers and 612 teachers' assistants. The majority of them worked in public settings (89.1%), only 7.4% in private and 3.5% in church-affiliated institutions (CVTI 2023a, own calculations). In 2023, an additional 527 qualified staff worked in special kindergartens; among this group of teachers, 358 are qualified in special pedagogy, 59 were assistants (CVTI 2023b).

Financing and costs for parents

In 2020, government spending on 'education' in Slovakia was 4.6% of GDP, of which 'pre-primary and primary education' accounted for 1.3% of GDP (Eurostat 2023i). In 2019, a total of 0.65% of GDP was allocated to the early education sector, approximately 0.5% to the kindergarten sector and only 0.1% on the childcare sector for under 3 year-olds (OECD 2023).

Childcare centres are funded by private providers and by municipalities as founders, not through the state budget. Kindergartens are financed through state budgets (of the Ministry of Education and the Ministry of the Interior) or by the municipalities; they are also funded by private or church-affiliated providers. The municipalities receive subsidies through tax revenues and pass some of these on to private and church providers – mostly for staff salaries.

According to the Kindergarten Funding Act (597/2003 Z. z.) the sources of funding for church schools and private schools are:

- (a) Funds from the State budget under the Ministry of Education and the Ministry of the Interior
- (b) Funds from other individuals and legal entities for renting the premises and equipment of schools when they are not used for the educational process
- (c) Profit from business activities
- (d) Contributions from founders
- (e) Contributions from parents or any other person who has a maintenance obligation towards the pupil, to cover the costs of education and training
- (f) Contributions from employers and employers' associations
- (g) Donations
- (h) Other sources according to a special regulation.

Even if the founder of the kindergarten is a church, it does not automatically mean that the founder is a non-profit entity.

Childcare centres set their fees locally, which can vary greatly from region to region. However, parents are entitled to apply for a childcare allowance. Fees are also charged for the first two years of kindergarten, which are set by the municipality in the case of public facilities and by the provider in the case of private facilities. The final compulsory year of kindergarten is free of charge – in private facilities the amount is partly covered by state subsidies. Meals are paid for

by the parents; in the last year of kindergarten, the state contributes €1.40 (May 2023) to the daily costs (Eurydice 2023, 3.1).

Since 2017, only EU funds have been used for the expansion of kindergarten places through programmes of the Ministry of Agriculture and Rural Development and the Ministry of the Interior of the Slovak Republic.

According to OECD data, in 2022, a couple with two children spent about 7% of net household income on childcare costs⁴ (OECD.Stat 2023). However, Act 245/2008 (§ 28) stipulates that for the attendance of a child in a municipal kindergarten, the parents/guardians contribute to the partial reimbursement of kindergarten expenses per month in an amount not exceeding 7.5% of the minimum subsistence level for one dependent child. The amount of the parents' contribution shall be determined by the founder of the kindergarten (city, municipality, legal or private person).

Staff to child ratios and group size

Since 2020, the regulated group size in **childcare centres** is 12 children, with no more than five children per qualified member of staff (amendment and supplement to Act No. 455/1991 on Trade Activities). At least 75% of staff must be professionals.

In **kindergartens**, children can be allocated to same-age or mixed-age groups. The requirements for group size are: a maximum of 18 children aged 2 and 3 years, 20 children aged 3 to 4 years, 21 children aged 4 to 5 years, 22 children aged 5 to 6 years or 21 children aged 3 to 6 years. These numbers may be exceeded by up to three children by the management under certain circumstances and if space allows. In all-day facilities, two professionals alternate shifts. If there are more than ten children under 3 years of age, three professionals work alternately with the support of an assistant. As a rule, two fully qualified teachers are allocated per kindergarten class, one working in the morning and one in the afternoon.

In a kindergarten group, a maximum of two children with special needs may be admitted; in this case, the number of children is then reduced (Act No. 245/2008 Section 28).

As a rule, the staffing ratio in private ECEC settings is more favourable than in public or church-affiliated institutions (CVTI 2023a), see *Table 5*.

Table 5

Slovakia: Calculated staff to child ratios in kindergartens by provider type, 2022

Provider type	Number of children enrolled	Number of staff (including centre leaders)	Calculated staff to child ratio*
Public	162,254	15,865	10.2
Private	10,169	1,324	7.7
Church-affiliated	6,407	622	10.3
Total	178,830	17,811	10.0

Source: CVTI 2023a, *own calculations

Note: Although there are usually two teachers per class, they rotate in shifts and there are only about two hours of overlap in their work with the children. In some one-group kindergartens, this may be even less than an hour.

⁴ The calculation is based on the following fictitious model: two parents working full-time (average income); two 2 and 3 year-old children in full-time care; relevant care allowances taken into account.

Curricular frameworks

There are no legal regulations or recommendations regarding an educational programme for **childcare centres**. The respective provider is only obliged to comply with health and safety regulations issued by the Ministry of Health, which emphasise quiet time, outdoor activities in all weather conditions and physical exercise for the children.

The State Education Programme for Kindergartens (*Štátny vzdelávací program pre predprimárne vzdelávanie v materských školách*), which was revised in 2016 and 2022, is the mandatory basis for the pedagogical work in **kindergartens** and is coordinated with the curriculum of primary schools. In addition, each kindergarten develops its own educational programme based on this National Curriculum. Special focus is placed on the evaluation of educational goals in the kindergarten as well as on inclusive education.

Kindergartens support the socio-emotional, intellectual, physical, moral and aesthetic areas of children's development. The aim is to prepare them 'for life' in an age-appropriate manner. Before entering compulsory school, the children receive a certificate of completion.

The curriculum is divided into seven learning areas: (1) language and communication, (2) mathematics and handling information, (3) people and nature, (4) people and society, (5) people and work, (6) art and culture, (7) health and movement. Educational and achievement standards are formulated for each of these areas that also play a role in evaluation procedures. The professionals can decide on materials and learning approaches themselves, but play should be the predominant form.

Digital education

Digital technologies available in every kindergarten should be used in play and in the activities chosen by the children. The National Curriculum states that a child should acquire basic digital skills in kindergarten. For example, digital games should be used to learn the concept of numbers and relations. The methods chosen by the staff should include not only print media, but also digital texts on the internet and digital educational programmes. Children should be supported in using different age-appropriate digital games and also learn to operate different electronic devices such as keyboard, mouse, tablet, interactive board (National Institute of Education and Youth 2022).

In 2020, the Ministry of Education established a central repository for digital educational content "Viki" to support interactive teaching in kindergartens and schools. The website (<https://viki.iedu.sk/resources/browser/verejne>) contains, among other things, publicly available educational content for kindergartens, which is much used by kindergarten professionals. Especially during the COVID-19 pandemic, professionals worked on documents and materials from home and kept in touch with children and parents via Facebook groups and video conferences.

Monitoring – evaluation

In **childcare centres** for under 3 year-olds, no mandatory evaluations or other assessments are required.

Child-related assessment

In **kindergartens**, the children are assessed by the pedagogy professionals, the lead staff and the kindergarten supervisor, mostly through observations, in order to determine the individual stage of development, to assess the effectiveness of the educational activities and to evaluate and improve the individual work with a child. In addition to observations recorded in writing by the staff, drawings or handicraft work of the child, for example, are also included in the evaluation. The teacher cooperates closely with the parents and informs them regularly about the child's development. The results of the pedagogical observation are recorded in diagnostic sheets. Each child has its own portfolio in which the results and the current development of the child are documented.

In order for a child to transfer to primary school, "school readiness" is meant to be assessed (Melikantová et al. 2020, 46). This can be done by the Centre of Counselling and Prevention, but this is not carried out in all kindergartens and not for all children. The final decision on school enrolment lies with the parents.

Centre-based internal evaluation

All educational institutions, i.e. also **kindergartens**, carry out annual, obligatory self-evaluation measures and submit a report to the school supervisory authority and the responsible body. This focuses in particular on the children, the staff team and their continuing professional development, the educational activities, projects, cooperation with other institutions, material and financial resources, as well as the goals that are being pursued. The educational processes and the children's achievements are also taken into account. These reports are prepared by the centre leaders in cooperation with the staff and also include the results of the external evaluation of the school supervisory authority as well as the children's own perspectives (European Commission/EACEA/Eurydice 2019, 104).

External evaluation

If external evaluations take place at all in **childcare centres**, they are conducted within the framework of the annual evaluation plan of the Ministry of Labour or when there have been complaints (European Commission/EACEA/Eurydice 2019, 125).

In **kindergartens**, the school inspectorate, as an independent external body, controls the quality of the pedagogical management, the personnel, spatial and material conditions as well as the educational process according to certain criteria, which can be viewed for each type of educational institution on its website. This is done, for example, by means of observations, questionnaires, checklists, document analyses, inspections of the facilities and interviews with the professionals. These aspects are summarised in a report which is discussed with the management and which also contains recommendations for improving quality.

Inclusion agenda

Children with special educational needs and disabilities

The Education Act requires that children with special educational needs receive the support they require. They can either attend mainstream ECEC settings or separate support institutions. Special education facilities are established primarily for children with multiple disabilities who, despite supports, are unable to attend mainstream kindergarten. In regular kindergartens, special groups can be set up for these children, or they join a regular group with the other children. Specialised professionals or psychologists are called in as support and an individual educational

plan is developed for each child, which is, however, based on the national curriculum framework.

In 2023, a total of 2,485 children were cared for by 527 professionals in 333 special needs kindergartens, with 208 children enrolled in 28 special classes in regular kindergartens (CVTI 2023b).

Children with a migration background and children from Roma communities

Slovakia belongs to the countries with the highest proportion of other ethnic and minority populations in the Central European region. The territory of Slovakia with its present borders was defined when the Czechoslovak Republic was established in 1918. Until then, the territory was part of the Kingdom of Hungary (from around 1000 to 1867) and the Austro-Hungarian Monarchy (1867-1918). Until 1918, Slovakia was not understood as a state formation, but as the territory where Slovaks lived. This territory was also inhabited by other ethnic groups. At the turn of the 9th and 10th centuries, Old Hungarian tribes penetrated a significant part of the area of today's Slovakia. In the 16th to 18th centuries, Roma, Croats, Serbs, Czechs, as well as Germans, Jews, and Ruthenians arrived. At the end of the 19th century, Bulgarians were added, and by the beginning of the 20th century, Czechs as well (Botík et al. 2020).

Nowadays, the population of national minorities has predominantly Slovak citizenship. The Constitution guarantees national minorities the right to education in their own language (national schools). For example, in the school year 2022/2023, there were 258 kindergartens in the Slovak Republic in which the language of instruction was Hungarian only. In 2022, there were 2,760 children in kindergartens in Slovakia who did not have Slovak citizenship (see *Table 6*). Only these children can be assumed to have an immigration background. However, based on the available statistics, we cannot identify the nationality of these children.

In 2022, only 1.2% of the total population held a non-Slovak citizenship, of which 60% came from other EU27(2020) countries. Among the under 5 year-olds, the respective shares are 0.2% and 62.1% (Eurostat 2023c).

According to the 2021 Census, 16.2% of the population belonged to minority ethnic groups, Hungarians made up the largest group (7.7%). Roma comprise the second largest group, who make up just under 1.2% of the total population (Eurydice 2023, 1.3). However, it is assumed that these figures are actually higher. Since many Roma do not declare their ethnicity in census and other surveys, their numbers are generally not correctly reflected in statistical data. Data from the Roma communities themselves speak of 7.5% of the total population (Melikantová et al. 2020, 19). Data from compiled national and local authority surveys estimate a total number of approximately 400,000 Roma in Slovakia, whereas the results of the 2021 census indicate the number of Roma in the Slovak Republic to be 67,179 (Eurydice 2023, 1.3).

In 2021, the government approved the "Strategy for Roma Equality, Inclusion and Participation 2030" (*Stratégia pre rovnosť, inklúziu a participáciu Rómov do roku 2030*). Priority areas are employment, education, health and housing, with special emphasis on increasing the attendance rate of Roma children in kindergarten, non-discrimination and strengthening measures to combat anti-Roma racism (Ministry of the Interior 2021). To better connect with Roma communities, professionals also make home visits to familiarise families with early education opportunities (European Commission/EACEA/Eurydice 2019, 120).

For children whose family language is not Slovak, there are a number of kindergartens where national minority languages are represented. In 2022, Hungarian was the most common language in public kindergartens (in 258 kindergartens), followed by Slovak-Hungarian (75). Other languages were spoken in four kindergartens. In the private sector, there was one kindergarten

each where German and Hungarian were spoken and seven with other languages. Hungarian was spoken in 22 church-affiliated kindergartens.

Among all children in kindergartens with a nationality other than Slovak, children with Hungarian nationality are the most frequent (94.4%), followed by 0.5% children with Czech/Silesian and 0.4% with Roma nationality. Most children with other nationalities attend public kindergartens (90.8%), followed by church-affiliated kindergartens (7.9%) and private kindergartens (1.3%) (see Table 6, CVTI 2023a, own calculations).

Table 6

Slovakia: Children in kindergartens by citizenship, nationality and provider type, 2022

Children in kindergartens	Public	Private	Church affiliated	Total
By citizenship				
With Slovak citizenship	160,139	9,669	6,262	176,070
With non-Slovak citizenship ⁵	2,115	500	145	2,760
By nationality				
Slovakian	150,599	9,536	5,427	165,562

Parental leave arrangements⁶

Maternity leave (*materská dovolenka*) is 34 weeks, of which six to eight weeks are taken before birth. 14 weeks, six of which are taken after the birth, are compulsory. During this time, 75% of the former average income is paid, with an upper limit of €1,851. A total of 270 days of health insurance contributions must have been paid during the previous two years. No work with the former employer is allowed when on Maternity leave, though working with another employer is possible. Single mothers receive 37 weeks of maternity protection.

Paternity leave lasts 28 weeks after birth; it is remunerated during two weeks within the first six weeks after birth to the same conditions as maternity benefit. Fathers are also entitled to a non-transferable maternity benefit throughout the period of Paternity leave. However, both parents cannot receive this allowance at the same time. While the father is taking Paternity

⁵ Calculated from the difference between the total number of children in kindergarten and the number of children with Slovak citizenship. Children with another nationality (e.g. Hungarian) may also have Slovak citizenship.

⁶ The brief overview in this section is based mainly on the country note for Slovakia by Zuzana Dančíková in the *International Review of Leave Policies and Research 2023* (see References).

leave, the mother cannot receive Parental leave benefit either. Single fathers are entitled to 31 weeks of Paternity leave.

Parental leave (*rodičovská dovolenka*) can be taken by both the mother and the father – even simultaneously – until the child is 3 years old. It is an individual, non-transferable entitlement. All employed parents permanently or temporarily residing in the Slovak Republic and caring for at least one child under 3 years in the same household of age are entitled to receive a **Parental allowance** (*rodičovský príspevok*) of €413 per month if they previously received Maternity leave pay and €301 if they did not. Only one parent can claim this amount even when both parents are on leave which can be interrupted several times. It is also possible to work.

Parents of under 3 year-olds who are in employment or studying are entitled to a **Childcare allowance** (*príspevok na starostlivosť o dieťa*): €80 per month for enrolment in a kindergarten attached to a school, €280 for care in other public institutions and €41 for other persons or relatives taking care of the child.

In 2019, 24% of fathers, especially those with higher incomes, made use of their share of maternity benefit. In February 2023, parental allowance was paid to 138,969 parents, of whom 97% were women.

Current challenges for the ECEC system in Slovakia

*Country expert assessment by **Monika Miňová, Zuzana Lynch and Milena Lipnická***

Although pre-primary education has received increased attention in the Slovak Republic in recent years, there are many problem areas that need to be addressed. We face a number of challenges and the following are issues that we see as needing urgent attention.

Qualified and motivated teachers: The teaching profession is not sufficiently attractive in the Slovak Republic. There are risks of an ageing workforce and teacher shortages. Financial motivation is insufficient. International comparisons show that teachers in Slovakia have some of the lowest salaries in OECD member states (European Commission/EACEA/Eurydice 2021). The remuneration system does not reflect the quality of teaching. It depends on the level of education attained, the career stage and the number of years of service in education. There is also a need to improve working conditions and to increase the social status and recognition of their work. Moreover, in line with European trends, kindergartens need to be staffed by teachers with a university degree. In the Slovak Republic, vocational secondary education is still the regular qualification requirement.

Pre-primary education available for all children: The introduction of compulsory education from 2021 for all 5 year-olds has been a major challenge until recently. This has increased pressure on municipalities to focus on building or expanding kindergarten places, but some are currently under-used, e.g. in the Košice Autonomous Region the average occupancy rate of newly created capacities was 76%. Particularly in marginalised Roma communities, it is difficult to get parents to bring their children to kindergarten. It is therefore necessary to work more with Roma parents to help them appreciate the benefits of pre-primary education. However, the introduction of compulsory pre-primary education has prevented many younger children from attending kindergartens as the 5 year-olds now have priority because of their required enrolment. However, the 2023 amendment to the Education Act requires municipalities to create sufficient capacity for 4 and 3 year-olds.

ECEC for children up to 3 years of age. A system of joint nursery and kindergarten facilities operated in our country until the 1990s. For vulnerable groups of children, such as children from socially disadvantaged backgrounds, marginalised Roma communities, children with disabilities,

institutional conditions for their cognitive, physical, social and emotional development have not yet been created by the State. Instead, the State supports early childhood care with social services (including in facilities for children up to 3 years of age). The State also makes financial contributions to parents, legal guardians for the proper care of children in the family. It is therefore not seen as necessary for them to entrust early years children to ECEC settings. Currently, there is no national curriculum for this age group of children. Supporting the development of children under 3 years of age should become one of the country's key priorities. It should not just be about placing children in institutions.

Inclusive education and teamwork. In order for education in the Slovak Republic to be open to all, it is necessary to create adequate organisational, staffing and spatial conditions through increased funding. The lack of specialist support staff (special educators, school psychologists, social educators) contributes to the inability of pre-primary settings to respond to the diverse needs of children and pupils. Slovak teachers are used to working individually in the classroom, but an inclusive environment requires developing the competence to work with others, as a team. The Ministry of Education, Science, Research and Sport of the Slovak Republic has decided to address the pressing issues in this area. The proposed direction is set out in a document called Strategy for an Inclusive Approach in Education and Training (*Stratégia inkluzívneho prístupu vo výchove a vzdelávaní*, Ministry of Education, Science, Research and Sport 2021).

Professional staff and new non-teaching staff positions. Developing the potential and considering the diverse needs of children is another goal in our ECEC system. This requires the coordinated work of professionals in pre-primary support teams. It is not common practice in Slovakia for specialist staff to be employed in mainstream kindergartens. The number of teaching assistants is also very low. Teachers have to manage many duties alone, often in the isolation of their own classroom, without the teamwork and support of teaching assistants and professional staff. Helping to provide compulsory pre-primary education to children with disabilities or children from socially disadvantaged backgrounds is the most recent role of the assistant teacher.

Informatisation and digitisation of education. In the past, this area has been underestimated and the global pandemic COVID-19 caught education unprepared. This unpreparedness was reflected not only in the lack of technical equipment in kindergartens and schools, but also in the underdeveloped digital competences of teachers for distance learning, especially during the first wave, which started in March 2020. At the same time, however, we have also seen increased efforts by teachers themselves to deal with the situation and face new challenges. On social media, teachers have been supporting each other and giving each other support and professional advice. In the context of the digitalisation of education, funding has also been earmarked for teacher education/training. A new post of digital technology coordinator has been created, with the task of helping teachers and pupils improve their work with digital technologies. Although children are supposed to learn and play mainly in natural environments, we cannot completely ignore new digital technologies in education. Integrating them in a meaningful way is a challenge for today's kindergarten.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population of the Slovak Republic was 5,434,712 inhabitants; thus, the population has increased slightly from 2005 to 2021 (2000: 5,598,657, 2005: 5,372,685, 2010: 5,390,410; 2015: 5,421,349; 2020: 5,457,873) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.63, Slovakia was above the EU27 average (Eurostat 2023d)⁷.

Children under age 6

Table 7

Slovakia: Number of under 6 year-olds in the total population, 2022

Age	Number of children
Under 1 year	57,032
1 year-olds	57,400
2 year-olds	59,066
3 year-olds	60,111
4 year-olds	60,788
5 year-olds	60,465
Total 0 to under 6 year-olds	354,862

Source: Eurostat 2023a

In 2022, 3.2% of the total population were children under the age of 3, and 6.5% were children under the age of 6. These proportions are significantly above the EU27 average.

Table 8

Slovakia: Distribution of under 6 year-olds in population by age compared with EU averages, 2000 to 2022, in %*

Year	Comparison Slovakia/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2000	Slovakia	3.2	3.4	6.6
	Ø EU15 ⁸	3.2	3.2	6.4

⁷ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

⁸ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Year	Comparison Slovakia/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2005	Slovakia	2.9	3.0	5.9
	Ø EU25	3.1	3.1	6.2

Single households with children under age 6

In 2022, more than half (56.5%) of households in the Slovak Republic with children under 6 years of age were couple households. Single parent households accounted for only 1.3% – almost exclusively single mothers.

Table 9

Slovakia: Households with children under age 6, 2022

Household type	Total households	Share of all households, in % ⁺
Total households	693,000	
Couple households	391,200	56.5

Employment rates of parents with children under 6 years of age

In the Slovak Republic, in 2022, the overall employment rate for men (15-64 years) was 79.8% and for women 72.2% (Eurostat 2023j).

In 2022, 64.8% of women and 85.3% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were slightly below the EU average (87.2%) and those of mothers were slightly above the EU-average (63.6%) (Eurostat 2023f).

Table 10a

Slovakia: Employment rates of parents with children under 6 compared with other EU countries, 2010 and 2022

	2010	
	Mothers, in %	Fathers, in %

Children at risk of poverty or social exclusion¹¹

In 2022, 24.9% of children under 6 were at risk of poverty or social exclusion, which was lower than the EU27 average (23.3%). The share of all persons at risk of poverty or social exclusion in the total population was 16.5% compared to 21.6% for the European average. 3.4% of under 6 year-olds and 3.2% of the total population suffered from severe material deprivation in 2020 (EU average 6.1 % and 4.3% respectively) (Eurostat 2023g, k).

Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-efq>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the author

Jerneja Jager holds a university degree in Pedagogy and also in Inclusive Pedagogy, and a PhD in Educational Sciences. She works as a research fellow at the Educational Research Institute in Ljubljana and is head of the Step by Step Centre for Quality in Education. She works as a project manager and coordinator of projects, and as a trainer in CPD events for ECEC staff. Her research interests are quality in ECEC, access to quality ECEC for disadvantaged children, and professional development of ECEC staff.

1. ECEC governance in Slovenia

In Slovenia, early childhood education and care provision is organised as a unitary system. Since 1993, the age-integrated ECEC institutions for children aged 11 months up to statutory schooling, generally at age 6, come under the auspices of the Ministry of Education (*Ministrstvo za vzgojo in izobraževanje*).

Slovenia was the first of the post-communist countries to transfer responsibility for early childhood education from the then Ministry of Health, Family and Social Security to the then Ministry of Education and Sport (Krek 1995, 37). The government's concrete responsibilities include issuing relevant legislation and providing an ECEC curriculum. Municipalities have a duty to provide sufficient places and to ensure that the national curricular framework is implemented.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Table 1 gives an overview of the main staff categories working in centre-based settings. Core professionals (i.e. staff with group or centre responsibility) are also categorised according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this chapter).

Table 1
Slovenia: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Early Childhood Teacher/ Kindergarten Teacher <i>Vzgojitelj/ vzgojiteljica predšolskih otrok</i> <i>Profile:</i> Early Childhood	<i>Vrtec</i> ECEC centre/ Kindergarten 11 months–5 years ¹	Core professional with group responsibility Leader of an ECEC setting Head of an ECEC unit in a primary school	11 months – 5/6 years	3 years of higher education <i>Award:</i> Bachelor's degree (Professional Bachelor) ECTS credits: 180 EQF level: 6 ISCED 2011: 6

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for settings for children **up to** 3 years of age and **3–5** years for pre-primary settings in countries with a primary school entry age of 6 years. In the case of Slovenia, the relevant format is **0–5** years. However, some 6 year-olds may also attend kindergarten if they were born before September 1st.

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Pedagogy Professional	<i>Osnovna šola</i> Basic school ² 1 st grade 6–7 years	Core professional with group responsibility (works along Primary School Teacher; Early Childhood Teacher teaches half of the lessons)	0–5/6 years	
	<i>Bolnišnica</i> Hospital 0–5 years	Core professional with small group responsibility	11 months – 5/6 years	
Early Childhood Assistant Teacher ³ <i>Vzgojitelj predšolskih otrok – pomočnik vzgojitelja / vzgojiteljica predšolskih otrok – pomočnica vzgojiteljice</i>	<i>Vrtec</i> ECEC centre/ Kindergarten 11 months– 5 years	Qualified co-worker – works with core professional or alone with group during absence of Early Childhood Teacher, e.g. rest time for children, morning assembly, pick-up time, etc. ⁴	11 months – 5/6 years	4 years upper secondary/vocational qualification <i>Award:</i> Vocational <i>Matura</i> ECTS credits: n/a ⁵ EQF level: 3 ISCED 2011: 3
Early Childhood Teacher for early intervention <i>Vzgojitelj predšolskih otrok za zgodnjo obravnavo</i>	<i>Vrtec</i> ECEC centre/ Kindergarten 11 months– 5 years	Individual work with children in need of additional support	11 months– 5/6 years	University degree in a relevant subject area ⁶ ECTS credits: 240/180 EQF level: 7 or 6 ISCED 2011: 7 or 6 3-year Professional Bachelor's degree course ECTS credits: 180

² Unified school for primary and first stage of secondary education, ISCED 1 and 2 (Eurydice 2023a)

³ The job title changed from Early Childhood Teacher's Assistant (previous) to Early Childhood Teacher – Teacher's Assistant (valid from 01.09.2018). For reasons of readability we have chosen the title **Early Childhood Assistant Teacher** for this report.

⁴ A Preschool Teacher's Assistant, as a member of the kindergarten staff, may also organise an ECEC programme for under 3 year-olds in their own home.

⁵ n/a = not applicable

⁶ Defectology, Pedagogy, Psychology, Social pedagogy or Special and rehabilitation pedagogy (Official Gazette of Republic of Slovenia 85/22); some study programmes are credited with 180 ECTS, some with 240 ECTS

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
				EQF level: 6 ISCED 2011: 6 Master's degree in relevant subject area ⁷ ECTS credits: 120 (2 year programme) 60 (1 year programme) EQF level: 7 ISCED 2011: 7

				specialist in working with the deaf-blind. ¹¹

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Public kindergartens are managed by Principals/Centre Heads. They assume two roles: that of a pedagogical leader and that of an executive manager.

Anyone who meets the conditions for an Early Childhood Teacher or school consultant, has at least five years of work experience in education, holds the title of Senior Councillor, Councillor or Adviser or has held the title of Mentor for at least five years and has passed the principal's exam (see below) can be appointed as the director of a public kindergarten (Official Gazette of Republic of Slovenia 141/22).

Principals/Centre Heads are appointed by a kindergarten council comprising five representatives of kindergarten's staff, three representatives of a founder (municipality), and three representatives of parents (Official Gazette of the Republic of Slovenia 17/2007, Article 46).

Responsibilities of the Principal of an ECEC centre are described in the Organisation and Financing of Education Act (Official Gazette of the Republic of Slovenia 17/2007, Article 49). The ECEC Principal performs the following tasks:

- Organises, plans and manages the work of the kindergarten
- Prepares a kindergarten development programme
- Prepares a proposal for the annual work plan and is responsible for its implementation
- Is responsible for realising the rights of children and the rights and duties of adults
- Leads the work of the Teachers' Council
- Creates a proposal for above-standard programmes
- Promotes lifelong education and the training of professionals
- Organises mentoring for students during work placements/practicum
- Participates in the educational work of EC teachers, monitors their work and advises them
- Proposes the promotion of staff to job titles
- Decides on the promotion of employees to pay grades
- Monitors the work of the advisory service

¹¹ Official Gazette of Republic of Slovenia 85/22.

- Takes care of the institution's cooperation with parents (parental meetings, 'speaking' hours and other forms of cooperation)
- Informs parents about the work of the kindergarten and about changes in the rights and obligations of pupils, apprentices and students¹²
- Ensures the enforcement of decisions of state bodies
- Represents the kindergarten and is responsible for the legality of the work
- Determines the systematisation of workplaces
- Decides on the employment relationships and on the disciplinary responsibility of employees
- Is responsible for ensuring and determining quality through self-evaluation and preparing an annual report on the self-evaluation of the kindergarten
- Performs other tasks in accordance with laws and other regulations.

During absence from the centre the ECEC Principal may authorise in writing specific members of the kindergarten staff to carry out tasks within their competence.

A candidate who has not taken the leadership exam can also be appointed, but must complete it no later than one year after the beginning of the mandate. If the ECEC Principal does not pass the exam within the year, the mandate is terminated by law. An ECEC leader's mandate lasts five years (Official Gazette of the Republic of Slovenia 17/2007, Article 53).

Leadership is predominantly understood as hierarchical (ECEC leader as the main person to make decisions, to sign official papers, etc.); however, in most cases ECEC leaders make decisions based on discussions made with their deputy leaders and/or consultants (basically with persons close to them; so in this sense leadership is also to some extent shared).

As part of a full-time workload, the ECEC Principal is obliged to carry out

- Three hours of work with children, or four hours of counselling work per week in a kindergarten with 10 or 11 playrooms or
- One and a half hours of work with children, or two hours of counselling work per week in a kindergarten with 12 or 13 playrooms.

In a kindergarten with 14 or more playrooms, the Principal does not have the obligation to work with children or to do consulting work as part of his full-time work obligation (Official Gazette of Republic of Slovenia 27/2014, 54/21, Article 3).

Specific qualification requirements for ECEC centre leaders

The education and training programme for the leadership exam and the content of the exam are determined by the minister on the proposal of the Expert Council of the Republic of Slovenia for General Education.

A completed postgraduate study programme can also be recognised in lieu of the leadership exam, for which the Expert Council of the Republic of Slovenia for General Education determines that it provides the knowledge specified for the exam (Official Gazette of the Republic of Slovenia 17/2007, Article 106).

Content of the leadership exam

- Introduction to educational management (globalisation and trends, introduction of changes)
- Theory of organisations and management (educational institutions as organisations, management, decision-making, organisational climate and culture)

¹² Children 0-6 are not mentioned in the Organisation and Financing of Education Act (Official Gazette of the Republic of Slovenia 17/2007).

- Planning (planning and evaluation, aspects of quality in education, financial operations)
- People in the organisation (motivation, communication, meeting management, conflict resolution)
- The principal as a pedagogical leader (newer insights into student and professional learning, leadership strategies for learning, assessment of annual work performance, monitoring and observation of lessons, professionalism and professional development)
- Legislation in education (systemic regulations in the field of education, sectoral laws and by-laws, employment relations, inspection)
- Optional subjects (current subjects in the field of leadership in education).

The goal of the “Headship Licence Programme” is to train participants for the tasks of managing and governing schools and kindergartens, defined in school legislation, and to develop knowledge and skills that contribute to personal and organisational efficiency. It is based on modern theoretical views on management in education, on international and national research on the management of educational organisations and on the previous experience with the work of Principals (National School for Leadership in Education 2023).

In 2021, the National School for Leadership in Education (NSLE) was deleted from the court register, and was attached to the National Institute for Education. The Ministry’s argumentation was the realisation of the goals of the coalition agreement. The former NSLE’s director disagreed with the “purely political” decision to attach the NSLE to the National Institute for Education (Delo 2021). ECEC leaders are also not satisfied with the situation; many argue that they miss the specifically targeted support for ECEC leaders.

2.3 Centre-based posts of responsibility

Slovenia has an exceptionally highly structured system of credit point acquisition for continuing professional development and career advancement. This enables both Early Childhood Teachers and ECEC Centre Principals to acquire different levels of recognised expertise and posts of responsibility.

Education staff may be promoted to the job titles Mentor, Adviser and Councillor, and from September 2023 on, a fourth title is in use: Senior Councillor (Official Gazette of Republic of Slovenia 141/22). From 2022 on, Early Childhood Assistant Teachers can be promoted to the job titles of Mentor and Adviser (Official Gazette of Republic of Slovenia 115/22). For this, they must have sufficient work experience, demonstrate good work performance, complete further education and training programmes in education or otherwise obtain additional functional knowledge and perform various additional professional work.

Titles gained are permanent and do not have to be reviewed or renewed.

Early Childhood Teachers who act as mentors during students’ workplace-based learning do not need any formally acquired training or qualification for this post. Centre leaders are in charge of choosing a mentor for each of the students undertaking workplace-based learning.

Article 60 of the Collective Agreement does not specify special conditions for the post of mentor from which it can be concluded that the mentor can also be an employee who does not have a title as designated mentor to the trainee, but it probably makes sense for the mentor in such cases to be a person who knows the field of work well (e-Ravnatelj 2022).

The mentor is credited for working with the trainee for four hours per week (Official Gazette of Republic of Slovenia 27/2014, 54/21, Article 13).

2.4 Co-ordinating and supervisory staff

In public kindergartens there is an on-site counselling service for children, staff and parents which cooperates with staff and management in planning, monitoring and evaluating the development of the kindergarten and the educational work. The Councillors are in most cases employed at one ECEC centre; in some cases, they may have a working contract with two ECEC centres (working part-time job at each centre). In Slovenia, it is not the case that Councillors would be generally responsible for a number of centres (there is no “Pedagogical Co-ordinator” as, for example, in some regions of Italy).

The counselling service participates in the preparation and implementation of individualised programmes for children with special needs, however they do have also other work obligations. Staff are Psychologists, Pedagogues, Social Workers, Social Pedagogues and Defectologists (Official Gazette of the Republic of Slovenia 17/2007, Article 67).

Professional workers must master the written Slovenian language, have the appropriate education/qualification specified by law and other regulations, and pass a legally required professional exam (Official Gazette of the Republic of Slovenia 17/2007, Article 92, paragraph 3).

The basic educational goal of the kindergarten, and in this context also of the counselling service in the kindergarten, is the optimal development of the child regardless of gender, social and cultural origin, religion, nationality, and physical and mental constitution. The counselling service in the kindergarten supports the basic purpose that all participants in the kindergarten are as successful as possible in realising both the fundamental and systemically specified general and special educational goals. The counselling service performs interdisciplinary professional work. On the basis of their specialist knowledge, through a consultative relationship and in a professionally autonomous manner, the counselling staff involve themselves in the complex solution of pedagogical, psychological and social issues of educational work in the kindergarten by helping and cooperating with all participants and, if necessary, also with relevant external institutions. The counselling service in the kindergarten or school is therefore a professional *colleague* in the kindergarten and not a professional kindergarten *service* (Nagode 2008, 5).

There are no special supervisory staff employed by the centre provider. The Centre Leader is responsible for monitoring the work of the staff and advising them (Official Gazette of the Republic of Slovenia 17/2007, Article 49).

The external evaluation of the educational system and educational organisations in Slovenia takes place in parallel with the self-evaluation of educational institutions (for more details, see the twin document: *Slovenia – Key Contextual Data*).

2.5 Specialist support staff

Specialist support staff are listed in *Table 1*. Specialist staff are in most cases understood as being connected to children with special needs, ensuring them appropriate support in order to develop their potential. The majority of children with special needs attend regular kindergartens, where they are offered various forms of assistance, such as Early Childhood Teachers for Early Intervention. The organisation and manner of implementing programmes are adjusted according to their needs. From June 2022 onwards (Official Gazette of Republic of Slovenia 85/22), EC Teachers for Early Intervention, EC Teachers for additional professional support or other appropriately qualified professional staff may also support the children’s development in kindergartens. Children might also get assistance from a sign language specialist or a specialist in adapted communication and work with deaf-blind children.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Table 2 gives a breakdown of the ECEC workforce in Slovenia according to qualification and gender.

Table 2
Slovenia: ECEC staff in centre-based settings, 2022/2023

Staff categories	Proportion of workforce, in %
Staff with a specialist three-year (or longer) higher education degree	58.8 (7,979 of total 13,564 ECEC staff)
Staff with a specialist vocational qualification (upper secondary, post-secondary)	43.2 (5,585 of total 13,564 ECEC staff)
Staff with a non-relevant qualification	No data available
Trainee staff	No data available
Unqualified staff	No data available
Specialist support staff (e.g. speech therapists) who work on site on a regular basis	4.4* (599 of total 13,564 practitioners in kindergartens) *consultants and other professionals
Male practitioners (387 of total 13,564 ECEC staff)	2.8
14 out of a total of 372 were centre leaders	3.8
133 out of 7,057 were core pedagogues	1.9
211 out of 5,536 were auxiliary staff/assistants	3.8
Staff with a minority ethnic background or a 'background of migration'	No official data available ¹³

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

Table 3 describes the initial qualifying route for prospective Early Childhood Teachers. The study route is open for those who have finished general secondary education with a university entrance exam (*matura*) *or* for those who have completed vocational secondary education with a *vocational matura* or final exam, and for those who finished the 4-year upper secondary programme before 1st June 1995. The course of study lasts three years; candidates must acquire 180 ECTS credits from the compulsory and optional parts of the programme. Credits obtained at other higher education institutions or achieved on the basis of recognised knowledge and

¹³ In the 2017/2018 school year, 12 Roma professionals were employed in kindergartens, including one teacher, three teacher assistants and eight Roma assistants (Bozovičar 2019).

skills may also be considered. The course of study concludes by presenting and defending a written Bachelor thesis. If successful, the candidate is awarded the title of *diplomirana vzgojiteljica/diplomiran vzgojitelj predšolskih otrok* (State-approved Early Childhood Education Teacher).

Table 3

Slovenia: Early Childhood Teacher

<p>Job title in Slovenian: <i>Vzgojitelj predšolskih otrok</i> Profile: Early Childhood Pedagogy Professional</p>
<p>Entry requirements: General <i>matura</i>, vocational <i>matura</i> or final exam or a 4-year upper secondary vocational programme completed before 1 June 1995.</p> <p>In the case of enrolment limitation, the candidates are selected according to: (1) overall performance in the general <i>matura</i>, the vocational <i>matura</i> or the final exam: 70 % of credits awarded; (2) overall performance in grades 3 and 4 of the secondary education programme: 30 % of credits awarded.</p> <p>Professional studies: 3 years of higher education; candidates must acquire all the required ECTS credits (180) from the compulsory and optional part of the programme. Credits obtained at other higher education institutions or achieved on the basis of recognised knowledge and skills may also be considered. The course of study concludes by presenting and defending a Bachelor thesis.</p> <p>Award: State-approved Early Childhood Education Teacher (Bachelor)</p> <p>ECTS credits: 180 EQF level: 6 ISCED 2011: 6</p> <p>Main ECEC workplace: A graduate Early Childhood Teacher can be employed in any organisation engaged in early learning and teaching; most often this means in ECEC settings and the first grade of the nine-year compulsory school. The graduate Early Childhood Teacher can also work in hospital units for young children.</p>

The initial qualifying route for Early Childhood Assistant Teachers is presented in Table 4. The route is open for anyone who has successfully completed compulsory education (9 years) or lower vocational education or the equivalent qualifying route under previous regulations. The route is at the upper secondary vocational level and is of 4 years' duration. Students are awarded the vocational *matura* after successful completion of the course. The mandatory part of the vocational *matura* involves taking a written and oral examination in the Slovene language on the education of young children. An optional part is a written and oral exam in a foreign language or mathematics, or exam performances and their defence. Successful candidates are awarded the title of an Early Childhood Assistant Teacher (*vzgojitelj predšolskih otrok – pomočnik vzgojitelja / vzgojiteljica predšolskih otrok – pomočnica vzgojiteljice*) and with this qualification they can be employed in a co-worker role in kindergartens. Persons with a vocational *matura* can either enter employment or continue their initial professional studies at a higher education programme of early childhood education, other professional programmes, and various university programmes (after completing a specific subject at *matura* level).

Table 4

Slovenia: Early Childhood Assistant Teacher

<p>Job title in Slovenian: <i>Vzgojitelj predšolskih otrok – pomočnik vzgojitelja</i></p>
<p>Entry requirements: Completed compulsory education (9 years) or lower vocational education or equivalent education under the previous regulations.</p> <p>In the case of enrolment limitation, candidates are selected according to the final assessment of the compulsory subjects in the 7th, 8th and 9th grade.</p>

Job title in Slovenian: Vzgojitelj predšolskih otrok – pomočnik vzgojitelja

Professional studies: 4 years upper secondary/vocational qualification, ending with vocational *matura*. The mandatory part of the vocational *matura* is a written and oral examination in Slovene language and early childhood education (2 subjects). The optional part (2 subjects) is a written and oral examination in a foreign language or mathematics, and exam performances (three performances) and their defence.

Note: The vocational *matura* award qualifies for employment or continuing education, e.g. higher education programme in early childhood education, other professional programmes, various university programmes (after completion of one subject at *matura*). After successful completion of a one-year *matura*-course, it is also possible to enrol for any kind of university studies.

Award: License as Early Childhood Assistant Teacher / Vocational *matura*

ECTS credits: not applicable

EQF level: 3

ISCED 2011: 3

Main ECEC workplace: ECEC setting (in a co-worker role) or home-based childcare setting (as core practitioner).

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Early Childhood Teacher – higher education route

Competency specifications

In Slovenia, three universities (University of Maribor, University of Ljubljana, University of Primorska) provide Bachelor-level *studies* for future EC Teachers. Each university publishes its own list of competence specifications for graduates of the Faculty of Education. Here, one example is presented (University of Ljubljana, Faculty of Education 2023b). The other two can be accessed via direct links in the References list (University of Maribor 2023; University of Primorska 2023a).

Early Childhood Teacher study programme, University of Ljubljana, Faculty of Education

The fundamental goal of the programme is to train students for quality educational work with children 0–6 and children in the first grade of the nine-year Basic compulsory school and for cooperation with their parents, colleagues and other professionals.

In the process of education, students of pre-school education become familiar with different conceptions of childhood and education and acquire basic theoretical and practical knowledge from individual areas of activities in kindergarten (Ministry of Education 2020). Graduates of the programme must know how to communicate with children and adults and be able to plan, implement and critically analyse educational work. The programme's electives encourage students to get more in-depth training for those areas of kindergarten work for which they have a particular interest and ability. An important goal of the study programme is the acquisition of basic and broadly transferable knowledge which will enable graduates to search for resources and ways to acquire the specific knowledge and skills they need at work in the process of lifelong learning.

The Faculty of Education at the University of Ljubljana has adapted the list of general and subject-specific competences developed by an international working group for the field of educational science and the TUNING (*Tuning Educational Structures in Europe*) teacher education programme supported by the European Union within the Socrates–Erasmus programme (<http://www.unideusto.org/tuning/>) and used it for developing new study programmes.

General competence specifications

- Knowledge and understanding of social systems (in particular the education system)
- Sensitivity/openness to people and social situations
- Knowledge and understanding of developmental principles, differences and individual needs
- Knowledge of educational concepts, their philosophical and historical foundations
- Knowledge of and compliance with the institutional frameworks of work (requirements, legislation, documentation requirements, legal aspects of educational work)
- Ability to research in education
- Organisational and management skills in education, mentoring students and trainees
- Use of ICT in education
- Understanding individual values and value systems, management of professional-ethical issues
- Knowledge, understanding, focusing on inclusive, non-discriminatory work, multiculturalism.

In addition to these competences, students also gain wider general competencies, acquired by students of *all* higher education programmes, irrespective of the course of study:

- Knowledge and understanding of social systems (especially processes in education)
- Sensitivity/openness to people and social situations
- Knowledge and understanding of developmental laws, differences and individual needs
- Knowledge of educational and educational concepts, their philosophical and historical foundations
- Knowledge and consideration of the institutional framework of work (requirements, legislation, documentation needs, legal aspects of educational work)
- Qualification for research in education
- Organisational and managerial skills in education, mentoring of students and interns
- Use of information and communication technology in education
- Understanding individual values and value systems, mastering professional-ethical issues
- Knowledge, understanding, orientation towards inclusive, non-discriminatory work, multiculturalism.

Subject-specific competence specifications

- Knowledge of the content and didactics of the field
- Understanding and application of curriculum theories and general and didactic knowledge in the subject area
- Interdisciplinary integration of contents
- Use of special-pedagogical skills to work with children with special needs
- Pedagogical classroom management and/or group management
- Organising active and independent learning, supporting effective learning strategies
- Ability to verify and evaluate the skills and achievements of pupils and developing feedback information
- Communicating with professionals from various educational fields
- Cooperation with parents
- Understanding the relationship between the educational institution and the social environment. Systemic vision and action
- Knowing and understanding the theoretical foundations of counselling
- Creation of a comprehensive assessment of the needs of a child or a group of children, their strong and weak areas taking into account environmental factors (physical, social, cultural) with the appropriate procedures and instruments
- Applying knowledge of management procedures and principles of counselling, planning and implementation of intervention programmes

- Ability to establish and maintain partnerships with other users or groups (parents, local community, advisory services, economy, etc.)
- Promoting such changes of a system that ensure basic rights and needs of a user/group
- Knowledge, critical assessment and application of theories of childhood development and learning in the planning, implementation and evaluation process of educational activities.
- Knowledge of forms, contents and methods of work and autonomous implementation of the curriculum for kindergarten and first grade curriculum of primary school
- Knowledge of all early childhood curricular areas and first grade subjects and their (interdisciplinary) integration in the learning process
- Efficient and flexible organisation of time and space: the layout of the classroom for a variety of activities (places for play and for calm activities), the appropriate choice of teaching and didactic materials, flexible scheduling of activities and transitions between them
- Observing and monitoring the achievements, progress and development of children
- Identifying and taking into account individual needs and other differences among children (in personality, abilities, cognitive styles, family or socio-cultural environment, ...) at educational work
- Providing emotional safety of children and the promotion of autonomy in accordance with their maturity
- Nurturing curiosity of children, taking into account the intrinsic motivation and interests, spreading interests and promoting exploratory and active learning
- Knowledge of teamwork and co-operation in a team with a teacher or teacher's assistant, work in a collective or professional team
- Effective communication with parents and knowledge and use of various forms of cooperation with them.

Curricular areas

Tables 5 and 6 present an overview of the compulsory and optional content in the curricula of the three Slovenian universities.

Table 5

Slovenia: Early Childhood Teacher study programmes – compulsory curricular areas/subjects, 2023

Curricular Area	Subjects under specific curricular area		
	University of Maribor (2023a)	University of Ljubljana (2023b)	University of Primorska (2023a)
Pedagogic/ didactic	Pre-school pedagogy	Pre-school pedagogy	Basics of pedagogy
	Didactics	School pedagogy with didactics	Pre-school pedagogy
	Theory of education	Theory of education	Didactics
Psychology	Developmental psychology	Developmental psychology	Developmental psychology
	Educational psychology	Educational psychology	Educational psychology
Pedagogical methodology	Introduction to the methodology of pedagogical research	Pedagogical methodology	Pedagogical research
Language and literature	Slovene language	Slovene language	Slovene language I, II / Italian language I, II ¹⁴

¹⁴ The programme has two majors: *Preschool education major* and *Preschool education major for institutions with Italian as language of instruction*. For students who choose the Preschool education major for institutions with an Italian language of instruction, the courses will also be conducted (10 contact hours each) in the Italian language.

Curricular Area	Subjects under specific curricular area		
	University of Maribor (2023a)	University of Ljubljana (2023b)	University of Primorska (2023a)
			Early learning of Slovene / Italian language
	Children's literature	Language and Literature	Children's literature
	Didactics of language education		Language activities in kindergarten
Mathematics	Mathematics education	Early learning of mathematics	Early learning of mathematics
Art	Elementary art educational practice	Art education	Art activities
	Didactics of visual art activities		
Theatre	Puppetry – drama education	Puppets, drama, media	Puppets, theatre, film
Technics	Didactics of technical education	Technical education	Technical activities
Music	Vocal-instrumental practicum I	Music	Musical language
			Child and music
			Musical activities
	Didactics of music education	Music in early childhood	Musical activities
Dance	Dance education didactics	Dance expression	Dance activities
Motor development	Didactics of physical education	Movement	Child's motor development
	Children's motoric	Children's motoric	Motor-sport activities
	Motor practical course		
Natural sciences	Didactics of early science	Early natural sciences – chemistry	Early learning of natural science
	Principles of natural sciences	Early natural sciences – physics	
		Early natural sciences – biology	
Social sciences	Didactics of introduction into social environment	Child in society	Early learning of social studies
		Social studies	
	Sociology of the family and the pre-school child	Sociology of education	Sociology of education
Philosophy	/	Selected topics in Philosophy	Philosophy of education
Inclusive/special pedagogy	Special pedagogy	Inclusive education	Inclusion in a kindergarten
ICT	/	/	Educational technology
Health	/	/	Taking care of the health of kindergarten children
Practicum	Practical training I, II, III, IV, V, VI, VII, VIII	Practicum in the first age group classrooms (children up to 3 years old)	Practical training I, II, III
		Practicum in the second age group classrooms (children 3–6 years old)	
		Practicum in the first grade of compulsory school	
Elective courses	Elective course 1, 2, 3, 4	Professional elective	Elective course – foreign

Curricular Area	Subjects under specific curricular area		
	University of Maribor (2023a)	University of Ljubljana (2023b)	University of Primorska (2023a)
		course I, II, III	language
		General elective course I, II	Elective course I, II, III
Graduation	Graduation project	Graduation project	Graduation thesis
Other	/	Cross-curricular connections – projects	/

Table 6

Slovenia: Preschool Education study programmes – elective courses

Curricular Area	Subject areas in three universities		
	University of Maribor (2023a)	University of Ljubljana (2023b)	University of Primorska (2023a)
Media	/	Media education	Communication and media in contemporary society
Dance	Dancing dramatisation in the kindergarten	Dance theatre	/
		Artistic movement and dance pedagogy	
		Stage of Faculty of Education	
Puppets	Preparing and realizing a puppetry project – performance	Puppets in pedagogical process	Puppetry
Nature	Children’s play and inquiry in natural environment	Nature in kindergarten, kindergarten in nature	Learn to read nature
		Nature and young children	
Mathematics	Learning mathematics through play	Mathematical challenges in kindergarten	Mathematical plays
		Mathematics through English	
Language and literature / literacy / communication	Slovenian oral texts	Children’s literature	Teaching Slovene at pre-school level
	Family literacy	Family literacy	Writing fairy tale texts
	Language activities in kindergarten	Interpersonal communication	Communication skills in education
	Interpretation of texts in juvenile literature		
Technics	/	Creative technical workshops	Selected topics in technical activities
Music	Music activities in kindergarten	Choir III	Musical interpretations I
	Playing instruments – Orff instruments	Communication with music	Musical didactical games
Experiential pedagogics	/	/	Experiential pedagogy
Children with disabilities	/	Special pedagogy	Basic methods of working with pre-school blind and visually impaired children

Curricular Area	Subject areas in three universities		
	University of Maribor (2023a)	University of Ljubljana (2023b)	University of Primorska (2023a)
Psychology	Useful psychological approaches in pre-school education	Development, teaching and learning in early childhood	Family Psychology
	Children's play and attachment		
Motor development / sport activities	Sensory motoric	Movement – a method of play	Physical sports activities in nature – swimming
	Physically talented children	Movement – a method of play for all periods of life	Sport for relaxation – tennis
		Mountaineering	Sports for relaxation – aerobics
	Sports in outdoor education	Swimming	Basic physical education
Foreign Language	Teaching English at pre-school level	English language I – Strategies for learning a foreign language	Teaching English language at an early stage
			Learning Italian in the pre-school period
		English language II – linguistic abilities	Foreign language
			Early learning of Italian language
Art	Artistic expression and space	Artistic creativity	/
	Visual art activities in the museum and gallery	Embodied approaches to creativity and learning	
Pedagogical methodology	Methodology of qualitative and quantitative pedagogical research	Research in education	/
Pedagogy	Educational Concepts in Theory and Practice	Pedagogical speech in kindergarten	Alternative pedagogical concepts in theory and practice
	Moral education and ethics		
	Pedagogical communication and partnership between kindergarten, school and family		
Other	Adult's role in child's introducing into social environment	Children with experience of violence	Education for diversity and social justice
		Children in the animals' kingdom	
	Team work in kindergarten and in school	Play and natural sciences	Italian as a professional language
		Kindergarten – a democratic community	
	Mathematical art picture book and didactic materials	Children's rights in kindergarten	

Pedagogic-didactic approaches

In line with general academic practice, higher education teachers are autonomous regarding the choice of content, literature and other resources for a particular course. In general, they are expected to adopt an interdisciplinary approach, including innovative and well-established procedures in the profession based on research evidence and theories of pedagogy.

Based on data accessible in the course syllabuses of study programmes at the University of Maribor (2023a) and the University of Primorska (2023b) (the University of Ljubljana does not have a course syllabus published on its website), higher education teachers use the following learning and teaching methods: lecture, discussion, documents analysis, theoretical and empirical research, project work (individual and in groups), discourse, cooperative learning, individual learning, teamwork, laboratory work, seminar work, problem based learning, individual presentations of lessons, e-learning, multimedia presentations.

In courses where specific didactics are required, higher education teachers use varying didactic approaches depending on the subject they teach (e.g. music workshops, musical methods of teaching and learning, public performance (music), display of planned motor/dance activities (motor development, musical education), homework assignments (art), exercises in a swimming pool or in the sea (outdoor activities – swimming), integrated practice etc.

Early Childhood Assistant Teacher– vocational route

Goals of the vocational programme

The 2020 version of the “Educational programme Pre-school education” (Portal MIZŠ 2023a) defines the goals of the study programme rather than competence specifications. These include enabling students to:

- Systematically acquire general and basic knowledge for understanding the principles in nature, society and profession
- Develop skills for successful work and professional growth and ability to understand human relationships
- Learn how to analyse specific technical problems in the workplace, and to plan measures to address them effectively
- Develop personal skills (responsibility, communication skills, creativity and innovation, empathy and openness, and persistence) and values (honesty, act in accordance with ethical principles), which are important for the education context
- Learn about interdisciplinary expertise and acquire knowledge of the basic principles of teamwork
- Develop motivation for education, training and lifelong learning
- Develop a willingness to discover and follow new developments in the professional field
- Master the basic professional terminology and know how to use scientific literature
- Use modern information technology to work in the professional field and to work with the resources
- Acquire the basics of entrepreneurship, making it easier to adapt to changes in the workplace and the labour market, and to successfully plan and manage his/her own career
- Develop social skills, independence and responsibility
- Actively take care of their own health and the health of the children entrusted to them and to develop a positive attitude towards a healthy lifestyle
- Work safely and ecologically aware, to act as responsible citizens, and know how to properly protect and preserve nature
- Know about and link theoretical and practical knowledge about development and education of children

- Master theoretical and practical knowledge of individual educational fields, the methodology and didactics of these areas, educational resources, tools and materials
- Effectively and creatively plan and implement educational work in the group
- Know how to organise a stimulating educational environment for the all-round development of children
- Learn how to observe, monitor and evaluate the child's development and progress
- Learn to communicate with children and adults and to learn about the methods and forms of cooperation with parents
- Learn to evaluate their own work through self-reflection and self-regulation.

Curricular areas

The vocational education programme consists of various mandatory and optional modules. The following are included in the 2020 version of the “Curriculum Pre-school Education” (Portal MIZŠ 2023b).

General education subjects: Slovenian; mathematics; foreign language; arts; history; geography; sociology; psychology; physics; chemistry; biology; physical education.

Professional modules: Communication skills; pedagogy and pedagogical approaches in the pre-school period; development and learning of young children; safe and healthy environment; early childhood curriculum; games for children; creative expression; maths for young children; linguistic expression of children; nature for children; social studies for children; information and communication technology; artistic expression; musical expression; dance expression; sports for children; multimedia.

The emphasis is also on practical training (practicum in ECEC settings), optional (elective) courses and an open curriculum.

Pedagogic-didactic approaches

The teacher is autonomous in determining the number of hours devoted to addressing the individual learning topics and determining the sequence of learning content. Orientation goals oblige the teacher to motivate the student to find the most innovative and feasible ideas and also projects.

Lessons should be conducted using various methods: brainstorming, explanation, guided discussion, demonstration, practical student activities, method of using resources, etc. The teacher is the moderator in the lesson, directing it to the students' activities and enabling reflection of experience, autonomy in thinking, critical analysis and creativity. Explanation and demonstration are problem-oriented (e.g. Gimnazija in srednja šola Rudolfa Maistra Kamnik 2023).

Vocational schools emphasise experiential learning, the importance of internships in kindergarten, give students additional knowledge of alternative pedagogies, and at the same time enable them to gain concrete experience abroad, in the Erasmus+ programme (practical training with work abroad).

Part of the lessons are conducted in the form of cross-curricular workshops for children, which will be held either at school or in the other relevant organisations in the community (e.g. museum), or in kindergartens, and in the form of courses in the field of sports (hiking, rollerblading, skating, swimming, skiing) (e.g. Gimnazija Celje – Centre 2023).

4.3 Alternative entry and qualification routes, system permeability

For graduates with related academic qualifications

The University of Primorska (University of Primorska 2022) and the University of Ljubljana (University of Ljubljana 2022) both offer Programmes for educational improvement. These are study programmes that upgrade, deepen and expand the acquired education and are determined by law or by-laws as a condition for carrying out the educational work.

The *Programme for Pedagogical Training in Preschool Education* is a training programme that allows graduates of programmes that train teachers and graduates of other related study programmes to obtain qualifications for employment in kindergarten.

Graduates from the following study programmes can enrol:

- University study programmes where graduates have obtained the professional title of a teacher
- University study programmes in the field of education, arts, social sciences or humanities
- Higher education professional or university study programme in social work
- Second-cycle Master's study programme in the field of education, arts, social sciences or humanities
- Second-cycle Master's study programme in social work, social inclusion and justice in the field of handicap, ethics and gender or social work with the family.

Candidates who have completed equivalent education abroad can also enrol in the programme. After completion, the participant receives a public document proving the appropriate qualifications for employment as an Early Childhood Teacher.

The programme lasts for one academic year and comprises 60 ECTS credits.

For non-qualified co-workers

See below – “career changers”.

Formal opportunities for moving up

Early Childhood Assistant Teachers can continue their studies by attending an Early Childhood Teacher Bachelor's degree programme (1st cycle) at one of the three universities with this programme.

Qualified Early Childhood Teachers can continue their studies in a 2nd cycle Master's study (e.g. *'Early Learning'* at the University of Primorska Faculty of Education or *'Pre-school education'* at the University of Ljubljana Faculty of Education and the University of Maribor Faculty of Education). Studies last two years (120 ECTS).

Besides employment in ECEC settings and primary schools, post-graduates with this qualification (Master's degree) can find employment in all institutions/organisations connected with early learning and teaching as well as in organisations which indirectly deal with children or with providing a stimulating environment for young children. Due to their broad professional profile, the graduate will be able to get a job and perform (University of Primorska 2023c):

- Work and tasks of providing professional assistance in working with children in various public institutions (e.g. in schools and kindergartens) and those organisations that deal with activities for children
- The work and tasks of the Assistant Principal and the Principal of the kindergarten
- Work and duties of a Kindergarten Teacher
- New, innovative forms of work with students in free time, extended stays, societies, centres, etc.

- Work and tasks of a professional worker in a mobile teaching service
- With an additional and appropriate qualification, the work and duties of an assistant in study programmes that are related content-wise to early learning and teaching
- Organisation and management of animation programmes for children
- Work and tasks of professional consulting in the preparation of children's programmes on RTV
- Participation in editorial and expert commissions of printed and electronic media for children
- Cooperation with manufacturers of equipment, lessons and toys intended for younger children.

The interdisciplinary Master's programme at the University of Ljubljana Faculty of Education (2023a), also provides a comparative approach. During studies, students are encouraged to get involved in development and research projects at the faculty and in ECEC centres. Students acquire competences for researching preschool education, managing and developing the quality of kindergartens, and competences in special didactic areas.

Master graduates of the programme at the University of Maribor Faculty of Education (2023b) are able to work as:

- Principal or head of kindergarten
- Pedagogical adviser and professional associate; professional assistance in working with children in various public institutions (e.g. schools and kindergartens) and those organisations that deal with activities for children
- Assistant in editorial and professional commissions of printed and electronic media for children
- Assistant (with an additional and appropriate qualification) in study programmes that are substantively related to preschool education
- Associate or consultant in other public institutions responsible for development and research in the preschool field (Institute for Education, Office for Education, Pedagogical Institute ...)
- Contractor on individual projects in various research and evaluation teams
- Job holder for new, innovative forms of work with children in their free time, extended stays abroad, associations, centres, etc., organisation and management of animation programmes for children
- Associate or consultant at equipment manufacturers, teaching aids and toys for young children.

Formal opportunities for moving across qualifications frameworks

Early Childhood Assistant Teacher

Anyone who is about to or has already passed the vocational *matura* examination has the opportunity to take an additional subject of the general *matura* examination (the so-called 5th subject). If they pass this additional exam, graduates have the opportunity to enrol in most university study programmes; however, without the 5th subject they are permitted only to enrol in post-secondary programmes.

Completion of the 5th *matura* exam is possible *in parallel* with the completion of the vocational *matura* exam or *after* completing the vocational *matura* exam.

Early Childhood Teacher

A qualified Early Childhood Teacher (1st cycle) can continue studies for a Master's degree in most 2nd cycle programmes after having passed the exams specified by individual study programmes.

Options for men and women with non-specialist qualifications (career changers)

A candidate who has finished a general (gymnasium) or vocational programme for obtaining secondary professional education can enrol for a vocational course 'Early Childhood Education' (60 ECTS) (CPI 2023).

The candidate is awarded the professional title Early Childhood Teacher, and can be employed as an Early Childhood Assistant Teacher.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Regulation and cooperation

Each university's Faculty of Education develops its own programme of workplace-based learning as a part of the initial study programme which must be accredited by the National Agency of Republic of Slovenia for Quality in Higher Education (*NAKVIS – Nacionalna agencija Republike Slovenije za kakovost v visokvem šolstvu*).

Since the profession of an Early Childhood Teacher is a regulated profession, the minimum amount of field-based studies has to be taken into account when drawing up the curriculum, and in the accreditation process of the programme in general.

For the envisaged number of enrolled students, each Faculty of Education must have signed agreements of collaboration with an adequate number of ECEC services.

Duration of workplace-based learning

University of Maribor, Faculty of Education

The study programme foresees workplace-based learning in all three academic years. The scope of workplace-based learning is 660 hours or 22 ECTS, the share in the entire programme is 12.2%. Workplace-based learning (practical training) 1, 2, 3, 4, 6 and 7 is carried out in the form of *integrated* practice. Integrated practice is carried out in all three academic years under the guidance of university teachers and is awarded 10 ECTS credits. The student is expected to carry out concrete tasks one day a week in kindergarten or 1st grade of elementary school (planned observation of various aspects of educational work, analyses, visits and getting to know institutions, etc.) (University of Maribor Faculty of Education 2023a).

Practical training units 5 and 8 are carried out in the form of 'block' practice. Condensed practice is carried out in the second and third academic year to the extent of 12 ECTS credits. In the second academic year, the condensed practice lasts two weeks (4 ECTS) and is carried out in kindergarten, in the third academic year it lasts for four weeks (8 ECTS) and is carried out three weeks in the kindergarten and one week in the 1st grade of primary school (University of Maribor, Faculty of Education 2023a).

University of Ljubljana, Faculty of Education

Workplace-based learning takes place during the second semester of each academic year and amount to a total of 360 hours (12 ECTS credits). In the first year, students spend their workplace-based learning in ECEC centres in groups with children aged up to 3 years (3 ECTS credits). In the second year, students spend their workplace-based learning in the first class of an elementary school (3 ECTS credits), and in the third year they spend their workplace-based learning in groups with children aged from 3 to 6 years (6 ECTS credits) (University of Ljubljana, Faculty of Education 2023b).

University of Primorska, Faculty of Education

Workplace-based learning takes place during the second semester of each academic year. In the first and second academic year, 3 ECTS are allocated for each year (6 ECTS together). In the last academic year, 6 ECTS are allocated (University of Primorska, Faculty of Education 2023d).

Table 7

Slovenia: Number of ECTS credits allocated to workplace-based learning in the professional study routes for core pedagogues

University	Workplace-based learning			TOTAL
	1 st year	2 nd year	3 rd year	
Ljubljana (2023/2024)	3 ECTS credits	3 ECTS credits	6 ECTS credits	12 ECTS credits
Maribor (2023/2024)	4 ECTS credits	7 ECTS credits	9 ECTS credits	20 ECTS credits
Primorska (2023/2024)	3 ECTS credits	3 ECTS credits	6 ECTS credits	12 ECTS credits

Skills and competences students are expected to develop during workplace-based learning

University of Maribor, Faculty of Education (2023a)

- To be able to define basic pedagogical terms and explain relations between them.
- To analyse, from the aspect of upbringing, the different roles of educator/teacher and child/student and other pedagogical workers.
- To learn the importance of kindergarten and school documentation.
- To be able to plan, realise and evaluate pedagogical work in kindergarten and the 1st grade of primary school.
- To lead the group independently in carrying out activities in all subject areas of the curriculum.
- To know how to solve educational problems.

University of Ljubljana, Faculty of Education (2023b)

The purpose of workplace-based learning is “to use the acquired theoretical knowledge in practical work and to critically reflect on one’s own and others’ decisions and actions”. As part of the integrated practice under the mentoring of the providers of the study programme, which takes place approximately once a week, students “will observe children, educators and kindergarten, experiment with the implementation of pedagogical work and participate in field studies in the outdoor environment”.

University of Primorska, Faculty of Education (2023b, 148-151)

Workplace-based learning contributes to the development of both generic and specific competences throughout the three years of study.

General competences

- Understanding the significance of reflective practitioner
- Qualification to thoughtfully performance and for critical analysis and improvement of educational work (professional development)
- The ability to actively participate in research projects aimed at improving educational practices
- Evaluation of the role of Preschool Teacher.

Specific competences

- Developing reflective approach to educational work
- The ability of self-reflection and of planning changes
- The effectiveness of collaboration with colleagues, the participants in the learning process, and with the environment
- The ability of observing and monitoring the performance of colleagues
- Educational leadership of a section, group, or individuals
- Knowledge of adequate preparation and presentation on a chosen topic or part of a teaching unit.

Forms of student self-evaluation and external evaluation

University of Ljubljana, Faculty of Education

No data available.

University of Maribor, Faculty of Education (2023a)

As conditions for admission to the exam, the following are mentioned:

- 100% compulsory participation in practical training
- A positive evaluation of the Report of practice/work
- Submission of all the necessary documents.

University of Primorska, Faculty of Education (2023b, 48; 107; 151)

The assessment of students in practical training includes the following:

- 1st academic year: student's project work; report on Practical Training 1 with self-evaluation
- 2nd academic year: report on Practical Training 2
- 3rd academic year: completed and presented obligations, i.e. shorter written products (e.g. lesson plans, reflections, journals, etc.) collected in teaching practice portfolio.

Submission of adequate documentation in compliance with mentor's instruction and with that of the corresponding services of the faculty is prerequisite for entering the course grade in student's resume.

Working conditions of mentoring/supervising staff in ECEC centres

The workplace-based learning of students is regulated by the Collective Agreement for the Education Sector in the Republic of Slovenia (Official Gazette of the Republic of Slovenia 52/94, 11/23). In Article 59 it is stated that students are accepted by the principal of the setting and that the practicum is carried out according to the programme of the Faculty that sends students. The ECEC setting and the faculty sign a special cooperation contract.

Article 60 of the Collective Agreement stipulates that a mentor is assigned to the pupil or student. The student's mentor monitors, guides and supervises the student during the internship, and at the end also evaluates their work.

Mentoring/supervising staff in ECEC settings do not have a designated role, with a specific time allocation and specifications for mentoring. The roles of mentoring/supervising staff in ECEC centres differ from faculty to faculty. Faculties may introduce these roles at special meetings with ECEC leaders, or students bring the allocated specifications for mentoring with them in the ECEC centre when they start their workplace-based learning.

Mentoring staff are not remunerated for their work with students, but they do receive a certificate (with credits), which they can use when seeking job promotion (Official Gazette of the Republic of Slovenia 54/2002, Article 17).

The still relevant White Paper on Education (Krek and Metljak 2011, 488-489) proposed the following solutions in the area of mentoring: *“The practical training of students in educational institutions (compact and integrated practice) should be carried out under the expert guidance of a mentor (teacher, educator or councillor) who acquires a permanent license through a CPD programme for which at least 3 credits are awarded. Practitioners with this title agree to cooperate with higher education institutions during the students’ practical placements and contribute towards improving this area through further education and training.”*

The White Paper 2011 also proposes that *“The work of mentors and partner institutions must be systematically regulated, given the technical and financial evaluation.”* From 2018-2022, the project MUNERA3 addressed the practical training of mentors (Ministry of Education 2023d).

In her master's thesis, A. Maravič (2016) notes that ECEC settings receive instructions for implementing workplace-based learning from universities. In principle, the instructions include guidelines for the implementation of pedagogical practice. However, according to the results of Maravič's research, the way in which the mentor implements or leads the mentee to new knowledge and experience is missing. More emphasis should also be given on the preparation of mentors for mentoring a student before the actual beginning of workplace-based learning.

6. Continuing professional development (CPD) of ECEC staff

Frameworks for regulating the CPD of ECEC personnel

The CPD framework for ECEC staff is guided by general national regulations regarding in-service training for all educational professionals, i.e. also for school teachers (Official Gazette of Republic of Slovenia 23/2023a). The overall aims of CPD are the provision of professional competences for carrying out specific specialist work, supporting a professional education system and thus improving its quality and efficiency.

In 2022, an amendment to the Act on Organisation and Financing of Education was adopted, with an aim to complement the career development of professionals in the field of education and to enable further career development by introducing the fourth title – Senior Councillor (Early Childhood Teachers – Teachers’ Assistants can be promoted as Mentor and Adviser only).

Main forms of CPD

“There are many high-quality programmes for further education and training available to education staff. By way of a public call for proposals, the Ministry selects professional training programmes to be published in the Catalogue of further education and training programmes for education staff (KATIS) and determines conditions for co-funding such programmes. Every year,

the Ministry also publishes a public call for applications for grants to subsidise the further education of education and other staff in kindergartens and schools providing public services” (Ministry of Education 2023a).

Further education and training of professionals is carried out in different ways (Ministry of Education 2023b):

– *Programmes for improving education*

Programmes for the improvement of education upgrade, deepen and expand the education of professional workers. They are defined by law and regulations as a qualifying condition for carrying out the educational work of an individual professional worker.

– *Career development programmes*

Career development programmes enable the continuing professional development of professionals, training for the implementation of new public educational programmes and the achievement of the goals of new curricula or knowledge catalogues and exam catalogues, continuous updating of disciplinary and professional knowledge, familiarisation with effective educational practices and successful approaches for professional management of the educational process and increasing its efficiency. These are:

- Professional training programmes (shorter forms of career development programmes, which are intended for the professional and disciplinary development of individual professional workers or professional assets, and are selected through a public tender)
- Thematic conferences (shorter forms of career development programmes that are intended for education and training of all staff members of a certain organisation)
- Singular programmes (organised as a quick, concrete and operative response to sudden or unpredictable problems in education)
- Project programmes are implemented in accordance with the regulations governing the use of European cohesion policy funds. They are intended for the implementation of new pedagogical practices.

From 2023 onwards (Official Gazette of Republic of Slovenia 23/2023) also

- Programmes of public institutions (also study groups and mentoring networks) and
- Programmes of higher education institutions.

In general, there are no specific forms of CPD for different core professionals and qualified co-workers (EC Teachers and EC Assistant Teacher). The forms for those qualified workers who do not have regular contact with children in the classrooms (such as Psychologists, Pedagogues, Social Workers etc.) are the same as those mentioned above. In many cases CPD is provided for all of them at the same time, especially if the CPD activity is workplace-based and out of working hours (e.g. a thematic conference).

In the case of CPD activities outside the workplace, ECEC providers have to cope with certain problems regarding the replacement of staff during CPD attendance and the costs for travelling. At the setting level, the most popular form of CPD is the so-called thematic conference where ECEC Centre Heads can choose the topic either independently or from the providers' CPD programme, and these workshops usually take place at the ECEC workplace, and in after-school hours.

Conditions of CPD

According to the Collective Agreement for the Education Sector in the Republic of Slovenia (Official Gazette of the Republic of Slovenia 52/1994, 11/2023, Article 53), workers have the right to continuing professional training. For those workers with at least an intermediate education at least five days of professional training per year are obligatory or 15 days every third year; for

other workers at least two days per year and six days every third year. As both Early Childhood Teachers and Early Childhood Teachers – Teachers’ Assistants have an intermediate or higher level of education they are guaranteed five days per year for professional training during working hours (the same applies for ECEC centre leaders).

The ECEC Centre Head is obliged to plan trainings and other CPD activities for practitioners within the yearly work plan and to enable them to participate (usually, ECEC centre leaders plan some of the CPD activities as obligatory for all staff, some are left up to the personal/individual choice of staff members). At the same time, it is also the practitioners’ obligation to participate in these activities. CPD is thus both obligation and entitlement.

Providers of ECEC provision cover the costs for CPD activities, which are incorporated into the programme budget.

Main providers of CPD

The main providers of CPD include higher education institutions (Faculty of Education, Faculty of Arts, Faculty for Social Work), the National Education Institute, the Educational Research Institute, the National School for Leadership in Education (from 2021 part of the National Education Institute) and non-profit and private providers. Each year these providers are invited to submit their programmes to the Ministry of Education in order to receive accreditation (and co-financing if relevant) for the training formally recognised for career advancement.

The legislation only defines who can apply to the public call for tenders for the selection of further education and training programmes, on the basis of which the Ministry of Education selects the training programmes for co-funding. The basic conditions for the co-financing of education and training programmes are determined on the basis of an evaluation of the programme providers from the previous calendar year, and on the basis of the priority themes set by the Ministry in cooperation with the development and advisory institutes for each school year (Kovšča 2021, 49).

The basic conditions for applying for the public call are, in particular (Official Gazette of the Republic of Slovenia 23/2023a, Article 8):

- The applicant (organisation) has an education activity specified in its act of establishment.
- The programmes applied for are in line with the aims of education in accordance with the law governing the organisation and financing of education and with these rules.
- The programmes applied for have been prepared in accordance with the provisions of the public call.

Formal recognition of CPD

If the CPD activity is accredited by the Ministry of Education, staff are awarded credits which are taken into account for advancement opportunities (i.e. promotion to Mentor, Adviser or Councillor, Senior Councillor). In order to achieve these titles, they collect credits defined by the Collective Agreement for the Education Sector (mostly for participation in trainings, projects, professional conferences, publishing articles, organising events with children, etc.). The awarded titles are permanent and influence the salary to some extent but not the working obligations.

For the programmes that are published in the *Catalogue of further education and training programmes for education staff* (KATIS), there is no doubt that they would not be recognised. For programmes that are not part of the KATIS, the Ministry of Education decides on their recognition.

CPD and career advancement

As previously mentioned, the CPD system in Slovenia enables career advancement through credit point acquisition. This enables Early Childhood Teachers, Early Childhood Assistant Teachers and ECEC Principals to acquire different levels of recognised expertise and posts of responsibility.

Education staff may be promoted to the job titles Mentor, Adviser and Councillor, and since September 2023 on, a fourth title is in use: Senior Councillor (Official Gazette of Republic of Slovenia 141/22). From 2022 on, Early Childhood Assistant Teacher can also be promoted to the job titles of Mentor and Adviser (Official Gazette of Republic of Slovenia 115/22).

Funding

ECEC employers cover the costs of attending CPD activities (the costs for CPD activities are incorporated into the programme costs). However, in some cases it might happen that an EC Teacher wishes to attend a CPD activity, which is (maybe) expensive or it follows a personal (not institutional – based on a yearly work plan) need; in such cases EC Teachers pay for participation in such a CPD activity themselves (if not agreed differently with their employer).

Challenges

The main problem is that ECEC settings do not have enough replacement staff available on a regular basis, especially if other staff are off on sick leave at the same time. This is nowadays the main reason that not only one member of staff cannot participate in CPD activities, but that the complete ECEC team is unable to attend a certain event due to shortage of staff. This is also the main reason that many CPD activities take place in the late afternoon after the children have left, or even on Saturdays.

Contents

Each year, the Ministry of Education suggests priority topics for CPD which are accepted by the Expert Council of the Republic of Slovenia for General Education. Priority topics for the school year 2023/24 are (for the entire educational system, including secondary schools): teaching, learning and evaluation of achievements in the learning and study process with an emphasis on modern learning technologies and innovative approaches; sustainable development and active citizenship; giftedness in the educational process and the upbringing and education of children with special needs (sensitisation and training for the use of new pedagogical methods and approaches); implementing lifelong career orientation and ensuring equal opportunities with an emphasis on vulnerable groups; social-emotional competence and well-being in education and the empowerment of professionals to deal with the topics of mental health and addiction; consulting work in the educational and study process; development of communication skills in the Slovenian language, bilingualism/multilingualism and media literacy. The practitioner voice is not present in the selection of priority topics process.

Apart from priority topics, there are also general topics: preschool education, elementary school, music education, upbringing and education of children and adolescents with special needs, secondary general education, secondary vocational and professional education, higher professional education, adult education.

In the *Catalogue of further education and training programmes for education staff (KATIS)*, for early childhood area, there were seven CPD courses offered in the 2022/23 school year. Topics of the programmes that had the most participants were: learning environments and formative

assessment (a one-day conference), digital literacy (a thematic conference in an ECEC setting); cooperation with parents (thematic conference in an ECEC setting).

The topics, emerging as issues for the near future in the context of CPD, are the renewal of a preschool curriculum, starting with its implementation in September 2025 (planned). CPD activities will need to be implemented before that date. Professionals will receive trainings related to the introduction of the new curriculum, but at the moment it is not yet clear what these trainings will be, what they will include and who will attend them (only EC Teachers, or both professionals, or maybe only ECEC centre leaders?).

Currently, a substantial project entitled “Digit-sustainable teacher” (Training of professionals and managers in education to strengthen their digital competences, competences for sustainable development and financial literacy)¹⁵ just started with its implementation and activities. The aim of the project, financed from the National Resilience and Recovery Plan, is to successfully train at least 20,000 professionals and managers. Currently, this is the project, involving the highest number of targeted professionals through the entire educational system.

Although digital education is important and Early Childhood Teachers and staff are the least educated group in this topic, there are also other topics that would need greater awareness and targeted support, for example: (self-)reflection skills; competences for shared learning within the team(s); the transition from kindergarten to schools; how to support families with children with any kind of disabilities/coming from challenging background(s). In general, there is a lack of CPD activities that would enable continuous professional support after attending a CPD course, e.g. professional learning communities where staff discusses and share experiences and challenges on newly implemented concepts, topics, activities, etc. Such activities¹⁶ are implemented only in kindergartens where ECEC leaders are aware of the importance of ensuring professional support to their staff after the attendance at the CPD activity (with an aim that knowledge, gained at the CPD activity, will remain sustainable).

Research on the CPD activities of ECEC personnel

Using the SICRIS (Slovenian Current Research Information System) database, very few projects are listed on the topic of ECEC, and none explicitly on the topic of the CPD of ECEC personnel (Institute of Information Science & Slovenian Research and Innovation Agency 2023).

The professional development of ECEC teachers is discussed in many diploma and master's theses; however, large-scale projects on this topic are not common.

CPD for ECEC staff is an issue in regards to not having enough staff who would supplement absent staff (those who attend CPD activities). This is a big challenge in ECEC centres, and very often ECEC centre leaders cancel the participation of their employees at the last moment because they do not have enough replacement staff available.

On the other hand, not enough attention is paid to CPD activities which would increase process quality of educational work. There are also other topics that would need greater awareness and targeted support, for example (self-)reflection skills, competences for shared learning within the team(s), the transition from kindergarten to schools, supporting families with children with any kind of disabilities/coming from challenging background(s). There is also a lack of CPD activities that would enable continuous professional support *after* the attendance at the training.

¹⁵ Project's budget is a little less than 17.6 mio EUR.

¹⁶ Professional learning communities were introduced to Slovenian kindergartens, members of *Step by Step Network for Changing Quality*, managed by Educational Research Institute, Step by Step Centre for Quality in Education. Centre ensures continuous support to ECEC leaders and professional learning community leaders.

7. Working conditions and current workforce issues

7.1 Remuneration

When starting to work, core pedagogues in ECEC start on the same wage grade as Primary School Teachers. However, differences appear in the wage grades over the years: EC Teachers can progress to a maximum of the 44th wage grade, whereas a Primary School Teacher (and also Early Childhood Teachers who work in the 1st grade of primary school) can progress up to the 46th wage grade.

Table 8

Slovenia: Lowest and highest basic salaries, from October 2022¹⁷

	Min. (per month)		Max. (per month)	
	Salary grade	Basic salary (gross)	Wage grade	Basic salary (gross)
Early Childhood Assistant Teacher	26	€ 1,226.82	36	€ 1,815.99
Early Childhood Teacher	32	€ 1,552.31	46	€ 2,485.30
Basic School Teacher	32	€ 1,552.31	48	€ 2,688.10

A little over 22% in contributions for social security and income tax (from 16 to 41%) is deducted from the gross salary.

Living as a single parent and being a teacher in a major city is a challenge, especially if you do not own an apartment/house. It is even more difficult to live on the salary of an Early Childhood Assistant Teacher (pre-2023, the salary of Teacher Assistants was under the minimum wage).

Posts of responsibility mostly bring an increase in salary. The minimum wage grade of ECEC Centre Leaders is 48 (€ 2,907.45 gross), the maximum 54 (€ 3,678.86 gross) (Official Gazette of Republic of Slovenia 157/22). Deputy leaders' minimum wage grade is 37 (€ 1,888.62 gross and the maximum 50 (€ 3,144.70 gross) (Official Gazette of Republic of Slovenia 11/2023; Official Gazette of Republic of Slovenia 139/2022).

Mentors to students during workplace-based learning do not receive a higher wage, however mentors to trainees (newly qualified staff) are credited four hours per week (Official Gazette of Republic of Slovenia 27/14, 54/21).

7.2 Full-time and part-time employment in ECEC provision

In the school year 2021/2022, nearly all (96.53%) ECEC staff – EC Teachers, EC Assistant Teachers, Centre Leaders, consultants and other professionals – worked full-time in public kindergartens (Statistical Office RS 2023a). Full-time posts comprise 40 hours/week.

In Slovenia, on average, Early Childhood Teachers are in direct contact with children in playrooms for 1,344 hours a year, which is more than the average in OECD countries (987 hours) (Eurydice 2022).

¹⁷ Eurydice 2023b *Conditions of service for teachers working in early childhood and school education*. Last update: 31 August 2023. Data for Early Childhood Assistant Teachers were obtained from Official Gazette of Republic of Slovenia 139/22.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Induction measures for newly qualified staff

No specified regulations exist regarding induction measures for newly qualified staff. However, they may be supported by mentors if the Ministry of Education opens a call for applications for this post. Otherwise early childhood centres do their best to support new employees, although they are not officially classed as trainees.

In March 2023, the Ministry of Education published an open call for mentoring trainees for 30 EC Teachers and Councillors, and for 50 EC Assistant Teachers. Places for the latter were filled before the open call deadline.

Depending on the Ministry's call for applications, a trainee is allocated to an ECEC centre in order to be under the guidance of a mentor. The mentor's role is to support them so that they can work independently when the probation time is over. Probation periods are conducted on the basis of a signed employment contract with an ECEC centre.

Voluntary probation was abolished in 2014 (Ministry of Education 2023c).

Appointment and tasks of a Mentor

A mentor is appointed by the Centre Head and must meet the conditions defined by law. Mentors perform the following tasks:

- Develop a programme of traineeship
- Advise the trainee to perform the tasks in accordance with the programme
- Cooperate with the Principal, Councillors, relevant expert working groups and other expert bodies in a kindergarten or school on the organisation and implementation of a traineeship programme
- Advise the trainee in the planning, organisation and implementation of practical presentations and other forms of direct educational work, and also monitor and analyse this work and provide the trainee with feedback
- Monitor the trainees' preparation and his/her logbook regarding the development of the traineeship programme
- Report on the trainees' skills for independent work and prepare an assessment of their practical work or written assignments necessary for admission to the professional examination
- In cooperation with the Principal, report on the completed traineeship
- Perform other tasks related to the traineeship programme (Official Gazette of the Republic of Slovenia 23/2006, 70/2022, Article 19).

Each practical assignment, monitored and evaluated by a mentor and the ECEC Centre Leader lasts one hour. The trainee is given the topic of the assignment by the mentor at least three days beforehand (Official Gazette of the Republic of Slovenia 23/2006, 70/2022, Article 22).

7.4 Non-contact time

The full-time working obligation for Early Childhood Teachers and Early Childhood Assistant Teachers is 40 hours per week. Legally, the EC Teacher's work with children should not exceed 30 hours per week and the Assistants' work 35 hours per week (Official Gazette of the Republic of Slovenia 100/2005, 18/2021, Article 41-).

Early Childhood Teachers thus have 7.5 hours/week non-contact time, and Early Childhood Teachers' Assistants 2.5 hours/week.-The remaining time is intended for breaks (0.5 hour/day).

7.5 Current staffing issues

In Slovenia, we currently face a great staff shortage, especially of Early Childhood Assistant Teachers. The main reason lies in (too) low salary, and on the other hand the responsibility is very high. The shortage of staff was also one of the reason that Ministry of Education published an open call for internship after quite a long period of time. Places for the job position of EC Teacher – Teacher's Assistant were already filled already before official closure of the call.

Regarding the age distribution in the workforce in public kindergartens in school year 2022/23, the situation is presented below:

Table 9

Slovenia: Age distribution of ECEC staff (Teachers and Assistant Teachers)

Age range (years)	Number
15-19	-
20-24	647
25-29	1,360
30-34	1,894
35-39	2,179
40-44	2,078
45-49	1,649
50-54	1,287
55-59	1,312
60-64	290
65 +	10
Total	12,730

Source: Statistical Office RS 2023b

Weaknesses in the system still exist. Newly qualified graduates often have difficulties in finding a job as an Early Childhood Teacher when they first enter the labour market. Most of them start as an Assistant, and subsequently they may be in danger of losing their initial drive to be productive, innovative and to develop new ideas. Young graduates often have to wait until an Early Childhood Teacher retires before being offered a post.

There is also increasing anecdotal evidence which suggests that many ECEC settings are not satisfied with the level of knowledge and skills, the values and reflective abilities of 'career changers'.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

Until 2017, the position of Teacher's Assistant was classified in the starting salary grade 19. After salary anomalies were eliminated, a new job position (Early Childhood Assistant Teacher) was determined, with placement in the initial 21st salary class. Since January 2019, the position of Early Childhood Assistant Teachers has been classified in the 22nd starting salary class. With this change, the starting salary was raised by three salary classes. Until 2022, it was possible to advance by ten salary grades, up to the 32nd salary grade. From 2022, EC Teachers' Assistants can be promoted to the job titles of Mentor and Adviser (Official Gazette of Republic of Slovenia

115/22), which includes a salary rise. From 2023, the initial salary wage grade of Early Childhood Assistant Teachers is 26 (NGO and trade union initiatives strongly supported this). In 2022, an amendment to the Act on the Organisation and Financing of Education was adopted, with an aim to complement the career development of professionals in the field of education and to enable further career development by introducing a fourth title – Senior Councillor. The minister at the time stated that the purpose of the fourth title is to establish additional motivation in the career development of professionals, extend the period of career advancement and enable expansion and deepening of knowledge. The law entered into force on 1 September 2023 (National Education Institute Slovenia 2022).

As already mentioned, the Ministry of Education published an open call for internship for 30 EC Teachers and Councillors, and for 50 Early Childhood Assistant Teachers in order to stimulate students to make a swifter transition to the labour market and to some extent to fill the gap regarding the shortages of staff.

In 2021, with the Recovery and Resilience Plan, Slovenia committed to renovating the education system. This began in 2022 and should last until completion in 2025. The introduction of the new curriculum for kindergartens is scheduled for September 1, 2025, and for the initial professional education of staff is expected to take place by then. It is not yet known what they will be.

9. Recent country-specific research focusing on ECEC staff

Research on the educational process in preschool education and its effects during the COVID-19 pandemic

Source: Jager et al. 2021 (see *References* for full details)

Aims and methods: Research funded by the Ministry of Education on the educational process in early childhood education during the COVID-19 epidemic took place between March and August 2021 and was designed as an observation of the preschool education of an individual child from several parallel levels: the institution kindergarten, the kindergarten group and the child's home environment. For each level, we determined the target population of people (ECEC leaders, professional staff in kindergarten classrooms and parents of children), from whom we collected information, opinions and explanations of the situation and challenges they faced. 155 ECEC leaders, 580 ECEC staff (EC Teachers), and 2,816 parents participated in the research study.

Selected findings: Findings indicated that kindergartens felt neglected, forgotten during the pandemic, as if they were not part of the education system. They missed the support of leading and responsible institutions, as well as two-way communication and the involvement of pre-school education experts in decision-making.

Both ECEC leaders and EC teachers expressed that the designation "*emergency care*" that was in use during the time of closure of public life was inadequate, and were concerned about the marked dominance of the medical-hygiene paradigm over the educational paradigm. At the expense of compliance with hygiene recommendations, the volume of work, especially for ECEC leaders and administrative staff, increased significantly, while EC Teachers' compliance with hygiene recommendations reduced the time for direct work with children. Also, due to the organisation of work, which required work in so called "*bubbles*", the simultaneous presence of ECEC staff in the group of children was reduced, which undoubtedly affected the quality of work in

the classrooms. In relation to the concept of "emergency care", it was found that kindergartens did not provide only "care", but an integrated education and care process.

Preschool teachers found the work in so-called "bubbles" a positive measure, but in the sense of working in smaller groups of children, in which they could adapt to the individual needs and interests of the children to a greater extent. However, "bubbles" were not understood as a positive measure in the context of children's social development.

The closure of the kindergartens did not have a significant financial impact on their operation; the financial consequences were very high costs for disinfectants, cleaners, protective equipment, and covering sick leaves.

Professional development activities moved to online platforms, the availability of professional training was also greater, kindergartens had less expenses to cover in terms of travel costs.

According to the parents, the time of the epidemic affected the children in the direction of reduced adherence to rules, which, in addition to reduced persistence, resulted in problems with concentration, less independence in dressing, difficulties in resolving conflicts, understanding instructions and fine motor skills – which EC Teachers also found.

Competences for the use of ICT proved to be very important and necessary. Preschool teachers reported that during the epidemic they raised their own competences in this area, but despite everything, the need for additional training remains, as does the need for better equipment of kindergartens.

Almost all kindergartens made additional contact with families at least once during the closure period, but only a small percentage of kindergartens made an inquiry regarding the needs of families during the epidemic.

Last but not least, it must be noted that support for vulnerable groups is a distinctly undernourished area even during the time of unchanged conditions, but during the epidemic this has only deepened.

Implications: As part of the research, an expert group of different ECEC professionals was formed, resulting in the preparation of *Recommendations for measures and systemic solutions in the field of preschool education after the experience with the COVID-19 pandemic* (Bozovičar et al. 2021).

The document can be of help to the leading institutions in the country in formulating measures in the case of the need again for online education (distance learning), and for ECEC leaders and professionals as guidance to maintain supportive education and care even in emergency situations.

Transition from kindergarten to primary school

Source: Jager, J. et al. 2022 (see *References* for full details)

Aims and methods: In recent years, we have seen an increase in the postponement of children's enrolment in the first grade of elementary school. For a successful transition from kindergarten to school, it is necessary to ensure professional, developmental and pedagogical continuity (OECD 2017). The research project "Ensuring a smooth transition between kindergarten and primary school", funded by the Ministry of Education, was focused on gaining insight into the provision of all three continuities by looking at the perspectives of the various stakeholders involved in the research: children, parents, professionals, leaders and advisory workers of kindergartens and primary schools.

The research aims were to:

- Identify activities, approaches and methods in kindergarten and first grade of primary school that contribute to pedagogical, developmental and professional continuity

- Gain insight into the understanding of the image of the child by professionals in kindergartens and primary schools and how this is reflected in their pedagogical practice
- Identify the mutual expectations of professional, advisory and leadership staff of kindergartens and schools and parents in relation to ensuring a smooth transition of children from kindergarten to primary school
- Gain insight into the reasons for postponing schooling and the possibilities for reducing them
- Gain insight into children's experience of transition.

The research was based on a combination of quantitative and qualitative pedagogical research and triangulation between methods. In the context of quantitative research, descriptive and causal non-experimental research methods were used; and in the context of qualitative research, observations with reflective interviews and focus interviews with children.

149 ECEC teachers from Slovenian public kindergartens (from 30 ECEC centres) and 50 classroom teachers (from 45 schools), children enrolled in kindergarten in the last year before entering school (88 children) and children in the first grades of primary schools (57 pupils) were included in the research, as well as advisory staff (15 from ECEC centres, 41 from schools) and leaders (8 from ECEC centres, 32 from schools).

Selected findings: The results obtained through questionnaires show the relative uniformity of pedagogical educational approaches at the level of interactions, teaching strategies and the learning environment in kindergartens and the first grades of elementary schools; results obtained through observation in kindergartens and schools, however, do not fully confirm this.

Implications: In order to ensure continuity and, as a result, a smooth transition from kindergarten to primary school, it is crucial to ensure systemic professional continuity (at the level of study programmes that educate/train for the profession of EC Teachers and Primary School Teachers), as well as developmental and pedagogical continuity, which kindergartens should be able to develop and provide. ECEC centres and schools ideally need to be connected in learning communities with the possibility of shared learning, self-reflection and with collegial support in the context of changing practices.

10. Workforce challenges – country expert assessment

Lack of relevant staff

ECEC centres face great challenges finding appropriate staff for job positions they advertise. The most wanted staff are in the Assistant category. However, the very low salary (only a little above the minimum wage) does not make this an attractive job.

There is also difficulty in recruiting Early Childhood Teachers, while various providers of additional professional help for children with special needs in kindergartens have been missing for a long time, such as Special Rehabilitation Pedagogues and Speech Therapists.

Professional staff in kindergartens are underpaid for very responsible work they carry out. According to data from the Ministry of Public Administration, in 2022 the average gross salary of preschool teachers and other professional staff in ECEC centres was € 1,669 gross. *“The level of payment shows the devaluation of the work of educators”*, stated the president of the Association of Kindergartens Slovenia, Silviya Komočar. *“A Primary School Teacher is ranked higher in*

wage grades than an Early Childhood Teacher, but the work of an Early Childhood Teacher is no less demanding than that of a School Teacher.”

Internal support to EC Teachers and EC Teacher Assistants and quality improvement

Not enough attention is paid to internal support groups in which ECEC staff could reflect on and plan future work. There are some ECEC centres where staff have regular time slots (paid) for reflection and planning together as a group (in some cases once per month), but in most cases there are the most three staff meetings during the whole year, at which ECEC centres organise different CPD events. However, regular and frequent organised meetings in ECEC centres at which staff can focus on the reflection of their work, make plans for improving the quality of their work and can support each other in the process of becoming and being a reflective practitioner are very rare.

It is also important that researchers and other field experts are actively connected with practitioners in co-constructing new knowledge and practices and in evaluating them, taking into account both the perspectives of the children’s development and well-being and the needs of families and communities.

Continuing professional development

In-service education is not regulated externally, but the choice of CPD providers who deliver a training is under the autonomy of each ECEC leader. The question is how CDP providers are selected, and what competence they have. Courses of some CPD providers are co-financed by the Ministry of Education if providers apply to a certain public call. This takes place each year, meaning that at least references and general aims and methods are checked by a professional group of experts. However, there is a vast group of CPD providers who do not undergo any kind of assessment but can still offer CPD activities to public (and private) ECEC centres.

Inter-institutional collaboration

In order to ensure a smooth transition from the ECEC centre to primary school and to learn from each other, these two organisations need to establish regular and formalised ways of collaboration. By forming an inter-institutional professional learning group, Primary School Teachers from the first three grades can learn about the approaches, didactics and concepts ECEC staff are using and promoting in early childhood education. Allocated time for peer-to-peer observation and reflective discussion are also essential, with the aim of converging approaches and practices between the two institutions and thus ensuring a smooth transition from the ECEC centre to school.

Promotion system

Although from 2022 Early Childhood Assistant Teachers can be promoted to the title of Mentor and Adviser and since 1 September 2023 a fourth title has been in effect to stimulate professional career development of core professionals, the promotion system still does not reward practitioners who are striving to improve the process quality of their work, but focuses only on credits and certificates received at trainings, conferences, or through extra work such as participating in a project, since no one knows how this person is performing in the classroom, since for a promotion no direct classroom observations are required. This kind of system does not support efforts to improve the quality of work, but rewards only those who know how to wisely collect certain credits/certificates.

Professional titles

All professional titles (Mentor, Adviser, Councillor, and from 2023 on Senior Councillor) are permanent – no renewal procedures are required, as is the case in higher education. In other words, professional titles are not limited to a certain period of time and no checks are made to ensure that the teacher is still fulfilling the requirements.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the term chosen in this report for the main form of centre-based ECEC settings is **kindergarten** (*vrtec*, 0–5)¹, sometimes referred to as **ECEC centre**. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Slovenia

1756	First kindergarten on Slovenian territory, in Maribor.
1834	First “children's shelter” is established in Ljubljana and financed by charities and church organisations (mainly for children of working parents from poorer backgrounds).
1863	First kindergarten established according to Froebelian principles (mainly for children from wealthier families)
1869	The Public School Act determines that children's shelters and recreation centres, which had become the concern of the state and municipalities and were only organised in larger cities and industrial areas, can be attached to elementary schools.
1872	Three documents relevant to kindergartens are published. They state that pre-school education is an important part of education for everyone.
1883	The Gorizia Association “ <i>Sloga</i> ” introduces a course for kindergarten management at the Women's Teacher Training College.
1914-18	During the First World War, refugee kindergartens and shelters are established for parentless Slovenian children. Besides taking in orphans, the kindergartens are attended by children whose fathers are in the army and whose mothers are employed. The emphasis is on child protection rather than early childhood education.
1929	The National Schools Act (1929), in Article 7, states that kindergartens, now called “amusement centres,” are also part of the national school system. Municipalities are obliged to establish amusement centres in the larger towns and cities, or, at the request of parents or the municipality, in other places, provided that at least 30 children are enrolled. Boys and girls aged 4 are admitted. Beyond these centres, there are “day shelters for infants and children” up to the age of 4, “day shelters with an amusement centre for children aged 4–7”, and “school day shelters” for children up to the age of 16.
1933	The Ministry of Education issues a Decree that amusement centres and shelters had to work according to specific programmes; each child had to have six to eight square metres of space, and groups of thirty to forty children had to have at least two rooms, one for the amusement centre, the other for dining and resting. Children up to the age of 4 were educated by female carers, older children by kindergarten/school teachers, and the rest of the time by nannies (children started compulsory schooling at the age of 7). Younger children were kept in shelters, from where they were sent to day-amusement centres.
1939-1945	During the Second World War, when what is now Slovenia was divided between Germany, Italy and Hungary, the kindergartens were characterised by a period of alienation. From 1941 to 1945, kindergartens were opened at harvest time for children

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. For Slovenia, the relevant format is **0–5**.

	whose parents were at work. By the end of the war, 69 kindergartens and 34 auxiliary kindergartens had been opened.
Post-1945	<ul style="list-style-type: none"> – Expansion of early childhood provision in the light of increasing maternal employment – Immediately after the war, the Ministry of Social Policy of the Federal Republic of Yugoslavia is responsible for ECEC institutions and, as early as 1945, organises a course for educating female teachers.
1946	The kindergartens are transferred to the Ministry of Education, and in the same year a course for Kindergarten Teachers of one year's duration is established at the Ljubljana Teacher Training College.
1948	Legislation is adopted to regulate nurseries and kindergartens. Nurseries are for children up to the age of 3, and kindergartens from the age of 3 up to the start of school. Companies, public offices and institutions can set up nurseries and kindergartens. Kindergartens, which also start admitting school children after school, are renamed "play and work homes". In these institutions, children are cared for and educated during the day, and sometimes also cared for at night.
1949/1950	A four-year secondary vocational school for female educators, a one-year school for assistant educators and a five-month course for auxiliary educational staff are established.
1950–1960	During this period there is little progress in the field of early childhood education. Maintaining kindergartens becomes expensive, as education is taken over by state institutions. Parents remove their children from kindergarten in large numbers because of the high costs. Even meals are abolished to cut costs.
1958	ECEC settings come under the auspices of the Secretariat for Family and Social Protection.
After 1960	After 1960, the situation in early childhood education begins to improve. In 1961, the People's Assembly of the People's Republic of Slovenia adopts a Resolution which foresees a unified system of childcare, laying down the basic principles of childcare, the roles of parents and other social factors. The number of kindergartens grows, as the number of children increased dramatically between 1950 and 1960 (from 12,700 to 22,500). Nurseries were staffed by nursery carers trained in two-year vocational school courses.
1961–1972	From 1961 to 1972, vocational secondary schools are set up in Ljubljana, Koper, Celje and Idrija.
1965/66	School preparation activities (so-called "small school") are explicitly included in curricular guidelines, but are not compulsory.
1970s	<ul style="list-style-type: none"> – First moves towards decentralisation – Due to the high level of maternal employment in socialist Slovenia, the need for ECEC provision for children increases
1971	First legislation comes into force providing for age-integrated kindergartens. The Act on Educational and Care Activities for Pre-school Children is adopted. The basic tasks of pre-school education in kindergartens are: to promote the intellectual, personal and physical development of children; to prepare children for school; child nutrition, care and health; and to combine family and social education. In the kindergarten groups with children up to 2 years of age, the educational-care work is conducted by paediatric nurses; in the groups with children aged 2–3 years by nurses and pre-school teachers; and in groups with children over 3 years of age, by Kindergarten Teachers.
1979	The first national Curriculum for the Education and Care of Preschool Children is adopted, introducing uniform and compulsory guidelines for work in kindergartens.
1980	– Act on the Education and Care of Preschool Children is adopted.

	<ul style="list-style-type: none"> – 4 sections are established in kindergartens: up to the age of 2, 2–3 years, 3 years up to one year before school entry, and school preparation activities. Age-combined sections are also possible (from 2 years to the age of one year before school entry). – Developmental groups are established for children with special needs. – Teachers have to qualify at upper secondary or higher education institutions. – A vocational school for Childcare Workers is established. In the under-2 sections, either teachers or paediatric nurses are employed.
1979/80	<ul style="list-style-type: none"> – Kindergartens become part of the general education system by law. – The final year in kindergarten is made mandatory. – The first early childhood curricular framework particularly emphasises preparing children for school.
1981	The Educational Programme for the Preparation of Children for Primary School, aimed at children aged 6–7, or one year before entering school.
1985	The initial professional education (IPE) of early childhood core pedagogues for work with 4 to 6 year-olds is raised to university level.
1987	Children have a legal entitlement to a kindergarten place from the age of 11 months.
1993	ECEC centres (0 to 6 years) are placed under the auspices of the Ministry of Education.
1995	A White Book sets out conceptual strategies for a reform of the entire education system, including early childhood education and care.
1996	<ul style="list-style-type: none"> – School entry age is lowered from 7 to 6 years. – The final kindergarten year is no longer compulsory. – The legal basis for the ECEC sector is set out in the Kindergarten Act and in The Organisation and Funding of Education Act. – According to the 1996 Act on the Organisation and Financing of Education and Training, public kindergartens are established by local authorities.
1999	Introduction of the first national curricular framework for early childhood education.
2002–2006	<p>Following documents are adopted by the Council of Experts of the Republic of Slovenia for General Education</p> <ul style="list-style-type: none"> – Supplement to the Kindergarten Curriculum in ethnically mixed areas (19.12.2002) – Supplement to the Kindergarten Curriculum for work with Roma children (19.12.2002) – Curriculum Guidelines for Kindergartens in Programmes with Adapted Provision and Additional Special Needs Support for Children with Special Needs (17.4.2003) – Curriculum for adapted programmes for pre-school children (22.6.2006)
2008	Act on Amendments and Additions to the Act on Kindergartens introduced the position of childminder/home-based childcare provider for pre-school children.
2011	The White Paper is updated, including e.g. organisational aspects of the kindergarten, revising the curriculum, more emphasis on language development.
2012	Abolishment of free kindergarten for second and subsequent children as a result of government austerity measures.
2015	A new Kindergarten Act comes into force.
2016	Amendments to The Organisation and Funding of Education Act
2017	Act Regulating the Integrated Early Treatment of Preschool Children with Special Needs
2018 – 2019	<ul style="list-style-type: none"> – Short-term educational programmes (240 hours/year) for children not enrolled in a kindergarten are subsidised by the state. – From January 1, 2018, all employees working as an Early Childhood Teacher's Assistant continue their work in the position of "Early Childhood Teacher – Teacher's Assistant".
2021	A parent of two children is entitled to free kindergarten if both children are enrolled in kindergarten. The parents are exempt from paying for the younger child.

	Parents of three or more children are entitled to the benefit in any case, i.e. if the first and second children are enrolled in primary school and the third child is enrolled in kindergarten, the parents are exempted to pay the kindergarten fees for the last child (and each child thereafter).
2022	<ul style="list-style-type: none"> – 4th promotion title is adopted: “senior councillor”. The purpose of this fourth title is to establish additional motivation in the career development of professionals, extend the period of career advancement and enable the expansion and deepening of knowledge. Only Early Childhood Teachers can be promoted to the 4th title. – Early Childhood Teacher – Teacher’s Assistant can be promoted to the title “mentor” and “advisor” for the first time.
2023	The ministry and the relevant union agree on raising the salaries of Early Childhood Teachers – Teachers’ Assistants from the 22 nd to the 26 th salary grade. Meanwhile, the Institute March 8 (NGO) announced that more than 20,000 people had signed their petition to further raise Early Childhood Teachers – Teachers’ Assistants salaries.

ECEC system type and auspices²

Early childhood education and care in Slovenia is organised as an integrated system in the education sector. Since 1993, ECEC provision for children from 11 months to 6 years has been under the jurisdiction of the Ministry of Education³ (*Ministrstvo za vzgojo in izobraževanje*).

The government is responsible for legal foundations and general regulations as well as for the curricular framework of early childhood education. It is the task of the municipalities to provide sufficient places and implement the curriculum.

General objectives and legislative framework

The seminal White Paper of 1995 (with amendments of 2011) laid down a fundamental reform of the education system, including early childhood education. Above all, equal opportunities and equal treatment of all persons were emphasised.

The main objectives of kindergartens (*vrtec* = "little garden") are to provide age-appropriate learning and social experiences for every child. Kindergartens are seen as complementary to the family; they support families in creating appropriate developmental conditions for children. Not only learning mutual respect is important for children, but also developing their imagination and independence. The most important principles are democracy, pluralism, equal opportunities and diversity.

The overarching legislation in early childhood education are (1) the Kindergarten Act (*Zakon o vrtcih* 1996/2021) and (2) the Act on the Organisation and Financing of Education (*Zakon o organizaciji in financiranju vzgoje in izobraževanja* 1996/2023). The latter describes the principles of democracy and pluralism, autonomy, competences and responsibilities of professionals, and equal opportunities for children and parents. It emphasises diversity among children, the right to free choice and various aspects of children's motor and intellectual development. The law describes, among other things, the optimal development of an individual regardless of gender,

² The Eurydice country report on ECEC in Slovenia provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

³ Until June 2022: Ministry of Education, Science and Sport

ethnicity or social or cultural background; education for mutual tolerance; the development of linguistic competences, especially in the Slovenian language and the promotion of national identity.

ECEC entitlement and compulsory attendance

Since 1987, all children aged 11 months and over have a legal entitlement to a place in full-day ECEC provision. However, many municipalities have problems providing the necessary places. Children who have to be placed on the waiting list of a public kindergarten can be cared for in groups of six children by childminders (*varuh predšolskih otrok*), who are legally entitled to funds from the municipality (20% of the price of the programme in a public kindergarten) to co-finance parents' fees (Kindergarten Act 1996/2021).

Attending an ECEC setting is not compulsory. Compulsory primary schooling starts at the age of 6.

Main types of provision

According to national statistics, there were 992 kindergartens in Slovenia in 2022/23, attended by a total of 86,177 children (including 27,204 under 3 year-olds). They were cared for by 13,564 professionals (SiStat 2023c).

Kindergartens (*vrtec*) are early childhood education settings for children until they enter school. The youngest children are usually 11 months old and are admitted after the end of Parental Leave. Educational activities in full-day kindergartens usually last six to nine hours per day, in half-day settings four to six hours. 98% of children are enrolled for a full day (European Commission/EACEA/Eurydice 2019, 50). As a rule, kindergartens are open between eleven and 12 hours a day to accommodate parents' working hours. During holidays, some units may close. During this time, children are either cared for in a mixed-age group or attend a unit associated with the kindergarten.

Private kindergartens, including those with a specific educational approach such as Steiner or Montessori, must adhere to the same structural regulations and hygiene standards as public settings. In 2020/21 there were 45 such institutions. Bilingual facilities also exist on the Italian and Hungarian borders (Eurydice 2023, 4.5).

Short-term education programmes (*krajši programi*) are offered mainly in remote areas. They comprise 240 to 720 hours of ECEC per year and are primarily intended to increase the enrolment rates of 5 year-olds who do not otherwise attend an ECEC setting. Since 2018/19, the government has been subsidising attendance for 240 hours/year (European Commission/EACEA/Eurydice 2019, 62).

A maximum of six children can also be cared for in an **education and care family** (*vzgojno-varstvena družina*) registered with the Ministry of Education. In 2022/2023 however, there were only 22 children in four groups. Children can also be cared for temporarily at home by registered (334 in 2022/2023) childminders (*varuh predšolskih otrok*) whose training does not entitle them to implement the education programme, but who have a short-term training in childcare. However, they must be registered with the Ministry of Education. For children who cannot attend an ECEC centre due to illness, there is also the option of ECEC provision at the child's home (*predšolska vzgoja na domu*) (Eurydice 2023, 4.4).

Provider structures

Kindergartens can be run by public (municipalities) or private providers (established by individuals or legal entities). Sometimes concessions are granted by public provider networks to private providers to meet demand. The majority of early childhood centres (kindergartens) in Slovenia are public.

Almost all enrolled children (94.3%) attended a public kindergarten in 2022/23 (SiStat 2023d).

Table 1

Slovenia: Number of children in ECEC settings (kindergartens) by age-group and provider type, 2022/23

Provider type	Under 3 year-olds	3 to 6 year-olds	Total	
			Number of children	Relative share by provider type, in %*
Public	42,260	38,958	81,218	94.3
Private	2,879	2,080	4,959	5.7
Total	45,139	41,038	86,177

Participation rates in regulated ECEC settings

The youngest children attending an ECEC centre are usually 11 months old, marking the end of parental leave. The proportion of under 3 year-olds enrolled in an ECEC setting has increased significantly since 2005: While in 2005 24% of this age-group attended a kindergarten, by 2022/23 the attendance rate had reached 71,1%. The enrolment rates of children between the ages of 3 and 6 years also increased considerably: from 77% to 93.1%. The overall enrolment rate was 84.6% (SiStat 2023a).

According to Eurostat data, in 2022 almost half of the under 3s and almost 90% of the children over 3 years spent more than 30 hours in an ECEC setting (see Table 2).

Table 2

Slovenia: Enrolment rates in ECEC centre-based settings by age-group and duration of attendance, 2005–2022

Year	Weekly hours of attendance	Under 3 year-olds in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	2	10
	Over 30 hours	22	67
	No enrolment in ECEC	76	23
2010	1 to 29 hours	4	14
	Over 30 hours	33	77
	No enrolment in ECEC	64	9
2015	1 to 29 hours	2.5	8.8
	Over 30 hours	34.9	82.1
	No enrolment in ECEC	62.6	9.1
2022	1 to 29 hours	2.6	6.4
	Over 30 hours	49.7	89.1
	No enrolment in ECEC	47.7	4.6

Financing and costs for parents

In 2022, 5.69% of GDP was spent on education, 1.10% of this for the early education sector (0 to under 6 years) (SiStat 2023g).

Parents' fees for kindergarten vary greatly across the country. This is primarily due to staff costs, which are based on qualifications and working hours and account for more than 80% of the costs. A survey showed that the costs for the under-3s are currently highest in Brežice (€624 per month), Radovljica (€609.04), Ig (€598.94), Žalec (€591.34) and Ormož (€588.47) (Celje.info 2022).

For all children, at least 23% of the costs are subsidised by municipalities (European Commission/EACEA/Eurydice 2019, 61). The costs are covered by public funds, funds from the providers, donations and income-based parental contributions. Parents with two children attending a kindergarten pay only for the older child, each additional child is then free of charge.

Short-term educational programmes are also free of charge for parents. Otherwise, fees are set according to income: In 2022/23, parents in lowest income bracket (up to €221,46 per month) receive €135,44 childcare allowance for the first child and have to pay nothing for the programme, whereas parents in the highest income bracket (from €1.008,94 to €1.218,08 per month) receive €27,11 and have to pay 77% of the programme price (Gov.SI 2023a, 2023b, Eurydice 2023, 3.1).

In 2023/24, the average cost of all-day provision for under 3 year-olds in a public kindergarten is €585.37, for over 3 year-olds €451.91, in multi-age groups €473.82, in developmental classes €1,130.07 and in Education and care families €512.90 (Gov.SI 2023c). Private kindergartens set the fees themselves and receive funds from the municipalities amounting to 85% of the costs of public kindergartens. This means that the parents' fees are subsidised, but can still differ from those of a public institution in the same municipality.

In 2022, a couple with two children spent about 7–8% of their net household income on childcare costs⁴ (OECD.Stat 2023).

⁴ The calculation is based on the following fictitious model: two parents in full-time employment (average income); two 2 and 3 year-old children in full-time care; relevant care allowances taken into account.

Staff to child ratios and group size

The number of groups and the number of children per group are determined by the kindergartens in agreement with the provider and legislative requirements. Children are divided into two age groups: the first with children from 11 months to 3 years and the second with children from 3 to 6 years or until they start compulsory school. Children of one age group, children only from the first or second age group or mixed groups from both age groups can also be combined.

The group sizes vary depending on the age composition: in same-age groups with children under 3 years of age there are nine to 12 children, in mixed-age groups there are at least seven and a maximum of ten children. Same-age groups of children between 3 and 4 years have a minimum of 12 and a maximum of 17 children; groups between 4 and 6 years have a minimum of 17 and a maximum of 22 children. Mixed-age groups between 3 and 6 years have a minimum of 14 and a maximum of 19 children. A group with all age groups has a minimum of 10 and a maximum of 17 children. Group size is reduced when children with special needs are present – a maximum of two children with special needs may be in a group (Eurydice 2023 4.2, 12.1).

In certain circumstances, the maximum number of children in a group may be increased by two, which is already regular practice in many cases (European Commission/EACEA/Eurydice 2019, 86).

In a full-day programme, two professionals are present at the same time in a group with under 3 year-olds for at least six hours, and for over 3 year-olds for at least four hours. In half-day programmes, the times of joint attendance are reduced to three or two hours. During shared attendance, the staffing ratio is 1:7 in groups with 3 year-olds and 1:11 or 1:12 in groups with over 3 year-olds.

According to national statistics for 2022/23, a kindergarten was attended by an average of 86.9 children, and the staff to child ratio averaged 1:6.8 (SiStat 2023e).

Curricular framework

In 1999, the Council of Experts of the Republic of Slovenia for General Education introduced a national curriculum for early childhood education. It was created – in cooperation with experts – as an open and flexible document, which contains possibilities for adaptation to different circumstances. The curriculum is not prescribed in detail: With reference to the national curriculum, each institution develops its own individual educational plan. Since then, the Council of Experts has published various amendments and supplementary documents, e.g. on working with Roma children, working in ethnically mixed areas, guidelines on caring for children with special needs and guidelines for the inclusion of immigrant children in kindergartens and schools (Expert Council of the Republic of Slovenia for General Education 2002a, 2002b, 2003; Education Institute of the Slovenian Republic 2012). Also, the kindergarten curriculum to be used in developmental groups was adapted in 2006 and in 2016 the supplement for children with autistic disorders and children with a long-term illness (Expert Council of the Republic of Slovenia for General Education 2006, 2016a, 2016b). The curriculum is mandatory for both public and private kindergartens. It is based on the principles of democracy and pluralism, equal opportunities and diversity, and emphasises cooperation with parents and the community.

The National Curriculum applies to work with both the under 3 year-olds and older age groups and covers six areas of learning: (1) physical activity, (2) language, (3) the arts, (4) society, (5) science and (6) mathematics. Separate objectives and illustrative examples are given for each of these learning areas. The content can be adapted to the daily routine and care is taken to alter-

nate guided activities with free play. However, no specific time frames are given for the individual areas; the professionals are expected to use their own methods. They draw up an annual work plan (on which monthly and/or weekly plans are developed) in which their activities in the group are recorded.

The curriculum's overarching goals are: learning to understand and respect others and oneself; developing emotional competence; fostering perception, expression, curiosity, inquisitiveness and imagination; intuition and independent thinking; communicative skills and artistic expression; initial reading and writing skills; motor skills. Overall, the education plan emphasises the individuality of the children and their freedom of choice as well as the importance of play.

Although Kindergarten- and Basic School curricula were created in the same comprehensive reform in the 1990s and include similar topics, they differ considerably. The Kindergarten curriculum is more flexible with an open structure while the Basic School curriculum is subject-based with compulsory areas.

Digital education

Even though the acquisition of digital knowledge and skills usually begins in primary school, the area of technology does feature in the early education curriculum. When the curriculum was created in 1999, examples were included to motivate children to handle digital objects (at that time digital scales, thermometers etc.) (Ministry of Education, Science and Sport 2021a). Today, children take their first steps into the digital world by playing computer games, drawing digitally or taking digital photos (Wechtersbach 2008).

Since Slovenia is in the middle of national curricular renewal, the Kindergarten Curriculum will also undergo this process. The starting points for a revised Kindergarten Curriculum (Cotič Pajntar, Marjanovič Umek and Zore 2022, 14) highlight "digitally supported learning, which makes sense to include thoughtfully and professionally in work with children, but only in cases where the use of modern technology also means added value to the use of other approaches to promote children's development and learning. This also requires greater digital literacy of professionals in the kindergarten".

Monitoring – evaluation

Child-related evaluation

The curriculum does not specify knowledge or skills that children should master by a certain age. However, the professionals observe the children and encourage them to learn. They communicate progress verbally to parents. Individual records of the children's development are in most cases kept for children with special needs, however more and more core practitioners tend to use formative monitoring for all children in a group.

Centre-based international evaluation

The head/leader of each ECEC centre is legally obliged to carry out one self-evaluation per year. This serves the quality development of the setting itself and is not forwarded to higher authorities. It is up to each ECEC setting to decide exactly how self-evaluation is carried out. This is challenging for the staff as there are no guidelines for implementation which are focused on process quality in kindergarten. Only some uniform tools (reference frameworks and indicators) for carrying out self-evaluation and introducing improvements in pedagogical work exist, with

no focus on specifics of the work in kindergarten. As a rule, the staff, the parents' board (European Commission/EACEA/Eurydice 2019, 40) and children take part. The kindergarten council, which exists in every institution, learn about the results and can propose measures. The focus should be primarily on the evaluation of the educational process and the findings can be compared with those of the external evaluation. Instruments, methods (e.g. questionnaires, rating scales) and the areas that are evaluated can be chosen by the ECEC settings themselves. In most cases, the professionals assess the implementation of the curriculum and the management assesses structural aspects, team cooperation and the area of staff CPD. Depending on the institution, parent surveys are also conducted.

External evaluation

The external evaluation of the educational system and educational organisations in Slovenia takes place in parallel with the self-evaluation of educational institutions.

The external evaluation of the educational system takes place in the following ways:

- Through national evaluation studies that last from 12 to 24 months
- Through large-scale international comparative assessments carried out under the auspices of the OECD and the International Association for the Study of the Effects of Education (IEA)
- Through formal procedures for updating educational work in Slovenia
- Through the external evaluation of schools, which is carried out by the Inspectorate for Education and Sports. The aim of the school inspection is to ensure compliance with the law and thereby protect the rights of the participants in education.
- Through the external evaluation of educational organisations responsible for assessing the quality of work in kindergartens (space, staff, programme) and schools under the ministry of education (Gov.SI 2023d).

External evaluations also include the accreditation process that private institutions have to go through.

Inclusion agenda

Children with special educational needs and disabilities

The concept of inclusion in ECEC is underpinned by legislation (*Zakon o celostni zgodnji obravnavi predšolskih otrok s posebnimi potrebami*, 2019). The main focus here is on early identification of difficulties and support for families (European Commission 2020, 64). Children with special educational needs generally attend mainstream institutions.

Placement committees at the National Institute of Education Slovenia and counselling services decide on the best way to support children with special needs (including children with learning and physical disabilities as well as children with autism, speech disorders and chronic illnesses) and their parents. Children can be placed in regular or developmental groups (*razvojni oddelek*). In both cases, their needs are addressed individually. A separate educational plan is prepared for each child. Depending on the needs, an individual support worker is assigned to the child on a temporary or full-time basis. In addition, group size in developmental groups is limited to six children and one child is supported by a relevant specialist (European Commission 2020, 60f). In regular groups, a maximum of two children with special needs can be included.

The National Curriculum addresses in detail the concerns and support of children with special needs through several additional documents (European Commission 2020, 76).

In Slovenia, there are also several separate support institutions; these take in kindergarten children who cannot be adequately supported in mainstream institutions.

In 2022/23 there were 295 children under 6 with disabilities enrolled in a primary school setting; most common were multiple disabilities (93) and speech and language problems (109) (SiStat 2023h).

Children with a migration background – Children from Roma communities

According to Eurostat, 8.2% of Slovenia's population in 2022 had a non-Slovenian citizenship, of which the majority (87.7%) came from countries outside the EU27(2020). In the group of under 5 year-olds, these proportions were 8.4% and 95.2% respectively (Eurostat 2023c).

National statistics indicate that in 2022/23, 8.2% of children (7,027) in kindergartens had a non-Slovenian citizenship; 47.5% of these were children under 3 years of age, 52.5% were between 3 and school entry age (SiStat 2023d, f, own calculations). 15.4% of the non-Slovenian children held a Kosovan citizenship, followed by those with Macedonian (8.7%), Serbian (5.3%) and Bosnia-Herzegovina citizenship (5.2%). 4.8% were citizens of other EU countries (SiStat 2023i, own calculations).

The rights of ethnic minorities are enshrined in law and included in supplements to the curriculum. The Roma Community Act in the Republic of Slovenia (*Zakon o romski skupnosti v Republiki Sloveniji*, 2007) sets out the rights of Roma. In the Roma Education Strategy (Ministry of Education, Science and Sport 2021b), the measures are mainly focused on increasing the participation of Roma children in kindergartens through the introduction of free and shorter kindergarten programmes in the year before school entry for children who are not enrolled in kindergarten; revision of the Kindergarten Curriculum; cooperation with parents; inclusion of Slovene and Roma culture and language in all programmes; providing organised transportation for all Roma children who are enrolled in full-day kindergarten programmes; employing Roma parents as drivers or children's companions; providing quality children's literature in the Romani language. There is also a call to consider co-financing informal preschool education activities (e.g. TOY library).

To strengthen the connection with Roma communities, home visits are also carried out to emphasise the importance of early childhood education (European Commission/EACEA/Eurydice 2019, 120). The *TOY for Inclusion* project, implemented in nine EU countries, including Slovenia, focuses primarily on younger children from Roma families, from families with a migrant background or from ethnic minorities. It focuses in particular on flexible solutions to reach these families and their children through low-threshold meeting centres (European Commission 2020, 76, 92). The recent National programme of measures of the Government of the Republic of Slovenia for Roma for the period 2021-2030 (Gov.SI 2021) defines the following strategic goals to be achieved by 2023: higher enrolment rates of Roma children in ECEC programmes, with sub-goals: acquisition of basic social and language skills before entering primary school; strengthening the knowledge of the Slovenian language, as well as the Romani language and culture among Romani children; regular participation of Roma children in learning processes and completed primary school education.

On the borders with Italy and Hungary there are bilingual ECEC settings where children learn Slovene either as a first or second language. For such ethnically mixed areas, a supplement was made to the curriculum so that these institutions receive extra funding for the further training of professionals. In addition, they usually have smaller group sizes and the staff have higher qualifications. For children with a migrant background, it is also generally recommended that they should be able to speak their family language in the ECEC settings (European Commission/EACEA/Eurydice 2019, 115f).

Parental leave arrangements⁵

Maternity leave (*materinski dopust*) is granted for 15 weeks, four weeks before and 11 weeks after birth. 15 days are compulsory. The full average salary from the previous 12 months is paid. Allowances and extras are not included. There is no upper limit, the lower limit is at least €628.61. If the mother is unable to care for the child, a maximum of 77 days of Maternity leave after the birth can also be transferred to the father or another person caring for the child.

Fathers are entitled to 15 fully paid calendar days of **Paternity leave** (*očetoovski dopust*), up to a maximum of 2.5 times the average gross salary per month of the previous year (€5,059,80). It can be taken full or part time until the child is 3 months old.

Parental leave (*starševski dopust*) is granted for 160 fully paid calendar days per parent under the same conditions as for paternity leave. 100 days may be transferred to the other parent. The specific use of the Parental leave must be recorded in writing 30 days before the end of Maternity leave. Parental leave must be taken as a continuous full-time or part-time leave: if taken in part time, the duration is not extended proportionately. One of the parents must take it immediately after Maternity leave. Up to 60 non-transferrable days per parent may be taken at any time until the child's age of 8 (full time or part time), but not more than twice a year, with each section lasting at least 15 days. If combined, Parental leave may be taken by both parents at the same time (20 hours per week for the mother, 20 hours per week for the father).

On average, roughly 93% of fathers took close to 15 days of Paternity leave in 2022. While most mothers take Parental leave, the share of fathers increased from 4% in 2021 to 9% in 2022. Reasons for fathers' persistently low participation may be found in the traditional division of tasks within the family.

Current challenges for the ECEC system in Slovenia

Country expert assessment by Jerneja Jager

1. The main challenge facing the ECEC system in Slovenia is the **lack of staff**, namely the lack of qualified Early Childhood Teachers and EC Teacher Assistants. Kindergartens from various Slovenian regions report that it is difficult to recruit suitable staff when they advertise vacancies. Very often, these are candidates without relevant qualifications and those who are qualified apply for vacant positions less often. The general reason is that salaries are too low for the very responsible work, although the Union of Education, Science and Culture of Slovenia (SVIZ) has agreed with the government on raising the salaries of EC Teacher Assistants. In general, however, field experts believe that the work of EC Teachers and EC Teacher Assistants is underpaid.
2. In 2021, with the Recovery and Resilience Plan (RRP), Slovenia committed to **revising the national curriculum** documents. This began in 2022 with the adoption of the starting points of the renewal and is expected to last until the end of 2025, when all curricula will be revised. The Kindergarten Curriculum has not changed since it was adopted in 1999. The process of modernising early childhood education and care is likely to pose some challenges. Changes to curriculum documents usually take place after conceptual/theoretical foundations are developed and prepared, followed by changes in the system and only then by substantive (curricular) solutions. In the case of Slovenia, however, all three processes are

⁵ The brief overview in this section is based mainly on the country note for Slovenia by Nada Stropnik in the *International Review of Leave Policies and Research 2023* (see *References*).

taking place at the same time. You could even say that we started at the end, which might result in inadequate and thoughtless solutions.

3. Modernising the Kindergarten Curriculum foresees that alongside schools, ECEC will also have a greater focus on **digitalisation**. However, it is not clear what this means: does it mean that staff will be educated to develop digital skills or that kindergartens will be digitally better equipped, or that young children will spend (more) time behind digital screens?

One of the aims of the *Revision of educational programmes project with the renewal of key programme documents* is: “to equip children in kindergartens and staff with competences important for facing current and future challenges (competences for sustainable development, digital competences, entrepreneurship competences that include financial literacy, creativity, collaboration and experiential learning), to strengthen the resilience of the education system (Education Institute of the Slovenian Republic 2022). There is vocal concern that the traditional focus on different kinds of play between children will be transferred to digital education/screens.

4. The enrolment of **vulnerable groups in ECEC programmes** is still a challenge, especially in the case of Romani and migrant/refugee children. ECEC centres started to offer hastily put together short programmes for children not enrolled in ECEC. There is a tendency to think that they were introduced only to increase the statistical data of enrolment of 4 and 5 year-old children in ECEC programmes, since Slovenia still did not meet the 95% Bologna target for of 4 and 5 year-olds (in the last 5 years, national data report somewhere between 93% – 94.5%).
5. The enrolment rate of under 3 year-olds is very high compared to other EU countries (71.1% in 2022/23, SiStat 2023a), however the **child: adult ratio** in these groups (under 3 years) remains too high.
6. **Parental fees** are among the highest in Europe, and Slovenia needs to do something in this respect in order to make early childhood education accessible to all children/families.
7. Legislation demands that each ECEC leader is responsible for annual **self-evaluation**. However, no clear instructions are given on how to do this. Therefore, it would be essential that the revised Kindergarten Curriculum include a chapter on self-evaluation.
8. There is a high number of deferred primary school enrolments: from 5.3% in 2014 to 11.1% in 2022/23 (*data received by email from Ministry of Education*). There are several challenges that lead to this situation. The most obvious is the lack of preparation on behalf of the school for children (and their families) starting school. The majority of schools are not very active in terms of getting to know their future pupils, in terms of getting to know about the work that kindergartens and what Kindergarten Teachers are doing, about the approaches kindergartens are using, and so on. There is low or no pedagogical continuity between institutions, inter-institutional meetings (professional learning communities composed of Early Childhood and Primary School Teachers) are very rare. There are also very few opportunities for staff of both institutions to observe a colleague in the other institution, and to reflect jointly on what they have seen, what could be transferred to the other educational level.
In order to ensure a smooth **transition between one learning environment and another**, it would be necessary to advocate and find ways for the Kindergarten Teacher to move between schools⁶ as this provides meaningful support for children in their first year of schooling, and (on the other hand) enables the Kindergarten Teacher to sustain contact with her primary professional role.

⁶ Early Childhood Teachers accompany children from kindergarten to school, stay with them for one school year, and then return to work in the kindergarten. If the children are distributed between different schools, the EC Teacher works in the one admitting the majority of school beginners.

On the other hand, there are also many different parental experiences with their own schooling, and schools should be more sensitive when approaching towards parents.

9. The final challenge – also highlighted in the 2017 SEEPRO study – is still relevant: **Initial professional education** will need to be more fully connected with practice and to include the changes occurring in contemporary ECEC, such as involving diverse families and communities in the life of ECEC settings. This demands intensive team working, critical reflective thinking, and a life-long approach towards learning and professional development. This kind of initial professional education needs to focus not only on knowledge transmission but also to strengthen the processes that support the construction of professional values and skills.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022/23, the total population in Slovenia was 2,107,180. It has thus increased continuously over the last 20 years (2000: 1,987,755; 2005: 1,997,590; 2010: 2,046,976; 2015: 2,06,2874; 2020: 2,095,861) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries (EU27+6) was in France (1.84), and the lowest in Malta (1.13). At 1.64, Slovenia was above the EU27 average (Eurostat 2023c⁷).

Children under age 6

Table 4

Slovenia: Number of under 6 year-olds in the total population, 2022

Age	Number of children
Under 1 year-olds	18,968
1 year-olds	18,866
2 year-olds	19,582
3 year-olds	19,932
4 year-olds	20,685
5 year-olds	20,820
Total 0 to under 6 year-olds	118,853

Source: Eurostat 2023a

⁷ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

The proportion of children under 3 years of age in the total population was 2.7% in 2022, and that of children under 6 years of age was 5.6%. While these shares were below the then EU15 average in 2000, they were slightly above it by 2015. In 2022, they correspond with the respective EU averages (see *Table 5*).

Table 5

Slovenia: Distribution of under 6 year-olds in population by age-group compared with EU averages, 2000 to 2022, in %*

Year	Comparison Slovenia/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds

Single households with children under age 6

More than three quarters (77.3%) of households with children under 6 in Slovenia were couple households in 2021. Single parent households accounted for only 0.8% – almost exclusively single mothers (0.7%).

Table 6

Slovenia: Households with children under age 6, 2021

Household type	Total households	Share of all households, in %*
Total households	199,800	
Couple households	154,500	77.3
Other types of households	43,700	21.9
Total single households	1,600	0.8
Single households, women	1,400	0.7
Single households, men	200**	0.1

Employment rates of parents with children under 6 years of age

In Slovenia, in 2022, the overall employment rate for men (15-64 years) was 79.2% and for women 72.9% (Eurostat 2023j).

In 2022, 79.6% of women and 91.3% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), both of the shares of employed fathers and mothers were well above the EU-average (63.6% and 87.2% respectively) (Eurostat 2023g, own calculations).

⁸ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Table 7a

Slovenia: Employment rates of parents with children under 6 compared with other EU countries, 2010 and 2022

	2010	
	Mothers in %	Fathers in %
Slovenia	78.7	91.1
Highest rate of employment in 27 EU countries ⁹	Denmark: 82.7	Netherlands: 93.4

Children at risk of poverty or social exclusion¹¹

In 2022, 9.5% of children under 6 were at risk of poverty or social exclusion, which was significantly lower than the EU27 average (23.3%). The share of all persons at risk of poverty or social exclusion in the total population was 13.3%, compared to the European average of 21.6%. 3.8% of the under 6 year-olds and 3.1% of the total population suffered from severe material deprivation in 2020 (EU averages 6.1% and 4.3% respectively) (Eurostat 2023h, i).

Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-eqf>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the author

Ana Ancheta-Arrabal, PhD, is University Professor in the Department of Comparative Education and History of Education of the University of Valencia. She qualified as an Early Childhood Education Teacher in 2001, graduated in Pedagogy in 2004, and was awarded a doctoral degree in 'Education in Political and Social Studies' in 2010. Her dissertation with European Mention opened a line of research focused in Early Childhood Education and Care from a comparative perspective in Spain. Over the past two decades she has contributed to various national and international networks and projects.

1. ECEC governance in Spain

In Spain, an integrated approach to Early Childhood Education and Care (ECEC) was adopted by the 1990 Organic Law on Education (*Ley Orgánica General del Sistema Educativo* – LOGSE). Since that time, ECEC has come under the auspices of the Ministry of Education, currently called the Ministry of Education and Vocational Training (*Ministerio de Educación y Formación Profesional* – MEFP). This national law explicitly recognised that, from early childhood onwards, ECEC provision constitutes the first stage of the Spanish education system (ISCED level 0¹). It precedes compulsory education, which starts at the age of 6. Children aged 0–5 years are enrolled in ECEC, including those with special educational needs and those who are socially disadvantaged. ECEC is governed by the principles of normalisation and inclusion, ensuring non-discrimination and equal access to and continuity in the education system. To promote the wellbeing of children and further eliminate inequalities, a new Ministry of Youth and Childhood was established in November 2023 (*Ministerio de Juventud e Infancia*).

Spanish ECEC is divided into two three-year cycles: the first for children aged 0–2 years, and the second for children aged 3–5 years. ECEC can be provided either in separate settings (*centros incompletos de primer ciclo* and *colegios de educación infantil y primaria*, respectively) or in combined and integrated/unitary settings for children aged 0–5 years (*escuelas infantiles*).

Centre-based settings are the main form of provision, but home-based ECEC provision is also an option within the first cycle (0–2 years), taking place at the home of the service provider (childminder). It exists in only two of the 17 autonomous communities: the Community of Madrid and the Chartered Community of Navarre (Eurydice 2023a).

The state and regional educational bodies establish the educational guidelines that apply to both cycles of ECEC. The first cycle (ISCED level 010) is the responsibility of the regional Education Departments, except in the autonomous community of Galicia, where responsibility is shared with the Department of Social Policy. The second cycle (ISCED level 020) falls exclusively under the education departments. In the autonomous cities of Ceuta and Melilla, the Ministry of Education and Vocational Training directly controls both cycles.

The Spanish education system operates as a decentralised governance system and responsibilities are distributed on four levels: central government, regional government, local authority level, and ECEC centre level (Eurydice 2023a). This means that the education departments of the autonomous communities are responsible for the running of pre-primary education in their territories; the local authorities contribute to the organisation of the first cycle of ECEC (0–2 years); and the centre leaders of ECEC institutions are responsible for managing them in economic, material and personnel terms, as set out in the Organic Law on Education 2/2006 (LOE), as amended by the Organic Law on Education 3/2020 (LOMLOE).

The education administrations of the autonomous communities are in charge of regulating the admission of children to both cycles of ECEC for public and publicly subsidised private settings, with two aims:

- To guarantee the right to education and access under conditions of equality and freedom of choice for parents or guardians
- To maintain an adequate and balanced distribution of children, without discrimination on ideological, religious, moral, social, sex, race or birthplace grounds. In the case of children

¹ International Standard Classification of Education 2011 (UNESCO Institute for Statistics 2012).

with specific needs for educational support, the educational administrations will establish a balanced proportion of these students who must be enrolled in either the public or the publicly funded private centres. Private settings have their own regulations.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

The 1990 Organic Law on Education (LOGSE) not only made provision for a complete restructuring of the education system for children aged 0 to 5 years but also for a reform and upgrading of the professional qualifications needed to work in this field. Since 1990 there are now two main groups of professional workers in early years settings:

- **Early Childhood Education Teachers** (*Maestro especialista en educación infantil*), with a Bachelor's degree in pre-primary teaching (*Grado universitario de Maestro en Educación Infantil*)
- **Senior Technicians in Early Childhood Education** (*Técnico superior en educación infantil*) with an advanced vocational training diploma in early childhood education (*Ciclo Formativo de Grado Superior en Educación Infantil*).

In the first group, maestros are professionals who have a university degree in pre-primary education or in primary school teaching with a specialisation in pre-primary education (both corresponding to ISCED level 6). In the first cycle (*primer ciclo*, 0–3) professionals in the second group holding the Advanced Vocational Training Cycle in Early Childhood Education diploma (ISCED level 5) may teach or support maestros, as determined by the education authorities.

Broadly speaking, only the *maestros* work as group leaders in the **second cycle** of early childhood education (*segundo ciclo*, 3–5), whereas in the first cycle, either *maestros* or Senior Technicians in ECE may take on the role as core practitioner with group responsibility. Nevertheless, the second cycle classes that are taught by *maestros* can be supported by school teachers in other specialities/subjects if necessary or even can be assisted by *técnicos* if permitted by the education authorities. In infant-toddler centres for under-threes, at least one *maestro* must be part of the centre team. Following LOGSE (Organic Law 1/1990), the auxiliary worker training scheme was abolished.

Moreover, since the 2006 Organic Law on Education (*Ley Orgánica 2/2006 de Educación*, LOE), different types of professionals are responsible for support in the fields of education and/or health of young children. They are specialists who have been specifically trained to perform such duties. Early childhood provision may have all or some of these professionals on their staff depending on the institution's needs and/or features (Royal Decree 1630/2006) – see *Chapter 2.5* for details of the specialist support staff.

Moreover, there may be a number of persons in **auxiliary roles** (see also *Table 1*).

Technicians in Education: Persons with a second-level vocational training certificate or equivalent qualifications who provide additional support to pupils with disabilities, assisting them on the school bus, helping them with their daily personal care and in the dining room, and in other similar situations. They also monitor hallways during classroom changes, students' toilets, classrooms (when the teacher is absent) and school playgrounds (during breaks) in coordination with the responsible teaching staff for such activities.

Infant Assistants help other staff working with pre-primary education pupils, especially in relation to their diet, their well-being and hygiene in the classroom.

Finally, there are professionals in charge of **administration** and the general **services** in schools. These include: administrative staff; library staff; ICT staff and service staff.

Publicly funded private schools and private schools employ their personnel by means of contracts. The categories of non-teaching personnel in private ECEC centres related to educational activities, administration and services are established in the Collective Agreements of publicly funded private schools and private schools respectively, both applicable throughout Spain.

Table 1 shows the main types of ECEC staff in centre-based settings in Spain and also categorises the **core practitioners** (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this chapter).

Table 1

Spain: ECEC staff in centre-based settings

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<p>Early Childhood Education Teacher² <i>Maestro especialista en educación infantil</i></p> <p><i>Profile:</i> Early Childhood Pedagogy Professional</p> <p><i>In some cases:</i> Pre-primary and Primary Education Professional</p>	<p>Age-integrated early childhood education centre <i>Escuela de educación infantil unificada</i> 0–5 years³ (1st and 2nd cycle)</p> <p>First cycle early childhood education centre (separate nursery setting) <i>Escuelas de educación infantil primer ciclo</i> 0–2 years</p> <p>Second cycle ECE centre <i>Escuela de educación infantil segundo ciclo</i> 3–5 years</p>	<p>Core practitioner with group responsibility</p> <p>Centre head</p>	0–6 years	<p>4 years at university <i>Award: Bachelor's degree (Grado universitario de Maestro en Educación Infantil)</i></p> <p>ECTS credits: 240 EQF level: 6 ISCED 2011: 6</p>

² Please note that, according to Spanish regulations, Primary education teachers can also work as an ECE Teacher and their profile is then Pre-primary and Primary Education Professional.

³ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Spain): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
	<p>Second cycle early childhood education unit in primary school <i>Colegio de Educación Infantil y Primaria</i> 3–5 years (in several Autonomous Communities (e.g. Comunidad Valencia, País Vasco) as from 2 years)⁴</p>			
<p>Senior Technician in Early Childhood Education <i>Técnico superior en educación infantil</i></p> <p><i>Profile:</i> Early Childhood Pedagogy Professional</p>	<p>Age-integrated early childhood education centre <i>Escuela de educación infantil unificada</i> 0–5 years (1st and 2nd cycle)</p> <p>First cycle early childhood education centre (separate nursery setting) <i>Escuelas de educación infantil primer ciclo</i> 0–2 years (1st cycle)</p> <p>Coordinated first cycle nursery units <i>Unidades de primer ciclo en centros separados</i> 0–2 years</p> <p>Second cycle ECE centre <i>Escuela de educación infantil segundo ciclo</i> 3–5 years</p>	<p>Core practitioner with group responsibility (only for work with 0–2 year-olds)</p> <p>Otherwise: Qualified co-worker⁵</p>	<p>0–2/3 years 0–5/6 years</p>	<p>1,600 hours non-tertiary, post-secondary vocational <i>Award: Diploma/Advanced Vocational Training Cycle in Early Childhood Education (Ciclo Formativo de Grado superior en Educación Infantil).</i></p> <p>ECTS credits: 120 EQF level: 5 ISCED 2011: 4</p>

⁴ see Ancheta-Arrabal et al. 2022

⁵ Occasionally, in some regions they can work to support ECE teachers in early childhood units in primary school for children aged 2–5 years (Ancheta-Arrabal et al. 2022).

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
	Second cycle ECE unit in primary school <i>Colegio de Educación Infantil y Primaria</i> 3–5 years			
Senior Technician in Sociocultural and Tourism animation <i>Técnico superior en animación sociocultural y turismo</i>	All ECEC settings, but not necessarily on-site	Qualified co-worker	All ages	Post-secondary Diploma/ Advanced Vocational Training Cycle in socio-cultural and tourism animation ECTS credits: 120 EQF level: 5 ISCED 2011: 4
Senior Technician in Social Integration <i>Técnico superior en integración social</i>	All ECEC settings, but not necessarily on-site	Qualified co-worker	All ages	Post-secondary Diploma/ Advanced Vocational Training Cycle in social integration ECTS credits: 120 EQF level: 5 ISCED 2011: 4
Technician in education <i>Técnico en educación</i>	Age-integrated early childhood education centre <i>Escuela de educación infantil unificada</i> 0–5 years (1st and 2 nd cycle) First cycle early childhood education centre (separate nursery centre) <i>Escuelas de educación infantil primer ciclo</i> 0–2 years Second cycle ECE centre	Short-term qualified co-worker	All ages	6 months (100-150 hours depending on the autonomous community) vocational education + 1-2 months (100-150 hours) in a work placement. ECTS credits: n/a ⁶ EQF level: 3 ISCED 2011: 3

⁶ n/a not applicable

Job title	Main ECEC work- place settings and age range	Main roles and positions	Main age- range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
	<p><i>Escuela de educación infantil segundo ciclo</i> 3–5 years</p> <p>Second cycle ECE unit in primary school) <i>Colegio de Educación Infantil y Primaria</i> 3–5 years</p>			
<p>ECE Teacher’s Assistant <i>Técnica / Auxiliar en educación infantil</i></p>	<p>Age-integrated early childhood education centre <i>Escuela de educación infantil unificada</i> 0–5 years (1st and 2nd cycle)</p> <p>First cycle early childhood education centre (separate nursery unit) <i>Escuelas de educación infantil primer ciclo</i> 0–2 years</p>	Short-term qualified co-worker	0–5/6 years	<p>6 months (100-150 hours depending on the autonomous community) vocational education + 1-2 months (100-150 hours) in a work placement.</p> <p>ECTS credits: n/a EQF level: 3 ISCED 2011: 3</p>
<p>Health Aid Technicians or Clinical Auxiliaries <i>Técnicos sanitarios o asistentes de clínica</i></p>	All ECEC settings, but not necessarily on site	Short-term qualified co-worker	All ages	<p>6 months (100-150 hours depending on the autonomous community) vocational education + 1-2 months (100-150 hours) in a work placement.</p> <p>ECTS credits: n/a EQF level: 3 ISCED 2011: 3</p>

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

In the relevant Spanish legislation, ECEC settings for 3 to 5 year-olds come under the umbrella term of ‘schools’ because they are mostly located in primary schools, whereas settings for the under threes and the small number of age-integrated 0–5 settings are referred to as ‘early childhood centres’. The terminology in this report will either refer to ‘early childhood education settings’ in general (0–2 *and* 3–5 years) or use the specific terms ‘first cycle early childhood centre’ (0–2) or ‘second cycle early childhood centre’ or ‘school’ (3–5) according to the context.

According to Article 34 of the Royal Decree 82/1996, which regulates early childhood and primary school education, and Article 33 of the Royal Decree 83/1996, the single-member governing bodies of **public early childhood education settings** are the members of the management team, most of whom also teach children. All members of the management team and any other positions defined by the educational authorities are career civil servant teachers and therefore their initial training is similar to that of other civil servant teachers. These include: Centre/School Head; Head of Curriculum; secretary; any other posts established by the education authorities such as Deputy Heads).

According to the relevant legislation (LOE 2006, LOMLOE 2020), 1st and 2nd cycle ECE setting management must combine organisation, administrative management, resource management and pedagogical leadership and development by means of a collaborative approach, seeking a balance between administrative and pedagogical tasks

Article 132 of LOE 2006, as amended by LOMLOE 2020, establishes that the competences of the leaders in early childhood education settings and heads in primary schools are as follows:

- To represent the centre/school and inform the educational authorities about the approaches, aspirations and needs of their educational community
- To supervise and coordinate the activities of the centre/school without detriment to the powers of the Teachers’ Assembly and the School Council
- To be responsible for the pedagogical supervision, promote educational innovation and encourage plans in order to attain the goals of the School Development Plan
- To ensure that legislation and other regulations in force are observed
- To serve as the leader/head for the entire educational staff
- To promote a sense of community in the institution
- To promote collaboration with families, with institutions and with organisations that support the centre's relations
- To promote internal evaluations and collaborate in external evaluations and in the evaluation of the teaching staff

- To call and preside over the academic events and meetings of the School Council and the Teachers' Assembly and implement the agreements reached by such bodies
- To contract works, services and supplies, as well as authorise expenses in accordance with the centre/school budget, order payments and endorse the official school certifications and documents
- To formulate proposals to the education authority as regards the appointment and dismissal of members of the management team, subsequent to notification to both the Teachers' Assembly and the School Council
- To approve the School Development Plan, the management project and the centre/school organisational and operational rules
- To decide upon the admission of children
- To approve the allocation of additional resources
- To determine guidelines for the collaboration, for education and cultural purposes, with local authorities, other educational institutions, bodies and organisations
- To take on any other responsibility established by the education authority
- To adapt human resources to the needs of the institution.

The Head of Curriculum is the person responsible for all academic-educational matters in the early childhood educational setting or primary school, such as:

- Coordinating the educational activities
- Drawing up academic timetables
- Coordinating the work of tutors and department heads
- Participating in the proposal of the development plan and the yearly general programme, and promoting a sense of community at the educational setting.

The selection of the Centre Leader/School Head (*Director o directora de centro/ Jefe o jefa de estudios*) (requirements, procedure, appointment, dismissal and recognition of the management role) in **public early childhood education settings** is regulated in Articles 133-139 of the LOE as amended by the LOMLOE and carried out through a process in which the educational community and the educational administration are involved in a merits-based selection system in which the centre's/school's career teachers participate. Participants are required to present a management concept. The selection is carried out at the school by a committee made up of:

- Representatives of the education administration
- Representatives of the setting concerned. At least one third of the members of the committee shall be teachers elected by the teaching staff and another third shall be elected by and from among the non-teaching members of the School Council
- The Centre Leader/School Head of an early childhood educational setting that provides the same type of education.

Those who have passed the selection process must complete a training programme on competences for the performance of the management function.

Those civil servant teachers wishing to access the post of Centre Leader/School Head at an early childhood education setting or primary school may apply to the setting of their choice. The requirements for taking part in this selection process include at least five years of service as a civil servant teacher and the submission of a management concept demonstrating objectives, strategies and assessment procedures. The educational administration of the autonomous community may require completion of a management/leadership training programme, especially in schools that offer both primary and pre-primary education.

The selected candidate is decided upon democratically by all members of the committee. The candidate selected is the one who obtains the highest final score. Furthermore, the results of the admitted and excluded candidates (always including the reasons behind their exclusion) must be published in the school or institution for which they are competing. The committee proposes the selected candidate to the education authority or announces the lack of selected candidates. Under extraordinary circumstances, whenever there is a shortage of candidates or whenever a setting has just been opened or even if the corresponding committee has not selected any candidates, the education authority may appoint a civil servant teacher as a Centre Leader/School Head for a maximum of four years.

Prior to their appointment as heads, candidates must successfully complete a management training programme, as defined in Royal Decree 894/2014. Those holding a Master's degree or postgraduate degree in the leadership and management of educational institutions are exempt from taking the core modules as well as the specific modules the relevant education authority might establish, with the exception of the 'management concept' module.

Apart from the course previously mentioned, there is also a 60-hour course on the updating of management skills. Its characteristics are the same as those for the training course on the development of leadership, except for core modules which are:

- Module I. Updating of the regulatory framework for educational institutions
- Module II. Management of institutional approaches
- Module III. Efficient and effective management of school resources
- Module IV. Key factors for effective leadership
- Module V. Accountability and educational quality
- Module VI. Management concept/project.

Once the training course has been completed, the Centre Leader/School Head is appointed for a period of four years. The appointment may be renewed for another four-year term, depending on whether they have been positively assessed at the end of their first term of office.

Centre/School Leaders assessed positively obtain personal, professional and economic recognition throughout their time in office. The criteria and procedures for this evaluation are public and objective and include the results of the individualised evaluation on completion of previous studies.

Similarly, the education authorities may establish a maximum limit to the number of terms that heads may apply for renewal. Once the chances of renewal are no longer possible, the candidate must take part in a new merits competition in order to be appointed as Centre Leader/School Head again in the same or in a different institution. Once Centre Leaders/School Heads end their term of office, they return to their original teaching post. For this reason or cause, the education authorities may appoint a temporary head, who will carry out the corresponding tasks until the next selection period is over and a new director is appointed.

The Order of 9 October 269/1996 on the constitution and appointment of the governing bodies of **publicly funded private schools**, stipulates that Centre Leaders/School Heads are appointed by the employer or elected in accordance with the legislation in force. Their tasks are to manage, guide and supervise the educational activities, in addition to those other duties that may be entrusted to them.

Article 13 of the 10th National Collective Bargaining Agreement establishes that **private non-subsidised centres** have the autonomy to determine their organisation and functioning, and to establish the governing bodies they deem appropriate. The Centre Leader is responsible for managing, guiding and supervising the educational activities in all matters entrusted to him/her.

The duration of office is determined by the time that the employer entrusts the employee with the responsibilities associated with that position.

Article 37 of Royal Decree 82/1996 and article 36 of Royal Decree 83/1996, stipulate that, in general terms, Centre Leaders/School Heads have the same working hours and holidays as other teachers. However, their own specific headship tasks are included within their teaching hours, so their teaching load is reduced. The education authorities are the ones in charge of establishing the number of hours that are to be assigned to teaching and to headship tasks, which vary in accordance with the specific design of the post (if it is that of a School Head or any other leadership posts such as Head of Curriculum), of the level of studies taught at the institution and of its size (number of registered children), resulting in a different teaching load for heads from one autonomous community to another.

Centre Leaders/School Heads are evaluated at the end of the period for which they were appointed. If they obtain a positive evaluation they receive personal and professional recognition as is established by the education authorities, which are the ones that set up the assessment procedure and its characteristics. Regarding mobility, and as career civil servants, they have the possibility to apply for the state-wide transfer competitions regulated by Royal Decree 1364/2010, Order EFP/1015/2018 and regional regulations. These transfer competitions are organised by the education authorities to cover vacancies in schools.

The dismissal of any of the leadership members takes place whenever a serious offence has been committed, if they have renounced their Spanish nationality or if they have been banned from exercising any kind of professional activity. The management of such processes corresponds to a commission of administrative infractions and is dealt with through a common process for all public civil servants. Articles 93-98 of the Law on the Basic Statute of Public Workers (Royal Legislative Decree 5/2015), establish the grounds for dismissal.

In educational establishments which are wholly or partly publicly funded, the conditions of teaching staff are regulated in the relevant 7th Collective Bargaining Agreement.

The position of centre management or the task of conceptualising the centre programme can only be carried out by an Early Childhood Education Teacher, not by other members of staff.

2.3 Centre-based posts of responsibility

In Spain, there are no centre-based posts of responsibility rewarded with higher pay which are held by regular Early Childhood Education Teachers for specific pedagogical tasks within the early childhood educational setting. Such tasks could include: working with migrant families, developing inclusive practices, mentoring trainee teachers.

2.4 Co-ordinating and supervisory staff

Articles 113 and 119 of the LOE as amended by the LOMLOE define the governing bodies of non-university education institutions such as early childhood education settings as follows:

A. Single-membership governing bodies:

Management Team (see *Chapter 2.2*) and **Teachers' Assembly** (chaired by the centre/school head and made up of all the teaching staff working in the centre/school.

B. Mixed-membership governing bodies:

School Council (comprising the centre leader as Chair, the head of curriculum, a representative of the city council, a group of teachers comprising not less than one third of the total number of members, representatives of the families and children, also comprising not less than one third of total members, and a representative of the school management and services staff.

School Counsellors belong to the internal and external guidance structures that intervene directly in education institutions. In early childhood and primary education there is usually, depending on the number of pupils, one educational guidance team assigned to several schools. The different educational authorities establish the counsellor's functions in Early Childhood, Primary and Secondary Education centres. Some of these responsibilities are:

- To coordinate academic and professional guidance activities
- To provide advice to the Pedagogical Coordination Commission
- To participate in the prevention and identification of learning issues
- To conduct the psycho-pedagogical evaluation of students in need of one
- To participate in the curricular adaptations of students with educational support needs
- To provide advice on the development of social guarantee programmes
- To provide support, advice and specific guidance to all students at non-university levels
- To cooperate with the educational establishments and their teaching staff in the development of projects for different activities, tutorials, and academic and professional guidance
- To be responsible for the psycho-pedagogical evaluation of students and contribute to the efforts of the Pedagogical Coordination Commission or similar body in the schools
- To advise families.

The **Pedagogical Coordination Commission** in ECE settings with more than twelve groups meets once a month to deal with key topics related to the curriculum. The Commission is chaired by the Centre/School Head and brings together the coordinators of each cycle, the Head of Curriculum and the School Counsellor. Its main tasks are focused on the design of educational content, the Diversity Attention Programme and psycho-pedagogical interventions.

The great diversity found in ECEC settings in terms of ownership, management and integration into primary schools makes it difficult to draw general conclusions about co-ordinating bodies or persons.

In terms of **supervisory staff**, the mechanisms for control and administrative inspection fall within the responsibility of the respective inspection services of the autonomous communities (Article 148 of Organic Law 2/2006 as amended by Organic Law 3/2020). These duties are carried out by **Education Inspectors**. Although their general responsibilities are defined at state level, the autonomous communities are in charge of establishing their specific duties. According to Article 151 of the LOE as amended by the LOMLOE, Education Inspectors are entrusted with the following tasks:

- To monitor, evaluate and control, from a pedagogical and organisational point of view, the functioning of educational institutions, as well as the projects and programmes they develop; supervise teaching practice, the management function and collaborate in its continuous improvement
- To participate in the evaluation of the education system and all its elements
- To ensure that the institutions comply with the laws, regulations and other provisions in force, and that the principles and values set out in the LOE as amended by the LOMLOE, are observed and applied, including those aimed at fostering real equality between men and women
- To advise, guide and inform the educational community about their rights and duties
- To guide management teams in the adoption and monitoring of measures that favour coexistence, participation of the educational community and resolution of conflicts, promoting and participating, when necessary, in mediation processes.

Inspectors do not teach in educational institutions; they issue the reports requested by the respective educational authorities or which are derived from the knowledge of the reality of educational inspection.

To carry out these duties effectively, Education Inspectors must have direct knowledge of the activities carried out at educational institutions, to which they have free access; assess and check the academic and administrative documentation of the setting, and receive from the various members of the educational community the necessary collaboration to carry out their tasks.

Education Inspectors are civil servant teachers, which means that their initial training is similar to that of the rest of civil servant teachers (see *Chapter 4*). However, in terms of inspecting early childhood education centres, they are not required to have a specialist qualification. The selection process is regulated by Articles 43-48 of Royal Decree 276/2007. Candidates take a competitive examination in order to access the inspectorate of the autonomous communities. Likewise, there is a traineeship period which is part of the selection process and lasts between three months and one year. Furthermore, candidates must meet the following specific requirements to take part in the publicly announced competitive recruitment: (a) belong to one of the bodies that make up the public teaching service with at least eight years' experience; b) hold a PhD, a Master's degree, a Bachelor's degree, or an equivalent qualification (but not specifically in Early Childhood Education); (c) go through the corresponding selection process; (d) prove knowledge of the co-official language of the autonomous community of destination, in accordance with its regulations.

Once appointed, they are obliged to take part in the competitions for the provision of inspector positions that are announced until they achieve a fixed post in their preferred autonomous community.

2.5 Specialist support staff

Pedagogical work in ECEC settings comprises many support activities beyond teaching which are carried out by staff holding a range of qualifications. These are professionals in the fields of **education and/or health**, depending on the specific needs of the children enrolled in each institution. In terms of their qualification, these staff members may include:

- Higher education graduates such as *Licenciados* (those who graduated before the Bologna process was adopted), with duties corresponding to their respective studies
- Intermediate graduates such as Registered Nurses (who monitor and care for pupils who fall ill, supervise the administration of prescribed medication, etc.); specialist support staff such as teachers specialised in Community Services and Therapeutic Pedagogy; Physiotherapists; or Occupational Therapists (see below) (Eurydice 2023b)
- Other professionals such as Senior Technicians in Sociocultural and Tourism Animation or Senior Technicians in Social Integration (see below).

The education authorities determine the necessary specialists in each educational institution. These may be teachers with a specialisation in Community Services, Therapeutic Pedagogy, or Hearing and Speech Therapists who provide specific treatment for disorders in coordination with other professionals involved in each case. These teachers are part of the educational and psycho-pedagogical guidance teams for early childhood and primary education (Eurydice 2023b). They are specialists with a specific qualification for the tasks they are assigned, such as:

- **Speech Therapists**, who provide specific treatment for speech disorders or problems related to the articulation of language in coordination with other professionals involved in the case
- **Occupational Therapists**, who provide specific treatment for the functional recovery of children by instructing on the handling of aids and prostheses, by training specific activities and by designing or making adaptations which help pupils to carry out their activities. They are

also responsible for monitoring and evaluating the treatment pupils undergo, in coordination with other professionals working at the institution;

- **Senior Technicians in Sociocultural and Tourism Animation**, who cooperate with the *maestro* to plan leisure and free time activities. They are responsible for carrying out such activities and assisting pupils during such activities; they coordinate and monitor extracurricular teaching and cooperate in monitoring pupils' schooling, liaising between the institution and families, etc.
- **Senior Technicians in Social Integration**: In cooperation with the ECEC core practitioner in context of social intervention, they can be family workers, special needs educators or attend to community mediation, support for educational intervention, first aid or promotion of personal autonomy, among others. They carry out socio-educational interventions. Their work is aimed at dealing with marginalised children and/or those at risk of social exclusion (ethnic minorities, disabled students, pupils with chronic diseases, pupils suffering from child abuse, etc.). They are in charge of programming, organising, developing and evaluating activities for the prevention of such adverse situations by promoting social integration, taking into account the information derived from the evaluation to determine which strategies and techniques are the most adequate for the development of the pupils' autonomy and their occupational integration under these circumstances
- **Health Aid Specialists or clinical auxiliaries** are professionals with training in intermediate vocational education/training cycles in the field of health care. They perform the tasks entrusted to them by a physician/paediatrician or a registered nurse, who supervises their work.

These specialists can be based at the centre for regular support if the educational authorities so decide, work in special centres or special units, or they can be allocated in individual cases by a local counselling or advisory service.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

The 2006 Organic Law on Education (LOE) stipulates that only qualified staff may work with children aged 0–6 years. However, there are no systematically compiled data in Spain on the breakdown of the workforce according to the qualification level of the staff (see *Table 2*).

Table 2:

Spain: Structural composition of ECEC workforce, 2021

Staff categories	Year / Proportion of workforce in 2021
Staff with specialist higher education degree	No systematically compiled national data – but since a Bachelor's degree is required for working as a core practitioner in the second cycle (3–5), and an Advanced Vocational Training qualification in the first cycle (0–2) of early childhood education, a high proportion can be assumed.*
Staff with specialist vocational qualification (post-secondary)	No systematically compiled national data**
Staff with specialist vocational qualification (upper secondary)	No systematically compiled national data**
Staff with non-specialist qualification	No systematically compiled national data
Unqualified staff	n/a ***

Staff categories	Year / Proportion of workforce in 2021
Specialist support staff (e.g. Speech Therapists)	0.9% off-site*
Male staff	2.3% total* 6.6% centre heads or administrators*; unknown for core practitioners; unknown for qualified co-workers**
Staff with a background of migration	No systematically compiled national data

*Data from 2020/2021 school year (MEFP 2022a).

** Disaggregated data for this category are not available. The official data from the MEFP do not specify the percentages among professionals working in formal ECEC services by type of qualification, as all ECEC professionals need to be qualified to work.

*** The only relevant data are the percentage of staff working with children from 0–3 in non-formal ECEC (with professional careers or other careers with no remuneration), which was 18% in 2014.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

In order to teach in the different non-university programmes established by Article 100 of the Organic Law 2/2006 (LOE) as amended by the Organic Law 3/2020 (LOMLOE), it is necessary to hold the corresponding academic qualifications and to acquire the pedagogical and didactic training established by the Government for each programme. The model of initial professional education is mainly concurrent, so it combines theoretical and practical training related to teaching with training and studies in the key content areas.

In Spain, both Early Childhood Education Teachers and Primary School Teachers are required to have a Bachelor's degree. This is considered to be generalist qualification. For all other levels of education needing a certain subject specialisation, a Master's degree is required.

Today, following the reform instigated by the 1990 Organic Law on Education (LOGSE), there are two main kinds of ECEC qualified professionals working with young children:

- (1) **Early Childhood Education Teachers** who are university trained with a focus on early childhood education
- (2) **Senior Technicians in Early Childhood Education** trained at post-secondary level for work mainly with children aged 0–2 years.

The following tables outline the professional qualifications and fields of work of the professional groups who work directly and on a daily basis with young children.

Early Childhood Education Teacher (*Maestra especialista en educación infantil*)

A four-year university-level degree with a specialisation in early childhood education is the required qualification for Early Childhood Education Teachers wishing to work in both public and privately run ECEC provision (Royal Decree 476/2013). The initial qualification route was transferred to university colleges specialising in teacher preparation in 1970, and the post-1990 route for prospective Early Childhood Education Teachers (*maestros especialistas en educación infantil*) stipulated higher entry requirements. The professional education/training syllabus was reformed in accordance with the Bologna Process, and currently the study route takes four years to complete and comprises 240 ECTS credits. Today, the IPE programme takes place at university-based teacher education faculties and qualifies for work with the age group 0–5 years. It is a Bachelor-level qualification (*primer ciclo de formación universitaria*), in contrast to the

Master's degree, which is the requirement for teachers working in all stages of the education system except pre-primary and primary.

Table 3

Spain: Early Childhood Education Teacher

Job title in Spanish: <i>Maestra en educación infantil</i> Profile: Early Childhood Pedagogy Professional
<p><i>Since 2006:</i></p> <p>Entry requirements: 10 years of compulsory schooling (up to 16) + 2 pre-university foundation years from 16 to 18; school leaving certificate – <i>Bachillerato</i>.</p> <p>Professional studies: 4 years higher education at a university faculty for teacher training (<i>Facultad universitaria de formación de profesorado</i>) – specialised training for work with 0- to 6-year-olds</p> <p>Award: Bachelor's professional degree as Teacher in Early Childhood Education (<i>Grado en Maestro/a en Educación Infantil</i>)</p> <p>ECTS credits: 240</p> <p>EQF level: 6</p> <p>ISCED 2011: 6</p> <p>Main ECEC workplace: First and second cycle early childhood education centres, 0–2 years, 3–5 years; age-integrated ECE centres, 0–5 years; early childhood education and primary school (<i>Escuela de Educación Infantil y Primaria</i>), 3–5 and 6–12 years</p>

Senior Technician in Early Childhood Education (*Técnico superior en educación infantil*)

A number of transition regulations applied up to 2000 for those who had a job before the 1990 legislation came into force. In 1987 and 1993, a specific form of training was developed for practitioners working in first cycle early childhood centres without formal qualifications. This qualifying route was designed to take into account previously accumulated work experience and to enable them to continue working as an early childhood centre employee. The 2006 Organic Law LOE stipulates that only qualified staff may work with children aged 0–5 years.

Table 4

Spain: Senior Technician in Early Childhood Education

Job title in Spanish: <i>Técnico superior en educación infantil</i> Profile: Social and Childhood Pedagogy Professional
<p><i>Since 2006:</i></p> <p>Entry requirements: 10 years of schooling (6 to 16 years) + 2 years' pre-university foundation; school leaving certificate (<i>Bachillerato</i>) or a successfully completed access test for higher professional training (minimum age 20 years)</p> <p>Professional studies: Approx. 1½ years (1,600 hours) post-secondary, non-tertiary vocational education + 3 months (400 hours) in a work placement. Focus on age-group 0–2 years.</p> <p>Award: Advanced Vocational Training Cycle in Early Childhood Education, <i>Técnico Superior en Educación Infantil</i></p> <p>ECTS credits: 120</p> <p>EQF level: 5</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: Age-integrated early childhood education centres (<i>escuelas de educación infantil unificadas</i>), 0–5 years; coordinated first cycle nursery units (<i>unidades de primer ciclo en centros separados</i>), 0–2 years. Occasionally, in some regions they may work to support ECE teachers in early childhood units in primary schools for children aged 2–5 years (Ancheta-Arrabal et al. 2022) or as a home-based ECEC provider.</p>

ECE Teacher's Assistant (*Técnica/Auxiliar en educación infantil*)

The *Técnicos* or *Auxiliares en Educación Infantil* assist other staff to look after early childhood education pupils, especially in relation to their diet, their well-being and personal care. Mostly, they are specifically in charge of children's hygiene in the classroom or accompanying them during meal times. There is no national regulation for this professional profile. The 2006 Organic Law LOE stipulated that only qualified staff may work with children aged 0–5 years. However, the *Infant Assistant* certificate is partly recognised, not on a national basis by the MEFP, but by some of the autonomous community employment services, and it is mainly offered in agreement with certain private IPE institutions.

The professionalisation of this sector has been and still remains an important reform to improve the quality of the provision, especially for the first cycle of the stage and in order to guarantee the equality of attention in terms of integrating vulnerable groups, which represents a challenge within ECEC provision.

Table 5

Spain: ECE Teacher's Assistant

Job title in Spanish: <i>Técnica/Auxiliar en educación infantil</i>
<p><i>Since 2006:</i></p> <p>Entry requirements: 10 years of schooling (6 to 16 years) (minimum age 16 years)</p> <p>Professional studies: 6 months (100–150 hours depending on the autonomous community) vocational education + 1–2 months (100–150 hours) in a work placement.</p> <p>Award: Certificate – Infant Assistant in Early Childhood Education, <i>Técnica/Auxiliar en Educación Infantil</i></p> <p>ECTS credits: n/a</p> <p>EQF level: 3</p> <p>ISCED 2011: 3</p> <p>Main ECEC workplace: First cycle ECE centre (<i>escuela de educación infantil</i>), 0–2 years; second cycle ECE centre, 3–5 years; co-ordinated nursery units (<i>escuelas de educación infantil primer ciclo</i>), 0–2 years (1st cycle)</p>

Senior Technician in Sociocultural Animation (*Monitor/Animador de ocio y tiempo libre*) – commonly known as Play Workers

Play Workers are not specialists in early childhood education, but in leisure and free time activities in various educational institutions. They generally work independently with children before and after school hours and during the break times. However, in the case of settings for children below age 3, they may also sometimes work alongside the teacher, or even as a substitute for the teacher, particularly in private settings.

In Spain, the IPE of professionals in the leisure and free time field began in the 1960s with courses for Play Workers and managers of leisure time. Later, in 1988, the qualification was regulated on a national basis (Figueres and Morros 2005), but the IPE for Sociocultural Animators still faced some complications, as they received very little practical learning against a very broad theoretical syllabus and little time to explore and extend this knowledge (Morros 2008). Since 2013, the certificate of Play Worker is recognised as a vocational education route on a national basis by the MEFP as the Advanced Vocational Training Cycle in Sociocultural Animation, but the competence to establish the IPE route lies in the responsibility of the education authorities of each autonomous community (Institut Valencià de la Juventut 2002:7).

Table 6

Spain: Play Worker/Senior Technician in Sociocultural Animation (IPE)

Job title in Spanish: <i>Técnico Superior de Animación Sociocultural</i>
<p><i>Since 2013:</i></p> <p>Entry requirements: 10 years of schooling (6 to 16 years); minimum age 16 years</p> <p>Professional studies: 1–2 years (2000 hours), (1,600 hours) post-secondary, non-tertiary vocational education + 3 months (400 hours) in a work placement, but hours are depending on the autonomous community.</p> <p>Award: Certificate of Advanced Vocational Training Cycle in Sociocultural and Tourism Animation</p> <p>ECTS credits: 120</p> <p>EQF level: 5</p> <p>ISCED 2011: 4</p> <p>Main ECEC workplace: All first and second cycle early childhood education settings.</p>
<p><i>Since 2006:</i></p> <p>Entry requirements: 10 years of schooling (6–16 years); minimum age 16 years</p> <p>Professional studies: 6 months (100–150 hours depending on the autonomous community) vocational education + 1–2 months (100–150 hours) in a work placement.</p> <p>Award: Certificate of Play Worker for leisure and free time, <i>Monitor/Animador de ocio y tiempo libre</i>.</p> <p>ECTS credits: n/a</p> <p>EQF level: 3</p> <p>ISCED 2011: 3</p> <p>Main ECEC workplace: all first and second cycle early childhood education centres, 0–2 years, 3–5 years; ECE unit in primary school</p>

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

The Ministry of Education and Vocational Training (MEFP 2021) sets the requirements for university Bachelor's and Master's degrees in teaching, vocational training and specialised education (artistic and sports education). Universities autonomously establish the Bachelor study programmes and second cycle degrees in line with the minimum requirements established in the state regulations, which are evaluated by the relevant bodies.

Early Childhood Education Teacher (*Maestra especialista en educación infantil*)

Competence specifications: Prospective ECE Teachers will be expected to acquire competencies related to the implementation of curricular goals and content. These include addressing diversity; knowledge of ICT; school organisation; learning to live together both inside and outside the classroom; addressing language learning within multicultural and multilingual contexts; working effectively with families; reflecting on classroom practice; and knowledge of quality improvement models (Oberhuemer et al. 2010). Specifically, legislation regulating the university bachelor degrees in early childhood and primary education establishes the competences and abilities to be acquired by students (Royal Decree 1594/2011):

- Being familiar with the goals, curricular contents and evaluation criteria of early childhood/pre-primary education
- Designing and regulating learning environments in diversity contexts attending to the individual educational needs of children, gender equality, equity and respecting human rights

- Promoting a sense of community in and outside the classroom and dealing with the peaceful settlement of conflicts; being able to observe systematically learning and coexistence contexts and to be able to reflect on them; reflecting in the group on the acceptance of rules and respect for others; promoting children’s autonomy and individuality as factors for educating emotions, feelings and values in early childhood
- Knowing about language development during early childhood, being able to identify possible dysfunction and ensure the right intervention; dealing with situations for learning languages in multicultural and multilingual contexts; mastering the use of different techniques of expression in oral and written language
- Knowing about the educational implications of Information and Communication Technologies and of television in early childhood
- Knowing about the foundations of child nutrition and hygiene
- Knowing the foundations of early attention, psychological, learning and personality-building processes during early childhood
- Knowing about the organisation of ECEC centres
- Viewing teaching as a professional activity needing continuous improvement and adaptation according to scientific, pedagogic and social changes
- Acting as a counsellor for parents regarding family education with children aged 0–6 years and mastering social abilities in the treatment and relationship with the family of each child and with all families
- Reflecting on class practices in terms of innovating and improving teaching work
- Acquiring habits and skills for autonomous and cooperative learning and promoting this among children
- Understanding the function, possibilities and limits of education in current society and the key competences that affect ECEC centres and their professionals
- Knowing about models for improving quality in educational institutions
- Mastering the Castilian language equivalent to level C1 (in those autonomous communities with a co-official language, the co-official language equivalent to the level C1) apart from a foreign language equivalent to the level B1 of the Common European Framework of Reference for Languages.

Curricular areas

The initial professional study route for prospective ECE Teachers is organised in three curricular areas or modules: (1) theoretical frameworks, (2) didactic and discipline-oriented training, and (3) practical work placement/field-based studies.

Based on current State regulations (Order ECI/3854/2007, ANNEX), the Bachelor study programmes are required nationwide to include the following modules and contents, without prejudice of the universities' autonomy (Royal Decree 1027/2011):

- **Basic education:** Education processes, learning and personality development (0–5 years old); learning difficulties and developmental disorders; society, family and school; childhood, health and food; organisation of the school room, materials and teaching abilities; systematic observation and contexts analysis; pre-primary education school/ECEC centre.
- **Didactic and discipline-oriented education:** Natural sciences, social sciences and mathematics; languages and reading and writing literacy; music; modelling; body language.
- **Practicum:** Periods spent in educational institutions and the preparation of the Bachelor thesis project.

- **Qualifying mention** (*mención cualificadora*): Special subject/topic (e.g. working with children with special needs, children with autism) proposed by the university when the students choose and develop their Bachelor thesis project.

Apart from these common core subjects, in all study programmes there are compulsory subjects to be included according to each specialisation. In addition to these subjects, which are called common core compulsory subjects and common core specialised subjects, each university is entitled to establish other compulsory as well as optional subjects. The pedagogic-didactic approach of the Bachelor studies emphasises independent work of the students through experiential learning. The IPE study route for Early Childhood Education Teachers was conceptualised under this approach, hence the realisation of field-based studies and work experience in early childhood education centres settings has an important place in the overall studies. According to Eurydice (2022b), 50 ECTS credits are allocated to practical work experience, representing around one fifth of the total (BA=240 ECTS credits), starting during the first semester of the study programme. The remaining credits are allocated to modules of basic education (100 ECTS credits), didactic and disciplinary education (60 ECTS credits), and the qualifying mention (*mención cualificadora*) (30-60 ECTS credits) which means that the student can obtain a specialised degree after acquiring a minimum of 30 ECTS credits.

Senior Technician in Early Childhood Education (*Técnico superior en educación infantil*)

The Royal Decree 1394/2007 (18 July) set out the conditions for this advanced vocational qualification. In addition, each autonomous community established a regulatory framework for the examinations required. Intermediate and higher vocational training may be provided in institutions exclusively devoted to vocational education/training, or in regular schools with a specific upper secondary vocational route. In the latter case, the vocational training is organised independently, but personnel and material resources may be shared. According to the Royal Decree 1538/2006, all these institutions must meet a series of requirements and conditions which apply throughout the whole of Spain.

The qualifying route for the *técnico superior* (Advanced Vocational Training Cycle in Early Childhood Education) is short and emphasises the birth to 3 age phase. It was upgraded considerably following LOGSE in 1990, and again in 2006 when the course length was extended from one year to 1½ years, with an additional three months (400 hours) spent in a work placement. This may be in the nursery unit of an early childhood education centre, in a children's hospital ward or in other childcare and social institutions.

Competence specifications: Senior Technicians in Early Childhood Education are expected to acquire the following competences during their IPE (Royal Decree 1394/2007):

- Organising resources according to the children's needs and characteristics
- Developing the programme activities, employing the appropriate resources and methodological strategies and creating a climate of confidence
- Designing and applying appropriate action strategies with families related to the goals and procedures of the ECEC institution
- Coping with uncertainties regarding people, resources or environment transmitting security and confidence
- Evaluating the intervention process and the results achieved; preparing and managing the documentation associated with the process, with the goal of improving the quality of the service

- Updating research and technical knowledge regarding their professional activity, using the available resources for lifelong learning
- Maintaining relationships with the children, their families, community groups and other professionals
- Managing cultural diversity and providing solutions to the conflicts that may occur
- Creating safe environments; respecting the regulations and security protocols in the planning and development of activities
- Exercising their rights and complying with their obligations under the current labour relations agreements
- Managing their professional career, analysing work opportunities, self-employment and earning
- Creating and managing a small enterprise; carrying out a products feasibility study; planning the production and marketing
- Participating actively in economic, social and cultural issues, with a critical and responsible attitude.

This study route is organised into modules based on the minimum teaching standards established at state level according to ANNEX I of Order ESD/4066/2008, which establishes the curriculum of the Advanced Training Cycle corresponding to the qualification of Senior Technician in Early Childhood Education. These modules must include, as a minimum, the following areas (see Eurydice 2023b):

Table 7

Spain: Curricular areas of the modules (*Técnico superior en educación infantil*)

Curricular areas	Hours	ECTS credits
Didactics of early childhood education	125	14
Personal autonomy and child education	105	12
Children's play and methodology	105	12
Expression and communication	100	11
Cognitive and motor development	105	12
Social and emotional development	75	8
Social abilities	60	6
Intervention with families and attention to children at social risk	60	6
Projects to become familiarised with alternative services in early childhood education and care	25	5
First aid	35	3
Work training and guidance	50	5
Enterprise and entrepreneurial initiative	35	4
Placements in various workplaces	220	22
Total	1100	120

These studies are fully or partly provided, and some vocational modules are delivered in different formats: in person, at a distance, or mixed. The number of credits allocated to this qualification is 120 ECTS credits. 20% of the time is spent in a work placement, and just over 18% of the ECTS credits are awarded for work placements.

4.3 Alternative entry and qualification routes, system permeability

Both levels of initial vocational education/training (intermediate and higher) are open to applicants who do not have the usual academic requirements, provided they pass a specific test proving that their background in the area will enable them to take full advantage of such training. In order to gain access to intermediate vocational training, pupils must hold the *Graduado en Educación Secundaria Obligatoria* certificate. Pupils successfully completing these studies are awarded a *Técnico* certificate, with which they have access to Bachelor studies such as the degree of *Maestro en Educación Infantil*.

Also, a system for evaluating and accrediting knowledge and skills acquired through experience or non-formal means and for adapting and updating vocational qualification routes according to real market needs has been established. The 2002 Organic Law on Qualifications and Vocational Training (Organic Law 5/2002, LOCFP) aimed to organise a comprehensive system of vocational training, qualifications and accreditation that provides a solution to social and economic demands through different types of training, including in-company and occupational training, and training addressed to the integration and reintegration of workers into the labour market. In this respect, among other measures, a system of grants and financial assistance was put in place for workers between 18 and 24 with no vocational training qualification to be able to combine their employment with the training activities required for obtaining that qualification (Royal Decree 1224/2009).

More recently, the Spanish Qualifications Framework⁷ has been implemented as an internationally recognized instrument that guides the coherent levelling of qualifications for their classification, relationship and comparison and that also serves to facilitate the mobility of people in the European space and in the international labour market.

The Spanish Qualifications Framework defines the unique Vocational Training system as a whole, for the first time, articulated and compact that:

- Identifies the professional skills required by the employment market
- Ensures suitable training offers
- Enables the acquisition of the corresponding training or, where appropriate, its recognition, and
- Offers a guidance service and professional accompaniment that allows the design of individual and collective training pathways.

Access to a career guidance system within the framework of the Vocational Training system is incorporated into the training process and into the accreditation procedure of skills gained through work experience.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

The IPE institutions have a great degree of autonomy in terms of organising the amount of time devoted to the theoretical and practical components of study programmes within the framework set by the relevant education authorities (Eurydice 2023b). The practical component of both ECE Teachers and Senior Technicians in ECE includes periods spent in educational settings

⁷ For further information see MEFP 2022b

and the preparation of a final project, which is necessary to get the qualifying mention (see *Chapter 4.2*). The “practicum module” of the Bachelor teaching degree in Early Childhood and Primary Education amounts to 55 ECTS credits (whereby the proportion allocated to the “Final Bachelor’s Project” within this module may vary) and the “work placement” module for prospective Senior Technicians in Early Childhood Education amounts to an average of 22 ECTS credits (the exact number of credits assigned by each autonomous community varies).

Work placements are field-based studies supervised by a mentor at the institution where the practicum takes place and by an academic tutor of the university or the vocational training centre. Their main objective is to enable students to apply and complement the acquired knowledge in their theoretical training.

Table 8 compares the practicum in the IPE of core practitioners in its different dimensions:

- Whether this element of IPE is regulated by national and/or regional and/or provider guidelines and how explicit these are about the cooperation between and the complementary roles of IPE institutions and ECEC centres
- The length of time spent overall in the workplace (in weeks or days) throughout the course of studies and how the time blocks are structured
- The number of ECTS credits allocated to workplace learning in the professional study routes for core practitioners
- The skills and competences students are expected to develop in the workplace
- Forms of student self-evaluation and external evaluation
- Whether mentoring/supervising staff in ECEC centres are *expected to or have to* complete a specific qualifying course for the task of supporting students in the workplace
- Whether mentoring/supervising staff in ECEC centres have a designated role, with time allocation specifications for mentoring, and whether/how they are remunerated for their work.

Table 8

Spain: Characteristics of guided workplace experience (practicum)

	Early Childhood Education Teachers	Senior Technicians in ECE
Regulation/Provider	Public and private provider agreements*	Public and private provider agreements**
Length/time blocks	First and last year of studies 1 semester	Final year of studies 3 months
ECTS credits awarded	50	22
Skills/ competences	Practising professional activities; facilitating their occupation; encouraging their entrepreneurial ability	n/a
Self-evaluation and external evaluation	Bachelor project with mentor at the IPE institution	Final project with mentor at the IPE institution
Mandatory course for mentors	No	No
Specified time allocation/remuneration for mentoring	No	No

* Royal Decree 1027/2011; ** Royal Decree 1543/2011; *** Order ESD/4066/2008

Recent reforms, trends and debates

There are no recent reforms or debates on this issue, but a worrying trend is emerging due to the 2011 reform of employment and labour in Spain which includes a new type of contract called “in placement” (*Contrato en prácticas*). This particular type of contract and the time students spend in the ECE institution during the practicum are being used by ECE providers to cover their needs for staff during certain periods of the school year. This is having an impact on the quality of ECE provision and of the work placements. One negative effect is the lack of staff in the institution who can take on a mentoring and supervising role with the students; another is that students are being used as substitute staff during their placement and are left to work alone with no supervision, despite the fact that taking on responsibility for a group of children is not permitted.

6. Continuing professional development (CPD) of ECEC staff

National, regional and/or provider framework for regulating the CPD of ECEC personnel

National regulations regarding the CPD of ECEC personnel have been provided only for fully-qualified teachers. Professionals with lower qualifications are encouraged to pursue further studies in order to improve their initial professional education and to gain access to jobs in the public sector, which in turn guarantee free access to CPD.

Early Childhood Education Teachers have a right and an obligation to pursue lifelong learning (Article 102, Organic Law on Education 2/2006). Continuing professional development is thus a responsibility for the education authorities and educational institutions. ECE Teachers and Senior ECE Specialists are expected to continually update their knowledge in the areas of early childhood research, didactics and professional issues. However, participation in CPD activities is voluntary.

Article 103 of the LOE (Organic Law 2/2006) establishes that the education authorities shall plan teacher training activities for the teaching staff working in public schools, including ECEC provision. They guarantee a diversity of offers which are available free of charge, and take the necessary measures to foster teacher participation in these activities. There are financial supports available for participants wishing to attend activities offered by other institutions.

CPD programmes for ECE Teachers are planned according to the priorities of the specific autonomous community and to the professional development needs expressed by teachers themselves. The autonomous communities are free to establish their own priority guidelines, considering the training needs of the teaching staff within their jurisdiction. This implies that both the content of the training and the institutions in charge of its provision differ from one autonomous community to another.

They are required to provide teachers with a range of activities and cater for their training needs, as well as establishing other training priority guidelines.

The National Institute of Educational Technologies and Teacher Training (INTEF – *Instituto Nacional de Tecnologías Educativas y de Formación del Profesorado*) is the unit within the Ministry of Education and Vocational Training responsible for the integration of ICT and teacher training. Its tasks include (Eurydice 2023b):

- Developing, promoting and disseminating curriculum materials
- Drafting of models for the training of teaching staff

- Designing and implementing specific programmes aimed at the scientific and didactic updating for teachers
- Developing and disseminating digital and audiovisual materials
- Implementing, in collaboration with the autonomous communities, specific programmes for the development of digital competence.

Main forms of CPD for ECE Teachers

According to article 5 of Order EDU/2886/2011, there are five main formats for CPD activities: courses; seminars; working groups; training projects in institutions; and conferences. They are also classified according to whether they are attendance-based or not (Eurydice 2023b):

- Face-to-face** courses and seminars may include non-face-to-face periods, provided that the total duration of the activity is at least twenty hours, and the non-face-to-face hours do not exceed 20% of the total. These periods must be evidenced by the submission of an individual or group report or project. As a general rule, face-to-face sessions shall not exceed eight hours per day.
- Online** activities may include a face-to-face session for their co-ordinations.
- Blended activities** combine face-to-face and online phases. In general, the face-to-face phase may not be of less than ten hours.

Teachers can take part in these activities during their teaching hours, during the compulsory time of on-site work in the setting or during working hours if they are carried out outside the educational institution.

CPD activities can be grouped according to three basic types (Eurydice 2023b): (1) courses requiring attendance or participation in online courses, (2) seminars and (3) teamwork. CPD also takes place on-site. This form is considered an effective tool for meeting the training needs of a team or group of practitioners who work at a particular early childhood education setting, and it is aimed at the theoretical and practical training of ECE Teachers. On-site CPD includes issues such as centre administration, management and organisation, innovative projects and their development, and so on. The Spanish Institute for Education Technologies and Teacher Training (INTEF) also establishes the relevant agreements with other institutions to this end.

CPD courses are organised according to the specific age-level and specialisation (e.g. ECE). The autonomous communities regulate the announcements, validations, certificates, activities registrations, equivalences between research activities and university degrees, priority lines in life-long learning, and so on. After taking part in these activities, educators receive attendance certificates.

The MEFP, in collaboration with the 17 autonomous communities, is responsible for fostering the international mobility of public school teachers, post-to-post teacher exchanges and visits to other countries.

Leave entitlement specifications

The educational administrations of the autonomous communities encourage and grant paid study leave for teaching staff in the public ECEC centres they manage (Article 105.2.d, Organic Law 2/2006, LOE). The purpose of these leaves is to promote their participation in activities regarding training and educational research and innovation. CPD provided by public institutions is free of charge, whereas CPD offered by other types of institution is fee paying, but teachers receive financial support for participation. Terms and conditions are determined by the corresponding authority with competencies in the field of education in each autonomous community,

and the amount of financial support depends on the available budget, so there is a significant variety (Eurydice 2023b).

Official internship periods are granted through a selective process and, if successful, teachers receive leave for this time.

Main providers of CPD for ECE Teachers

The Ministry of Education and Vocational Training (MEFP), through the National Institute of Educational Technologies and Teacher Training (INTEF), establishes on a yearly basis the priority areas to which continuing teacher training plans must adhere. It also offers State Continuing Professional Development programmes and it establishes the appropriate agreements with other institutions to this end. The education authorities of the autonomous communities can:

- Establish their own priority guidelines for continuing training, taking into account the training needs of the teaching staff within their jurisdiction
- Establish the content of the training
- Decide on the institutions in charge of its provision.

All autonomous communities have a network of institutions which provide CPD activities. Although they have different names, the most widespread term is **Teachers' and Resource Centres** and they are the main institutions responsible for providing formal CPD activities. Each institution is responsible for a variable number of schools, including ECEC settings, to which they provide support in relation to professional development, promote inter-institutional working teams supporting the dissemination of knowledge, provide resources to the teaching staff and contribute to the development of their teaching activity and the improvement of settings through educational innovation.

In all the autonomous communities there are also other institutions involved in the continuing professional development of teachers, such as university departments, institutes of education, professional associations, unions or educational reform movements.

Finally, there are numerous private associations, groups or institutions (such as official professional associations, unions, pedagogical reform groups, foundations, etc.) whose aim is to foster in-service teacher training; Education authorities may grant these institutions financial assistance to help them achieve such an objective.

Formal recognition of CPD

Undertaking CPD activities has a direct impact on teachers' professional careers, since they are regarded as merits in competitive examinations (merit for transfers, secondments, management of educational institutions) or as a necessary requirement to be eligible for a salary bonus. The amount and name of this bonus varies in the different autonomous communities.

The Resolution of 16 February 2011, by the Directorate General for Evaluation and Territorial Cooperation establishes the recognition, within the area of competence of the different education authorities, of additional allowances for teachers linked to the completion of training activities. Undertaking continuing teacher training is optional but has specific effects on teachers' professional careers like merits in public competitive examinations or receiving an additional payment. Agreements between the Ministry of Education and the education authorities of the autonomous communities (2011) regulate the recognition of teachers training activities. The education authorities recognise the training activities, research and innovation carried out by the teaching staff out of the jurisdiction of the target education authority, providing that they have been previously accredited by the education authority in charge of offering such training.

The recognition of such activities is considered a merit in any call including the assessment of continuing professional development activities.

Recognition of additional payments related to the implementation of training activities refers to specific additional remuneration for continuing professional development (bonus for every five-year and six-year period in service): recognition of the training activities carried out by teachers out of the jurisdiction of the target education authority, as long as they have been previously recognised by the education authority where they were implemented; certification and recognition by the relevant education authority of the number of bonuses for every 6-year period in service; certification and recognition by the target education authority of the training activities carried out during the current six-year term in service, to those teachers moving for work to such education authority. The recognition of these training activities is carried out according to the regulations and criteria on continuing professional development activities of the education authority to which teachers belong. It has effect on all the calls, competitions or administrative actions considered to assess them (Eurydice 2023b).

Content of CPD courses

The 2013 Act on the Improvement of Quality in Education (Organic Law 8/2013), which modifies the 2006 Organic Law on Education, lays down several guidelines for the CPD programmes offered by the education authorities of the autonomous communities. These include:

- Adapting knowledge and methods to accommodate recent research findings and specific teaching methodologies
- Offering training related to coordination, guidance, tutorship, attention to diversity and school organisation
- Establishing training programmes in Information and Communication Technologies (ICT) and foreign languages
- Promoting educational research and innovation programmes
- Providing specific training as regards equal opportunities between men and women, and coeducation.

In addition, each Community offers specific guidelines for different groups of teachers, depending on the demands and needs of the particular stage of education in which they are working (e.g. early childhood education). In fact, CPD for Early Childhood Teachers in Spain tends to be distinctly diverse since so many different entities offer such professional learning programmes and there has been little specific regulation in this regard (Úcar Martínez et al. 2007).

There have been no large-scale research projects on the CPD activities of ECE personnel over the past five years. Smaller-scale studies have included the following topics:

- Collaborative reflection on ECE to improve transition
- Citizenship in CPD for ECE teachers
- Digital competency and the use of ICT in ECE professionals.

7. Working conditions and current workforce issues

Conditions of service for **Early Childhood Education Teachers** vary depending on the education level and the ownership of the educational institution. Both the national and regional education

authorities, are responsible for regulating these conditions. The 2013 Act on the Improvement of Quality in Education (Organic Law 8/2013) establishes that the education authorities must ensure that teaching staff receive consideration, treatment and respect which reflect the social importance of their task. This has led to new measures aimed at the social recognition and support of teachers and the improvement of their working conditions.

The **Senior Technicians in ECE** have been campaigning for years for improvements in their working conditions, including being placed in a higher professional level or category within public administration. The Senior Technicians in ECE belong to the so called 'technical category' for which only a baccalaureate or vocational training is required and as a professional group they are thus categorised at a lower level than Early Childhood Education Teachers. However, they argue that a majority in fact have higher degrees, usually a university degree, but the differences in the qualifications required in the first and second cycle keeps them in a lower professional category (Cadena Ser 2017), since there is still no equity between the conditions of work with under 3 year-olds and over 3 year-olds. According to a survey by Sánchez Muliterno (2009) this is more of an economically based justification than a professional one since it is commonly accepted that the younger the children, the less qualified the staff need to be. In fact, Senior Technicians in ECE work in regular and specialised services and perform a wide range of duties. That is the reason for claiming more recognition of the job category itself and for wishing to clarify schedules, duties and other working conditions.

One issue to reconsider is the fact that, both in the IPE and CPD of ECE Teachers, there is insufficient focus on self-evaluation which are central to the quality of ECEC (Ancheta-Arrabal et al. 2022). This is not a trivial issue, since studies that included the views of parents came to similar conclusions about the gaps in initial professional studies regarding the role and perspectives of families, and about the conditions which undermine the quality of ECE, such as the high teacher-child ratios in the groups, the constantly changing national ECE policies, or the lack of resources (Sánchez Muliterno 2009, 59). Therefore, further analysis should focus on the causes of these social and professional understandings, which can be related to the current working conditions and social status of ECE teachers.

However, according to Organic Law 4/2019 on the improvement of teaching and learning conditions in non-university education, working conditions may vary depending on (Eurydice 2023b):

- Ownership of the workplace: public or private
- Contractual relationship with the administration or educational institution (e.g. in public schools being a civil servant, interim or labour staff)
- Educational level they teach
- Employment category (for example, in public schools, belonging to the Secondary Teachers' Corps or to the Faculty Corps)

Even for public educational institutions, there can be differences amongst the various autonomous communities.

7.1 Remuneration

In Spain, ECE Teachers' salaries can vary depending on the ownership of the educational institution. They are paid the same as Primary School Teachers. With this salary it is possible to live without additional support, even as a single parent in a major city.

The salaries of civil servants are classified into basic and supplementary, according to the Royal Legislative Decree 5/2015, which approves the revised text of the Law on the Basic Statute of

Public Workers. Career civil servant teachers in public educational institutions, including ECEC centres, can receive the following (see Eurydice 2023b):

- a) **Basic rewards:** These are paid according to the secondment of their body or category and to their seniority. They are:
- *Basic payment:* includes the monthly allowance of basic payment corresponding to the specific professional classification group or subgroup, and the supplementary remuneration (applicable allowance to the post and certain components of the specific additional remuneration)
 - *Additional payment:* Paid according to the characteristics of the jobs, the professional career or the development, performance or results achieved by the civil servant.
- b) **Additional bonuses:** General component (based on the above-mentioned levels); individual component (related to the specific conditions of each position.); continuing professional development component (amount allocated for every five or six years in service, which varies in each education authority).

According to the monthly figures in euros provided for in the 2021 State Budget, ECE Teachers in **public pre-primary settings** are placed in Group B/Subgroup A2, level 21 on the salary table of career civil servant teachers. With three years' working experience they earn a gross basic salary of at least €1,881.8 per month. With additional payments they can earn between €2,400.13 and €2,646.34 per month. For a detailed salary table, see Eurydice 2023b.

The salary of teaching staff on a contract basis is established in line with national labour laws, the applicable group agreement and the employment contract. Interim civil servants receive the basic remuneration and extra pay corresponding to their assigned body, as well as most of the additional remuneration earned by career civil servants.

The payment system for teachers in **private schools** is regulated by the various labour conventions and agreements. In **publicly funded private schools**, the minimum salary for the staff in the jurisdiction of these agreements is set in their salary tables, and it comprises: basic salary, additional rewards, bonus for every three-year or six-year period in service and other supplements (regional salary supplement; temporary incapacity supplement; residence allowance; two extraordinary payments, each equivalent to one month's salary, seniority and specific supplements). These payments vary according to the autonomous community and they are paid by the corresponding education authority as delegated payment and on behalf of the owner of the institution.

The awards of the staff in the 9th collective agreement on **private education** without grant-aided or subsidised levels comprise: basic salary; a teaching productivity bonus; a supplement for professional development and improvement allowance (which is paid for the training and knowledge acquired in each five-year period, with a minimum of 100 hours of training during this period) dedication allowance, to be paid in full to teachers with a working day of 60% or more; teachers with a working day of less than 60% receive it in proportion to their working day; temporary allowance for government posts, to be paid to teachers who hold the posts of Centre Leader/Director, Deputy Director, Head of Curriculum and Head of Department; insularity bonus, for those workers who work in Ceuta, Melilla, the Balearic and Canary Islands; a supplement for the completion of the Baccalaureate, equivalent to 14% of the basic salary, is paid to teaching staff serving in the final year of the baccalaureate; three special payments, each equivalent to one month's basic salary, professional development allowance, allowance for the completion of the baccalaureate and temporary government allowance, if any (Eurydice 2023b).

In general terms, the conditions of service for Centre Leaders/School Heads, Heads of Curriculum and secretaries in public schools are similar to those of other career civil servant teachers, with some exceptions listed below. Centre Leaders/School Heads have the status of civil servant

teachers, which means that they have an indefinite contractual relation with the education authorities.

The salary for heads in public institutions is established in the same way as for the rest of civil servant teachers, according to the adscription to the body or scale to which they belong, to a certain professional subgroup or group, to their seniority (three-year work period), to their category or professional level and the specific post they hold.

The General State Budget only influences the common salaries for all teachers in Spain. This remuneration includes the basic salary, the three-year bonus payments, the additional remuneration attached to a post, the extra pay salary and the extra pay three-year bonus. The autonomous communities, in turn, determine the complement for management positions.

The annual salary ranges can be found in the different autonomous communities, but in smaller pre-primary and primary education centres (specific size according to autonomous community) the minimum annual wage is €34,363 and the maximum wage is €47,816; while in the largest pre-primary and primary centres (specific size according to autonomous community) the minimum wage is €41,480 and the maximum wage is €53,933 (Eurydice 2023b).

7.2 Full-time and part-time employment in ECEC provision

Both working time and holidays vary between the autonomous communities and whether the early childhood education settings are publicly or privately owned. In general, a full working week in public educational institutions is 37.5 hours, 30 of them must be spent at school and 25 on teaching time (Organic Law 3/2020, LOMLOE). All ECE Teachers in the **public sector** work full time.

Concerning **publicly funded private** schools/ECEC settings, the 7th Collective Bargaining Agreement for private education companies fully or partially supported by public funds defines the working hours of teachers in these institutions: hours devoted to the teaching activity; and hours devoted to non-teaching activities (preparation, in-between periods, evaluation meetings, etc.) (Eurydice 2023b).

The annual working time of the teaching staff is 1,180 hours:

- 850 hours are devoted to teaching (a maximum of 25 hours per week)
- 330 hours are devoted to non-teaching activities (distributed over the school year)
- Temporary workers have to work an additional 40 hours a year.

The annual working time of the teaching staff in the 1st cycle of pre-primary education (0–2 years):

- 1,362 hours for Early Childhood Education Teachers (a maximum of 32 hours per week)
- 1,620 hours for Senior ECE Specialists (a maximum of 38 hours per week).

In **private schools/ECEC settings**, the 10th National Collective Bargaining Agreement for general regime private institutions or formal education institutions without any educational agreement or public financial support states that 27 hours per week plus 237 additional teaching hours a year can be distributed over the year, providing that the overall working time does not exceed 8 hours per day (teaching hours included). Moreover, 50 hours a year are devoted to training and updating. Subject to agreement between the company and the worker, the annual working time may be increased by a maximum of 90 hours. This increase, freely offered and voluntarily accepted, is preferably offered to **part-time staff** (Eurydice 2023b). However, there are no disaggregated data available specifically about part-time employment in early childhood educational settings.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

In public educational institutions there are several general supporting measures, targeted at all the teachers, amongst them early career teachers and newly qualified staff in their first post.

During their first year of teaching, candidates who have passed both phases of the selection process to access the teaching profession must complete a final 'on-the-job' qualifying phase before they are appointed as civil servants. During this probation phase, and as a support measure for newly appointed teachers, they are monitored by experienced teachers so that responsibility for the trainee teacher's teaching plan is shared. This induction phase, including professional development activities, ranges from a minimum length of three months to a maximum of one school year. Education authorities are responsible for the regulation and organisation of the final 'on-the-job' qualifying phase. Applicants take and pass a traineeship period which differs according to the ownership of the educational institution where they are teaching.

Traineeship period in public ECEC settings

Article 23 Royal Decree 276/2007 regulates the traineeships that are part of the process for accessing the **public service** before being appointed career civil servant teachers; this includes a tutored and paid period before joining teaching. Each autonomous community regulates it and sets its length, which can range between three months and a school year; trainee teachers elaborate a final report assessing the difficulties found and the support received.

The tutor of the traineeship period must be an experienced teacher, with whom the trainee teacher shares the responsibility for planning and teaching; a teacher belonging to the same body and speciality as the applicant and, preferably, to the body of senior teachers. The functions of this tutor are to assess the trainee teacher in every relevant aspect for the appropriate development of the teaching activity, as well as to monitor and evaluate this period.

The activities carried out by trainee teachers, apart from teaching, can be regular meetings for discussing progression or problems with the tutor; monitored activities regarding classroom programming, students teaching and assessment; participation in the drafting of the institution documents; meeting with the families.

Training aimed at trainee teachers

The autonomous communities establish the mandatory or non-mandatory nature and the themes of these training courses. Their length varies between the different education authorities and they can be provided in different formats:

- Classroom-based at the educational institution
- Blended or distance
- At the Teachers' and Resources Centres.

The trainee teacher can participate through observations in other teachers' classrooms and, mainly, in the classroom of the teacher-tutor.

The evaluation of the traineeship period is carried out at the end of the traineeship period; applicants are evaluated in terms of 'pass' or 'non-pass':

- Positive evaluation, 'pass': the trainee is appointed as a career civil servant. This assessment is carried out by the traineeship tutor, the head of the establishment and the assigned inspector.
- Negative evaluation ('non-pass'): the education authority can allow the repetition of this phase only once. Those who do not incorporate or do not pass it for the second time lose all rights to be appointed as career civil servant teachers.

The education administration can grant exemption from the traineeship period to those candidates who have passed the phase of competitive examination based on merits and who prove that they have taught, at least, for a school year.

Traineeship period in private ECEC settings

Publicly funded private schools: there is a probation period lasting four months for all the new teaching staff, as set out in the Collective Agreement for private education providers financed in whole or in part by public funds.

Private schools receiving no public funds: In accordance with the National Collective Bargaining Agreement for general regime private institutions or formal education institutions without any educational agreement or public financial support, this period lasts three months.

At the end of the probationary period, the candidate's teaching ability is assessed and he/she is declared eligible/not eligible. If a candidate is considered not eligible, education authorities may allow the candidate to retake this final phase. Those who do not take up their post or are declared not eligible for a second time lose their right to be appointed career civil servants.

7.4 Non-contact time

The working time of teaching staff in the **civil service** varies according to the education authority they are ascribed to. In general, the working day for teachers in *Educación Infantil* is similar in all autonomous communities and is currently around 37.5 hours per week, with approximately one hour of each five hours dedicated to the work without children (see *Table 9*).

The non-contact hours are used for meetings, talks with parents, assessment sessions, and so on. Seven and a half hours of the weekly working time can be used at discretion outside the setting. They are used for continuing professional development, preparation, meetings, evaluations or extracurricular activities.

Table 9

Spain: Working hours, including non-contact time, of ECE staff according to setting providers

	Public settings	Publicly funded private settings	Private settings
Teaching hours*	25 hours per week 875 hours per year	25 hours per week 875 hours per year	27 hours per week (32 hours availability on-site)
Non-teaching hours (non-contact time)	1 out of 5 hours (7,5 hours per week can be spent off-site)	330 hours per year	Up to 287 hours per year
Hours to be spent in the setting**	25-30 hours per week up to 1,140 per year	1,180 hours (2nd cycle) 1,362 hours (1st cycle, ECE Teachers) 1,620 hours (1st cycle, Senior ECE Specialists)	32 hours per week (1st cycle) 27 hours per week (2 nd cycle)
Average working week in hours	37.5 hours	32 hours (1st cycle, ECE Teachers) 38 hours (1st cycle, Senior ECE Specialists)	37.5 hours

Source: adapted from Eurydice 2023b

*The calculation of teaching hours is made up of the minimum number of school days in the Organic Law on the Improvement of Quality in Education, 175 school days, although in the calendars established by the education authorities this number is increased with slight differences depending on the autonomous community.

** The hours to be spent at school and the global working day are calculated taking into account the 190 days between September 1st and June 30th, without including Christmas and Holy week and bank holidays.

In **publicly funded private schools** 850 hours are devoted to teaching (a maximum of 25 hours per week) and 330 to non-teaching activities (distributed over the school year). The annual working time of the teaching staff in the first cycle (0–2 years) is 1,362 hours for Early Childhood Education Teachers (max. of 32 hours per week) and 1,620 hours for Senior ECEC Specialists (max. of 38 hours per week).

The workload of teachers in **private-sector** schools depends on the Collective Agreement which covers them. The Agreement for pre-primary education establishes 32 hours of availability at school per week.

7.5 Current staffing issues

A significant structural feature of the Spanish education workforce in general is that it is an ageing workforce. However, teachers in ECE and primary education show a younger profile than those in other levels of education. The largest group is between 40 and 49 years (31.6%), followed by those between 30 and 39 years (28.9%) and those between 50 and 59 years old (24.7%). Moreover, a considerable percentage of teachers are under 30 years of age (8.6%) (MEFP 2022a, 55).

In Spain, there are currently more ECE Teachers than needed, so the widespread European phenomenon of staff shortages does not apply here. Many teachers now seek an additional qualification as Senior Technician in ECE, since there are more jobs available in the private sector settings for children aged 0–2 years. However, this means that they are placed in a lower salary category and experience less favourable working conditions than they would in a public sector setting.

General processes of recruitment vary in relation to the ownership of the educational institution and to the educational level provided (Eurydice 2023b):

- **Public centres/schools:** This is subject to passing a competitive examination established for each of the teaching staff categories, in accordance with the provisions of the Regulation on entry, access and acquisition of new specialisations.
- **Publicly funded private centres/schools:** The selection criteria for teachers have a public nature and are established by the School Board, the school head and the owner of the school. The selection process is carried out by the owner of the centre together with the director, according to the established selection criteria, as indicated in Article 60 of Organic Law 8/1985 on the Right to Education (LODE). Each educational administration verifies that this procedure complies with the established criteria and is entitled to elaborate on the conditions for its implementation.
- **Non-publicly funded private centres/schools:** the selection process is carried out by the owner of the school and their recruitment adapts to the provisions of the Workers Statute.

Another consistent issue is that Senior ECE Specialists do not have similar CPD options in different parts of the country, that they have fewer options than Early Childhood Education Teachers and even fewer if they work in the private sector.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

In 2008, with the aim of improving educational care for the first cycle (0–2 years), the Ministry of Education, Social Policy and Sport (MEPSyD) launched the **Educa3 Programme**. This was a programme to expand the provision of places for the 0–2 years age group and to improve quality through the continuing professional development of staff (Consejo de Ministros extraordinario, 2009). This involved: expanding the vocational training for Senior Technicians in ECE, depending on the specific situation in the autonomous community; starting to recognise previous work experience and providing specific training modules offered through distance learning or based in an institution; promoting exchanges of experience between ECEC centres and supporting the improvement of educational quality, e.g. through the establishment of a website for professional training and a family education website including information about resources and didactic materials and providing a framework for exchange of experiences. One outcome was the implementation of the Royal Decree on the recognition of professional competences acquired through work experience (Royal Decree 1224/2009).

On January 19, 2021, the Organic Law on Education 3/2020 (LOMLOE) which amends Organic Law 2/2006 became effective and the former Organic Law 8/2013 on the improvement of quality in education was repealed.

This reform initiative aims at tackling the following challenges in the Spanish education system:

- Improving the level of competence of all children, compensating for initial disadvantages
- Regaining the equality lost during crisis years
- Updating the teaching profession to lead curricular and didactic innovation
- Improving the scope and quality of 0–2 education and its curricular framework
- Increasing STEM vocations, especially among female students.

The Ministry of Education proposes the following general changes in Early Childhood Education, in accordance with the existing challenges and the objectives set out in the education reform:

- The first cycle 0–2 will be educational in nature with certain minimum requirements and a pedagogical proposal.
- The educational stage will be aimed at compensating for the effects of inequalities of cultural, social and economic origin on children's learning.
- Early detection and early attention to support needs will be encouraged.

The specific changes this new law introduces in Early Childhood Education are the following (Eurydice 2023c):

A. Educational provision

The administrations will gradually increase the offer of public places in the first cycle in order to meet the demand for places for children up to age three. All centres 0–6 years will require authorisation by the educational administration for their operation. The Government will regulate the curriculum and the minimum requirements of the two cycles of this stage, that is, the qualifications of all professionals, the staff to child ratio, the facilities, and the number of school positions.

B. Aims and principles

- At this stage, emotion-management, education for responsible and sustainable consumerism, and health promotion and education are pedagogical principles.

- The promotion of gender equality is a new objective in Early Childhood Education.
- At this stage, the effects of cultural, social and economic inequalities on children's learning and development will be compensated for.

C. *Evaluation and orientation*

- Early detection and early attention to specific educational support needs will be a priority.
- At the end of the stage, a report will be issued on the development and needs of each child.

Since this legislation came into force, an implementation process has begun that will conclude in the 2023/2024 academic year. In order to achieve greater equity in the educational system, one of the fundamental objectives set by the LOMLOE (Organic Law 3/2020) is the universalisation of enrolment from 0 to 2 years. To achieve this objective, new forms of cooperation between the MEFP and the autonomous communities are necessary. A cooperation programme to finance the creation of public places for the first cycle of Early Childhood Education, endowed in 2021 with 200 million euros, was presented to the General Education Commission. The first annuity will allow the creation of more than 21,000 new places in ECEC provision. Nevertheless, the sustainability of the ECEC Spanish system needs to be addressed also in terms of quality, which involves giving institutional priority to its workforce and conditions (Ancheta-Arrabal 2022).

LOMLOE also seeks to improve the social recognition of vocational training tracks to bring Spain closer to the rates of students who choose this path in other European countries.

The Law on the Organisation and Integration of Vocational Training (2021, Organic Law 3/2022) consolidates Vocational Training into a single system at the service of students, workers and unemployed. This new system will integrate the VET of the educational system and the VET for employment. The implementation of this Law will establish a unique, modular and flexible provision of Vocational Training. It will be organised in training itineraries that allow progression through five ascending degrees: partial accreditation of competences (Grade A), Certificate of Professional Competence (Grade B), Professional Certificate (Grade C), Training Cycles (Grade D) and Specialisation Courses (Grade E). The entire offer in cycles of Grades C, D and E will have a dual character and will be divided into two types: General Dual Vocational Training or Advanced Dual Vocational Training. Regarding the accreditation of competencies, the new text also streamlines the system of accreditation of professional competencies acquired through work experience and non-formal training channels. The new Vocational Training Law regulates the relationship between Vocational Training and university education, promoting mutual recognition, such as higher education credits, to facilitate the establishment of training itineraries that recognize previously acquired training in both directions. A Catalogue of Professional Competence Standards replaces the current National Catalogue of Professional Qualifications.

Lastly, the Royal Decree 62/2022 on the Modernisation of Vocational Training aims to relax the requirements for obtaining vocational training qualifications, professional certificates and other awards currently linked to the National Catalogue of Professional Qualifications. Likewise, it aims to progress in terms of the expansion and flexibility of vocational training courses. This norm applies to authorised high schools, both public and private, which offer vocational training qualifications, professional certificates and other awards. In this respect, it complements and expands the assumptions provided for in Royal Decrees 34/2008 and 1147/2011 as requirements for vocational training.

9. Recent country-specific research focusing on ECEC staff

Evaluation of CPD programme on collaborative reflection on early childhood education

Source: Vizcarra, M. T., E. López-de-Arana, and R. Gamito 2021 (see *References* for further details)

Aims: This research analyses the process of collaborative reflection carried out by the professionals of the Municipal Network of Early Childhood Schools of Vitoria-Gasteiz to define key aspects of the transition from home-based ECEC to centre-based ECEC and their understandings of the adaptation process. The aim was to identify the main aspects related to this period of transition, in order to jointly construct the professional knowledge for improving the work in this crucial stage for the children.

Procedure: An action research approach was adopted in four phases. In this article the third phase is presented, reflecting on current practices during the adaptation period and how language and modes of action should be transformed in the future. In the study, 115 early childhood professionals, 12 researchers and 6 senior ECE specialists participated in eight working groups to reconstruct knowledge through different strategies.

Findings: The study is a pioneer in its field. The conclusions show that the reception time, as opposed to the adaptation period, implies accepting the emotional affordances that each girl and boy brings with them, so that new bonds can be created that give them security, instead of forcing them to adapt to a rigid, pre-set structure.

Implications: The study suggests the need to rethink the settling-in stage when children enter the institutional framework of an early childhood setting for the first time.

Construction of citizenship in the initial professional education of ECE Teachers

Source: García Pérez et al. 2020 (see *References* for further details)

Aims: The severe social and environmental problems in our world demand a model of education for a global, participative and critical citizenship. This requires training future teachers as educators in citizenship, developing awareness in relation to these problems and attitudes of social commitment, with a teaching model that favours the construction of this model of citizenship in the children they will be working with.

Procedure: Against this background, a qualitative research study was developed. Group interviews were held with 36 students in 12 groups in 2014/15 and 64 students in 15 groups in 2015/16. Participants analysed the process of construction of citizenship in students of the Early Childhood Education Teacher study programme at the University of Seville. The research is based on the monitoring of the development of teaching the subject "City and citizenship in Early Childhood Education", through the statements of the students involved.

Findings: The results show an evolution of the conception of citizenship in students towards a more participative model linked to social commitment. An important factor in this development was the didactic model applied by the university teacher. In the interviews, the impact of certain activities on the students' awareness of socio-environmental problems was highlighted. Likewise, reflections on the possibilities offered by the official curriculum to educate for citizenship and, above all, knowledge about education projects for children for citizen participation were important. The study concluded with the design of a project or proposal for didactic intervention by the student work groups, to consolidate the link with the reality of teaching. Moreover, the

students were able to perceive the role of the teacher as a reference for building a model of desirable citizenship.

Implications: In this sense, there are explicit implications for the everyday application of the didactic model that the subject intended to transmit, confirming that really significant learning is developed by living the said model in daily learning experiences and complementing this with personal experiences of citizen participation in real social contexts.

Vocation in the identity of the Early Childhood Education Teacher: a review of the last decade

Source: Romero-Sánchez et.al. 2020 (see *References* for further details)

Aims: The review study of research over a period of ten years aims to constitute an approach to the role played by vocation in building the professional identity of the Early Childhood Education Teacher. To do this, a systematic review of research from 2010 to 2019 was conducted. Although teaching as a vocation is a topic that has been widely studied and investigated in the past, the novelty of this study lies in the fact that it currently does not feature in research. This review intended to present an updated analysis of the contemporary status quo of the issue. The study therefore aims to identify the main contributions of studies on the importance that the concept of vocation has in the process of professionalising the Early Childhood Education Teacher and to find out what additional elements influence the construction of the teaching identity of these professionals.

Procedure: To this end a systematic review of Spanish-language research studies on this topic over a period of ten years was carried out. Out of the 909 studies located, 40 were finally selected. Out of these 40 studies, 33 were research articles and 7 were doctoral theses.

Findings: Results show that a great number of research studies – predominantly qualitative – were carried out during the ten-year period, mostly in Spain. Among the topics addressed were: the influence of vocation on the choice and enactment of the profession; the practicum in initial professional education; and working conditions of the teaching profession. The least researched topics were: the impact of gender on the construction of the identity; the role of the family in the choice of profession and professional orientation of the teacher.

Implications: The article concludes with the recommendation to continue researching aspects such as responsibility, illusion and motivation to reinforce the vocational component of the teacher.

10. Workforce challenges – country expert assessment

One of the recent workforce challenges in the teaching profession in general has been and still is: **achieving a balance between the teaching and administrative duties of core practitioners.** A survey of practitioner views focusing specifically on ECEC services in Spain (Sandstrom 2012) noted that an excessive bureaucratic workload has a negative impact on the practitioners' practice, reducing the time available for reflection, meetings, planning or participation in CPD. The study also showed that the over-enrolment of children led to teachers relying more on lesson books and worksheet activities as a way to control a large class.

At the same time, the previous Organic Law (8/2013) on the Improvement of Quality of Education stipulated that for the second cycle of pre-primary education the Government is responsible for establishing:

- The objectives, skills and evaluation criteria of the core curriculum, which will represent 55% of the school timetable in the autonomous communities with a co-official language and 65% in the rest
- The foundations for multilingual education.

These requirements imply additional tasks for ECEC professionals working in the second cycle.

Whether the implementation of this Organic Law achieved the desired balance is a question that remains without a clear response, due to a lack of relevant policy measures or research.

Thus, a second challenge that needs to be addressed by the authorities is the identification and recognition of these conditions and the **funding of research** to help improve them. On the one hand, given the high variability in the administration of ECEC provision in Spain (departments, city councils, consortiums, autonomous communities, etc.), it is necessary to point out that the legal regulations sometimes only refer to one type of educational centre, since the others are regulated in a particular way by each city council. This makes it difficult to draw conclusions about ECEC settings in general and the conditions of ECEC professionals in a specific region. On the other hand, improving the availability and accessibility of information is essential. Available official statistics still do not show, for example, the proportions of professionals in ECEC by type or level of qualification. This is also the case for vulnerable groups related to lower professional positions, such as the number of Assistants from ethnic cultural minority groups. One thing is for sure, the requirements to access the private sector (the predominant sector for 0–2 provision) are becoming higher and higher (such as having an education degree/training in English language or other languages, etc.), even for posts as Assistants. This situation, added to the financial crisis that Spain has been experiencing, has made it even more difficult for minority groups to gain access to higher levels of education or even to finish their compulsory education, meaning that the chances to access this kind of employment are very limited. However, it cannot be assumed that in most cases people coming from ethnic minority groups are Assistants in ECEC services. They tend to be more represented as caregivers in home-based ECEC provision, as “the changes in demographic, economic, socio-cultural and health foster the emergence of a new set of caregivers: the hired caregiver, covered generally by immigrant women” (Ruiz López and Moreno Preciado 2013, 86).

Concerning the **right to CPD**, guaranteeing the principle of non-discrimination among ECEC professionals needs to be emphasised, since the public offer of CPD is mainly addressed to ECE teachers in public ECEC services. The possibilities to develop further as a professional thus rely too heavily on the economic circumstances of the practitioners and their personal situation in terms of participation in further education. Moreover, this is also related to the varying working conditions: for ECE teachers in public provision, accessing CPD is both a right (with dedicated work time and reimbursement of costs) and can also facilitate a reward (as a merit or even to get extra payment bonuses). However, for ECE teachers working in the private sector or for other ECEC practitioners this is not the case.

Finally, as already outlined in *Chapter 8*, there is a need to reconsider the fact that both the initial professional education and continuing professional development of ECE Teachers focus insufficiently on **quality issues in ECEC** compared with other areas. For instance, one of the main challenges that the new Law on Education (Organic Law 3/2020, LOMLOE) presents for the ECEC workforce is how to develop the competences to deal with **diversity** and how to handle an **inclusive intervention**, thus making it vital to extend the training and education of ECEC professionals to include the specific needs of educational support (Lao et al. 2022). This is, among other

things, a key issue for research – to explain a societal and professional perspective that fails to value the professional status of early childhood education and thus hinders the development of the profession and effective CPD policymaking (Ancheta-Arrabal, 2018). Further analysis needs to examine the causes for this. In line with the Decent Work Agenda (ILO, 2013) this is a responsibility shared among social and economic actors, including social scientists and practitioners. Hence, a new space for debate, study and reflection around the status of the **self-image and self-perception of ECE professionals** in Spain and its consequences for the improvement of the profession should be encouraged from the highest authorities in education to the professionals that work and dedicate their daily attention to the youngest citizens of our society (Ancheta-Arrabal 2019), in order to recognise and value their education for what it really is: a human right.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC settings are: **first cycle early childhood education centres** (*primer ciclo*, 0–2) and **second cycle early childhood education centres** (*segundo ciclo*, 3–5)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Spain

1838	<ul style="list-style-type: none"> – Pablo Montesino founds the first 'infant school' (<i>escuela de párvulos</i>) at the primary school in the village of Virio in the province of Asturias. – The first Education Act (<i>Ley de Someruelos</i>) refers to these schools as the lower level of primary school education².
1849	Just 10 years later, 100 such children's schools have been established, but they are not publicly funded.
1857	<i>Escuela de párvulos</i> are recognised by law (Moyano Law) as the first stage in the education system and are mainly established in areas with more than 10,000 inhabitants.
From 1878	<ul style="list-style-type: none"> – New educational ideas (e.g. Froebel) stream into early education. – In 1884, there are 864 institutions attended by about 25% of 3 to 6 year-olds.
From 1890s	Funding problems and poor quality lead to a reduction in the number of ECEC settings.
1901	In a primary reform (the Royal Decree of October 26, 1901 (32) the <i>Escuelas de párvulos</i> are considered as the first grade of primary education.
Early 20th century	Following a phase of expansion at the beginning of the century, a strong slump in provision follows during the Spanish Civil War.
1945	Primary Education Act: early education is a non-compulsory stage of school.
1960s	Increasing maternal employment leads to a renewed expansion of the ECEC sector. In 1966, however, no more than 25% of the 2 to under 6 year-olds attend an ECEC setting.
1970	The General Education Act confirms the voluntary nature of early education, but divides it into two phases: (1) childcare centres for 2 to 3 year-olds and (2) preschool classes in primary schools (or 'kindergartens' in big cities) for 4 to 5 year-olds.
From 1975	Expansion of the now state-funded early childhood education system
1978	The Spanish Constitution allows for cooperation with the Church in the field of education and authorises subsidies for Catholic ECEC settings.
1980–1990	Experimental plans for the new ECE settings that the 1990 Education Act then embraces
1990	<ul style="list-style-type: none"> – Education Act: introducing the basic right to education – ECEC settings for under 3 year-olds and 3 to under 6 year-olds are integrated and organised in two cycles.
1991	Transfer of responsibility for ECEC from the National Government to the Autonomous Communities regarding the regulation of the curriculum for the first cycle (0–3).

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6 (as in Spain): **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds.

² Ministry of Education 1985

1995	The Act on Participation, Evaluation and Governance (9/1995) gives ECEC settings more autonomy.
2002	Law on improving the quality of education
2004/05	Gradual introduction of waiving parental fees for 0 to 3 year-olds in ECEC centres
2006	Education Act confirms the integrated approach towards early childhood education.
2008	The Ministry of Education, Social Policy and Sport (MEPSyD) launches the <i>Educa3 Programme</i> aimed at expanding the provision of places for the 0–2 age group and improving programme quality through complementary continuing professional development activities for staff working with the youngest children.
2021	The amended 2020 Education Act comes into force.
2022	The Royal Decree 95/2022 regulates the general and pedagogical principles of ECEC as well as organisational requirements and basic curricular and competence requirements.
2023	Establishment of a Ministry of Youth and Childhood (<i>Ministerio de Juventud e Infancia</i>)

ECEC system type and auspices³

Responsibilities for the education system in Spain are shared between the Ministry of Education and Vocational Training (*Ministerio de Educación y Formación Profesional*) and the education authorities of the Autonomous Communities. The Ministry is responsible for the overall organisation of the education system, while management and operation are the responsibility of the education authorities of the Autonomous Communities. In this respect, the structure of the Spanish early childhood education and care system can be described as both integrated and decentralised.

ECEC settings for under 3 year-olds (1st cycle, ISCED 01) are primarily the responsibility of the municipalities, except in the Autonomous Community of Galicia, where responsibility falls within the remit of the Department of Social Policy (*Consellería de Política Social*). ECEC settings for the over 3 year-olds (ISCED 02) are the responsibility of the Ministry of Education and Vocational Training or the education authorities of the Autonomous Communities. In the autonomous cities of Ceuta and Melilla, the Ministry of Education has oversight of both cycles (European Commission/EACEA/Eurydice 2019, 175).

A new Ministry of Youth and Childhood (*Ministerio de Juventud e Infancia*) was established in November 2023 (Government of Spain 2024). It is responsible for proposing and carrying out government policy on matters of young people and the protection of minors. The main aim is to promote children's wellbeing and to address the inequality gap.

General objectives and legislative framework

Overarching principles are the right to education, equal access and freedom of choice for parents regarding the institution. The overall aim of early childhood education is to promote the physical, emotional, social and intellectual development of children in close cooperation with the family. Respect for cultural diversity and preparation for active participation in society and public life also play a major role.

³ The Eurydice country report on ECEC in Spain provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

The Education Act (*Ley Orgánica 3/2020, de 29 de diciembre, de Educación*), which came into force in 2021, is the basic legal framework for the education system in Spain. Early childhood education is defined here as the first stage of the education system with two cycles: one for under 3 year-olds and one for 3 to under 6 years-olds. Amendments to the Education Act included measures to increase places for children up to 3 years of age and promote gender equality in early education. The implementation process of the new law will last until 2024. Another important legal basis is the Law for Improving the Quality of Education (*Ley Orgánica 8/2013, de 9 de diciembre, para la mejora de la calidad educativa*), which, among other things, sets out the objectives of the core curriculum.

ECEC entitlement and compulsory attendance

Spanish legislation (article 15.2 of Organic Law 2/2006 on Education [LOE], as amended by Organic Law 3/2020 [LOMLOE]), guarantees every child over 3 years of age a legal right to a free place in an early childhood education institution for 25 hours per week. Some Autonomous Communities are also extending this entitlement to 1 and 2 year-olds. If public facilities cannot meet the demand for places, then private facilities are subsidised (European Commission/EACEA/Eurydice 2019, 46). Attending an ECEC setting is voluntary for children below compulsory school age. However, the second cycle has become widespread throughout the country, so that, at present, practically 100% of children aged 3–5 years attend an ECEC setting. Compulsory schooling starts at the age of 6.

Main types of provision

In Spain, the system of early childhood/pre-primary education – *educación infantil* (‘infant education’) – is organised in two cycles. Early childhood education may be offered either in **unitary pre-primary schools** – *escuelas infantiles* (‘infant schools’) – for children aged 0–5 years or in **separate pre-primary centres** – *centros de educación infantil* (‘infant education centres’) for the younger age group (0–2/3 years, depending on the Autonomous Community) and pre-primary and primary education centres (*centros de educación infantil y primaria*) for the 3–5 age group, mostly located in the same building as primary schools.

First cycle ECE centres (*primer ciclo*) for children under 3 years of age are usually open between ten and eleven months a year and the opening hours are mostly based on the needs of the families.

Second cycle ECE centres (*segundo ciclo*) for children between 3 years and school entry are open on 178 school days and have the same holiday periods as primary schools. Both cycles can be offered either in separate settings, or together in one self-contained setting, or be attached to a primary school.

Public educational institutions that offer both cycles or only the 2nd cycle are open five hours a day and offer additional care during off-peak hours. In the case of public institutions offering only the 1st cycle, each municipality regulates the opening hours individually; however, children may not be present for more than eight hours a day. The same applies to private facilities.

Currently, the demand for places for under 3 year-olds is greater than the available places almost everywhere in Spain; in the 2nd cycle, demand and supply are balanced (European Commission/EACEA/Eurydice 2019, 63). If there are not enough places available, preference is given to children who have siblings in the facility, who are disabled, whose parents live nearby or who have a low income (Ancheta-Arrabal, in press).

In two Autonomous Communities – the Community of Madrid and the Chartered Community of Navarre – **home-based ECEC provision** is also an option for children aged 0–2 years.

Provider structures

According to national statistics, there were a total of 99,539 groups in 22,510 ECE settings for children under 6 in 2020/21; almost two-thirds of these were under public management. 10,192 settings offered first cycle education; slightly more than half of which were private whereas of 14,106 settings offering second cycle education, only 25.9% were private (INE 2023, D1).

Table 1

Spain: Number of ECEC settings, groups and enrolled children by provider type, 2020/21

Provider type	Number of settings	Relative share by provider type in %	Number of groups	Relative share by provider type in %	Number of children	Relative share by provider type in %
Public	14,697	65.3	63,766	64.1	104,4503	64.4
Private	7,813	35.7	35,773	36.9	57,7595	35.6
Total	22,510		99,539		162,2098	

Quelle: INE 2023, D1

In 2023/24, the number of **first cycle ECE centres** had increased overall to 9,169. Just over half (4,620) were publicly funded and 4,549 were privately run settings (Ministry of Education and Vocational Training 2023, 19). In 2020/21, 1,651 of the private settings were private-subsidised and 2,764 private non-subsidised (Eurydice 2023, 2.8).

Participation rates in regulated ECEC settings

The proportion of children under the age of 3 attending ECEC settings has increased since 2005 from 37% to almost half of the children (48.6%) in 2022. The proportion of children aged 3-6 years, which was already very high in 2005 at 94%, rose to 96.1% by 2022.

Table 2

Spain: Enrolment rates in ECEC centre-based settings by age and duration of attendance, 2005–2022

Year	Weekly hours of attendance	Under 3 year-olds in %	3 years to minimum compulsory school age, in %
2005	1 to 29 hours	24	53
	Over 30 hours	13	41
	No enrolment in ECEC	62	6
2010	1 to 29 hours	19	45
	Over 30 hours	18	48
	No enrolment in ECEC	63	7
2015	1 to 29 hours	19.1	46.6
	Over 30 hours	20.6	45.4
	No enrolment in ECEC	60.3	7.9
2022	1 to 29 hours	25.9	51.6
	Over 30 hours	22.7	44.5
	No enrolment in ECEC	51.4	4.0

Source: Eurostat 2023b, slight deviations from 100 % due to rounding

In 2021, almost all 3 to under 6 year-olds attended an ECEC setting, as did more than half of 2 year-olds. *Table 3* shows the number of children and attendance rates by age.

Table 3

Spain: Number and enrolment rates of children in 1st and 2nd cycle ECE centres by age, 2021

Age	Number of children In 1 st cycle ECE centres	Enrolment rates in 1 st cycle ECE centres, in %	Number of children in 2 nd cycle ECE centres	Enrolment rates in 2 nd cycle ECE centres, in %
Under 2 years	173,880	24.7		
2 year-olds	214,873	56.2		
3 year-olds	224	0.1	384,361	94.1
4 year-olds			416,436	96.5
5 year-olds			430,815	97.2

Source: Eurostat 2023f, g

In 2022/23, attendance rates were 14.7% for children under age 1, 49.6% for 1 year-olds, 71.3% for 2 year-olds and 95% for 3-year-olds (children with special educational needs included) (Ministry of Education and Vocational Training 2023, 20).

In 2023/24, a total of 1,600,564 children were enrolled in ECE centres, 490,308 children in first cycle institutions and 1,110,256 children in the second cycle (Ministry of Education and Vocational Training 2023, 5).

Financing and costs for parents

In 2019, 0.47% of GDP was spent on the 2nd cycle of early childhood education (OECD 2023). In 2021, 34% of public expenditure on education was spent on early childhood education institutions, primary schools and special education (Ministry of Education and Vocational Training 2023, 12).

In general, the providers of **1st cycle ECE centres** set the fees themselves, linked to criteria such as family income, the number of siblings already in the setting or the number of hours the child spends there. Sometimes maximum fees are set by the Autonomous Communities. The maximum cost for full-time attendance can vary from below €100 to well over €200 per month, depending on the Community and the benefits for which a family may be eligible.

Attendance at public **2nd cycle ECE centres** is free of charge except for meals. However, private settings charge fees; these may be subsidised by the education authorities of the Autonomous Communities.

The financing of public institutions is generally the responsibility of the state. The Ministry of Education allocates funds to the Autonomous Communities for the operation of ECE centres. They enjoy a high degree of financial autonomy and decide themselves on the exact distribution of the budgets. The municipal authorities receive funds for establishing and maintaining ECE facilities from taxpayers' money as well as budgets from the state and the communities. Private facilities that have a contract with the local education authority and meet certain criteria can also be subsidised by state funds.

To address the disparities between Autonomous Communities in terms of access to a place for under 3 year-olds, funding was made available by the national government through the *Educa3-Programme* – although this was used differently by the Autonomous Communities (Ancheta-Arrabal and Zhang 2016).

In 2022, a couple with two children spent about 5% of net household income on childcare costs⁴ (OECD.Stat 2023).

Staff to child ratios and group size

In both cycles, the children are divided into same-age groups. If there are not enough children of one age, mixed-age groups are formed. If possible, the same ECEC professional accompanies the children through an entire cycle.

The maximum number of children in a group and per professional is regulated as shown in *Table 4*.

Table 4

Spain: Maximum number of children per group/professional in ECE centres by age

Age	Max. number of children per group/per professional
Under 1 year	8
1 to 2 years	10 to 14
2 to 3 years	16 to 20
3 to 4 years	25
4 to 5 years	25
5 to 6 years	25

Source: Eurydice 2023, 4.2

In the community of Madrid, one home-based ECEC provider ('day mother, day father') must have at least completed the advanced vocational training cycle in Early Childhood Education (ISCED level 5), and can care for four children. In the Chartered Community of Navarre, the respective minimum requirement is a training in caring for children under the age of 3 years, or experience/specific training in caring for minors. Regarding the staff to child ratio, the maximum number of children per educator is four which can be increased to five in exceptional and justified circumstances (Eurydice 2023, 4.4).

Curricular framework

The curriculum for early childhood education is compulsory for both cycles, whereby on the basis of the Education Act which came into force in 2021, the framework for the 1st cycle is drawn up by the government in cooperation with the Autonomous Communities. For the 2nd cycle, the Ministry of Education draws up a core curriculum and describes the objectives and content as well as evaluation criteria, which are subsequently supplemented or adapted by the education authorities. This adaptation by the Autonomous Communities is nevertheless handled very differently: some draw up the same education plan for both cycles, others a separate one for each cycle and still others only one for the 2nd cycle.

The Education Act (2/2006 with amendments of 2020) sets out the organisation and pedagogical principles of both education cycles. Subsequently, the Royal Decree 95/2022 sets out the regulations and content of early education in more detail. These refer, for example, to supporting children's development in multiple dimensions (physical, emotional, sexual, affective, sociological, cognitive and artistic) as well as promoting personal autonomy, a positive self-image and education in civic values (Ancheta-Arrabal, in press).

⁴ The calculation is based on the following fictitious model: two parents working full-time (average income); two 2 and 3 year-old children in full-time care; relevant care allowances included.

Objectives of the early childhood curriculum include acquiring key skills and competences in the following domains (Eurydice 2023, 4.3):

- Getting to know their own body as well as others' and learning to respect differences
- Observing and exploring their family, natural and social environment
- Progressively acquiring autonomy in their regular activities
- Developing their emotional and affective capacities
- Interacting with others on an equitable basis and progressively acquiring basic guidelines for coexistence and social relations, as well as practising the use of empathy and peaceful conflict resolution, avoiding any kind of violence
- Developing communication skills in different languages and forms of expression
- Being introduced to logical-mathematical skills, to reading and writing, and to movement, gesture and rhythm
- Promoting, applying and developing social norms that foster equality between men and women.

The professionals are free to choose their own materials and methods, with an emphasis on play.

In the second year of the 2nd cycle (5 to 6 year-olds), a foreign language; reading, writing and basic numeracy; information and communication technologies; and visual and musical expression are usually introduced. The teaching of religious content is offered voluntarily by the religious communities. Books and other materials used in the institutions are inspected by the education authorities.

Digital education

The guidelines for the national education plan emphasise the pedagogical use of digital technologies to support learning processes, but without going into more detail about the digital competences to be developed. For example, reading digital books, using digital devices such as webcams and computer games are recommended (European Commission/EACEA/Eurydice 2019, 100).

Nevertheless, there is no consensus among ECE professionals on the suitable level of integration of these technologies. The reasons for this are, on the one hand, the students' own competence with regard to digital technologies (Alberola-Mulet et al. 2021), and on the other hand, that ethical problems are not addressed in the development of digital competencies during their initial professional education (Novella-García and Cloquell-Lozano 2021).

Monitoring – evaluation

Not all Autonomous Communities evaluate both cycles of the early childhood education system.

Child-related assessment

Criteria established by the Ministry of Education and adapted by the Autonomous Communities serve as a reference framework for the assessment of children. At the beginning of the settling-in phase, an initial assessment is carried out within the framework of the respective institution's development plan, followed by continuous assessments. At the end of the year, a final evaluation takes place, which describes the children's skills and abilities. The education authorities schedule three formal evaluations per year, the results of which are communicated to the families in a written report. Observations are the main form of assessing the children, as well as

interviews with the families. Screening instruments may also be used to identify possible developmental delays.

Centre-level internal evaluation

Centre-based self-evaluation measures and their implementation are the responsibility of the ECE centres. In some Autonomous Communities there are also guidelines for self-evaluation, which is usually carried out annually.

External evaluation

External evaluations are the responsibility of the State Inspectorate of Education, the inspection authorities of the respective Autonomous Communities, the National Institute for Educational Evaluation (subordinate to the Ministry of Education), and evaluation authorities of the Autonomous Communities. The National Institute for Educational Evaluation produces a system of educational indicators that are regularly adapted. In 2019, it consisted of 17 indicators in three dimensions (educational environment, financing, educational outcomes).

Inspections carried out by officials from the Education Inspectorate are designed to check compliance with legal regulations and to determine the rights and obligations of all those involved in the learning process. They also examine the day-to-day operation of an educational setting and its education programme. Inspections and evaluations ultimately serve to improve the quality of education; they are also intended to increase transparency and effectiveness. The frequency of implementation depends on the resources of the respective Autonomous Community. In two Autonomous Communities (Cataluña and Valencia; in Andalusia only for the 2nd cycle), the perspectives of children and parents are also included in the evaluation process. Instruments to capture their perspectives have been designed for both self-evaluation procedures and external evaluation by the Education Inspectorate (European Commission/EACEA/Eurydice 2019, 20, 131f).

Inclusion agenda

Children with special educational needs and disabilities

The principle of diversity is included in both the new Education Act (2020) and the Education Quality Improvement Act (2013). According to this legislation, all children should receive the support that best suits their needs. Children with special needs usually attend mainstream ECE centres. They are enrolled in a special education setting only when their needs cannot be met in a regular ECE centre. The specific arrangements for this are determined by the regional education authorities.

In 2021/22, 1.3% of children in the 1st cycle had special educational needs and 3.2% in the 2nd cycle (Ministry of Education and Vocational Training 2023, 9).

The National Strategy for the Prevention of Poverty and Social Exclusion (*Estrategia nacional de prevención y lucha contra la pobreza y la exclusión social, 2019-2023*) has a special focus on inclusive education and early education for under 3 year-olds, especially for families from disadvantaged backgrounds.

Children with a background of migration – children from Roma communities

In 2022, 11.4% of the total population had a non-Spanish citizenship, of which more than two thirds (67.8%) came from countries outside the EU27(2020). In the age-group up to 5 years,

15.1% children were of non-Spanish origin, of which three quarters (75.4%) are from non-EU countries (Eurostat 2023c).

In 1st cycle ECE centres, a total of 160,188 children, were of non-Spanish origin in 2020/2021. Of these, 17.9% came from the EU27(2020) countries, 15.5% from Latin American countries and 23% came from African countries (INE 2023, E5).

There are bilateral agreements with some countries, e.g. Portugal, to promote their family language and thus their culture and identity. For example, in the Autonomous Community of Extremadura there is a "Portuguese Language and Culture Programme" in ECE centres and schools (European Commission/EACEA/Eurydice 2019, 115).

The second EU Minorities and Discrimination Survey (EU-MIDIDS II; European Union Agency for Fundamental Rights 2016) showed that the attendance rate of Roma children in Spain (between 4 years old and school entry) was very close to the European target of 95% (European Commission 2020, 134). However, as ethnic identification is not allowed in Spain, there is no accurate and up-to-date data on the number of Roma in the country. The Council of Europe estimated in 2012 that there were approximately 705,000 Roma (about 1.6% of the population) (Carrasco and Poblet 2019).

Parental leave arrangements⁵

Birth and childcare leave for biological mothers (changed terminology since March 2019) (*permiso y prestación por nacimiento y cuidado del menor*) is granted for 16 weeks, of which six are compulsory and must be taken in full time after the birth. Full salary continues to be paid up to a maximum of €4,495.50 per month if the mother has paid into a social insurance scheme for at least 180 days during the past seven years. Mothers who do not meet this requirement receive a lump sum of €600 per month for 42 days.

Working fathers are granted 16 fully paid weeks of **Birth and childcare leave for persons other than biological mothers** (*permiso y prestación por nacimiento y cuidado del menor del progenitor distinto de la madre biológica*) under the same conditions as mothers (excluding the lump sum). Six weeks after birth are compulsory.

Parental leave (*excedencia por cuidado de hijos*) can be taken as an individual and non-transferable entitlement by either parent for up to three years after the birth. In the first year, the return to the same job is guaranteed. Apart from social security contributions, the time is unpaid. Currently, four of the 17 Autonomous Communities pay monthly lump sums, mainly for low-income parents.

According to a survey by Meil and colleagues in 2021, 89.6% of mothers took childcare leave for their youngest child. In 66.7% of births, an average of 110.1 days of leave were taken. 90% of mothers took these in fulltime. In 2021, 73.7% (in relation to the number of births) persons took "birth and childcare leave for persons other than biological mothers". 51% of fathers took this time – unlike mothers – in different blocks of time. In 2021, 11.1% of people (in relation to the number of births) took parental leave, of which 12.6% were fathers. 19.8% of mothers took an average of 6.1 months off, while 6.5% of fathers took 5.7 months.

⁵ The brief overview in this section is based mainly on the country note for Spain by Gerardo Meil and colleagues in the *International Review of Leave Policies and Research 2023* (see *References*).

Current challenges for the ECEC system in Spain

Country expert assessment by Ana Ancheta-Arrabal

In Spain there are currently a number of **support mechanisms for families** in relation to early childhood, but they are quite limited, as they are addressed to support the most vulnerable families in economic terms, i.e. only for those who live below the extreme poverty line, whereas those who live in a situation of moderate poverty are neglected. Moreover, other vulnerable groups, particularly in rural areas, are not receiving the policy priority needed in many different regions, thus resulting in significant disparities for families and their children across the country. Spanish administration of the education sector is mainly decentralised, especially for the first cycle of ECEC, creating significant differences in terms of opportunities and costs between the different Autonomous Communities, as well as wide and persistent regional disparities in key educational and social indicators. It is therefore crucial to address **inequality of access** among vulnerable groups who may find it challenging not only to pay the fees often required, but to get available services (e.g., in rural municipalities). Previous decades have seen even larger disparities in terms of equity of access to high quality ECEC in the individual Autonomous Communities than were traditionally the case (Ancheta-Arrabal and Zhang 2016). Moreover, current efforts are not likely to ameliorate the lack of equitable access in some regions of the country. The differences in quality between ECEC institutions in Spain are also reproduced through the personnel who work in ECEC in terms of inequities in career regulations and working conditions (see the ECEC Workforce Profile for Spain, Ancheta-Arrabal 2024).

As concluded in the SEEPRO-r study in 2018, we can say that the **tension between quality and equity** in ECEC is still relevant and a main challenge to be solved in the diverse territories of Spain. This inequality undermines the principle anchored in the Convention on the Rights of the Child (CRC) to guarantee education for all children as one of the ratified rights (Ancheta-Arrabal 2011). The incomplete and under-developed societal dialogue surrounding ECEC, which mirrors the discourses at other levels of the education system, still remains a policy challenge in terms of the sector's further development.

ECEC must be accessible to all without any type of discrimination based, for example, on race, colour, ethnic origin, sex, language, religion, economic or social situation. But, especially for the most vulnerable groups in society, including families in poverty, immigrants, the disabled and ethnic minorities, positive discrimination measures should be adopted to eliminate existing discrimination. Right now, discrimination may not officially exist in education legislation and regulations, but the reality is quite different and the fact is that if centres that are not governed by guidelines from the responsible educational authorities, these guarantees are not provided. However, the cultural and educational capital of families should not be a hindrance in guaranteeing learning opportunities or attending to diversity where, for example, in the most problematic situations, access to technology may impede the participation of families (Ancheta-Arrabal et. al. 2022).

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Spain was 47,432,893 and has been increasing steadily for over 20 years (2000: 40,470,182; 2010: 46,486,619; 2020: 47,332,614) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (as of 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.19, Spain had one of the lowest rates among the SEEPRO-3 countries (Eurostat 2023d)⁶.

Children under age 6

Table 5

Spain: Number of under 6 year-olds in total population, 2022

Age	Number of children
Under 1 year-olds	337,549
1 year-olds	345,218
2 year-olds	366,776
3 year-olds	384,994
4 year-olds	411,344
5 year-olds	434,163
Total 0 to under 6 year-olds	2,280,044

Source: Eurostat 2023a

In 2022, 2.2% of the total population were children under 3 years of age, 4.8% were children under 6 years of age. During the last two decades these proportions always were only slightly below the respective EU averages. In 2022, particularly the proportion of the under 3 year-olds fell considerably below the EU average.

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Single households with children under age 6

Almost three quarters (72%) of households with children under 6 in Spain were couple households in 2022. Single parent households accounted for only 2.7% – almost exclusively single mothers (2.2%).

Table 7

Spain: Households with children under age 6, 2022

Household type	Total households	Relative share of all households, in %*
Total households	3,984,600	
Couple households	2,868,300	72.0
Other types of households	1,007,900	25.3
Total single households	108,400	2.7

Employment rates of parents with children under 6 years of age

In Spain, in 2022, the overall employment rate for men (15-64 years) was 78.2% and for women 69.9% (Eurostat 2023k).

In 2022, 60.9% of women and 82.2% of men (18-64 years) with children under 6 were employed. Among the 27 EU-countries (2020), the shares of employed fathers were below the EU-average (87.2%), as were those of mothers (EU-average 63.6%) (Eurostat 2023h, own calculations).

Table 8a

Spain: Employment rates of parents with children under 6 compared with other EU countries, 2010–2022

	2010	
	Mothers, in %	Fathers, in %
Spain	56.0	77.1
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Children at risk of poverty or social exclusion¹⁰

In 2023, almost one third (31.3%) of children under 6 in Spain were at risk of poverty or social exclusion. This proportion was significantly higher than the EU27 average (23.3%) for this age-group. The share of all persons at risk of poverty or social exclusion in the total population was 26% (EU: 21.6%). In 2020, 6.8% of children under 6 suffered from severe material deprivation – this proportion was higher than the EU27 average of 6.1%. For the total population, it was 3.4% (EU: 4.3%) (Eurostat 2023i, j).

In 2021, the National Alliance for Zero Child Poverty was launched, working in partnership with various social actors to reduce child poverty (Eurochild 2021).

About the author

Maelis Karlsson Lohmander has served as Senior Lecturer in Education and Psychology at the Department of Education, Communication and Learning, University of Gothenburg since 2001. Her research interest is oriented toward Early Childhood Education with a special focus on policy and practice regarding professionalism and professional development both at national and international levels. She has participated in several international research projects and published book chapters and articles on early childhood education, ECE teacher education and related professional issues. She is vice president of the European Early Childhood Education Research Association.

1. ECEC governance in Sweden

ECEC in Sweden is part of a unified education system covering the ages 1–19 years. Since 1996, the Ministry of Education and Research (*Utbildningsdepartementet*) has had overall responsibility for early childhood services. The National Agency for Education (*Skolverket*) and the National School Inspectorate (*Skolinspektionen*) are responsible for providing support and monitoring quality.

The Swedish education system for children aged 1–6 years includes preschools¹ for children aged 1–5 years (*förskola*), preschool classes (*förskoleklass*) for children aged 6 years and school-age educare² settings (*fritidshem*) for children from 6 years of age before and after school hours to supplement the education in the preschool class and the compulsory school (SFS 2010:800 § 1). Different curricular frameworks exist for the preschool, and the preschool class and school-age educare setting. There are municipal (*kommunala*) and independent (*fristående*) preschools. Most registered children (78.6%) attend municipal preschools (Skolverket 2023a).

The preschool class is in a transition phase. In 2018, the preschool class became compulsory. In 2020, the Government commissioned an inquiry on a 10-year compulsory school where the preschool class would be included as year 1 (SOU 2021). Although no decision has been made by Parliament and there is no explicit policy on this up till now, the preschool class is likely to become officially integrated into the primary school system in the future.

ECEC also includes facilities termed Pedagogical Care (*Annan pedagogisk verksamhet*) such as home-based ECEC provision and open preschools (SFS 2010:800, chapter 25).

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

Two main groups of qualified staff work in preschools: *Förskollärare* (lit. Preschool Teachers) with a university degree and *Barnskötare* (Childcare Workers) with a specialist upper secondary vocational education. Currently, well over 35% of ECEC staff lack a specialist qualification in ECEC or are unqualified. Only about 60% of the workforce have a specialist qualification out of which 40.7% are certified Preschool Teachers and 17% qualified Childcare Workers (see *Table 2* in *Chapter 3*).

Preschools have long opening hours. There is some variation, but most preschools are usually open from 6/6:30 in the morning to 18:30/19:00 in the afternoon. Staff work in teams (*Arbetslag*) on a rotating scheme. The full complement of staff is usually on site between 10:00 and 14:00 hours. According to the Education Act, preschools must have qualified Preschool Teachers in the work team, but it does not stipulate how many per group of children or per department. Childcare Workers are not explicitly mentioned in the Education Act. It is however stated that in addition to Preschool Teachers, staff with relevant training and/or experience may also work in the preschool as long as they can support children’s development and learning and work towards reaching the goals in the curriculum (SFS 2010:800).

¹ ‘Preschool’ is the official translation of *förskola* in government and other administrative documents.

In order to apply for a permanent position Preschool Teachers must be certified. Certification requirements do not apply to Childcare Workers. With the persistent lack of qualified Preschool Teachers and Childcare Workers, municipalities employ staff with various qualifications, even unqualified staff. These may be given a position as *Outbildad barnskötare* (Unqualified Childcare Worker) or – for those with a university degree other than a teaching degree – as *Lärare med annan inriktning* (Teacher with an alternative specialisation). It is the responsibility of the individual municipality to decide about the various positions, hence there may be considerable variation across the country.

In recent years, because of the lack of qualified staff, municipalities have introduced a new position to support the regular staff. There is variation between municipalities across the country also in this respect. Some municipalities have defined qualification requirements for the support staff. In the municipality of Gothenburg *Förskoleassistenter* (Preschool Assistants) have been employed. The Preschool Assistants are part of the work team and have a complementary role to assist and help with the practical care work in line with the curriculum for the preschool (Skolverket 2019).

The qualification requirements for this group are:

- 9-year compulsory schooling or equivalent
- Personal competence suitable for work in the preschool such as being attentive to children’s needs and able to establish good relations with both children, their guardians, and colleagues
- Ability to communicate orally and in writing in the Swedish language.

To apply for a permanent position Preschool Assistants must complete course modules equivalent to about 40% of the vocational programme for Childcare Workers with the ambition that they will eventually complete the entire 3-year programme and become fully qualified Childcare Workers. Staff without this qualification can only be temporarily employed (Rebas and Enbågen 2022).

In addition to these staff categories, staff with other qualifications such as *Grundlärare med inriktning mot arbete i fritidshem* (Primary Teacher specialising in school-age educare) and *Grundlärare med inriktning mot arbete i förskoleklass och grundskolans årskurs 1–3* (Primary Teachers specialising in Preschool Class and Primary School Grades 1-3), may also belong to the workforce. They work in school-age educare settings, in primary schools and in some cases also in preschools.

Table 1 shows the ECEC staff in centre-based settings in Sweden and categorises the core pedagogues (i.e., staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at the end of this chapter).

Table 1
Sweden: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age-range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Preschool Teacher/ ECEC Teacher	<i>Förskola</i> Early childhood	Core practitioner with group responsibility	1–6 years	3½ years university education

Job title	Main ECEC workplace settings and age-range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
<i>Förskollärare</i> <i>Profile:</i> Early Childhood Pedagogy Professional	centre/preschool 1–5 years ³ <i>Förskoleklass</i> Preschool class in schools 6 years <i>Öppen förskola</i> Open preschool 1–5 years <i>Fritidshem</i> School-age educare setting 6–12 years			<i>Award:</i> Bachelor's degree ECTS credits: 210 EQF level 6 ISCED 2011: 6
Childcare Worker <i>Barnskötare</i>	<i>Förskola</i> Early childhood centre/preschool 1–5 years <i>Öppen förskola</i> Open preschool 1–5 years	Qualified co-worker	Broad-based pedagogical and social care approach 1-10 years and beyond	3 years upper secondary vocational education specialising in pedagogical work ECTS credits: n/a ⁴ EQF level 3/4 ISCED 2011: 3
Primary Teacher – specialising in School-age Educare <i>formerly Leisure-Time Pedagogue</i> <i>Grundlärare med inriktning mot arbete i fritidshem</i>	<i>Fritidshem</i> School-age educare setting 6–12 years <i>Grundskolan</i> Primary school 7–12 years	Core practitioner with group responsibility in school-age educare settings <i>In schools:</i> Specialist teacher for practical / aesthetic subjects	6–12 years	3 years at higher education institution specialising in school-age educare and practical/aesthetic subjects <i>Award:</i> Bachelor's degree ECTS credits: 180 EQF level 6 ISCED 2011: 6

³ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in pre-primary settings. In Sweden, the relevant formats are **1–5** and **6–7** years.

⁴ n/a = not applicable

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Up until June 30, 2019, the title for staff with leadership responsibility in the preschool was *Förskolechef* (Preschool Head). As of July 1, 2019, this was replaced by the title *Rektor* (Principal), the same as for compulsory school. This was an important change and marked a step forward to equate the work in preschools with the work in primary schools. Only those with the required education and experience can be employed as Principals. A Deputy Principal may be appointed. A Preschool Principal is usually responsible for several preschools, especially in the larger municipalities, and a majority do not work directly with children. The mean number of preschools per Principal is 2.6 in municipal preschools compared to 1.2 in independent ones. In municipal preschools, about 6% of the Principals combine this position with working with children. The corresponding figure for independent Preschool Principals is 73% (Skolverket 2023b).

The Principal is responsible for the internal organisation, for the budget and for allocating resources according to children’s conditions and needs. With a special focus on pedagogical work, the Principal is responsible for coordinating and developing education in the preschool. A member of staff at a preschool with sufficient knowledge and expertise may be appointed to support the Principal, make decisions, and take responsibility for certain management tasks.

Qualification requirements for Principals include a compulsory university education comprising 30 ECTS at advanced level over 3 years. The costs for education are shared between the state and the municipalities. The education is mandatory for those Preschool Principals who took up the post after July 1, 2019. They are required to start their training within two years of taking up their duties. The education must be completed at the latest within five years of taking up the position of Principal. Those who were active as Preschool Heads on July 1, 2019 are not covered by the obligation (SFS 2010:800; Skolverket 2021a). This also applies when changing employers. Job specifications for these posts may vary between municipalities. However, the criteria usually focus on both *personal leadership skills*, e.g. communication, cooperation and social competencies, and *formal leadership skills* such as familiarity with legal aspects, exercising authority, etc.

2.3 Centre-based posts of responsibility

Since municipalities are responsible for the organisation and running of all education settings, including early childhood education, there may be variation between preschools and municipalities across the country. Some municipalities in rural areas may only have a limited number of settings with implications for special posts of responsibility.

Special assignments may be allocated within the preschools, such as responsibility for digitalisation, gender equity, language and literacy, multilingualism and other areas that need development to align with the curriculum goals (Skolverket 2019). These special responsibilities are often, but not exclusively, linked to Government initiatives and usually require training within the specific knowledge domain. All salaries are individually negotiated so there may be a variation between members of the staff regarding salaries. However, rather than increased salaries, staff with these responsibilities are assigned hours to carry out their work, leading to a reduction of hours working directly with children.

There are also positions as *Förstelärare* (First Teachers). *First Teacher* and *Senior Teacher (Lektor)* positions were introduced by the Government following the reform (2011) of teacher education programmes (Utbildningsdepartementet 2012). The intention was to make use of the expertise of certified teachers considered to be highly qualified who had demonstrated excellence in their work over at least four years in the workplace. This initiative did not involve Preschool Teachers. However, some municipalities have introduced ‘First Teacher’ positions also for Preschool Teachers. The task of the First Teacher is to be designed according to local needs and based on the development areas identified in the systematic quality work. The First Teacher may be appointed to support the principal and take responsibility for certain management tasks (Skolverket 2021b). The position often entails a salary increase.

In settings where students are placed during practicum, *VFU-lärare* (On-site Supervisors) are responsible for the supervision of students. Certified Preschool Teachers and Primary Teachers specialising in school-age educare can take a special course for supervisors at universities comprising 7.5 ECTS credits. This qualifies them to work as on-site supervisors in preschools and school-age educare settings (see also *Chapter 5*).

Furthermore, there are mentor positions (*mentor*) for newly qualified and certified Preschool Teachers. During their first year of employment, newly qualified Preschool Teachers have a personal mentor whose role is to provide support for their professional development (SKOLFS 2014:44) (see also *Chapter 7*).

2.4 Co-ordinating and supervisory staff

The accountable local preschool authority may establish different preschool positions with a coordinating and/or supervisory responsibility. The titles for these positions vary across the country, e.g. Pedagogical Leader, Development Educator, Development Leader, Process Leader and *Pedagogista* (in Reggio Emilia-inspired preschools). The various preschool authorities determine their competence requirements, areas of responsibility and tasks. In some municipalities they work centrally, in others they are placed under the Principal.

A Pedagogical Leader (*Pedagogisk utvecklingsledare*) is responsible for different aspects of the work in the preschool such as quality assurance, professional development, etc. Pedagogical Leaders usually have special training of shorter or longer duration within specific knowledge domains and often work across several preschools. They have a counselling, coaching and support role focusing on the work team to further develop the competence of teachers and the overall quality of the preschool. They may also organise on-site or regional continuing professional development activities. ‘Pedagogistas’ have taken university courses in so-called Reggio Emilia-inspired pedagogy. After completion, they may be responsible for implementing this pedagogical approach in several preschools.

At the national level, the National School Inspectorate is responsible for monitoring quality. At the municipal level, the overall preschool administration is responsible for quality assurance. At the preschool level, the Principal is responsible for systematic quality work and for ensuring that the education aligns with the intentions of the curriculum (Skolverket 2019).

2.5 Specialist support staff

Children in need of extra support are integrated into regular preschools. Children who, for physical, mental, or other reasons, need special support in their development shall be given the support that their special needs require. It is the responsibility of the Principal to ensure that the child is given such support. The child's guardian must be given an opportunity to participate in the design of the special support measures. However, unlike in compulsory schools, for preschools there are no provisions for action programmes. The documentation of support measures in preschool is decided at the local level (SFS 2010:800, chapter 8, §9).

Preschools have access to so-called resource teams to guide and support teachers in their everyday work such as Speech Therapists, Psychologists etc. These specialists are not based at the preschools and do not usually work directly with children in the preschool. Children can be referred to different specialists who have individual consultations with guardians and children regarding, for example, delayed speech development. There are also some preschools for children with specific disabilities such as hearing impairment and autism who need additional educational or practical support. In these preschools, Special Education Teachers (*Specialpedagoger*) often work together with the regular Preschool Teacher and Childcare Worker. The Children's Health Centre (*Barnvårdscentralen, BVC*) has overall responsibility and provides support to parents regarding children's medical health, well-being, growth, and development. In several municipalities, staff from BVC meet Preschool Teachers and Principals once or twice annually to discuss, support and advise on general issues regarding children's development.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

Table 2 shows the proportion of various staff categories in all preschools, both municipal and independent, according to their structural composition.

Table 2

Sweden: Structural composition of ECEC workforce in municipal and independent centre-based settings 2022

Staff categories	Proportion of workforce
Staff with a specialist higher education degree in <i>municipal</i> preschools	42.9% Preschool Teacher
	1.6% Compulsory School Teachers
	0.4% Primary Teachers specialising in School-age Educare*
Staff with a specialist higher education degree in <i>independent</i> preschools	30.5% Preschool Teachers
	2.0% Compulsory School Teachers
	0.5% Primary Teachers specialising in School-age Educare
Staff with a specialist vocational qualification (upper secondary) in <i>municipal</i> preschools	17% Childcare Workers
Staff with a specialist vocational qualification (upper secondary) in <i>independent</i> preschools	15.3% Childcare Workers

Staff categories	Proportion of workforce
Staff with a specialist higher education degree in municipal preschool classes	46.2% Preschool teachers
	27.6% Compulsory School Teachers
	5.0 % Primary Teachers specialising in School-age Educare
Staff with a specialist higher education degree in independent preschool classes	33.3% Preschool Teachers
	28.1% Compulsory School Teachers
	2.9% Primary Teachers specialising in School-age Educare
Staff with some pedagogical education** in municipal preschools	18.1%
Staff with some pedagogical education in independent preschools	19.8%
Staff with no relevant or no formal IPE in municipal preschools	20.1%
Staff with no relevant or no formal IPE in independent preschools	21.9%
Specialist support staff (e.g. support for children with disabilities integrated into regular preschools)	5% approx.
Male staff	4.2% of all staff in preschools (approx. 4% in municipal preschools and 6% in independent preschools. 41.9% of all male staff have a preschool teacher degree)
	8.4% of all staff in preschool classes
	32.1% of all staff in school-age educare settings
	6.0% of all ECEC principals
Foreign-born (<i>utomlands födda</i>) staff members	Preschools: No systematically compiled national data Preschool class: 13.6% in the school year 2022/2023

Sources: Skolverket 2023a, b, c

***Note:** Although the official term for students who graduate from the current teacher education programme is *Primary Teacher specialising in School-age Educare*, the former term (Leisure-Time Pedagogue – *fritidspedagog*) is still in current use, for example in statistics from the National Agency. A considerable proportion of the staff working in school-age educare settings may have the former qualification as Leisure-time Pedagogue.

****Note:** According to the National Agency for Education ‘*some pedagogical education*’ equals unfinished courses with no degree or final award from any of the specialisations listed above.

Table 3

Sweden: Proportions of the ECEC workforce qualifications according to provider in %, 2022

	Qualified Preschool Teachers	Qualified Primary Teachers* (Leisure Time Pedagogues)	Qualified Teachers	Upper secondary specialist vocational education (Child Care Workers)	Some pedagogical education	No formal pre-service education for working with children
Municipal preschools	42.9	0.4	1.6	17	18.1	20.1
Independent preschools	30.5%	0.5	2.0	15.3	19.8	21.9

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

The three main groups of staff in ECEC follow different qualifying routes. Preschool Teachers and Primary Teachers with a specialisation in School-age Educare are educated at university level; Childcare Workers have an upper secondary vocational education specialising in pedagogical work. *Tables 4–7* set out the details of these different routes.

According to legislative probations in 2011, all teachers must be certified or licensed (*legitimerade*) with Qualified Teacher Status (QTS) from the National Agency for Education to work in preschools and schools. Since December 2013, only Preschool Teachers and Primary Teachers who have QTS are accepted for permanent posts (SFS 2011:326).

Table 4

Sweden: Preschool Teacher

Job title in Swedish: Förskollärare Profile: Early Childhood Pedagogy Professional
<p><i>Since 2011</i></p> <p>Entry requirements*: 12 years of schooling (9 years compulsory schooling, 3 years upper secondary level) + matriculation</p> <p>Professional studies: 3½ years (7 semesters) at a higher education institution/university for the education of teachers. Students specialise in early childhood education (0 to 6 years)</p> <p>Award: Bachelor of Arts in Preschool Education (<i>Förskolläraryxamen, grundnivå</i>)</p> <p><i>Since 2013:</i> Qualified Teacher Status (QTS) necessary for permanent employment</p> <p>ECTS credits: 210</p> <p>EQF level: 6</p> <p>ISCED 2011: 6</p> <p>Main ECEC workplaces: Early childhood centre/preschool (<i>förskola</i>), full-day provision for 1 to 5 year-olds; preschool class in schools (<i>förskoleklass</i>) mainly for 6 year-olds, open 3 hours daily. Also: open preschool (<i>öppen förskola</i>) for parents, family day carers and children aged 1 year and older; school-age educare settings (<i>fritidshem</i>) for children aged 6–12 years as a complement to the preschool class, open before and after school hours and during holidays.</p>

***Note:** There are two kinds of admission criteria for all university study programmes, *basic admission criteria* (mainly grades from upper secondary education) and *special admission criteria*. Both are related to the programme chosen. There are also three main selection groups for admission into university: (1) based on grades (a minimum third of available places), (2) based on results on the Swedish Scholastic Aptitude Test, *Högskoleprovet* (a third of available places) and 3) selection decided by universities or university colleges themselves (maximum third of the places) (UHR 2022).

Table 5

Sweden: Childcare Worker

Job title in Swedish: Barnskötare
<p><i>Since 2011</i></p> <p>Entry requirements: 9 years compulsory schooling with school leaving certificate.</p> <p>Professional studies: 3 years upper secondary level of comprehensive school in the childcare and leisure-time education programme – specialisation in <i>pedagogical work</i> (including 15 weeks in practical placement).</p> <p>Awards: Matriculation Certificate – <i>Pedagogical Work</i> awarded by the school authorities.</p>

Job title in Swedish: <i>Barnskötare</i>
<p>Students who have passed the exam and have taken courses in Swedish and English are qualified to apply for university education.</p> <p>ECTS credits: n/a EQF level: 3 or 4 ISCED 2011: 3</p> <p>Main ECEC workplace: Early childhood centre/preschool (<i>förskola</i>), full-day provision for 1 to 5 year-olds, as auxiliary worker; open preschool (<i>öppen förskola</i>) for parents, family day carers and children aged 1 year and older, as auxiliary worker.</p>

Note: Some Childcare Workers who have been in the workforce for many years and who completed their professional training before 1992, when a two-year upper secondary programme specialising in childcare only was introduced, may have shorter-length qualifications. *Barnskötare* (Childcare Worker) is not a **protected/certified title**. Hence, in addition to the three-year vocational programme there are still courses of varied duration, some of only ten weeks' duration.

Table 6

Sweden: Primary Teacher – Extended School

Job title in Swedish: <i>Grundlärare med inriktning mot arbete i fritidshem</i>
Profile: Primary Teacher specialising in school-age educare and practical/aesthetic subjects
<p><i>Since 2011</i></p> <p>Entry requirements: 12 years schooling (9 years compulsory schooling, 3 years upper secondary level) + matriculation</p> <p>Professional studies: 3 years (6 semesters) at a higher education institution for the education/training of teachers/university department of child and youth studies, specialisation in leisure-time pedagogy and practical/ aesthetic subjects with children 6 to 12 years.</p> <p>Award: Bachelor of Arts in Primary Education – Extended School. (<i>Grundlärare med inriktning mot arbete i fritidshem, 180 högskolepoäng, grundnivå</i>).</p> <p>ECTS credits: 180 EQF level: 6 ISCED 2011: 6</p> <p>Main workplaces: School-age Educare settings (<i>fritidshem</i>), 6–12 years – most centres are integrated within school premises; primary school (<i>grundskola</i>), 7–12 years, practical/aesthetic subjects. Some may also work in preschool classes although their current education does not qualify for work in the preschool class (see <i>chapter 3 Table 2</i>).</p>

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Teacher education since 2011

Since 2011, teacher education programmes are related to distinctive age specialisations. Currently, teachers who specialise in early childhood education in preschools and teachers who specialise in school-age educare and in practical/aesthetic subjects follow two different programmes:

1. Preschool teacher education for work in preschools (children aged 1–5 years), comprising seven semesters (210 ECTS credits).
2. Primary teacher education. This programme has four distinct specialisations. The programme for work in school-age educare settings and for teaching practical/aesthetic subjects in the first years of compulsory school for children aged 6–12 years) is one of the specialisations. This programme comprises six semesters (180 ECTS credits).

The overarching aims and competences required for a degree in both programmes are regulated in the Higher Education Act/*Högskolelagen* (SFS 1992:1434) and the Higher Education Ordinance/*Högskoleförordningen* (SFS 1993:100; SFS 2021:1335). Graduates must demonstrate the knowledge and skills required for independent work as Preschool Teachers/Primary and Leisure-time Teachers in preschools, school-age educare settings and schools. The overarching aims are then further specified under the headings: *knowledge and understanding; competence and skills; judgement and approach*.

Four principles characterise the current approach to teacher education: a) a scientific and critical approach, b) a historical perspective, c) an international perspective, and d) IT as an educational resource. Based on these principles, three domains of knowledge make up the content of the IPE of both Preschool Teachers and Primary Teachers working in school-age educare settings and primary schools:

- Educational sciences
- Subject knowledge including subject didactics
- Work placement – practicum.

In addition, students must produce a professionally relevant degree project of 15 ECTS credits. The Swedish Higher Education Authority (*Universitetskanslerämbetet [UKÄ]*) has overall responsibility for monitoring the quality of higher education, and for reviewing HEI's resource utilisation and compliance with laws and regulations.

In Sweden, universities have a high degree of autonomy. As long as they abide by the overarching aims and guidelines such as the Higher Education Act (SFS 1992:1434) and Higher Education Ordinance (SFS 1993:100) individual higher education institutions (HEI) can choose to focus on certain domains of knowledge. It is the local Faculty Board of Studies for initial teacher education programmes at respective universities that are responsible for translating the overall aims and guidelines in the Government Bill and Higher Education Act and Qualifications Ordinance to local curricula and syllabi. Therefore, it is not possible to give detailed information about curricular areas and pedagogic-didactic approaches for the education of teachers across all HEI institutions in Sweden. The following information reflects the programmes offered by the University of Gothenburg.

The two programmes are different in length, with 210 ECTS credits for Preschool Teachers and 180 ECTS credits for Primary Teachers specialising in school-age educare. The work placement also takes place in settings that are professionally relevant for the two groups, that is, preschools and school-age educare settings and schools. In addition, the subject studies are oriented toward the future profession. Education for sustainable development is central to the University of Gothenburg and a distinctive feature throughout the programmes.

Box 2

Sweden: Course modules – Preschool Teacher programme, University of Gothenburg

Preschool Teachers have a university degree of 3½ years' duration with the possibility to extend this to 4 years. The overarching principles and domains of knowledge that make up the content are translated into different themes/course modules (Göteborgs Universitet 2023).

1. Educational sciences (60 ECTS credits)

Seven integrated and overlapping themes make up this domain of knowledge:

- The history, governing, conditions and founding values – including democracy and human rights of preschool and school
- Curriculum theory and didactics
- Theory of science, research methodology
- An interdisciplinary perspective on development and learning including cognitive science and special education

- Social relations, conflict resolution and leadership
- Follow-up and analysis of learning and development for Preschool Teachers
- Evaluation and developmental work.

2. Subject studies: Preschool pedagogy (120 ECTS credits)

including subject-related didactics within the domain of early childhood education (105 ECTS credits) and a degree project/dissertation (15 ECTS credits)

Six themes make up this domain of knowledge:

- Children’s play, communication, language and literacy
- Children’s mathematical learning
- Play, learning, and care
- Co-operation with guardians, the preschool class, the school-age educare setting and the school
- Aesthetic learning processes
- Nature, environment, and technique/technology.

All modules in semesters 1–5 and the two first modules in semester 6 are at initial level and comprise 7.5 ECTS credits each. The degree project comprises 15 ECTS credits.

In the final semester (7), there are two distinct course modules at advanced level comprising 15 ECTS credits each. One is compulsory (*Sustainable Development and Global Perspectives*) and one is optional, focusing on one of the themes above.

3. Work placement – practicum, 20 weeks (30 ECTS credits)

The practicum, supervised work placement, is organised as four distinctive course modules comprising a total of 30 ECTS credits.

Table 7

Sweden: Semester schedules – Preschool Teacher programme, University of Gothenburg

Semester 1	Learning, development and pedagogy 1 Play, learning and care 1 Practicum 1 Children’s language and communication 1
Semester 2	Children’s language and communication 2 Mathematics in early childhood education 1 Social relations, conflict management and leadership 1 Steering, Organisation and Value Systems 1
Semester 3	Practicum 2 Collaboration Learning, development and pedagogy 2 The teaching profession and theory and methods of science 1
Semester 4	Children’s language and communication 3 Arts, aesthetics and learning Steering documents, assessment and evaluation 2 Practicum 3
Semester 5	Play, learning and care 2 Science, environments and technologies Mathematics in early childhood education 2 Social relations and special educational perspectives 2
Semester 6	The teaching profession and scientific work Practicum 4 Degree project
Semester 7	Education for sustainable development and global perspectives Optional module

Sweden: Programme for Primary Teacher – specialising in school-age educare Course modules, University of Gothenburg

The same domains of knowledge apply to the programme for students qualifying for work in school-age educare settings and schools (Göteborgs Universitet 2022).

1. **Educational sciences** (60 ECTS credits)
 - Learning, development and didactics
 - Curriculum theory, organisation, follow up and assessment of learning and development
 - Leadership, special education, social relations, and conflict management
 - Theory of science, research methodology, evaluation, and developmental work.

2. **Subject studies** (90 ECTS credits)

including subject-related didactics within leisure-time education (75 ECTS credits) and a degree project dissertation (15 ECTS credits)

The subject studies include five themes:

 - Leisure, play and relations in school-age educare settings
 - Children's upbringing and leisure time in the local environment
 - Children's digital media cultures
 - Outdoor Education
 - Language and creative processes for teachers in leisure-time centres.

In addition to the above students are expected to specialise in one or more of the following subjects a) arts, b) home economics, c) sports and health and d) music.

3. **Work placement – practicum**, 20 weeks (30 ECTS credits)

The practicum, supervised work placement, is organised as four distinctive course modules comprising a total of 30 ECTS credits.

Upper secondary vocational programme for Childcare Workers, 3 years

Childcare Workers are required to follow a three-year upper secondary vocational programme specialising in pedagogical and social work. The overarching aim of the IPE is to prepare students for working primarily alongside Preschool Teachers in early childhood settings. The education comprises both compulsory and optional courses focusing on children's development, needs and rights as well as on various educational activities and the professional role. The programme includes 15 weeks of work placement/practicum and prepares students for work in the preschool or for work as student assistants in schools. In addition to assessing the theoretical courses, the student's abilities to perform common tasks in the professional field are assessed. This programme is also offered as an **apprenticeship**. It provides the same knowledge and the same vocational qualification as the regular programme, but approximately 50% of the education takes place in one or more workplaces (Skolverket 2023d).

4.3 Alternative entry and qualification routes, system permeability

A large group of staff members in the preschools lacks any formal or pre-service education for working with children. The Education Act stipulates that the work in the preschool should be carried out by certified Preschool Teachers (SFS 2010:800 chapter 2, §13). According to the curriculum Preschool Teachers are responsible for education and teaching in the preschool. They have management and leadership responsibility in relation to the work team to ensure that the work is carried out in accordance with the overarching goals in the curriculum (Skolverket 2019). Such a high number of uneducated staff causes concern when it comes to overall quality in the preschool. To attract students to the profession, HEIs offer a variety of alternative qualification routes to become Preschool Teachers.

Since 2007, experienced Preschool and Primary Teachers with an incomplete degree from a Swedish university or a degree from a foreign university but lacking a formal teaching qualification, are offered an alternative route (SFS 2008:1101). The supplementary programme usually comprises 120 ECTS credits (30 ECTS credits of which are practicum) depending on the educational background the programme may need to be complemented with an additional 30 ECTS in Swedish or English. Through individual validations of previous course modules taken, the length of study can be shortened (Göteborgs Universitet 2020).

Experienced Childcare Workers/equivalent with five years of full-time or eight years of part-time work experience in preschools can qualify as Preschool Teachers by taking supplementary education full-time or part-time at higher education institutions. At the University of Gothenburg, the programme comprises 150 ECTS credits over 2.5 years for full-time students. For part-time students, the programme takes 5 years to complete.

There is a large degree of flexibility for the individual student regarding the pace of study. The mode of delivery is online study. The content is largely the same as in the regular programme. In this programme, students are credited with 15 ECTS credits of practicum. Furthermore, Educational Science is reduced by 19.5 ECTS credits and Subject Studies by 10.5 ECTS credits (Göteborgs Universitet 2023) (see also *Chapter 2* – Preschool Assistants).

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Workplace-based learning comprises an important part of all teacher education in Sweden. It is in the workplace that students can acquire essential professional skills and competences that university-based courses alone cannot provide (Karlsson Lohmander 2015). The relation between the two parts of teacher education was highlighted in the two most recent teacher education reforms (SOU 1999:63; SOU 2008:109). Following a discussion between the Government, representatives from the teachers' union and municipalities, the Government decided that a five-year trial period with selected practicum schools and preschools would be implemented (SFS 2014:2). From 2014–2019, the University of Gothenburg (together with 14 other universities across Sweden) participated in the so-called Practicum Preschool Project (*Övningsförskoleprojektet*). This proved to be successful (Berlin 2018; Fröborg, Wimmerstedt, Steele, and Svensson 2020) and the system with selected practicum preschools and schools has now been introduced in all teacher education programmes (SFS 2021:1335).

Since the main form of ECEC provision is preschool education and the largest group of core professionals are Preschool Teachers, the following will focus on workplace-based learning (practicum) for this group. However, the overall structure and organisation apply to the education of Primary Teachers specialising in School-age Educare in schools and in school-age educare settings as well.

With a clear focus on the age group 1–5 years, students spend approximately 20 weeks (corresponding to 30 ECTS credits) in the workplace. During the practicum, students are organised into small groups and placed in the same preschool in a particular area during all workplace-based course modules. To ensure that students gain experience and knowledge of a variety of preschool contexts, they have field studies in preschools in other areas.

Principals of preschools (*rektorer*) and Placement Coordinators (*VFU-samordnare*) nominate the most appropriate preschools in the field and the most qualified Preschool Teachers to act as On-site Supervisors (*VFU-handledare*) to safeguard high-quality workplace-based learning.

The focus of the work placement modules is on *investigating, implementing* and *synthesising*, indicating gradually increasing complexity – from novice in the first module to competent professional in the fourth and last module. Work placements take place in four different course modules comprising 7.5 ECTS credits each in semesters 1, 3, 4 and 6. 100% attendance at the workplace is required, which corresponds to the normal working hours of a full-time employee. Exceptions are made for time scheduled for participation in lectures, seminars, and exams.

Module 1, semester 1: Observations focusing on the overall organisation and everyday practice, and on children’s learning and own professional development. Investigating how the steering documents, including curricular frameworks and theoretical perspectives, are implemented.

Module 2, semester 3: Central to this module is the didactic planning, implementation, and documentation of theme-oriented work with children integrating mathematics, language and communication.

Module 3, semester 4: This module aims to develop knowledge and understanding of pedagogical leadership and its importance for social relationships and conflict management. The focus is on systematic approaches towards promoting children’s development and learning, including aesthetic learning processes. Students are encouraged to gradually ‘replace’ the Preschool Teacher and take independent responsibility for planning and implementing different activities such as arts, drama, dance, and music with children and to collaborate with the work team and parents/guardians.

Module 4, semester 6: This module focuses on the importance of pedagogical leadership and the professional role to manage the complexity of preschool education from a societal and sustainable development perspective in relation to children’s differing needs and sometimes unequal preconditions. Central to this module are children’s perspectives and own pedagogical-didactical perspectives related to the curriculum.

For each practicum period, students are expected to keep a reflective journal (logbook) and participate in introductory lectures, praxis seminars and exams. They also have to submit individual written assignments. Students who fail a workplace-based learning course module have the right to a second placement.

Both the university and the preschools participate in the planning of the workplace-based learning periods. On-site supervisors (*VFU-lärare*), university-based teachers/workplace-based course module teachers (*VFU-kurslärare*) and students form teams throughout the four modules. The team reflects on possible amendments and developments of the various modules in terms of safeguarding high quality. The university-based teachers visit students during the practicum in semesters 2 and 6. Together with the on-site supervisor they assess the performance of the students and discuss with them areas for development and need for support during the weekly meetings. Furthermore, the university-based teacher will also consult and discuss the performance of each student with the on-site supervisor before reporting the grades. The on-site supervisors do not receive specific remuneration. However, taking on the responsibility of on-site supervision is an important criterion when negotiating salaries at annual appraisal meetings. The time allocated for supervision depends on the needs of the individual student. Some students may need more support to reach the goals in the course module syllabus while others are more independent. A common recommendation is one hour per week.

To become On-site Supervisors, prospective candidates must be qualified and certified Preschool Teachers and have a minimum of two years’ work experience. They are obliged to complete a qualifying course at the university “Tutoring in Teacher Education” (*Professionshandledning för VFU-handledare*) comprising 7.5 ECTS credits.

6. Continuing professional development (CPD) of ECEC staff

Municipalities have the main responsibility for the organisation and management of preschools. There is currently no national coherent and transparent system which includes formal, informal, and centre-based forms of CPD. Consequently, CPD activities may vary between municipalities across the country. However, the establishment of a national merit-/qualification system for Principals, School Teachers, and Preschool Teachers (*Nationellt professionsprogram för rektorer, lärare och förskollärare*) to strengthen and develop their competence, enable career advancement and make the teaching profession more attractive will be introduced in 2025 (Regeringskansliet 2023a).

Principals have overall responsibility for quality issues in the preschool, including CPD. They are responsible for ensuring members of staff are well qualified for the work. They decide the kind of CPD activities needed for the preschool, for different categories of staff and for individual members of the work team. There is no regulation regarding the number of days per year granted for CPD. Preschools are usually closed two days per semester for planning the work in the setting and for CPD. The individual Preschool Teacher's/Childcare Worker's need for competence development is discussed at the annual appraisal meetings and formulated in the competence development plan (*Kompetensutvecklingsplan*).

Concerning the content focus of CPD activities, at the national level the government may outline and target domains of knowledge for CPD and allocate money to municipalities to organise this. One example was the 'Boost for Preschool' programme (*Förskolelyftet*) in 2009 and 2011 where preschool staff were offered advanced courses of varying lengths, with shorter courses for Childcare Workers than for Preschool Teachers and Preschool Principals. This was linked to the revision of the curriculum in 2010 where subject knowledge was included for the first time. The focus was on children's development in language, mathematics, natural sciences, and technology. Another example was the 'Boost for Reading' (*Läsllyftet*) initiative from 2017–2021 where the National Agency was commissioned by the Government to organise CPD activities focusing on the didactics of language, reading, and writing for Preschool Teachers and 'provide preschool teachers with scientifically informed and proven working methods for developing children's linguistic and communicative abilities' (Skolverket 2021d, 3). There is still a strong focus on language and literacy. Since autumn 2022, the Swedish National Agency for Education has offered various language-promoting and competence-enhancing initiatives for staff in preschools such as Vocational Swedish for preschool staff (see also *Chapter 8*) (Skolverket 2023e).

Apart from the above-mentioned government initiatives, the most common forms of CPD are study days for all members of staff where the focus is on current issues often linked to the curriculum. These include topics such as leadership, teaching in preschool, language and literacy, multilingualism, pedagogical documentation, science and technology, sustainable development in the preschool, the professional role, etc. In some municipalities, there is a strong focus on 'Reggio Emilia pedagogy' and this has been a recurring focus for CPD in many preschools. Childcare Workers may be offered supplementary training which will deepen and expand their professional competences and skills. Likewise, unqualified workers such as Preschool Assistants may receive education to make them more professionally competent (see *Chapter 2.1*).

As part of the national school development programme, the National Agency for Education provides funding for courses for preschool staff organised in the municipality and linked directly

to local needs. Courses comprising 7.5 ECTS credits are delivered online by higher education institutions appointed by the National Agency for Education (Skolverket 2023f).

The following are examples of courses offered to Preschool Teachers during 2023:

- Teaching in preschool
- Challenging and supporting children’s development
- Science and technology
- Documenting quality
- Multilingualism.

For Principals, the following course is offered:

- To lead and organise the systematic quality work – the principal's responsibility for preschool quality.

CPD activities during working hours are organised and funded (total or partial costs) by the individual preschool, the municipality or the government and are compulsory for those members of staff who are invited/nominated to participate. The cost for any CPD that is not approved by the Preschool Principal must be covered by the individual and must take place outside working hours.

There is a multitude of CPD formats and activities available. These include seminars, conferences, lectures, and courses (on-site or online) addressing various domains of knowledge. In recent years the variety of providers has increased substantially. In addition to the National Agency for Education, universities, municipalities, regional development centres, and the Teachers’ Union, there are many independent private providers who offer CPD activities, often at very high costs. Municipalities/preschools are free to choose the topic and provider that suits them.

Regularly occurring problems regarding access opportunities to CPD have to do with the overall economy; the funding usually set aside for CPD for each practitioner is very small. At the same time, costs for attending various forms of CPD may be very high, which makes it difficult to participate. Another problem is the shortage of staff. Even if there is funding available it still might not be possible for practitioners to attend because of the lack of substitute staff to replace them.

Concerning formal recognition of CPD in terms of promotion and career advancement, participation in CPD activities can qualify the individual Preschool Teacher for specific tasks or posts of responsibility within the setting. As mentioned (see *Chapters 2 and 5*), there are qualifying university courses at regional levels for On-site Supervisors who are responsible for the supervision of student teachers during practicum and at the national level for mentors responsible for newly employed Preschool Teachers during their introductory year.

In addition to the assignments and positions mentioned in *Chapter 2* (First teacher, Pedagogical Leader, On-site Supervisor, Mentor), participation in CPD can also qualify for principal positions in the preschool. Furthermore, with the aim to include valuable expertise from experienced Preschool Teachers and School Teachers in teacher education, to strengthen the cooperation between work settings and the university, practising Preschool Teachers can be appointed as Adjunct Teachers (*Adjungerad Universitetsadjunkt*) at the university. They are usually employed on a part-time basis while working concurrently in preschools and schools. Long-term competence requirements for employment as an Adjunct Teacher responsible for workplace-based course modules in the university study programme usually include the following:

- Certified Preschool Teacher including on-site mentoring experience
- A course on ‘Tutoring in Teacher Education’ (7.5 ECTS credits)

- A course on ‘Teaching and Learning in Higher Education’ (7.5 ECTS credits).

Particular importance is attached to pedagogical skills such as experience in supervising students during practicum and participation in the development of work-place based learning modules in the regular programme.

There are also other study routes such as Master, Licentiate and Doctoral degree programmes. Participation is usually not supported by state or employer funding although there have been some exceptions in the form of so-called National Research Schools which was part of the ‘Boost for Teachers’ initiative (*Läraryftet*) where students studied part-time while working concurrently. Participation was funded through Government grants to municipalities and universities. After completion, students were awarded a *Licentiate* degree (Riksdagen 2016).

7. Working conditions and current workforce issues

7.1 Remuneration

Preschool Teachers do not usually receive the same salary as Compulsory School Teachers. One of the justifications given for this difference is that the length of initial professional education differs. However, salaries are individually negotiated and, given the shortage of qualified Preschool Teachers and Childcare Workers, there can be considerable variation between different parts of the same city and between municipalities across the country depending on, for example, work experience, level of qualification and lack of qualified Preschool Teachers. An average introductory salary for a newly qualified Preschool Teacher is approximately SEK 31,500 (€2,743.19)⁵ per month; more experienced Preschool Teachers receive approximately SEK 36,000 (€3,135.08) per month, with a variation of SEK 31,800–45,200 (€2,769.32–3,936.26). The average salary across the country is approximately SEK 34,900 (€3,039.28).

Some municipalities may offer higher salaries to attract Preschool Teachers to vacant positions. Staff may also receive higher salaries for posts of responsibility such as Pedagogical Leader or First Teacher. While mentors for newly qualified Preschool Teachers usually receive a salary increase, Preschool Teachers who take on the responsibility for the supervision of students do not automatically receive this. It is considered an important criterion when discussing salaries at the annual appraisal.

Salaries for Childcare Workers are also individually negotiated and may vary across the country. The salary per month for Childcare Workers varies from approximately SEK 26,000 to 30,100 (€2,264.22–2,621.27) with an average salary of SEK 26,649 per month (€2,320.74). It is possible to live on this salary, although much depends on the living costs and family composition (e.g. single parents and number of children) and the area of residence. Through the publicly funded Swedish Social Insurance (*Socialförsäkringen*) all families receive allowances for each child until the child’s sixteenth birthday. There are also housing allowances to support families with children who need help paying rent or monthly fees for their housing (Försäkringskassan 2023).

7.2 Full-time and part-time employment in ECEC provision

Full-time employment for Preschool Teachers in Sweden means 40 hours of paid work per week. Part-time employment can involve different percentages up to full time, e.g. 50% or 75% of full-

⁵ Conversion rate November 2023

time employment. Staff with young children under the age of 12 years are entitled to work part-time. Working six hours a day for five days is a common solution for many.

In terms of permanent or temporary employment, a total of 119,386 employees work in the preschool which corresponds to 100,753 full-time permanent posts. The remainder is employed on a temporary basis (Skolverket 2023d).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Newly qualified staff are entitled to an introductory period when they first start working after graduation. The introductory period usually lasts a whole academic year during which new employees can further develop and become more secure in their professional role. The introductory period should begin immediately after the new employee starts working. The Principal is responsible for nominating licensed Mentors with sufficient work experience and must ensure that the Mentor gets the appropriate preconditions for the work. To qualify for the mentoring responsibility experienced and professional Preschool Teachers and Primary Teachers must attend a specially designed national online mentoring course comprising 7.5 ECTS credits at advanced level. The Mentor is responsible for supporting the new employee during the introductory period. In addition to providing professional, personal and social support in the workplace, and stimulating professional development, the aim of the introductory period is also to develop an understanding of schools and preschools as workplaces and of their role in society (SKOLFS 2014:44).

7.4 Non-contact time

Non-contact time is not regulated but the Teachers' Union recommends four hours per week for Preschool Teachers. There is no recommendation for non-contact time for Childcare Workers or other members of staff. It is up to the local preschool authorities to decide about and regulate in local agreements non-contact time for this staff category. All staff members attend workplace meetings. Furthermore, Mentors have time set aside for regular meetings with new employees.

7.5 Current staffing issues

As previously mentioned, there is currently a huge lack of qualified Preschool Teachers and Childcare Workers in the preschool (see *Chapter 2*); recruitment and retention of qualified preschool staff are in crisis.

One reason is the number of teachers approaching or taking retirement, resulting in an estimated future shortage of Preschool Teachers and Childcare Workers. According to the Teacher Prognosis 2021 (Skolverket 2021c), the total need for qualified Preschool Teachers is estimated to be 37,000 full-time positions (approximately 2,500 annually) up to 2035. The corresponding figure for Teachers in School-age Educare settings is 5,800 (approximately 400 annually) (Skolverket 2021c).

Over the past decades, many recruitment strategies have been introduced. Since 2016 the Government has been allocating funding to municipalities to raise teacher salaries, the so-called 'Teacher Salary Boost' (*Lönelyftet*) for specially qualified Schoolteachers and Preschool Teachers. The aim of this initiative is to increase the attractiveness of the teaching profession and thereby improve outcomes in schools (SKOLFS 2016:61). In addition, various new career posts have been introduced (see *Chapters 2 and 5*) and a new national merit-/qualification system for Principals, Teachers, and Preschool Teachers has been suggested (see *Chapter 6*).

The National Agency for Education (Skolverket 2021c) proposes several measures to counteract the shortage of qualified teachers. In this respect teacher education is crucial. The number of places in preschool teacher education programmes has increased in recent years and efforts are being made to encourage students (including male students) to apply and ensure they complete their education.

To safeguard teacher education of high quality the Government has also invested in Research Schools/doctoral programmes for Teacher Educators to strengthen research links where, after completion, students are awarded a *Licentiate* or, alternatively, a *Doctoral Degree*. One example is the Research School ‘*Educating for Play-Responsive Teaching in Early Childhood Education for Social and Cultural Sustainability* (PRECEC SCS’) (2019–2024) which is organised by a consortium of universities and funded by the Swedish Research Council. Students study part time (80%) while working concurrently in preschool teacher education programmes (20%). In this case, students are awarded a Doctoral Degree.

While there has been an increase in CPD opportunities, according to the National Agency it is crucial to continue investing in qualifying CPD, further education and flexible study routes for unqualified staff to safeguard access to equal preschool education of high quality across the country. The need for CPD is estimated to be the case for approximately 2,400 Preschool Teachers and 5,700 Primary Teachers/Leisure-time Pedagogues. To retain preschool staff, Principals must also systematically work towards ensuring a good working environment (Skolverket 2021c). This is particularly important since stress and health issues seem to be increasing (Persson and Tallberg Broman 2019) and are a matter of concern to the Teachers’ Union, Preschool Principals, and preschool administrations all over the country.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

For decades, education has been and still is high on the political agenda and a recurring topic in both political and public debate. Several reforms and initiatives have been suggested and implemented to further develop education in general, including preschool and teacher education. In addition to the initiatives and reforms already presented such as increased CPD opportunities, the introduction of a national merit-/qualification system for Principals, Schoolteachers and Preschool Teachers, and the ‘Teacher Salary Boost’ (see *chapter 6*), there are also other initiatives.

Some of these initiatives include:

- Strategies to *develop teacher and preschool teacher education* (Regeringen 2023)
- Investment in continuing education *to improve the knowledge of the Swedish language among staff in preschools* (Skolverket 2023e)
- Strategies to increase attendance in the preschool *among foreign-born young children for improved language development in Swedish*
- Investment in continuing education for Preschool Teachers and pedagogical staff in preschool *to strengthen their digital competence* in the preschool field.

Recently, the use of digital tools in preschool has been debated. The Government has commissioned the National Agency for Education to review the curriculum for the preschool (Skolverket 2019) regarding digitalisation with the intention that the use of digital tools be

informed by research and provide documented added pedagogical value. The review is to be reported in June 2024 (Regeringskansliet 2023b).

According to the report from the Government Inquiry on *Förskola för alla barn – för bättre språkutveckling i svenska* (Preschool for all children – for better language development in Swedish) (SOU 2020:67), about 4% of all children in the age group 3–5 years were not enrolled in preschool, with children from weak socio-economic backgrounds being overrepresented. As a consequence, the Education Act was amended to include an obligation for municipalities of residence to contact the guardians of children through outreach activities and inform about the purpose of preschool and the child's right to preschool education (even without any request for a preschool place from the child's guardian) if: (1) the child was born abroad and has been resident in Sweden for a maximum of five years, or (2) the child's guardians who are resident in Sweden were born abroad and have resided in Sweden for a maximum of five years (SFS 2022:833).

9. Recent country-specific research focusing on ECEC staff

There is a large and growing body of research on preschool with a mixture of both small-scale and large-scale projects. Many research studies/projects conduct praxeological research with a focus on different aspects of the listed domains of knowledge in the preschool curriculum (Skolverket 2019) or other aspects of everyday practices in the preschool. In these projects, the role of teachers is often addressed. Some projects focus on issues of professionalism in a direct way. The research projects below are examples of important areas relating to staffing issues in the preschool.

Dilemmas in the assignments of Preschool Teachers (2017–2019) (*Dilemman i förskollärares uppdrag*)

Sources: The main publication from this project is by Persson and Tallberg Broman (2019). Key findings from the project have also been reported in various book chapters, e.g. Tallberg Broman 2020 (see *References* for full details).

Background and aim: In 2017, the Malmö City Preschool Administration, Department of Quality and Supervision, providing funding and commissioned researchers at Malmö University to conduct a professions-oriented study about dilemmas in the mission of Preschool Teachers assignments and highlight different staff members' perceptions and experiences of contributing causes to high sick leave and increased mental health issues. The aim of the study was a) to create in-depth knowledge about dilemmas in Preschool Teachers', b) to compile statistics and exemplify research concerning conditions for Preschool Teachers' assignments and work situation and c) to present and discuss possible measures and actions to deal with the problem.

Methods: The study included both documentary research and interview studies. The documentary research included annual reports from Malmö City as well as reports and situation assessments from the Preschool Administration in Malmö. It also included 30 preschool reports and 30 quality reports and quality plans from preschools in seven preschool areas where sick leave was particularly high in 2017, as well as national and local statistical reports. The interview study comprised 13 interviews with 46 staff members from Malmö Preschool Administration, Preschool Principals, and Preschool Teachers from areas with high and low sick leave.

Selected findings and implications: Findings indicate that several factors related to staffing and the work environment contribute to the current increasing sick leave and health issues, e.g. the lack of qualified Preschool Teachers, high staff turnover and a shortage of staff for children in need of special support. Another important factor is the changing role, the extended responsibility, and the legitimacy for Preschool Teachers to take on a leadership role in relation to colleagues in the preschool. Some of the suggested support measures and actions that need to be taken into account to improve the situation include: increased autonomy and control for Preschool Teachers, support for their leadership responsibility, reduction of the workload and sufficient staffing.

Play-Responsive Early Childhood Education and Care (PRECEC) (2019–2022)

Sources: The main publication from the project is Pramling et al. (2019) which is available through Open Access (see *References* for full details). Another key publication is Pramling (2022).

Background and aim: The background of this project funded by the Swedish Institute for Educational Research is the recent increased emphasis on teaching and education in the Swedish preschool curriculum and how this pedagogical practice can be understood in the context of ECEC with its holistic goals and play as central for children’s learning and development. The aim of this research project was to contribute an empirically grounded theorisation of teaching that does not exclude but instead is inclusive of play.

Methods: A combined research and development project was conducted, an example of praxeological research where researchers and preschool personnel collaborate in generating new knowledge of relevance to research (theory) and to preschools (pedagogical principles). Preschool Teachers documented joint activities with children. These films were then discussed at seminars at the university in terms of what could be learned from these activities and how they played out and could be developed. The films were subsequently analysed by the researchers to theorise the observations. This work eventually led to the theorisation of Play-Responsive Early Childhood Education and Care (PRECEC), encompassing teaching as responsive to play.

Findings and implications: The findings are primarily theoretical, in the form of Play-Responsive Early Childhood Education and Care (PRECEC). This theorisation, in very brief terms, conceptualises teaching as activities jointly co-constructed by staff and children where there is responsivity to play. It provides a number of concepts that serve as analytical principles for understanding co-constructive activities in ECEC (and beyond). The project also contributed to pedagogical principles – such as being responsive to play, and to different modes of participating, co-constituting narratives (imaginary scenarios, in and from which children can play and learn also what goes beyond play) and shifting between and relating fantasy and reality through meta-communication. Additionally, there were contributions given in the form of establishing a network for ECEC personnel and researchers, exchanging experience, and generating and disseminating new knowledge.

A Sustainable Preschool – A development and research project (2021-2024) (*En hållbar förskola- ett utvecklings- och forskningsprojekt*)

Sources: Two main publications from the project are Engdahl et al. (2021) and Ärlemalm-Hagsér et al. (2023) available through Open Access (see *References* for details).

Background and aim: The background of this combined development and research project is the revision of the national preschool curriculum (Skolverket 2019), where the concept of sustainability is central, both in the fundamental values and tasks sections, and in specific goals.

The aim of the development part of the project is to develop Preschool Teachers' competence and skills on how to work with sustainability with young children. The aim of the research project is to study how teachers, and their leaders, develop their education and teaching towards sustainability. Another aim is to follow how the participants, over 100 Preschool Leaders and 200 Preschool Teachers, implement a 'Whole School Approach' into their management and organisational strategies.

Methods: The following methods were used: 1) An initial survey on how the participating preschools handled and understood Education for Sustainable Development (ESD); 2) All teachers evaluated their work with ESD using the OMEP ESD Rating Scale; 3) Systematic conversations with children; 4) Group discussions about the ongoing work with sustainability; 5) Interviews with leaders and preschool teachers about promoting a sustainable leadership in Early Childhood Education (ECE). A final survey will be conducted to study the development of knowledge and the processes of development and changes in the preschools and in the organisations.

The data has mainly been generated and uploaded by the participants themselves, mostly as text documents. Furthermore, the researchers are conducting interviews with process leaders, Preschool Teachers, and Principals, aiming at developing theoretical and pedagogical strategies that offer opportunities for enhancing Education for Sustainability (EfS) in ECE.

Findings and implications so far: Findings indicate that teachers are interested in EfS. Initially, common content areas were linked to Nature and to waste sorting, reuse, and recycling. Less common content was linked to the economic dimension of sustainability, consumption patterns, budgeting, and money. Thus, the teachers identified a need for professional competence to initiate relevant EfS content and activities. Furthermore, participants recognised that children's participation for a sustainable present and into the future is a decisive element if change is to occur.

The project was initiated by the Swedish institute Ifous (2021) and funded by the collaborating partners; Ifous, the nine participating municipalities/providers, Mälardalen University and University of Gothenburg.

10. Workforce challenges – country expert assessment

Recruitment and retention of qualified ECEC staff is a significant challenge for the Early Childhood Education workforce in Sweden and has been for several years. Currently, there is a substantial shortage of certified Preschool Teachers, with an estimated need for 37,000 full-time positions up to 2035 due to upcoming retirement among practising Preschool Teachers (Skolverket 2021c). There is also a growing shortage of qualified Childcare Workers. Given the crucial role staff qualifications play in children's development and learning (see, for example, Sylva et al. 2011), it is problematic that the number of staff lacking relevant professional or formal education of any kind currently working in preschools is very high. Moreover, *Barnskötare* (Childcare Worker) is **not a protected/certified title**. In addition to the three-year vocational programme there are courses of varied duration, such as ten-week courses offered by private providers. Therefore, even if employed Childcare Workers may have undergone some training, the **acquired qualifications and skills may vary substantially**, with implications for the overall quality of the education provided.

Linked to the challenge of staff qualification and shortage of staff is the issue of **group size in preschools and the staff to child ratio**. A recommended benchmark for children aged 1–3 years is 6–12 children. For 4 to 5 year-olds the benchmark is 9–15 children. According to the Teachers' Union, approximately 49% of preschools have larger group sizes than the recommendation for groups of 1 to 3 year-olds. In the age group 4–5 years, the corresponding figure is 47%. Both the union for Preschool Teachers and the union for Childcare Workers demand that group size be regulated by law (Sveriges lärare 2022, Kommunal 2023).

A lack of qualified staff and large groups of children implies a **worsening of working conditions**, of the conditions needed (e.g. non-contact time) to take on the overall responsibility for pedagogical work aligned with the curriculum, including planning, documentation and cooperation with parents (Williams, Sheridan, and Pramling Samuelsson 2016). Individual children's achievements are not assessed in the preschool. However, according to the curriculum, preschool staff should 'continuously and systematically follow, document and analyse each child's development and learning...' (Skolverket 2019, 19), which is challenging. It requires qualified, competent staff and time, neither of which are always available (Skolverket 2023). Furthermore, preschools have long opening hours (6:00/6:30 – 18:30/19:00), with staff working in teams on a rotating scheme. The full complement of staff is usually on-site between 10:00 and 14:00 hours. Because of the lack of regular staff as well as substitute staff children might not receive the attention, support and trust needed for their development, wellbeing and learning. The youngest children are especially vulnerable in this respect (Skolinspektionen 2016). Over time, with the goal of increasing the quality of education in the preschool, the roles and responsibilities of staff members have been differentiated. The curriculum demands enhanced responsibility for Preschool Teachers (Skolverket 2019). In addition to being responsible for children's education, they now have a **leadership responsibility** in relation to their colleagues without a clear formal mandate for it (Eriksson 2014). In many cases, it can be a single Preschool Teacher who must supervise and support a work team with very varied qualifications, including staff members with no relevant education at all. This has implications for preschool education and the workforce in that it is very time-consuming and may cause stress and other health issues (Persson and Tallberg Broman 2019). Preschool Teachers need support for their leadership and management responsibility. Leading other adults, especially their colleagues, is different from the leadership role they otherwise have for the children. The preconditions for high-quality preschool education are insufficient and health issues and sick leave are increasing.

As in many other countries, the number of foreign-born families in Sweden has increased in recent years. Yet another challenge is how to support these children and families in the most appropriate way. Preschool Teachers need more knowledge about family backgrounds, language and cultural traditions. They need to develop skills and competences regarding how to **work with multilingual groups of children and their families** (Harju-Luukkainen and Kultti 2017). Furthermore, it is important to offer **CPD focusing on linguistic and cultural diversity and inclusion** and to support both children's and staff members' development in the Swedish language (Skolverket 2023e; SOU 2020:67). With the strong focus on language and literacy (Skolverket 2019) it may be a challenge **to support children's language development in both Swedish and their home language** especially if staff with the appropriate educational and linguistic qualifications and competencies are lacking. Practitioners also need basic skills to support children in developing **digital competency**, including the role of media in society, to ensure the use of digital tools is informed by research and provides added pedagogical value (Regeringskansliet 2023b).

The Government has initiated several reforms already reported, such as the Teacher Salary Boost (SKOLFS 2016:61), increased CPD opportunities and career advancement strategies.

Furthermore, strategies to increase attendance in the preschool among foreign-born young children for improved development in the Swedish language have also been initiated.

Taken together these initiatives and reforms are hoped to make the teaching profession more attractive, counteract the recruitment and retention problem, ensure a qualified workforce in preschools and school-age educare settings and equal and accessible high-quality preschool education across the country.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC settings are **preschool** (*förskola*, 0–5) or **ECEC centre** and **preschool class** (*förskoleklass*, 6–7)¹. Any additional forms of provision are described where appropriate.

Historical milestones in ECEC in Sweden

1854	Opening of first crèche in Stockholm for the children of poor working mothers. Early establishments were run by foundations and churches.
1896	First Froebelian kindergartens (<i>barntädgården</i>) opened, providing part-time education for middle class families.
1904	First public kindergarten opens at the Froebel Training College in Norrköping; it is open for all children and with low or no costs for parents.
1932	Alva Myrdal proposes an integrated form of publicly funded provision with well-educated staff, to provide for children of <i>all</i> working mothers.
1944-45	First state grants are issued for provision and training; main responsibility for ECEC expansion comes under the Ministry of Health and Social Affairs and the National Board of Health and Welfare.
1950s	Majority of mothers at home; if kindergartens are used, mostly only for three hours in the morning or afternoon.
1960s	<ul style="list-style-type: none"> – Women start returning to the labour market in the context of a fast-growing economy. Beginning of significant expansion of ECEC provision. – The first state-run training institute started in Malmö (south of Sweden) 9 May 1962.
1968 – 1972	A major report issued by the National Commission on Child Care (<i>barnstugeutredningen</i>) sets out the goals, organisation, content and practices of early childhood education for the first time, proposing the integration of day care centres and kindergartens.
1974	Introduction of paid parental leave – one of the first countries to do so.
1975	Preschool Act (<i>förskolelagen</i>) guarantees all 6 year-olds 525 hours per year of state-funded early education provision provided by the municipalities (<i>kommuner</i>).
1985	Children of parents in employment or study are guaranteed a place in public childcare from the age of 18 months.
1991	Local Government Act; decentralisation and increased responsibility for the municipalities
1995	New Childcare Act: <i>kommuner</i> are obliged to provide an ECEC place for all children from age one whose parents are working or studying, within four months of application.
1996	Responsibility for ECEC transferred from national Ministry of Social Affairs to Ministry of Education and Research.
1998	First preschool curriculum introduced (<i>Läroplan för förskolan, Lpfö98</i>); preschool classes set up in schools for 6 year-olds (voluntary attendance).

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3-reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in pre-primary settings in countries where the school starting age is 6 years. In Sweden the relevant formats are **1–5** and **6–7** years.

1999/2000	Introduction of the 'universal preschool' (<i>allmän förskola</i>) for 15 hours/week. Full-time provision is available only for children whose parents work or study.
2002	Maximum cap (<i>maxtaxa</i>) on parental fees introduced; restricted access right to public childcare for the children of the unemployed, the non-employed and those on parental leave
2003	Free universal ECEC provision for 4 and 5 year-olds (525 hours/year)
2006	First revision of the preschool curriculum (minor revisions)
2010	<ul style="list-style-type: none"> – Free universal preschool provision extended to 3-year olds – Second revision of the preschool curriculum (major revisions, e.g. inclusion of subject domains and clarification of the role of teacher)
2016	Third revision of the preschool curriculum (moderate revisions) issued
2018	<ul style="list-style-type: none"> – Fourth revision of the preschool curriculum comes into force. – The preschool class becomes compulsory.
2020	Children's rights (UN Convention on the Rights of the Child, CRC) were incorporated into Swedish law and as a fundamental value in the curriculum for the preschool.

ECEC system type and auspices²

Early childhood education and care in Sweden is part of the public education system. ECEC is organised as a unitary model with two main levels of governance: national and local (municipality). At the national level, since 1996, both centre-based and the less common home-based provision for children aged 1 to under 7 years come under the auspices of the Ministry of Education and Research (*Utbildningsdepartementet*). Through the Swedish National Agency for Education (*Skolverket*), the main administrative body at the national level, the government is responsible for setting out policy goals and guidelines and funding frameworks relating to early childhood provision. However, the system itself is highly decentralised. At the local level, the 290 municipalities (*kommuner*) are responsible for the planning and organisation of public ECEC provision and for ensuring that the relevant steering documents are implemented. The providers of independent preschools (*fristående förskolor*), which are attended by 21% of 1 to 5 year-olds living in Sweden, are responsible for their management (Eurydice 2023; Vallberg-Roth 2015; Skolverket 2023a).

General objectives and legislative framework

National goals are drawn up by the Swedish parliament (*Riksdag*) and the Swedish government. 'Preschools' (*förskolor*) for 1 to 5 year-olds and 'preschool classes' (*förskoleklasser*) for 6 to 7 year-olds, are the two core forms of provision and are regulated by the Education Act (Skollagen, SFS 2010:800), which sets out objectives for the education system as a whole. Communication and interaction are seen as particularly important in early childhood education in order to learn new skills in a playful way and to develop a social and cultural identity (Williams et al. 2018).

Principles, goals and values for early childhood education and care are more explicitly specified in the Curriculum for the Preschool (*Läroplan för förskolan Lpfö18*), which was revised in 2018. The document states that education should convey and establish respect for human rights and the fundamental democratic values on which Swedish society is based. Specifically, "...preschool

² The Eurydice ECEC country report on ECEC in Sweden provided orientation for legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

education should reflect the values expressed in the UN Convention on the Rights of the Child” (Skolverket 2019, 5). A holistic approach to care, development and learning is another fundamental principle. The UNCRC was incorporated into Swedish law on 1 January 2020 (EASNIE 2020).

The Education Act places a duty on the self-governing municipalities to provide ECEC services and school-age educare settings (formerly: leisure-time centres) for children aged 1 to under 13 years. These settings are offered to children during the part of the day when they are not attending school and during school holidays (Education Act, SFS 2010:800).

Municipalities must ensure that parents receive a place within four months of their application.

ECEC entitlement and compulsory attendance

Children have had a statutory entitlement to a place in publicly subsidised ECEC provision since 1999, beginning when they are 1 year of age. From the age of 3 up to school entry at age 6, this entitlement is free of charge for at least 525 hours per year (at least 15 hours/week) and applies not only to parents who work or study, or whose child needs special support, but also to children of unemployed and non-working parents (Garvis and Lunneblad 2018, 27; Education Act, SFS 2010:800).

There is no obligation for 1 to 5 year-olds to attend an ECEC centre. Since 2018, attending a preschool class (*förskoleklass*) has become mandatory, starting in the autumn of the year children turn 6 (Eurydice 2023).

Parents of 6 year-olds who are working or studying and whose child attends a preschool class have the right to a subsidised place in a school-age educare setting (*fritidshem*).

By making the preschool class compulsory, the school starting age was effectively lowered from 7 to 6 years in 2018.

Main types of provision

ECEC centres (*förskolor*) or ‘preschools’, as they are called in official translations of Swedish documents, are usually unitary, age-integrated settings and are the main form of provision for children aged 1 to under 6 years. They are generally grouped in two broad age bands: 1 to 3 year-olds and 3 to under 6 year-olds. However, there are also settings with same-age groups, mostly in ECEC settings following the philosophy of Reggio Emilia. Most centres are open from 6:00/6:30 in the morning until 18:30/19:00 in the evening, with staff working in teams (*Arbetslag*) on a rotating scheme. The full complement of staff is usually on site between 10:00 and 14:00 hours.

Although the number of children in preschools has increased steadily over the years, after peaking in 2011 the number of ECEC settings has in fact decreased since then. In 2022, there were 9,310 preschools in Sweden (Skolverket 2023a).

Preschool classes (*förskoleklasser*) were traditionally one-year transition classes located in schools for 6 to 7 year-olds. They are now, since 2018, compulsory. Municipalities have a duty to ensure that a place in a preschool class with a minimum of 525 hours of tuition during the school year is available for all children (Eurydice 2023, 4). Most children start preschool class in the August of the year they turn six and the first grade in the compulsory school in August of the year they turn seven. In 2022/23, 3,573 schools offered preschool classes (Statista 2023).

Open-door preschools (*öppna förskolor*) are community drop-in and advisory centres for parents and children who are not attending any other form of provision, and also for home-based childcare providers. They are funded by the municipalities and generally supervised by a fully qualified Preschool Teacher (*förskollärare*), although as a form of ‘pedagogical care’ (*pedagogisk omsorg*) there are no specific requirements regarding the professional qualification of staff. Across the country there were 507 open-door preschools in 2022 (Skolverket 2023b).

Home-based ECEC settings (*familjedaghem*) are a form of pedagogical care which takes place in the provider’s home (see also Skolverket 2012).

There are no specific curricular regulations and no required form of professional qualification for those working as home-based childcare providers. Although pedagogical care is not considered part of the education sector, in the Education Act (SFS 2010:800, Chapter 25 §2) it is stated that pedagogical care “...should stimulate children’s development and learning”. These facilities are for children aged 1–12 years (but mostly used by families with children up to age 3) and are provided by registered home-based day carers (*dagbarnvårdare*).

School-age educare settings (*fritidshem*) offer activities, care and education for children attending school before and after school opening hours and during the school holidays. They are open for children aged 6–12 years. Children whose parents work or study or need extra support are entitled to a place. In 2022, there were 4,380 centres in the country catering for 480,000 children (Skolverket 2023c, 9).

Provider structures

The majority of ECEC settings are provided and run by the municipalities. However, since the early 1990s, independent, grant-aided provision (organised by parent or staff co-operatives, foundations, for-profit companies, and other entities) has increased steadily. Grant-aided independent schools (*fristående skolor/förskolor*) are subject to the same legal and regulatory frameworks as publicly funded ECEC provision).

In 2022, 83.6% of school-age educare settings were also municipally owned (Skolverket 2023c, 9).

Table 1 illustrates the distribution of ECEC provision according to provider type.

Table 1

Sweden: Number of ECEC settings according to provider type, 2022

Type of setting	Public/municipal	Independent, grant-aided	Total
ECEC centre/preschool (<i>förskola</i>)*	6,540	2,770	9,310
Preschool class (<i>förskoleklass</i>)**	2,964 (11 of these are state-run)	592	3,573
Open-door preschool (<i>öppen förskola</i>)***	472	35	507

Source: Skolverket *2023f, **2023g, ***2023b

Participation rates in regulated provision

In 2022, 85.8% of children aged 1 to 5 years attended a *förskola* (see Table 2) and almost 96% of 4 year-olds were participating in ECEC (Skolverket 2023d).

Table 2

Sweden: Number of children and enrolment rates in ECEC centres (preschools) according to age and provider type, 2022

Age group	Number of children	Total enrolment rates in %	Relative share in public settings in %	Relative share in private setting in %
1 year-olds	59,107	51.0	39.9	11.1
2 year-olds	105,815	91.3	71.7	19.7
3 year-olds	111,731	94.5	74.1	20.4
4 year-olds	115,309	95.6	75.5	20.5
5 year-olds	116,092	95.5	75.6	20.0
(6 year-olds)	787	0.6	0.5	0.1
1–3 years	164,922	79.0	62.0	17.1
1–5 years	508,842	85.8	67.5	18.4

Source: Skolverket 2023d

In 2022, a total of 124,327 children (representing an enrolment rate of 96.7% of all 6 year-olds) attended a preschool class (Skolverket 2023g).

The participation rates of children under age 3 in centre-based settings have increased only marginally since 2010, from 51% to 54.4% in 2022 (see Table 3). During the same period, the proportion of children aged between 3 and 6 years in ECEC provision rose from 84% of the age-group to 97.7%.

Table 3

Sweden: Participation rates according to duration of attendance in centre-based settings by age-group, 2010-2022

Year	Weekly attendance	0 to under 3 years in %	3 years to minimum compulsory school age in %
2005	1 to 29 hours	22	35
	Over 30 hours	31	52
	No enrolment in ECEC	48	13
2010	1 to 29 hours	18	29
	Over 30 hours	33	65
	No enrolment in ECEC	49	6
2015	1 to 29 hours	21.4	25.9
	Over 30 hours	42.8	70.3
	No enrolment in ECEC	36.0	3.8
2022	1 to 29 hours	16.3	27.1
	Over 30 hours	38.1	70.6
	No enrolment in ECEC	45.6	2.3

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 1.56% of GDP in 2019: 1.0% for provision for under 3 year-olds and 0.6% on

provision for 3 to under 6 year-olds. This put Sweden in second place among the OECD countries after Iceland in terms of expenditure on the education sector in 2019 (OECD 2023).

The funding of ECEC provision is shared between the state and the municipalities. A block grant is transferred from the national level to the municipalities and complemented by funding through tax revenues at the local level. However, there is considerable variation in the allocation models used across the municipalities. Each municipality then allocates resources to individual settings, which also charge fees to cover part of the costs. Funding is not determined by provider type. Each ECEC setting has its own budget and in some municipalities preschool principals have to calculate how many children are to be allocated to each group to cover costs (Garvis and Lunneblad 2018). At the local level, fees are regulated according to income and the number of siblings attending. They may vary according to provider. However, a fee cap (*maxtaxa*) is set annually at the national level to ensure affordability. The maximum fee system is voluntary for municipalities but has been adopted by all and the Swedish government compensates for any loss of income (European Commission 2020, 51).

From the age of 3, at least 15 hours per week are free of charge. The time the child spends in the setting beyond these three hours is subject to a fee. No fees are paid for attending the preschool class.

In 2022, a couple with two children spent about 3% of net household income on childcare costs³ (OECD. Stat 2023).

Staff to child ratios and group size

Swedish ECEC provision is internationally well-known for its favourable staff-child ratios. However, there are no national requirements, neither for preschools nor for preschool classes. Instead, the municipalities and sometimes the ECEC settings are responsible for regulating criteria for group size and the number of children per staff member. The practised ratios may vary across settings, depending on the group composition, e.g. the number of children with special educational needs, or the number of immigrant children with special language needs. The monitoring of staff-child ratios is compulsory and part of ongoing evaluation policies.

Skolverket, the Swedish National Agency for Education, has made recommendations for group size: six to 12 children for the ages 1–3 years and nine to 15 children for the ages 4–5 years (Williams et al. 2018). However, municipalities are not obliged to adhere to them, and there are no national recommendations about adult/child ratios.

Although the groups are usually organised so that 1 to 3 year-olds and 3 to 5 year-olds are in one group, there has been a recent trend towards same-age grouping. Also, sometimes two traditional groups are combined so that about 40 children are cared for in one group by eight adults. This is to increase flexibility for both children and professionals (Williams et al. 2018). Although large teams and groups with many children are less prone to staff absences, a strict structure is needed to “manage the chaos”. As a result, and contrary to the intentions of increased flexibility, the children's wishes and influences are limited. The organisation of large and complex groups involves a lot of planning, administration and bureaucracy at the expense of the time spent with the children (Karlsson Lohmander and Pramling Samuelsson 2020).

In 2022, the most common number of children in preschools was 13-15 (in a quarter of groups), but in 9% of groups there were 22 children or more. In groups with under 3 year-olds there were

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

12.6 children on average, compared to 16.2 in groups with 4 to 5 year-olds. In the ECEC centres, there were on average 5.1 children per full-time professional (Skolverket 2023a, 13f, 17).

Curricular framework

ECEC centres/preschools and preschool classes in primary schools are regulated through two different curricula.

The *Curriculum for the Preschool (Läroplan för förskolan, Lpfö 18)*, first issued in 1998, was revised in 2006, 2010, 2016 and in 2018 (Skolverket 2019). All centre-based settings for children aged 1 to 5 years in Sweden are required to work according to this document.

In the original document (1998), the goals set down were formulated at a relatively abstract level, and the areas for development and learning were not specified in detail.

The 2010 version included more specific objectives-for children's development in language and mathematics, and in natural sciences and technology. The guidelines for staff responsibilities were clarified, both at individual teacher level and at team level. New sections referred explicitly to documentation, evaluation and quality development, and also to the responsibilities of centre heads.

The 2018 version is divided into two equally long sections: one on the fundamental values and task of ECEC, the other on 'goals and guidelines' for both the children's learning and staff responsibilities. Care, development and learning are seen as mutually enhancing and inter-related. Play is regarded as the foundation of development, learning and wellbeing. Education in preschools should take its starting point both in the curriculum and in respecting children's needs, experiences and interests (Skolverket 2019). At the same time, the concept of 'teaching' has been introduced for the first time, to illustrate that preschools are part of the school system. As part of a system of policy steering by goals, regional and centre-specific educational plans complement the national curriculum. In addition, there was a greater focus on literacy, mathematics and science and technology, but also on cooperation with parents (Williams et al. 2018).

For the **preschool classes**, goals and guidelines are set down in the curriculum for compulsory schools, preschool classes and school-age educare settings (*Läroplan för grundskolan, förskoleklassen och fritidshemmet Lgr22*). Core learning areas include: language and communication; creative and aesthetic forms of expression; mathematical reasoning and forms of expression; nature, technology and society; games, physical activities, and outdoor excursions.

The goals in both preschools and preschool classes continue to be goals to aim for and not goals to be achieved.

Digital education

The revised curriculum also emphasises the challenges posed by the information society. Children's learning should be understood in the context of these challenges (Williams et al. 2018).

In alignment with the Swedish government's national digital strategy, the most recent version of *Curriculum for the Preschool (Lpfö 18)* states that children should be given the opportunity to "...develop digital skills through an understanding of the digitalisation that they encounter in their daily lives". ECEC staff are responsible for each child being able to explore technology and use digital tools in a way that stimulates development and learning (Skolverket 2019, 15f).

However, the use of digital tablets in preschool has been debated. The Government has commissioned the National Agency for Education to review the curriculum for the preschool (Skolverket 2019) regarding the use of digital tools in the preschool. The review is to be reported in June 2024 (Regeringskansliet 2023a).

Monitoring – evaluation

According to the Education Act and the Swedish Preschool Curriculum, the quality of all preschools must be regularly and systematically documented, reviewed and evaluated, and steps for further improvement developed. Sweden has a mixed approach towards monitoring and assessment, combining national quality audits with locally appropriate quality control.

Child-related assessment

Children's achievements and educational outcomes are not evaluated formally in **preschools**. Activities and support are provided in a flexible way to account for each child's perceived needs and current situation. Dialogues with the parents on the child's well-being, development and learning of the child are held regularly, both informally and formally. The staff monitor the children's progress regularly, but there are no formal regulations on how this is to be conducted. Since 2019, when revisions to the Education Act came into effect, **preschool classes** are required to regularly inform parents/guardians about their child's development. Another requirement is that a special assessment of knowledge development relating to Swedish, Swedish as a second language and Mathematics should be made with the help of mapping support materials developed by the Swedish National Agency for Education. If this assessment shows an inability to meet the knowledge requirements, support measures are to be planned or the Preschool Principal should be notified.

Centre level assessment

Centre-level self-assessment is not regulated at the national level. ECEC settings can decide whether it should take place, although Preschool Principals are expected to encourage this. Self-evaluation instruments vary from municipality to municipality may also vary depending on the needs of the ECEC setting. According to the curriculum (Skolverket 2019, 19, 21), "all members of the work team must, based on their roles, provide education in accordance with the national goals and investigate what measures need to be taken". The Principal "has special responsibility for planning, following up, evaluating and developing the education systematically and continuously, thereby promoting increased achievement of goals".

The emphasis of evaluations at the centre level is on overall quality enhancement. Criteria may include deciding on which curricular areas and goals they should be focusing on to meet the needs and interests of the children, whether the goals they set themselves for the previous evaluation have been achieved, and how the current evaluation phase will be assessed (documentation, parent survey, discussions with the children).

The Principal's responsibilities also include developing cooperation with the preschool class, the school and school-age educare settings and providing staff with the opportunity to develop their competences in order to carry out their tasks in a professional manner.

External evaluation

The Swedish National Agency for Education has the task of ensuring that the municipalities and the private providers comply with the legislation and regulations relating to early childhood

education and care. The Swedish School Inspectorate has supervisory and external monitoring responsibility for all levels of the education system, including preschools. This includes a self-evaluation by the municipality regarding various aspects of the quality in preschools.

Inclusion agenda

Children with special educational needs and disabilities

According to the Education Act (SFS 2010:800), a basic principle of each level of education is access to an equivalent education for all. Children with disabilities or in need of special support are therefore not treated or defined as a group that is any different from other pupils and their rights are not stated separately. Consequently, they are integrated into mainstream early childhood provision, either in a regular group or in a special group with fewer children and access to specialist staff (e.g. psychologists, speech therapists). The municipalities are responsible for providing the necessary resources, and children with disabilities have a right to priority access to early childhood provision. They should receive education and care according to their specific needs. Children with severe and multiple disabilities are entitled to personal assistance. For each child in need of special support, a continuously evaluated action plan is drawn up by teachers, in consultation with the children, their parents and specialist support teachers.

The Education Act also specifies that municipalities should attempt to offer care to children according to their needs outside the normal opening hours of preschools and school-age educare (e.g. during the evenings, nights and at weekends). The Swedish government has introduced a state grant to encourage municipalities to increase this kind of provision (European Commission 2020, 45).

Children with a migration background – children from Roma communities

In preschool classes, the number of children with a home language other than Swedish rose from 21,067 in 2012/13 to 30,315 children in 2022/23. This accounts for 24.5% of all children. Of these, the home language of most was Arabic (23.6%) followed by Somali (6.5%) and English 86.3%) (Skolverket 2023h, Tab 3a, b).

Children from asylum seeking families have the same entitlement to a place in an ECEC institution as other children living in Sweden.

With the aim of supporting active bilingualism and the children's bicultural identity, many municipalities have a policy of providing home language tuition for these children. Roughly one third of municipalities offer this provision for 21.5% of immigrant children in preschools.

In 2022, around 26% of children under age 7 in Sweden had a background of family migration, considerably more than the proportion in the overall population (3.9%). *Table 4* shows different groupings of children according to whether the child and/or the parents were born in Sweden or elsewhere.

Table 4

Sweden: Children 0–7 years and total population according to child's and parents' place of birth, 2022

	Under 7 years	Share of under 7 year-olds in %	Total population	Share of total population in %
Foreign born	34,109	4.1	2,145,674	3.0
Born in Sweden with two foreign born parents	180,999	22.0	681,448	0.9

	Under 7 years	Share of under 7 year-olds in %	Total population	Share of total population in %
Born in Sweden with one parent born in Sweden and one foreign born parent	114,206	13.9	816,209	1.1
Born in Sweden with two parents born in Sweden	494,307	60.1	68,978,225	95.0
Total	823,621		72,621,556	

Source: Statistics Sweden 2023, own calculations

86% of children with a Swedish background aged 1–5 attended preschool in 2022. The corresponding figure for Swedish-born children with two foreign-born parents is 82%, while only 73% of foreign-born children were enrolled. Foreign-born children have the lowest enrolment rate across all age groups. The difference is largest among 2 year-olds, where the difference in attendance rate is 29 percentage points between foreign-born children and children with a Swedish background (Skolverket 2023a, 10).

Looking at the child population under 5 years of age, 9.3% had a non-Swedish citizenship in 2022. More than a half of them (58.8%) came from countries outside the EU27(2020). The respective shares for the total population were 8.4% and 63.2% (Eurostat 2023c).

Sweden has a long-term Roma inclusion strategy that is effective for 20 years up to 2032. Roma are one of the five recognised national minorities with their own acknowledged language, Romani Chib (Regeringskansliet 2023b). The overall objective is to ensure that young Roma persons have the same opportunities in life as non-Roma persons. The strategy covers the areas of education, employment, health, housing, culture/language and civil society (*empowerment*). The main responsibility for the implementation lies with the local and regional authorities. In 2011, at the start of the strategy, the Council of Europe estimated that approximately 42,500 Roma live in Sweden (0.46% of the population). Most Roma children did not attend an ECEC centre (European Commission 2021).

Parental leave arrangements⁴

Maternity leave (*gravitetsspänning*) is compulsory for two weeks before or after delivery. Under certain circumstances, pregnant women can take indefinite leave at 77.6% of their previous monthly earnings. Pregnant women who have a physically demanding or risky work may be entitled to a pregnancy benefit starting 60 days before delivery (Försäkringskassan 2023, 20231115)

Temporary leave (*tillfällig föräldrapenning*) for family duties in connection with the child's birth ('baby time') is an entitlement which can be taken for 10 days, to be present at the birth or to care for other children in the family. This leave is also paid at a rate of 77.6% of previous earnings (max. SEK 393,750 €33,075.73 per year). Leave can be used at any time during the first 60 days after childbirth. To care for a sick child (from 8 months to 12 years) each parent can receive compensation for a maximum of 120 days per year (Försäkringskassan 2023)

Sweden is well known across the world for its generous parental leave.

Parental leave (*föräldrapenning*) benefit for 240 days can be granted to either parent until their child is 18 months old. 90 days cannot be transferred to the other parent (so called mother's or

⁴ The brief overview in this section is based mainly on the country note for Sweden by Ann-Zofie Duvander and Niklas Löfgren in the *International Review of Leave Policies and Research 2023* (see References).

father's quota). Up to 30 days can be taken by both parents simultaneously (*dubbeldagar*) until the first birthday of the child.

195 days per parent are income-based (77.6% of earnings up to a ceiling of SEK 525,000, €44,100.97 per year), 45 days are paid at a flat-rate of SEK 180 (€15.12) per day. There is an extra pension supplement for the parent who earns the lower income during the child's first four years. Same-sex parents have the same rights as opposite-sex parents. Rights to leave and benefit are based on custody.

Since the beginning of 2014, either form of paid leave can be taken up to the child's 12th birthday. However, only 96 days may be taken after the child's 4th birthday. Paid leave days can be taken full-time, part-time, quarter-time, or one-eighth time, with the length of leave extended accordingly (e.g. one day of full-time leave becomes four days of quarter-time leave). The majority of parents take the main part of the leave before their child reaches the age of 2 years. As from the child's 1st birthday, there is an entitlement to ECEC, either in a centre-based or home-based setting, on a full-time basis for employed parents or on a part-time basis if they are not employed.

In 2022, 28% of eligible women received pregnancy benefit for an average of 63 days. 77% of all eligible persons took temporary leave, on average for 9.7 days of the ten available days. Only 1.4% were women.

Whereas in 2002, fathers took about 12% of all Parental leave days used in that year, by 2022, it had increased to 30%. On average, women took 78 days, men 39.5. 19.4% of couples shared Parental leave equally between them during the first 24 months of the child's life.

In 2020, most Parental leave days were taken by women during the first year of the child's life, while men tended to take leave when the child was between the ages of one and three.

Current challenges for the ECEC system in Sweden

Country expert assessment by Maelis Karlsson Lohmander

The first and foremost challenge in Sweden relates to **staffing shortages** (see also the ECEC Workforce Report, Karlsson Lohmander 2024). The current lack of qualified staff has led to major differences within and between municipalities and preschools across the country when it comes to staffing, positions and organisation. This has severe implications for the overall quality of early childhood education and for the possibility of offering equal education of high quality across the country. This also impacts the staff working in the preschools, who are faced with less favourable working conditions and increased pressure which may reduce job satisfaction. One consequence is an observable rise in the number of staff on sick leave.

Therefore, to ensure access to equal preschool education across the country, recruitment and retention of qualified staff, not only licensed Preschool Teachers but also Childcare Workers, are major problems which policymakers at the municipal and national level are struggling to solve. Moreover, *Barnskötare* (Childcare Worker) is not a **protected/certified title**. There is a variety of courses of different lengths from the three-year vocational programme to courses of only ten weeks' duration offered by private providers. Some municipalities employ all their unqualified staff as Childcare Workers, which may impact the quality of the education. Protecting the title and determining job-related criteria/qualifications is a demand made by the Childcare Workers' Union (Kommunal 2023).

Another challenge has to do with **enhancing the attraction of the profession**. This is particularly necessary for those teachers working in certain urban areas with a high number of families needing additional support.

The Government has increased the number of places in preschool teacher education. However, the number of applicants has decreased in recent years and many of those who are admitted do not complete their education. To improve the quality of the programmes and the status and attractiveness of the professions the Government has commissioned an inquiry on teacher education to ensure that those admitted to the programme have the prerequisites required to complete the programme and become skilled teachers and preschool teachers (Regeringen 2023:11).

In the light of **increased migration** and growing numbers of foreign-born families living in Sweden, a national challenge is how to best provide preschool education for the children of asylum seekers and migrants. Linked to this challenge is the need for increased and improved cooperation between the various actors and public services in the Swedish welfare system to facilitate migrant families' inclusion in society. Preschools are often the first place of encounter with this system. According to the inquiry on participation in preschool education and language development (SOU 2020:67), approximately 4% of all children in the age group 3–5 years did not attend preschool or pedagogical care. The inquiry proposed strategies to increase participation in preschool education among newly arrived children and children needing improved language development. Following the inquiry, the Education Act was amended. Since July 2022 municipalities of residence are obliged to contact the guardians of children who are to be offered a place in the preschool 'through outreach activities ... and who do not have a place in the preschool and inform them about the purpose of the preschool and the child's right to preschool' (SFS 2022:833, chapter 8 §12a).

To further support preschool staff, the Government has invested in continuing education to improve the knowledge of the Swedish language in preschools (Skolverket 2023e).

Although CPD provision is increasingly focusing on such challenges, Preschool Teachers and Childcare Workers also need supportive working conditions in order to maintain the special character of participatory pedagogy with a holistic perspective on care, wellbeing and learning as shared meaning-making processes.

Group size in preschool has been a recurring topic in public debates. Over the years, and as a consequence of various reforms such as children's entitlement to a place in preschool, group size has increased. In 2016, in response to the debate, the National Agency for Education proposed recommendations for group size: 6-12 children for the ages 1–3 years and 9-15 children for the ages 4–5 years (Regeringskansliet 2016). The municipalities are free to adjust group size according to local needs. Over the past year, average group size has in fact decreased by one child per group. However, preschools have long opening hours and the full complement of staff is usually on site only between 10:00 and 14:00 hours. This means that although group size on average has decreased with the lack of both regular and substitute staff in individual preschools it can be difficult for a staff member to manage 15 children.

To safeguard high, even and equal quality in preschools across the country and to counteract these structural factors the Government has initiated and invested in several reforms. One example is the new national merit/qualification system (Regeringskansliet 2023c). It is hoped that these reforms will make the profession more attractive and reduce the shortage of preschool staff.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Sweden totalled 10,425,326. Since 2000 (8,816,426), there has been a slight but steady increase in the total population (2005: 9,011,392; 2010: 9,340,682; 2015: 9,747,355) (Eurostat 2023a).

Total fertility rate

In 2021, the average of the total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate in the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). With 1.67, Sweden is well above the EU27 average (Eurostat 2023d)⁵.

Children under age 6

Table 5

Sweden: Children under 6 years of age, 2022

Age	Number of children
Under age 1	114,663
1 year-olds	115,050
2 year-olds	117,612
3 year-olds	120,049
4 year-olds	121,060
5 year-olds	125,441
Total 0 to under 6 year-olds	713,875

In 2022, children under age 3 comprised 3.3% of the total population, and children under 6 years of age 6.8%. Particularly during the past seven years, these shares have been significantly higher than the respective EU-average.

Table 6

Employment rates of parents with children under 6 years of age

In 2022, the total employment rate for men in Sweden aged 15 to 65 years was 85.5%, for women 81.3% (Eurostat 2023 h).

In 2022, 81.5% of women and 95.1% of men with children under 6 were in employment. The share of employed fathers was thus the highest among the EU27(2020) (average: 87.2%), that of mothers the second highest (average: 63.6%) (Eurostat 2023e, own calculations).

Table 8a

Sweden: Employment rates of parents with children below age 6 compared with SEEPRO-3 countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Sweden	75.2	91.6
Highest rate of employment in 27 EU countries ⁷	Denmark: 82.7	Netherlands: 93.4

Children at risk of poverty or social exclusion⁹

In 2022, 21.4% of children under 6 were at risk of poverty or social exclusion. This proportion was slightly below the EU27 average (23,3%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 18.6% (EU: 21.6%). In 2020, 5% of children under 6 and 2.5% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023f, g).

About the author

Janine Hostettler Schärer, PhD, is a research associate and lecturer at the Institute for Early Education 0–8 at the University of Teacher Education St. Gallen. Her research interests include transitions to care, play-based learning, relationships, and professional development in early childhood education. Janine holds a PhD from Canada and is involved in international research collaborations.

Introduction

Switzerland is a federal state with 26 cantons and 2,136 municipalities (Federal Statistical Office 2023a) and is divided into three language regions: German-speaking Switzerland, French-speaking Switzerland (Romandie) and Italian-speaking Switzerland (Ticino). Because each canton and, in some cases, each municipality handles the area of early childhood education and care (ECEC) for children up to age 4 differently, it is difficult to find comparable data and make valid statements for all regions of Switzerland (kibesuisse 2015; Stern et al. 2022). Where necessary and possible, this report presents information for German-speaking, French-speaking and Italian-speaking Switzerland separately.

1. ECEC governance in Switzerland

Switzerland is a federally organised country and responsibilities for the system of early childhood education and care (ECEC) are shared between federal government, cantons and municipalities. The term **early childhood education and care** was introduced in Switzerland with the "Orientation Framework for Early Childhood Education and Care" of the Swiss UNESCO Commission and the Swiss Childcare Network (Wustmann Seiler and Simoni 2016).

In Switzerland, ECEC for children **before the age of 4** is the responsibility of either canton or municipality, or the joint responsibility of both. Children between the **ages of 4 and 6** attend **kindergarten**, which is part of the Swiss education system and is the responsibility of the respective canton. Since kindergarten is part of the school system, all children from the age of 4 (or 5 in a very few cantons) attend free of charge. In the canton of Ticino (Italian-speaking Switzerland), kindergarten can be attended (voluntarily) from the age of 3.

Since kindergarten does not provide facilities for care before and after school or during lunch break, municipalities are obliged to offer **out-of-school care** if there is sufficient demand. They are responsible for the organisation of out-of-school care and for its quality and qualification requirements. Out-of-school care centres offer care for kindergarten and school children throughout the day from about 7:00 to 18:00 outside of regular school hours. In many cases, care during school holidays cannot be guaranteed. There is no legal entitlement in Switzerland to a place in an out-of-school care centre financed by the state. In addition, there are no specifications or standards by cantons, or specific quality criteria for out-of-school care. This is largely because there is no umbrella organisation or nationwide association for out-of-school care in Switzerland (Stamm 2017).

Slightly more than a third of children in Switzerland aged 0–12 years (35.6%) and also of children under 3 years of age (34.3%) are cared for in ECEC and out-of-school care, although the duration of attendance differs. While 46.1% of 0–12 year-olds and 19% of under 3 year-olds spend less than 10 hours per week in a childcare setting, 38.7% and 56.2% respectively attend between 10 and 30 hours per week (Federal Statistical Office 2023b). In French-speaking cantons, urban cantons such as Basel-Stadt and Geneva, and cantons with a large city such as Zurich, more than 70% of parents use childcare services, mainly the institutionalised forms, especially childcare centres for under 4 year-olds and out-of-school care. In the more rural cantons of German-speaking Switzerland and in Ticino, non-institutionalised childcare is the main option. Here, parents primarily rely on grandparents (Federal Statistical Office 2023c).

Early childhood education and care (ECEC) for children up to 4 years of age

Early childhood education and care settings are called *Kindertagesstätte (Kita)* in the German-speaking part of Switzerland, *crèche* in the French-speaking part and *nido dell'infanzia* in Italian-speaking Switzerland. The federal government imposes a licensing and supervisory obligation on cantons or municipalities for childcare institutions, whereby the responsibilities of both, as well as the responsibilities of social and/or education departments, are regulated differently (kibesuisse 2015; Stern et al. 2022). According to an evaluation study commissioned by the Swiss Conference of Cantonal Social Directors (*Schweizerische Konferenz der kantonalen Sozialdirektorinnen und Sozialdirektoren, SODK*), all cantons have issued requirements for the quality of childcare services. These include submitting a pedagogical concept when applying for a licence, staff qualification requirements or staff to child ratio. However, requirements and topics covered in pedagogical concepts remain vague and are not regulated (Ecoplan 2020). As Switzerland has a legal minimum of 14 weeks of maternity leave, which is very short compared to other countries, there is often a need for care facilities for babies, which require high ratio levels (Stern et al. 2015).

Childcare and education services for children aged 0 to 4 are not available in all regions of Switzerland and the demand for ECEC exceeds the supply in most regions. Furthermore, there are differences between language regions; there are better conditions for childcare for the first years of life in French-speaking Switzerland than in German- and Italian-speaking Switzerland (Faeh and Vogt 2021). Across the country, around 90% of all childcare facilities are organised as associations, limited liability companies, foundations, or company-run centres, with the association being the most common type of provider.

In German-speaking Switzerland, an average of two-thirds of the costs for childcare services is paid by parents, while in French-speaking Switzerland, parental contributions account for only one third (Stern et al. 2015). Two thirds of the providers run one to three childcare centres. Strategic management is often a voluntary board of directors, while business and pedagogical management is usually in the hands of a childcare Centre Director. In larger organisations, operational management is increasingly separated from pedagogical management (kibesuisse 2015).

Working conditions in childcare institutions are set autonomously, in accordance with the legal requirements and regulations of cantons and municipalities. Only the canton of Vaud (French-speaking Switzerland) introduced a collective labour agreement in the childcare sector in January 2019 (*Convention collective cantonale de travail dans le secteur de l'accueil de jour de l'enfance*) (Faeh and Vogt 2021).

Early childhood education and care (ECEC) for children over 4 years of age

The focus in *kindergarten* (German-speaking Switzerland), *école enfantine* (French-speaking Switzerland) and *scuola dell'infanzia* (Italian-speaking Switzerland) is on the children's education. Pedagogical approaches are mainly based on guided play and activities as well as free play. Cantons determine curricula and timetables and determine teaching materials. A nationally harmonised curriculum at regional language level (*Plan d'étude romand (PER)* in French-speaking cantons, *Piano di studio* in Italian-speaking cantons, and *Lehrplan 21* in German- and multilingual cantons) supports pedagogical quality in kindergartens throughout Switzerland. The curriculum emphasises the needs of the individual child, promoting learning through play and a focus on children's competences. Municipalities organise relevant settings, which allows for locally adapted solutions.

Clear strengths of ECEC from the age of 4 in Switzerland are the anchoring of kindergarten in the education system, the legal requirement that kindergarten must be offered throughout the

country, as well as the strong pedagogical perspective and play-oriented curriculum (Faeh and Vogt 2021). While kindergartens in German-speaking Switzerland have traditionally been more socially oriented with free play and holistic support, *école enfantine* in French-speaking Switzerland and also *scuola dell'infanzia* in Ticino have long been dominated by a school readiness approach, prioritising cognitive-oriented activities (Stamm 2017).

Kindergarten Teachers usually teach children in mixed-age classes (first and second kindergarten year - respectively children from 4 to 6 years) alone. They plan, teach and reflect on their lessons; they observe, accompany and support children in guided and free choice sequences. Kindergarten Teachers work together with other specialist staff (Special Education Teachers, Second Language Specialists, Speech Therapists) who support children in or alongside kindergarten activities. Kindergarten Teachers are also responsible for working with parents at parents' evenings, development and transition meetings, as well as for dealing with any problems that may arise. Another field of activity is the school unit: Kindergarten Teachers belong to a team of teachers of one or more schools, which is led by a principal (Faeh and Vogt 2021).

Out-of-school childcare

Out-of-school care as a form of supplementary family care is offered by municipalities for the time before and after classes and over lunch break. With regards to the standards for out-of-school care, only the defined minimum structural quality characteristics of the Ordinance on the Admission of Foster Children (PAVO) are met (Faeh and Vogt 2021). Throughout Switzerland, there is a lack of standardised principles for out-of-school care, as well as missing framework conditions; there are only recommendations (kibesuisse 2021a). Moreover, the qualifications of educators working in out-of-school care vary greatly (Faeh and Vogt 2021). This will be discussed in *chapter 2*.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC care

In the field of early childhood education and care, educators with basic professional qualifications (Childcare Specialists, *Fachpersonen Betreuung - FaBe*) and educators with higher professional qualifications (Childhood Pedagogues, *Kindheitspädagoginnen/-pädagogen - HF¹*) work together. With increasing responsibility, the required competence profile also increases. It is considered desirable to combine educators with both basic and higher professional qualifications, apprentices, students and assistants (kibesuisse 2020). Due to historically different developments in initial professional education, the proportion of educators with higher professional qualifications is higher in French-speaking Switzerland (Dubach et al. 2018). In German-speaking Switzerland mainly Childcare Specialists work as qualified staff and possibly also as group leaders, whereas in French-speaking Switzerland these positions are filled with staff holding *HF* qualification.

Trainees are also in contact with children. They work under the supervision either of qualified Childcare Specialists (*FaBe*) with an additional qualification as vocational trainers or of *HF* Childhood Pedagogues. In addition, there are non-qualified staff in the ECEC sector who also work

¹ HF = *Höhere Fachschule* (higher vocational college, upper secondary level)

with children. There are again regional differences in the ratio of qualified and non-qualified staff: In German-speaking Switzerland, a minimum proportion of 50% of qualified childcare staff is required, while in French-speaking Switzerland at least two thirds of the staff must hold a recognised qualification (Ecoplan 2020).

In **kindergartens**, a qualified Kindergarten Teacher with a Bachelor's degree (formerly Kindergarten teaching diploma) works with the children. At the beginning of the school year or when there is a heavy workload in a class, a Classroom Assistant may be present. Classroom Assistants are either students of a teacher training college (in training), staff without formal qualifications, or staff with proof of a completed course of several days as a Classroom Assistant (for example: St.Gallen University of Teacher Education: PHSG n.d.).

Ideally, Social Pedagogues *FH*² or *HF*, Childhood Pedagogues *HF* or Childcare Specialists *FaBe* work in direct contact with children in **out-of-school care**. Pedagogical staff are supported by employees and assistants (in training as Pedagogues *FaBe* or Childhood Pedagogues *HF*; without initial professional education; interns or community service workers). The operational management is in the hands of the Centre Directors (kibesuisse 2022), who can be Social Pedagogues or Childcare Specialists on the one hand, or occasionally non-qualified staff on the other. There is no minimum percentage of pedagogically trained staff for out-of-school care.

Table 1 below provides an overview of staff with direct contact with children in Switzerland. Staff in initial education/training (trainee *FaBe* as well as trainee Childhood Pedagogues) who work as non-qualified assistants are not listed here.

Table 1

Switzerland: ECEC staff in centre-based settings (childcare, pre-primary, out-of-school)

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ETCS credits EQF level ISCED level
Childcare sector				
Childcare Specialist <i>Fachperson</i> <i>Betreuung (FaBe) –</i> <i>Fachrichtung Kinder</i> <i>Profile:</i> Social and Childhood Pedagogy Professional	Childcare centre <i>Kindertagesstätte</i> <i>Crèche</i> <i>Nido dell'infanzia</i> 0–3 years ³ Out-of-school care <i>Hort</i> 4–12 years	Group leader (core professional) Qualified co-worker	0–12 years with specialisation in early childhood	3 years of dual education/training at a vocational school (<i>Berufsfachschule</i>), spending 3½ days in a childcare setting <i>Award:</i> Federal certificate of proficiency (EFZ) With additional study time also:

² FH = *Fachhochschule* (university of applied sciences, tertiary level)

³ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports in countries with a school entry age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. In Switzerland the corresponding formats are **0–3** and **4–5** years.

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ETCS credits EQF level ISCED level

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

Childcare sector

For the position of Centre Director of a **childcare centre** (*Kindertagesstätte/crèche/nido dell'infanzia*), no specific federal-level qualification is required. Childcare Specialists with relevant work experience are permitted to manage a facility, as are Childhood Pedagogues *HF*, the latter mostly in the case of larger centres. Most Centre Directors attend some kind of further training for this task, but there are regional differences: In French-speaking Switzerland, in addition to work experience, a tertiary education is usually a prerequisite for managing a childcare centre, while in German-speaking Switzerland, further education in management or business administration is more likely to be required (Ecoplan 2020; SODK and EDK 2022).

Various training institutions offer professional development courses in leadership. These include specific training in childcare management, or a higher professional examination for a managerial position in the social and socio-medical field, or further training in leadership to the level of a CAS⁵ at a university of applied sciences (e.g. CAS "Leadership in daycare structures" at the Lucerne University of Teacher Education). In childcare, however, certificates and diplomas that are tailored as industry certificates to the qualifications of managers in this field still dominate

⁵ CAS = Certificate of Advanced Studies

(Dubach et al. 2018). In Ticino, the CAS "*Il nido dell'infanzia in coordinamento pedagogico e organizzativo*" for childcare centre managers was launched in 2008 (Stamm 2017).

As there is no job description in Switzerland for the position of Centre Director in ECEC; understanding of leadership, type of tasks and possible contact with children are also not defined. Depending on the size of the setting, the Centre Director has more administrative than pedagogical tasks to fulfil. In the German-speaking part of Switzerland, Childhood Pedagogues *HF* sometimes take over the pedagogical management (the pedagogical programme, support plans, annual plans, etc.) or the site management in larger facilities. However, there are still many staff without leadership qualifications in management positions (Dubach et al. 2018). In eight cantons, a management qualification is only expected from a certain size of childcare setting, in three cantons, longstanding professional experience is considered equivalent to obtaining a management or leadership position, while in twelve cantons, training with a management qualification is required (Faeh and Vogt 2021). The *SODK* and the *EDK*⁶ (2022) recommend hiring people with pedagogical and business skills, as well as leadership skills and personal aptitude for management positions in early childhood education.

In some cases, managers of **out-of-school care** facilities have a higher level of training. However, there are no cantonal qualification requirements, which is why some out-of-school care is also managed by *FaBe* Childcare Specialists.

Education sector

For **kindergarten** (pre-primary class), management lies with the school to which the kindergarten belongs. The School's Principal is responsible for pedagogical quality, staff management, budget and infrastructure planning and represents the school externally. School Principals have a nationally recognised diploma in school leadership (SDBB n.d.).

2.3 Centre-based positions of responsibility

Childcare sector

The only designated position of responsibility in childcare centres is that of supporting apprentices in the centre. Besides a completed apprenticeship and at least two years of professional experience, a 5-day course for vocational support staff is compulsory. Such a position can be accompanied by higher pay, but this is not guaranteed.

Education sector

Similarly, the only position of responsibility in kindergartens is that of guiding or **mentoring students** during their field practice. For this purpose, Kindergarten Teachers can attend a further training course of several days (e.g. training as a field practice teacher/mentor at the University of Teacher Education St. Gallen). However, this is not a prerequisite. Internship teachers receive additional compensation for their supervisory task.

⁶ EDK = Swiss Conference of Cantonal Educational Directors (*Schweizerische Konferenz der Kantonalen Erziehungsdirektoren/-direktorinnen*)

2.4 Co-ordinating and supervisory staff

Childcare sector

There are three quality labels for **childcare centres** in Switzerland: (1) QualiKita, (2) Education and Learning Stories (*Bildungs- und Lerngeschichten*, BULG) and (3) Infans. Centres with such a quality label are regularly visited and evaluated (kibesuisse 2015).

- *QualiKita* is a certification procedure with a focus on pedagogical quality, awarded by kibesuisse⁷ and the Jacobs Foundation⁸. *QualiKita* covers all quality dimensions of a childcare centre with a focus on pedagogical quality. It aims to measure, describe, and further develop the quality of an institution. To date, 107 Swiss childcare centres have been awarded the label, and 27 further centres are in the process of being labelled (kibesuisse 2015, QualiKita 2022).
- *Education and learning stories* is a narrative approach towards documenting and supporting individual children’s educational pathways based on close observation. The Marie Meierhofer Institute for the Child (n.d.) implemented this approach in 25 childcare centres in German-speaking Switzerland from 2009 to 2013 and accompanied and evaluated the children’s learning stories with various studies (kibesuisse 2015).
- *Infans* offers a qualification framework for educational professionals in childcare centres (Bildungskrippen.ch 2016). The German version was adapted for Switzerland (Hofmann and Toberer n.d.) and has been introduced in 48 childcare centres so far. *Infans* focuses on the thematic interests of children, on their bonding needs, the relationship with their parents, as well as paying attention to their developmental needs and tailoring pedagogical activities to meet these accordingly (kibesuisse 2015). Childcare centres that work according to the *Infans* or *education and learning stories* approaches are grouped together in the “Network Education” (Netzwerk Bildungsort Kita n.d.), which offers training and further education.

In **out-of-school care**, the Ordinance on the Admission of Foster Children (PAVO) stipulates that the supervisory authority should carry out inspection visits as often as necessary, but at least every two years, to assess the welfare and quality of care for children. Providers, whether private companies, non-profit organisations, or public services, have no influence on how the supervisory authority carry out these inspections. The supervisory authority must ensure that the requirements for granting a licence are met and that providers comply with the legal provisions and conditions (PAVO 2017).

Education sector

In **kindergartens**, the School’s Principal is responsible for supervisory tasks. In the context of personnel management, they visit Kindergarten Teachers annually, observe class activities and discuss these with the teacher.

2.5 Specialist support staff

Specialists provide support for children in childcare centres and out-of-school settings as needed (e.g. early preventative education).

Since kindergarten is part of the Swiss school system, kindergarten children benefit from screening examinations and, if necessary, receive support during or alongside lessons in the form of

⁷ The Swiss Childcare Association *kibesuisse* is the Swiss professional and trade association for childcare services.

⁸ The Jacobs Foundation invests in the future of young people so that they can become socially responsible and productive members of society.

special needs education, second language instruction, speech therapy and psychomotor therapy (Faeh and Vogt 2021).

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

According to a study on the demand for skilled workers in social professions (IWSB 2016), 42% of employees in the **childcare sector** are trained professionals, 11% obtained similar training, 18% are *FaBe* trainees, 18% have no formal qualifications, and 11% are students in training. This means that in Switzerland, the number of qualified professionals with formal training is nearly the same as the number of employees without training (IWSB 2016). The SODK and EDK (2022) recommend a proportion of caregivers with professional qualifications of at least 60% of the total number of staff, and a target value of 80%.

Table 2

Switzerland: Number of employees in childcare settings according to occupational title and qualification status (IWSB 2016, 5, no more recent data available)

Occupational title	Formal qualification	Similar qualification	Apprentice trainees (<i>FaBe</i>)	Without formal qualification	Student in training	Total
Childcare Specialist – (<i>FaBe</i>)	18,300 (42%)	4,800 (11%)	8,100 (18%)	7,800 (18%)	4,900 (11%)	43,800
Childhood Pedagogue <i>HF</i>	3,300 (59%)	500 (10%)	600 (11%)	400 (8%)	700 (12%)	5,600
Social Pedagogue <i>HF/FH</i>	14,000 (70%)	1,300 (7%)	2,100 (11%)	1,100 (5%)	1,500 (7%)	20,100

In the summer of 2020, 2,778 Childcare Specialists graduated; 2,323 were women and 455 men. Although the male apprenticeship entry rate for the years 2018 to 2020 was 16%, only 8% of childcare and out-of-school care staff in Switzerland are men (SAVOIRSOCIAL 2020b; 2020c). The figure is even lower for the pre-primary sector. According to SAVOIRSOCIAL, it is still difficult for men to access and remain in the field due to multi-layered prejudices.

In 2020, 556 women and 238 men graduated as Social Pedagogues *HF*. In 2020, of the 437 graduates in Childhood Pedagogy *HF* (formerly Child Educators *HF*), 401 were women and 36 men (SAVOIRSOCIAL 2020c).

The IWSB study (2016) mentions for the social sector an above-average rate of women as well as many younger employees, a high part-time rate, and a rather low rate (12%) of employees with a migration background. The authors explain the latter by the fact that minimal language skills are required in these professions. It is also noticeable that up to one third of the staff does not hold the corresponding formal education (IWSB 2016). This applies equally to management staff, group leaders and pedagogical staff (Faeh and Vogt 2021).

Since most Swiss teacher education colleges train **Kindergarten** Teachers not only for the kindergarten level but also for the first two to three years of primary school, no information can be derived for the number of men in kindergarten; however, in the academic year 2021/22, 94.5%

of teachers in Swiss kindergartens were women (Federal Statistical Office 2023d). Data on the migration background of Kindergarten Teachers were compiled for 2014. At that time, only 3% of Kindergarten Teachers were not Swiss nationals (Federal Statistical Office 2016). It can be assumed that most Kindergarten Teachers in Switzerland hold a relevant diploma or acquired post-qualification.

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

In Switzerland, staff in early childhood education and care, out-of-school care and pre-primary education have very different qualifications. These differences are due to the different work-specific requirements but can also be attributed to different training traditions or anchoring in voluntary work (Dubach et al. 2018).

Childcare Specialist (*FaBe Kinder*) (in French-speaking Switzerland: *assistant socio-éducatif / assistante socio-éducative*; in Ticino: *operatore / operatrice socioassistenziale con specializzazione in educazione della prima infanzia*) is a three-year apprenticeship leading to a federal certificate of proficiency. Trainees attend a vocational school one and a half days a week. The rest of the time they work in early childhood or out-of-school care, where they are supervised by a trainer. In addition, they attend so-called interdisciplinary courses on 20 days during the 3-year apprenticeship. *FaBe* are trained to work with children aged 0–12 years, but with a focus on early childhood. The main area of work for a trained Childcare Specialist is working with children as a co-educator or as a group leader. In the European comparison of qualifications (Swiss Confederation 2015), *FaBe* are classified at EQF level 4. The ISCED category is 3 (Federal Statistical Office 2015).

Table 3

Switzerland: Childcare Specialist

<p>Job title in German: <i>Fachperson Betreuung Fachrichtung Kinder (FaBe Kinder)</i></p> <p>Job title in French: <i>Assistant socio-éducatif / assistante socio-éducative</i></p> <p>Job title in Italian: <i>Operatore / operatrice socioassistenziale con specializzazione in educazione della prima infanzia</i></p> <p>Profile: Social and Childhood Pedagogy Professional</p>
<p>Entry requirements: Secondary school leaving certificate</p> <p>Professional studies: 3 years at vocational school – 1½ day per week in school, 3½ days in a childcare or out-of-school care</p> <p>Award: Swiss Federal Certificate of Proficiency (upper secondary level)</p> <ul style="list-style-type: none"> • <i>Eidgenössischem Fähigkeitszeugnis EFZ</i> (German-speaking Switzerland) • <i>Certificat fédéral de capacité CFC</i> (French-speaking Switzerland) • <i>Attesto federale di capacità AFC</i> (Italian-speaking Switzerland) <p>ECTS credits: n/a</p> <p>EQF level: 4</p> <p>ISCED 2011: 3</p> <p>Main fields of work: Early childhood centre, out-of-school care</p>

The degree programme for **Childhood Pedagogues HF** (*Höhere Fachschule*) can be completed following an apprenticeship with an EFZ/CFC/AFC, or with a general university entrance qualification or a subject-linked university entrance qualification. This professional education lasts two to four years (depending on previous education), during which time the Childhood Pedagogues work at least 50% in an early childhood or out-of-school care setting. One entry requirement is at least 800 hours of practical experience. The age range covered is 0–16 years.

There are regional differences in the professional category of Childhood Pedagogues HF. In French-speaking Switzerland (Romandie), a diploma from a higher technical college is a prerequisite for working as a co-educator or group leader (tertiary level of education), while in German-speaking Switzerland only a Federal Certificate of Proficiency (EFZ) is expected (secondary level of education) (kibesuisse 2015). In the German-speaking part of Switzerland, HF Childhood Pedagogues often work as early childhood centre directors or as pedagogical managers in larger organisations. In the European comparison of qualifications (Schweizerische Eidgenossenschaft 2015), Childhood Pedagogues HF are classified at EQF level 5 and ISCED level 5 (Federal Statistical Office 2015).

Table 4

Switzerland: Childhood Pedagogue HF

<p>Job title in German: <i>Kindheitspädagogin / Kindheitspädagoge HF</i> Job title in French: <i>éducateur de l'enfance / éducatrice de l'enfance ES⁹</i> Job title in Italian: <i>educatore dell'infanzia / educatrice dell'infanzia SSS¹⁰</i> Profile: Social and Childhood Pedagogy Professional</p>
<p>Entry requirements: Apprenticeship proficiency certificate (EFZ, CFC, AFC) or general university qualification or vocational baccalaureate with between 400 and 800 hours of work experience</p> <p>Professional studies: 2 to 4 years depending on previous education at a Higher Vocational College, at least 50% in a childcare setting</p> <p>Award: Diploma in Childhood Education</p> <ul style="list-style-type: none"> • <i>Diplom HF</i> (German-speaking Switzerland) • <i>Diplôme fédéral ES</i> (French-speaking Switzerland) • <i>Diploma federale SSS</i> (Italian-speaking Switzerland) <p>ECTS credits: n/a EQF level: 5 ISCED 2011: 5 Main fields of work: Early childhood centres, out-of-school care</p>

In Switzerland, Kindergarten Teachers receive their professional education at Universities of Teacher Education (*Pädagogische Hochschulen*). Admission requirements are a general or subject-specific university entrance qualification, or a vocational training EFZ with a specialised preliminary course. The three-year programme qualifies students to teach not only in kindergarten but, in most cantons, also in the first two (or three) grades of primary school. Training at a University of Teacher Education is completed with a BA Pre Primary and Primary Education after attaining 180 ECTS credits. Kindergarten teachers are classified at EQF level 6 in the European comparison of qualifications (Swiss Confederation 2015). The ISCED category is 6 (Federal Statistical Office 2015).

⁹ *ES École Supérieures* (French-speaking Switzerland)

¹⁰ *SSS Scuole Specializzate Superiori* (Italian-speaking Switzerland)

Table 5

<p>Entry requirements: General or subject-specific university entrance qualification or vocational training EFZ /CFC/AFC with a specialised preliminary course Professional studies: 3 years at a University of Teacher Education Award: Bachelor (BA Pre Primary and Primary Education) ECTS credits: 180 EQF level: 6 ISCED 2011: 6 Main fields of work: Kindergarten – in most cases also for the first two-three grades of primary school</p>

Ideally, a **Social Pedagogue HF** or **FH** would be responsible for the management of out-of-school care. The **HF** programme (*éducateur / éducatrice sociale ES, educatore / educatrice sociale SSS*) is similar to that of Childhood Pedagogue (see Table 4). The **FH** programme is usually a three-year full-time course at a University of Applied Sciences for Social Work and is completed with the federal diploma "Bachelor of Arts/Bachelor of Science in Social Work". Compared to the HF training, the scientific-theoretical content of the FH training outweighs the practical content (SDBB n.d.) Social Pedagogues HF are classified at EQF level 5 in the European comparison of qualifications (Swiss Confederation 2015). The ISCED category is 5. Social Pedagogues FH are classified at EQF level 6 (Swiss Confederation 2015). The ISCED category is 6 (Federal Statistical Office 2015).

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Childcare Specialist (*Fachperson Betreuung – Fachrichtung Kinder, FaBe*)

A Childcare Specialist FaBe accompanies children and their families as they settle into the new childcare situation. They care for infants and toddlers and develop a relationship with them that meets their needs. They accompany children in group situations and support the inclusion of children with disabilities in the group. They record educational and developmental processes and plan suitable offers and activities with co-workers. They use their broad repertoire of creative and musical tools to carry out these activities (SAVOIRSOCIAL 2020a). *Table 7* shows which competences are supported during professional education or apprenticeship.

Table 7

Switzerland: Childcare Specialist *FaBe*

Competence areas (SAVOIRSOCIAL 2020a, 8)

Applying transversal competences
<ul style="list-style-type: none"> – Act according to one's own professional role – Reflect on one's own work – Shape professional relationships – Communicate appropriately for the situation and target group – Collaborate to overcome conflict
Performing everyday routines
<ul style="list-style-type: none"> – Planning one's own work – Structuring the daily schedule with children – Protecting privacy and providing opportunities for retreat – Designing the daily environment – Carrying out household tasks – Preparing and accompanying mealtimes – Creating an environment that promotes movement – Supporting personal hygiene and personal care – Acting appropriately in accident, illness and emergency situations
Enabling autonomy and participation
<ul style="list-style-type: none"> – Enabling and accompanying participation in social and cultural life – Supporting children in decision-making processes – Supporting social contacts and relationships
Working in an organisation and a team
<ul style="list-style-type: none"> – Working together as a team – Working together inter-professionally with other professionals – Working together with relatives and other caregivers – Contributing to the quality management process – Carrying out general administrative tasks
Acting in specific support situations
<ul style="list-style-type: none"> – Accompanying children and their families during the settling-in period – Accompanying and shaping transitions in relation to children and groups – Forming relationships with infants and toddlers and carrying out personal care – Accompanying and supporting children in group situations
Supporting education and development, maintaining and promoting quality of life
<ul style="list-style-type: none"> – Assist in recording and documenting educational and developmental processes – Participate in the planning of educational and developmental support services – Stimulate and implement group and child-centred activities – Participate in analysing and evaluating the educational and developmental activities

Childhood Pedagogue HF

Childhood Pedagogues HF are trained to develop, reflect and further develop pedagogical concepts; to observe children and document their developmental steps; to create stimulating learning environments; to design transitions between children's learning stages; to contribute professional knowledge to the cooperation with other professionals; to involve parents and other caregivers in the daily care routine. In addition, Childcare Pedagogues are prepared for taking on leadership tasks such as the management of a childcare institution as well as the staff employed, organisational and administrative tasks and working on quality development (SDBB n.d.).

The IPE curriculum includes the following:

- Pedagogical and psychological basics
- Didactics and methodology
- Education, upbringing and development of the child
- Work with parents
- Cooperation with professionals
- Social, pedagogical, political environment
- Teamwork and leadership
- Administration and organisation
- Reflection on professional practice (function, role and tasks)

Table 8 shows the Swiss framework curriculum for courses at the higher vocational colleges HF for the study of childhood pedagogy.

Table 8

Switzerland: Framework plan for courses in "Childhood Pedagogy HF" at Higher Vocational Colleges – Competence areas (SAVOIRSOCIAL 2021a, 5)

1. Planning and implementation of pedagogy				
1.1 Recording and analysing the child's living environment	1.2 Analysing each child's educational and developmental pathways	1.3 Developing and advancing the pedagogical programme	1.4 Stimulating educational processes in each child and in the group	1.5 Initiating and maintaining educational partnerships
2. Guiding and supporting children in everyday activities				
2.1 Building and shaping a relationship with each child	2.2 Organising rooms and the spatial environment to promote learning in a safe and needs-oriented way.	2.3 Observing individual children and the group in everyday activities and adjusting pedagogical approaches accordingly	2.4 Working with groups of children and shaping the group situation to promote each child's development	2.5 Supporting transitions
3. Developing a professional identity				
3.1 Coping with challenging and changing situations	3.2 Understanding and reflecting on the professional role			
4. Process analysis and documentation				

4.1 Analysing pedagogical activities	4.2 Documenting pedagogical activities and processes			
5. Working in a professional environment				
5.1 Team work	5.2 Cooperating with other professionals and support services	5.3 Building and maintaining networks		
6. Advancing the profession				
6.1 Reflecting on one's own professional work in a socio-political context	6.2 Developing and implementing innovative ideas and approaches for one's own field of work	6.3 Advocacy for professional interests		
7. Participating in developing the organisation/institution				
7.1 Taking on leadership and tasks of responsibility	7.2 Developing and assuring quality	7.3 Developing and sustaining internal and external communication	7.4 Developing and leading projects	

Social Pedagogue HF

In the study of Social Pedagogy HF, competence specifications include joint planning and development of social pedagogical work, accompaniment and support in everyday and transitional situations, development of one's own professional identity, process analysis and documentation, work in a professional environment, and participation in the development of the organisation/institution (SDBB n.d.). According to the framework curriculum for Social Pedagogues HF, the following work areas and competences are acquired during the study programme (SAVOIRSOCIAL 2015):

- Accompanying people in coping with difficult life situations and support them in goal-oriented ways
- Sharing and helping to shape the daily lives of clients
- Enable, support and promote the social participation and integration of clients into society
- Developing and activating resources for shaping clients' lives
- Working with client systems
- Cooperate in the socio-educational team, with other professionals and in the organisation
- Know the legal and political environment and include it in the implementation of the socio-educational mandate
- Reflect on and further develop one's own person, professional identity and professional activities

Table 9

Switzerland: Draft framework curriculum for courses in "Social Pedagogy" at Higher Vocational Colleges HF – Competence areas (SAVOIRSOCIAL 2021b, 6)

1. Joint planning and development of socio-pedagogical work				
1.1 Taking note of the living context of	1.2 Determining support needs in a participative way	1.3 Planning and implementing goals	1.4 Cooperating with the family and the	

the accompanied person	and developing these together	and strategies together with the accompanied person or group	social environment	
2. Guidance and support in everyday and transitional situations				
2.1 Building and shaping a relationship to the accompanied person	2.2 Strengthening the self-efficacy of the accompanied person and promoting their self-determination	2.3 Support participation in social life	2.4 Organise the environment and conditions according to needs	2.5 Support group situations and involvement
2.6 Providing everyday support for accompanied persons according to needs	2.7 Accompanying in situations of transition and crisis			
3. Developing a professional identity				
3.1 Coping with challenging and changing situations	3.2 Understanding and reflecting on the professional role			
4. Process analysis and documentation				
4.1 Analysing and adapting socio-pedagogical processes and activities	4.2 Documenting processes and writing reports			
5. Working in a professional environment				
5.1 Working in a team	5.2 Cooperating with other specialists and support agencies	5.3 Building and sustaining networks		
6. Advancing the profession				
6.1 Reflecting on one's own work in a socio-political context	6.2 Developing and implementing innovative ideas and approaches in one's own field of work	6.3 Advocacy for professional interests		
7. Participating in the development of processes and projects				
7.1 Taking on leadership tasks and responsibilities	7.2 Developing and ensuring quality	7.3 Developing and ensuring internal and external communication	7.4 Developing and leading projects	

Social Pedagogue FH

In the social work degree programme at the Universities of Applied Sciences, topics such as upbringing and education, coping with everyday life, social work organisations, the welfare state

and social economy, neighbourhood work, and others are taught as elective modules. Practical training takes place in the professional field of social pedagogy. Theory and practice are inter-linked and consolidated through project work (SDBB n.d.). *Table 10* shows the contents of the Bachelor's programme in Social Work at the Zurich University of Applied Sciences (ZHAW) as an example, valid from 2019.

Table 10

Switzerland: Content of the Bachelor's degree programme in social work (ZHAW n.d.)

Compulsory modules in the main study programme	
<i>Module 1</i>	History and theories of social work
<i>Module 2</i>	Development and socialisation
<i>Module 3</i>	Basics of professional work
<i>Module 4</i>	Introduction to research work
<i>Module 5</i>	Portfolio 1
<i>Module 6</i>	Legal and ethical foundations of social work
<i>Module 7</i>	Social and political framework conditions of social work
<i>Module 8</i>	Social change, social problems, social inequality
<i>Module 9</i>	Organisations in the social sector
<i>Module 10</i>	Case study workshop
<i>Module 11</i>	Portfolio 2
Elective courses in the main study programme	
<ul style="list-style-type: none"> – Participation, involvement, integration – Social space, culture and community development – Phases of life, transitions and generations – Deviance, delinquency and crime prevention – Vulnerability and interventions 	

Kindergarten Teachers

Kindergarten Teachers in Switzerland study at a University of Teacher Education (PH). They obtain qualified teacher status for work in pre-primary education and, depending on the university, for the first two or the first three primary school years. *Table 11* gives an overview of the study content, using the example of the study programme in kindergarten and primary education at the University of Teacher Education St. Gallen with a teaching qualification for kindergarten to third grade (PHSG 2019).

Table 11:

Switzerland: Content of the Bachelor study programme in pre-primary and primary education (PHSG 2019, 34)

	ECTS credits
Core studies	
Professional and study skills	4
Education and reference sciences	31
Languages	10
Nature, mankind and society/mathematics	20
Design, music and movement/sport	30
Learning an instrument	3
Focus studies	4
Thematic week: writing and learning in Regional Didactic Centres	1
Field studies	40
Specialist studies	16

Bachelor thesis	8
Self-directed studies	
Thematic weeks (3 weeks à 1 ECTS credit)	3
Optional subject studies or recognition of school-relevant achievements	7
Work in learning communities	3
Total	180

4.3 Alternative entry and qualification routes, system permeability

Childcare Specialists (*Fachpersonen Betreuung – Fachrichtung Kinder, FaBe*) can complete a vocational baccalaureate either simultaneously (this increases the number of school days) or subsequently. Furthermore, after completing their vocational training, they can follow up with further studies to become a Childhood Pedagogue *HF*. The vocational baccalaureate or the qualification as a Childhood Pedagogue *HF* provides access to a university of applied sciences for a Bachelor of Arts (BA) in Social Work and, with an additional specific preliminary course, to a study programme for a BA in Pre Primary and Primary Education at a University of Teacher Education.

Kindergarten Teachers with a BA in Pre Primary and Primary Education and Social Pedagogues with a BA/BSc in Social Work can complete a Master's programme as further education, for example the Master's in Early Childhood Studies (University of Teacher Education St. Gallen, PHSG), or the Master's in Early Childhood (University of Teacher Education Thurgau, PHTG).

What is missing is the possibility of a BA Early Childhood, which would offer a bridge to the Master's degree programmes in Early Childhood for Childcare Specialists with a vocational baccalaureate or for Childhood Pedagogues *HF*.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

In Switzerland's dual VET system, Childcare Specialists *FaBe* spend at least three days in a childcare setting (early childhood or out-of-school care) and Childhood Pedagogues *HF* at least 2½ days a week. Curricula for the respective training courses clearly specify which learning goals are to be worked towards at which learning site (training institution, childcare setting, interdisciplinary courses) (SAVOIRSOCIAL 2020a), whereby all learning goals are based on the defined competence specifications (see *chapter 4.2*). Learners/students are accompanied by vocational support staff (whose training is discussed in *chapter 2.3*). Whether those with a mentoring task are paid extra or allocated time for this work is not handled uniformly.

Students at the universities of teacher education sometimes have weekly field practice days and / or block practicum periods during their 3-year course of studies. At the University of Teacher Education St. Gallen, for example, 19 weeks are allocated to field studies and accompanying seminars, which together add up to 40 ECTS credits (PHSG 2019, p. 24). As explained in *chapter 2.3*, some field practice teachers have completed a CPD course focussing on the mentoring task and are additionally remunerated for accompanying students. Field practice is primarily about applying the theoretically acquired knowledge in practice. The specific content is defined individually by the universities of teacher education.

6. Continuing professional development (CPD) of ECEC staff

In their study of continuing professional development offers in the field of childcare in German-speaking and French-speaking Switzerland, Geiss and Wallimann (2020) identified 40 training providers which, in 2018, advertised a total of 542 courses for childcare staff in early childhood and out-of-school care. These providers are either public (e.g. universities, universities of applied sciences and vocational schools) or private (e.g. limited liability companies, associations and foundations), with public providers accounting for almost 60% of the programmes offered. The CPD programmes can be divided into the following thematic groups: (1) *growing up* (e.g. babies, (language) development, health and nutrition); (2) *social* (e.g. everyday work, parental cooperation and pedagogy); and (3) *management, teamwork and organisational development* (e.g. administration, personnel management and reflection). Most of the training courses are full-day or multi-day courses (Geiss and Wallimann 2020).

CPD for Kindergarten Teachers may be school-based (SCHILF), courses offered at the cantonal level or courses offered by universities of teacher education. Teachers in the canton of St. Gallen, for example, are entitled to 3% of their working time (i.e. 57 hours per year for a 100% workload) for CPD (courses and peer observation) (Kanton St. Gallen, Amt für Volksschule 2021).

While entitlement to CPD is clearly regulated for Kindergarten Teachers, this is not always the case in the childcare sector. In several cantons, it is stipulated that providers should ensure accessibility to CPD for employees. In some cantons, attendance at CPD sessions is even a requirement, depending on the function. In their recommendations on the quality and financing of early childhood and out-of-school care, SODK and EDK (2022) emphasise that employees of childcare facilities should be enabled to attend regular training and further education courses. Time should be set aside for this in the calculation of the staffing ratio and the financing of CPD should be taken into account in the full costs per childcare place. Kibesuisse (2021b) recommends that its members offer three days per year for training and further education. Apart from these recommendations, there is no legal entitlement to days off and cost coverage for CPD in ECEC.

7. Working conditions and current workforce issues

7.1 Remuneration

Wages for staff in the field of ECEC were below the average Swiss income of CHF 6,665 (€6,857) for the year 2020 (Federal Statistical Office 2022). The wage recommendations presented in *Table 12* for professional staff take into account the level of education, professional experience and additional tasks.

Table 12

Switzerland: Wage recommendations according to qualification (kibesuisse 2021b, 19-22)

Occupational group	Annual income
Childcare Specialist <i>FaBe</i>	52,000 – 76,099 CHF €53,498 – 78,291
Childhood Pedagogue <i>HF</i>	61,100 – 98,670 CHF €62,860 – 101,512

Occupational group	Annual income
Centre Director without a tertiary education (e.g. Social Pedagogue <i>HF</i>)	71,500 – 108,251 CHF €73,559 – 101,512
Centre Director with a tertiary-level qualification (e.g. Social Pedagogue <i>FH</i>)	78,000 – 115,401 CHF €80,247 – 118,725
Kindergarten Teacher (see Fehr 2020)	73,963 – 112,311 CHF €76,093 – 115,546

In some cantons, Kindergarten Teachers still earn less than Primary School Teachers, even though they follow the same initial professional education (LCH 2018).

7.2 Full-time and part-time employment in ECEC provision

In 2022, more than 75% of mothers in Switzerland worked part time (Federal Statistical Office 2023e) and an above-average number of women work in the social sector (IWSB 2016). It is therefore not surprising that part-time work is widespread in this sector. There are no nationwide statistics on full- and part-time employment in the childcare sector. According to the latest figures from the Federal Statistical Office, 76.8% of Kindergarten Teachers in public schools and 19.3% in private schools work less than 50% of a full-time position. In public schools 14.6% and in private schools 42.3% are employed between 50% and 89% of a full-time position, and 8.6% of Kindergarten Teachers in public and 38.4% in private schools work more than 90% of a full-time position (Federal Statistical Office (2023d)).

7.3 Support measures in the workplace for newly qualified and newly appointed staff

Measures to support newly qualified or newly recruited staff are not regulated in the childcare sector.

In the majority of cases, Kindergarten Teachers complete a form of induction and are assigned a teacher mentor who provides support during the first year of employment. Only a few cantons do not offer an induction procedure. This introduction into the profession is often carried out by the universities of teacher education in cooperation with the local primary schools where kindergartens are based (SKBF 2011).

7.4 Non-contact time

In its guidelines, kibesuisse (2020, 9) recommends adding 10% to the childcare ratio for indirect pedagogical work without children. However, this part of the work is not generally regulated. SODK and EDK (2022) also explicitly recommend including non-contact time in the staffing ratio for work that is not directly pedagogical (team meetings, training sessions, etc.).

The working time for Kindergarten Teachers is structured as follows (using the example of the Canton of St. Gallen): 88% teaching (planning, preparation, implementation, evaluation), 4% for pupils (counselling, support, work with parents), 5% school (pedagogical-administrative organisation of the school), 3% teacher (individual further education) (Canton of St. Gallen, Amt für Volksschule 2021).

7.5 Current staffing issues

In the childcare and education sector of ECEC, there has been a shortage of staff for some time (LCH 2021; SRF 2022). This is aggravated by the high turnover of staff, which makes both sustainable teamwork and continuous caring for individual children problematic. This turnover is at

least partly a consequence of the low pay and low prestige of the profession, as well as the high proportion of untrained staff. In addition, despite high popularity among trainees, the childcare professions get little social prestige (Stamm 2017). This is exacerbated by the fact that due to the shortage of teachers (LCH 2021) in Switzerland, more and more specialist staff are migrating from the early childhood sector to schools and kindergartens (ZLV 2022). The childcare sector consists of a noticeable number of younger employees, a high part-time rate and a low proportion of employees with a migration background. It is also worth noting that up to one third of staff do not have the appropriate formal education (IWSB 2016). Particularly revealing is the insight that in early childhood and out-of-school settings, direct work with children is usually carried out by staff who do not have relevant qualifications (Burger et al. 2017; IWSB 2016), as qualified staff are entrusted with management and training functions. Both wages and employment conditions in ECEC differ to such a large extent from canton to canton and from provider to provider that it is almost impossible to make nationwide statements (Stamm 2017).

In terms of the age distribution of Kindergarten Teachers, in public schools more than half of the teachers (51.6%) are between 40 and 60 years old, in private schools slightly less than half (44.4%) are in this age group. Only 15.8% (in public schools) and 18.2% (in private schools) are younger than 30 years (Federal Statistical Office 2023d).

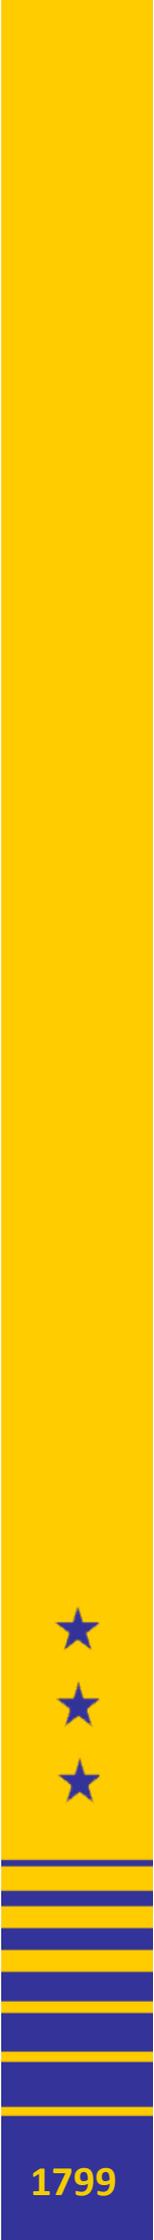

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

In the last two decades the focus of ECEC in Switzerland has been on the expansion of childcare services. Currently, pedagogical quality is prominently discussed in research, practice, politics and society (Swiss UNESCO Commission 2019, Faeh and Vogt 2021). While in French-speaking Switzerland educators hold higher professional qualifications, in German-speaking Switzerland an increase in professional qualification levels is necessary. In order to improve pedagogical quality, educators should acquire a competence profile at tertiary level. Another focus of quality development should be continuing professional development of educators (Faeh and Vogt 2021).

As part of the research conducted by the Office for Labour and Social Policy Studies on behalf of SAVOIRSOCIAL (Dubach et al. 2018), the following qualification needs were identified in the field of early childhood policy:

Table 13
Switzerland: Qualification needs in the field of early childhood policy (according to Dubach et al. 2018).

Professionals without leadership function	Professionals with a leadership function
<ul style="list-style-type: none"> – Educational orientation – Accompaniment of children’s learning and developmental processes – Inclusion and handling of diversity – Cooperation with parents – Reflection skills – Early language support 	<ul style="list-style-type: none"> – Educational orientation – Provision of initial and continuing education – Using the available provision of initial and continuing education – Competence building through initial and continuing education – Conceptual work – Cooperation with parents – Professional and practical guidance of staff – Qualification needs of centre leaders

Dubach et al. (2018) came to the conclusion that an explicit educational mandate should be formulated for the institutions of the early years 0–3 and that adequate resources should be made available for this purpose. Based on the results of this study, SAVOIRSOCIAL has decided to strengthen the vocational baccalaureate (*Berufsmatura*) that can be acquired alongside initial education/training in order to promote permeability to the university level (e.g. to universities of teacher education that offer Master's degree courses in the field of early childhood) and thus contribute to the professionalisation of the occupational field, as well as to examine new CPD offers in the field of early language support. Furthermore, the HF degree in childhood pedagogy should be promoted in German-speaking Switzerland (SAVOIRSOCIAL 2019).

9. Recent country-specific research focusing on ECEC staff

In Switzerland, central topics of ECEC, such as cooperation with parents and guardians, equal opportunities for all children and valuing diversity, are currently being explored in research and further training initiatives (Faeh and Vogt 2021). However, there is an acute need for more research and further training, as well as for the development of concepts for cooperation between professionals from childcare centres, Kindergarten Teachers and caregivers from out-of-school care. This is necessary to ensure process quality for the children throughout the day during the transitions from kindergarten to out-of-school care (lunch break), back to kindergarten, and then back to out-of-school care (Faeh and Vogt 2021).

Furthermore, continuous efforts to support the professionalisation of staff and to increase the level of qualification in ECEC are needed. Further training with a focus on interaction between educator and child is a particularly important aspect of enhancing process quality in ECEC. In addition, a common focus on process quality of all professionals (from childcare centres, kindergarten and out-of-school care) and close cooperation with parents and guardians is necessary to achieve better quality and thus equal educational opportunities for all children (Faeh and Vogt 2021).

In a recent Federal Council report on early childhood policy in Switzerland, existing gaps and potential for improvement regarding government activities in this area were summarised from the perspective of various stakeholders. A lack of statistical data, exchange of information and experience, coordination, access to services, quality and funding of services were identified (Swiss Confederation 2021). In the following, four current research projects focussing on ECEC staff are presented.

Quality development in childcare through web-mediated further training on supportive staff-child interaction in heterogeneous groups of young children (iQuaKi)

Source: University of Constance 2022, PHTG 2018 (see *References* for further details)

Aims and methods: In the first phase of the project, an online training course for educational professionals was developed. Training was aimed at professionals in childcare centres for children aged 0–4 years. Aim was to increase the quality of the staff–child interactions. This training was developed on the basis of established English-language formats and adapted for German-speaking countries.

The impact of the training was evaluated in the second project phase. For this purpose, 63 professionals participated in the training. They answered questionnaires before, immediately following and six months after the training, e.g. on their self-efficacy, reflective competence and pedagogical competence. Both professionals and parents answered questionnaires on children's social-emotional competences. In 30 facilities, standardised observations of quality of interaction according to CLASS Toddler (La Paro et al. 2012) were carried out at all three time points mentioned.

Selected findings: The evaluation shows that participants were very satisfied with the training. Professionals themselves perceive changes in their actions (e.g. more sensitive interactions) and their attitude (e.g. stronger consideration of the child's perspective). Initial analyses of the observations show that quality of interaction also improved after the training. In addition, findings confirm that a good quality of interaction between professional and child has a beneficial effect on their education: in particular, active learning support has a positive influence on children's learning behaviour (commitment and motivation).

Implications: The training will continue to exist as a CPD offer for pedagogical professionals after the end of the project and thus makes an important contribution to quality development in early childhood education. Furthermore, results of the study emphasise the relevance of quality of interaction and show how quality development can succeed through online training.

Mobilisation and development of interactional competences in professional relationships with parents: the context of child rearing [*Mobilisation et développement des compétences interactionnelles dans les relations professionnelles avec les parents: le contexte de l'éducation de l'enfance*]

Source: University of Geneva 2022 (see *References* for further details)

Aims and methods: The project aims to better understand how Childhood Pedagogues build relationships with parents in verbal interactions and how the skills to conduct such interactions can be developed in professional development programmes. The project uses video-ethnographic methods in two childcare centres in the canton of Geneva with different profiles in terms of socio-economic and geographical location.

Selected findings: Results are not currently available (April 2023).

Implications: The research findings will contribute to the professionalisation of Childcare Specialists and develop intervention and training methods based on the principles of interaction analysis in adult education.

Early language development: international research findings and a review of early language development in Switzerland

Source: Vogt, F., S. Stern und L. Fillietaz 2022 (see *References* for further details)

Aims and methods: The focus was on effective design of early language support for children aged from birth up to 4 years in Switzerland in the context of the various measures taken by cantons. The international research situation was presented based on around 700 scientific articles in German, English and French. Findings were condensed into a typology. Twelve case studies describe the different approaches in Switzerland.

Selected findings: Results show that attending an early education programme, e.g. childcare, parent-child group or playgroup, has a positive effect on school language skills. However, this is conditional on good pedagogical quality. Everyday integrated language support is more effective than separate groups and programmes. Parental education is also essential.

Implications: Further professionalisation of Childcare Specialists is urgently needed.

Coaching processes in language support in childcare settings

Source: PHSG 2022 - St.Gallen University of Teacher Education (see *References* for further details)

Aims and methods: This sub-project of the “Integrated support of German-language learning in childcare settings” study focuses on the research gap concerning effective coaching processes and the characteristics of successful coaching in ECEC. This research investigates how the coach (expert in German language development) and the coachee (professional caregiver) co-construct a common understanding of language development situation and professional practice that ensures a high quality of interaction in early childhood education. Of interest are specific situations that occur in the coaching interaction and how they are dealt with by coach and coachee. Coaches conduct an intensive coaching process with regular sessions every fortnight over one year. The 30 to 45-minute coaching sessions are conducted on-site in the childcare centres. During this process, three coaching sessions are recorded, and then individual interviews are conducted with the coach or coachee. Approximately 10 sessions will be studied. For data analysis, interaction analysis or grounded theory are planned.

Selected findings: Results are expected in 2025.

Implications: Providing new insights into coaching: showing a variety of different types of coaching and how coaching processes/conversations can be approached.

10. Workforce challenges – country expert assessment

Professionalisation initiatives for those working in the early years sector (0–3 years) in Switzerland are urgently needed. There are prerequisite conditions, however. The first is the possibility of retaining professionals in their jobs for longer periods of time with better pay, as the current high staff turnover undermines professionalisation. Second, Childcare Specialists should be given the opportunity to obtain a Bachelor's degree in Early Childhood. This would enable care professionals with a vocational baccalaureate (*Berufsmatura*) and Childhood Pedagogues *HF* to study at a university of applied sciences and, after obtaining a BA in Early Childhood, to complete a Master's programme. This way, suitable candidates for higher education would not migrate to the social services sector (with a BA/BSc Social Work) and thus partly leave the early childhood sector. This would be an important development, especially considering the fact that SA-VOIRSOCIAL (2019) recommends explicitly promoting the vocational baccalaureate and the initial professional education of Childhood Pedagogues *HF* in German-speaking Switzerland. Professionalisation initiatives in the early childhood sector, however, also needs to include the provision of working time for professionals so that they can attend existing CPD courses and programmes during working hours. It would be important here – as called for by Faeh and Vogt (2021) – to offer courses focussing on improving process quality.

When looking at the **CPD topics** identified by Dubach et al. (2018) for professionals with and without leadership functions, it is striking that both groups have similar needs in terms of training. Above all, the topics of educational orientation, support for children's learning and development processes and cooperation with parents stand out. It is immanently important that educational orientation and monitoring of children's learning and development processes are not considered in isolation according to age group, but discussed in joint concepts for cooperation

between childcare centres, kindergartens and out-of-school care. Entering kindergarten, many children do not only switch from a childcare setting to kindergarten, but also from a childcare centre to an out-of-school setting. This double transition could be facilitated for children with a common educational orientation and concepts for cooperation. Guided transitions could take place with the involvement of parents, in institutions that have common understandings. In some communities, such transitions are better facilitated than in others (e.g. visiting days in out-of-school care with lunch, employees from out-of-school care as assistant workers in kindergarten). This type of cooperation between the three actors needs to take place more often and be explicitly promoted.

A **coordination of ECEC provision** as well as **national statistics for the early childhood sector** which provide information about use, financing, and above all, quality of provision, is a Swiss policy demand (Swiss Confederation 2021); it is particularly important for researchers in the field of early childhood, who depend on relevant statistical data and information as a basis for their studies. Switzerland has a broad and dynamic research practice in the field of early education in general and in early language development in particular, but what is missing is an institutionalised collaboration between the relevant training institutions (higher vocational colleges and vocational schools) and the higher education institutions conducting scientific research (universities of applied sciences, universities of teacher education and universities in general) (Vogt, Stern, and Fillietta 2022). What early education staff in Switzerland need from research are, on the one hand, studies on the interplay of influencing factors in the course of development and, on the other hand, effectiveness studies on pedagogical approaches and measures. In addition, early education services should be reviewed and further developed across the country to ensure pedagogical process quality.

International Cooperation

Switzerland is represented in international expert committees such as the *OECD Network on Early Childhood Education and Care ECEC*, *Eurydice Network* and *European Agency for Special Needs and Inclusive Education*. Swiss experts have contributed to a European project and reports on inclusive early childhood education and care (*Inclusive Early Childhood Education IECE*) of the European Agency (2017) as well as to the OECD study on *Quality Beyond Regulations* with an in-depth country report on the situation of early childhood education and care in Switzerland (Faeh und Vogt 2021).

Early childhood education and care (ECEC)

Switzerland is a federal state with four language regions: German, French, Italian and Rhaeto-Romanic. German is the official language in 17 of the 26 cantons (mainly in north-west, east and central Switzerland) and there are additional official languages in four other cantons. French is the official language in four cantons (mainly in the west, i.e. Romandie), and in two others it is spoken in addition to other languages. Italian is an official language in Ticino and Graubünden, and Rhaeto-Romanic is an official language only in Graubünden (Infos Schweiz 2015).

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC provision are **childcare centre** (*Kindertagesstätte; crèche; nido dell'infanzia, 0–3*) and **pre-primary class** (*Kindergarten/Vorschule/Eingangsstufe; école enfantine/cycle 1; scuola dell'infanzia, 4–5*)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Switzerland

1817	First custodial institution for young children established in German-speaking St. Gallen during the peak of widespread famine in Europe; five more are subsequently opened in Geneva and the canton of Bern.
1826	First childcare institution established in Geneva for working parents, based on the English infant school model
1830	The first infant school for poor children opened in Zurich.
1844	The first <i>scuola dell'infanzia</i> is established in Ticino based on Italian models.
1845	In German-speaking Switzerland, the first Froebel-inspired kindergarten opens in Riesbach near Zürich.
1848	In French-speaking Switzerland, <i>écoles enfantines</i> are included in the School Act.
1st half of 19th century	Infant schools and kindergartens develop as mass institutions, with up to 150 children (3 to 5 year-olds) being supervised by one person. In 1844 there were 127 such settings.
2nd half of 19th century	The first private facilities (<i>crèches</i> , school-age care) are established.
1870	First <i>crèche</i> is founded in Basel as a service for working-class families in which both parents have to work; the focus is on hygiene and care rather than educational activities.
1873	The first training institute for kindergarten pedagogues is opened in St. Gallen, offering a one-year professional education course.
1874	Compulsory primary education is introduced, but handled very differently depending on the canton.
1881	The Swiss Kindergarten Association is founded, through which the kindergarten pedagogues receive their diploma. The Association recommends extending the course of professional education to two years.
1907	The Swiss <i>Crèche</i> Association is founded, promoting the expansion of <i>crèches</i> /nurseries, especially in German-speaking Switzerland. Among the staff are paediatric nurses and nuns; the training is extremely varied and is not regulated. Attempts to standardise the training of staff remained unsuccessful until well into the 20th century.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds in countries with a primary school entry age of 6 years. In Switzerland, the relevant formats are **0–3** and **4–5** years.

1942	The Kindergarten Association publishes a comprehensive set of criteria for professional education/training.
Pre-1960s	The traditional role of women sees them as home-makers and caring for children as their responsibility, which is why both the employment rates of women and the number of children to be cared for are declining. If children have to be cared for, this is mainly done by grandmothers.
1961	In Geneva, the <i>École de Jardinières d'Enfants</i> is founded for the training of staff working in crèches/nurseries.
1967	The Kindergarten Association publishes a framework curriculum for work in kindergartens, which is based on the primary school curriculum.
Post 1960/ 1970s	New kinds of facilities spring up, mainly to provide care for children with a migration background. Women's associations organise different approaches towards extra-familial care; these include new ideas about pedagogy and go beyond the mere supervision of children.
1972	The Crèche Association issues regulations for a two-year apprenticeship as an early childhood educator and opens its own vocational training school.
1973	Family day care associations are founded.
1970s and 1980s	All-day schools are established, enabling comprehensive services for school-age children. Crèches (now often referred to as "Kita") increasingly employ pedagogically trained staff.
1982	The kindergarten framework curriculum is revised and expanded.
1990-2000	Kindergartens come under the responsibility of the 26 cantons. Some cantons pass legislation regarding the funding of nurseries.
2003	A parliamentary initiative pushed through a kick-off financing family-supplementary care. New childcare places (crèches, day care, supplementary school care) are funded by law; by 2018, the law supports the creation of 57,400 new childcare places.
2007	Despite the expansion, there is still a lack of childcare options outside the family. According to a survey of parents, around 20% of children of pre-school and school age cannot be cared for to the desired extent.
2022/23	A parliamentary initiative calls for the transformation of the kick-off funding into permanent funding. In March 2023, the National Council approved. The Council of States still has to approve the matter.

ECEC system type and auspices²

In Switzerland, the ECEC system is divided into a childcare sector for children under 4 years of age and an education sector for 4 to 6 year-olds consisting of pre-primary provision in schools.

The cantons and municipalities are responsible for childcare facilities, in most cases under the cantonal departments for family and social policy. The Swiss Conference of Cantonal Ministers of Social Affairs (SODK) has a co-ordinating role between cantons on related issues.

The education system is decentralised, in line with the federal structures in Switzerland. The main responsibility for education lies with the 26 cantons, each of which has its own legal provisions. The cantonal department for education manages, coordinates and supervises the education system in the respective canton. The Swiss Conference of Cantonal Ministers of Education (EDK) is responsible for coordination across cantons in education-related issues (EDK 2021a).

² The Eurydice country report on ECEC in Switzerland provided orientation on legal and regulatory aspects. All other sources are clearly indicated within the text and in the references section.

General objectives and legislative framework

Childcare sector

In a joint declaration of the SODK and EDK on early childhood education and care (Childcare network 2018), it was stipulated that childcare provision should above all be needs-based, accessible and affordable and, in principle, open to all children. The two ministerial conferences intend to co-operate further in developing the quality of services and facilitating transitions between provision. The legal framework for the childcare sector for children under 4 years of age is provided by the Federal Law on Financial Aid for Extra-Familial Childcare (Fedlex 2021a) and the Ordinance on the Admission of Foster Children (PAVO) (Fedlex 2021b).

Education sector

In pre-primary settings, besides Christian, humanistic and democratic values, basic principles are promoting equal opportunities, gender equity and mutual respect (Curriculum 21). Under the Federal Constitution (1999, Art. 62 - Fedlex 2021c), the cantons are obliged to coordinate the education system. Through inter-cantonal agreements (2009), the Swiss school concordat Har-moS (Educa 2021) regulates the structures and goals of compulsory schooling, which also includes the pre-primary level for 4 to 6 year-olds. The EDK ensures the enactment of the concordat, supports the cantons in its implementation and reviews the educational goals achieved (EDK 2021a).

ECEC entitlement and compulsory attendance

Attendance at early childhood settings for children under 4 is voluntary. There is no legal entitlement to a place for under 4 year-olds - except in the canton of Basel-Stadt (European Commission/EACEA/Eurydice 2019, 52, 200).

For over 4 year-olds, attendance in pre-primary classes is usually, but not always, compulsory. The exact age at which children may enrol is determined by the cantons. In most cases, they are between 4 and 5 years old when they start pre-primary provision. Parents have a say regarding the age of entry if there are special reasons.

In some German-speaking cantons, attendance is not compulsory or is only compulsory for one year. Since 2015/16, the canton of Ticino has offered an additional optional year in addition to the two compulsory preschool years, meaning that 3 year-olds can also attend.

Primary school (grade 1) begins when the children are between 6 and 7 years old.

Main types of provision

Childcare sector

Childcare centres (*Kindertagesstätten, Kitas, Krippen / crèches / nidi dell'infanzia*)

For children from 3 months to 4 years of age, full-day or half-day ECEC centres are available and supervised by the respective canton.

Home-based settings (*Tagesfamilien / accueils familial de jour / famiglie diurne*)

In addition to centre-based settings, home-based childcare provision is also available, both for young children and for school-age children. In 2021, 5.6% of children under the age of 4 were cared for in home-based settings, 4.2% by nannies, au-pairs and babysitters (BFS 2023i).

There are few national statistical data available on the number of children attending centre-based settings for children under 4 years, or on the number of settings.

In Switzerland, **grandparents** are a widely used **informal** form of childcare. In 2021, 36.1% of children under 4 years of age were cared for by grandparents, compared with 34.3% attending centre-based settings and 10.3% by persons from the neighbourhood/extended family (excluding grandparents) (BFS 2023i).

Most centre-based settings are open 11 to 12 hours a day, usually from 7:00 to 18:00/19:00.

Education sector

Pre-primary classes (*Vorschulen, Kindergärten, erster Lernzyklus / écoles enfantines, cycle 1 / scuole dell'infanzia*)

Pre-primary classes for 4 to 6 year-olds are attached to primary schools. In some cantons, *cycle 1* is combined with the first two grades of primary school. In this organisational form, known as *Grundstufe / Basisstufe* in German-speaking areas or *cycle primaire 1* in the French-speaking regions, 4- to 7/8 year-olds are taught together (Eurydice 2023).

Table 1

Switzerland: Number of pre-primary units and children in pre-primary classes, 2005 – 2022

	Pre-primary units 4 to 6 year-olds	Number of children in pre-primary classes*
2010/11	4,994	148,879
2015/16	5,457	170,576
2021/22	5,436	181,158

Sources: BFS 2023a, *BFS 2023f

Provider structures

In both the childcare and education sectors, there are public and private ECEC settings, or facilities that employers set up for their employees.

In 2021/22, the majority of **pre-primary units** (4 to 6 year-olds) were public (92.6% or 5,034). Just 7.2% (391) were private, non-subsidised facilities and only 11 (0.2%) were both private and subsidised.

Table 2

Switzerland: Number of pre-primary units according to provider type, 2021/22

Setting	Provider			Total
	Public	Private		
		Non-subsidised	subsidised	
Pre-primary units	5,034	391	11	5,436

Source: BFS 2023a

In 2015, 90% of **childcare centres** for children under 4 were privately organised as associations, limited liability companies, foundations, or company ECEC centres, with two-thirds of the associations operating one to three centres (Childcare network 2015, 5)³. No recent statements can

³ The Childcare Network was dissolved in 2020 and is continued by Alliance Enfance: <https://www.alliance-enfance.ch/>

be made on the relationship between public and private services, as this information is often missing at cantonal level (Stern, von Dach, Fries, and Iten 2021).

In 2022, there were a total of 340 childcare centres (156 providers) for children under 4 years of age in Zurich, of which 312 were private with a contract (91.8%), 18 without a contract and only 10 were municipal. They offered 12,185 places in total (City of Zurich 2023, 4). Whether this ratio can also be observed in other parts of Switzerland cannot be statistically proven.

Participation rates in regulated provision

At the federal level, no consistent country-wide statistics are compiled on the number of childcare places or their usage. Also, not all cantons keep such statistics. In the national statistics database, data for under 4 year-olds are collected only for some aspects relating to childcare provision. In the education sector, data for 4 to 6 year-olds are generally subsumed under the wider age-group of 4 to 12 year-olds in primary education. Children between 4 years of age and the start of primary school are not listed separately.

National statistics report for 2021 that three-quarters (75.2%) of under-3s used *some kind of* extra-familial care for up to 29 hours per week, with 23% being cared for more than 30 hours; the shares of 4 to 12 year-olds were 89.7% and 9.1% respectively (BFS 2023j).

However, according to Eurostat data on Switzerland, which focus on *centre-based* settings, a quarter of children under 3 years of age attended a childcare setting for up to 29 hours per week in 2021, while over two thirds did not attend a facility at all, as did over one-third of the over-3s (Table 3).

A recent analysis of attendance rates in 1,890 centre-based settings receiving start-up funding revealed the extent to which childcare for under 4 year-olds in Switzerland primarily takes place in the family: 21% of children attended on only one day per week, 35% on two days, 22% on three days, 10% on four days and only 12% on five days per week, i.e. full time (EDI 2020, 7). National statistics show that approximately 40% of all children up to three years attended centre-based childcare in 2018, with most children attending two or three days per week (Faeh and Vogt 2021, 15).

Also, in 2021, 37.3% of children between 3 years of age and first grade of primary school (pre-primary class/kindergarten) did not attend a centre-based setting whereas half of them attended an institution for more than 30 hours per week. An OECD source based on 2020 data indicates that 50% of 3 to 5 year-olds were enrolled in ECEC programmes and pre-primary education in Switzerland, compared to 87% on average across OECD countries (OECD.Stat 2023a).

Table 3

Switzerland: Enrolment rates according to age and duration of attendance in centre-based settings, 2010 to 2021

Year	Weekly attendance	0 to 2 years, in %	3 years up to minimum compulsory school age, in %
2010	1 to 29 hours	21.4	62.0
	Over 30 hours	4.6	9.9
	No enrolment in ECEC	74.0	28.0
2014	1 to 29 hours	24.0	56.9
	Over 30 hours	5.8	9.1
	No enrolment in ECEC	70.2	34.0
2017	1 to 29 hours	19.6	40.3
	Over 30 hours	6.0	12.6

Year	Weekly attendance	0 to 2 years, in %	3 years up to minimum compulsory school age, in %
	No enrolment in ECEC	74.4	47.1
2021	1 to 29 hours	25.1	50.1
	Over 30 hours	5.4	12.6
	No enrolment in ECEC	69.6	37.3

Source: Eurostat 2023b, slight deviations in the sums due to rounding

Eurostat data according to age groups are only available for children over 3 years of age: These show that only very few 3 year-olds attended an institution in 2021, just under half of the 4 year-olds, but almost all 5 year-olds (see *Table 4*).

Table 4

Switzerland: Number and enrolment rates of children in kindergartens/pre-primary classes by age, 2021

Age	Number of children in pre-primary classes	Enrolment rates in pre-primary classes, in %
3 year-olds	2,144	2.3
4 year-olds	41,400	48.7
5 year-olds	84,115	97.5
6 year-olds	45,097	53.2

Source: Eurostat 2023h, i

Financing and costs for parents

According to OECD data, total public expenditure on early childhood education and care amounted to 0.49% of GDP in 2019 (OECD 2023).

Childcare sector

Fees for **childcare centres** are generally more expensive for parents than in other countries, as childcare provision is less heavily subsidised by public funds. On average, parental contributions cover about two-thirds of the total cost of a childcare place (Kibesuisse 2021).

For low-income families the canton of Bern, for example, provides childcare vouchers which cover almost all of the childcare costs. If the child has a disability, the parents additionally receive a lump sum. Parents with higher incomes who wish to continue working can also apply for vouchers, but at a lower level (European Commission 2020, 52).

In 2022, a couple with two children spent about 32% of net household income on childcare costs which was the highest among the OECD-countries⁴ (OECD.Stat 2023b).

Education sector

Attendance at **pre-primary classes** is free of charge. 95% of pupils attend compulsory school in the public school in their residential area, which is free of charge for all children. Approximately 5% of children attend a private school for which a fee is charged.

Responsibility for compulsory schooling lies with the cantons, which are obliged by the Federal Constitution to harmonise important goals and structures nationwide. The municipalities organise school operation, which allows for adapted local solutions (EDK 2020).

⁴ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Staff to child ratios and group size

Childcare sector

Regulations on staff to child ratios and on the minimum of fully trained personnel in childcare centres are set by the cantons (Faeh and Vogt 2021, 42) and there are great variations. On average, the minimum requirement for the proportion of trained personnel is 50%, ranging from 100% in the canton of Jura and 33% in the canton of Ticino. Staff to child requirements for working with 0 to 1½ year-olds range from 1:3 to 1:5. In most German-speaking cantons the requirement for work with 1½ to 4 year-olds is 1:6. The French- and Italian-speaking cantons tend to differentiate more specifically according to age. For 4 to 6 year-olds in supplementary childcare the ratio in most cantons is 1:8, although in Jura (with 100% professionals) it is 1:15 (data based on table adapted from Ecoplan (2020, 30-31) by Faeh and Vogt (2021, 42-44)).

According to the recommendations of the SODK and EDK (2022), one professional cares for two to three children up to the age of 18 months, and four to six children from 18 months until they enter kindergarten, ten to 12 children at the age of 4–8 years and 12 to 14 children at the age of 8-12 years. According to Kibesuisse (2020) mixed-age groups generally comprises ten to 12 children, whereby children under 18 months are weighted with a factor of 1.5, and children with special needs with a factor greater than 1 (depending on the kind of care required). No more than six children up to 18 months should be present at the same time.

Kibesuisse (2020) recommends the following (purely by calculation) staff-child-ratios for professionals with different qualifications (see table 5), with at least one pedagogically trained specialist for every 12 children.

Table 5

Switzerland: Recommended staff to child ratios by age of children and staff qualification

Age	Care specialist (<i>Fachperson Betreuung, Fachrichtung Kinderbetreuung, FaBeK</i>)	Educator (<i>Kindernerzieher:in, HF</i>)	Student or assistant
	Concurrent number of children per staff		
Up to 1½ years	3	3.9	2.1
1½ - 3 years	5	6.5	3.5
3 – 4½ years	8	10.4	5.6
4½ – 6 years	10	13	7
6 years and over	12	15.6	8.4

Source: Kibesuisse 2020, 11

Education sector

The organisation of pre-primary classes is the responsibility of the cantons. As a rule, 4 and 5 year-olds are together in one class; the minimum and maximum number of children in a class is set by the cantons - usually between 22 and 24 children. However, group size varies greatly between cantons (European Commission/EACEA/Eurydice 2019, 88).

According to the recommendations of Kibesuisse (2019, 17), one pedagogically trained specialist and one assistant should be present for every 15 children in a pre-primary class.

The daily organisation of time is arranged by the municipalities or the schools themselves. For example, in "comprehensive block teaching" lessons are combined for at least three and a half hours on five mornings. The weekly number of hours is usually between 12 and 25 hours in the first year, and 20 to 25 hours in the second year.

In 2021, there were on average 18.6 children in a pre-primary class (BFS 2023b), and in 2021/22, one full-time equivalent professional was responsible for 17.8 children (BFS 2023c).

Curricular frameworks

Childcare sector

In Switzerland, there is no legally binding curricular framework for pedagogical work in settings for under 4 year-olds (Faeh and Vogt 2021, 39). However, a non-mandatory Orientation Framework for Early Childhood Education, Care and Upbringing in Switzerland, authored by C. Wustmann Seiler and H. Simoni, is available (Swiss UNESCO Commission and Childcare Network Switzerland 2016). It is relevant in the three language regions, i.e. German-speaking Switzerland, Ticino and French-speaking Switzerland. The document is used as a reference framework by cantons and municipalities, who may require a centre-based pedagogical concept as a basic prerequisite for accreditation.

Six guiding principles form the basis of the Orientation Framework:

1. Physical and psychological well-being (protection and security, needs- and age-appropriate support, reliable adults)
2. Communication (different ways of expression as a condition for making themselves understood by others)
3. Belonging and participation (being heard and being able to contribute)
4. Resilience and empowerment (acquiring a positive self-concept and self-esteem)
5. Inclusion and acceptance of diversity (appreciative recognition for all children)
6. A holistic approach and appropriateness (learning through the senses, stimulated by interests and experience).

In order to do justice to these guiding principles, professionals need to regularly observe, reflect on and document educational and developmental processes. By creating a stimulating learning environment geared to the individual interests of the children, they can moderate educational processes. The framework also emphasises the joint responsibility of educators and parents in supporting the child, e.g. during transitions.

Education sector

After the intercantonal agreement on the harmonisation of compulsory education came into force in 2009 (Educa 2021), teaching materials were created for the different language regions, new curricula were developed and national educational goals were set according to which all children should receive a basic education (languages, mathematics and natural sciences, social sciences and humanities, music, art and design as well as movement and health).

The pre-primary classes in the French-speaking cantons follow the "*Plan d'études romand*" since 2015, and in the Italian-speaking Ticino the "*Piano di Studio*" since 2018/19. All 21 cantons where German is spoken have adopted curricula based on the "*Lehrplan 21*". The curriculum is compulsory (European Commission/EACEA/Eurydice 2019, 200).

Compared to teaching in primary school, lessons in Cycle 1 are less oriented towards subjects or modules, but are strongly oriented towards the heterogeneous development of the children and are organised in an interdisciplinary way. Nine development-oriented approaches facilitate this planning:

1. Body, health and motor skills (e.g. development of motor skills, expressing feelings with the body);
2. Perception (e.g. practising close observation, focusing attention);

3. Temporal orientation (e.g. reflecting on daily structures, learning concepts of time);
4. Spatial orientation (e.g. exploring the living space, describing spaces);
5. Connections and regularities (e.g. learning everyday concepts, differentiating the world view);
6. Imagination and creativity (e.g. trying out different forms of representation, developing new solutions);
7. Learning and reflection (e.g. thinking about activities and goals, comparing new with known);
8. Language and communication (e.g. creating a variety of opportunities to speak, expanding vocabulary);
9. Independence and social action (e.g. developing confidence in one's own abilities, accepting responsibility).

Play and learning are seen as two sides of a coin in terms of exploring and extending personal competences. Learning materials build on perceived interests and stimulate curiosity for new things.

Digital education

Childcare sector

There is no reference to digital awareness or digital education in the Orientation Framework for Early Childhood Education, Care and Upbringing in Switzerland.

Education sector

In the curriculum for the first learning cycle in the German-speaking regions (Lehrplan 21 2016a, b) the module *Media and information technology* specifies a range of competences for 4 and 5 year-olds. These include: laying the foundations for reflecting with and about media, the interactive use of media, also the analysis of simple problems and the understanding of information processing systems. Both analogue and digital media open up a creative possibilities and playful experimentation. However, the curriculum also states that the use of media should not be in competition with real experiences in one's own environment, but should complement them.

Monitoring – evaluation

In both the childcare and education sectors, internal evaluation is usually mandatory and must be carried out regularly (every one to three years). This may be in the form of a development plan, an annual report or an updated pedagogical programme - although the focus may be different depending on the canton.

Childcare sector

In the childcare sector, there are relatively few requirements beyond the obligation to register and obtain authorisation and supervision, for which each canton is responsible. However, the federal-level 'ordinance on the admission of foster children' (PAVO) stipulates that monitoring visits should take place at least every two years (Faeh and Vogt 2021, 23). In recent years, quality issues have come more clearly into focus, especially with regard to structural and process quality; assessments of learning processes are also considered important (European Commission/EACEA/Eurydice 2019, 125f). According to the Orientation Framework for ECEC in Switzerland authored by Wustmann Sailer and Simoni in 2016 (see section on *Curricular frameworks*),

the written pedagogical programme of all childcare facilities should contain statements on ensuring the pedagogical quality of the facility, to be assessed through self-evaluation and external evaluation procedures. In the canton of Solothurn, for example, in addition to the Orientation Framework for ECEC in Switzerland (Swiss UNESCO Commission and Childcare Network Switzerland 2016), evaluators are required to adhere to the quality standards of the QualiKita association (QualiKita 2021), which also provides instructions for online self-evaluation.

Education sector

Due to the federalism in Switzerland, different regulations at the canton and school level apply in terms of quality assurance. Both external and internal evaluation procedures are partly compulsory, partly voluntary. However, external evaluators must always adhere to the respective cantonal guidelines.

In German-speaking Switzerland, quality is usually ensured through a combination of external evaluation, internal quality management and school supervision. In the French-speaking part of the country, performance tests are more common, both for the children and for the quality management of the institution. Overall, the presence of national educational goals and common regional language curricula have helped to standardise quality efforts in recent years.

Furthermore, since 2006, the EDK and the Confederation have been operating the "Swiss Education Monitoring" as a way of systematically collecting data on the quality of education (EDK 2021b). Since 2010, the Swiss Coordination Centre for Education Research (SKBF) has presented the "Swiss Education Report" every four years, which contains data on all levels of education (but does not refer to the childcare sector) (skbf/csre 2023).

Many cantons have included quality assurance and development in their school and education laws in the context of the harmonisation of compulsory education (Educa 2021, see also section on *Curricular frameworks*).

The integration of pre-primary classes into compulsory school has facilitated the transition to primary school. To ensure continuity between the levels, information about the children is passed between the professionals. As a rule, however, no grades are given in the pre-primary units. Instead, the children's abilities are recorded on observation sheets, which serve primarily to promote the development of each individual child. In some cantons, parents are also involved in the evaluation of facilities for children over 4 years of age (European Commission/EACEA/Eurydice 2019, 130).

Inclusion agenda

Children with special educational needs and disabilities

With the ratification of the UN Convention on the Rights of the Child in 1997, Switzerland committed itself to taking into account the special support needs of children with disabilities. Furthermore, the United Nations Convention on the Rights of Persons with Disabilities, which came into force in Switzerland in 2014, strives for the full participation of people with disabilities in all areas of life and is a guiding principle for the inclusive orientation of all support services.

– Childcare sector

Since 2008, the cantons have been responsible for special educational measures for children and young people. In an "Inter-cantonal agreement on cooperation in the field of special needs

education" (*Sonderpädagogik Konkordat*) the EDK stated that childcare facilities (*Tagesstrukturen*) are part of the basic special needs education provision and that integrative solutions are to be preferred to an approach of separation.

With the KitaPlus programme, an initiative of the Kifa Switzerland Foundation and the *kibesuisse* Childcare Association Switzerland, specific conditions are created in regular institutions for children with special needs and disabilities so that they can be integrated into normal everyday life (KitaPlus 2021).

According to field experts and organisations, a comprehensive inclusive orientation is still a long way off. Support is needed from local authorities to implement the legal provisions, among other things to enhance networking between all those involved, and to ensure that specially trained educators are available for supporting the staff in childcare centres.

– Education sector

Due to the very different conditions in the cantons, inclusive developments in education can hardly be described from a national level perspective.

In the canton of Bern, for example, children with disabilities can attend either a special school or a regular kindergarten. For inclusive education, a psychological/psychiatric clarification and decision-making process is required, as well as a permit that has to be renewed every year. The regular institution helps to decide whether the child is accepted - the prerequisite is always that appropriate educational resources are available (Achermann et al. 2017).

Children with a migration background

In general, Swiss integration policy understands integration as a two-way process in which both the indigenous and the migrant population should participate. It is a core task of the state, in which all levels participate and which is oriented towards the principle of "promote and challenge" (State Secretariat for Migration 2020).

In 2022, 25.7% of the total population had a non-Swiss citizenship; almost two-thirds of them (64%) came from EU27(2020) countries. Among children under 5 years of age, the figures were 27.7% and 60.4% respectively (Eurostat 2023c).

– Childcare sector

In 2018, the EDK and the cantons agreed on five goals for the integration of refugees and temporarily admitted persons (Integration Agenda Switzerland). One of these goals states that 80% of children under the age of 4 from asylum-seeking families should be able to communicate in the language spoken in their place of residence when they start compulsory schooling (KIP 2021).

One example of promoting literacy, especially among children from home learning environments with low stimulation and with a migrant background, is a project called "Tell me a story". It is aimed at 2 to 5 year-olds and their families and involves, among other things, reading stories aloud in the languages of origin (European Commission 2020, 129).

– Education sector

Special support is also provided for children with a migration background via the Special Education Concordat (EDK 2007).

Parental leave arrangements⁵

Maternity leave (*Mutterschutz, congé et allocation de maternité*) lasts 14 weeks after the birth of the child, of which eight weeks are compulsory; leave before the birth can only be taken for medical reasons. For 14 weeks, 80% of earnings are paid, up to a maximum of 220 CHF (€225.48) per day, if contributions were paid into an old-age insurance scheme during the nine months before the birth. In most cases, mothers take more than the 14 weeks provided for, even if this extra time is not remunerated.

Paternity leave (*congé et allocation de paternité*), first introduced in 2021, lasts two weeks, and is paid in the same way as Maternity leave. It begins after the birth of the child and must be taken within six months; it can be taken in full or on a daily basis.

There is no legal basis for **parental leave**. A few private companies grant unpaid leave (from a few days to 24 months)

In 2021, the average number of Maternity leave days taken by recipients was 79 (out of 98). On average, CHF 130 (€133.24) was paid, well below the upper limit. Initial analyses show that in 2021, about 70% of eligible fathers received childcare allowance and took an average of 14 days off.

Current challenges for the ECEC system in Switzerland

Country expert assessment by Janine Hostettler Schärer

From expansion to quality issues

Until recently, the main focus in Switzerland was on increasing the provision in the early education and care system, as demand still exceeds supply. This has been politically supported since 2003 with start-up funding for supplementary family childcare. In recent years, however, there has been a paradigm shift from *care* to *education*, from structural to pedagogical quality. Every child has a right to high-quality early education, which should lead to inclusion and more equal opportunities for all children. However, this quality must also be financed. Since 2022, there has been a political push to move from start-up funding to continuous funding for supplementary family childcare in order to strive for quality improvement. National standards are needed to promote process quality (Faeh and Vogt 2021). Concepts and internal quality development processes are needed for their implementation and review. Active learning support for children, more dialogue between professionals and children, and coaching of professionals (Reyhing et al. 2019) are indispensable prerequisites for this.

Shortage of staff and skilled workers

Another challenge is the shortage of staff and professionals in Switzerland. This is exacerbated by the current shortage of primary school teachers, as professionals from the early childhood sector are migrating to the better-paid school sector. In order to retain staff in the ECEC field, better remuneration and better working conditions are needed. For example, paid continuing professional development courses are needed, as well as remunerated leave entitlements and paid time for preparation and follow-up, meetings and supervision.

⁵ The brief overview in this section is based mainly on the country note for Latvia by Isabel Valarino and Rahel Aina Nedi in the *International Review of Leave Policies and Research 2023* (see *References*).

Career opportunities

Efforts are underway in German-speaking Switzerland to create more training places for HF Childhood Pedagogues (see also Hostettler Schärer 2024). This is important in order to offer career opportunities to ECEC staff so that they can be retained in the profession. Above all, however, this should increase the pedagogical quality in the facilities.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the population in Switzerland totalled 8,738,791. This is a further indication of a steady increase over the past 20 years (2000: 7,164,444; 2010: 7,785,806; 2020: 8,606,033 (Eurostat 2023a)).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.52, Switzerland is in line with the EU27 average (Eurostat 2023d)⁶.

Children under 6 years of age

Table 6

Switzerland: Number of under 6 year-olds according to age, 2022

Age	Number of children
Up to 1 year	88,200
1 year-olds	85,795
2 year-olds	86,922
3 year-olds	88,825
4 year-olds	88,828
5 year-olds	90,261
Total 0 to under 6 year-olds	528,831

Source: Eurostat 2023a

The proportion of children under 3 years of age in the total population was 3.0% in 2022, and that of children under 6 years of age was 6.1%. These shares were slightly above the EU27 average.

⁶ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

Table 7

Switzerland: Children under 6 years of age – share in total population from 2000 to 2022, in %*

Employment rates of parents with children under 6 years of age

In Switzerland in 2023, the employment rate of men (15 to 64 years) was 83.5% overall, that of women 61.1% (Eurostat 2023k).

In 2022, 46.9% of women and 95.3% of men with children under 6 were in employment (BFS 2023g). The rate of employed fathers was thus above the EU27(2020) average (87.2%) and that of mothers significantly below (average: 63.6%) (Eurostat 2023e).

Table 9a

Switzerland: Employment rates of parents with children below age 6 compared with seepro3 countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Switzerland	36.8	98.6
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Switzerland: 98.6
Lowest rate of employment in 27 EU countries	Hungary: 32.7	Latvia: 74.8

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Children at risk of poverty or social exclusion¹⁰

In 2021, 23.3% of children under 6 were at risk of poverty or social exclusion. This proportion was in line with the EU27 average (23.5%) for this age group. The share of all persons at risk of poverty or social exclusion in the total population was 17.6% (EU: 21.7%). In 2020, 2.8% of children under 6 and 1.8% of the total population suffered from severe material deprivation (EU average 6.1% and 4.3% respectively) (Eurostat 2023f, g).

⁹ AT, BE, BG, CY, CZ, DK, DE, EE, EL, ES, F, FI, IE, IT, HR, HU, LV, LT, LU, MT, NL, PL, PT, RO, SE, SI, SK

¹⁰ 'At risk of poverty or social exclusion' refers to the situation of people either at risk of poverty (threshold set at 60 % of the national median equivalised disposable income after social transfers), or severely materially deprived or living in a household with a very low work intensity. (https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Glossary:Material_deprivation)

Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-eqf>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the author

Nataliia Sofii, PhD, works at the Ukrainian Institute of Education Development, established by the Ministry of Education and Science of Ukraine to support the educational reform strategy “New Ukrainian School”. She was previously director of the Ukrainian Step by Step Foundation – a national member of the International Step by Step Association. Her professional interests include inclusive education and the professional development of ECEC teachers.

1. ECEC governance in Ukraine

Ukrainian legislation on early childhood education and care is based on the Constitution of Ukraine and comprises the Law of Ukraine "On Education" (Verkhovna Rada 1991; 2016), the Law "On Preschool Education" (Verkhovna Rada 2001); the draft of the Law "On Preschool Education", 2021 and other regulatory acts. ECEC is high on the government agenda.

Ukraine has a partially unified system of early childhood education and care. Both centre-based settings for the under-threes – nurseries and nursery-kindergartens – and preschool/ pre-primary education for children from 3 to 6/7 years of age come under the responsibility of the Ministry of Education and Science of Ukraine (*Ministerstvo osvity i nauky Ukrainy*). The latter are part of the state education system.

Home-based childcare settings and health support childcare centres for children under 4 years of age fall under the responsibility of the Ministry of Health (*Ministerstvo okhorony zdorov'ya Ukrainy*).

National ECEC policies are determined by the legislation mentioned above, and regional state (*oblast*) administrations (including Kyiv city administrations, local executive and self-governing bodies) are responsible for the management of ECEC settings. Almost 99% of ECEC settings are funded and managed by local authorities.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

According to the Law on Preschool Education, staff in ECEC settings comprise:

Early Childhood Teachers (*vykhovatel*). These are the core practitioners, and they have to have a higher education degree (minimum Bachelor's degree, optional Master's) to work with children aged 0 to 6 years in centre-based settings.

In 2016, the new position of **Early Childhood Teaching Assistant** was introduced for inclusive settings, with one post being allocated to each inclusive classroom (Cabinet of Ministers of Ukraine 2016b; Ministry of Education and Science 2016). According to the Resolution of the Cabinet of Ministers of Ukraine (2019), Early Childhood Teaching Assistants help to provide a child-centred focus in the educational process, participate in the development and realisation of the child's individual development programme and help to make necessary adaptations.

Both Early Childhood Teachers and Early Childhood Teaching Assistants receive an additional 20% to their salaries for their work in inclusive classrooms (Cabinet of Ministers of Ukraine 2004).

Based on the recommendations of the Inclusive Resource Centre and at the parents' request, ECEC settings can include a post as **Child Assistant**. Child Assistants are responsible for the social support of children with complex disabilities. Child Assistants do not refer to pedagogical positions. Their training is provided by the regional (*oblast*) centres of social services. The duration of their training should be no less than 60 academic hours. After training and medical tests, an

agreement is reached between the kindergarten and the Child’s Assistant according to the parents’ requests (Law of Ukraine “On Comprehensive General Secondary Education”, Verkhovna Rada 2020).

Each preschool classroom, including inclusive classrooms, is allocated a post of (technical) **Teaching Assistant** (*Pomichnyk vykhovatelya*) – one per classroom. The basic requirements for this position are a minimum age of 18 years and quarterly medical testing. Teaching Assistants (*Pomichnyk vykhovatelya*) work under the supervision of the Early Childhood Teacher.

Table 1 distinguishes between different types of contact staff and also categorises the core practitioners (i.e. staff with group or centre responsibility) according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at the end of this chapter).

Table 1

Ukraine: ECEC staff in centre-based settings

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Early Childhood Teacher <i>Vykhovatel</i> <i>Profile:</i> Early Childhood Pedagogy Professional	<i>Yasla / dytyachyy sadok</i> Nursery/nursery-kindergarten 2 months–5(6) years ¹ <i>Doshkil’nyy navchal’nyy zaklad</i> Early childhood education setting/ kindergarten 3–5(6) years <i>Spetsial’nyy doshkil’nyy navchal’nyy zaklad</i> Special early childhood education setting/ kindergarten 2–5(6) years <i>Tsentr rozvytku dytyny</i> Child development centre 5–6(7) years	Core practitioner with group responsibility Centre Leader	2 months–5(6) years	Bachelor, 4 (or 3) years university study route ECTS credits: 180 EQF level: 6 ISCED 2011: 6

¹ **Editors’ note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports for countries with a school starting age at 6: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4 and 5 year-olds. However, in the Ukrainian legislation, the age range is stated as 3–6(7); children with SEND may start school one year later.

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Early Childhood Teaching Assistant <i>Asystent vykhovatel</i>	<i>Yasla – dytyachyy sadok</i> Nursery/ nursery-kindergarten 2 months–5(6) years <i>Doshkil'nyy navchal'nyy zaklad</i> Early childhood education setting / kindergarten 3–5(6) years	Qualified co-worker in integrative groups/settings	2 months – 5(6) years	Bachelor, 4 (or 3) years university study route ECTS credits: 180 EQF level: 6 ISCED 2011: 6
Early Childhood Technical Assistant <i>Pomichnyk vykhovatelya</i>	<i>Yasla – dytyachyy sadok</i> Nursery/ nursery-kindergarten 0–2 years 2 months – 5/6 years <i>Doshkil'nyy navchal'nyy zaklad</i> Early childhood education setting/ kindergarten 3–5 (6) years <i>Spetsial'nyy doshkil'nyy navchal'nyy zaklad</i> Special early childhood education setting 2 – 6 (7) years	Unqualified co-worker	n/a ²	No formal IPE requirements
Child Assistant <i>Asystent dytyny</i>	<i>Doshkil'nyy navchal'nyy zaklad</i> Early childhood education setting/ kindergarten 3–5 (6) years	Support of children with complex disabilities in integrative groups/settings		Minimum 60 hours (2 ECTS credits)

² n/a not applicable

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

According to the Law of Ukraine “On Preschool Education” (Ministry of Education and Science 2015), the management of early childhood institutions/kindergartens is provided by the **Centre leader/Director** (*zaviduvach*). A Director should have Ukrainian citizenship, be fluent in Ukrainian, have a Master’s degree (full higher pedagogical education) and a minimum of three years of practical experience, possess organisational skills and have the physical and psychological prerequisites for fulfilling this professional function. The setting founder/provider has the right to nominate a person for the position of Director and to sign a contract.

Successful candidates can be assigned as a Centre leader/Director regardless of the type and provider of the institution. In most cases an experienced Early Childhood Teacher Methodologists becomes a Centre leader/Director. Job descriptions of the Directors are specified in the regulations of the early childhood institution. The Director nominates all other positions according to the relevant legislation.

According to the Law “On Preschool Education”, the governance bodies include the Director of the early childhood setting/kindergarten, who is responsible for the management of the setting and the Pedagogical Board.

The **Pedagogical Board** is a collegiate governance body which acts according to the relevant ECEC legislation. Members include all pedagogical staff, medical workers, other specialists, the representatives of parents’ committees and other relevant persons involved in the educational process. The Pedagogical Board can invite representatives of non-governmental organisations, secondary school teachers and parents to its meetings. All invitees have an advisory vote. The head of the Pedagogical Board is the Director of the early childhood institution/kindergarten.

The functions of the Pedagogical Board include the following:

- Approval of the educational programme of the kindergarten, evaluation of its implementation and implementation of the educational standards
- Developing a system of internal monitoring of the quality of education
- Developing the work plan of the kindergarten
- Approval of the annual plan of continuing professional development of the ECEC Teachers and their reports during the process of attestation
- Developing ways of cooperation between the kindergarten and families
- Initiating institutional audits, and other issues.

Early childhood institutions/kindergartens may also have other governance bodies:

- Self-governance bodies of the pedagogical staff
- Self-governance bodies of parents
- Self-governance bodies of other stakeholders in the educational process.

2.3 Centre-based posts of responsibility

The Law of Ukraine “On Preschool Education” does not provide for specific qualification requirements for different kinds of teaching position (a decree, which had approved this, was repealed). It just states the names of the positions and number of hours per week they should work.

It is the responsibility of the Director to develop and approve the job descriptions for each post according to the National Classification of Professions (2010), in particular for nine types of posts, which refer to pedagogical assignments: Early Childhood Teacher, Early Childhood Teaching Assistant, Early Childhood Teacher Methodologist, Teacher Defectologist (Special Needs Pedagogue), Speech Therapist, Educational Psychologist, Music Teacher, Sports Instructor, and Handicraft Teacher.

The Centre Leader/Director can also make use of the Professional Standards for Early Childhood Teachers and Directors approved in 2021.

2.4 Coordinating and supervisory staff

Co-ordination and supervision are provided by the **Early Childhood Teacher Methodologist** (*vyxovatel-metodyst/starshyj vixovatel*) whose main responsibilities include the following:

- Providing methodological support to teachers, including developing the teachers' plans
- Supervision of teachers' educational activities
- Providing necessary information about child development to parents
- Organisation of the planning process (monthly, quarterly, annual)
- Organisation of the didactic-methodological unit in the early childhood institution/ kindergarten
- Supporting the development of teachers' professional communities, moderating the exchange of “best” professional practices and analysing these
- Organising the mentoring process for young ECEC Teachers and during the students' pedagogical practicum
- Cooperating with other educational institutions, especially with primary schools to ensure a smooth transition between early childhood and primary education.

2.5 Specialist support staff

According to the Law of Ukraine “On Preschool Education”, the following positions are in most cases part of the regular on-site staff alongside the Early Childhood Teaching Assistants and Child Assistants:

- Social Pedagogue
- Educational Psychologist
- Music Teacher
- Sports Instructor
- Special Needs Teacher
- Speech Therapist
- Handicraft Teacher.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

According to the Statistical Bulletin, the State Statistics Service of Ukraine, at the end of 2021 the ECEC workforce comprised 138,772 persons working in a pedagogical capacity and 172,996 persons working in a non-pedagogical capacity – see *Table 2*.

Table 2

Ukraine: Total number of persons in the ECEC workforce

Directors of early childhood institutions/kindergartens	11,359
Early Childhood Teachers	90,833
Methodologists / Pedagogical Advisers	4,832
Educational Psychologists	4,525
Social Pedagogues	375
Teaching Assistants	4,781
Other pedagogical staff	22,067
Total number of pedagogical staff	138,772
Medical staff	11,523
Technical staff	161,473
Total number of persons in ECEC workforce	311.768

Source: State Statistics Service of Ukraine 2021

The ECEC workforce comprises 136,951 women. Among them are 37,572 women under 35 years of age, 87,816 women aged 36–60 years and 13,384 women aged 61 years old and older.

In terms of qualifications at the end of 2021, 41,668 Early Childhood Teachers from a total of 138,772 were staff with a Junior Bachelor's degree and 94,096 of the remaining staff also had a higher education degree (Bachelor/Specialist/Master).

Table 3

Ukraine: Structural composition of ECEC workforce – qualifications, gender, ethnicity

Staff category	Year/provision/proportion of workforce*
Staff with specialist higher education degree	2021: 30% Junior Bachelor degree (see <i>Chapter 4.1</i>) 70% Bachelor's or Master's degree
Staff with specialist vocational qualification (post-secondary)	n/a
Staff with specialist vocational qualification (upper secondary)	n/a
Staff with non-specialist qualification (other qualification)	No data available
Unqualified staff	No data available
Specialist support staff (e.g. special needs teachers)	No data available
Male staff	No data available
Staff with a background of migration	No systematically compiled national data

Source: State Statistics Service of Ukraine 2021

4. Initial professional education (IPE)

4.1 Initial qualifying routes (higher education and vocational)

According to the Law of Ukraine “On Higher Education” (Verkhovna Rada 2014), professional education, including teacher education, is provided according to four levels of higher education. These are the beginning level (short cycle); the first level (Bachelor’s degree); the second level (Master’s degree) and the third level (Doctoral degree).

After completing relevant educational programmes at each of the levels, graduates are awarded the following diplomas/degrees:

- 1) Beginning level – Junior Bachelor diploma (120 ECTS credits)
- 2) First level – Bachelor’s degree (180-240 ECTS credits)
- 3) Second level – Master’s degree (90-120 ECTS credits)
- 4) Third level – Doctoral degree (PhD)

Initial professional education courses for prospective Early Childhood Teachers are offered by Pedagogical Colleges (beginning level (Junior Bachelor) or the first level (Bachelor)), Pedagogical Institutes, Pedagogical Universities and classic Universities, which can provide Bachelor’s and Master’s degrees.

The minimum admission requirement of *Pedagogical Colleges* for Junior Bachelor or Bachelor degree programmes is a completed secondary education. Some of the pedagogical colleges have signed transfer agreements with pedagogical universities or classic universities. According to these agreements, holders of Junior Bachelor diplomas from pedagogical colleges are granted priority and may enter university level teacher education studies in the third semester. *Pedagogical Universities* train teachers for lower and upper secondary schools and for colleges. However, many of the pedagogical universities along with the pedagogical colleges provide training programmes for Early Childhood and Primary School Teachers. Bachelor degree holders may continue their pedagogical education at universities to pursue a Master’s degree.

Universities provide training for teachers within the study programme “Education”; classic universities may have pedagogical institutes as part of their structure. Bachelor degree programmes at universities have a nominal study length of four years (three years for persons with the Junior Bachelor diploma). Master’s degree programmes normally take one year to complete; in some cases, the Ministry of Education and Science has approved a length of 1½ years. The duration of the Master’s degree programme for the holders of a Bachelor degree may be determined individually, based on the differences between Bachelor and Master’s degree curricula.

Persons with a basic secondary education and sufficient knowledge and skills in ECEC activities may enrol in a **Junior Bachelor** study programme (2½ to 3 years) to obtain a Junior Bachelor’s degree. The usual length of a higher education **Bachelor** programme is four years (240 ECTS credits), although for the early childhood field only 180 ECTS credits are required. In ECEC settings all graduates perform the same duties and tasks.

Table 4

Ukraine: Early Childhood Teacher

Job title in Ukrainian: <i>Vykhovatel</i> Profile: Early Childhood Pedagogy Professional
<p>Entry requirements: Completed secondary education (9 or 11 years of schooling)</p> <p>Professional studies: 4 years at a <i>Pedagogical College</i> for students with 9 years of secondary education; 3 years for those with 11 years of secondary education. The regular length of studies for Bachelor degree programmes at pedagogical colleges is 4 years for full-time students and 5 years for part-time students and remote learning courses.</p> <p>or</p> <p>4 years (3 years for persons with the Junior Bachelor diploma) study route “Education” at a <i>University</i>. This study route can be followed by a 1-(or 1½-) year of Master Degree programme.</p> <p>Award: Bachelor’s degree in Early Childhood Education</p> <p>ECTS credits: 180</p> <p>EQF level: 6</p> <p>ISCED 2011: 6</p> <p>Main ECEC workplaces: Nurseries/nursery kindergartens (2 months–5(6) years), early childhood education settings/kindergartens (3–5 or 6 years, special kindergarten (2–6 or 7 years), child development centre (5–6 or 7 years).</p>

Note: Higher education institutions are not required to provide employment for all graduates. Graduates are free to apply for a post of their choice, with the exception of those studying with the support of state funds or local budgets. These graduates are obliged to work at the proposed post in accordance with a procedure established by the Cabinet of Ministers of Ukraine (1996). They sign an agreement with the administration of a higher educational institution to work in the state sector for at least three years on completion of their studies. Graduates who agree to work for at least three years in rural areas or towns are provided free housing, heating and electricity by the state within the established legal norms (Cabinet of Ministers of Ukraine 2011). If graduates refuse and do not wish to take up the proposed employment, they must reimburse the full cost of their education to the state budget (Paragraph 2 of the Presidential Decree 1996).

Centre Leaders/Directors of Early Childhood Centres and Pedagogical Advisers (Early Childhood Teacher Methodologists) follow the same study route as Early Childhood Teachers (see above, Table 4).

At the beginning of the 2021/2022 school year, the following number of students studied the specialist area of “Preschool Education”:

Table 5

Ukraine: Number of ECEC students by educational level

Educational level	Number of students as of 2021/2022 school year	Number of graduates from initial professional education institutions in the 2021/2022 school year
Young Specialist	542	470
Junior Bachelor	1,222	-
Bachelor	126	15
Master	3,676	477

Source: State Statistics Service of Ukraine 2022

4.2 Competences, curricula and pedagogic-didactic approaches in IPE programmes

Early Childhood Teacher (*Vykhovatel*)

Competences

Competences to be acquired by Early Childhood Teachers are generally structured according to subject specific (professional) competences and general competences (generic competences, transferable skills).

There are also other equally important, universal competences that students learn to master during the IPE programmes. These apply to all levels of the teaching profession and include:

- Learning to learn
- Mastering a foreign language and basic information technologies
- Communicating with children, parents and colleagues
- Being able to look for and use information independently
- Following the strategy of life-long learning
- Being able to reflect
- Taking into account the individuality of children
- Being able to organise materials and present them appropriately
- Determining the child's developmental level
- Establishing a stimulating and age-appropriate environment for the children without forcing or accelerating the learning process.

Graduates of the Bachelor's study route on early childhood education should be able to:

- Analyse socially significant problems and processes and be able to use research methods in professional and social activities
- Organise their work on a scientific basis, using the newest methods
- Have a basic knowledge of employment relations
- Cooperate with colleagues and work in a team
- Know the basics of pedagogical skills
- Reflect on their own experience and analyse personal capabilities
- Acquire new knowledge, using modern information technologies
- Implement the most appropriate teaching approaches in their daily work with children
- Improve their own personal and professional competences and teaching skills and
- Provide appropriate approaches for children with developmental difficulties, disadvantaged children or those who are experiencing or have experienced crisis and conflict situations.

Professional Standards – Early Childhood Teacher

In October 2021, standards for the profession of Early Childhood Teacher were issued and approved by the Ministry of Economics of Ukraine (2021).

The Professional Standards describe the main goals of the professional activities of the Early Childhood Teacher. They set out the working conditions and admission procedures to the profession; they list documents which verify the professional and educational qualifications acquired through initial and continuing professional education as well as the legislation which regulates professional activities; and they describe general and professional competences.

General competences of the Early Childhood Teacher/Educator include the following:

- Civic competence

- Social competence
- Cultural competence
- Leadership competence
- Ethical competence.

The professional competences are structured according to specific tasks or functions and include the following:

A. Organising, providing and implementing the educational process.

- Prognostic (the ability to plan and predict the outcomes of the educational process; to document professional activities)
- Organisational (the ability to provide early childhood education in the Ukrainian language; to select effective methods according to the needs of children and their parents; to provide conditions of acquiring early childhood education for children with special needs)
- Evaluative-analytical (ability to conduct and to interpret the results of the monitoring of educational activities in order to make necessary changes according to the needs and opportunities of children; ability to identify the level of children’s competence development according to the educational standards), and
- Subject-methodological (ability to develop the key competences according to educational standards).

B. Participating in the development of a healthy, safe and inclusive educational environment.

- Health protection (ability to organize a physically and psychologically safe educational environment) and
- Project management (ability to organise activity centres based on universal design principles³ and appropriate furnishings).

C. Partnerships with participants in the educational process

- Psycho-emotional (ability for self-control, interacting tolerantly, reacting flexibly to changes, resilience)
- Pedagogical (ability to cooperate and communicate effectively; ability to involve all participants linked to the educational process based on the principles of partnership and mutual responsibility; ability for teamworking)
- Moral-ethical (ability to consider individual cultural, religious, social and language characteristics of families and to challenge stereotypes and discrimination).

D. Professional development

- Life-long learning (ability to reflect and self-assess, to plan professional development)
- Informational-communicational (ability to use ICT and e-resources effectively in the educational process, to be aware of and use safety rules in the digital environment).

All competences described in the Professional Standards are translated through the specific knowledge and skills. They are now used widely used in the CPD programmes for Early Childhood

³ See UN 2006. “Universal design” means the design of products, environments, programmes and services to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design. “Universal design” shall not exclude assistive devices for particular groups of persons with disabilities where this is needed (UN 2006, 4).

Teachers. All CPD providers are expected to include them when developing their training programmes. They also can be used by initial professional education institutions, by the Directors of early childhood institutions/kindergartens and by other stakeholders.

Professional standards – Directors of Early Childhood Institutions (Centre leaders)

In September 2021, Professional Standards for the Directors of early childhood institutions were issued and approved by the Ministry of Economics of Ukraine (2021).

The Professional Standards for Directors are structured according to the same goals as those for the Early Childhood Teacher and include the following professional tasks/functions and competences:

A. Organising a healthy, safe and inclusive learning environment.

- Health protection (ability to provide a physically and psychologically safe learning environment and ability to organise the work of psychological and social-pedagogical services in the kindergarten)
- Planning (ability to plan and analyse the effectiveness of the educational process).

B. Managing an early childhood institution/a kindergarten

- Operational management (ability to secure the financing of the kindergarten, organisation and control of nutrition and medical services in the kindergarten, management of human resources)
- Organisational-methodological (ability to organise the educational programme, the work of the psychological-pedagogical support team, the methodological support of the pedagogical staff)
- Communication (ability to communicate effectively with all participants involved in the educational process and other stakeholders).

C. Ongoing personal and professional development

- Life-long learning (ability to reflect and self-assess, to plan professional development)
- Informational-communicational (ability to use ICT and e-resources effectively in the educational process, to be aware of and use safety rules in the digital environment).

D. Leadership and partnership

- Leadership (ability to present the early childhood institution/kindergarten, to show resilience and flexibility, to support conflict resolution and the prevention of professional burn-out)
- Emotional-ethical (ability relating to self-regulation, to display tolerance, to conduct constructive and sustainable interactions with the participants of the educational process).

E. Strategic development

- Strategic governance and strategic development (ability to conduct strategic planning, to develop a strategy for the kindergarten, to develop a system of quality control)
- Strategic communication (ability to present the kindergarten to different stakeholders)
- Normative-legal (ability to use legal documents in the professional activities).

The Professional Standards for the Directors of early childhood institutions/kindergartens are – like those for Early Childhood Teachers – widely used by different CPD providers. They may also be used by the initial professional education institutions and other stakeholders.

The recommendations (in Ukrainian) about how to use these Professional Standards were issued in 2022 by the Ministry of Education and Science and shared on the websites of the Ministry and the Ukrainian Institute of Education Development.

Curriculum – Bachelor study route

The Bachelor study route comprises different educational blocks. The first is a general section aimed at the overall development of personality, the formation of values, leadership skills, self-knowledge, and a child study. The second block comprises general pedagogical knowledge and includes psychology and pedagogy. During this block a course on early childhood pedagogy begins which includes the intellectual development of the child and possibilities of influencing children's development.

Graduates of the Bachelor degree programme on early childhood education should have knowledge about:

- Basic sciences in the field of humanities and social-economical sciences, as well as ethical and legal standards that govern people's relationship to society, the environment
- The nature and social significance of their future profession
- A holistic view of the processes and phenomena occurring in society and nature; the ability to use these principles when deciding appropriate educational objectives
- Scientific understanding of healthy lifestyles, the ability to maintain a healthy lifestyle
- Cultures and laws of thinking.

4.3 Alternative entry and qualification routes, system permeability

In Ukraine, core pedagogues working in ECEC institutions need the full formal qualification as an Early Childhood Teacher. There are no alternative qualifying routes apart from the ones described above which allow for a more flexible approach or accept alternative entry requirements. Men and women without a formal qualification are only permitted to work as Early Childhood Technical Assistants. Technical staff usually receive some form of on-the-job training while working in a kindergarten.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

The form, duration and organisation of workplace-based learning in the IPE of ECEC core practitioners are defined in the curricular framework provided by the Ministry of Education of Ukraine (1993). According to the *Concept of the Development of Pedagogical Education* (Ministry of Education and Science of Ukraine 2018) the pedagogical practicum is a compulsory part of IPE, and should include a minimum of 30 ECTS credits in the Bachelor's and Master's degree programmes, starting from the first year of study. At least half of the duration should include practical professional activities.

Each HEI (college/institute/university) develops internal regulations regarding the pedagogical practicum. These include the general goal and the objectives, the types of pedagogical practica and schedules, the responsibilities of trainee teachers, supervisors from the HEI and supervisors from the early childhood institutions, a description of the assessment process, documentation examples, etc.

In most cases there are three types of practicum: (1) educational, (2) pedagogical, and (3) pre-diploma practicum.

Table 6

Ukraine: Types of ECEC practicum

Type of practicum	Semester	Number of weeks
Educational	5	2
Pedagogical		
– In classrooms for children up to 3 years of age	6	2
– In classrooms for children of preschool age (3–5 years)	7	5
– Pre-diploma (mainly at the place of the student’s future employment)	8	6
– Pre-diploma with additional specialisation	8	2

Source: Ivano-Frankivsk College 2015.

Mentoring support

There are two types of mentorship in early childhood education settings/kindergartens: (1) for newly-qualified teachers and (2) for all team members through a Pedagogical Mentor/ Teacher Methodologist (see *Chapter 7.3*). These tasks are included in the annual plan of the ECEC centre. Specific mentoring arrangements for students who spend their practicum in a kindergarten are provided by the head of the host setting.

6. Continuing professional development (CPD) of ECEC staff

Continuing professional development used to be regulated by the *Regulation on the Certification (Attestation) of Teaching Staff* (Ministry of Education and Science of Ukraine 2010). Certification (attestation) of teaching staff was obligatory and had to be conducted once every five years. The purpose was to confirm the current qualification level of each teacher or to achieve a higher one. The main condition of teachers’ certification was their participation at the compulsory courses at specialised departments of teacher training institutions, institutes, and universities, or at advanced training and retraining institutes and at In-Service Teacher Training (INSETT) institutions at least once every five years. There was no clearly defined annual allocation of time that should be devoted to professional development.

The new **Regulation on the Certification (Attestation) of Teaching Staff** was developed in September 2021 and is in the process of approval (Ministry of Education and Science 2021b). The main difference between the two sets of regulations in 2010 and 2021 is the specification of minimum hours for CPD as a requirement for teachers’ certification (attestation). According to the 2021 Regulation, the minimum hours of CPD to be completed within five years by Early Childhood Teachers should be no less than 120 hours (4 ECTS credits). For Primary School Teachers it is 150 hours (5 ECTS credits) every five years. It was recommended that teachers should participate in professional development activities annually, but without a clear distribution of credits for each year. The Resolution of the Cabinet of Ministers of Ukraine (2019) specified that all pedagogical staff should participate in continuing professional development on a permanent

basis and have the right to choose both the provider and the form of CPD services (demonopolisation of INSETTs).

The professional development of pedagogical workers, including Early Childhood Teachers, is set out in the CPD plan approved by the educational institution in which they work. At the same time, teachers also have a right to make use of opportunities beyond this plan.

CPD providers should be officially registered and publish the current programme on their websites. Each programme should include the number of allocated credits, a list of the competences aimed for as well as other information.

Recommendations on the implementation of the Professional Standards for the Directors of early childhood institutions issued by the Ministry of Education and Science (2022a) mention that CPD providers should focus their programmes on the competences included in the Professional Standards. Although recommendations on the implementation of the Professional Standards for Early Childhood Teachers have not yet been approved, they include a similar recommendation regarding focusing on the competences listed in the Professional Standards.

Paragraph 1.7 of the *Regulation on the Certification of Teaching Staff* (Ministry of Education and Science of Ukraine 2010) stipulates that teachers should be assessed and certificated once every five years or, if a teacher wishes to achieve a higher status more quickly, she/he can apply to be assessed out of turn, but not earlier than one year after the previous assessment. This procedure is called *re-certification*.

In order for Early Childhood Teachers to receive a **promotion** they are required to attend a formal CPD course which, since 2019, they may select themselves.

Since the beginning of the 2020 school year, **Certification Commissions** organise the certification process at three different levels: at the 1st level they are established at the early childhood institutions/kindergartens; at the 2nd level at the local educational authority; and at the 3rd level at the Ministry of Education.

Certification Commissions are organised for one year and their responsibilities are as follows: At the 1st level they are responsible for the certification of teachers; at the 2nd level they supervise the certification of the Directors of educational institutions; and at the 3rd level they are responsible for the certification of the governing bodies.

Certification Commissions of the 1st level (up to March 15th of any one year) are expected to familiarise themselves with the professional experience of teachers who applied to participate in the certification process by attending their lessons, studying their documentation and professional activities and also items developed by the Director of the educational institution. The final decision regarding the professional qualification is made during a meeting of the Certification Commission where the teachers give a presentation and can provide additional information.

Formal CPD courses for all levels of the teaching profession have similar objectives:

- Developing standards oriented towards the modernisation of the professional development and further training of teachers and school leaders
- Implementing modern technology in the professional development and training of educational, scientific and pedagogical staff in the educational system according to the requirements of innovative developments in education
- Ensuring the proactive nature of the training of educational, scientific and pedagogical staff to meet the needs of education reform and the challenges of modern social development (Decree of the President of Ukraine 2013).

Teachers' professional development is financed through regional and municipal budgets. Changes in the process of **funding CPD** started in 2019 after the Resolution of the Cabinet of

Ministers № 800 (Cabinet of Ministers of Ukraine 2019) had been approved. According to the Resolution, the planning process includes two stages:

- (1) During the first stage the educational institution is expected to develop a plan of professional development based on the teachers' proposals. These should include the directions of their professional development, CPD providers and the cost of their services. Such plans should be developed by December. If the plan is approved by the Pedagogical Board, it is then uploaded on to the website of the educational setting. Training providers (INSETT) which are funded through the regional (*oblast*) budgets make their financial applications based on the plans of the educational institutions, taking into consideration the number of teachers who have declared their willingness to participate in such courses.
- (2) The second stage of the planning is provided by the Director of the educational institution, who has to include costs for professional development into the institution's annual plan and budget.

In all Ukrainian educational institutions, including kindergartens, CPD is considered an integral part of their professional work. However, CPD activities **do not take place during working hours** but after closing hours or during school holidays.

Teachers appreciate the on-site activities carried out by the CPD providers in their kindergartens. This **kindergarten-based training** is very popular, especially among teachers living in rural areas; it means they can benefit from the CPD programme without having to leave their families. Also, through this model, kindergarten teams can ask the provider to design a programme which corresponds to a specific problem or to the latest local or government policy initiatives. Consequently, the training takes into account the teachers' interests and thus contributes towards improving the quality of professional development. Sometimes courses are also organised for ECEC Technical Assistants.

There are no problems regarding **participation** in professional development courses, since in most cases access depends entirely on the person's own wish. CPD activities are acknowledged in terms of **career advancement**.

Starting from 2020, when quarantine requirements caused by COVID-19 were introduced in many regions of Ukraine, CPD courses and the certification process were provided online.

Reforms regarding the continuing professional development of staff in ECEC provision

Since independence in 1991, the Ministry of Education has paid a lot of attention to reforming the system of teacher education/training to accommodate the needs of a society marked by social, economic and cultural changes. In particular, in 2011 the State programme "Teacher" was developed (Ministry of Education and Science of Ukraine 2011). It envisaged coordinated efforts to improve the quality of IPE and CPD in Ukraine.

The latest reforms in the education system, known as "New Ukrainian School" reform (which also influence early childhood education and care) are related to the adopting of the new Law of Ukraine "On Education", which came into force in September 2017 (Ministry of Education and Science of Ukraine 2017).

After the Law of Ukraine "On Education" was approved, the *Concept of Development of Pedagogical Education* was developed (Ministry of Education and Science of Ukraine 2018). The main goal of the Concept was to improve the system of the initial professional education of teachers and to develop alternative forms of teachers' professional development. The concept emphasised the following aspects of the reform: developing a qualifications framework and professional standards, including standards on digital competence; developing an internal system of

quality enhancement in education; key objectives of each level of higher education (in total four levels); increasing the amount of time allocated to the pedagogical practicum.

One of the main reforms foreseen by the Law “On Education” is the *decentralisation of the system of in-service training* (Cabinet of Ministers 2019). Until that time, teachers (both from kindergartens and schools) were encouraged to improve their professional knowledge only through courses at the regional INSETT institutes, which were free of charge for them. The frequency of such in-service training was once every five years.

The new Law of Ukraine “On Education” envisaged extending the introduction of structural reforms to the ECEC system, introducing new educational standards for preschool education called the Basic Component of Preschool Education (approved by the Order of the Ministry of Education and Science (2021a); and the Professional Standards for Early Childhood Teachers and Directors of early childhood institutions/kindergartens described in *Chapter 4.2*.

Another important reform in the CPD field was the reform of existing network of Methodological Centres and establishing a network of Centres of Professional Development for Teaching Staff (2020) in local communities. The main goals of the Centres of Professional Development are to promote CPD of teaching staff in local communities, providing psychological support and consultations. More specific tasks include the following:

- Summarising and sharing information related to professional development
- Coordinating professional learning communities
- Sharing the data base of CPD providers (programmes, participant’ feedback) and other resources
- Providing psychological support to teaching staff
- Organising and conducting consultations to teaching staff on such issues as: individual professional development plans; certification issues; strategic planning and other issues.

7. Working conditions and current workforce issues

7.1 Remuneration

In accordance with the Law on Education, the Accreditation Regulations (Ministry of Education and Science of Ukraine 2010) state that a teacher is subject to assessment and certification once every five years, the results of which determine the teacher category level and thus directly affect the teacher’s salary.

As from January 2017, official salary tariffs were changed (Resolution No 1037, Cabinet of Ministers 2016a). As a result, new salaries are based on the 1st tariff category established regarding the subsistence minimum for able-bodied persons on 1 January 2017 which was at that time 1,600 UAH (€54,57) per month.

Beginning with the “New Ukrainian School” reform in 2018, teachers’ salaries were increased by 10% from two main sources: (1) educational subvention and (2) national or local budgets (Resolution of Cabinet of Ministers of Ukraine 2018). Since Early Childhood Teachers are not directly involved in the school reform, the issue of increasing their salaries depends on local budgets.

In 2022, the salaries of early childhood staff were as follows:

Table 7

Ukraine: Salaries of early childhood staff per month, February 2022

Position	UAH	Euros* (as in February 2022)
Centre Leader/Director of early childhood institution	7,464	233
Early Childhood Teacher (without category)	5,265	165
Early Childhood Teacher (1st category)	5,699	178
Early Childhood Teacher (2nd category)	6,133	192
Early Childhood Teacher (highest category)	7,701	241
Inclusive classrooms		
Early Childhood Teachers of all categories + 20% according to categories		
Early Childhood Teacher Assistant	5,265 – 5,699	165-178

*The exchange rate in February 2022 was 1 Euro/32 UAH, as of September 2022 it was 1 Euro/40 UAH

Source: Onyshchenko 2022

Pedagogical and scientific-pedagogical employees of schools and educational institutions receive a monthly retirement premium corresponding to a certain percentage of their salary, depending on the length of educational work: over 3 years – 10%; over 10 years – 20%; over 20 years – 30% (Ministry of Education and Science of Ukraine 2005).

Early Childhood and School Teachers' wage rates are identical. While School Teachers are also paid for checking copybooks, classrooms, Early Childhood Teachers are not.

7.2 Full-time and part-time employment in ECEC provision

An Early Childhood Teacher usually works 30 hours per week with the children (whereas a School Teacher's workload is 23 hours per week). There is no information available about full-time and part-time employment.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

There are two types of mentorship in early childhood education institutions/kindergartens:

- (1) Newly-qualified Early Childhood Teachers are supported during their first year of work by a mentor who is a qualified Early Childhood Teacher Methodologist. Support includes planning lessons, answering their questions, observing teachers' practice and providing feedback.
- (2) A Pedagogical Adviser (Early Childhood Teacher Methodologist) supports all in-service teachers, e.g. by helping them to prepare lessons or to cope with developmental issues in certain children. The Pedagogical Advisers review literature and pass on knowledge about innovative approaches. They also make observations in the groups and provide feedback – this is one of the most important aspects of a mentor's work.

There is no additional payment provided for taking on the task of mentor.

7.4 Non-contact time

There is no official non-contact time for Early Childhood Teachers in Ukraine. Time spent for work 'without children', i.e. for planning, meetings with parents, participation in professional networks, is not remunerated.

7.5 Current staffing issues

Due to the war and the resulting migration of the population, there are many concerns regarding the reduction of employees of Early Childhood institutions. Because of this, the Ministry of Education and Science of Ukraine (2022c) issued the letter regarding the preservation of the network of ECEC centres and the protection of the rights of staff.

To preserve the network of ECEC centres and teaching staff, the Ministry suggested number of recommendations:

- Organising (re-organising) the number of classrooms depending on demographic situation in the regions
- Maintaining the network of special education classrooms
- Promoting the expansion of private ECEC centres/kindergartens
- Organising short-term groups (Sunday groups, evening groups) for children with parents, especially internally displaced families.

In order to implement these suggestions, the Ministry has recommended:

- Providing two Early Childhood Teachers per shift/per classroom (in total four Early Childhood Teachers per classroom in two shifts) and two Technical Teaching Assistants per classroom;
- Increasing the number of children in the classrooms – 10 children up to 3 years of age in the early age groups, 15 children aged 3–5 years in kindergarten classrooms;
- Providing a flexible daily schedule (from 2 to 12 hours a day)
- Using different educational formats (offline, online, blended).

Re-organisation or closing of the early childhood institutions should be based on local communities' decisions.

The letter (Ministry of Education and Science 2022c) referred to the Agreement between the Ministry of Education and Science and the Central Committee of the Trade Union of Educators for the period 2021-2025 to provide teaching staff's right to receive their payment regularly. If case teaching staff are unable to work (damaged kindergarten buildings or other circumstances) they should receive two-thirds of their salaries.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

The main changes relating to ECEC staffing come from adopting the amendments to the Law “On Preschool Education”, which introduced the concept of “inclusive education” as well as the position of Early Childhood Teacher Assistant in 2015.

This position is included in the list of pedagogical and scientific-pedagogical staff as approved by the resolution of the Cabinet of Ministers of Ukraine (2015) and follows the staff norms of kindergartens (Ministry of Education and Science 2016).

If there is at least one inclusive group in a kindergarten, an Early Childhood Teacher Assistant can be employed.

The position of Child's Assistant (social worker/parents of children with special needs/other persons) was introduced by the Ministry of Social Policy of Ukraine in 2017. The relevant Order of the Ministry of Social Policy includes requirements for this position, which is funded by the departments of social protection. Child's Assistants are introduced in the inclusive classroom at

the request of parents of a child with special needs and the relevant recommendations of the Inclusive Resource Centre.

Other recent policy reforms are related to the development of Professional Standards – for Early Childhood Teachers (Order of the Ministry of Economics 2021) and for Directors of early childhood institutions/kindergartens (Order of the Ministry of Economics 2021) – see *Chapter 4.2* for more details.

9. Recent country-specific research focusing on ECEC staff

Improving the quality of early childhood education and care in Ukraine

Source: Peeters, J. 2019 (see *References* for further details)

Background: The study was conducted by Jan Peeters of the VBJK in Ghent/Belgium and funded by UNICEF-Ukraine in 2018. Reasons for conducting the research were changes in the legislation, in particular: the draft of the Law of Ukraine “On Preschool Education”, Basic Component of Preschool Education (educational standards) and the “New Ukrainian School” concept.

Aims and procedures: The general goal of the research was to study the quality of early childhood education and care in Ukraine according to the criteria of the European Quality Framework (2015) and to develop recommendations which would strengthen the early childhood education system in Ukraine within the context of educational reforms. The study focused on the following aspects: access to ECEC; workforce; curriculum; monitoring and evaluation; governance. The study included visits to early childhood institutions, interviews and focus groups with educational policy representatives, tutors in IPE and CPD and early childhood teachers.

Findings and implications: The aspect “workforce” included the following general recommendations: existing professional education for teachers is focused mainly on theory and lacks an appropriate practical focus; teacher educators are not sufficiently aware of the latest international studies in the field of early childhood education and care and have difficulties in working with children of early age (0–2 years) and their parents. It is therefore recommended to increase the number of hours allocated to the pedagogical practicum of student teachers, starting from the first year of their studies.

Another recommendation was focused on the role of teacher-methodologists who can play an essential role in improving the quality of early childhood institutions and supporting Early Childhood Teachers in the introduction of innovative teaching methods and approaches. It was emphasised that the training of mentoring skills is critical for teachers-methodologists.

The low salaries for both Early Childhood Teachers and Teacher Educators were highlighted as an issue of serious concern for the quality of early childhood education.

Criteria of quality in early childhood education – Ukrainian Step by Step Foundation

Source: UNICEF in Ukraine and Ukrainian Step by Step Foundation 2019 (see *References* for further details)

Background and aims: The research was conducted by the Ukrainian Step by Step Foundation in partnership with the Kyiv International Institute of Sociological Studies, with funding support from the Ministry of Education and Science of Ukraine and UNICEF Ukraine. It was part of an international project aiming to specify “International quality criteria for centre-based childcare”

and was conducted in 2018–2019. Following countries took part: China, Chile, Denmark, Germany, Norway, Russia, Spain, Ukraine, and Vietnam.

The main research questions were: "How important are criteria of quality of early childhood education for different target groups?" and "Which criteria are the most/the least important?"

Procedure: The basis of this research was the third edition of the Early Childhood Environment Rating Scale (ECERS-3), an instrument for assessing the quality of early childhood education programmes for children aged 2–5 years. The research focused on: interactions between teachers and children (28 criteria)

- 1) Interactions between teaching staff and parents (11 criteria)
- 2) Pedagogical orientation (7 criteria)
- 3) Educational structure (6 criteria).

In Ukraine the survey included the following target groups, which represented four major regions (city/rural population):

- Representatives of local educational authorities
- Early Childhood Teachers from 50 early childhood institutions (one classroom, two Early Childhood Teachers)
- Children's parents
- Students of IPE institutions.

Methods included telephone interviews, email interviews and online surveys.

Main findings related to the workforce: All criteria related to workforce issues were assessed by the highest scores (on average more than 6 out of the maximum score of 7), which demonstrated the general understanding and recognition of the role of competent teaching staff by all stakeholders.

Assessing process quality in early childhood education institutions according to ECERS-3

Source: Ministry of Education and Science 2022d (see *References* for further details)

Background: In 2019, the Programme of Government was approved by the Cabinet of Ministers of Ukraine, which included goals of different Ministries. One of the goals of the Ministry of Education and Science (2022b) was providing equal access to quality early childhood education for every child, including conducting the assessment of the quality of educational process in early childhood institution according to the international instrument Early Childhood Environment Rating Scale (ECERS-3). ECERS-3 is the third edition of the Early Childhood Environment Rating Scales (ECERS) developed by Thelma Harms, Richard M. Clifford, and Debby Cryer (2014) to assess classroom quality. The main aspects of assessment classroom quality include the following: space and furnishings; personal care routines; language and literacy; learning activities; interaction; programme structure.

Aims and procedures: In 2022, a study on the assessment of process quality in early childhood institutions according to ECERS-3 was conducted by the Ministry of Education and Science of Ukraine (Ukrainian Institute of Education Development, Institute of Educational Analytics), with funding support from UNICEF Ukraine and the Ukrainian Step by Step Foundation.

The main goals of the study were to pilot international instrument ECERS-3 and to assess process quality in Ukrainian early childhood educational institutions. The sample included 200 early childhood institutions, which represented 24 *oblasts* in Ukraine and Kyiv city.

The study was conducted by the local experts who passed the necessary training.

Findings and implications: One of the major conclusions of this study was that the "Early Childhood Teacher is a key person in providing quality in the educational process of early childhood

educational institutions” (Ministry of Education and Science 2022d, 129). Professional training should be focused not only on the acquisition of necessary knowledge and skills, but also on the development of personal qualities such as flexibility and the ability to adapt learning activities to better react to the individual characteristics of children. The role of Professional Standards for Early Childhood Teachers in developing the necessary competences was also emphasised.

10. Workforce challenges – country expert assessment

That the role of early childhood education and care is critical to the further success of each person has been emphasised both at the international and national levels. Since 2017, when the educational reform “New Ukrainian School” started, it has become clear that changes should start even earlier than primary school, namely at the level of early childhood education.

Many positive changes have happened. These include developing:

- A new draft of the Law of Ukraine “On Preschool Education” (2021)
- A revised version of educational standards for preschool education (Basic Component of Preschool Education 2021)
- Professional Standards for Early Childhood Educators and Directors of early childhood institutions (2021).

At the same time many challenges remain, in particular:

- The social status of personnel working in the early childhood system is much lower than that of staff working in primary and secondary schools.
- Primary and secondary teachers working within the educational reform “New Ukrainian School” get more financial support due to financial subvention from the state budget and also methodological support.
- There is no correlation between the quality of work and the allocated salary. The quality of work is measured only indirectly (according to the number of years of work, level of education, compulsory attestation). All this leads to a decrease in teachers’ motivation.

The low social status of Early Childhood Teachers leads to the following problems:

- Students with a relatively low level of relevant knowledge who wish to get a higher education degree tend to enrol at pedagogical colleges/institutes because it is easier to complete these qualifying courses since the competition is not very high. However, after graduation, it is likely that they will not get a job because of their low grades.
- Moreover, some graduates with good degrees choose not to work in a kindergarten or work there for just a short time. One reason is the very low salaries of Early Childhood Teachers mentioned above; thus graduates prefer to seek better paid jobs.

The issue of initial professional education/training is also problematic. The majority of graduates who apply for work in ECEC institutions do not meet the expectations of directors and often find it difficult to work with parents. Possible explanations for this situation could be:

- The study programmes are too focused on theory
- The dominance of traditional learning methods such as lectures, seminars
- The absence of the practice of applied research
- A lack of pedagogical themes during the practicum.

Starting on 24 February 2022, when the Russian Federation invaded Ukraine, the country has been faced with a huge number of other problems.

As of 23 September 2022 (Institute of Educational Analytics 2022):

- 819 early childhood education institutions have been damaged
- 82 have been completely destroyed
- 4,798 institutions accept children (331,762 children are enrolled)
- 3,873 ECEC settings use various forms of remote working with parents and children (involving 276,777 children)
- 632 ECEC institutions work in blended format (involving 42,815 children)
- 35,419 institutions provide educational services for 19,289 preschool children among internally displaced persons (IDPs)
- 7,227 children with special educational needs study in 4,167 inclusive groups
- 192 preschool education institutions are used as reception centres for IDPs.

One of the biggest challenges is to collect information about teaching staff who have to leave war zones and move either to other *oblasts* in Ukraine or abroad. As of 01.08.2022, only 76 early childhood teachers (IDPs) have been employed in the safe areas of Ukraine. At the same time 7,781 of children of preschool age, including 280 children with special needs, from IDP families have been admitted to ECEC institutions in central and western parts of Ukraine.

Another challenge is providing psychosocial support to all participants engaged in the educational process. Although the Ministry of Education and Science has established special rubrics on its website, providing recommendations of psychologists and other relevant resources, more work is needed in this area with the involvement of international experience.

Preliminary remarks

As of 24.02.2022, a state of war prevails in Ukraine. This has and will have a strong impact on all areas of society, including the system of early childhood education and care.

According to the United Nations High Commissioner for Refugees, the number of refugees who have fled Ukraine for other European countries because of the war amounted to 5,872,700 in August 2023, and to 358,300 for countries beyond Europe (ODP 2023). In addition, there are more than 5 million internally displaced persons (as of May 2023, UNHCR 2023).

Statistical data used in this report are those that were currently accessible. However, as these possibly do not accurately reflect current conditions, they must be interpreted with caution.

Early childhood education and care (ECEC)

Please note

In alignment with country-specific usage, the terms used in this report for the main forms of centre-based ECEC provision are **ECEC centre** (*yasla-sadok*, 0–5/6) and **kindergarten** (*dytyachyy sadok* or *shkola-dytyachyy sadok*, 3–5/6)¹. Any additional forms are described where appropriate.

Historical milestones in ECEC in Ukraine

1917	The Central Council of Ukraine forms the General Secretariat of Education, renamed the Ministry of Education on January 9th, 1918, including a Department for Out-of-school Education and Preschool Education.
1918	The Department of Out-of-school Education and Preschool Education raises the issue of universal compulsory preschool education of children. "Regulations of Kindergartens" noted that "all children from the age of 3 years old shall attend kindergartens" – these should be "free everywhere and be established at the expense of the rural and urban self-governments."
1920	The basis of the Ukrainian System of National Education is the social care and education of children aged 3 to 15. Orphanages become the main child care establishment: kindergartens, schools, and out-of-school institutions have to merge into a "single social organism", i.e. an orphanage, even though not all children were parentless.
1930	Establishing local educational authorities which provided management of educational institutions
1955	3,713 regular ECEC settings are registered in Ukraine, providing for 215,700 children.
1959	Resolution of the Council of Ministers of Ukraine "On measures for the Further Development of Childcare Facilities, Improving Education and Health Care for Children of Preschool Age." This and other documents plan the expansion of a network of ECEC settings and the improvement of their financial security.
1960s	During the 1960s a stable growth takes place in the number of ECEC institutions and the number of children enrolled. By the end of 1970, the total number of kindergartens in Ukraine was 16,500.

¹ **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. We have chosen the following age-inclusive format for the SEEPRO-3 reports: **0–2** years for settings for children **up to** 3 years of age and **3–5** years for pre-primary settings in countries with a primary school entry age of 6 years. The relevant formats for Ukraine are **0–5/6** years and **3–5/6** years.

1980s	Expansion continues during the 1980s and also qualitative measures are taken. In 1987, there are 23,100 kindergartens in the Ukraine catering for 2.7 million children, representing 60.3% of the total population of preschool-age children (69.3% in urban areas, 40.5% in rural areas).
1992	24,500 kindergartens operate in Ukraine – the highest figure so far. The number of children covered by the system of public ECEC reaches 2.2 million, representing 47% of the total population of preschool-age children. 268,000 teaching staff are involved, 97% of whom are fully qualified.
1990s	During the 1990s considerable progress is made in the conceptual and legal framework of early childhood education and care.
1993	Current views on ECEC are set out in the Concept for Preschool Education in Ukraine – a system of objectives and approaches based on humanism, democracy, national culture and humanistic values.
1991-1993	For the first time in the history of Ukraine, alternative preschool education programmes were started: 'Ukrainian Preschoolers' (1991); 'The child in the preschool years' (1991); 'Baby' (1992); 'Child' (1993).
1994	"The First Steps" Project (Step by Step Project since 1996) was launched by the International Renaissance Foundation with the support of the <i>Open Society Foundation and Children Resource International</i> (USA) – implementer: Ukrainian Step by Step Foundation
1996	Decision of the Cabinet of Ministers of 3 November 1993 on the State National Programme 'Education' ('Ukraine of the XXI Century')
1998	Standards of education at all levels of educational institutions are set out, for ECEC institutions in the "Basic components of early childhood education in Ukraine".
2001	The legislation "On Early Education" launches a new stage of development of early childhood education and care in Ukraine.
2001	Legislation "On Child Protection" sets out the system of state and public measures to ensure a full life, comprehensive education and development of children as well as the protection of their rights.
2003	The Early Childhood Pedagogy team at the Dragomanov National Pedagogical University jointly with the Ukrainian Step by Step Foundation develops the programme 'Step by Step' in Ukraine based on the Step by Step project.
2008	The policy paper "On additional measures to improve the quality of education in Ukraine" provides the theoretical basis for early childhood education, defining functions, policies, principles, goals and objectives for modernisation up to 2016.
2013	National Strategy of Education Development till 2021 and Plan of its realisation (reopening ECEC institutions, which had been previously closed; plan to cover 100% of children 5–6 year-olds through diversification of ECEC forms)
2017	Amendments to the Education Act are passed.
2021	– Amendment to the Early Education Act – Revision of the early childhood curriculum ("Basic components of early education")
2022	As of 24.02.2022, a state of war prevails in Ukraine, which has and will have a strong impact on all areas, including the system of early childhood education and care.

Sources: Cabinet of Ministers of Ukraine 1993; Ulyukayeva 2004; Ministry of Education 2017; Verkhovna Rada of Ukraine 2021.

ECEC system type and auspices

Early childhood education is an independent but integral part of the education system in Ukraine (Early Education Act 2001, as amended in 2020). At the national level, the Ministry of Education

and Science (*Ministerstvo osvity i nauky Ukrayiny*) is responsible for regular ECEC settings for young children. These are both multi-age facilities (*yasla-sadky*) for children from 2 months to school enrolment at 7 years of age and separate nurseries (*dytyachi yasla*) and kindergartens (*dytyachi sadky*) as well as school kindergartens (*shkola-dytyachyy sadok*) for 3 to 7 year-olds, which are attached to primary/secondary schools.

The Ministry of Health (*Ministerstvo okhorony zdorov'ya Ukrayiny*) is responsible for home-based ECEC settings and also for children's health centres (*budynok dytyny*) for orphans or children with disabilities up to the age of 4.

While the ministries are primarily responsible for legal regulations and the development of standards, the municipalities are responsible for the management and operation of the facilities (Putcha et al. 2018).

General objectives and legislative framework

Within the framework of the *National Economic Strategy 2030*, an education and social reform is underway, the aim of which is, among other things, to promote the quality of early childhood education in Ukraine as well as its accessibility (Government Portal 2021). In particular, this accessibility is to be made as close to home as possible (Verkhovna Rada of Ukraine 2021).

Every child, regardless of origin, ethnicity, religion, language or other characteristics, should have free access to early education. Fundamental principles of the pedagogical processes are democratisation and child-centredness as well as equity. Special emphasis is also placed on cooperation with families (Ministry of Education 2019).

Another important aspect is the creation of a safe learning environment in which children with special educational needs and children from areas where there are armed conflicts can feel comfortable (Liapunova 2020).

The general operation of ECEC provision is regulated by the Constitution of Ukraine (1996, as amended in 2019) and by the Education Act of Ukraine (1991, as amended in 2017; Ministry of Education 2017). This states, among other things, that the right to education applies to all persons, disadvantaged groups as well as minority ethnic groups (Right to Education Initiative 2020).

The Early Education Act (*Zakon pro doshkil'nu osvitu*) (2001, as amended in 2021), the Child Protection Act (2001, as amended in 2016) and the UN Convention on the Rights of the Child are the most important legal frameworks for ECEC. The amendments to the Early Education Act (Amendment No. 4604) focus mainly on ensuring accessibility to early childhood education for *all* children (Verkhovna Rada of Ukraine 2021).

According to a decision of the Cabinet of Ministers ("On Approval of Licensing Conditions of Educational Activities of Educational Institutions" 2015), the Ministry of Education issues licences for regular ECEC settings. Children's health centres for children under 3 years of age are regulated by the "Standard Regulations of Children's Centres".

ECEC entitlement and compulsory attendance

All children from the age of 2 months until they start school have a legal right to a place in a centre-based or home-based ECEC setting (CIS Legislation 2021). For 5–6/7 year-olds, early education is compulsory (Education Act, Art. 11, Ministry of Education and Science 2017), otherwise attendance is voluntary.

Primary schooling usually starts at the age of 6, for children with special needs also later (Ministry of Education and Science 2017).

Main types of provision

According to the Early Education Act (2001, with amendments 2020, Art. 12), there are different kinds of ECEC provision.

For the SEEPRO-3 study we have categorised them into three main types: (1) regular ECEC settings; (2) settings with combined regular and remedial or special education tasks; and (3) residential provision (children's homes for orphans; sanitoriums for children with long-term illnesses).

(1) Regular ECEC settings

These include:

Multi-age ECEC centres (*yasla-sadok* – lit. "nursery-kindergarten") for children between 2 months and 6/7 years are the most common form of provision.

Nurseries (*yasla*) for children from 1 to 3 years are usually part of a multi-age centre or a kindergarten. There are very few self-contained settings.

Kindergartens (*dytyachyy sadok*) for 3–6/7 year-olds are either separate facilities or attached to a primary or secondary school (*shkola-dytyachyy sadok* – lit. "school-kindergarten").

All regular ECEC settings are open from 7:30 to 17:00 (state and municipal facilities) or from 8:00 to 20:00 (private facilities).

(2) Settings with combined regular and remedial or special education tasks

Combined early childhood centres (*yasla-sadok kombinovanoho typu*) and **child development centres** (*tsentr rozvytky dytyny*) offer both regular and integrative groups for children between 2 months and 6/7 years as well as groups with remedial, special and rehabilitative provision. The pedagogical staff in these facilities work closely with speech therapists, psychologists, music teachers, sports educators and other types of specialist.

Children's health centres (*budynok dytyny*) are ECEC centres for under 3 year-olds (or under 4 year-olds with disabilities), offering medical services for orphans, long-term sick and severely disabled children (Puchta et al. 2018, 8).

Special needs centres provide for children between 2 and 7 years of age with various disabilities. They are only found in the larger cities (Puchta et al. 2018, 8).

(3) Residential provision

Children's homes are full-time residential settings, either for very young orphans or for children aged 3 and older. For these children, there are also **Family groups** (2 months–6/7 years) for them to attend until they start school. These are assigned to the Ministry of Social Policy.

Sanitoriums provide for children who need long-term medical care and rehabilitation measures.

During the summer season – June, July and August – all ECEC settings offer summer camps where children can either stay overnight or spend just one day there. These camps offer various educational and health care activities. They are not compulsory and can be taken up voluntarily depending on the parents' wishes.

In 2022, there were 13,900 ECEC institutions in Ukraine, with 1,047,000 places and 934,000 enrolled children (SSSU 2023a).²

916,144 children attended public institutions and 26,658 private or corporative institutions.

² All data reported below exclude the Autonomous Republic of Crimea, the city of Sevastopol and temporarily occupied territories in the Donetsk and Luhansk regions.

Provider structures

According to the Early Education Act and the Education Act of Ukraine, the providers of ECEC settings are the state, municipalities and private individuals; almost all are subsidised by the state or municipalities (Ministry of Education and Science 2017).

The private sector is relatively small (in 2015 there were only 177 privately run ECEC facilities); however, parents increasingly tend to enrol their children in private institutions because they are more flexible, use more modern methods and the group size is usually smaller (Putcha et al. 2018). Even in 2022, only 3.6% of the ECEC settings were private (SSSU 2023b).

As of 2016, the Ministry of Health regulations for establishing private provision have been relaxed, making it easier to set up a new private facility. Until then, for example, one and a half times more square metres had to be available per child than in the average international comparison, or each facility was obliged to maintain its own kitchen (OECD 2017). In addition, since 2015, private institutions have been legally exempt from taxation (Law "On Amendments to the Tax Code of Ukraine in Creating Favourable Conditions for the Provision of Educational Services of Early Childhood Education Institutions and Secondary Schools in Private Ownership"). Therefore, there is hope that these measures will increase the number of official registrations – especially in home-based settings.

At the end of 2022, 13,376 public (state and municipal) ECEC institutions provided 1,020,425 places and 499 private or corporative institutions 26,658 places (SSSU 2023b).

Participation rates in regulated provision

Because of the war, many parents (mostly mothers) had to leave the country with their children in the spring of 2022. The data reported here are those that were last accessible.

In 2020, according to national statistics, 1,150,500 children were enrolled in 15,335 ECEC centres with a total of 1,153,000 places. The overall enrolment rate was 63% (SSSU 2021a, 108f). Eurostat data (2023d) report that in 2021, 152,501 children attended ISCED 01 settings and 998,044 were enrolled in ISCED 02 settings.

Between 1990 and 2005, ECEC provision decreased significantly, not least because of a lack of funding, but also because demand was rather low due to high unemployment. Whereas there were 24,500 settings still open in 1990, by 2004, there were only 14,900. From 2010 onwards, the number began to slowly increase again (Putcha et al. 2018). However, according to national statistics, there were also only 13,900 facilities in 2022 (SSSU 2023a).

Enrolment rates and also the number of available places vary greatly from region to region. Across the country, there is a lack of places in most areas – which was and still is one of the reasons for corruption in the education sector. To address this problem, the so-called "electronic queue" was introduced to make the registration of children fairer and more transparent (Ministry of Education 2019). So far, however, this has only been partially successful, as it is up to the municipalities to decide whether or not to use the electronic system of registration (Putcha et al. 2018). Beyond this, technical and security shortcomings in the electronic waiting loop create opportunities to bypass it or to obtain a place through irregular means. In several cities, these 'e-queues' have therefore already been abolished. Since a place in an ECEC setting can also eventually lead to the desired place in primary and secondary school, many parents register their children at birth. Donations are also used to improve the chances of getting a place (OECD 2017). By easing the hurdles for the establishment of new ECEC facilities, 74,675 additional places in preschool facilities could be created from 2017 to mid-2020 (Government Portal 2021).

Especially in rural areas, the low attendance rates are often due to the fact that the facilities are too far away from the homes and parents cannot bring the children there – especially because in rural areas often only short programmes are offered for a few hours a day. An effective strategy to increase attendance rates is still missing (Liapunova 2020).

National data show a drop in the number of ECEC settings between 2010 and 2015, with the subsequent increase by 2020 not yet reaching 2010 levels. The number of children enrolled, on the other hand, increased between 2010 and 2015, only to fall slightly below 2010 levels by 2021 – at the same time, attendance rates rose steadily from 53% to 60% between 2010 and 2021, and dropped again to 53.4% in 2022 (see *Table 1*). However, regional differences are significant: in 2020, the enrolment rate in rural areas was only 42%, while in urban areas it was 75% (SSSU 2021a, 108).

Table 1

Ukraine: Number of ECEC settings, enrolled children (0–6 years) and participation rates from 2010 to 2022

Year	Total number of ECEC settings	Total number of children enrolled	Participation rates across all types of ECEC provision, in %
2010	15,600	1,273,000	53
2015	14,813	1,291,200	55
2021	15,000	1,111,000	60
2022	13,900	934,000	53.4

Source: SSSU 2023a

Table 2

Ukraine: Enrolment rates by age, 2022

Age group	Enrolment rate, in %
0–2 years	12.3
3–4 years	77.2
5 years	65.6
3–5 years	73.0
6 years	7.8
3–6 years	55.2
Total 0 to 6 year-olds	39.4

Financing and costs for parents

In 2019, 5.4% of the gross domestic product was spent on education in Ukraine (The World Bank 2022). It is unclear what share early childhood education has here.

Since 2017, ECEC has been financed from the local budgets. In 2019, consolidated budget expenditure on education was 6% of GDP and 17.4% of the national budget, 15.1% of this being spent on ECEC (Institute of Educational Analytics 2021, 66f).

Starting from 2019, the educational subvention from the central budget to local budgets was introduced to cover additional needs of children with SEN in the inclusive groups.

Ukraine has been going through a decentralisation phase in recent years which entails the merging of regions into territorial communities (*terytorial'na hromada*), with all the necessary adjustments. For ECEC settings, this means that a previously centralised state financing system is changing to decentralised budgeting. As a result of this process of decentralisation of financial

resources, the municipalities have been responsible since 2015 for the financing of ECEC facilities. Attendance at a public setting is free of charge except for meals (Putcha et al 2018). Meals are free for orphans, for children in special needs institutions and for children from families with less than the minimum income set by the government. Church-affiliated early education institutions are not funded through the state or municipal budget. Private (commercial) facilities are self-sustaining, i.e. the costs are borne by the parents and the provider.

Private ECEC provision is very expensive: in 2017, a place in a private setting could cost up to UAH 12,000 (€392) per month, which is about twice the average household income (OECD 2017). The previously mentioned differences between urban and rural areas relate not only to the resources allocated to a facility, but also the budgets allocated per child (Peeters 2019).

Since 2015, municipalities can receive financial state support if their local budget is not sufficient. Such education subsidies are intended mainly for staff and operating costs. The institutions are also allowed to accept donations, which usually come from parents (OECD 2017).

In public ECEC settings parents have to pay for meals, the amount of which is set annually by the local authorities and can vary from city to city: In Kyiv, in 2023, it amounted to between 45–58.8 UAH (1.1–1.46€) per day, depending on the age of the child (Chervonohrad.City 2023) whereas in Kremenchuk in 2022 it amounted to 21–29 UAH (0.52–0.72€) per day (Telegraf 2021). Low income parents, parents with children with special educational needs and parents participating in the war are exempt from payment.

Denominational ECEC settings are not financed through the state budget. Private (commercial) facilities are self-sustaining, i.e. the costs are borne by the parents and the provider. Municipal facilities have so far been partly funded by the local municipal or district budgets.

Staff to child ratios and group size

In most cases there are two professionals in a group, one of whom is responsible for five to ten children. In inclusive groups there may be up to 15 children, including one to three children with special educational needs. In private settings, the provider decides on the group size, which is usually smaller than in public facilities (Putcha et al. 2018). As a rule, the children are organised into four age-groups: 0 to 2 year-olds, 3 to 4 year-olds, 4 to 5 year-olds and 5 to 7 year-olds.

In the most frequently used type of provision (multi-age ECEC centres), the staff to child ratio is 1 : 12, with 24 children in a group (Peeters 2019). *Table 3* shows the estimated staff to child ratio in different kinds of settings in 2015 (no newer data available).

Table 3

Ukraine: Staff to child ratios, 2015

Setting type	Number of staff	Number of children	Staff to child ratio*
Self-contained nursery	15	36	1 : 2.5
Multi-age ECEC centre, 0–6/7 years	236,936	996,823	1 : 4.2
Kindergarten, 3–6/7 years	44,431	177,067	1 : 4.0
Other kinds of ECEC setting (e.g. 'School- Kindergarten')	27,531	117,281	1 : 4.3
Total	308,913	1,291,207

Curricular framework

The "The Basic Component of Early Education" (2012, as amended in 2020 and issued in January 2021) was prepared by experts from research and practice and, as a framework curriculum, represents the state (mandatory) standard for early education in Ukraine. It primarily describes the competences children should have acquired at the end of pre-primary education. Continuity between early education and school is a key feature. The competency-based document emphasises humanistic pedagogy, civic education and the shared educational responsibility of the state, municipalities, families and experts from the education and care sector. Learning areas include: personal development; sensory-cognitive experiences; nature; play; society; language development; the arts (Department of Education, Culture, Youth and Sports of Rakhiv City Council 2021).

Inclusive education is also a focus of the curriculum. A study sponsored by UNICEF found that many aspects of the curriculum are promising, but that more attention needs to be paid to strengthening cooperation between parents, professionals and the local community. The study also found that although there is a tendency towards a child-centred approach, teacher-initiated practices are predominant and room for free play is often neglected. Moreover, professionals may feel overwhelmed by the inclusive approach and exercise too little autonomy (Peeters 2019).

Digital education

The introduction of information technologies into early childhood settings is a very recent pedagogical phenomenon. At the same time, multimedia tools for ECEC settings are increasingly being produced for the early education sector (computer games, electronic lexicons, videos, etc.). In the revision of the "Basic Component of Early Education" of 2021, "the basics of computer literacy" was included as a new learning area with compulsory and optional competence specifications that addresses the acquisition of digital knowledge and skills by younger children. These include children's ability to use digital technologies to meet their individual needs, solve educational tasks and develop a positive attitude towards ICT and digitalisation.

The use of digital media in early education is mainly seen as an opportunity to create creative learning conditions, while ensuring that children also acquire awareness of possible harmful experiences. However, lack of funds and of motivation on the part of ECEC centre leaders to use digital media with the children mean that acquiring digital devices is often associated with difficulties. Moreover, the use of computers by preschool children, for example, is not provided for in the standards for "equipping educational institutions with computer technology" (Nosenko et al. 2016).

Monitoring – evaluation

According to the UNICEF study, there is no coherent system of monitoring and evaluation in the ECEC system in Ukraine. Moreover, a lack of trained staff and relevant evaluation instruments are common hindrances. Private, non-accredited ECEC institutions are not evaluated at all (Peeters 2019).

Child-related assessment

Most municipalities use an instrument developed by researchers to measure children's developmental progress. However, it is often not implemented due to time constraints; the results

are sometimes shared with parents, but the parents are rarely involved themselves (Peeters 2019).

Centre-based internal self-evaluation

There is no tradition of internal, centre-based evaluation in Ukraine. The UNICEF study suggests that ECEC staff need professional support here (Peeters 2019).

External evaluation

A quality management system for education is currently being developed in Ukraine to meet the requirements of ISO standards. The new concept for the further development of early education is to be part of the quality assurance. In addition to the Ministry of Education, representatives of UNICEF and the Ukrainian Step-by-Step organisation are also working on this project. The main referential base is the European Quality Framework (EQF). The pilot project launched in 2019 by the Institute for Educational Analysis to systematise statistics on early education is intended to improve monitoring. This was also linked to a study initiated by the Ministry of Education on the quality of early childhood education institutions, which examined education programmes, staff, number of children, materials and finances (Liapunova 2020).

In some municipalities, expert advisers or counsellors visit ECEC settings on a regular basis. UNICEF is working with the ministry to introduce the revised Early Childhood Environment Rating Scale (ECERS-3). However, data storage systems are often lacking (Peeters 2019). Professional counselling services carry out quality audits mainly with regard to pedagogical aspects. The professional supervision of the spatial environment and equipment in ECEC centres poses a number of difficulties, since many things do not directly fall under the responsibility of the settings themselves (e.g. changes regarding safety aspects, fire safety) and therefore there is no budget for improvements. External evaluation is not yet as important as it should be in quality assurance: there is a lack of specialised experts to carry out evaluations, and often a lack of funding in rural areas (Liapunova 2020).

The external evaluation of educational quality and educational standards is provided by the State Agency of Quality of Education (SAQE), which was established in 2017 by the Cabinet of Ministers of Ukraine. The Ministry provides its coordination. One of the main activities of SAQE is conducting institutional audits (State Service of Education Quality of Ukraine 2023).

Inclusion agenda

Children with special educational needs and disabilities

In Ukraine, inclusive education has been a priority since the 1990s. However, as the recent UNICEF study found, the definition of inclusive education still tends to focus on children with disabilities rather than, for example, children from disadvantaged backgrounds. Moreover, ECEC professionals are often not well-trained in this approach (Peeters 2019). The implications associated with the term were and still are very different: In a first phase (until about 2001), “inclusion” was primarily understood to mean medical models of ‘disabilities’ and was based on a deficit concept. In a second phase (until 2010), attempts were then made to integrate children with special educational needs into a system that remained largely unchanged. It was only in the subsequent third phase (from 2010) that attempts were made to implement the principle of inclusion based on the principles of non-discrimination, consideration of diversity and the inclusion of all participants in educational processes (Martynchuk et al. 2021).

Overall, the main attempt has been to broaden the definition of inclusion. In the 2017 Education Act, children to be supported through inclusive education/care are all children who need additional support, either permanent or temporary – this includes children from disadvantaged groups and children from ethnic minorities. In 2017, the Cabinet of Ministers of Ukraine adopted a new regulation on inclusive resource centres (*Inklyusyvno-resursnyi tsentr*), which replaces the abolished system of psychological-medical-educational consultations. The regulation specifically requires local authorities to establish such resource centres for every 7,000 children in rural areas and 12,000 children in urban areas. Their tasks include assessing the special needs of children and developing recommendations as well as providing psycho-educational services and methodological support for professionals. In addition, early intervention services for children from birth to 5 years of age have also been established in ten regions of Ukraine in recent years with the help of donor organisations. In order to support the transition of children from these services to development programmes, the Ukrainian Step by Step Foundation conducted a project in which various institutions participated.

In the ECEC settings themselves, as stated in the “Instruction on the organisation of inclusion groups in kindergartens” (*Instruktsiya z organizatsii inklyuzyvnyh grup u doshkil'nyh zakladah osvity*), parents or other persons may act as volunteer childcare workers. These accompany children with special educational needs throughout the day and provide support when needed. The only requirement for the job is a medical doctor's approval (Putcha et al. 2018).

With effect from 29 July 2015, the Ukrainian Cabinet of Ministers issued Decision 530 "On Amendments to the Regulations for Early Childhood Education Institutions", in which it endorsed the establishment of special needs and inclusion groups as part of ECEC centres for children with special needs.

Based on the conclusions of the Psychological, Medical and Pedagogical Commission (PMPC), inclusive early education centres can be opened at the request of parents in cooperation with the centre director. The latter then decides to establish an inclusive education group that takes into account the specific educational needs of the children.

During the past two years (as of 2020), the number of children with special educational needs attending inclusive early education groups doubled to 4,681 children (Government Portal 2021). Initiatives to integrate children from families who have been displaced within Ukraine into ECEC settings have been very successful. Special training is available for professionals working with these children (Liapunova 2020).

Children with a migration background – Children from Roma communities

According to the law, linguistic minorities in Ukraine are divided into three categories: indigenous peoples, such as the Crimean Tatars, who speak indigenous languages; minorities who speak a European Union language; and minorities who speak a non-EU language, such as Russian. With the amendment to the Education Act 2017 coming into force, minority languages are only spoken as second languages in early childhood education institutions, which actually contradicts the Education Act as a whole and also the statement in the Constitution that every person has the right to be educated in their family language (Right to Education Initiative 2020).

In 2020, Ukrainian was spoken in almost all ECEC institutions (97.9%), and Russian in only 1.2% (SSSU 2021a, 111).

Statistics on migrants are not consistently collected in Ukraine – and where they are compiled, they may contradict one other depending on the source and definition of ‘migration status’ (VoxUkraine 2018). According to data from the International Organisation for Migration in Ukraine, only 293,600 foreigners (less than 0.7% of the population) lived permanently in Ukraine (and had an official entry permit) in 2020. In addition, there were 151,300 people who lived in

Ukraine only temporarily (students, seasonal workers) (IOM Development Fund 2021, 18). In 2021, 32,284 children under the age of 4 were of non-Ukrainian origin (SSSU 2022a). According to Eurostat data for the same year, this was 2.5% of the corresponding age group (Eurostat 2023a).

As in many countries, it is difficult to obtain accurate figures on the Roma community in Ukraine. While the 2001 Ukrainian Census reported 47,600 individuals and 20,000 children, estimates from Roma advocacy groups estimate the figure at least at 80,000 children, who generally have little access to early childhood education opportunities (UNICEF 2021, 37).

The implementation of the Roma Strategy up to 2020 did increase ECEC enrolments among by Roma children – which was mainly attributed to projects implemented by NGOs such as "Blago" or "Step-by-Step" (UN Women Ukraine 2019, 36, 59). Starting in 2021, a new Roma strategy is to contribute to the integration of Roma into society. This strategy is to be implemented by 2026; interim results were to be assessed in 2022 and 2024 (Council of Europe 2021) but will now take longer because of the war.

Parental leave arrangements

Fully paid **Maternity leave** covers 70 calendar days before the birth and 56 calendar days afterwards (Replicon 2022).

Parental leave can be taken up to the child's third birthday not only by the mother or father of the child, but also by grandparents or other relatives who care for the child while the parents work. As a rule, Parental leave is unpaid, unless the employer offers its own payments.

In 2021, the **Childcare Leave** Act 1401-IX came into force, which also grants up to 14 paid calendar days of **Paternity leave** to fathers or other relatives caring for the child. As a rule, however, employers do not pay more than the mandatory minimum amounts. If there are two or more children under 15 in the family, the parents are entitled to an additional ten days. Both parents can benefit from part-time arrangements at work during Parental leave (Willis Towers Watson 2021).

At the end of maternity leave, women employees are granted childcare leave until the child reaches 3 years of age. This leave may also be used either fully or partially by the child's father, grandmother, grandfather, or other relatives who are actually caring for the child (Replicon 2022).

The family receives financial support amounting to 41,280 UAH (€1,021)³. This is paid in two stages: 10,320 UAH (€255) just after the delivery followed by 860 UAH (€21) every month over three years. The maximum amount of the monthly child support for single mothers in 2023 was UAH 2,272 (€56). This monthly allowance has not been increased since 2014 and is currently just over half of the official subsistence level (UNICEF 2021, 81).

In addition, each family either receives a so-called "Baby Package" which includes necessary items for a newborn or a lump sum of 6,300 UAH (€155) (Fakty 2023).

Current challenges for the ECEC system in Ukraine

Country expert assessment by Nataliia Sofii

The most urgent challenges for the ECEC system in Ukraine are those caused by the Russian Federation, which started a full-scale war in February 2022.

³ Conversion rate August 2023

As a result, 70 ECEC institutions have been destroyed totally, and 1,031 have been damaged (Trade Union of Pedagogical Workers of Ukraine 2023).

Additional financial investments are required for repairing these and building new ones.

At the same time, more information is required about possible alternative forms of accessing ECEC through exchanges with other countries. Implementing relevant forms in Ukraine will need to be accompanied by the development of appropriate legal and methodological documents.

Another challenge is to provide psychosocial support to young children and families who have had a stressful experience. Some children have lost their parents, had the experience of bombing and getting injured, or have had to move to another regions of Ukraine or to other countries.

They urgently need the support of their parents who are often suffering stress themselves or who do not fully understand their important role in this process. Therefore, more information for parents with examples of activities they can do with their children at home, in shelters or other places is essential.

On April 2023, the Cabinet of Ministers of Ukraine approved the Concept of Safety of Educational Institutions, where such important issues as psychosocial support, knowledge about how to behave in dangerous situations and in the face of cyber threats were included. The Concept can be an effective tool to make all educational institutions, including ECEC Centres, more safe for all participants of educational process.

The lack of sufficient ECEC institutions is one of the problems which breaks one of the main rights of a child – their right to quality care and education, especially for children from vulnerable groups, i.e. those: with special educational needs; from Roma communities and other national minorities; living in internally displaced families; from rural areas; under three years of age.

According to the State Agency of Statistics of Ukraine only 39.4% of young children were enrolled in ECEC institutions in 2022 (SSSU 2023a).

Another challenge concerns the support of private ECEC centres – at the end of 2022, private ECEC centres comprised only 3.6% of the total number of settings (SSSU 2023a).

Yet another challenge relates to the quality of early childhood education. Here the work of the State Agency of Quality Education is invaluable, in particular by providing institutional audits and methodological materials to ECEC institutions. The Early Childhood Environment Rating Scales (ECERS-3) study was conducted by Ukrainian Institute of Education Development with the support of the Ministry of Education, UNICEF and Ukrainian Step by Step Foundation. Methodological recommendations based on the results of the study can be a good resource for providing higher quality of ECEC (Ministry of Education and Science of Ukraine 2023).

After the main Law of Ukraine "On Education" was adopted in 2017, many relevant changes were made to Ukrainian legislation, also in the ECEC field. However, the new Law on Preschool Education has not yet been adopted.

There is a need for the further development of legal and methodological recommendations to support the implementation of key documents such as the Concept of Early Childhood Education, Professional standards for ECEC teachers and principals, and ECEC educational standards (Basic Component of Early Childhood Education).

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age – even if compulsory schooling starts earlier or later in some countries.

Total population

In 2022, the total population in Ukraine was 40,997,698, showing a steady decline over the past 20 years (2000: 49,114,950; 2010: 45,782,592; 2020: 41,732,779) (Eurostat 2023a).

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate among the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1,13). At 1.16, Ukraine had the second lowest total fertility rate (Eurostat 2023b)⁴.

Children under age 6

Table 4

Ukraine: Number of children under 6 years of age, 2022

Age	Number of children
Under 1 year	270,884
1 year-olds	292,596
2 year-olds	307,472
3 year-olds	334,231
4 year-olds	361,593
5 year-olds	394,094
Total 0 to under 6 year-olds	1,960,870

Source: Eurostat 2023a

In 2022, 2.1% of the total population were children under 3 years of age, 2.7% were children between 3 and 6 years of age. While these shares were mostly slightly higher than the respective EU averages up to 2015, they were significantly lower in 2022, especially for children under 3 years of age.

Table 5

Ukraine: Share of children under 6 years of age in the total population from 2000 until 2022*

Year	Comparison Ukraine/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2010	Ukraine	3.2	2.8	6.1
	∅ EU25 ⁵	3.1	3.1	6.2
2015	Ukraine	3.3	3.3	6.6
	∅ EU28	3.0	3.2	6.2

⁴ Data for **Ukraine** and the **UK** (2021) are from Statista (<https://www.statista.com/statistics/296567/fertility-rate-in-ukraine/> and <https://www.statista.com/statistics/284042/fertility-rate-in-the-united-kingdom-uk/>). Data for the **Russian Federation** (2021) are from WorldBankData (<https://data.worldbank.org/indicator/SP.DYN.TFRT.IN?locations=RU>).

⁵ The data for 2010 (EU25) include the EU25-Länder at that time (AT, BE, CY, CZ, DK, DE, EE, EL, ES, F, FI, HU, IE, IT, LU, LV, LT, MT, NL, PL, PT, SE, SI, SK, UK). The 2015 data (EU28) include the EU25 countries and additional BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

Year	Comparison Ukraine/EU	Under 3 year-olds	3 to under 6 year-olds	0 to under 6 year-olds
2022	Ukraine	2.1	2.7	4.8
	Ø EU27(2020)	2.7	2.9	5.7

Source: Eurostat 2023a, * Own calculations; differences in totals are due to roundings

Single households with children under age 6

In 2021, 6.1% of all households had children under 3 years of age, and 14.9% had children under 7 years old (SSSU 2021b, 11). Only one adult lived in 7.6% of households with children (without age specification). In a quarter (25.5%) of these lone-parent households there are children under 7 years of age (SSSU 2021b, 16f). The latter households in particular often struggle with a lack of financial resources, which do not allow them, for example, to buy necessary medication (34.2%) or pay for doctor's visits (31.5%) (UNICEF 2021, 58).

Employment rates of parents with children under 6 years of age

In 2021, 69.9% of men and 60.7% of women of working age (15–70 years) were in employment (SSSU 2022b). The unemployment rate in 2020 was 9.1% for women and 9.8% for men (SSSU 2021a, 55).

There are no available data on the employment status of mothers and fathers with under 6 year-old children in Ukraine. However, the following two tables present information on the situation among EU countries (*Table 6a*) and among non-EU countries other than Ukraine (*Table 6b*) participating in the SEEPRO-3 study.

Table 6a

Employment rates of parents with children under 6 among EU countries, 2010 und 2022

	2010	
	Mothers, in %	Fathers, in %
Highest rate of employment in 27 EU countries ⁶	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2022	
	Mothers, in %	Fathers, in %
Highest rate of employment in 27 (2020) EU countries ⁷	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Children at risk of poverty or social exclusion

In Ukraine, three criteria are used to define poverty: (1) a person's total expenditure is below 75% of the total monthly per capita expenditure (median); (2) a person's per capita equivalent income is below 60% of the median according to the EU scale; and (3) the EU deprivation criterion, according to which a household has four of new deprivation characteristics. Child poverty is defined on the basis of the Living Conditions Survey.

In 2019, the relative poverty rate in a household with one child was 23.7%, with two children 37.7% and with three children 59.7%. Younger children in particular are more clearly affected by poverty: The relative poverty rate of children under 3 years old was 52.6%, that of 3 to 6 year-olds 46%. In addition, children in rural areas are more often affected by poverty than children in cities and more often when parents are not in employment (UNICEF 2021, 20ff). Overall, one third of households with children are in a situation of material deprivation, 19% in severe material deprivation – this situation is particularly aggravated among single parents (52.2% vs. 31.8%) (ibid, p. 28f).

Overall, the proportion of people living in poverty and receiving social assistance was 63% in 2015, rising to 70.9% in 2018 – falling to 57.4% in 2019 (ibid, p. 15).

For 2021, the overall share of persons at risk of poverty or social exclusion was reported at 23.4% (Eurostat 2023c).

For the period from 2016 to 2020, the National Poverty Reduction Strategy was approved, which was supposed to alleviate the situation through increased employment opportunities or better access to social services, among other things. However, improvements could only be seen at a very low level, if at all. Since the strategy did not consider children according to age-groups, no statements can be made about a possible improvement in child poverty (UNICEF 2021, 73ff). For some years now, the inequalities between rich and poor families with children (data without age

specification) have been worsening: in 2019, rich families spent 5.1 times as much as poor ones (UNICEF 2021, 48).

Glossary

EQF – *European Qualifications Framework*

Outcomes based (knowledge, skills, competences), eight-level reference tool to enable qualification comparisons between countries.

<https://www.cedefop.europa.eu/en/events-and-projects/projects/european-qualifications-framework-eqf>

ECTS – *European Credit Transfer and Accumulation System*

A system for enhancing student mobility through the Europe-wide recognition of credit transfers and credit accumulation in higher education

https://ec.europa.eu/education/resources-and-tools/european-credit-transfer-and-accumulation-system-ects_en

ISCED – *International Standard Classification of Education*

An instrument for comparing levels and fields of education across countries, developed by UNESCO in the 1970s and revised in 1997 and 2011.

<http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>

About the authors

Eunice Lumsden is Professor of Child Advocacy and Head of Childhood, Youth and Families at the University of Northampton. She has considerable experience advising on early childhood policy, workforce qualifications and is a member of the Institute of Apprenticeships and Technical Qualifications, Education and Childcare Route Panel.

Natalie MacDonald is a Senior Lecturer and the Assistant Academic Director for Childhood, Youth and Education at the University of Wales Trinity Saint David. Natalie has a research interest in the role of the adult in play-based pedagogy, concept development, policy and professional learning. Natalie is currently undertaking a Doctorate in Education.

Catriona Rogers is a Senior Lecturer in Early Childhood Studies at Stranmillis University College, Belfast. Having worked in the Early Years sector for over 20 years, Catriona is particularly interested in the areas of professionalism and males in the workforce.

Sarah Burton is an associate lecturer with the Open University, Professional Doctorate student and a senior early years officer in a local authority early years setting in Scotland. She has a background in early years policy, communications and knowledge exchange in the voluntary sector in Scotland.

Preamble

The UK, comprising England, Wales, Scotland and Northern Ireland, has a mixed economy in ECEC with most provision for 0 to 5 year-olds traditionally provided by the private, voluntary and independent (PVI) sector and an early start to compulsory schooling at 5 years (4 in Northern Ireland). More recently there has been an increase in state-funded provision for 3 to 5 year-olds (and latterly for disadvantaged 2 year-olds) in nursery and reception classes in primary schools, with almost all schools now adopting a 4+ admissions policy (in the September after the 4th birthday).

Politically, the UK has been undergoing a period of gradual change over the last 35 years with increasing devolution of responsibilities to its four constituent nations. Governance of ECEC services is amongst the devolved responsibilities. This has resulted in increasing divergence between education and social services policies and systems, including provision and regulation of services for young children and their families and associated workforce policies. This divergence has become more evident between Wales and Scotland and the rest of the UK over the last five years.

While the picture of the ECEC workforce across the UK is confused and confusing there remain some common overarching features across the four nations:

- A mixed economy of care; reflecting in part the UK’s modified neo-liberal political and economic position in championing business/private enterprise and supporting social enterprise and voluntary organisations with state intervention for essential public services
- Higher status accorded to education than to care; based partly on historical associations between caring/mothering as ‘women’s work’ for which no qualifications were necessary
- Teachers with Qualified Teacher Status (QTS) enjoying significantly better pay, career structures, conditions of service and CPD entitlements than other workers due to the different status of education and care and strong unionisation of the teaching workforce combined with differential patterns of employment across the public/local authority and PVI sectors
- Absence of unionisation amongst the non-teaching workforce; poorly paid and poorly qualified women working in relative isolation in small private and voluntary settings are less likely to join unions
- Absence of men, particularly in work with the youngest children
- A predominantly white female workforce
- National specification – whether statutory or through guidance – of minimum standards and curriculum, partly as a means of standardising provision across what is because of the mixed economy approach a highly variable sector
- Regulation and enforcement regimes through inspectorates that act as mechanisms of control, standardisation and accountability and provide information to justify public expenditure
- Competence-based qualification requirements based on national standards and curriculum frameworks
- Despite stated aspirations towards graduate leadership, and progress in developing higher level qualifications, the minimum requirements for leadership of the majority of non-school ECEC settings remain at level 4 EQF/level 3 ISCED in England. In Wales, Scotland and Northern Ireland these have been raised to level 6 EQF/level 5 ISCED.

This report describes in detail the provision and governance of ECEC, workforce structures, qualification and competence requirements separately for each of the four nations. However, where features are largely shared and to avoid repetition, some sections have been integrated.

1. ECEC governance in the United Kingdom

1.1 England: ECEC governance

With a population of 56.5 million (ONS 2022), England is by far the largest of the four nations. Since 2010 there has been a shift in ECEC policy from an integrated policy framework to one focused on educational outcomes. The Department for Education (DfE) has overall responsibility for ECEC and compulsory schooling and Local Authorities in England have specific statutory responsibilities under the Childcare Act 2006 (Legislation.gov.uk 2006) and the Childcare Act 2016 (Legislation.gov.uk 2016a). These include securing sufficient childcare places in their area, providing information to parents, providing information and training to childcare providers and ensuring provision of free childcare entitlement (15 hours for vulnerable 2 year-olds; 15 hours for 3 and 4 year-olds and 30 hours for 3 and 4 year-olds of working parents).

The *Early Years Foundation Stage* (EYFS) (DfE 2023b) sets out the statutory curriculum framework and safeguarding and welfare requirements for provision from 0 up to 5 years and regardless of setting. *Development Matters* (DfE 2021a) is non-statutory curriculum guidance that sits alongside the EYFS.

In England, regulation and inspection of all services for children and young people, including early years, out-of-school and residential childcare as well as schools, is integrated under the Office for Standards in Education, Children's Services and Skills (Ofsted). Ofsted is a non-ministerial government department that reports directly to parliament via the Select Committee on Education. This gives it some degree of independence from ministerial/political oversight by the Department for Education. Her Majesty's Chief Inspector is legally required to provide an annual report on standards in schools and, since 2001, to report separately on standards and issues in early years services. Ofsted registers providers of early years education and childcare (other than schools) on either the Early Years Register (compulsory for provision that includes under-fives) or the Childcare Register (compulsory for provision for children from 5 to 8 years and optional for older age groups or activity clubs). Provision registered on the Early Years Register will be inspected within 30 months of registration and at least once within the next 6 years. Any setting that is judged as 'inadequate' will be inspected again within 6 months and those judged as 'requiring improvement' within a year. Ofsted will prioritise inspections where concerns have been expressed (Ofsted 2021).

Ofsted provides feedback on strengths and areas for development in relation to the inspection framework and explains areas for improvement. Local Authority early years advisory teams provide support to settings to develop their practice, though the extent of support varies across England. Many teams have been reduced as a result of funding cuts and the academisation¹ of schools. This has given schools more autonomy, downgraded the role of local authorities and led to a greater emphasis on mutual support between schools and early years settings through Teaching Schools and system leadership roles (networks of national, local and specialist lead teachers recognised for specific expertise).

Standards, qualifications and registration for teachers – those with Qualified Teacher Status (QTS) and Early Years Teacher Status (EYTS) – are under the direct control of the Department for Education. There is no register for Early Years Practitioners who are qualified at Level 3 on the Regulated Qualifications Framework (RQF) – equivalent to Level 4 EQF.

¹ Academisation is the process by which England is moving toward all schools becoming an Academy. These are independent but state-funded. They vary in size and the policy direction is for all Academies to be part of multi-academy trusts.

1.2 Wales: ECEC governance

Wales has a population of circa 3.1 million (ONS 2021). The National Assembly for Wales (commonly known as the Welsh Assembly) was established in 1999 and has legislative and administrative powers covering all forms of health, education and social services for young children and their families. The system is multi-sectoral, with early childhood education under the auspices of the Welsh Government Department of Education, Social Justice and Welsh Language whereas childminding (home-based childcare provision), day nurseries and parent support are the responsibility of the Department of Health and Social Services. Considerable changes are currently underway to early years services, with policy focusing on creating a single high-quality approach to ECEC that is child centred (Welsh Government 2019).

Unlike in England, an overarching integrated policy framework was included in the Childcare, Play and Early Years Workforce Plan (Welsh Government 2017a) and continues to be reflected in the annual children's plan for Wales (Welsh Government 2022a) and in the development of the new Quality Framework for the sector.

Wales defines early years as the period from pre-birth to the end of the Foundation Phase. The statutory Foundation Phase curriculum framework covers 3 to 7 year-olds in both maintained schools (i.e. primary and nursery schools) and non-maintained settings (pre-schools, playgroups and day nurseries and Flying Start centres). Flying Start (Welsh Government 2017b) is a multi-disciplinary programme based primarily on the universal Health Visiting service that targets extra Health Visitors time and resources on families with children under 4 living in the most disadvantaged neighbourhoods in Wales. Centre-based settings as well as early learning and language development sessions are part of the offer along with parent/family support and home visiting services provided according to assessed need.

In 2015, a statutory *Foundation Phase Profile* (Welsh Government 2016a) was introduced to ensure a nationally consistent baseline assessment during the reception year. This was part of the planned comprehensive *Early Years Development and Assessment Framework* across education and health sectors from birth to 7 years that had been introduced in 2013. The Foundation Phase Profile will also contribute evidence towards the new Early Years Outcomes Framework (Welsh Government 2016b) which provides a tool for results-based accountability that measure the effectiveness of local and national government policies across all aspects of children's health, care, development, wellbeing and safety. Following on from a review of the curriculum in Wales (Donaldson 2015), a new *Curriculum for Wales* for 3–16 year-olds (Welsh Government 2020a) and a *Curriculum for Funded Non-Maintained Nursery Settings* (Welsh Government 2022c) and new assessment arrangements are being developed.

The regulation of services for young children in Wales is not integrated under a single regulator as in England. Instead, Wales chose to keep separate regulation and inspection regimes with early education under ESTYN – the office of Her Majesty's Inspectorate for Education and Training in Wales – and day nurseries and family day care (home-based childcare provision, childminding) under the Care Inspectorate Wales (CIW) that operates a different set of quality indicators. Since 2019 the two organisations have worked together to undertake one inspection of care and education in regulated non-school settings up to the age of 12 and non-maintained settings that provide education to 3 and 4 year-olds that are eligible for part-time funding (ESTYN 2021).

Standards and qualifications for teachers (those with Qualified Teacher Status) and learning support staff are regulated by the Education Workforce Council (EWC 2022). Qualifications to work in early years settings other than schools are approved by Social Care Wales and are regulated by Qualifications Wales. They continue to relate to the national occupational standards set down by employers, workers and other stakeholders through the relevant authority for the sector –

Skills for Care and Development. Social Care Wales is also the registration body for qualified Social Workers; however, unlike in Scotland, there is currently no register of ECEC workers.

1.3 Scotland: ECEC governance

Scotland's legal, educational and qualifications frameworks have long been distinct from those of England and Wales. It has its own elected parliament that operates within a budget settlement determined under an agreed formula with Westminster and makes its own laws with the exclusion of UK-wide reserved matters such as defence, macro-economics and foreign policy. The Scottish Government governs a population of around 5.4 million (ONS 2022). After a close run referendum on independence in 2014, the Scottish parliament has received further delegation of responsibilities to include, for the first time, limited tax raising powers set out in the Scotland Act 2016 (Legislation.gov.uk 2016b).

Compulsory schooling in Scotland starts between 4½ and 5½ years of age. Children born in January and February (who would start aged 4½) have always been permitted to defer their school start date by one year. In 2021, the Scottish Government began a pilot scheme to enable children born from August who would normally start school aged 4½ to 5 to defer for an additional year in Early Learning and Childcare (Scottish Government 2020). It is planned that this will be fully implemented in 2023.

In Scotland, the term Early Learning and Care (ELC) is used rather than ECEC and the Scottish Government's early learning and childcare directorate leads on developing the sector in partnership with local authorities, agencies, the private and voluntary centre-based sector and childminders. Aspects of the provision, funding, staffing, regulation and inspection are split between the education and health and social care sectors.

There are two main bodies overseeing curriculum and practice in the sector: Education Scotland and the Care Inspectorate. Staffing is predominantly governed by the Scottish Social Services Council which sets the standard for childhood practice qualifications and registers staff working in the sector.

National guidance for pre-birth to early primary school: *Realising the Ambition* (2020) was developed by Education Scotland (Education Scotland 2021). Early learning and care settings must also meet National Health and Social Care Standards, developed and inspected by the Care Inspectorate (Care Inspectorate 2017). In February 2022, the Care Inspectorate published *A quality framework for daycare of children, childminding and school aged childcare*, which sets out criteria linked to its health and social care standards (Care Inspectorate 2022). This framework is additional to Education Scotland's *How good is our early learning and childcare*, a self-assessment tool last updated in 2016 (Education Scotland 2016). *Curriculum for Excellence*, sets out education experiences and outcomes for children from age 3 to 18 (Education Scotland 2022).

All settings, including those in schools, must be registered with the **Care Inspectorate**. The Care Inspectorate conducts inspections in all early learning and childcare settings and in school-based early years settings inspects in partnership with Education Scotland, the agency responsible for school inspections. Partnership inspections include joint questionnaires, a joint self-assessment and reporting format and a care inspector present for inspection teams in early years settings that are part of primary schools. However, this partnership arrangement has been criticised in a recent consultation on education agencies (Scottish Government 2022b).

The Scottish Social Services Council sets the Standard for Childhood Practice and registers all leaders/managers of settings, practitioners and support workers. All practitioners are required to meet level 7 of the Scottish Credit and Qualifications Framework, while managers must also gain a BA or Professional Development Award (PDA) in childhood practice (level 9 SCQF). A 'graduate apprenticeship' has been developed which qualifies staff to work at practitioner level but

enables them to add 60 credits of level 9 (SCQF) management modules credits in order gain manager or lead status. This new qualification is being run by the University of the West of Scotland and University of the Highlands and Islands.

It was announced in March 2022 that The Scottish Qualifications Authority (SQA) will be replaced by a new agency in 2024. Until then the SQA accredits all qualifications and is the sole examination and awarding body for both academic and vocational awards outside of universities. Scottish Vocational Qualifications (SVQ) at levels 1 to 8 (levels 1–5 EQF) in the Scottish Credit and Qualifications Framework (SCQF) are based on UK-wide national occupational standards. The SCQF has a total of 12 levels up to PhD with a Bachelor's degree with honours and a PDA at level 9 (level 6 EQF).

Early learning provision in schools may be overseen by senior school leaders, with Head Teachers registered as setting managers with the Care Inspectorate. Head Teachers are also registered with the General Teaching Council for Scotland (GTCS) – the body that sets the standards for entry and career progression for the whole of the teaching profession and approves Initial Teacher Education courses leading to Qualified Teacher Status (QTS) – and will have achieved the 'Standard for Headship qualification' (GTCS 2021). Some local authorities include teachers within their early years settings, or have Head Teachers as managers of multiple settings.

In March 2022, the Scottish Government announced the creation of three new education bodies: a **qualifications** agency (replacing the Scottish Qualifications Authority); a **professional learning, curriculum and assessment** agency and an **inspection** agency (the latter two replacing Education Scotland.) Following wide consultation, the planned operational date is 2024. Early learning and care were mentioned in relation to the importance of the new inspection agency setting a shared inspection framework with the Care Inspectorate (Scottish Government 2022a).

1.4 Northern Ireland: ECEC governance

With a population of over 1.9 million (ONS 2022), the six counties of Northern Ireland form the smallest nation of the UK. It has a complex and often fraught history of governance both from Westminster and self-governance through an elected Assembly based in Stormont. Northern Ireland now has a devolved power sharing arrangement through a National Executive in which the main political parties representing the dominant protestant/unionist majority and the catholic/republican minority have both been guaranteed ministerial appointments and influence. As with Scotland and Wales, the devolved powers of the Northern Ireland Assembly extend across education, health and social welfare. The Department of Education for Northern Ireland (DENI) oversees all education services, including pre-school education and Sure Start. It delegates responsibility for administering early years grants and monitoring Sure Start to regional Childcare Partnerships.

The Sure Start programme provides a range of services for young children under 4 and their families including the Developmental Programmes for 2 to 3 year-olds. There are 39 Operational Sure Start Projects across Northern Ireland in the Top 25% Deprived Areas. Responsibility for Sure Start was originally transferred from the Department for Health, Social Services and Public Safety to the Department for Education Northern Ireland (DENI) in 2006 along with the rest of early years services including childminding and childcare in order to co-locate responsibility within a single department.

The Department of Education launched *Learning to Learn: A Framework for Early Years Education and Learning* (DENI 2013) that set out a strategy for 3 to 6 year-olds from a narrower educational perspective with progress overseen by an Early Years Stakeholder Group representing providers as well as government interests.

Given that the compulsory school starting age is set at the September after a child's 4th birthday (the earliest in the UK), and the preponderance (62%) of school-based nursery class places for 3 year-olds over funded places in the PVI sector (DENI 2013), early years provision outside of schools is largely restricted to day care 0 to 4 year-olds, pre-school groups of mainly 3 year-olds and wrap-around care. Funded places are available for all 3 year-olds and for disadvantaged 2 year-olds (proposed changes mean that target 2 year-olds are likely to have separate provision in future). This is set at a minimum of 12.5 hours per week for 38 weeks in Northern Ireland compared to 30 hours in England, since September 2017.

Staffing ratios for the PVI sector are broadly the same as in England at 1:8 for 3 to 4 year-olds with a level 3 qualified leader. However, this requirement is currently in a state of transition and new leaders are required to hold a level 5 Diploma in Leadership for Care, Learning and Development or the Playwork equivalent in the case of out-of-school care. Meanwhile at least advisory access to someone with a higher level qualification is considered essential but, unlike in Scotland and Wales, this does not have to be a qualified teacher.

The Council for the Curriculum, Examinations and Assessment (CCEA) regulates qualifications and issues curricular guidance for pre-school groups (3 year-olds) with funded early education places and separate curricular guidance for the Foundation Stage (6 to 8 year-olds) in schools.

The pre-school version (CCEA 2018) offers guidance on planning, observation, assessment and record keeping and wider issues such as equal opportunities as well as a curriculum framework. This is broadly similar to other parts of the UK but an emphasis given upfront to the arts and creativity is distinctive.

The Foundation Stage (CCEA 2020) builds on and extends the Learning to Learn Framework from 2013. It introduces Religious Education for the first time as agreed with the four main Christian Churches in Northern Ireland and incorporates 'mutual understanding' into Personal, Social and Emotional Development. These features reflect the unique history and issues of Northern Ireland. Key Stage 1 builds on this, focusing on similar areas as those of the Foundation Stage.

There is a strong tradition of parent/community-run pre-school groups affiliated to Early Years. In addition, churches of both denominations have had a greater role in the provision of education at all levels than in the rest of the United Kingdom. Building on the previous policy for Community Relations, Equality and Diversity in Education, which sought to develop mutual understanding and respect between different communities, the Shared Education Act was introduced in 2016 (DENI 2016).

As in other parts of the UK, only qualified teachers with QTS are allowed to lead classes in maintained nursery and primary schools. Standards for teachers are determined by the General Teaching Council Northern Ireland (GTCNI) (which also regulates teacher registration, initial teacher education and teachers' continuing professional development).

Regulation and inspection of early years services are split. Inspection of funded pre-school education, together with all other phases of education and the safeguarding of pupils within them, is vested in the Education and Training Inspectorate for Northern Ireland (ETINI). However, unlike Ofsted in England, the Education and Training Inspectorate is not responsible for the registration of pre-school groups or for wrap around care, day nurseries, childminders and other children's services. These aspects of early years are deemed care and are registered and inspected on an annual basis by specialist Early Years Teams of Social Workers based with the five local Health and Social Care Trusts.

2. Who belongs to the early years workforce?

2.1 Regular contact staff in ECEC provision

In all four nations, classes in maintained (state-funded) schools and nurseries must be led by a Level 6 teacher with Qualified Teacher Status (QTS), whereas the staffing requirements in the Private, Voluntary and Independent (PVI) sector remain diverse, though there is specific guidance about staff qualifications and ratios. The following tables provide an overview of regular contact staff by nation, first in the Private, Voluntary and Independent (PVI) sector (*Chapters 2.1.1 to 2.1.4*) and then in the Maintained sector (schools) (*Chapters 2.1.5 to 2.1.6*).

Note from the SEEPRO editors: In other country reports, the core professionals (i.e. staff with group or centre responsibility) in these tables are categorised according to one of five ECEC professional profiles adapted from the original SEEPRO study (see *Box 1* at the end of this section). However, since job titles and qualification requirements are so highly variable in the UK, particularly in the PVI sectors of the four nations, a descriptor has been allocated only in those cases where a clear profile is visible.

2.1.1 England: Regular contact staff in the PVI sector

Table 1

England: Regular contact staff in full-day and sessional care, children's centres, family hubs and out-of-school provision by staff type

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education (IPE)	Minimum qualification requirement ECTS credits EQF level ISCED level
Family Hub/ Children's Centre Manager <i>Profile: Variable</i>	Family Hub/ Children's Centre (0–18 or up to 25 for young people with SEND)	Senior Manager	Variable depend- ing on qualifica- tion	Usually Bachelor's degree or equiva- lent with relevant professional qualifi- cation in Social Work (e.g. QQSW), Nursing (e.g. RGN) or Teaching (e.g. QTS or EYPS/EYTS) ECTS credits: 180 EQF level: 6 ISCED 2011: 6
Early Years Teacher (EYTS) <i>Profile: Early Childhood Peda- gogy Professional</i>				
Nursery	Day Nurseries* (0–4 ²) or	Setting Manager	0–5	**From 2014 on- wards:

² **Editors' note:** International data sources use varying ways of presenting the age range of children enrolled in ECEC settings. For the SEEPRO-3 reports we have chosen the following age-inclusive format: **0–2** years for children **up to** 3 years of age and **3–5** years for 3, 4, and 5 year-olds in countries with a primary school entry age of 6 years. In the UK, the corresponding formats vary according to the diverse forms of provision, but in general they are **0–4** and **2–4**, since compulsory schooling starts at age 5 (4 in Northern Ireland).

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education (IPE)	Minimum qualification requirement ECTS credits EQF level ISCED level
Manager or Person-in-Charge <i>Profile:</i> Early Childhood Pedagogy Professional Playgroup or Pre-school Manager or Leader <i>Profile:</i> Early Childhood Pedagogy Professional	Family Hubs/ Children's Centres (0–18 or up to 25 for young people with SEND) plus parent support). Mainly PVI sector Community***/ PVI playgroups and pre-schools (2–4) Children's Centres	Play-group/pre-school manager or Curriculum Leader		Early Years Educator award (see below) ECTS credits: n/a ³ EQF: level 4 ISCED 2011: 4/3
Group/Room Leader OR Early Years Educator (EYE) <i>Profile:</i> Early Childhood Pedagogy Professional	Day Nurseries (0–4) or Family Hubs/ Children's Centres (0–18 or 25 for young people with SEND) plus parent support. Community/PVI playgroups and pre-schools (2–4)	Qualified early years core pedagogue able to work independently and supervise junior staff	0–5	Early Years Educator 2 years upper secondary education plus GCSEs in Maths & English (or equivalent) ECTS credits: n/a EQF level: 4 ISCED: 3
Nursery Nurse OR Playgroup Worker OR Early Years Practitioner OR Early Years Educator (EYE)	Day Nurseries (0–4) or Family Hubs/ Children's Centres (0–18 or up to 25 for young people with SEND) plus parent support. Community/PVI playgroups and pre-schools (2–4)	Qualified early years core pedagogue able to work independently	0–5	Early Years Educator 2 years upper secondary education plus GCSEs in Maths & English (or equivalent) ECTS credits: n/a EQF level: 4 ISCED 2011: 3
Nursery Assistant OR Playgroup Assistant OR Special Needs	Day Nurseries (0–4) or Family Hubs/Children's Centres (0–18 or up to 25 for young people with SEND)	Paid assistant working under supervision.	Not applicable	None mandatory. But must hold RQF level 2 Certificate in Early Education and Care to count within required

³ n/a = not applicable

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education (IPE)	Minimum qualification requirement ECTS credits EQF level ISCED level
Assistant	plus parent support Community/PVI playgroups and pre-schools (2–4)			50% ratio
Apprentice	Day Nurseries (0–5) or Family Hubs/ Children’s Centres (0–18 or up to 25 for young people with SEND) plus parent support. Community/PVI playgroups and pre-schools (2–4)	Paid trainee working under supervision	Early Years (0–5)	Maths and English GCSE intermediate secondary RQF level 2 Working towards RQF level 3 (EQF 4) Early Years Educator award
Parent Volunteer	Family Hubs/ Children’s Centres (0–18 or up to 25 for young people with SEND) plus adult parent support. Community/PVI playgroups and pre-schools (2–4)	Assistant across all areas working under supervision	Not applicable	Not applicable ****Disclosure and Barring Service check required
Play Leader <i>OR</i> Play Worker <i>OR</i> Care Assistant	Out-of-school care facility – before school breakfast club; after school club (3–10) Holiday Play scheme (3–10)	Leading group or activity in provision for young children out of school hours	Variable depending on qualification. Playwork 5–16	None mandatory. Up to the manager to decide. Commonly will hold NVQ level 2/3 or Diploma in Playwork (EQF 3 or 4)

Explanatory notes:

*In Day Nurseries that are part of chains, overall management responsibility may lie with a senior or area manager with day-to-day operation of the setting delegated to the local setting manager who may or may not have a substantial direct role with children. Proprietors of private nurseries are not required to hold any qualifications but must appoint a manager who does.

**Transitional arrangements apply to other relevant level 3 qualifications started before 2014.

***In community playgroups the management function for staff appointments, policy and budgets etc. is vested in a local community management committee with the Playgroup Leader having day-to-day responsibility for the operation of the group.

****The Disclosure and Barring Service provides checks against police records and the statutory lists of those barred from working with children. All those who work with children and/or vulnerable adults must be checked including regular volunteers.

2.1.2 Wales: Regular contact staff in the PVI Sector

Early education and childcare services for children under 12 outside of schools (i.e. day nurseries, childminders, pre-schools, playgroups, out-of-school/holiday play schemes and Flying Start Centres) are regulated and inspected by the Care Inspectorate for Wales (CIW) and are subject to the National Minimum Standards for Regulated Childcare in Wales (Welsh Government 2016c). Staff ratio requirements are the same in Wales as in England. Because ESTYN inspects the funded early learning component in all types of setting, some provision is subject to both forms of registration and inspection. Social Care Wales has overall responsibility for the development of the non-school ECEC workforce and provides a range of training resources for ECEC workers.

Table 2

Wales: Regular contact staff in full-day and sessional care, Flying Start programmes and out-of-school provision by staff type

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Health Visitor <i>Profile:</i> Health Care Professional	May or may not be based in Flying Start Centre. Responsibility extends over whole programme including home visiting and parent support. 0–4 plus adults	Senior Manager	Lifelong (health) plus birth to 3 development	Usually Bachelor’s degree in Nursing plus relevant professional qualification in Health Visiting ECTS credits: 180 EQF level. 6 ISCED 2011: 6
Flying Start Leader	Flying Start: day care and home visiting provision	Manager/ Leader	0–5	Diploma in Leadership for Children’s Care, Play, Learning and Development (Management) ECTS credits: n/a EQF level. 5 ISCED 2011: 5 Diploma**** in Children’s Care, Play, Learning and Development ECTS credits: n/a EQF level. 3 or 4 ISCED 2011: 3
Nursery Manager/Person in charge <i>OR</i>	Day nurseries (0–4)	*Setting manager		
Creche Manager <i>OR</i>	Mainly PVI sector	Setting manager

Apprentice	Day Nurseries (0–4) or Children’s Centres (0–4 plus parent support) Community/PVI playgroups and pre-schools (2–4)	Paid trainee working under supervision	Early Years (0–5)	None mandatory: Intermediate/GCSEs advised. Working towards Level 2 Diploma in Children’s Care Learning and Development
Parent Volunteer	Children’s Centres (0–4 plus adult parent support). Community/PVI playgroups and pre-schools (2–4)	Assistant across all areas working under supervision	Not applicable	Not applicable ****Disclosure and Barring Service check required
Senior Play Leader/ Person in charge Play Worker	Out-of-school care facility: before school breakfast club; after school club and holiday play schemes (4–10)	Leading group or activity in provision for young children out of school hours	4–16	Manager/Leader: Level 3 Diploma in Playwork Playworkers: 50% must hold min. level 2 Diploma in Playwork ECTS credits: n/a EQF level: 3 or 4 ISCED 2011: 3 or 4

Explanatory notes:

*In day nurseries that are part of chains, overall management responsibility may lie with a senior or area manager with day-to-day operation of the setting delegated to the local setting manager who may or may not have a substantial direct role with children. Proprietors of private nurseries are not required to hold any qualifications but must appoint a manager who does.

**In community playgroups the management function for staff appointments, policy and budgets etc. is vested in a local community management committee, with the Playgroup Leader having day-to-day responsibility for the operation of the group.

***Cylch Meithrin are Welsh-speaking playgroups offering total immersion in the Welsh language

****The Disclosure and Barring Service provides checks against police records and the statutory lists of those barred from working with children. All those who work with children and/or vulnerable adults must be checked including regular volunteers.

2.1.3 Scotland: Regular contact staff in the PVI Sector

In Scotland there are three types of professional registration for managing and working in early learning and childcare: Manager/lead practitioner; practitioner; support worker. *Table 3* below

provides an example of the range of professionals in these roles.

In early learning and childcare up to compulsory school age, all settings must be led by a SCQF level 9/EQF level 6 qualified manager, registered either with the Scottish Social Services Council or another professional body such as the General Teaching Council for Scotland (GTCS). For example, a Head Teacher of a primary school may be registered as the manager of a nursery within a primary school setting that provides childcare services. A local authority children’s centre or standalone nursery, or a manager of a private or voluntary sector nursery manager must have, or must have a condition on their registration to gain, an EQF level 6 qualification (i.e. BA in Childhood Practice, Professional Development Award level 9). There is no requirement for a Qualified Teacher Status teacher to be present in any setting though teachers registered with the GTCS are present in some settings.

The language describing early learning and childcare settings varies according to historical identities and geography and services available. They include early years settings, children and family centres, nursery schools, and nursery classes. Some settings include children from birth to school age, some only those from 2/3–5 years, when funding entitlements begin. Some settings provide additional support for parents, such as parent/child groups.

Table 3

Scotland: Regular contact staff in full-day and sessional care

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
Head of Centre, Manager	Nursery School, Children and Family Centre, Under 5s centre, Nursery	Manager/head	0–5	EQF Level 6 – management qualifications as well as a practice qualification (see below) Management qualifications: BA Hons Childhood Practice (SCQF level 10) or PG Diploma or Masters in Childhood Practice (SCQF Level 11) Professional Development Award – SCQF Level 9 or Other professional registrations such as social work, nursing/midwifery, teacher, health professions council, community education, with 60 credits from BA childhood practice or PDA childhood practice. ECTS Credits: 120

Job title	Main ECEC work- place settings and age range	Main roles and positions	Main age- range focus of initial professional education	Minimum qualification requirement ECTS credits EQF level ISCED level
				EQF level: 6 or 7 SCQF level: 9, 10 or 11 ISCED 2011: 6 or 7
(Senior or Lead) Early Years Practitioner/ Childcare Officer/ Child development Educator	All early years settings: School based Nursery classes, Nursery school, Private and voluntary sector settings, Children and family centres, Forest/nature kindergartens	May be in management role, may be working directly with children full time, may combine both roles. May also work with parents in partnership with health and social care professionals. Qualification also appropriate for out-of-school care and work in children's/young people's residential settings.	0–5	SVQ Social Services (Children and Young People) or HNC SCQF level: 7 EQF level: 5
Support worker Assistant	All early years settings: School based nursery classes, Nursery school, Private and voluntary sector settings, Children and family centres, Forest/nature kindergartens	Working with children alongside practitioners. Qualification also appropriate for out-of-school care and work in children's/young people's residential settings.	0–5	May register without qualifications, but must gain them within 5 years. National Certificate in Early Education and Childcare at SCQF Level 6 SVQ Social Services (Children and Young People) at SCQF Level 6 EQF level. 4

2.1.4 Northern Ireland: regular contact staff in the PVI Sector

A 'Home Childcarer' is a form of approved childcare introduced by the Government to allow parents to have approved childcare in their own home and to access childcare benefits and support that is made available by the Government against the cost. Equally families who have children with disabilities may benefit from childcare in their own home.

The minimum qualification requirements for staff working within the early years and childcare sector is set out within Standard 11 of the Minimum Standards for Childminding and Day Care for Children under Age 12. Level 5 qualifications are now established as the minimum attainment levels for Centre Leaders i.e. the person in charge/manager and deputy leaders in full-day care, crèche and sessional care (Children's Care, Play, Learning and Development (CCPLD) and Playwork at level 5). Room Supervisors/Team Leaders and staff who could deputise for the leader working under the supervision of the Manager are required to hold at, the very least, a qualification at level 3 in Early Years or Playwork. 50% of all other childcare staff should have as a minimum a qualification at level 2 in Early Years or Playwork as appropriate to the setting.

Playwork is identified as the most appropriate qualification for staff working in school-age childcare services (SACC).

Childminders for the first time must complete Health and Safety, Paediatric First Aid and Child Protection training every 3 years and are also encouraged to work towards level 2 or level 3 qualifications in Children's Care Learning and Development or Playwork depending on their previous learning and experience.

It should be noted these are minimum qualification requirements and that staff holding higher Level qualifications as listed within the document are also deemed qualified and will meet regulatory requirements. A manager/leader who was currently employed prior to the publication of the Minimum Standards and who has an NVQ/QCF level 3 qualification in CCLD, Playwork or equivalent can apply for another manager/leader post without having to gain a RCF Level 5 qualification⁴. Those currently employed in a deputy manager or other childcare role are required to agree with the employer to undertake a level 5 qualification within an agreed period of time, if applying for the post of manager. In the event of a person acting in a manager or deputy manager role on a temporary basis, the planned arrangements for post holders to achieve their required level 5 qualification must be agreed with the Early Years Team in the local Registering Health and Social Care Trust Early Years team. All managers must have a current Safeguarding and Child Protection Certificate. If this is not the case, this must be achieved as part of the induction process and within one month of appointment. If the Manager is the Designated Child Protection Officer, evidence of certificated training must be in place prior to commencing duties.

2.1.5 England, Wales, Northern Ireland: Regular contact staff in the maintained sector (schools)

Given that the requirements for educational staff in schools derive from the same legislation and are broadly the same in England, Wales and Northern Ireland, *Table 4* applies to all three nations.

⁴ This was to ensure that manager/leaders with legacy qualifications were recognised and did not have to meet the new requirements.

Table 4

England, Wales and Northern Ireland: Regular contact staff in nursery schools and in nursery and reception classes in primary schools by staff type

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education (IPE)	Minimum qualification requirement ECTS credits EQF level ISCED level

Apprentice	Nursery School (2–4) State or Independent sectors** Primary School (2–10) State or Independent sectors	Paid trainee working under supervision	Early Years 0–5	Maths and English GCSE secondary level Working towards level 3 award in relevant sector
Parent Volunteer	Nursery School (2–4) State or Independent sectors Primary School (2–10) State or Independent sectors*	Usually allocated particular tasks such as hearing children read	Not applicable	Not applicable ***Disclosure and Barring Service check required
Play Leader / Play Worker	Out-of-school care facility: before school breakfast club; after school club (3–10) Holiday Play scheme (3–10)	Leading group or activity in provision for young children out of school hours	Variable depending on qualification. Playwork 5–16	No compulsory requirement – decision to employ lies with manager. Commonly will hold level 2 or 3 or Diploma in Playwork.

Explanatory notes:

*Controlled/Maintained/Integrated/Irish Medium sector in NI

**Head teachers are expected to hold or be working towards the post National Professional Qualification for Headship prior to appointment or shortly afterwards.

***The Disclosure and Barring service provide checks against police records and the statutory lists of those barred from working with children. All those who work with children and/or vulnerable adults must be checked including regular volunteers.

2.1.6 Scotland: Regular contact staff in the maintained sector (schools)

Table 5

Scotland: Regular contact staff in nursery schools and in nursery and reception classes in primary schools by staff type

Job title	Main ECEC work-place settings and age range	Main roles and positions	Main age-range focus of initial professional education (IPE)	Minimum qualification requirement ECTS credits EQF level ISCED level
Head Teacher <i>Profile:</i> Pre-primary and/or Primary Education Professional	Head Teacher of a primary school with responsibility for a nursery class or nursery May include children from birth to 5½ years.	Manager/ head	3–12 Early years to upper primary	BA Degree/Postgraduate degree Teaching qualification and registered with General Teaching Council Scotland (GTCS) and hold the Standard for Headship, 60 credit post-graduate certificate at SCQF level: 11 EQF level: 7
Primary (Early Years) Teacher <i>Profile:</i> Pre-primary and/or Primary Education Professional	Nursery class in nursery school Nursery class in primary school 3–4 years Combined reception/nursery unit in primary schools 3–5 years	Class teacher <i>OR</i> Teacher in charge of Nursery/ Reception unit	3–12 Note: no specific requirement for early years training	Bachelor's degree with QTS. Registered with GTCS. ECTS credits: 180 EQF level: 6 ISCED 2011: 6
Primary (Early Years) Teacher <i>Profile:</i> Pre-primary and/or Primary Education Professional	Reception class in primary school 4½–5½ Primary class in primary school 5½–12 years	Class Teacher	4½–5½ 5½–12	Bachelor's degree with QTS. Registered with GTCS. ECTS credits: 180 EQF level: 6 ISCED 2011: 6
Classroom Assistant <i>OR</i> Teaching Assistant <i>OR</i> Special Needs Assistant	Reception class in primary school 4½–5½ Primary class in primary school 5½–12 years	Assistant to class teacher	n/a	No formal qualifications required. Advised: SVQ 2 (Level 4 EQF/level 3 ISCED) in Supporting Teaching and Learning in Schools
Apprentice	Nursery class in nursery or primary school 3–4 years	Trainee working under direction	n/a	Intermediate certificate/ National Award 2 or higher school certificate or SVQ2

Job title	Main ECEC workplace settings and age range	Main roles and positions	Main age-range focus of initial professional education (IPE)	Minimum qualification requirement ECTS credits EQF level ISCED level
	Combined reception/nursery unit 3–5 years Reception class 4½–5½ Primary class 4½–11 years			Working towards SVQ level 3 (EQF level 4) in Children and young people's services
Volunteer (usually parent)	Nursery class in nursery or primary school Combined reception/nursery unit Reception class in primary school	Usually allocated particular tasks such as hearing children read	n/a	**Police check from Disclosure Scotland only

Explanatory notes:

*Head Teachers are expected to have completed the 'Into Headship' programme prior to appointment or shortly afterwards. This is post-graduate in level but not sufficient in itself for the award of a Bologna second cycle degree.

**Disclosure Scotland provides checks against police records and the statutory lists of those barred from working with children. All those who work with children and/or vulnerable adults must be checked including regular volunteers.

Box 1

SEEPRO profile categories for ECEC core professionals (adapted from Oberhuemer, Schreyer, and Neuman 2010)

- **Early Childhood Pedagogy Professional** (specialist focus, 0–6/7 years)
- **Pre-primary Education Professional** (exclusive pre-primary focus 3/4–6 years)
- **Pre-primary and Primary Education Professional** (focus on pre-primary *and* primary education 3/4–10/11 years)
- **Social and Childhood Pedagogy Professional** (mainly broad focus, including ECEC, usually 0–12 years, but sometimes including adults)
- **Social Care/Health Care Professional** (sometimes early childhood focus, sometimes broad focus, including adults)

2.2 Centre leader

All the four nations of the UK have different qualification requirements (see *Tables 1–5*), job descriptions and pay scales in the **PVI sector**. In Family Hubs/Children's Centres the Centre Leader will usually have responsibility for a multi-professional team from health, education and social care.

In the **maintained sector**, Nursery and Nursery School Leaders will be qualified teachers and have requirements to complete headship leadership programmes. Pay scales will vary as will the role of the head, depending on the type of setting it is. For example, some leaders are focused on management responsibilities only, whereas others have additional teaching responsibilities.

2.3 Centre-based posts of responsibility

All settings across the UK have people with specific responsibilities; the names, job descriptions and remuneration, if any, will vary from setting to setting. All settings will have practitioners responsible for safeguarding and special needs. Country specific information is given below.

England/Wales/Northern Ireland: The minimum qualification for any role of responsibility in the PVI sector in England is the level 3 Early Educator qualification or equivalent. In Northern Ireland and Wales, all Deputy Managers and Room Leaders require a level 5 qualification (Diploma in Leadership for Children’s Care, Play, Learning and Development or equivalent). Although training qualifications are available in, for example, pedagogical lead, special needs and safeguarding, it is up to the individual settings to decide on remuneration. Deputy Head Teachers and classroom teachers in Maintained Nurseries or Schools will have Qualified Teacher Status (QTS) and may have specific responsibilities such as Foundation Lead, which would usually attract additional salary or remission. In Northern Ireland, if applying for the post of manager, persons currently employed in a deputy manager or other childcare role are required to sign an agreement with the employer to undertake a level 5 qualification within a specified period of time. In the event of a person acting in a manager or deputy manager role on a temporary basis, the planned arrangements for post holders to achieve their required level 5 qualification must be agreed with the Early Years Team in the local Registering Health and Social Care Trust Early Years team.

Scotland: All post holders with specialist responsibilities must have SVQ Social Services (Children and Young People) or HNC level 7 SCQF (EQF level 5) and in schools hold a teaching qualification.

2.4 Co-ordinating and supervisory staff

Practice in this area varies across the UK, is setting dependent and can be fulfilled by both internal or external practitioners. For example, a PVI chain may have specific roles to coordinate training across all their settings, or regionally. Some local authorities will have advisory teams, often holding a teaching or equivalent qualification to support in certain areas, including improving practice. Those in settings usually hold level 5 qualifications in Wales, Northern Ireland and Scotland and Level 3 in England. In Northern Ireland, Room Supervisors/Team Leaders and staff who could deputise for the leader working under the supervision of the Manager are required to hold, at the very least, a qualification at level 3 in Early Years or Playwork. In Maintained nurseries and schools these roles usually require a teaching qualification.

2.5 Specialist support staff

There are a range of specialist roles within the early years. Some of these roles are setting-based, such as safeguarding, or specific roles in relation to, for example, special education or forest schools. Others are external to the setting, such as Health Visitors, Social Workers and Speech and Language Therapists. In schools, the person responsible for special needs (SENCo) must have mandatory training and all involved in safeguarding must receive regular training.

3. Structural composition of ECEC workforce: qualifications, gender, ethnicity

3.1 England: structural composition of ECEC workforce

Table 6

England: Full-day care and sessional care in PVI Sector: all staff types and highest qualification

Staff categories	2023 / Proportion of workforce in all group-based care in %
Staff with at least a level 6 qualification (degree) EQF 6/ISCED 6	11
Staff with at least a level 5 qualification (Foundation Degree/Diploma/training qualification) (EQF/ISCED 5)	4
Staff with at least a level 4 qualification (post-secondary) EQF 4/ISCED 4	5
Staff with at least a level 3 qualification (Early Educator/A levels/training qualification) (upper secondary) EQF 4/ISCED 3	85
Unqualified staff	No data
Male staff	2
BME (Black and Minority Ethnic) staff or staff with background of migration	18

Source: Childcare and Early Years Providers Survey 2023 (DfE 2023a)

Table 7

England: Proportions of staff in school-based provision offering nursery and maintained nursery schools and classes by highest qualification achieved

Staff categories	2023 / Proportion of workforce	
	In primary schools, in %	In separate nursery schools, in %
Staff with at least level 6 qualification (degree)* EQF/ISCED 6	34	25
Staff with at least level 5 qualification (Foundation Degree/Diploma/training qualification) EQF 5/ISCED 5	4	5
Staff with at least level 4 qualification (post-secondary) EQF 4/ISCED 4	5	4
Staff with at least a level 3 qualification (Early Educator/A levels/training qualification) (upper secondary) EQF 4/ISCED 3	85	83
Volunteers	21	38
Male staff	2	
BME (Black and ethnic Minority) staff or staff with background of migration	16	

Source: Childcare and Early Years Providers Survey 2023 (DfE 2023a)

*Note: Only those with Qualified Teacher Status (QTS) may lead classes/units in maintained nursery and primary schools in the UK

3.2 Wales: Structural composition of ECEC workforce

It is difficult to gain a full picture of the qualifications, gender and ethnicity of the workforce in Wales. The *Childcare, Play and Early Years and Workforce Plan* (Welsh Government 2017a) estimated approximately 23,300 persons working in childcare and Foundation Stage settings, the majority of whom are women. According to the *Review of the Childcare Sector* (Welsh Government 2018) the Care and Social Services Inspectorate Wales (CSSIW) is the key source for information, but their data is not always reliable. The review estimated that 60% of the workforce had a level 3 NVQ qualification (EQF 4/ISCED 3) with a similar percentage holding the qualification in Child's Care Learning and Development (CCLD). They estimated that only 1% of the workforce held a CCLD qualification at level 6 and they were mainly employed in full-day care settings. School data is collected annually by the Education Workforce Council (EWC). In 2021, 0.1% (39) of teachers and 0.2% (70) of registered learning support workers were employed in school-based nurseries. There are no specific data about gender or ethnicity for this phase of education, though overall data for registered teachers in Wales indicated that 91.6% were White, 0.5% of the were Asian/Asian British and 0.2% were Black/African/Caribbean/Black British.

3.3 Scotland: Structural composition of ECEC workforce

Table 8

Scotland: Structural composition of ECEC workforce

Staff categories	2021, Number/Proportion of workforce
Staff with highest qualification (BA Childhood Practice, Professional Development Award level 9) EQF/ISCED 6	This is a requirement for managers of day care for children, including out-of-school care. SSSC* data state that there are 3,304 registrations of managers in Scotland, 46% of which have registered to work towards a higher qualification. The 2021 School Census** states that there were 3,150 graduates (appropriate qualification) in early years settings providing Government-funded places, with 1,533 undertaking the Childhood Practice degree.
Head Teacher/Teacher QTS Degree	980 teachers are listed as working in the early learning and childcare sector. It is not clear whether these are working as practitioners in a setting with children or as managers, i.e. Head Teacher, unlikely to be working directly with children.
Staff with specialist vocational qualification (post-secondary) SVQ 3 or Higher National Certificate HNC – level 7 SCQF – Equivalent to EQF level 5	This is a requirement for practitioners in day care for children – (this figure includes out-of-school care). There are 34,721 registrations of practitioners in Scotland, of which 16% have a registration with a condition, which suggests they are working towards a qualification at this level but are likely to have a lower qualification.
Staff with non-specialist qualification. Unqualified staff	Unknown. Only relevant qualifications are recorded. There are 8,979 registrations of support workers in Scotland, of which 56% have a non-specialist qualification and 4,015 (44%) have no qualification at all.
Male staff	4%

Staff categories	2021, Number/Proportion of workforce
Staff with a BME (black and minority ethnic) background	1% of staff reporting ethnicity
Staff with disability	2% of staff report having a disability.

*Source: SSSC 2021; ** Source: Scottish Government 2021

3.4 Northern Ireland: Structural composition of ECEC workforce

The way that publicly available statistics are held makes it difficult to disaggregate data for difference sections of the early years workforce in Northern Ireland.

4. Initial professional education (IPE)

4.1 Initial qualifying routes – Qualified Teacher Status (QTS)

4.1.1 England, Wales and Northern Ireland: QTS qualifying routes

Initial Teacher Training/Education (ITT or ITE – both terms are in use) leading to Qualified Teacher Status (QTS) is broadly similar, and is mutually recognised, across all the nations of the UK though the precise detail of routes and professional standards varies. ITT for England, Wales and Northern Ireland are presented here as one table while Scotland is presented separately due to the differences in nomenclature for entry requirements and degrees.

Table 9

England, Wales and Northern Ireland: Early Years/Primary Teachers with Qualified Teacher Status (QTS)

Title: <i>Primary (Early Years) Teacher (3–7) with QTS status*</i> Profile: Pre-primary and Primary Education Professional
<p>Entry requirements for all forms of Qualified Teacher Status (QTS): 12 years of schooling, school leaving certificate (A-levels/equivalent), intermediate school certificate passes (GCSE) in English, Maths and a science subject plus success in prescribed professional tests in English and Maths and rigorous interview.</p> <p>Professional studies: All study routes are conducted under the auspices of the relevant regulating authority for ITT*. All routes lead to the award of Qualified Teacher Status (QTS):</p> <ol style="list-style-type: none"> (1) BEd or BA in Education: 3- or 4-year full-time undergraduate honours degree programme at HEI (Higher Education Institution) focusing primarily on education related subjects. Level 6 EQF (2) BA or BSc: 3 or 4-year full-time undergraduate honours degree programme at HEI focusing primarily on core curriculum subject. Level 6 EQF as precursor to routes 3,4,5, and 6 (3) PGCE – Professional Graduate Certificate of Education/Postgraduate Certificate of Education: One or 2 year full-time postgraduate course leading to QTS; postgraduate option includes some Master’s level 7 (EQF) work, professional option undergraduate level 6 only. (4) SCITT/School Direct – school centred initial teacher training with QTS: Entrants must be graduates and undertake a one-year programme based on two schools (not available in Wales) (5) Teach First – innovative two-year salaried leadership development and teacher training programme run by charitable foundation in conjunction with partner HEIs for graduates with commitment to work in socially disadvantaged areas 6) Graduate Teacher Programme (Wales only): following agreed study/training programme in conjunction with one of the 3 approved ITT centres while employed as an unqualified teacher in a school.

Title: Primary (Early Years) Teacher (3–7) with QTS status*

Profile: Pre-primary and Primary Education Professional

(7) Postgraduate Teaching Apprenticeships (England only). This route allows trainee teachers to be employed in schools, combining paid employment and training funded through the Apprenticeship Levy.

Awards:

- (1) Bachelor of Education (Hons) with QTS
- (2) Bachelor of Arts or Bachelor of Sciences (Hons) with QTS
- (3) PGCE – Professional Graduate Certificate of Education/Postgraduate Certificate of Education
- (4) QTS only. Must be linked to HEI for optional Professional Graduate Certificate
- (5) PGCE – Postgraduate Certificate of Education after one year. Option of Master’s Degree in year two.
- (6) QTS only. Optional Professional Graduate Certificate

ECTS credits: 180 or more, depending on route chosen

EQF level: 6** or 7

ISCED 2011: 6 or 7, depending on qualification route. BEd/BAEd = ISCED 655; entry requirement for all other routes = ISCED 650.

Main ECEC workplaces: nursery class in nursery school (2, 3 and 4 year-olds depending on school); nursery class in primary school (2, 3 and 4 year-olds depending on school); combined reception/nursery unit in primary schools (3 to 5 year-olds); reception class in primary school (compulsory education, 4 to 5 year-olds); class leader, lead teacher/curriculum leader in children’s centre, Flying Start Centre or supporting private, voluntary and independent sector settings (0–4 years).

Notes:

*Qualified Teacher Status (QTS) is awarded by the Department for Education in England, the Education Council (EWC) in Wales and the General Teaching Council in Northern Ireland (GTCNI). QTS confers ‘License to Practice’ as a teacher in maintained schools and other provision. Education, training and assessment for the status is solely via approved providers of Initial Teacher Training (ITT).

**Almost all undergraduate degree programmes in the UK are now at Honours level which means they comply with full requirements for 180 ECTS credits at EQF/ISCED level 6. Ordinary Degrees contain less than the full 60 ECTS credits equivalent at level 6 and are only awarded as a fall-back in exceptional circumstances. Theoretically, an Ordinary Degree is still acceptable for QTS.

4.1.2 Scotland: QTS qualifying routes

In Scotland, the General Teaching Council for Scotland (GTCS) regulates all aspects of IPE and subsequent stages of education and training for teachers, accredits university programmes leading to QTS, acts as a clearing house and administers the Teacher Induction Scheme. All teachers working in Scotland are required to register with the GTCS and the annual registration fee provides the regulator with an income. Once registered, teachers must adhere to the GTCS professional code of conduct. It has the power to investigate complaints/accusations of abuse and to remove a teacher from the register if found to be in serious breach of the code.

Table 10

Scotland: Primary/Pre-Primary Teachers with Qualified Teacher Status (QTS) – registered with GTCS

Title: Qualified Primary Teacher with QTS (4–12)

Profile: Pre-primary and Primary Education Professional

Entry requirements:*

12 years of schooling, *plus*

(a) A National Qualification at SCQF level 6/7 (EQF level 3), for example Higher or Advanced Higher Award, one of which must be in English (SCQF 6) *and*

Title: Qualified Primary Teacher with QTS (4–12)
Profile: Pre-primary and Primary Education Professional

(b) A National Qualification Course Award at SCQF level 5 (EQF level 2), one of which must be Mathematics.

In addition, all applicants must be members of the Protecting Vulnerable Groups Scheme following criminal record checks.

Professional studies:

There are **3 main routes** leading to the award of QTS:

- (1) ** 4-year full-time combined undergraduate degree at University leading to a named award which *includes* QTS Level 6 EQF/ISCED
- (2) ** 4-year full-time concurrent undergraduate degree leading to a named award *plus a separate* teaching qualification
- (3) a one-year (or equivalent part-time) Professional Graduate Diploma of Education following on from a successfully completed undergraduate degree programme.

Awards:

- (1) ** "Master" of Education/Primary Education or BA Hons in Education /Primary Education (QTS fully integrated)
- (2) *** "Master" of Education /Primary Education or BA Hons in Education /Primary Education *plus* QTS
- (3) PGDE Professional Graduate Diploma in Education/ Primary Education

ECTS credits: 180 or more, depending on route chosen

EQF level: 6 or 7

ISCED 2011: 6 or 7, depending on qualification route (Routes 1 and 2 = ISCED 655. The entry requirement for PGDE = ISCED 650)

Main ECEC workplaces: nursery class in nursery school (3 and 4 year-olds); nursery class in primary school (3 and 4 year-olds, depending on school); combined reception / nursery unit in primary schools (3 to 5 year-olds); reception class in primary school (5 year-olds); primary class in primary school (5 to 12 year-olds); Early Years Teacher (regular within setting or external/ad-hoc) in Local Authority or private and voluntary pre-school providers under partnership agreement (mainly 3 to 5 years).

Notes:

*Each university sets its own entry requirements which are normally higher than the minimum because of competition for places.

**Scottish undergraduate degrees are traditionally 4 years (compared to 3 in England and Wales). This is normally explained as being related to the greater breadth (and hence less subject specialisation) in the school leaving certificate (Scottish Higher system).

***In Scotland, by convention the older universities name their undergraduate degrees 'Masters', although they are not at Master's level and only comply with Bologna First Cycle Degrees at EQF level 6.

4.2 Initial qualifying routes (non-QTS)

4.2.1 England

Early Years Teacher Status (EYTS) was introduced in England in 2013 as a replacement for the broader based Early Years Professional Status. It is awarded by the National Council for Teaching and Leadership (an executive agency of the Department for Education). EYTS does **NOT** confer QTS for employment in maintained schools throughout the UK. Those with EYTS may only be employed as unqualified teachers or support staff in maintained schools and are not subject to the same terms and conditions as teachers. However, those with EYTS may be employed as teachers in independent schools and also in the increasing number of state supported free schools and academies, as well as teachers/ leaders/ managers throughout the PVI sector. Education, training and assessment for the status takes place via approved providers of Initial Teacher Training (ITT).

Table 11

England: Early Years Teachers with EYTS

<p>Title: <i>Early Years Teacher (0–5) with EYTS</i> Profile: Early Childhood Pedagogy Professional</p>
<p>Entry requirements: 12 years of schooling, school leaving certificate (A-levels/equivalent), intermediate school certificate passes (GCSE) in English, Maths and a science subject.</p> <p>Professional studies: All routes to EYTS (see below) are usually conducted in association with a higher education institution although some routes are provided by training providers.</p> <p>(1) <i>Undergraduate Entry:</i> BA (Hons) ECS: 3 or 4-year full-time undergraduate Bachelor of Early Childhood Studies course with EYTS at a University/ Higher Education Institute (level 6 EQF: 180 ECTS credits).</p> <p>(2) <i>Graduate Entry</i> One-year full-time postgraduate course at HEI leading to EYTS designed for graduates from any discipline with little or no experience of work with young children; postgraduate option includes some Master’s level 7 (EQF) study, professional option includes undergraduate honours level 6 only.</p> <p>(3) <i>Graduate Employment-based:</i> For graduates with relevant or non-relevant degree plus experience: 9 -12 months of part-time study at HEI leading to EYTS while employed in relevant role.</p> <p>(4) <i>Undergraduate Route:</i> Three or four-year degree in early years that leads to award of EYTS.</p> <p>(5) <i>Assessment only route:</i> For graduates with relevant degree and extensive relevant experience: 3 months in which to demonstrate and be assessed across all aspects of EYTS standards.</p> <p>Awards:</p> <p>(1) *Bachelor of Early Childhood Studies or equivalent (min 3 year honours degree) with EYTS</p> <p>(2) PGCEYE – Professional Graduate Certificate of Early Years Education with EYTS /Postgraduate Certificate of Early Years Education with EYTS</p> <p>(3) EYTS only. Optional Professional Graduate Certificate</p> <p>(4) EYTS only. Must be linked to HEI for optional Professional Graduate Certificate</p> <p>(5) EYTS only</p> <p>ECTS credits: 180 or more, depending on chosen route</p> <p>EQF level: 6 or 7</p> <p>ISCED 2011: 6 or 7, depending on route taken. BA (Hons) Early Childhood Studies = ISCED 655. Entry requirement for other routes = ISCED 650</p> <p>Main ECEC workplaces: nursery class, nursery school (2, 3 and 4 year-olds, depending on school); nursery class in primary school (2, 3 and 4 year-olds, depending on school, working under the direction of lead teacher); combined reception/nursery unit in primary schools (3 to 5 year-olds, working under direction of unit head); reception class in primary school (compulsory education, 4 to 5 year-olds; lead teacher in children’s centre or private, voluntary and independent sector settings including those registered as schools (2–4 or 0–4 years); leader/manager in smaller pre-schools, playgroups and day nurseries (PVI sector, 2–4 or 0–4 years); curriculum leader in larger pre-schools, playgroups and day nurseries (PVI sector, 2–4 or 0–4)</p>

Note:

*The undergraduate route to EYTS is linked to a BA degree that meets the subject benchmarking statement of the Quality Assurance Agency for Higher Education related to Early Childhood Studies.

The Early Years Educator (see *Table 12*), introduced from 2013, is a RQF level 3 (EQF 4/ISCED 3) qualification that meets the prescribed standards and other requirements of the National College for Teaching and Leadership (NCTL) but is awarded by a range of independent awarding bodies (such as CACHE, Edexcel and City and Guilds) that are regulated by Ofqual. Relevant study can be undertaken at a broad range of schools and Colleges of Further Education or in employment. Assessment practice must be consistent with the assessment principles set down by the Skills for Care and Development – the relevant sector skills body.

Table 12

England: Early Years Educator

<p>Title: <i>Early Years Educator</i> (core pedagogue with various job titles) Profile: Early Childhood Pedagogy Professional</p>
<p>Entry requirements: Minimum age 16. 10 years' schooling and intermediate school leaving certificate (GCSE) in at least 5 subjects including Maths and English.</p> <p>Professional studies:</p> <p>(1) <i>RQF level 3 Certificate and Diploma in Childcare and Education</i>. Designed as two years full-time study in a school or college of further education with extensive placements. License to practice.</p> <p>(2) <i>RQF level 3 Diploma in Early Years Education and Care</i> or <i>Level 3 Diploma for the Early Years Workforce</i> depending on options. May be studied part-time by those in employment. Equivalent to one – two years of full-time study. License to practice.</p> <p>Awards:</p> <p>(1) Nested suite of awards building sufficient credit points for admission to HE and award of Level 3 Diploma encompassing EYE license to practice</p> <p>(2) Single award of Level 3 Diploma encompassing EYE license to practice.</p> <p>ECTS credits: not applicable</p> <p>EQF level: 4</p> <p>ISCED 2011: 3</p> <p>Main ECEC workplaces: <i>Day nursery (0 to 4 years); Pre-school/playgroup (2/3 to 4 years), Children's Centre (0 to 5 years)</i></p>

Note:

Exact name of qualification depends on choice of Awarding Body and optional units which confer some degree of specialism around required core specified in qualification criteria by the Department for Education.

In 2020, the Government introduced T Levels (equivalent to 'A' Levels), with Education and Childcare being among the first to be launched. Embedded in the qualification are the Early Years Educator standards to ensure those with the T Level meet the full and relevant criteria for early years practice (HM Government n. d.)

There are no minimum qualification requirements for Teaching Assistants or Special Needs Assistants in maintained nursery or primary schools; however, the above EYE award or its predecessors might be considered relevant and helpful, particularly for the nursery age group.

4.2.2 Wales: Initial ECEC qualifying routes (non-QTS)

Level 4 and 5 Diplomas have been developed for leaders and managers of practice that build on, and provide a progression route from the established level 2 and 3 Certificate/Diploma in Children's Care, Play, Learning and Development. Currently it is only compulsory for those leading Flying Start programmes in Wales.

Table 13

Wales: Lead practitioners/managers of early years services

<p>Title: Leadership for Children's Care, Play, Learning and Development 0–19 Profile: Social and Childhood Pedagogy Professional</p>
<p>Entry requirements: Minimum age 19. Other requirements at discretion of Approved Centre depending on experience.</p> <p>Professional studies:</p> <p>1. Full time education and training route: 1 – 2 years in Further and Higher Education College with extensive work placements. Maybe taken as part of wider Degree or Higher National Diploma programme.</p>

Title: Leadership for Children’s Care, Play, Learning and Development 0–19 Profile: Social and Childhood Pedagogy Professional
<p>2. Work-based route: Around 12–18 months part-time study (in-service training and/or distance learning or day release) while in full time employment.</p> <p>Awards:</p> <ol style="list-style-type: none"> 1. Level 4 Diploma in Leadership for Children’s Care, Play, Learning and Development (Management) (Wales)* 2. Level 5 Diploma in Leadership for Children’s Care, Play, Learning and Development (Management) (Wales and Northern Ireland) plus other HE credit-bearing awards 3. Level 5 Diploma in Leadership for Children’s Care, Play, Learning and Development (Management) (Wales and Northern Ireland) <p>ECTS credits: Depends on route chosen</p> <p>EQF level: 5</p> <p>ISCED 2011: Depends on route.</p> <p>Main ECEC workplaces: Flying Start/Sure Start children’s centre (0 to 4 years plus parent support); Flying Start home visiting programme; family support programmes for parents with children 0–4 years.</p> <p>*Level 4 is knowledge based and must be undertaken before completing the new Level 5 Diploma in Leadership for Children’s Care, Play, Learning and Development (Management) (Wales).</p>

The Level 3 (EQF 4) Diploma in Children’s Care, Play, Learning and Development (*Table 14*) is the minimum requirement for counting as a qualified core professional in Wales and Northern Ireland. Relevant study can be undertaken at a broad range of schools and colleges or in employment.

Table 14

Wales: Early Years Services Practitioner (core professional)

Title: Children’s Care, Play, Learning and Development practitioner (various job titles) Profile: Early Childhood Pedagogy Professional
<p>Entry requirements: Minimum age 16. 10 years schooling. Other requirements at discretion of Approved Centre depending on experience.</p> <p>Professional studies:</p> <ol style="list-style-type: none"> 1. Full time education and training route: Two years in school or FE College as part of wider general/vocational education and training programme with work placements. Equivalent qualification can be obtained through studying an Early Years Bachelor’s degree or Diploma of Higher Education with Early Years Practitioner Status (EYPS)*. 2. Work-based route: Around 12–18 months of part-time study (in-service training and/or distance learning or day release) while in full time employment. 3. Apprenticeship route: Normally 2 years of part time study and training as part of wider general or vocational education programme while employed as trainee. <p>Awards:</p> <ol style="list-style-type: none"> 1. Level 3 Diploma in Children’s Care, Play, Learning and Development (Wales and Northern Ireland) – maybe combined with additional qualifications such as GCSEs and ‘A’ levels or other academic credit-bearing award. 2. Level 3 Diploma in Children’s Care, Play, Learning and Development (Wales and Northern Ireland) only 3. Level 3 Diploma in Children’s Care, Play, Learning and Development (Wales and Northern Ireland) – combined with additional generic education and skills awards. 4. BA Early Years Education and Care/Early Childhood with Early Years Practitioner Status*. 5. Higher Education Diploma in Early Years Education and Care/Early Childhood with Early Years Practitioner Status*. <p>ECTS credits: n/a</p>

<p>Title: Children’s Care, Play, Learning and Development practitioner (various job titles) Profile: Early Childhood Pedagogy Professional</p>
<p>EQF level: 4 ISCED 2011: 3 Main ECEC workplaces: day nursery (0–4 years); pre-school/playgroup (2/3 to 4 years); <i>Flying Start</i> children’s centre/home visiting programme (0–4 years)</p>

**Note:* Precise name may vary depending on training provider and choice of options. Higher National Certificates (HNCs) are predominantly provided by Further and Higher Education Colleges for students continuing in full-time education and training but with a significant component of work placements.

As in England, there are currently no minimum qualification requirements for Teaching Assistants or Special Needs Assistants in maintained nursery or primary schools in Wales and Northern Ireland, however the above CCLD award might be considered relevant and helpful, particularly for the nursery age group, as well as qualifications in Supporting Teaching and Learning in Schools which are not detailed here.

4.2.3 Scotland: Initial ECEC qualifying routes (non-QTS)

Outside the school sector, all Childcare Workers in Scotland are regulated by the Scottish Social Services Council (SSSC) which sets professional standards, registers suitably qualified workers and deals with complaints against individuals. There are three levels of registration: (1) Lead Practitioner/Manager – graduate (SCQF level 9 EQF level 6) standard in Childhood Practice for leading any service for children and young people; (2) Core/Independent Practitioner – SCQF level 7, EQF level 5; (3) Support worker – SCQF level 6, EQF level 4 – working under direction. Implementation of the new requirements will take some years, therefore the SSSC is currently dealing with legacy qualifications and allowing existing experienced managers/leaders to register on the basis of the qualifications that were relevant when appointed.

Table 15

Scotland: Children’s and Young People’s Services Lead Practitioner/Manager (Standard in Childhood Practice)

<p>Title: Children’s and Young People’s Services Lead Practitioner/Manager Profile: Social and Childhood Pedagogy Professional</p>
<p>Minimum entry requirements Flexible depending on previous experience and qualifications and chosen route.</p> <ol style="list-style-type: none"> 1. Universities normally require 12 years of education and Scottish Higher/Advanced Higher Diplomas (SCQF 6/7; level 4 or 5 EQF) to include English and Maths 2. National agreements allow for Accreditation of Prior Certificated Learning (e.g. SVQ 4/HNC/HND – Higher National Certificate/Diploma) in relation to Childhood Practice degree programmes. 3. SVQ 4 or equivalent vocational qualification (EQF level 5) 4. Undergraduate Degree (EQF/ISCED level 6) <p>Professional studies:</p> <ol style="list-style-type: none"> 1. 4-year full-time undergraduate degree leading to named award with eligibility for graduate registration 2. SVQ 4 (or equivalent) followed by 2–3 years full-/part-time undergraduate degree leading to named award with eligibility for graduate registration 3. SVQ 4 followed by 3 to 4 years of part-time study while continuing in employment, with eligibility for graduate registration 4. Degree followed by graduate training programme in childhood practice <p>Awards:</p>

<p>Title: <i>Children’s and Young People’s Services Lead Practitioner/Manager</i> Profile: Social and Childhood Pedagogy Professional</p>
<ol style="list-style-type: none"> 1. BA Hons Childhood Practice 2. B BA Hons Childhood Practice 3. SCQF Level 9 Childhood Practice 4. Graduate Diploma Programme in Childhood Practice <p>ECTS credits: 180 or more, depending on chosen route. EQF level: depends on route. BA Hons EQF level 6; BA Ordinary and SCQF Level 9 are EQF level 6 ISCED 2011: depends on route: 1, 2 and 3 are ISCED 550/650. Entry requirement for 4 is 650 Main ECEC workplaces: General/Day Care Manager in children’s centre or private and voluntary day nurseries (2–4 or 0–4 years); Leader/Manager in LA partnership pre-schools, voluntary and community playgroups and day nurseries (2–4 years); Leader/Manager in out-of-school and holiday provision (5–12 years)</p>

Table 16

Scotland: Children’s and Young People’s Services Practitioner

<p>Title: <i>Children’s and Young People’s Services Practitioner</i></p>
<p>Minimum entry requirements: For SVQ 3: None specified – at the discretion of local SQA (Scottish Qualifications Authority) approved centre (primarily a work-based qualification for existing employees)</p> <p>For Higher National Certificate (HNC): None specified – at the discretion of local SQA approved centre. Intermediate and higher certificates advised.</p> <p>Professional studies:</p> <ol style="list-style-type: none"> 1. Scottish Vocational Qualification 3 in Children and Young People’s Services 2. Higher National Certificate in Children and Young People’s Services or similar* <p>Award: depends on the route chosen. ECTS credits: n/a EQF level: 4 or 5 ISCED 2011: 4 or 5, depending on route chosen Main ECEC workplace: LA, Partnership and Private Day Nurseries (0–4); Private, voluntary and community/partnership pre-schools and playgroups (2–4); Out-of-school clubs (before and after school and holidays; 5–12)</p>

Notes:

*Precise name may vary depending on training provider and choice of options. HNCs are predominantly provided by Further and Higher Education Colleges for students continuing in full time education and training but with a significant component of work placements.

As in England and Wales, there are no minimum qualifications for Teaching Assistants or Special Needs Assistants in maintained nursery/primary schools in Scotland, though they may hold or achieve a variety of qualifications not detailed here.

4.2.4 Northern Ireland: Initial ECEC qualifying routes (non-QTS)

The person in charge/manager and deputy should have at least a qualification at QCF Level 5 Diploma in Child Care, Play, Learning and Development or Playwork; or a relevant occupational qualification in early years’ education, social work, nursing, teaching or health visiting; and 2 years’ experience working with children aged 0–4 years.

Team leaders or supervisors should have at least a qualification at QCF Level 3 Diploma in Child Care, Play, Learning and Development or Playwork.

At least 50% of all other childcare staff should have a minimum qualification at QCF Level 2 Diploma in Child Care, Play, Learning and Development or Playwork. Other staff should be in the

process of gaining this qualification within a reasonable time. Where staff have previously attained Level 2, 3 or 5 NVQ qualifications in Early Years Care and Education, this will be an acceptable alternative to QCF Diplomas.

Table 17

Northern Ireland: ECEC Manager

Title: <i>Leadership Full Day Care, Crèche and Sessional Care</i> Profile: Early Childhood Pedagogy Professional
<p>Entry requirements: Level 5 = minimum acceptable qualification*</p> <p>Professional studies:</p> <ol style="list-style-type: none"> 1. Title: <i>Room Supervisor Full Day Care, Crèche and Sessional Care</i> Profile: Early Childhood Pedagogy Professional
<p>Entry requirements: Level 3 = minimum acceptable qualification</p> <p>Professional studies:</p> <ol style="list-style-type: none"> 1. Full-time education and training routes mainly in regional colleges 2. Part-time work-based routes <p>Awards**:</p> <ol style="list-style-type: none"> 1. Level 3 Children’s Care, Play, Learning and Development 2. Level 3 Diploma in Playwork 3. CACHE Extended Diploma in Children’s Care, Play, Learning and Development 4. BTEC National Diploma in Children’s Care Learning, Play and Development <p>ECTS credits: not applicable EQF level: 5 ISCED 2011: 655 Main ECEC workplaces: day nursery (0–3 years); Pre-school/playgroup (2–3 years); children’s centre (0–4 years)</p>

*Based on Acceptable Qualifications for the Early Years, School Age Childcare, Childminding Sectors and Home Childcarers in Northern Ireland (2016, updated 2020)

** Some qualifications require extra modules to be undertaken.

4.3 Competences, curricula and pedagogic-didactic approaches in IPE programmes

4.3.1 UK wide: Competence specifications and curricula

It has become clear from the above that a variety of approaches to qualifications for work with young children has evolved across the UK, dependent largely on the different governance and inspection regimes. The competency and curriculum requirements in turn reflect those differences. One aspect that is a common thread running through education and training programmes at all levels across the UK is a requirement to incorporate the core or generic skills essential for employment. These include amongst others: communication; application of number; use of information technology; problem solving; working with others/teamwork; managing own learning/ learning to learn.

The profile and level of core skills required for any particular job/subject area, and whether these are identified separately or embedded in other aspects, varies across the IPE programmes.

Competence specifications are based on national standards and curriculum frameworks. These not only differ between the nations (strongly educational in England, based on generic social care models in Wales and Scotland), but determine core professional requirements at different levels: currently at level 4 EQF and level 4 ISCED in England and at level 5 EQF/level 4 ISCED and level 6 EQF/level 5 ISCED in Scotland, Wales and Northern Ireland (see *Appendix II* for explanatory note on UK Qualification Levels).

QTS competence specifications and curricula

Initial Teacher Training with QTS is delivered in three main educational phases: primary 3–11; middle 7–14 and secondary 11–19. Within the primary phase, some providers offer the opportunity to focus on lower primary/early years 3–7 (nursery, reception and Key stage 1) or upper primary (7–11). However, all ITT trainees are required to have a working knowledge of the key stages above and below in order to facilitate progression and to understand how key stages build on one another throughout the school curriculum to 19. Once qualified, a teacher with QTS may be deployed with any age range in the school system at the discretion of the Head Teacher.

Although ITT is similar in nature and its outcomes mutually recognised across the UK, the competency requirements for Teachers with QTS have developed in divergent ways to reflect the educational and cultural context of each nation. For ease of comparison, and to reduce repetition, the relevant information for qualified teachers with QTS across the four nations will be presented before other types of qualification are considered.

The curriculum is not separately prescribed outside the competency specification but is devised locally by each approved provider of Initial Teacher Training to ensure the underpinning knowledge, skills and attitudes necessary to enable trainees to meet all aspects of the Teacher Standards.

A variety of pedagogic methods may be used in ITT depending on the approved local ITT provider (generally a Higher Education Institution (HEI) or school consortium linked to an HE provider) and chosen route. These may range from lectures and seminars to practical workshops and laboratory classes, demonstrations, teaching observations and work-based learning. Increasingly, ITT includes elements of distance learning and/or self-directed enquiry and problem solving. All ITT courses must include a minimum of around 50% placements/work-based learning as specified by the regulator.

An essential pedagogic/didactic feature of QTS (and also of EYTS) is building the capacity for

reflection and self-awareness in order to learn from experience. The ideal of the reflective and reflexive practitioner is one who constantly reviews what they have done and the impact it has had on themselves and others (both children and adults) within a cycle of continuous improvement. This is closely related to the highest level of the key/core skill of 'learning to learn'.

Early Years Initial Teacher Training (EYITT, non-QTS) competence specifications and curricula

As with QTS, the curriculum is devised by local approved providers of Initial Teacher Training to provide the underpinning knowledge, skills and attitudes necessary to support these detailed competence specifications. The core of the curriculum is based around children's development, learning, health and wellbeing in the context of family, culture and services (the ecological context), the Early Years Foundation Stage requirements and the teaching of early literacy and numeracy. The supporting advice issued by the Department for Education provides the same list of core content as for Qualified Teacher Status; however, the emphasis on ecological context expressed in wider documentation related to EYTS is distinctive, as is Standard 7 on safeguarding and promoting welfare. Early Years Teachers with EYTS specialise in the Early Years Foundation Stage from 0 to 5 covering babies and toddlers as well as pre-primary education and care and are required to have a working knowledge of primary school Key Stage 1, the phase above, in order to facilitate progression. They must also understand how the other key stages build on one another throughout the National Curriculum up to the age of 18.

General competence specifications and curricula (non-QTS)

The main focus of the curriculum is a holistic approach to young children's health, development and learning from birth to 5 (7 in Wales) and how best to support this. The principles and values of child-centred practice are introduced along with opportunities to implement principles, theories and approaches in practice.

A variety of pedagogic methods may be used across all forms of qualification for work in education and children's services, depending on level, curriculum focus and chosen route. These may range from lectures and seminars to practical workshops and laboratory classes, demonstrations, teaching/childcare observations, modelling, coaching and work-based learning. Increasingly, all training includes elements of distance learning and/or self-directed enquiry and problem solving and in addition all learners are encouraged to be reflective and reflexive in relation to their learning experiences and to be able to self-evaluate their strengths, weaknesses and ongoing learning and development needs. All of the programmes must include a substantial component of placements/work-based learning and assessment as specified by the relevant awarding body or regulator. For example, the Level 3 Diploma in Care, Learning and Development requires a minimum 700 hours of experience in real work settings as an employee or on placement, i.e. around 50% of all learning hours. Assessment methods include, for example: observation, reflective accounts, critical incident analyses, self and peer assessment, portfolios, learning contracts, case studies, projects and simulations/virtual environments as well as critical analysis of information and evidence from reading or lectures, particularly at higher levels. However, the larger part of assessment must be based on the trainee's experience and performance in work/placement settings.

4.3.2 England: Competence specifications for Teachers with QTS

Table 19

England: Competence Specifications for Primary (Early Years) Teachers (3–7) with QTS

Teachers' Standards
<ol style="list-style-type: none"> 1. Set high expectations which inspire, motivate and challenge pupils 2. Promote good progress and outcomes by pupils 3. Demonstrate good subject and curriculum knowledge: (if teaching early reading) demonstrate a clear understanding of systematic synthetic phonics*; (if teaching early mathematics) demonstrate a clear understanding of appropriate teaching strategies* 4. Plan and teach well-structured lessons 5. Adapt teaching to respond to the strengths and needs of all children 6. Make accurate and productive use of assessment 7. Manage behaviour effectively to ensure good and safe learning 8. Fulfil wider professional responsibilities

Notes: Standards and detailed criteria are generic to all teachers regardless of the age range. The two criteria with an asterisk are specific to teachers following an early years specialism (3–7). For a full list of Teachers' Standards and criteria see https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1040274/Teachers__Standards_Dec_2021.pdf

Source: Department for Education 2021c

Table 20

England: Competency Framework –Teachers' Standards (Early Years) – non-QTS

Standards	Criteria
	An Early Years Teacher must be able to:
Set high expectations which inspire, motivate and challenge all children	<ul style="list-style-type: none"> – Establish and sustain a safe and stimulating environment where children feel confident and are able to learn and develop – Set goals that stretch and challenge children of all backgrounds, abilities and dispositions – Demonstrate and model the positive values, attitudes and behaviours expected of children.
Promote good progress and outcomes by children	<ul style="list-style-type: none"> – Be accountable for children's progress, attainment and outcomes – Demonstrate knowledge and understanding of how babies and children learn and develop – Know and understand attachment theories, their significance and how to promote secure attachments effectively – Lead and model effective strategies to develop and extend children's learning and thinking, including sustained shared thinking – Communicate effectively with children from birth to age five, listening and responding sensitively – Develop children's confidence, social and communication skills through group learning – Understand the important influence of parents and/or carers, working in partnership with them to support the child's wellbeing, learning and development.
Demonstrate good knowledge of early learning and EYFS	<ul style="list-style-type: none"> – Have a secure knowledge of early childhood development and how that leads to successful learning and development at school – Demonstrate a clear understanding of how to widen children's experience and raise their expectations – Demonstrate a critical understanding of the EYFS areas of learning and development and engage with the educational continuum of expectations, curricula and teaching of Key Stage 1 and 2 – Demonstrate a clear understanding of systematic synthetic phonics in the teaching of early reading – Demonstrate a clear understanding of appropriate strategies in the teaching of early mathematics.

Standards	Criteria An Early Years Teacher must be able to:
Plan education and care taking account of the needs of all children	<ul style="list-style-type: none"> – Observe and assess children’s development and learning, using this to plan next steps – Plan balanced and flexible activities and educational programmes that take into account the stage of development, circumstances and interests of children – Promote a love of learning and stimulate children’s intellectual curiosity in partnership with parents and/or carers – Use a variety of teaching approaches to lead group activities appropriate to the age range and ability of children – Reflect on the effectiveness of teaching activities and educational programmes to support the continuous improvement of provision
Adapt education and care to respond to the strengths and needs of all children	<ul style="list-style-type: none"> – Have a secure understanding of how a range of factors can inhibit children’s learning and development and how best to address these – Demonstrate an awareness of the physical, emotional, social, intellectual development and communication needs of babies and children, and know how to adapt education and care to support children at different stages of development – Demonstrate a clear understanding of the needs of all children, including those with special educational needs and disabilities, and be able to use and evaluate distinctive approaches to engage and support them – Support children through a range of transitions – Know when a child is in need of additional support and how this can be accessed, working in partnership with parents and/or carers and other professionals.
Make accurate and productive use of assessment	<ul style="list-style-type: none"> – Know and act upon the legal requirements and guidance on health and safety, safeguarding and promoting the welfare of the child – Establish and sustain a safe environment and employ practices that promote children’s health and safety – Know and understand child protection policies and procedures, recognise when a child is in danger or at risk of abuse, and know how to act to protect them.
Fulfil wider professional responsibilities	<ul style="list-style-type: none"> – Promote equality of opportunity and anti-discriminatory practice – Make a positive contribution to the wider life and ethos of the setting – Take a lead in establishing a culture of cooperative working between colleagues, parents and/or carers and other professionals – Model and implement effective education and care, and support and lead other practitioners including Early Years Educators. – Take responsibility for leading practice through appropriate professional development for self and colleagues – Reflect on and evaluate the effectiveness of provision, and shape and support good practice – Understand the importance of and contribute to multi-agency team working.

4.3.3 Wales: Competence specifications for teachers with QTS

New professional standards for teaching and leadership were introduced in Wales in 2017 and are the responsibility of the Education Workforce Council (EWC). There are five standards and five overarching values and dispositions. The standards form the framework for initial and ongoing professional development. Each standard is divided into a number of purposes and there are three descriptors for each of the teaching standards depending on whether in training, in the induction period or an experienced teacher:

- QTS
- Induction
- Sustained highly effective practice

There are two descriptors for the formal leadership standards:

- Sustained highly effective practice
- Effective formal leadership

Table 21

Wales: Competence specifications: Teachers/Teaching Assistants/Higher Level Teaching Assistants

Professional values and dispositions	
Welsh language and culture Rights to learn Literacy, numeracy and digital competency The professional learner The system role Professional entitlement	
Five Professional Standards for Teaching and Leadership	
Pedagogy	The teacher consistently secures the best outcomes for learners through progressively refining teaching, influencing learners and advancing learning. The teacher in a formal leadership role exercises accountability for the pedagogy of others by creating and sustaining the conditions to realise the four purposes for learners and achieve the best for them in terms of standards, wellbeing and progress
Leadership	The teacher exercises leadership through all aspects of professional practice to support the efforts of others across the school and beyond to fulfil the educational ambitions for Wales. The teacher in a formal leadership role works intelligently to bring coherence, clarity and a shared commitment to realising the vision for pedagogy, learners, colleagues and the wider community.
Professional Learning	The teacher consistently extends knowledge, skills and understanding and can show how reflection and openness to challenge and support informs professional learning to progressively develop pedagogy. The teacher in a formal leadership role stimulates an appetite for professional learning that is valued, has impact upon pedagogy and supports professional growth across a learning community within and beyond the school.
Innovation	The teacher employs an innovative outlook which is exemplified through the controlled and measured development of techniques and approaches to improve pedagogic outcomes. The teacher in a formal leadership role ensures a positive climate for innovation that is coherent and manageable and outcomes are evaluated, disseminated and applied.
Collaboration	The teacher takes opportunities to work productively with all partners in learning in order to extend professional effectiveness. The teacher in a formal leadership role builds a climate of mutual support in which effective collaboration flourishes within and beyond the school to spread effective pedagogy.

Note: These standards have been abbreviated

Source: <https://hwb.gov.wales/professional-development/professional-standards>

4.3.4 Scotland: Competence specifications for teachers with QTS

In Scotland, professional standards for qualified teachers are regulated through the General Teaching Council for Scotland (GTCS) and were revised in 2021. There are four standards: (1)

Provisional Registration; (2) Full Registration; (3) Career-Long Professional Learning; (4) Headship. They are underpinned by a set of professional values: (1) Social Justice; (2) Trust and Respect; (3) Integrity.

The following table lists the standard for provisional and full registration with the GTCS applied at the end of the ITT programme and on successful completion of the probationary year respectively. The level of performance expected is differentiated through use of differential criteria at the two stages. Further details can be found in the relevant documentation (see *References* and *Acronyms*).

Table 22

Scotland: Competence specifications for Primary Teachers with QTS

1. Professional values and personal commitment	
<p>Social Justice Social justice is the view that everyone deserves equal economic, political and social rights and opportunities now and in the future.</p> <p>Trust and Respect Trust and respect are expectations of positive actions that support authentic relationship building and show care for the needs and feelings of the people involved and respect for our natural world and its limited resources.</p> <p>Integrity Integrity is the practice of being honest and showing a consistent and uncompromising adherence to strong moral and ethical principles and values</p> <p>Professional Commitment Making a professional commitment to learning and learners that is compatible with the aspiration of achieving a sustainable and equitable world embodies what it is to be a teacher in Scotland.</p>	
2. Professional knowledge and understanding	
Curriculum and Pedagogy	Have knowledge and understanding of <ul style="list-style-type: none"> – Pedagogical Theories and Professional Practice – Research and engagement in practitioner enquiry – Curriculum design – Planning for assessment, teaching and learning
Professional Responsibilities	Have knowledge and understanding of <ul style="list-style-type: none"> – Education system – Learning communities
3. Professional Skills and Abilities	
Curriculum and Pedagogy	<ul style="list-style-type: none"> – Plan effectively to meet learners needs – Utilise pedagogical approaches and resources – Utilise partnerships for learning and wellbeing – Employ assessment, evaluate progress, recording and reporting as an integral part of the teaching process to support and enhance learning
The Learning Context	<ul style="list-style-type: none"> – Appropriately organise and manage learning – Engage learner participation – Build positive, rights respecting relationships for learning
Professional Learning	<ul style="list-style-type: none"> – Engage critically with literature, research and policy – Engage in reflective practice to develop and advance career-long professional learning and expertise

Please note – these standards have been abbreviated.

Source: General Teaching Council for Scotland 2022

4.3.5 Northern Ireland: Competence specifications for teachers with QTS

The competence specifications for Pre-primary/Primary Teachers set down by the GTCNI (General Teaching Council for Northern Ireland), are presented in *Table 23* in a somewhat abbreviated form. For the exact wording, please see Department of Education (Northern Ireland)/General Teaching Council for Northern Ireland 2010.

Table 23

Northern Ireland: Competence specifications for Pre-Primary Teachers (3-4) and Primary Teachers (4-11) with QTS

General Teaching Council (NI) – Code of Values and Professional Practice	
Professional Values and commitments	<p>Teachers should demonstrate that they understand and uphold the core values and commitments enshrined in the Council’s Code of Values and Professional Practice.</p> <p>The core values of the profession are: Trust, honesty, respect, fairness, integrity, tolerance, commitment, equality and service</p> <p>Commitments are to:-</p> <p>Learners e.g. to maintain professional relationships that respect pupils as persons; respect each pupils’ uniqueness, individuality and specific needs; motivate and inspire to help realize potential</p> <p>Colleagues and others e.g. work with others to create a professional community; promote collegiality; cooperate with external agencies; ensure respectful, trusting relationships with parents/carers; respect confidentiality unless legal requirement to disclose</p> <p>The Profession e.g. as reflective practitioners, contribute to review of policies and practices; assume responsibility for own ongoing professional development need</p>
Professional knowledge and understanding: educational policies and contexts	<ul style="list-style-type: none"> – Teachers will have developed knowledge and understanding of: – Contemporary debates about the nature and purposes of education and the social and policy contexts in which the aims of education are defined – Significant features of pupils’ cultures, languages and faiths and how to address the implications for learning arising from these – Their responsibilities under the Special Educational Needs Code of Practice, the most common special needs and strategies to address these – Strategies for communicating effectively with pupils, parents, colleagues and personnel from relevant child and school support agencies – How to use technology effectively, both to aid pupil learning and to support their professional role – The interrelationship between schools and the communities they serve, and potential for mutual development and wellbeing – The statutory framework pertaining to education and schooling and their specific responsibilities emanating from it
Professional knowledge and understanding: curriculum	<ul style="list-style-type: none"> – Teachers will have developed a knowledge and understanding of: – Curriculum development processes, including planning, implementation and evaluation – How the learning area/subject(s) they teach contribute to the Northern Ireland Curriculum* – The curriculum requirements in preceding and subsequent key stages
Professional knowledge and understanding: methods	<p>Teachers will have developed knowledge and understanding of:</p> <ul style="list-style-type: none"> – Relevant learning area/subject(s), including strategies and initiatives to improve, literacy, numeracy and thinking skills – Sufficient linguistic and pedagogical expertise to teach the curriculum in Irish medium and other bilingual contexts

General Teaching Council (NI) – Code of Values and Professional Practice	
	<ul style="list-style-type: none"> – Factors that promote and hinder effective learning and the need to provide for the holistic development of the child – A range of strategies to promote and maintain positive behaviour, including an acknowledgement of pupil voice
Professional skills	<ul style="list-style-type: none"> – Set learning objectives taking account of what pupils know, understand and can do, and the Northern Ireland Curriculum requirements – Plan and evaluate lessons that enable all pupils, including those with special educational needs, to meet learning objectives – Deploy, organise and guide the work of other adults to support pupils' learning – Plan for out-of-school learning, including school visits and field work – Manage their time and workload effectively and efficiently and maintain a work/life balance – Create and maintain a safe, interactive and challenging learning environment – Use a range of strategies and resources, including eLearning, to enable learning and maintain pace within lessons – Employ strategies that motivate and meet the needs of all pupils, including those with special and additional educational and language needs – Promote a standard of behaviour that enables all pupils to learn, pre-empting and dealing with inappropriate behaviour
Professional skills: assessment	<ul style="list-style-type: none"> – Monitor pupils' progress and give constructive feedback to help pupils reflect on and improve their learning – Select from a range of assessment strategies to evaluate pupils' learning, and use this information in their planning – Assess pupils' attainment against relevant benchmarking data and understand the relationship between assessment and target setting
Wider professional role	<ul style="list-style-type: none"> – Keep curricular, subject and pedagogical knowledge up-to-date through reflection, self-study and collaboration with colleagues – Contribute to the life of the school, collaborating with teaching and support staff, parents and external agencies – Liaise with parents or carers on their child's progress and achievements

Source: Department of Education (Northern Ireland)/General Teaching Council for Northern Ireland 2010.

4.4 ECEC competence specifications and IPE curricula (PVI sector)

4.4.1 England

A range of qualifications from RQF Levels 3–6 are provided in Higher and Further Education institutions and by training providers. However, to be counted in the staff to child ratios, a qualification is needed that is 'full and relevant' at Levels 2 or 3 (DfE 2022a). Setting managers must have a level 3 qualification (Early Years Educator or equivalent). Degrees in Early Childhood Studies or a related degree with assessed placements or with the Early Childhood Graduate Practitioner Competences embedded in them can be counted in staff to child ratios at level 3. *Tables 24 and 25* show the six main qualification areas for the Level 3 Early Years Educator (see DfE 2019 for fuller details of the qualification criteria) and the nine competence areas for the Level 6 Early Childhood graduates (see QAA 2022 for fuller details).

Table 24

England: Early Years Educator Level 3 – Main Qualification Criteria

1.	Support and promote children’s early education and development
2.	Plan and provide effective care, teaching and learning that enables children to progress and prepares them for school
3.	Make accurate and productive use of assessment
4.	Develop effective and informed practice
5.	Safeguard and promote the health, safety and welfare of children
6.	Work in partnership with the key person, colleagues, parents and/or carers or other professionals

Source: DfE 2019

Table 25

England: Early Childhood Graduate Practitioner Level 6 – Competence areas

1.	Advocating for young children’s rights and participation
2.	Promoting holistic child development
3.	Working directly with young children, families and colleagues to promote health, wellbeing, safety and nurturing care
4.	Observe, listen and plan for young children to support their wellbeing, early learning, progression and transitions
5.	Safeguarding and child protection
6.	Inclusive practice
7.	Partnership with parents and caregivers
8.	Collaborating with others
9.	Professional development

Source: Quality Assurance Agency (QAA) 2022

4.4.2 Wales: Children’s Care, Play, Learning and Development: Level 5 and Level 3 competence specifications

Changes in Wales mean that the required qualification for leadership/management in Flying Start programmes – provision that is targeted at the most disadvantaged children and families – is higher (at level 5) than that for leading/managing day nurseries, play groups and other settings (where it remains at core pedagogue level 3) in less disadvantaged neighbourhoods. However, the volume of credit is not equivalent to that of a Diploma in Higher Education or a Foundation Degree in the Qualifications Wales Framework and therefore does not fulfil all the requirements for level 5. Several Higher Education providers in Wales have developed Early Years degree programmes which have embedded a practice competence element (Early Years Practitioner Status) aligning to the National Occupational Standards. These programmes have been approved by Social Care Wales and appear on their list of approved qualifications to work in the ECEC sector. These are an alternative route to a practice competence qualification to work in ECEC to those listed below.

Table 26a

Wales: Minimum competence specifications for Leader/Manager in Flying Start Children’s Centre programme – level 4

<p>Title: Level 4 Diploma – Preparing for Leadership and Management in Children’s Care, Play, Learning and Development (Wales) Age range: 0–19 Level 4 in <i>Qualifications for Wales and Regulated Qualifications Framework (RQF)</i>: 60 credits equivalent to 335 learning hours and a Total Qualification Time of 600 hours. Structure: 3 Mandatory units.</p>
<p>Entry requirements: None other than minimum age 18 years. Rest at discretion of local approved centre.</p>
<p>Consists of three modules, all mandatory</p> <ol style="list-style-type: none"> 1. Leading child-centred practice 2. Theoretical frameworks for leadership and management 3. Understanding how to lead and manage effective team performance

Table 26b

Wales: Minimum competence specifications for Leader/Manager in Flying Start Children’s Centre programme – level 5

<p>Title: Level 5 Diploma – Leadership and Management in Children’s Care, Play, Learning and Development: Practice Level 5 in <i>Qualifications for Wales and Regulated Qualifications Framework (RQF)</i>: Minimum 120 credits (equivalent to 415 learning hours and a Total Qualification Time of 1,200 hours including practice competence) Structure: Minimum of 90 credits from mandatory core, 30 credits from optional group</p>	
<p>Entry requirements: Must be over 19. Others at discretion of local approved centre. In Wales, Level 4 <i>Preparing for Leadership and Management in Children’s Care, Play, Learning and Development (Wales)</i> must be completed prior to the Level 5 Diploma in <i>Leadership and Management in Children’s Care, Play, Learning and Development (Wales)</i></p>	
<p>Mandatory core units</p>	<p>In a health and social care or children and young people’s setting lead and manage:</p> <ul style="list-style-type: none"> – Child-centred practice – Effective team performance – Quality of the workplace/setting – Professional practice – Practice that promotes the safeguarding of children
<p>Optional units</p>	<p>In a health and social care or children and young people’s setting lead and manage:</p> <ul style="list-style-type: none"> – Health, wellbeing and creative learning within childcare provision – The acquisition of a new language through immersion – Support for families to develop parenting skills – Speech, language and communication skills – Services for children with additional needs – Continuous improvement through the regulatory processes – Inter-professional working arrangements – Work with volunteers – Business planning and processes – A therapy team – Child health services – Study skills

Explanatory notes: Not all units are of equal size/credit value.

Source: Health and Care Learning Wales 2019

Although individuals with a wide range of qualifications may work in provision that includes young children under 12 in Wales and Northern Ireland, such as out-of-school and holiday play schemes, these are not recognised as core professionals in the ECEC sector and the alternative qualifications are not detailed here.

Table 27

Wales: Minimum competency requirements for core practitioner/senior practitioner/setting manager

<p>Title: Level 3 Diploma in Children’s Care, Play, Learning and Development) Age range: 0–19 Level 3 in Qualifications for Wales and Regulated Qualifications Framework (RQF): 65 credits equivalent to one year of full-time study plus placement experience Structure: 16 mandatory units plus minimum of 16 credits from 5-6 optional units</p>	
<p>Entry requirements: None other than minimum age 16 years. Rest at discretion of local approved centre.</p>	
<p>Mandatory units</p>	
<p>Generic health and social care</p>	<p>In settings for health and social care for children and young people</p> <ul style="list-style-type: none"> – Promote communication – Engage in personal development – Promote equality and inclusion – Principles for implementing duty of care*
<p>Children and young people</p>	<ul style="list-style-type: none"> – Understand child and young person development* – Promote child and young person development – Understand how to safeguard the wellbeing of children and young people* – Support children’s and young people’s health and safety – Develop positive relationships with children, young people and others involved in their care – Working together for the benefit of children and young people – Understand how to support positive outcomes for children and young people*
<p>Early learning and childcare</p>	<ul style="list-style-type: none"> – Context and principles for early years provision – Promote learning and development in the early years – Promote children’s welfare and wellbeing in the early years – Professional practice in early years settings – Support children’s speech, language and communication
<p>Selected Optional Units</p> <ul style="list-style-type: none"> – Work with babies and young children to promote their development and learning – Care for the physical and nutritional needs of babies and young children – Lead and manage a community based early years setting – Promote young children’s physical activity and movement skills – Promote creativity and creative learning in young children – Work with parents to meet their children’s needs – Work with parents, families and carers to support their children’s speech, language and communication development – Engage fathers in their children’s early learning – Promote children in early years settings acquiring a new language through immersion 	

Note: Not all units are of equal credit value.

*Units marked with an asterisk are knowledge only. All others must be demonstrated in practice.

Source: Health and Care Learning Wales 2019

Curricular areas

The curricular areas for the level 3, 4 and 5 diplomas in Children’s Care, Play, Learning and Development are determined by the need to underpin the competence requirements. However, as these qualifications are embedded within the wider Children and Young People’s Services Sector, the focus is much broader than education. A substantial mandatory core covers the development health and wellbeing of children from birth to 19 in the context of their families and social circumstances and is underpinned by a children’s rights approach.

4.4.3 Scotland: Competence specifications – Early Learning and Childcare

There are three sets of competences that must be met depending on the level of practice: Lead Practitioner/Manager in Childhood Practice (EQF level 6)⁵, Core Practitioner Level 7 SQCF (EQF level 5 (Table 28) and Early Education and Childcare (EQF level 4).

Table 28

Scotland: Children and Young People (0–16): Competence specifications for core practitioner

<p>Role: Core Practitioner Level 7 SQCF (EQF level 5)* (Meets requirements for registration with Scottish Social Services Council) Title: Scottish Vocational Qualification in Social Services (Children and Young People 0-16)</p>	
<p>Structure: Based on National Occupational Standards (Skills for Care and Development) Four mandatory/core units plus four optional units Minimum entry requirements: None specified (at discretion of local SQA approved centre). Current employment in a relevant childcare provider expected.</p>	
<p>Mandatory Units</p>	
<p>Promote effective communication</p>	<ul style="list-style-type: none"> – Establish understanding about children’s communication – Support children to interact through communication – Communicate effectively about difficult, complex and sensitive issues with children and key people – Communicate using records and reports
<p>Promote health, safety and security in the work setting</p>	<ul style="list-style-type: none"> – Maintain health, safety and security in the work setting – Promote health and safety in the work setting – Minimise risks arising from emergencies
<p>Develop practice through reflection and learning</p>	<ul style="list-style-type: none"> – Reflect on own practice – Take action to enhance practice
<p>Promote the safeguarding of children and young people</p>	<ul style="list-style-type: none"> – Maintain understanding and awareness of harm, abuse and safeguarding – Implement practices that help to safeguard children and young people from harm or abuse – Develop relationships that promote the safeguarding of children and young people – Promote rights and inclusion with children and young people – Work in ways that promote the wellbeing of children and young people – Support children and young people to keep themselves safe

⁵ The SSSC standard for Lead Practitioner/Manager also acts as the relevant Subject Benchmark Statement recognized by the Quality Assurance Agency for Higher Education in Scotland for BA degrees in Childhood Practice. The content of awards from universities is not prescribed but must cover the areas set out in the relevant Subject Benchmark Statement of the Quality Assurance Agency for Higher Education in Scotland (see above).

- Optional units for work in early learning and childcare include:
- Promote the development of children and young people*
- Plan and organise environments for children and families
- Promote the health and physical development of children
- Promote children's wellbeing and resilience
- Implement frameworks for early education through the development of curriculum planning
- Support early intervention for the benefit of children and families
- Care for children at home
- Promote the care, learning and development of children with additional requirements in partnership with their families
- Empower families through the development of parenting skills
- Use information and communication technology to promote children's early learning
- Support the use of medication for children
- Support children and young people through major transitions
- Support children who have experienced trauma
- Manage a small-scale childcare business
- Work with a management committee

Once registered with the SSC, all workers must follow the **Code of Practice** below.

Social service workers must:

- Protect the rights and promote the interests of service users and carers
- Strive to establish and maintain the trust and confidence of service users and carers
- Promote the independence of service users while protecting them as far as possible from danger or harm
- Respect the rights of service users whilst seeking to ensure that their behaviour does not harm themselves or other people
- Uphold public trust and confidence in social services
- Be accountable for the quality of their work and take responsibility for maintaining and improving their knowledge and skills.

Please note: These standards have been abbreviated.

Source: SQA- Scottish Qualification Authority 2021

* The format of the **HNC Childhood Practice** (Higher National Certificate) is being revised with a pilot of so called NextGen HNC underway in 2021/22

IPE curricular areas and approaches – SVQ

All those preparing for SVQs in the care sector cover the same core requirements, regardless of age band or setting. However, the rest of the curriculum depends on the chosen option modules that match the employment setting.

As SVQs are primarily designed for those already in relevant employment, the methods employed would be primarily through working under direction with modelling, observation and mentoring support from an experienced and qualified co-worker. This is normally supplemented by distance learning/self-study or day/block release to colleges for the underpinning knowledge, theory and methods.

4.4.4 Northern Ireland

Level 5 is now the minimum qualification for those working as the person in charge/manager/deputy leaders and room supervisors/team leaders who are able to deputise (Childcare Partnerships 2016).

Table 29

Northern Ireland: Level 5 competence specifications

Level 5 Diploma in Leadership and Children’s Care, Play, Learning and Development Management Pathway*	
Learners are required to successfully complete 90 overall credits, 72 credits from the mandatory units and a minimum of 18 credits from the optional units	
Mandatory units	<ul style="list-style-type: none"> – Support children’s care, learning and development in the early years – Lead practice that supports positive outcomes for children’s development – Develop and implement policies and procedures to support safeguarding of children – Promote professional practice – Develop health and safety and risk management policies, procedures and practices in early years settings – Work in partnership – Use and develop systems that promote communication – Develop own professional development – Champion diversity, equality and inclusion – Lead and manage a team – Manage induction – Develop supervision practice – Appraise staff performance – Professional and sustainable practice in delivery of service
Optional units	<ul style="list-style-type: none"> – Understand the speech, language and communication needs of children and young people with social, emotional and mental health needs – Promote creativity and creative learning in young children, work with parents, families and carers to support their children and young people’s speech, language and communication development – Promote children in childcare settings acquiring a new language through immersion – Develop and evaluate operational plans for own area of responsibility – Recruitment and selection within health and social care or children and young people’s settings – Facilitate coaching and mentoring of practitioners in health and social care or children and young people’s settings – Manage quality in health and social care or children and young people’s setting – Develop provision for family support

Source: NCFE 2022

4.5 Alternative entry and qualification routes, system permeability

UK-wide

The majority of entrants make the choice of a career in ECEC at 16 to 18 years while still in full-time education and training. Of these some will go into work-based apprenticeship schemes while the majority stay on at school or college, gaining work experience through practice placements. Those who achieve better grades in the level 3 Diploma (SVQ 3 in Scotland), often combined with other accredited studies, may then apply for higher education in a relevant subject area or on an integrated professional education and training course.

Other entrants follow more traditional academic studies (GCSEs and ‘A’ Levels, or Scottish Highers) before choosing a career in primary teaching on leaving school (B.Ed./BA Education) or choosing to study/work with the 0–8 age group (e.g. BA Early Childhood Studies or BA Childhood Practice in Scotland).

Direct entrants into employment need to work towards becoming qualified within two or three years of appointment and in Scotland become registered to work in the sector. It is possible for

16 to 17 year-olds to opt to go straight into employment as unqualified staff or on apprenticeship schemes, and employers may provide in-house work-based training programmes beyond induction with a pathway starting from level 2 Certificates and Diplomas (or SVQs in Scotland) and building up to level 3 or higher supported by day release to a college or distance learning resources. Others enter the ECEC workforce as mature adults after having had their own children, or as a career change.

The UK education, higher education and training sectors have become much more diversified and flexible in recent years. For level 3 (EQF level 4) qualified core practitioners, progression to and through higher education is possible via work-based and distance routes. Further and higher education institutions offer the level 5 (EQF 5) Diploma in Children’s Care, Play, Learning and Development or Higher National Certificates/Diplomas and Foundation Degrees (level 5) that in turn can be ‘topped up’ to a Bachelor’s degree and full level 6 graduate status with an additional 12 to 18 months of work and study.

4.5.1 Formal opportunities for moving up and across qualifications frameworks

Horizontal mobility: In Wales and Scotland, permeability across the non-school workforce is encouraged through a shared code of ethics and values in care and qualification structures that have a mandatory common core for children and young peoples’ and wider care services. Transfer between roles is thus possible through the addition of a few specific units. In England there is less transferability into and within the education sector because of the strongly educational focus of qualifications and the strict division between teachers with QTS and support staff roles.

Vertical mobility: The extended version of the RQF level 3 Diploma in Children’s Care Learning and Development in Wales and Northern Ireland, and the EYE qualification in England have been rated by the Universities and Colleges Admission Service (UCAS) in order to create the credits which are necessary for entry to Higher Education. However, vocationally oriented credits alone may not be sufficient in relation to the competitive requirements for entrance to some universities. Hence 16 to 19 year-olds in full-time education and training in schools and colleges are often advised to combine their vocational qualification with some additional academic studies. In the case of mature students with extensive practice experience, universities often exercise more discretion over entry requirements.

The relevant regulator controls the number of places for all forms of Initial Teacher Training in the nations of the UK and entry can be highly competitive. The range of full-time and part-time routes through ITT (leading to QTS) ensures that progression is possible by work-based routes. However, standard higher education fees (currently £9,250 per annum – €10.766⁶) are applicable for those requiring a degree. Although loans are available for first degrees, Higher Education Institution fees may still be prohibitive to many given the low pay characteristic of the sector.

4.5.2 Options for career changers

The ITT graduate entry routes for QTS provide opportunities for career change for graduates. However, the requirement for Maths and English (and Science in England) is GCSE (level 2) at a minimum of grade B in England (grade C in Wales).

For those at RQF/SVQ level 3 with related qualifications in playwork, health care or social care, career change is facilitated through the mandatory common core structure for the care sector that applies in Wales and Scotland. In England, the distinctively educational approach of the EYE makes transferability more difficult. Alternatively, individuals may use any existing RQF level 3 qualifications to apply for an undergraduate degree as a mature student.

⁶ Conversion rate: July 2023

At any stage of the education and training system Accreditation of Prior Accredited or Experiential Learning (APL /APEL, sometimes referred to as RPL – Recognition of Prior Learning) is theoretically possible. However, it has proved extremely difficult to operationalise in practice as credit is usually transferred by matching learning outcomes to modules/units. What is commonly found is that the variation of content in modules and levels across different awarding bodies or Higher Education institutions makes an exact match impossible, meaning that it is easier for the individual to follow the whole programme rather than to try selectively to fill in apparent gaps. The exception to this is through recognition agreements with particular institutions or Awarding Bodies based on academic transcripts and mapping. These may allow, for example, an ITT collaborative provider to give the equivalent of 60 ECTS credits credit (first year of University, RQF level 4 studies) for a range of specified vocationally related qualifications.

5. Guided workplace experience (practicum) in the initial professional education of core professionals

Workplace-based learning is an essential component of all education and training programmes that lead to recognised qualifications for ECEC at EQF levels 4 to 6 across the UK. As all recognised qualifications for core practitioners and teachers are competence-based (interpreted as the effective implementation of skills and knowledge in action) rather than just knowledge-based, evidence for assessment must include demonstration of the competences claimed in an appropriate work environment. This is achieved through real work in the case of employees, or practice placements for trainees.

5.1 Regulation/guidance, duration and structure of work-based learning in IPE

The precise requirements for work-based learning are set down by the relevant awarding or regulating body and vary with sector, qualification and chosen route. In level 3 Diploma programmes placement/work experience must account for roughly half of the learning time and for those studying for the level 5 Diploma in Leadership in Children’s Care, Play, Learning and Development this must include experience within a leadership role, albeit limited in extent.

ITT programmes must include a minimum of 24 weeks (120 days) of work experience, up to two weeks of which may be counted from before the main training programme begins. Experience of at least two different settings and ages/phases of the curriculum is also required.

5.2 ECTS credits allocation for IPE

Whether or not ECTS credits are allocated specifically to work-based learning within higher education programmes is dependent on the structure of the individual modules that make up the validated course specification which in turn depends on the policy of the Higher Education Institution. In some cases, designated placement modules carrying a given number of points are part of the course specification. In others, time spent in placement is integrated into the module specifications for different curricular/subject areas.

5.3 Skills and competences developed in IPE through work-based learning

In judging core/key skills, the UK system allows for the distinction between whether and where particular skills are taught, developed and assessed. In a fully competence-based qualification system, ideally all types and areas of skills and competences defined in the specification should

be developed through practice and assessed in the workplace, regardless of how they were originally taught. However, the methods of assessment may take many forms and simulation/alternative methods may be permitted under some circumstances (for example, in demonstrating aspects of competences associated with child abuse/protection or dealing with a difficult parent that might not occur in the course of everyday practice as a trainee).

Although teaching methods and techniques can be taught in the classroom and demonstrated through observation of video clips, it is widely recognised that their effective implementation in real group settings with children cannot be achieved without practice in a real-world setting. This is particularly true of managing children's behaviour and group/classroom management. Co-teaching or observation and coaching by an experienced practitioner are usually considered the most effective. However, pairing trainees to support each other is also used and can result in effective learning for both participants when combined with debriefing with an experienced teacher or tutor.

Similarly, learning to work with and supervise/mentor less well-qualified colleagues or to handle parents' concerns are skills that, although they may be simulated and rehearsed through role play, most students/trainees develop or hone through direct experience in the workplace at a later stage.

5.4 Forms of student self-evaluation and external evaluation

Although the expected level of evaluation varies with the level of qualification, for all ECEC trainees judging competence is not just about observing that a task has been carried out meeting certain criteria but ascertaining the reasoning and theory underpinning a trainee's actions. It is hence generally recognised that sound underpinning knowledge and understanding is essential to enable trainees to respond effectively in the unpredictable situations that are characteristic of work in ECEC. In England and Scotland, vocationally oriented degrees for those working with young children (such as BA Hons Early Childhood Studies or BA in Childhood Practice respectively) already allow for a mix of academic/theoretical knowledge and practical/practice-based credit. In Wales the EU Social Fund initiative called '*Progress for Success*' (Welsh Government 2017b) is providing opportunities for practitioners to extend their knowledge and skills to improve provision for children

Assessment items within the overall assessment strategy may include:

- Essays and assignments and written or oral examinations are used to test knowledge and understanding of relevant theories and procedures outside of the workplace.
- Child observations, including those undertaken as part of routine workplace records, are used by tutors to test understanding of stages of development and the ability to apply this in deciding the next steps in promoting development for a particular child.
- Work-based projects and assignments require students to plan and implement activities in order to promote a particular aspect of children's development. These are normally designed to fit within the wider curriculum plans/schedules of the workplace.
- Reflective logs and diaries while in work/on placement are used to help students identify and cope with the emotional impact of incidents that may arise in ECEC as well as to improve on their own learning and performance.
- Building on the above, students may be asked formally to evaluate/rate their own performance as part of professional dialogue with and grading by supervisors/mentors or tutors.
- Case studies may be used to demonstrate analytic and problem solving skills that draw on underpinning theory and knowledge that has not been adequately tested through a period of work-based learning.
- Research activities may be used to develop the trainee's capacity to make use of evidence in support of teaching and commitment to continuous improvement.
- In some cases, unseen written examinations or multiple choice tests may be used to assess aspects of knowledge.

All of these methods and more may contribute to the portfolio of evidence that students/trainees/employees accumulate in relation to the skills and competencies specified.

Self-evaluation on a formative basis is a feature of many assessment strategies as it is considered to be an effective means of encouraging self-reflection and the development of reflective practice. To be valid, any evidence from the workplace must be substantiated through the signature of the supervisor/mentor assigned to the student or by a visiting tutor.

In the case of ITT (including Early Years Teacher Status in England), although appropriately qualified and trained supervisors/mentors validate the work-based evidence of trainees and undertake their own observations, their judgements must be moderated through joint observations carried out with a visiting tutor/representative of the ITT provider who may carry out their own separate observations in addition. Independent external evaluation is also a requirement for effective quality assurance. Specifically, External Moderators with no connection to the ITT provider must themselves carry out a number of sample observations of trainees to confirm the accuracy of judgements made jointly by the supervising teacher and the visiting tutor/representative of the ITT provider.

For the level 3 diplomas and apprenticeships (EQF 4), the majority of judgements are made by the staff of local ECEC centres in which trainees/employees are based and/or by visiting tutors from the school or Further Education institution that has overall responsibility for their training programme. The judgements made by individual assessors are quality assured by an internal moderator who reports, via approved assessment centre arrangements, to the independent External Moderator representing the relevant awarding body.

5.5 Qualifying courses for mentors/supervisors

Supervisors/mentors must themselves be qualified at a relevant level and undergo specific training for the role provided by the ITT provider or Approved Assessment Centre. The form and length of training is not usually prescribed and the outcome of training is rarely formally assessed. However, an annual training and update event for mentors is considered good practice and some training providers offer modules in mentoring that can be counted towards related awards or Continuing Professional Development requirements.

The effectiveness of supervisor/mentor training can be evaluated during the moderation process by considering the consistency of application of procedures and judgements made by supervisors/mentors. In the case of ITT, representatives of the approved ITT provider must undertake regular visits to moderate and to carry out direct observations themselves as part of quality assurance.

5.6 Designated roles, time allocations and remuneration of mentors/supervisors

Mentoring/supervising staff in ECEC centres usually have specified roles in relation to students/trainees/junior employees that notionally require some remittance of their time to perform. These arrangements are formalised in guidance to ITT providers in which supervisors/mentors sign an agreement and payments are made by the ITT provider to facilitate their release. However, whereas regular formal hours of release from teaching may be achieved in a school, the reality for most small-scale ECEC settings is that the manager/group leader (who is often the only person in the setting sufficiently well qualified to act as supervisor/mentor) simply has to fit supervision into their already busy schedule and this may take them away from direct work with children.

6. Continuing professional development (CPD) for ECEC staff

Throughout the UK, the only ECEC staff to have fully regulated CPD frameworks, prescribed CPD opportunities and standardised terms and conditions of service are Teachers with QTS in maintained schools. This is partly because teachers with QTS must all be registered with the relevant nation's organisation that sets down the standards for their training and continuing development and support needs, and partly because the teaching profession is well established and strongly unionised. This is not the case for other areas of the ECEC workforce.

In England, there is recognition of the importance of ongoing professional development in the early years sector and while there are no formal standards for CPD or registration of practitioners in England, the Government has made funds available under the COVID Recovery Plan (DfE 2022b) to provide whole setting support and mentoring for practitioners and coaching to leaders. They have also introduced the National Professional Qualification in Early Years Leadership (NPQEYL) (DfE 2022b). Furthermore, research by the Nuffield Foundation (Oppenheim, Rehill, and Batcheler 2022, 53) has highlighted the importance of “improving the system for accessing Continuing Professional Development through a central online hub for accessing quality-assured resources and courses as part of a single one-stop shop for career development in the sector.”

In other parts of the UK, Wales is moving towards registration of staff working in the sector (see *Chapter 7*) and in Scotland all staff working in settings registered by the Care Inspectorate must be registered or working towards registration with the SSSC. Staff are required to complete continuing professional learning – this is part of the codes of practice for social service workers. They are also required to confirm that they have recorded and completed the appropriate Continual Professional Learning (CPL) for their registration when they renew it. All registered support workers, practitioners and managers must complete 10 days or 60 hours CPL over 5 years. It is also the case that regulatory and inspection authorities in all four nations are increasingly developing online training and CPD opportunities and/or best practice guidance as well as providing information about approved training and CPD opportunities elsewhere.

In Scotland, the SSSC describe CPL in broad terms, from learning for a qualification to reading a book or mentoring a colleague. The agencies regulating the sector provide online training resources and directories of learning resources. The Government has also invested in five online learning modules published in 2020 to accompany the workforce expansion. However, it is difficult for the workforce to get protected time for CPD and there is some emerging evidence that enrolment on online learning courses such as the Government CPL and SSSC's open badges increased during COVID-19 lockdown, when some early years professionals were unable to work in settings as usual and had time to spend on learning.

A further issue raised about the nature of CPD provision is the contrast between one-day/hours-based training sessions that focus on skills and the general aim for a degree-led workforce where deeper professional reflection is embedded (Dunn et al. 2018).

In the school sector, government policies across the UK, to a greater or lesser extent, have been to devolve budgets and decision-making down to school level. In England, this has probably gone furthest in terms of so-called Free Schools and Academies, which are not strictly bound by the national curriculum and can make their own decisions on appropriate qualifications for staff and may not be bound by national pay agreements. But more generally, the traditional role of local authorities as providers of in-service training and curriculum updates has diminished and all schools now control their own training/CPD budgets and are free to buy into services from whatever source as they see fit.

Table 30 attempts to encompass England, Wales and Northern Ireland while Table 31 covers the same features for Scotland.

Table 30

England, Wales and Northern Ireland: Features of CPD by role/qualification type

Issue	Teacher in maintained nursery or primary school with QTS, level 6 EQF	Group/Flying Start Leader/Children's Centre manager with EYTS (RQF/EQF level 6 England); Diploma in leadership of CCPLD (EQF level 5 Wales)	Core practitioner RQF level 3 (EQF level 4) with EYE (England); CCPLD (Wales and Northern Ireland)
Regulatory frameworks for CPD	Newly qualified/probationary teacher year on 90% workload for support and CPD plus 4/5 days to attend ongoing professional development with ITT provider. Specialist qualifications and/or standards for senior teachers and leadership and management.	DfE and SCW (<i>Social Care Wales</i>) advise but do not require days for CPD. Regulatory standards require all staff to keep up to date with basic requirements.	Regulatory standards require all staff to keep up to date with basic requirements.

Recent research into CPD across the UK

Source: Rogers, S., C. Brown, and X. Poblete. 2017. *A Systematic Review of the Evidence Base for Professional Learning in Early Years Education* (the PLEYE review)

Purpose: The study had two main aims:

- Identify the most effective types of PDL approaches for improving outcomes for children in EYE
- Inform and have impact on policy and practice in the EYE sector as a necessary first step to developing PDL programmes that are effective in improving outcomes for children (Rogers et al. 2017, 14).

Methodology: Systematic review focusing on three main questions that emerged from the initial scoping exercise:

1. What evidence is there of impact of professional learning approaches for improving outcomes for children in EYE? Which approaches are more and less impactful?
2. What are the features of and the theory of action underpinning effective professional learning approaches in EYE?
3. What types of professional learning opportunities are available to EY practitioners and who provides them? How do these relate to 1. and 2. above? (Rogers et al. 2017, 19-20).

Key findings:

1. Reflection, feedback and follow-up matter: PDL programmes that provide opportunities for reflection, peer group discussion and regular feedback on learning and performance are effective at changing practice and improving outcomes for children.
2. Research-based interventions related to real world contexts are linked to improving practice and outcomes for children: Research-based interventions introducing new learning about children’s development and learning, or content and pedagogical knowledge appear to be linked to positive outcomes for children particularly when they are linked to practitioners’ professional contexts.
3. Combining research-based knowledge with knowledge of setting contexts supported by a coaching model of PDL appear to impact most positively on children’s learning outcomes: Programmes that combine new knowledge and content (from research) with knowledge gained from the participants’ own specific setting context appear to be most effective at achieving change to practice and positive impact on children’s learning.
4. Duration, frequency and intensity of PDL are important factors in achieving impact on outcomes for children (Rogers et al. 2017, 11-12).

Recommendations for policy and practice:

1. Key stakeholders in the EYE sector should work together to develop a set of agreed guidelines or minimum standards for the quality assurance of PDL programmes.

2. Develop a strategy for investment in evidence-informed professional development and learning in EYE
3. Develop and evaluate sector-wide EYE PDL intervention (Rogers et al. 2017, 11-15).

Wales

The regulator for social care in Wales is *Social Care Wales*. They are proactive in addressing the CPD needs in early years. They commissioned a workforce survey in 2014 which found that the priorities for CPD differed considerably in the sector. The most popular form of CPD (57% of all staff), particularly in the PVI sector, was training provided by relevant membership organisations, such as the Pre-school Learning Alliance.

Since then, there has been an increased focus on CPD and registration (see *Chapter 7*) and Social Care Wales have affirmed their commitment to this area, stressing that it is individual workers' responsibility for their own professional development across their careers. They have developed a toolkit to support practitioners (Social Care Wales 2018) that provides a framework to guide ongoing development. It identifies seven steps for CPD:

1. Assessment of individual and organisational need
2. Identify development needs
3. Identify learning objectives, opportunities and resources
4. Plan development opportunities
5. Implement learning opportunities
6. Record outcomes
7. Review, accredit and refine learning

With the Welsh Government confirming its ongoing commitment towards registration of Early Years Practitioners (Welsh Government 2022b), the importance of CPD for the early years workforce contains to be the focus of policy.

Scotland

Source: Dunn, B., C. McDonald, and J. Johnson. 2018. "Evidence of Quality Professional Development: A Study in Childhood Practice", In *Professional Development in Education*, 44(3), 397-411.

Purpose: The BA Childhood Practice (BACP) degree is a work-based degree provided at seven universities in Scotland and is a requirement of those in senior leadership roles in early years. This study particularly focused on the professional and personal development of these students.

Methodology: The small-scale action research project was undertaken by three university providers of the degree. A phenomenographic approach was employed to identify how perceptions of 'learning and affective experiences' form research assignments, questionnaires and interviews.

Key findings:

The findings were grouped into three strands:

Professional skills and abilities:

- Knowledge in relationship to leadership and management became explicit rather than implicit and as a result facilitated changes in practice.
- Confidence in undertaking research meant research was integral to the students' practice.

Professional knowledge and understanding:

- Developing the skills in using theory to justify practice and confidence to debate practice issues.
- Recognising their role in disseminating knowledge
- Seeing issues from different perspectives.

Professional values and personal commitment:

- Participants reported they were better able to question the values and beliefs that underpinned practice.
- Increased understanding about the importance of reflection
- Increased confidence.

7. Working conditions and current workforce issues

7.1 Remuneration

The state-maintained school sectors across England, Wales, Scotland and Northern Ireland have broadly comparable national agreements with the relevant long-established Teachers' Unions concerning the terms and conditions, remuneration and career structures for qualified Primary Teachers (Early Years) with QTS. The starting salary for a newly qualified teacher in the UK in 2022/23 will be around £28,000 – €32,590⁷) with an additional weighting payable in London as the most expensive area. In Scotland, incremental increases on an annual basis within each pay scale are almost automatic, though subject to satisfactory performance appraisal. Career structures allow for progression to higher pay scales on promotion and/or achievement of additional specialist or leadership and management awards. Senior Teacher rates start at around £42,000 (€48,885) while the pay for Head Teachers is based on the size of the school, with a minimum salary of around £54,000 (€62,852) for even the smallest village school.

Those classified as support staff, including Classroom/Teaching Assistants and Early Years Teachers with EYTS, earn considerably less, even if they also hold a relevant graduate level 6 qualification. There are no nationally agreed pay scales and there is considerable variation across Local Authorities. The current government's policy is to encourage the establishment of Free Schools and Academies (state maintained but outside of Local Authority control), so increasingly pay and conditions are at the discretion of the individual school. According to the National Careers Service website, a full-time Teaching Assistant working 30–40 hours per week can expect to earn between £13,000 and £23,000 (€15,131 and €26,770) per annum, with some experienced Higher Level Teaching Assistants (a specialist level 5 qualification) eligible to earn slightly more, depending on the school.

Similarly, there are no agreed terms and conditions for ECEC staff in the PVI sector, which historically has not been unionised, although in Scotland the Government's induction resources list two unions staff may want to join. There are also pay differentials between the public and private sector. The Social Mobility Report (2020) found that the average wage across the EY sector is £7.42 (€8.64) per hour, which is similar to the retail sector (£7.09, €8.25), but far lower than the average pay across the female workforce (£11.37, €13.23) and total working population (£12.57, €14.63).

The particularly low average pay rate in the PVI sector is partly due to high turnover and a high

⁷ Conversion rate July 2023

proportion of young workers and apprentices under 21 for whom the national minimum wage is less than normal. More experienced core practitioners are more likely to have supervisory responsibilities and hence to earn slightly more. Nevertheless, these levels of pay are not enough to support a family. As a result, staff with families are often in the position of claiming in-work benefits through Universal Credit. According to Archer and Oppenheim (2021), 45% of the workforce are in this position.

Across the PVI sector there is no systematic career structure or provision for annual increments or additional payments for achieving higher level qualifications and graduate status. In 2022, the average salary for a manager started at £23,000 (£26,770). In England, employers and nursery owners in the PVI sector argue that they cannot afford to pay more given that the government effectively restricts a large part of their income of PVI settings through the low hourly funding rate for provision of the free part-time ECEC entitlement for all 3 and 4 year-olds and an increasing number of 2 year-olds. In addition, day nurseries and pre-schools are under pressure from government and the public to keep fees low so as to keep costs down for working parents. Similar challenges exist in Wales, Northern Ireland and Scotland.

7.2 Full-time and part-time employment in ECEC provision

Working hours are variable but most full-time ECEC workers work for 36–40 hours per week. Shift work is particularly prevalent in day nurseries to accommodate opening from 8:00 to 18:00 for 48–50 weeks per annum. In contrast, many pre-schools and playgroups operate sessions within school hours of roughly 9:00–12:00 and 13:00–15:30/15:45 in school terms only (38 weeks per annum). As a result, part-time working is more common in sessional care. In Scotland data for the SSSC (2021) found that there was more part-time employment in the voluntary sector with a 46%/55% divide between part-time and full-time employment.

In the maintained schools sector the maximum hours worked by teachers are determined by national agreement as 1,260 per annum, but not all these need be on school premises. The majority of teachers are full time and teachers are paid 52 weeks per year. In contrast, Classroom/Teaching Assistants are more likely to be part time and often on hourly contracts that apply to term times only.

7.3 Support measures in the workplace for newly qualified and newly appointed staff

All registered childcare settings across the UK are obliged by the relevant standards/framework to provide new staff with a basic induction programme covering areas such as health and safety and to allocate a supervisor/mentor to monitor and appraise their performance and identify additional training needs. Often this can be an informal arrangement with no specified time allowances for mentoring and support activities. How much is offered beyond this basic minimum is up to the local provider to decide.

The situation is different in Scotland. The National Standard for funding for 1,140 hours includes requirements for the management and leadership of staff to include appropriate induction tailored to the needs of individual staff. A national induction resource is available to support staff, particularly those new to the sector. Staff carry out work-based learning and are generally required to have a mentor to support them in their role. Local authorities may have local systems for mentoring or support within the workplace, but no national schemes exist.

The exception is for newly qualified/probationary teachers for whom national agreements specify reduced workloads, supervision and support arrangements during their first year while the probationer works to achieve the practising teacher's standards leading to full registration. During this

year the probationer also remains attached to an ITT provider for further training and development opportunities.

7.4 Non-contact time

In the case of qualified teachers, national agreements specify a maximum number of contact hours per week and that all staff must be allowed at least 10 hours from this for preparation and marking. Other specified activities are by negotiation with the Head Teacher but there is a clear expectation of remission from teaching to fulfil them.

Such allowances are not standardised in the PVI sector and staff are often expected to write up observations and reports during quieter periods when children might be asleep or supervised by another or participating in a larger group activity such as listening to a story. Supervisory staff may be allowed some time for their supervision and administrative work at the discretion of the setting manager who themselves may be involved in direct childcare in order to maintain statutory ratios. However, standards require that such activities must not take senior staff away from direct involvement with children too frequently.

7.5 Current staffing issues

Teaching as a profession is relatively stable and the mainly female pre-primary/primary workforce has good maternity leave arrangements that enable qualified teachers to return to work, should they wish. Teacher recruitment is controlled by central government for each nation through restricting the number of Initial Teacher Training places based on forecast births. Incentives are offered for specialist shortage subjects at secondary levels (e.g. Maths and Physics) but Primary Teacher recruitment has remained buoyant. However, wastage through drop out, career change and stress has increased in recent years and some areas (particularly the more rural and/or disadvantaged) have experienced shortages.

High turnover has long been recognised as a problem in the PVI sector. This is partly due to the preponderance of young staff; however, failure to retain the more experienced and better qualified is often related to low pay and poor career prospects.

This has worsened over the last few years with COVID-19, bringing greater challenge to the sector and there is a current crisis in recruitment and retention, despite ongoing investment by the four nations of the UK. Recruitment strategies to increase diversity have not been successful and ECEC continues to be staffed by a predominantly white female workforce. Changes in the free childcare offer to parents have also brought challenges. In Scotland, for example, the sector has expanded to meet the government's commitment to offering 1,140 hours, which was put back to 2021 following the COVID-19 pandemic. This has required recruitment across the sector – public and private. However, as in other parts of the UK, recruitment and retention were already an issue. The *Early Years and Childcare Workforce: Final Report* (Scottish Government and Convention of Scottish Local Authorities – COSLA 2019, 25) reinforced the challenges and the divide between public and private sector provision, with the “...independent sector employers much more likely to expect recruitment challenges in the next year (66%) than their third or public sector counterparts (50% and 37% respectively).”

The 1,140 hours' commitment has also raised issues in relation to funding, with Local Authorities paying more to public sector provision than to the private sector. The Scottish Government has pledged to increase funding to the latter sector to ensure the living wage could be achieved but research by the National Day Nurseries Association (2019) revealed that one in five local authorities will not be increasing the amount provided to the private and voluntary sector to ensure 1,140 hours.

The situation in relation to funding and its impact on recruitment and retention is echoed across

the other nations of the UK. In England, the Institute of Fiscal Studies (2021) noted that there had been ongoing increases in funding for the early years but that through the minimum wage and new taxes, the recent rise of 17p (20 cent) per child on the 30 hours 3 to 4-year offer would be insufficient in the context of rising costs.

8. Recent policy reforms and initiatives relating to staffing and professionalisation issues

8.1 England: Recent policy reforms

The *Early Years Workforce Strategy* (DfE 2017, 6) stated that it aimed “...to support delivery of good quality early years provision for all children from birth to five years.” The strategy focused on attracting more staff into the sector, continuing the development of specialist graduates with EYTS, improving the quality of training, increasing the diversity of the workforce, retaining and developing the workforce, developing career pathways, CPD and sector-led quality improvements. However, despite commitment to the importance of investing in the early years and despite ongoing investment, the workforce in England is currently facing considerable challenges that are compounded by the impact of COVID-19 and the lack of impetus to address the core issues of low pay, poor working conditions and low qualification levels (Bonetti 2020; Pascal et al. 2020).

These issues are reinforced by the Social Mobility report (2020) on the stability of the early years workforce and by the Nuffield Foundation research into early education’s role in shaping life chances (Archer and Oppenheim 2021). The report draws attention to the average wage being £7.42 (€8.64) an hour in 2018 and that 45% of those working in the early years were claiming state benefits. It also highlights the fact that rather than qualifications improving, they are variable and between 2014/15 to 2018/19 the staff percentage with an NVQ level 3 qualification reduced from 83% to 52%. This had risen to 59% in 2023 (DfE 2023b).

Furthermore, the Early Years Alliance (2023) research into recruitment and retention in the workforce found that year on year the sector is unable to recruit staff, there is increased reliance on agency staff and more people are considering leaving their positions. The research indicated that 48% of respondents were considering leaving their jobs. However, expanding access to early years provision requires growth in the number of places available and indicates that with the combination of staff turnover and increased entitlement to places, 50,000 more staff will be needed in 2024 and the same growth in 2025.

One of the ways the Government has addressed the workforce challenges is by reducing the ratios in settings, from 1:4 to 1:5 for 2 year-olds, the same ratio as in Scotland. The DfE launched a consultation into the proposals in 2023 and while research by the Early Years Alliance (2022) found that only 2% of the 9,000 respondents were in favour of the changes, the new ratios were introduced in January 2024 (DfE 2023b).

In addition to changes to ratios, the requirement for those with a level 3 qualification to hold a mathematics qualification to be included in ratios has also been changed. Apprentices and students can now be counted in ratio at the level below they are studying if the manager of the setting assesses it is appropriate (DfE 2023a).

The DfE is also continuing to invest in the sector with the COVID Recovery Plan (DfE 2022c) and ongoing focus on apprenticeship routes for the workforce (Institute of Apprenticeships and Technical Qualifications 2022). Additionally, the Government’s commitment to expand childcare

entitlement for working parents has continued. Prior to the 2015 general election a commitment was made to extend free ECEC from 15-30 hours per week for 38 weeks, for working parents. The focus on free hours connected to working parents has continued and from September 2025 all working families with a nine month-old child will be entitled to 30 hours of funded ECEC. The changes are being introduced incrementally, starting in April 2024. However, while these changes are based mainly on economic arguments, their impact on outcomes for the children appear to be missing from political debates. The changes also bring with them considerable challenge for a sector that is struggling with recruitment, retention and funding models (Institute of Fiscal Studies 2023).

8.2 Wales: Recent policy reforms

Wales is currently in the middle of a number of major policy changes that significantly impact on ECEC services and workforce. Under the *New Deal for the Education Workforce*, which builds on recommendations of the Furlong (2015) and Donaldson (2015) Reports, both teachers and support staff will have a 'structured entitlement' to ongoing professional and leadership development. For teachers this will include access to new Master's degrees (level 7 EQF) in Continuing Educational Practice or in Educational Leadership dependent on their chosen route as a senior specialist practitioner or potential Head Teacher (see Welsh Government 2015).

In relation to the childcare workforce, the EU Social Fund project *Progress for Success* covering west Wales and the valleys currently underway has three strands for improving qualification levels and professionalisation of the ECEC workforce:

- Strand 1 will fund existing practitioners with no or low levels of qualification to achieve level 3 in early years and/or play work.
- Strand 2 is designed to improve the assessment infrastructure through providing qualified assessor training at level 3.
- Strand 3 aspires to fund selected practitioners through a new suite of qualifications in childhood practice (developed by the Social Care Wales in 2016) from level 4 to level 6 EQF or graduate equivalent (see Welsh Government 2017b).

In 2017, Welsh Government finalised the Childcare, Play and Early Years Workforce Plan (Welsh Government 2017c) setting out their aims for development of the ECEC workforce. The three key themes are:

- Attracting high quality new recruits
- Raising standards and skills
- Investing in building capacity and capability.

8.3 Scotland: Recent policy reforms

In 2021, 3 and 4 year-olds became entitled to 1,140 hours Early Learning and Childcare a year; this expansion from 600 hours was paused for a year because of the COVID-19 pandemic. This has been accompanied by an expansion of staff and services, with a model referred to as 'Funding follows the child' with private and voluntary sector providers required to meet a 'National Standard' in order to gain Government funding.

In 2021, the Scottish Government began a pilot scheme to enable children born from August who would normally start school aged 4½ to 5 years to defer for an additional year in Early Learning and Childcare.

In March 2022, the Scottish Government announced the creation of three education bodies: A new qualifications agency (replacing the Scottish Qualifications Agency); a new professional learning, curriculum and assessment agency, and a new inspection agency (both replacing Education Scotland.) Early Learning and Care were mentioned in relation to the importance of setting a shared inspection framework with the Care Inspectorate.

8.4 Northern Ireland: Recent policy reforms

In July 2020, the Education Minister outlined the plans following the allocation of a £10.5 million (€12.5 million) funding package for the childcare sector in light of the COVID-19 pandemic. The Childcare Recovery Support package was allocated to help childcare providers to reopen, or remain open, and applied to ECEC and school age childcare settings, play groups and childminders. The package of measures included financial support to childcare providers to assist them to operate within the parameters of the Executive's childcare recovery plan, ensured as many providers as possible could open to assist parents returning to work and allowed for the continuation of the bespoke Approved Home Childcarer Scheme aimed at enabling parents to have their childcare needs met in their own homes

In January 2021, the *Children and Young People's Strategy* was published. This is the strategic framework through which departments work together to improve the wellbeing of all children and young people. It lists eight outcomes to be achieved for all children and young people, covering many aspects of children's lives including their physical and mental health, play and leisure, learning and achieving, safety and stability, economic and environmental wellbeing, contribution to society and rights and equality.

9. Recent country-specific research focusing on ECEC staff

Professionalisation and what it means to be a professional have been major topics for debate across the UK.

9.1 Research in England

Childcare and early years providers survey 2023

Sources: Department for Education 2023a; Adams, L., S. Coburn-Crane, A. Hassan, and J. Taylor 2023 (see *References* for further details).

Purpose: To monitor and evaluate childcare and early years provision to provide an insight into group-based providers, childminders and school-based provision.

Methodology: Large mixed-mode survey, completed online or by telephone, with 15,828 participants. The data gathered included staff to child ratios, children with special educational needs and disability (SEND), staff qualification and pay and information about the costs of providing care.

Key findings:

- There were an estimated 56,300 providers with at least one child aged 0–4 registered in England in 2023. These providers were offering over 1.5 million Ofsted registered childcare places.
- Early Years provision was delivered by an estimated 347,300 paid staff. Of these, 259,300 worked in group-based settings, 55,800 in schools and there were 32,200 childminders and childminder assistants.
- 19% of paid staff employed by all group-based providers were under 25 compared with just 8% of paid staff employed by school-based providers.
- 16% of staff in all group-based providers and 26% in school-based providers were 50 or older.
- The majority of paid staff in the Early Years' workforce were reported to be female (98%) and

- White British (83% in schools-based providers and 81% all group-based providers).
- The majority of Early Years staff employed by both school-based (85%) and all group-based providers (80%) was reported to be qualified to at least Level 3.
- Graduates (Level 6): Slight rise since 2022 with a third (34%) of staff in school-based settings and 11% in all group-based settings. Senior managers in group-based settings and Head Teachers, Teachers and Early Years Co-ordinators in school-based settings were more likely to be qualified at this level.
- 11% of staff in all group-based providers and 5% in all school-based provision earn less than the National Living Wage.

ECEC and life chances

Source: Archer, N., and C. Oppenheim. 2021 (see *References* for further details).

Purpose: An exploration of the role of early education and care provision over the last two decades in England.

Methodology: Focused literature review from 2010 using peer-reviewed and grey literature.

Key findings relating to the quality of the workforce:

- Despite all the growing evidence about the importance of a quality workforce for improving young children’s outcomes, qualifications are inconsistent, the workforce is undervalued and does not have the same status of others, such as schoolteachers.
- The workforce is marked by low pay and limited opportunities to progress. For example:
 - The average wage in the sector was £7.42 (€8.64) an hour in 2018, compared to £11.37 (€13.23) an hour across the female workforce
 - In 2019, 45% of childcare workers were claiming state benefits or tax credits
 - In the PVI sector there was a fall in NVQ level 3 qualifications (83% 2014/15 to 52% 2018/19).
- There is an apparent increase in staff turnover with the following factors being identified as key reasons:
 - Pay and responsibility
 - Lack of training
 - Lack of progression
 - Low status
 - Organisational culture
- Information about staff profiles is limited; the workforce is still predominantly white female, with a shift towards younger less qualified staff and there is little information about the level of roles held by staff from minority ethnic groups.
- Recruitment challenges
- Differences between qualification requirements in maintained sector (higher) than the PVI sector
- Despite the importance of CPD being recognised, its provision is increasingly fragmented.

9.2 Research in Wales

Independent workforce review

Source: Bonetti, S., and K. Cooper. 2022 (see *References* for further details).

Purpose: An independent review into the Child, Play and Early Years (CPEY) workforce to support the next steps for professional registration.

Methodology: Mixed-methods study that employed desk-based research, semi-structured interviews and a workshop with stakeholders.

Key findings:

Findings centred around three key themes:

- Defining the workforce and who should be included in a registry; practical elements of a registry.

There was support for developing a professional register and considerable recognition that it could raise the professionalism of the workforce. There was also caution about the complexities of setting up a register; there needed to be clear communication and a slow developmental approach so that the register evolved over time rather than being a finished product at the start. In 2020-2021, the number of workers thought to be working in registered CPEY settings was 13,656, however estimating the exact size of CPEY workforce is difficult. While some individuals, such as teachers, are registered, the majority are not. Furthermore, play workers are part of the CPEY workforce, but work in a range of organisations, some of which are not registered with the Care Inspectorate Wales (CIW) and work with older children and young people.

- Qualifications and continuing professional development
- Lack of knowledge about the qualifications of the workforce, working conditions and career trajectories. Additionally, challenges in recruitment that preceded COVID have been exacerbated by the pandemic.

While the interviews evidence agreement that all those that work in CPEY should be valued for their role in children's lives, there was less agreement of if all should be registered. Additionally, some workers have multiple roles and work titles are varied.

Implications: This review has informed the next steps for the Welsh Government for the registration of Early Years Practitioners (see Welsh Government 2022b).

9.3 Research in Scotland

Professional development in Childhood Practice

Source: Dunn, B., C. McDonald, and D. Johnson. 2018 (see *References* for further details).

Aims: The study examined the contribution of the BA Childhood Practice work-based degree to professional and personal development, including leadership skills, analysed in relation to relevant models of professional development.

Methods: It drew upon evidence from three university providers, from research assignments, subsequent questionnaires and interviews with students. A phenomenographic approach was used to identify the perceptions of learning and affective experiences. In discussing the nature of professional development, the paper draws on theoretical frameworks and the Standard for Childhood Practice.

Selected findings: Findings revealed that characteristics identified in these models were evident in the degree, the most influential being knowledge and understanding, critical awareness, and changes to values and beliefs. These aspects promoted leadership and quality and underpinned increased self-confidence.

Implications: The main issue that emerged was the significance of a work-based model which promotes the development of higher level skills; this is relevant across professions

Documenting children's learning – resisting dominant discourses

Source: McNair L. J, C. Blaisdell, J. M. Davis, and L. J. Addison. 2021 (see *References* for further details).

Aims: This article highlights an action research project that sparked transformation regarding

how early years practitioners documented children's learning. The dominant discourse of standardisation and narrowing of early childhood education, encapsulated in the Organisation for Economic Co-operation and Development's International Early Learning Study, has resulted in the 'shaping' and 'testing' of young children around the globe. The OECD has become very interested in early childhood education and is an instrumental player today (Cohen et al. 2021). Consequently, the testing of young children has been instigated by governments to ensure children gain the accepted knowledge, skills and dispositions required to be successful learners.

Methods: Situated within this context of testing and standardisation, this article shares knowledge gained from a small action research project that took place in one Scottish early years setting. The study was stimulated by the early years practitioners of the setting, who strongly opposed the 'reductionist' formal 'tick-box' assessments produced by their local authority. These types of didactic formal assessments suggest that pedagogy is underpinned by a desire to tame, predict, prepare, supervise and evaluate learning. This article is of critical importance as it examines the imposition of didactic assessment from the practitioners' perspective. The practitioners in the study contested that 'tick-box' assessments diminished children's identities down to a list of judgements about their academic abilities, or lack thereof. The introduction of the 'tick-box' assessments presented a dilemma for the practitioners, in terms of the different views of the government and practitioners of what knowledge is worth knowing and what individuals and groups can learn.

Selected findings: Many of the practitioners from the Early Childcare and Learning setting positioned themselves and their work as being consciously different from what was going on in the wider sector. The setting introduced a new method to capture children's learning, which they named the 'Lived Story' approach. The article argues that Lived Stories are a form of narrative assessment designed to track children's progress whilst respecting the complexity of their learning, their position within the learning process, the flow/fluidity of their ways of being and their ability to act in radical, creative and innovative ways.

Implications: The article concludes that by using 'Lived Stories' practitioners were able to lessen the surety of the language they use. The article highlights that as practitioners write Lived Stories and assess children's progress they are freed to use terms such as 'wondering, puzzling, thinking, exploring', demonstrating that this language, and the ideas it enables, are on a continuum; a journey that spans a lifetime.

Transferring ECEC services to the education sectors in England, Scotland and Sweden

Source: Cohen, B., P. Moss, P. Petrie, and J. Wallace. 2021 (see *References* for further details).

Between 1996–1998, England, Scotland and Sweden moved responsibility for all early childhood education and care (ECEC) and school-age childcare (SACC) services from welfare into education. Following an earlier study researching these reforms up to 2003, this article examines and compares subsequent developments and consequences of the initial reform, from 2003–2017. These differed widely. Sweden succeeded in achieving further integration and better access to services, while services in England and Scotland remained divided and fragmented. England's attempt at major reform did not survive political change; while Scotland's more ambitious universalist approach was constrained by lack of appropriate devolved powers and a clear vision of how ECEC and SACC might fit into the education agenda. Undue dominance of the school and the teaching profession posed risks in all three countries. The article considers possible reasons for the differing responses to a common policy change, including the different histories of ECEC and SACC prior to transfer, processes of subsequent policy development, and the effects of differing welfare regimes and path dependency.

9.4 Research in Northern Ireland

Strategies, systems and services in Northern Ireland

Source: McMillan, D. J., and B. McConnell. 2015 (see *References* for further details).

Background: Education in Northern Ireland has a particular distinctiveness and ECEC policy development has not always followed the lead of England. It is largely still a two-tier, split system of variable quality, with a voluntary and private sector childcare staffed by vocationally trained, poorly paid individuals and graduate teacher-led statutory early education provision. Attempts at a more integrated approach to ECEC policy development foundered after the draft Early Years (0–6) Strategy was rejected on consultation and the Department of Education reverted to a more easily manageable Learning to Learn strategy focusing on 3 to 6 year-olds.

Purpose: To explore issues of language and power in the NI government policy document *Learning to Learn: a framework for early years education and learning*

Methodology: Critical discourse analysis (after Ozga 2000) using a framework of context, texts and consequences to generate a text analysis protocol.

Findings: The article describes the source of the policy as rooted in the previous attempt at an integrated strategy which had generated huge interest and around 2,000 consultation responses, many in support of the principles and vision but not its focus on largely educational interventions rather than a more holistic approach recognising learning as beginning pre-birth that was apparent in the government's own commissioned evidence paper. The 'rights-based, inclusive language' (McMillan and McConnell 2015, 249) adopted by the 2013 framework reflected the advisory role of the early years stakeholder group and demonstrated awareness of wider global policies such as the UNCRC. Despite claims of egalitarianism special mention was given in the document, perhaps for political reasons, to Irish medium provision, although this accounted in reality for only a very small proportion of provision.

The Learning to Learn framework was intentionally realigned with the Department of Education's core objectives of raising standards and reducing underachievement in education. The school readiness agenda is, hence, central and only tempered somewhat by reference to the importance of the home learning environment and supporting parents. Care is notable by its absence and reference to the care/nurturing function only appears once in the document.

Ministerial endorsement refers to a two-strand approach with the second strand being cooperation with other departments and agencies to address wider family issues but the targets are vague and represent a considerable watering down from the previous strategy's ambition of integrated education and care within a framework of wider family support. On workforce issues, the Learning to Learn policy exhorts the PVI sector to make the best use of the expertise of qualified teachers (Early Years specialists in advisory roles), reinforcing the 'dominant discourse that statutory is best'. However, the article identifies a 'deafening silence' on the issue of raising workforce qualifications. The benefits of CPD are recognised but it is proposed that this is achieved through outstanding settings (mainly from the statutory sector) leading regional networks and making use of the Excellence in Early Education Fund.

The authors conclude that the recession has directly constrained government policy and prevented further expansion of early years provision or the pursuit of graduate leadership as a goal. In addition, the political and social context in which 'segregated education is the norm' and legislative changes require cross-party agreement, fosters insularity from global perspectives and mitigates against more radical change.

10. Workforce challenges – country expert assessment

Over the last two decades the ECEC workforce in the UK has been the focus of ongoing investment, both in terms of workforce reform and of providing increasing hours of ‘free’ childcare for parents. There have also been significant developments in our knowledge of child development, in particular brain development and attachment; the impact of early trauma and the importance of infant mental health. However, these developments are often overshadowed by the ongoing challenges within the ECEC systems. Three broad barriers repeatedly appear in the literature: the mixed market of ECEC provision, funding, and the nature of the workforce (Nuffield 2022). This research also provided evidence confirming the rhetoric that those working in ECEC are passionate about their work but do not feel valued by policy makers.

There is also the ongoing debate about the purpose of early years provision. Is it about providing ‘childcare’ while parents work or about high-quality early learning experiences that all young children should have access to? The relationship between the cost of childcare and winning voters is evident in general elections and the decision by the English Government to reduce the staff to child ratios for 2 to 3 year-olds from 1:4 to 1:5 has been marketed as bringing England in line with other countries and driving costs down for parents (Lesh and Niemietz 2022). However, a purely economic debate misses the importance of high quality early learning experiences on lifelong outcomes, the importance of graduate leadership and integrated services.

Each of the four nations has, in different ways, recognised the importance of integrated services. Scotland and Wales have consistently been more proactive in this area and the approach is embedded in their ongoing workforce plans. However, the challenges of the separate interests of the wider health, care and education sectors in presenting barriers, especially in inspection and regulation systems, cannot be underestimated. For example, the evaluation of the *Integration Transformation Programme* (Welsh Government 2022d) highlighted that progress is being made but is impacted upon, in part, by organisational barriers.

In England, one of the aims of the *Childcare Act 2006* was the integration of education and care. However, the change of Government in 2011 resulted in a greater focus on *school readiness* and outcome measures. The development of Children’s Centres (hubs of integrated working) was also impacted upon by the change in Government and once funding stopped being ring-fenced they began to decline in numbers. At the same time, the recent *Best Start for Life* policy direction (Department of Health and Social Care 2021) has put integrated working formally back on the agenda, especially with the introduction of Family Hubs. The important point here is that families benefit from an integrated approach to services that they can easily access. The challenge is for the services involved in the early years is to learn from previous experiences and not repeat past mistakes.

Workforce

Employers and membership organisations have warned about a looming crisis in recruitment, staff shortages and availability of suitably qualified staff. This is partly due to low status, low pay and poor career prospects across the private, voluntary and independent ECEC sector. It has been exacerbated by competition for staff within the wider care sector. The uptake of training places for ECEC qualifications at level 3 (EQF level 4) and at graduate level 6 (EQF level 6) in England has also been affected by more stringent entry requirements for the Early Years Educator (EYE) and Early Years Teacher Status (EYTS) qualifications. EYTS entry requirements were

aligned to those for Qualified Teacher Status (QTS) in 2013, yet they do not have the same employment benefits, nor a protected year for newly qualified teachers.

The ECEC staffing crisis had been brought to a head by the entitlement to free ECEC for 3 to 4 year-olds from roughly 15 hours to 30 hours per week. Given that many settings offer predominantly part-time places (e.g. morning or afternoon sessions), doubling the entitlement has required a major expansion in the number of places which has inevitably increased demand for qualified staff. This situation is being exacerbated further by the incremental changes from April 2024 for working parents to access 30 funded hours for infants from nine months old.

The pay and conditions in the PVI sector have also made it difficult to recruit more qualified practitioners and the last few years have seen recruitment and retention become more challenging. There is also an increasing number of settings closing or being concerned that they will continue to be viable businesses.

Research clearly identifies the benefits of a graduate led workforce in ECEC but the ongoing investment in graduate programmes, such as EYTS in England, has highlighted further the differences in pay, status and working conditions and benefits between those with EYTS and their teaching colleagues with QTS – a situation in which the Government has no will to intervene. This two-tier system between the private and public sector, resulting from the mixed economy of provision in ECEC, needs to be addressed alongside the other complex issues. Consequently, there needs to be a major overhaul of the early years system (Nuffield Foundation 2022). Furthermore, it is imperative that policy makers articulate a clear vision about the workforce. Work has been undertaken to raise the profile of the career routes open to those working in ECEC and to make the different qualifications clearer in England (DfE 2022b) but more needs to be done. Those working in the sector need to know there are opportunities for progression, a strong CPD system to support their development and pay scales that reflect their qualifications and experience, whatever part of the UK they work in.

The DfE in England has pledged £153 million (€174,3 Mill.) to develop the early years workforce, including developing an expert and mentoring programme (DfE 2022d). This is an important and much-needed step, but previous experience has shown that regardless of funding, the inherent problems of low pay, status and staff turnover are difficult to change. Arguably, the steps that have been taken more recently by the DfE to address workforce issues and improve CPD opportunities, get lost in the wider debates about sustainability and funding.

Funding

There has been an ongoing argument between the ECEC sector and governments that current rates of funding for the free entitlement are insufficient to cover the costs of providing high quality ECEC places, which need to be cross-subsidised through fees for additional hours and additional services such as meals. For some families meeting these costs is a prohibitive factor in taking up their 'free' hours, especially for those on the lowest incomes.

Funding for early years in England is complex, with the funds that each local authority receives, calculated through the Early Years National Funding Formula. Since 2019–20, local authorities have had to pay a universal base rate to all settings, then can add supplements if settings meet one or more of four categories, for example have a higher number of children with English as a second language (see Foster 2022).

Reports by different organisations have repeatedly warned about funding issues. In 2015, the Institute for Public Policy Research expressed concern that "... the government will significantly underfund the planned extension, and that this will result in a poorly delivered policy with negative outcomes for children and families and for the sustainability of the sector" (Cory 2015, 3). More recently the Institute of Fiscal Studies (2021) has drawn attention to the issue that the

increase in government funding for the 3 to 4 years offer in England will be consumed by increases in living costs. Following the announcement of the expansion of funded ECEC places in 2023, concerns were reaffirmed for the financial challenges that the sector faces (Institute of Fiscal Studies 2023). Furthermore, one of the reasons why the ECEC sector argue against changing staff to child ratios in England is that it will make little difference to business costs for several interrelated reasons, including recruitment issues, pay and staff turnover and the substantial increases in the cost of living.

A further area that impacts on funding is sufficiency and the fluctuations in take-up of places. As the Nuffield research (2022) into the impact of COVID-19 on the sector found, the pandemic shone a light on to the importance of ECEC, but with the increasing cost of living impacting on family budgets and settings having to navigate funding, staffing and sufficiency issues, action must be taken to shape a more resilient sector than is able to navigate the ongoing challenges it faces.

Mixed economy

There remain huge disparities in terms of status, pay, terms and conditions of service between those in maintained nursery/primary schools who hold QTS and the rest of the workforce, whether graduate or not. Governments across the UK have refused to address this issue and have maintained the position that rates of pay and terms and conditions of service of ECEC workers are up to individual employers to decide provided they comply with the legislative frameworks of employment rights and the requirements of a national minimum and living wage. In fact, there is also increasing evidence in England that larger chains are acquiring smaller settings (Lloyd and Simon 2022). If the purchasing chain is a for-profit organisation, staffing costs can be up to 14% lower than that for non-profit settings (Simon et al. 2022).

This neo-liberal approach of leaving it all to employers and individuals to fund simply does not work in a situation where settings are small scale and struggling to survive financially and in which the workforce is extremely low paid. This increasing shift to some smaller settings being purchased by large for-profit chains adds a new level of concern for a sector that is struggling. Staff retention is even more challenging and there are ongoing concerns in England and Scotland of graduate leaders moving into teaching or other careers because of the better pay and conditions. Furthermore, the drive to increase qualifications for setting managers and leaders in Wales, Scotland and Northern Ireland leaves practitioners questioning whether investing their time in training is worth it given the lack of financial recognition of their qualifications.

ECEC policy strategy

ECEC policy has developed differently across the four nations of the UK, with Wales and Scotland focusing on a raft of changes to strengthen the early childhood period, improve outcomes, raise the qualification level for leadership positions and support for families. None of these nations are finding the process easy and, as indicated before, the inherent challenges of pay, the mixed economy of provision and issues with the workforce all act as barriers to change. In Northern Ireland policy has also focused on raising the qualification for managers to level 5 and, like Wales and Scotland, recognise and promote 'play' as a crucial part of early years learning.

In England, early years policy remains politically contentious. Actions such as raising the entry requirements for EYE and EYTS qualifications and not granting QTS to Early Years Teachers with EYTS, alongside initiatives such as the extension of the free entitlement, do not appear to have been thought through in terms of the impact on recruitment and shortages of qualified staff. This situation has been compounded by COVID-19. Research evidences the importance of high-

quality early years experiences for young children, yet in England the ECEC sector has faced continual changes in ministerial responsibility. Despite COVID-19 highlighting how important ECEC is to the economy of the nation, the sector continually feels unheard, undervalued, underfunded, susceptible to policy changes and increasingly open to the challenges of acquisition by for-profit chains – a situation which perpetuates the view that those working in the ECEC sector are not as important as others working with children and families.

Appendix I: Acronyms and definitions

UK wide

BME: Black or Minority Ethnic is the term most usually used in the collection of workforce statistics to represent staff who self-declare as being of non-white British heritage or those with a background of migration.

Childminder: A person who cares for children from birth to five in their own home for more than 2 hours a day and for reward. May also be funded to provide ECEC for 2/3 to 5 year-olds.

Children's Centres focus on a wide range of provision for children, often including day care, and parent support in a particular neighbourhood. Mainly associated with the Sure Start initiative in disadvantaged areas in England and Northern Ireland (or Flying Start in Wales). Children's Centres are on the decline in England (see Family Hubs).

Day Nursery: Provider of full-day care for groups of children under five, normally while parents work or study. Mainly private for-profit but also can be community-based or managed by a voluntary organisation. Usually from 18 months but some accept babies under one.

ITT/ITE: Initial Teacher Training or Initial Teacher Education are the terms used for the regulated training of teachers leading to Qualified Teacher Status.

LA: Around 150 Local Authorities distribute funding and provide local administrative services and support to local services, including children's services, throughout the UK. They are partly financed by national government grants and partly through local taxation based on private properties and business rates.

ONS: The Office for National Statistics is responsible for collecting, analysing and disseminating statistics about the UK's economy, society and population.

Nanny: A person employed by parents to care for one or more children in the child's own home.

Nursery School: State maintained or independent/private provider of pre-school education for children from 2–3 to 5.

Nursery Class: Class for 2, 3 or 4 year-olds that is part of a primary school.

Out-of-School Care/Clubs: Provision for school aged children (4–5 and over) before and/or after the school day begins, usually but not always on school premises.

Pre-School: Provider of mainly part-time ECEC for groups of children from 2–3 to 5. Often these are parent or community run and rely partly on parent volunteers.

PVI: The Private, Voluntary and Independent sector encompasses all types of providers of ECEC services outside of maintained schools. Private provision mainly includes day nurseries and childminders that are operated as private enterprises on a for-profit basis. This includes both privately owned single day nurseries and company owned chains of nurseries. Voluntary (sometimes known as voluntary and community) encompasses not-for-profit parent-run pre-school playgroups, community day nurseries and those operated by large voluntary organisations such as Action for Children. Independent refers to the independent schools sector that have nursery schools, classes or day nurseries attached.

QTS: Qualified Teacher Status is the qualification prescribed under the 1944 Education Act for all teachers in maintained schools and classes. Teachers with QTS must be registered and regulated by the relevant General Teaching Council (or equivalent) in each of the four nations. Standards, assessment, education and training requirements and the number of training places are also set down nationally.

England

CACHE: Council for Awards in Childcare and Education. <https://www.cache.org.uk/>

DBS: The Disclosure and Barring Service provide checks against police records and the statutory lists of those barred from working with children across England, Wales and Northern Ireland. All those who work with children and/or vulnerable adults must be checked including regular volunteers <https://www.gov.uk/government/organisations/disclosure-and-barring-service>

EYE: The Early Years Educator qualification at level 3 RQF (level 4 EQF) is based on standards set down by the National College for School Leadership for all those working in ECEC other than Qualified Teachers and those holding graduate Early Years Teacher Status. It replaces all other previously accepted qualifications at this level in England and is strongly education focused. <https://www.gov.uk/government/publications/early-years-educator-level-3-qualifications-criteria>

EYFS: The Early Years Foundation Stage in England is the statutory framework that applies to all Ofsted registered providers for children from birth to 5 inclusive including childminders, nurseries and reception classes in schools. It sets out the minimum standards for health and safety as well as all aspect of children’s development and learning.

EYTS: Early Years Teacher Status is a professional graduate qualification at level 6 EQF in England only. It is primarily education focused though aimed at all those who work with young children 0–5., i.e. until the end of the Early Years Foundation Stage. It is not recognised as equivalent to QTS for the purpose of employment in maintained schools. <https://www.gov.uk/government/publications/early-years-teachers-standards>

Family Hubs: One-stop-shops for families and children 0–19 (up to 25 for young people with special needs and/or a disability). Core focus on 0–2 age group.

Ofqual: The Office of Qualifications and Examinations Regulation regulates qualifications, examinations and assessments in England <https://www.gov.uk/government/organisations/ofqual>

Ofsted: The Office for Standards in Education, Children’s Services and Skills regulates and inspects schools, and children’s services including Early Years. <https://www.gov.uk/government/organisations/ofsted>

RQF: The Regulated Qualifications Framework replaced the Qualifications and Curriculum Framework providing a single simple system showing the level and size of all qualifications approved by Ofqual for use in schools and colleges across England. https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/461298/RQF_Bookcase.pdf

Wales

CIW: The Care Inspectorate for Wales inspects all registered care provision including early years settings other than schools. www.cssiw.org.uk/?lan=en/

ESTYN is the Educational Inspectorate in Wales covering all schools and funded early education provision wherever it is offered. <http://www.estyn.gov.wales>

EWC: The Education Workforce Council for Wales carries out regulatory functions of the General Teaching Council for Wales. Its remit covers standards, registration, initial training and CPD of teachers in schools and further education, learning support staff and youth workers. <https://www.ewc.wales/site/index.php/en/>

Flying Start is part of the Welsh Government’s early years strategy aimed at children under 4 living in disadvantaged areas. It provides an enhanced health visiting service, parenting programmes, centre-based part-time ECEC and access to speech and language support. <http://gov.wales/topics/people-and-communities/people/children-and-young-people/parenting-support-guidance/help/flyingstart/?lang=en>

Qualifications Wales is the new regulator for qualifications, examinations and assessments in schools and colleges in Wales and maintains the Welsh Qualifications Framework (broadly equivalent to Ofqual in England). <http://qualificationswales.org/?lang=en>

SW: Social Care Wales registers all care provision including early years settings other than schools and determines appropriate qualifications for employment at different levels <http://www.ccwales.org.uk/early-years-and-childcare-worker/>

Scotland

CIS: The Care Inspectorate for Scotland inspects (but does not register) all types of care provision, including early years settings other than schools. <http://www.careinspectorate.com/index.php/about-us>

Disclosure Scotland provides checks against police records and the statutory lists of those barred from working with children in Scotland and liaises with the DBS in England. All those who work with children and/or vulnerable adults must be checked including regular volunteers. <https://www.disclosurescotland.co.uk>

Education Scotland is the education inspectorate responsible for all phases of education in schools and early years settings. <http://www.educationscotland.gov.uk>

ELC: Early Learning and Care – the term used in Scotland instead of Early Childhood Education and Care.

GTCS: The General Teaching Council (Scotland) is the registration and regulatory body for the teaching profession <http://www.gtcs.org.uk/about-gtcs/about-us.aspx>

SCQF: The Scottish Credit and Qualifications Framework sets out all the regulated qualifications available to schools and colleges in Scotland across 8 different levels and illustrates the interface with higher education awards from level 9 (EQF level 6; Honours graduate) to 12 (level 8 EQF or Ph.D.) <http://scqf.org.uk/the-framework/>

SQA: The Scottish Qualifications Authority is the body that regulates and awards all forms of vocational and academic qualifications in Scotland other than those offered by universities and maintains the SCQF. <http://www.sqa.org.uk/sqa/70972.html>

SSSC: The Scottish Social Services Council is the registration and regulatory body for social work, care provision and care professionals, including early years services other than schools. <http://www.sssc.uk.com>

Northern Ireland

CCEA: The Council for the Curriculum, Examinations and Assessment is responsible for advising government and producing guidelines on the curriculum, approving qualifications and monitoring the standards of awards and also acts as an Awarding Body in its own right for a range of awards outside of Universities. <http://ceea.org.uk>

Childcare Partnerships: The five regional Childcare Partnerships bring together representatives from across the statutory, voluntary, community and independent sectors in order to support parents, providers and employers in providing and gaining access to high quality affordable childcare. Policy responsibilities include workforce strategy for the early years, childcare and playwork workforce and quality improvement. <http://www.childcarepartnerships-ni.org>

DENI: The Department of Education (Northern Ireland) has devolved responsibility for all forms of educational provision, including funded pre-school education and Sure Start to local authorities. <https://www.education-ni.gov.uk>

Early Years (formerly NIPPA – the Northern Ireland Pre-School Playgroups Association) is the largest membership organisation representing preschools, nurseries and other groups from the voluntary, community and independent sector in Northern Ireland. <http://www.early-years.org>

ETINI: The Education and Training Inspectorate in Northern Ireland inspects all phases of education wherever these are delivered including Pre-school and Foundation Stage <http://www.etini.gov.uk>

NI Direct is the Northern Ireland government website that explains how services are organised, regulated and inspected. <https://www.nidirect.gov.uk/articles/early-years-teams>

Appendix II: Explanatory note on UK qualification levels

England, Wales and Northern Ireland

Of the nine qualification levels in England, Wales and Northern Ireland (Gov.UK 03.10.2022), the following five are relevant to this report. The stated examples apply only to the education systems of the three nations.

Level 3: e.g. A level or International Baccalaureate Diploma; level 3 award/certificate/diploma

Level 4: e.g. Higher National Certificate; level 4 award/certificate/diploma/NVQ

Level 5: e.g. Higher National Diploma or Foundation Degree; level 5 award/certificate/diploma

Level 6: e.g. Bachelor's degree with/without honours; level 6 award/certificate/diploma

Level 7: e.g. Master's degree, postgraduate certificate in education, level 7 award/certificate/diploma

Scotland

There are three qualification levels relevant to this report in Scotland:

Level 6: e.g. Scottish Higher; National Certificate.

Level 7: e.g. Higher Level Certificate

Level 9: e.g. Bachelor's degree with/without honours

THE UNITED KINGDOM

of Great Britain and Northern Ireland

Early childhood education and care (ECEC)

Please note

Terminology for the main forms of ECEC provision vary among the four UK nations. Descriptors used in this report for ECEC settings in the private, voluntary and independent sectors (0–4 years) and the state-maintained school sectors (2–4 years) reflect nation-specific usage.

Historical milestones in ECEC in the UK

1816	<i>Scotland:</i> Robert Owen opens the first “infant school” for the workers employed in his cotton mills in New Lanark, including children as young as 18 months.
1837	<i>England:</i> 20 years later there are roughly 150 infant schools in England, teaching morals, religion, reading, writing and arithmetic to poor children from 18 months to the age of 6–7.
1870/1872	<i>England:</i> Elementary Education Act: 5 years is established as the starting age for compulsory schooling.
1900	<i>England:</i> 40 years later, about 43% of 3 to 5 year-olds attend either a “baby class” (3-4) or an “infant class” (5-6) and early childhood education becomes an integral part of the school system. Enrolment rates fall to 23% by 1910 due to poor health environment and unsuitable teaching conditions (very large groups, rigid formal instruction).
1911	<i>England:</i> Rachel and Margaret Macmillan found an open day nursery school in London (Deptford), providing for physical, educational and social needs of 2 to 8 or 9 year-olds. Subsequent but limited expansion of nursery provision.
1914–1918	Expansion of day nurseries during WWI
1918	<i>England:</i> Fisher Education Act gives local authorities the power to establish “nursery schools” for 3 and 4 year-olds living in poverty; these receive state funding and are included in the schools inspection system, but expansion is slow in the following years.
1923	<i>England:</i> The Nursery School Association is founded.
1928	<i>Northern Ireland:</i> Arellian Nursery School opened in a church hall, based on the ideas of the McMillan sisters in London; re-opened in 1931 in new premises as the first purpose-built nursery school in N.I.
1939–1945	Further expansion of day nurseries in England and Wales during WWII, with numbers increasing from 194 (1941) to 1,559 (1944). <i>Wales:</i> It gradually became common practice, particularly in rural Wales, to include young children, from 3 years, in reception classes with children up to 7 years with no provision or curriculum specifically for these young children.
1944	<i>England:</i> Education Act requires that local authorities provide early education for 3 to 5 year-olds. After WW2 the requirement is changed to provide only for children in exceptional circumstances.
Post 1944	Gradual expansion of ECEC provision
1960s	Increasing admission of 4 year-olds into reception classes in primary schools; start of the parent-led and community-based voluntary pre-school playgroup movement across the UK
1970s	<i>England:</i> state maintained nursery schools and school-based nursery classes cover only 27% of children aged 3–4.
1980s	Rapid growth of private for-profit provision as maternal employment increases.
1989	<i>England:</i> Children Act (England) emphasises a targeted approach, i.e. ECEC provision only for families ‘in need’. <i>Scotland:</i> A duty is also placed on local authorities in 1995 to provide for families in need.

	<i>Northern Ireland:</i> Northern Ireland Nursery Guidelines [1989] issued
1997	<i>England:</i> The New Labour government initiates policy initiatives to increase equality of opportunity and reduce child poverty: early childhood education and care becomes a government priority for the first time. Early Excellence Centres are launched, to provide models of high-quality, integrated services. <i>Northern Ireland:</i> First <i>Pre-school Curricular Guidance</i> published
1998	<i>England:</i> <i>Sure Start</i> is introduced – a targeted intervention programme for children under age 4 and their families, aimed at better co-ordination of services; extended in 2000 to reach more children living in poverty; introduction of entitlement to free part-time early education for 4 year-olds. Responsibility for childcare moved to Department for Education and Employment. <i>Northern Ireland:</i> Pre-school Expansion Programme [PEEP] launched
2000	<i>England:</i> Introduction of first curricular framework for work with 3 to 5 year-olds (<i>Curriculum Guidance for the Foundation Stage</i>) <i>Wales:</i> Post-devolution: the National Assembly for Wales sets out its own vision for the education and care of young children.
2003	<i>England:</i> First official recommendations for work with under 3 year-olds (<i>Birth to Three Matters</i>) issued. Early Excellence Centres are renamed as Children’s Centres. <i>Wales:</i> The <i>Foundation Phase</i> for 3 to 7 year-olds with a play based curriculum is introduced.
2004	<i>England:</i> Expansion of (Sure Start) Children’s Centres (initially 32 in the most disadvantaged wards, later target 2,500); entitlement to free part-time early education extended to 3 year-olds; introduction of 10-year childcare strategy <i>Every Child Matters</i>
2005– 2010	<i>England:</i> The number of places in full-time childcare for under 5 year-olds grew further by 40 per cent (from 511,000 to 716,700). Despite the New Labour reforms, ECEC continues to be characterised by a marked class structure, with a divide between those families using public settings and those who can afford to use private provision (with the support of tax subsidies).
2006	<i>England:</i> First-ever Childcare Act, setting out plans for a combined curricular framework for work with 0 to 5 year-olds
2007	<i>England:</i> Department for Children, Schools and Families (DCSF) created. <i>Scotland:</i> Entitlement to ‘free early education’ increased to 475 hours a year for 3 and 4 year-olds
2008	<i>England:</i> Introduction of the Early Years Foundation Stage (EYFS) – curricular and structural standards for all approved settings for under 5 year-olds and the first (reception) year in primary schools <i>Scotland:</i> Introduction of a Common Framework with the local authorities (<i>Getting it Right for Every Child</i>) – a strategic 10-point programme to ensure all children the best start in life
2010	<i>Scotland:</i> Curriculum for Excellence for 3 to 18 year-olds introduced <i>England:</i> Target of 3,500 Children’s Centres reached. Entitlement to ‘free early education’ extended to 570 hours per year for 3 and 4 year-olds and extended to most disadvantaged 2 year-olds. Major cuts in public funding initiated by new Conservative-led coalition government.
2012	<i>England:</i> EYFS revised and shortened, mainly for providers (EYFS Statutory Framework), with fewer learning goals and a greater emphasis on school readiness
2013/2014	<i>England:</i> Entitlement to free part-time early education extended to 2 year-olds, first to 20% and then to 40% of the most disadvantaged families
2014	<i>Scotland:</i> Children and Young People Scotland Act includes ‘early education’ extended to 600 hours. <i>England:</i> Plans announced for a reception baseline assessment (RBA) to measure the abilities of 4 and 5 year-olds at the start of school (retracted in 2015 following widespread criticism)

2015	<i>England:</i> 250 Children’s Centres closed since 2010. <i>Scotland:</i> Review of Early Learning and Childcare Workforce and Out of School Workforce
2017	<i>England:</i> 15 hours of free provision per week extended to 30 hours for 3 and 4 year-olds whose parents work more than 16 hours. Revised EYFS introduced
2018	<i>England:</i> New Early Learning Goals introduced – revised EYFS piloted <i>Northern Ireland:</i> Revised <i>Curricular Guidance for Pre-school Education</i> published by the Council for the Curriculum, Examinations and Assessment
2019	<i>England:</i> New attempt to pilot an RBA Department for Education launches a public consultation on revising the EYFS, including proposed changes to the Early Learning Goals and the EYFS profile assessment.
2021	<i>Scotland:</i> As from August 2021: commitment to 1,140 hours free Early Learning and Childcare a year for all 3 and 4 year-olds and eligible 2 year-olds <i>England:</i> Another revised version of the <i>Statutory Guidance for the Early Years Foundation Stage</i> , including 47 Early Learning Goals; Family Hubs are envisaged as part of easily accessible and coherent joined-up services in a policy document on “The best start for life: A vision for the 1,001 critical days” and are rolled out across Britain.
2023	<i>Scotland:</i> Proposal to reform the Scottish Qualifications Authority (SQA) and Education Scotland: merging the curriculum and assessment function and removing inspection from Education Scotland. Care Inspectorate, which inspects early years settings, not included.
2024/2025	<i>England:</i> From April 2024: 15 hours of ‘free childcare’ to all children over 9 months with working parents From September 2025: Working parents with children under the age of 5 are entitled to 30 hours of ‘free childcare’.

ECEC system type and auspices

The systems of early childhood education and care in the constituent countries of The United Kingdom of Great Britain and Northern Ireland – England, Wales, Scotland and Northern Ireland – traditionally varied in terms of detail, but overall they were essentially similar. However, in the context of devolution since the end of the 1990s and separate legislatures and executives in Scotland, Wales and Northern Ireland also responsible for education and family policies, growing divergence has become observable and this is increasing year on year.

England

Overall responsibility for the planning and monitoring of ECEC provision for children up to the start of compulsory schooling at age 5 (in reality usually age 4) lies with the Department for Education. Despite this unifying step, two sub-sectors of early childhood education and care still remain, each with differences in terms of access, service providers, funding conditions and staffing requirements: (1) the state-maintained sector and (2) the considerably larger private, voluntary and independent (PVI) sector with a high proportion of private for-profit providers. “The childcare market has come to dominate the English ECEC system” (Lloyd 2020, 84). Responsibilities are shared between central government, local authorities and service providers in the non-state sector. The Office for Standards in Education, Children’s Services and Skills (Ofsted), which is not officially affiliated to a specific government Department, is responsible for regulating and inspecting all types of ECEC provision, including home-based settings.

At the neighbourhood level, the local authorities have the duty to ensure that there are sufficient places in ECEC settings available to meet demand. They are also responsible for ensuring that providers comply with national standards.

Wales

Early childhood education and care in Wales is regulated by two ministerial departments, i.e. it functions primarily as a bi-sectoral system. The Minister for Health and Social Services is responsible for ECEC provision for children under 3 years of age and outside of the maintained education system. The *Care Inspectorate Wales* (CIW) supervises compliance to the National Minimum Standards for Regulated Childcare for Children up to the age of 12 years (2016 under review in 2023), which cover home-based ECEC settings and private centre-based settings. Any childcare setting which runs for more than 2 hours must register with the Care Inspectorate Wales (CIW). State-maintained and approved private pre-primary institutions for 3 and 4 year-olds come under the portfolio of the Minister of Education (*Department for Education and Skills – DfES.*) *Her Majesty's Inspectorate for Education and Training in Wales* (Estyn) is responsible for the inspection of preschool settings and for the initial and continuing professional development of ECEC staff.

Scotland

Early childhood education and care in Scotland (Early Learning and Childcare – ELC) comes under the auspices of different ministerial departments. Overall responsibility for education lies with the *Cabinet Secretary for Education and Skills*, with a *Minister for Children, Young People and Keeping the Promise* responsible for early education and childcare (Scottish Government 2023a). It has been described as a 'hybrid unitary system' (Cohen et al. 2018).

The workforce remains divided, with the majority of staff in early learning and childcare continuing to have lower qualifications and pay than those of teachers providing 'early education' in schools, despite the requirement for early years settings to be managed by Childhood Practice degree-qualified staff.

ECEC provision for under 3 year-olds is run by a variety of agencies. These include local authorities (50.9%), private for profit services (29.2%) and voluntary and not for profit services (19.9%) (Care Inspectorate 2023, 13). The private and voluntary sector similarly provides for roughly half of the settings for 3 to 4 year-olds.

In 2008, *The Scottish Early Years Framework* was introduced to strengthen co-operation and partnerships between providers, local authorities and families. *Education Scotland* is the inspection agency responsible for supervising educational institutions and curriculum development. The Care Inspectorate inspects early years and childcare settings. Early years settings for children aged 3 and over can be inspected by both agencies. Local authorities are responsible for the organisation and staffing of preschool settings and receive subsidies from the government and tax authorities.

Northern Ireland

Responsibility for different aspects of early childhood education and care was traditionally shared among a number of government Departments (Education; Health; Employment and Social Affairs). Responsibility for the ECEC phase now comes under the Department of Education in the Northern Ireland Executive, although the Department of Health continues to have some responsibilities for provision for children under 3 (European Commission/EACEA/Eurydice 2019,

196). At the local level, The Education Authority (EA) supervises both centre-based and home-based private childcare facilities.

General objectives and legislative framework¹

The 1989 Children Act set out the regulatory framework for all ECEC settings in the UK. Additionally, more specific legislation relates to early childhood education and care in each nation.

England

The Government's overarching aim is for ECEC (usually referred to as "Early Years" or "Early Education and Childcare") to be available through a diverse range of high-quality providers to suit parents' and children's needs. Improving disadvantaged young children's life chances by 'closing the gap' between them and their peers is one of five core goals outlined in the Department for Education's social mobility plan (2017), with a specific focus on key early language and literacy skills (Eurydice 2020a – no longer accessible), as well as the 'levelling up' agenda (Department for Levelling Up, Housing and Communities 2022).

State-maintained ECEC provision (nursery schools and nursery and reception classes in primary schools) is regulated by the Education Act 2011. The Department for Education provides statutory guidance for English local authorities on their duties pursuant to the *Childcare Act 2006 and 2016* (see DfE 2023c for all current guidance).

The *Childcare Act* (2006 with amendments) sets out the arrangements for the provision, regulation and inspection of childcare in England and Wales. It places a duty on local authorities to regulate 15 hours per week of free ECEC provision for all 3 and 4 year-olds and disadvantaged 2 year-olds. In 2017, free provision was extended to 30 hours for 3 and 4 year-olds with working parents and for the 'most disadvantaged' 2 year-olds. From April 2024, working parents of 2 year-olds will have access to 15 hours of free childcare; by September this will be extended to children aged 9 months to 3 years and by September 2025 the offer will increase to full 30 hours (Gov.Uk 2023a). Furthermore, the government will provide additional funding to facilitate the expansion of the new free hours, to change the staff to child ratio for 2 year-olds, and to provide grants for childminders (Gov.Uk 2023b).

The *Children Act* (2004 with amendments) provides a legislative framework for ECEC primarily at the local level and established the office of a Children's Commissioner in England and Wales. Reforms set out in the *Children and Families Act 2014* make provisions for families and also children with special educational needs or disabilities. All local authorities are required to report annually on how they are meeting the needs of working parents in terms of ECEC provision.

Wales

The Welsh Programme for Government 2016 to 2021 included the objective of increasing the offer of funded early years education and childcare from 10 to 30 hours per week, and from 38 to 48 weeks of the year for working parents of 3 and 4 year-olds. This offer began across the country in September 2020. Plans for a new model of 'Community Learning Centres' providing extended services such as childcare, parenting support, family learning, and community access

¹ The Eurydice reports on ECEC in the four nations of the United Kingdom initially provided orientation for legal and regulatory aspects of the ECEC system. However, the UK is currently no longer included in the Eurydice database, therefore the Eurydice sources from 2020 and 2021 can no longer be accessed. All other sources are clearly indicated within the text and in the *References* section.

to facilities built around the school day are also included in the Welsh government's strategy (Eurydice 2021b – no longer accessible).

The legal framework for placing a duty on local authorities to provide nursery education is set out in the *School Standards and Framework Act 1998*. Additionally, the *Childcare Act 2006* places a duty on local authorities to secure sufficient childcare places, including Welsh-medium provision, for working parents.

Under the Education Regulations (*Nursery Education and Early Years Development and Childcare Plans*) (Wales) (Amendment) issued in 2005, local authorities are obliged to offer free, part-time provision for children, starting in the term after their third birthday. Settings providing this early education entitlement are required to work according to the Foundation Phase Framework (see section on *Curricular frameworks*) and be inspected by Her Majesty's Inspectorate for Education and Training in Wales (Estyn) (Eurydice 2021b – no longer accessible).

Scotland

The Scottish Government's aims are: to give all children the best possible start in life through a high quality ECEC system which is flexible, accessible and affordable. ECEC is seen as a cornerstone for closing educational attainment gaps and eradicating child poverty. Expanding entitlement to ECEC is also viewed as an important tool to support long-term inclusive growth in Scotland's economy. Since August 2021, any setting delivering the Government's commitment to 1,140 funded ECEC hours for 3 and 4 year-olds is required to meet a new National Standard which includes a national set of quality criteria (Eurydice 2021a – no longer accessible).

In terms of childcare provision, *The Children (Scotland) Act 1995 (with amendments up to 2020)* marked a significant step in ECEC regulation, setting out the duties and powers available to local authorities to support children and their families and to intervene when the child's welfare requires it. Early education provision is guided by the *Education (Scotland) Act 1996, amended 2016* which regulates the funding of early education institutions. Alongside making provision for children's rights, *The Children and Young People (Scotland) Act 2014* sets down further regulations for the provision of early years services. It also provides a framework for creating a more integrated approach towards (childcare) provision for under 3-year olds and (education) provision for 3 and 4 year-olds and eligible 2 year-olds.

Northern Ireland

The *Draft Childcare Strategy 2015 to 2025* sets out two sets of aims. One is developmental: to give all children the best start in life, prepare them for lifelong well-being and achievement, and to create the basis for "a better, more prosperous future". The second is employment-related: to enable parents to join the workforce "and so enhance prosperity", and to improve gender equality. The main aim of ECEC is to provide equal opportunities for all children to develop and achieve their potential through high quality education and care. This includes equitable access to high quality ECEC services for all, support of individual development, and the identification of risks and their reduction. Particular emphasis is placed on affirming parents in their role as first educators and cooperating with them, as well as supporting children from disadvantaged backgrounds.

Relevant legislation includes the *Children (Northern Ireland) Order 1995*, which sets out duties of the local authorities regarding childcare, and the *Education (Northern Ireland) Act 2014*, which was the basis for replacing the previous five regional Education and Library Boards through an Education Authority. The Education Authority (EA) is responsible and accountable for all pre-school education and learning services funded by the government, including the planning of places and the co-ordination of pre-school admissions. The *Education (Northern Ireland) Order*

1998 defines the length of a full-time pre-school place as at least four-and-a-half hours a day, and a part-time place as at least two-and-a-half hours a day.

ECEC entitlement and compulsory attendance

Legal entitlement is regulated differently in each of the four constituent countries. There is no universal ECEC entitlement for children younger than 3 years of age; however, targeted entitlement applies to 2 year-olds from disadvantaged families. 3 and 4 year-olds are entitled to between 10 and 30 hours of free ‘early education’, as are most disadvantaged 2 year-olds. These hours may be provided in a publicly funded setting (*school or nursery school*) or with a registered private or voluntary provider including home-based ECEC providers (termed *childminders*). In England and Wales, from the September following their 4th birthday, all children are entitled to a full-time (approx. 32 hours) place in a *reception class* in primary school (European Commission/EACEA/Eurydice 2019, 50).

Table 1

United Kingdom: Legal entitlement to a ‘funded childcare’ place in ECEC provision, 2023

England	Universal free early education entitlement of 15 hours per week for 3 and 4 year-olds for 38 weeks a year. Children with working parents entitled to an extra 15 hours per week, i.e. 30 hours in total. 2 year-olds whose parents are in receipt of benefits, or children who are disabled or looked after, are also entitled to 15 hours a week for 38 weeks a year. From April 2024 , working parents of 2 year-olds will have access to 15 hours of free childcare, by September to be extended to children aged 9 months to 3 years and by September 2025 the offer will increase to full 30 hours.
Wales	12½ free hours per week for 39 weeks a year for 2 to 3 year-olds in deprived areas. 10 hours a week for all 3 and 4 year-olds, increased to 12½ hours for 3 year-olds in deprived areas. 3 and 4 year-olds with working parents entitled to 30 hours per week to 48 weeks a year.
Scotland	From August 2021, all 3 and 4 year-olds and eligible 2 year-olds receive 1,140 hours annually of funded early learning and childcare (30 hours a week during term-time, or 22 hours spread across the year).
N. Ireland	12½ free hours/week during school terms in the year preceding school entry (i.e. for 3 year-olds). Pre-school education in all settings is accessible to children from all backgrounds, unlike the school system, which is organised along denominational lines.

Source: Coram Family and Childcare 2022 for England, Wales and Scotland; Gov.UK 2023a

Attending an ECEC setting is not compulsory in the UK. Statutory schooling begins at 5 in England, Wales and Scotland and at 4 in Northern Ireland.

In England, admission authorities have a duty to provide a full-time place for all children in the September following their fourth birthday. Children reach **compulsory school age** on three prescribed days following their fifth birthday (31 December, 31 March, and 31 August) (DfE 2021a, 25).

In Scotland, children can start school in August between the ages of 4.5 and 5.5. From August 2023 children who are eligible to start school but who are still aged 4 (with their 5th birthday between August and end of February) can defer entry to have an additional year of funded early learning and childcare (Scottish Government 2021b).

Main types of provision

England

Nurseries/day nurseries accept children from the age of 3 months up to 5 years. They may be run by local authorities, but the majority are private, voluntary or independent nurseries run by private (for-profit) companies, voluntary organisations such as charities, or independent schools. They are generally open for at least six hours a day, and most are open all day and all the year round.

'**Preschools**', originally called playgroups, are more informal not-for-profit childcare groups for 2 to 4 year-olds. They may be run by churches or community organisations and usually offer half-day sessions.

Nursery schools and **nursery classes/units** in primary schools (also in private schools) provide for 3 and 4 year-olds (and disadvantaged 2 year-olds). They are usually open for 38 weeks per year and for six hours daily, but where there are wrap-around facilities, opening hours may be extended to ten hours (8:00 to 18:00 hours).

Reception classes in primary schools are the first class of compulsory schooling. By law, children must start statutory education full-time at the beginning of the term following their 5th birthday. However, a large number of children are admitted to primary school in the September after their fourth birthday and spend a full year in reception class. As part of the school system, they follow the school year and are therefore open for only 38 weeks annually.

Children's centres were introduced in 1997/1998 within the Sure Start initiative as an integrated service model combining education for young children and a variety of support facilities for parents. Most are organised by both public and private, non-profit organisations. This innovative form of provision, which has inspired several other European countries to establish similar centres (e.g. Germany, particularly in North-Rhine Westphalia), has been suffering under radical cuts to the social budget, particularly since the Conservative government came to power in 2015.

Childminders (home-based child carers) are mostly registered with Ofsted, some with a childminder agency. They are subject to the same regulatory and inspection framework as centre-based providers. All childminders in England must be suitable to work with children, have first aid training (renewed every 3 years), undertake a safeguarding / child protection course and regular professional development.

Wales

As in England, a variety of settings are available which differ according to age and provider. For the youngest these are **day nurseries** (age-range varies) in the voluntary, private and independent sector or **registered childminders**. Some of the day nurseries (mostly privately run) are Welsh medium settings. The **Flying Start** programme is offered to parents of all eligible (disadvantaged) 2 to 3 year-olds for 2½ hours a day on 5 days/week for 39 weeks/year. An additional 15 sessions are provided during school holidays. 3 and 4 year-olds may attend a publicly funded or private-independent **nursery school** or **nursery class**. From age 4, children may attend a full time **reception class** in primary school before statutory schooling begins at age 5. Most of the state-maintained settings are accessible during school term-times only, i.e. 38 weeks/year, and are open for roughly six hours daily, whereas day nurseries are mostly open full day and around the year.

Scotland

ECEC provision for under 3 year-olds (e.g. **nurseries, playgroups, family centres, childminders**) is mainly run by private organisations; publicly funded places for the early education of 3 and 4 year-olds may also be offered in a private setting. **Nursery classes** for 3 and 4 year-olds are usually located in primary schools, and there are some stand-alone **nursery schools**. Most of the private sector settings align opening times to the needs of families. **Family/children's centres** are multi-purpose service centres for children and their families, including ECEC.

At the end of 2022, there were a total of 7,044 services, 3,530 of them offered by childminders, 3,514 in centre-based settings: 108 child and family centres, 33 nurseries and 33 holiday play-scheme, 2,538 nursery classes, 682 out-of-school services and 120 playgroups (Care Inspectorate 2023, 12).

Northern Ireland

As in Scotland, ECEC provision for under 3 year-olds (**day nurseries, preschools/playgroups, childminders** – including Irish-medium settings) is run by private agencies. Disadvantaged 2 year-olds have the possibility of attending an ECEC setting attached to the government funded *Sure Start* programme, which provides a range of support services for parents and children under the age of four who live in disadvantaged areas across Northern Ireland (Eurydice 2020b – no longer accessible).

In the year preceding statutory schooling, which for all children except the 'summer born' begins at age 4, children can be enrolled in public or private **nursery schools, nursery units in primary schools, private nurseries** or **voluntary community playgroups**. Nursery schools are open for 38 weeks/year for at least 2½ hours daily. Privately-run provision is usually open full day all the year round. Some nursery units in primary schools have an opening hours' option of 4½ hours per day.

Three categories of childcare setting are defined and required to register with Health and Social Care Trusts:

1. **Childminders** are self-employed and work in their own homes to provide care and play for other people's children in a family setting. They may offer this service all year round for the full working day. Childminders are required to register when they look after one or more children aged under 12 for reward on domestic premises.
2. **Full-day care** is provided for children aged 0–12 years for a continuous period of four hours or more in any day in premises which are not domestic. The children do not necessarily have to attend for more than four hours, and the setting may provide for part-day care, but if the facility is open for longer than four hours, it is defined as a full-day care setting.
3. **Sessional day care** covers less than a continuous period of four hours in any day and covers crèches, pre-school sessional care (playgroups), out of school clubs (school-age childcare including breakfast clubs, also referred to as wrap around care). **Sure Start** also comes under the category of "sessional day care" and targets children aged 4 and under and their families in areas of social disadvantage to promote the physical, intellectual and social development of children. There are currently 39 Sure Start projects across Northern Ireland, covering a wide geographic spread. The Minimum Standards guidance also applies to early years and childcare staff within Sure Start projects providing the 2- to 3-year programme and crèche provision to support programme delivery.

Provider structures

England

Publicly funded nursery schools and nursery classes in primary schools, which now also accept (disadvantaged) 2 year-olds, provide only a minority of places for 2 and 3 year-olds in England. The majority of providers of ECEC for children below the age of 4 in England are located in the private, voluntary and independent (PVI) sector (see *Table 2*).

Following the introduction of the early education entitlement (see section on *ECEC entitlement and compulsory attendance*), the PVI sector expanded exponentially. Private-for-profit and not-for-profit childcare businesses became eligible – alongside the state-maintained nursery provision – for direct public subsidies to provide this entitlement as long as specified quality and safeguarding criteria were met. This increase in the partial public funding of the private sector helped to fuel a rapid rise in private-for-profit childcare businesses, including corporate childcare chains with stock market listed shares (Lloyd 2020).

Table 2

England: Number and proportion of ECEC places (0 to 4 years) by provider type, 2023

Provider type		Number of places	Proportion in %*
Non-school centre-based ECEC settings (group based providers)	Private (mostly for-profit with state funding for specific number of early education hours)	764,200	67.0
	Voluntary (not-for-profit)	225,400	
	Others	54,000	
	All group based providers	1,043,600	
School ECEC settings (school based providers)	State-maintained and independent schools offering nursery provision	314,900	22.4
	State-maintained nursery schools	34,700	
	All school based providers	349,600	
Home-based ECEC settings (childminders)		164,900	10.6
Total		1,558,100	

Source: Gov.UK 2023e, *own calculation

Table 3 shows the spread of children with 15 and 30-hour entitlements registered with different provider types. Eligible 2 year-olds have a 15-hour funded entitlement to childcare, the greater majority (98,953) of which are enrolled in the PVI sector compared with 18,660 enrolments in maintained nursery schools and state-funded primary schools. This contrasts with the main providers for 3 and 4 year-olds, the majority of whom are enrolled in state-run primary schools (in nursery units/classes and reception classes), although the numbers in the PVI sector remain high.

Table 3

England: Number of providers and children, 15 and 30-hour entitlements, 2023

Provider type	Age group	15-hour funded entitlement		30-hour funded entitlement*	
		Providers	Children	Providers	Children
All providers	2 year-olds	20,991	124,211	0	0
	3+4 year-olds	46,187	1,196,031	35,258	362,982

Provider type	Age group	15-hour funded entitlement		30-hour funded entitlement*	
		Providers	Children	Providers	Children
Private and voluntary	2 year-olds	15,188	98,953	0	0
	3+4 year-olds	18,808	473,531	17,719	256,576
Independent schools	2 year-olds	130	667	0	0
	3+4 year-olds	815	25,722	442	5,823
Local authority day nurseries	2 year-olds	206	1,510	0	0
	3+4 year-olds	400	9,806	316	3,426
Maintained nursery schools	2 year-olds	316	6,604	0	0
	3+4 year-olds	383	28,347	373	9,565

Wales

As in England, the majority of ECEC providers for children under age 4 in Wales are in the private, voluntary and independent sector, including home-based childminding services. Publicly funded provision (nursery schools, nursery classes and reception classes in schools) provide places for 3 to 4 year-olds and 4 to 5 year-olds; non-maintained settings can also provide funded provision for 3 to 4 year-olds. Welsh medium provision of childcare is delivered across all types of providers. Mudiad Meithrin is the lead organisation in Wales for supporting Welsh language immersion settings. Expansion of the Flying Start childcare programme (free childcare for 2–3 year-olds in areas of deprivation) and the Childcare offer (30 hours funded provision for 3–4 year-olds of working parents) is taking place from 2022–2025, placing an increased demand for and on the childcare sector in Wales.

Currently (2023) there are 3,434 childcare settings (including 1,589 childminders, 1,044 all-day settings, 418 sessional services and 330 out-of-school programmes) registered with Care Inspectorate Wales (CIW) providing 79,191 childcare spaces for children aged 0–12 years (Welsh Government 2023c).

Scotland

ELC in Scotland is provided both by local authority settings as well as private and voluntary providers working in partnership with local authorities. The main providers of ECEC settings for under 3 year-olds are private/voluntary, whereas funded ECEC for 3 and 4 year-olds is delivered by a wide range of providers from across the public, private and voluntary sectors as well as by childminders.

A number of nurseries are attached to private-independent schools. Employers may also provide a company nursery/kindergarten for the children of employees.

A National Standard ('Funding follows the child') is to help increase choice and flexibility for parents and carers whilst ensuring children benefit from high quality provision. It means that parents and carers – including those of eligible 2 year-olds – will be able to choose to use their

child’s entitlement at any ECEC provider that meets the National Standard, has a place available, and is willing to enter into a contract with the local authority (Scottish Government 2018a).

Northern Ireland

There is no publicly funded ECEC provision for under 3 year-olds in Northern Ireland. Nurseries and childminders (or nannies) in the private sector have to be registered and are inspected annually by one of the five regional *Health and Social Care Trusts*. Free provision for 3 year-olds may be provided in the complete range of privately-run and publicly funded ECEC settings (see section on *Main forms of provision*). 4 year-olds are in statutory schooling.

Participation rates in regulated provision

Note: The most recent data from Eurostat on enrolment rates are from 2018 - no further data are currently available.

Between 2005 and 2018, the proportion of under 3 year-olds attending centre-based settings increased from 29% to 38.6%, while the proportion of children between 3 years and compulsory school decreased from 88% to 78,1%.

Table 4

United Kingdom: Enrolment rates by age and weekly hours of attendance, 2005-2018, in %

Year	Weekly hours of attendance	Under 3 year-olds, in %	3 years to minimum compulsory school age, in %
2005	1 to 29	24.0	64.0
	Over 30	5.0	24.0
	No enrolment in ECEC	71.0	12.0
2010	1 to 29	31.0	67.0
	Over 30	4.0	22.0
	No enrolment in ECEC	66.0	11.0
2015	1 to 29	26.1	48.8
	Over 30	4.3	24.0
	No enrolment in ECEC	69.6	27.2
2018	1 to 29	31.6	29.2
	Over 30	7.0	48.9
	No enrolment in ECEC	61.4	21.9

Source: Eurostat 2023b

England

Almost three quarters (74%) of eligible 2 year-olds benefitted from the 15-hour entitlement in 2023 and 94% of 3 and 4 year-olds. In 2023, the number of 3 and 4 year-olds registered for the 30-hour entitlement (362,982) was the highest on record, although significantly lower than the number registered for the 15-hour programme (1,196,031) (Gov.UK 2023d).

The greater majority of eligible 2 year olds and most 3 year-olds registered for 15-hour funded programmes in 2023 attended settings in the PVI sector, whereas the greater majority of 4 year-olds were registered in maintained nursery and state funded primary schools. However, the overall number of PVI providers delivering the 15-hour entitlements (31,500) was down 3% from 2022 (Gov.UK 2023d), possibly reflecting the closure problems that nurseries are having in the face of staff shortages and the general rise in the cost of living.

Table 5

England: Number of children registered for state funded and expanded programmes by age and provider type, 2023

Setting		State funded entitlement (15 hours)	Expanded entitlement (30 hours) for eligible 3 and 4 year-olds	Total
All providers	2 year-olds	124,211	0	124,211
	3 year-olds	576,886	260,586	837,472
	4 year-olds	619,145	102,396	721,541
Private/voluntary/independent providers (PVI)	2 year-olds	98,953	0	98,953
	3 year-olds	352,811	184,139	536,950
	4 year-olds	120,720	66,614	187,334
Childminders	2 year-olds	5,733	0	5,733
	3 year-olds	16,537	15,747	32,284
	4 year-olds	4,291	4,583	8,874
State funded schools (including maintained nursery schools and special schools)	2 year-olds	18,660	0	18,660
	3 year-olds	192,661	57,090	249,751
	4 year-olds	471,542	28,237	499,779

Wales

The number of children accessing Flying Start childcare in 2021-2022 was 34,121 out of an expected 36,215 (Welsh Government 2022a). The Childcare Offer for 3 to 4 year-olds in Wales was accessed by 17,824 children in 2020–2021 and delivered by 2,252 providers – these included childminders, full day care and sessional care providers (Welsh Government 2022b).

A first phase of expansion started in September 2022, a second one from April 2023 and a third will follow in April 2025, aiming to provide high quality childcare to all 2 year-olds. By the end of March 2023, 3,178 children – 600 more than planned – could be reached. In the next two years it is envisaged that a further 9,500 2 year-olds could be supported (Welsh Government 2023b).

Table 6

Wales: Number of settings and places in non-maintained ECEC, 2023

	Settings	Places
Childminders	1,589	1,2820
Creches/nurseries	16	474
Full day care	1,044	40,510

Northern Ireland

In 2022/23, the share of 91% of 3 year-olds who were in funded pre-school education remained stable although their numbers in the population decreased (Northern Ireland Statistics and Research Agency 2023, 5). As *Table 8* illustrates, 22,715 children attended funded ECEC, mostly in publicly funded nursery provision (15,495). Just under half that number (7,043) were enrolled in voluntary and private settings and 177 children attended a primary school reception class.

Table 8

Northern Ireland: Number of settings and children in funded centre-based care, 2022/23

	Number of settings	Number of children
Voluntary and private pre-school centres	349	7,043
Nursery schools	93	5,796
Primary school with funded places in nursery units	255	9,699
Primary school with funded places in reception classes	45	177
Total	742	22,715

Source: Northern Ireland Statistics and Research Agency 2023, 19, 21, and own calculation

Financing and costs for parents

According to OECD data, total public expenditure in the UK on early childhood education and care amounted to 0.52% of GDP in 2020 (OECD 2023).

The UK central government has a *Statement of Funding Policy* for all policy areas in England and for the regional parliaments in Wales, Scotland and Northern Ireland. Funding is transferred as a block grant and the national parliaments decide on their own budget priorities. In terms of early childhood education and care, the local authorities have a duty to fund the weekly hours of free entitlement set down by law. Otherwise, parents have to pay a heavy price in terms of childcare costs, particularly for under 3 year-olds (see *Table 9*). A survey of local authorities in England, Scotland and Wales from November 2022 to February 2023 showed that childcare costs (25 hours per week) for under 2 year-olds have increased by 5.6% per year – the increase was highest in England (5.9%), lowest in Scotland (1.6%) (Coram Family and Childcare 2023, 17). The childcare costs for an all-day place are above the thresholds of Universal Credit supports in 97% of local authorities (Coram Family and Childcare 2023, 13).

Table 9

Great Britain: Average weekly parental fees for under 3 year-olds in centre-based ECEC settings, 2023

Age	Great Britain	England	Wales	Scotland
	Full-time place (50 hours)			
Under 2 years	£ 285.31 € 325.99 ²	£ 289.98 € 331.33	£ 250.95 € 286.73	£ 227.17 € 259.56
2 year-olds	£ 279.60 € 319.47	£ 283.95 € 324.44	£ 249.24 € 284.78	£ 225.44 € 257.58
	Part-time place (25 hours)			
Under 2 years	£ 148.63 € 269.82	£ 150.89 € 172.40	£ 135.67 € 155.01	£ 118.14 € 134.98
2 year-olds	£ 144.01 € 164.54	£ 146.00 € 166.82	£ 134.92 € 154.16	£ 114.81 € 131.18

Source: Coram Family and Childcare 2023, 11, 13

Across Great Britain, nursery costs for under 2 year-olds are on average higher than the equivalent costs for a childminder (£285,31 and £247,19– €325,99and €282,44) for a full-time place respectively). Nursery costs in Wales are lower than in England and Scotland.

In all nations and regions, families pay considerably less for nursery childcare for **3 and 4 year-olds** compared to younger children. The main reasons for this are: (1) families receive a certain amount of free hours, resulting in lower fees; and (2) childcare providers are able to operate at lower staff to child ratios for older children, which often means that childcare costs less to provide (Coram Family and Childcare 2023, 14).

Since 2018, a scheme of Tax-Free Childcare for parents of children up to age 11 is available across the UK in England, Scotland, Wales and Northern Ireland in which the government pays 20 per cent of childcare costs up to a set amount. Eligibility for the scheme depends on household income and circumstances.

In 2022, a couple with two children spent about 16% of net household income on childcare costs³ (OECD.Stat 2023).

The overall situation has been described by Polly Toynbee (2023) as follows:

“Costing an unaffordable average of just under £15,000 a year for a full-time place for a child under two, nurseries are closing in droves, unable to finance the government’s so-called 30 free hours, with pay so low that childcare assistants flee elsewhere. The fact is, the sum the government pays to supposedly cover these hours is far too little, so nurseries struggle unless they can charge parents significant extras.”

Staff to child ratios in centre-based settings and group size

England

From September 2023, one member of staff can look after five children (Gov.UK 2023c) which – regarding quality issues – is a deterioration from the current regulation of four children per staff.

² Conversion rate November 2023

³ The calculation is based on: full-time working parents (average wage); two children aged 2 and 3 years in full-time childcare; childcare benefits included.

Binding staff-child ratios are included in the *Statutory Framework for the Early Years Foundation Stage 2021*. Up to September 2023, these were:

Table 10

England: Staff to child ratios

Age range	Staff to child ratios
Under 2 year-olds	1:3** At least one member of staff must hold an approved NQF* level 3 qualification, and must be suitably experienced in working with children under two; at least half of all other staff must hold an approved level 2 qualification
2 year-olds	1:4 At least one member of staff must hold an approved NQF level 3 qualification; at least half of all other staff must hold an approved level 2 qualification
3 year-olds and over	1:8 In registered early years provision where a person <i>without</i> an NQF level 6 qualification works directly with the children: at least one member of staff must hold an approved level 3 qualification; at least half of all other staff must hold an approved level 2 qualification
	1:13 In registered early years provision where a person <i>with</i> an NQF level 6 qualification works directly with the children: at least one other member of staff must hold an approved level 3 qualification
	1:13 In maintained nursery schools and nursery classes in maintained schools where at least one member of staff must be a qualified school teacher: at least one other member of staff must hold an approved level 3 qualification
4 and 5 year-olds	1 qualified teacher to 30 children Legislation on reception classes in maintained schools and academies limits the size of infant classes to 30 pupils per school teacher. Additional staff may include teaching assistants, higher level teaching assistants or other support staff.

*National Qualifications Framework; ** Up to September 2023

Source: DfE 2021b

Wales

Table 11

Wales: Statutory staff to child ratios in regulated childcare settings

Age range	Adult to child ratio
Under 2 years	1:3
2 year-olds	1:4
3 to 7 year-olds	1:8

Source: Welsh Government 2016

These ratios include any children of staff or volunteers and apply to any activity including escorting and transporting children. Regular volunteers can be taken into account in the normal staffing ratios (Welsh Government 2016). However, there is also a requirement in Wales – in line with September 2018 guidance – for all publicly funded settings providing for 4 year-olds in the Foundation Phase – including *reception classes* – to work towards a 1:8 ratio (European Commission/EACEA/Eurydice 2019, 89).

Scotland

The Scottish Care Inspectorate provides guidance about adult to child ratios in Early Learning and Care (ELC) settings.

There are no specifications about the number of qualified staff that should make up these ratios.

Table 12

Scotland: Staff to child ratios in registered ELC settings

Age range	Adult to child ratio
Under 2 years	1:3
2 to under 3 year-olds	1:5
3 year-olds and over*	1:8

Where children aged 3 and over attend facilities providing a session which is less than a continuous period of four hours in any day the adult to child ratio may be 1 : 10, providing individual children do not attend more than one session per day.

Source: Care Inspectorate (Scotland) 2018

Northern Ireland

In PVI settings the Registered Person ensures that a minimum ratio of staff to children is followed (0–2 years 1:3; 2–3 years 1:4; 3–12 years 1:8). Minimum ratios of staff to children must be met and at least two members of staff must be on duty in each room within a setting at all times.

The recommended staff to child ratio in full-time *state-maintained* provision (nursery schools and nursery classes or units attached to primary schools) is two members of staff to 26 children. One of these must be a qualified teacher, the other a qualified nursery assistant.

Private and voluntary provision has to comply with the following legal requirements:

Table 13

Northern Ireland: Required staff to child ratios in private and voluntary ECEC settings

Age range	Staff to child ratios
2 to 3 year-olds	1:4
3 to 5 year-olds	1:8

A 'suitably qualified person' must be in charge at all times.

Source: Eurydice 2020b (no longer accessible)

Curricular Frameworks

England

There is one statutory framework for the entire ECEC phase in England. Both public and private ECEC settings are obliged to work according to the *Statutory Framework for the Early Years Foundation Stage* which most recently became effective in September 2021 (DfE 2021b). Three sections refer to (1) the learning and development requirements, (2) assessment, and (3) the safeguarding and welfare requirements. The learning and development requirements focus on seven areas of learning:

- Communication and language (listening, attention and understanding; speaking)
- Personal, social and emotional development (self-regulation; managing self; building relationships)
- Physical development (gross motor skills; fine motor skills)
- Literacy (comprehension; word reading; writing)

- Mathematics (number; numerical patterns)
- Understanding the world (past and present; people, culture and communities; the natural world)
- Expressive arts and design (creating with materials; being imaginative and expressive).

In each of the seven learning areas, Learning Goals are specified, 47 in all.

Recommended modes of learning are both adult-led and child-initiated. Particular emphasis is placed on play and exploration, active learning, and creative and critical thinking. There is no mention of children’s rights, democratic practices or children’s participation in decision-making.

Wales

There is no integrated curricular framework for the entire ECEC phase in Wales. The previous statutory curricular framework for work with 3 to 7 year-olds, the Foundation Phase Framework, applied to all ECEC settings serving children of that age group, whether maintained or non-maintained (Welsh Government 2015).

However, Wales is currently in the midst of fundamental changes to its statutory curriculum in the form of ‘Curriculum for Wales’, set out in the *Curriculum and Assessment (Wales) Act 2021*, replacing the national curriculum set out in the *Education Act 2002* (Part 7). A duty is placed on funded non-maintained settings as well as schools to implement Curriculum for Wales and appropriate assessment arrangements (Gov.UK 2021).

From September 2022, the new statutory framework *Curriculum for Wales* replaced the Foundation Phase framework and applies through the Curriculum and Assessment (Wales) Act 2021 for all learners aged 3–16 (Welsh Government n.d.). The new curriculum arrangements allow for schools to design their own curriculum around four core purposes:

- Ambitious, capable learners
- Enterprising, creative contributors
- Ethical, informed citizens
- Healthy, confident individuals

Within and across these four purposes are seven areas of learning and experience: Expressive Arts; Health and Wellbeing; Humanities; Language, Literacy and Communication; Mathematics and Numeracy; Science and Technology. The *Curriculum and Assessment (Wales) Act 2021* includes a statutory duty for non-maintained settings delivering funded childcare to implement Curriculum for Wales. In response to this, a Curriculum for Funded Non-maintained Settings (Welsh Government 2022c) and Assessment Arrangements for funded non-maintained settings (Welsh Government 2022e) have been developed through a co-construction process within the sector. The Curriculum for funded non-maintained settings has embedded the four purposes and seven areas of learning into five developmental pathways:

- Belonging
- Communication
- Exploration
- Physical Development
- Wellbeing.

The curriculum for funded non-maintained settings has a focus on child-centred practice and authentic and purposeful learning for children. *Cynefin* features heavily placing emphasis on a sense of place and belonging for children in Wales.

Guidance for approaches to supporting learning and development in ECEC and delivery of provision within non-maintained settings and schools sit around three key enablers (Welsh Government 2023a):

- Enabling adults
- Engaging experiences
- Effective environments.

A suite of professional learning and development support is in development to support the ECEC sector with curriculum framework changes across Wales.

The Flying Start initiative in Wales aims to provide under 4 year-olds from disadvantaged backgrounds with a “flying start” to life. Flying Start focuses not only on educational aspects but also on supporting parents and health issues. Flying Start provision is expanding across 2022-2025 to provide childcare and services to more children aged 2–3 across Wales in areas of multiple deprivation.

Scotland

The Scottish *Curriculum for Excellence* is the statutory educational framework for children aged 3 to 18 years, regardless of the setting. The first stage of the Curriculum for 3 to 5 year-olds encompasses pre-primary education and the first stage of primary school (Scottish Government 2021a).

Principles for early education emphasise active learning through: spontaneous and purposeful play; investigating and exploring; events and life experiences; focused learning and teaching. Experiences and outcomes in eight curricular areas are emphasised for the age range 3-15: expressive arts; health and well-being; languages (including literacy, English and a foreign language); mathematics (including numeracy); religious and moral education; sciences; social studies; technologies.

Realising the Ambition: Being Me is refreshed early years national practice guidance for Scotland (Education Scotland – National Improvement Hub 2020). It builds upon the original principles and philosophy of *Pre-Birth to 3* and *Building the Ambition*. It retains the relevant content from the previous guidance which it replaces, extending and strengthening it in line with current research and evidence about how children develop and learn. It is published by Education Scotland for anyone working in early learning and childcare and in early primary school.

Northern Ireland

The *Curricular Guidance for Pre-School Education* (CCEA 2023a) applies to the preschool ECEC phase in Northern Ireland. All ECEC settings, both statutory as well as voluntary and private settings with funded places are obliged to follow this guidance (Department of Education 2021). An emphasis is placed on each child having the opportunity to develop his or her individual potential. A holistic approach serves towards promoting all aspects of children’s development; developing self-esteem, self-control and positive attitudes towards others; developing language and communication skills to encourage the sharing of thoughts and feelings; and creating confident, independent and curious learners with a positive and problem-solving attitude to learning (CCEA 2023a). Six areas of learning are foregrounded: personal, social and emotional development; physical development; creative/aesthetic development; language development; early mathematical experiences; early experiences in science and technology; knowledge and appreciation of the environment (Department of Education 2021). There is no mention of children’s rights, democratic practices or participation in decision-making.

The *Curricular Guidance* is the basis for the Education and Training Inspectorate (ETI) when evaluating the quality of provision and the outcomes for learners in all pre-school settings. The Foundation Stage (age 4–6) is the statutory curriculum framework for the first two years at primary school (CCEA 2023b).

Digital education

The term ‘digital education’ does not appear in the statutory ECEC curricular frameworks in England, Wales, Scotland or Northern Ireland. The preferred term is ICT which is seen as a cross-curricular domain to be implemented in an age-appropriate way. However, there is little or no specific reference to digital practices before entering compulsory schooling except in the case of the Northern Ireland curricular guidance.

In **England**, there is no mention of digital literacy or digital learning in the *Statutory Foundation Stage Framework* (see section on *Curricular frameworks*) for work with children from birth to five.

In **Wales**, a non-statutory *Skills framework for 3 to 19-year-olds in Wales* (2008) states that ICT is a cross-curricular domain and that children’s ICT skills, knowledge and understanding should be developed through a range of experiences that involve finding and developing information and ideas and creating and presenting information and ideas (Welsh Government 2016). However, there is no specific reference to digital practices with 3 to 5 year-olds. Digital competence is embedded within and across the new *Curriculum for Wales* from September 2022 as part of the cross curricula skills – this elevates the importance of digital competence to align with literacy and numeracy within the Welsh curriculum.

In the *Curriculum for Excellence* for 3 to 18 year-olds in **Scotland**, ‘ICT to enhance learning’ is one of six areas listed in the Technologies section. Across the curriculum, skills in ICT are to be developed in the context of the learning and teaching as appropriate to the child or young person’s maturity.

Realising the Ambition includes a section on ‘Digital technology and the young child’ which emphasises the importance of learning ‘with and through digital technology rather than about it, and recognises its presence within everyday lives, including the pedagogical documentation systems of early years settings (Education Scotland 2020, 78).

The *Curricular Guidance for Pre-school Education* in **Northern Ireland** has a section on ICT, emphasising that it can enhance educational opportunities when it is integrated and embedded in an age-appropriate way. It states that children need to see ICT used in meaningful contexts and for real purposes, with a firm emphasis on exploration. The children should have opportunities to “use digital resources, for example a camera, to enhance their own learning, deepen and consolidate observational skills and creativity; and explore and investigate a range of ICT resources safely, naturally and at their own pace” (CCEA 2023a).

Monitoring – evaluation

England

Child-related assessment

Assessments of individual children are recorded according to the seven learning areas (Early Learning Goals – ELGs) in the *Early Years Foundation Stage (EYFS)* curricular framework. Three assessments are obligatory: one for 2 year-olds in ECEC settings (*Progress Check at age two*), one during the child’s first six weeks in the reception class in primary school (*Reception Baseline*

Assessment – RBA, Gov.UK 2022) and one at the end of the school year in reception class (*Early Years Foundation Stage Profile*) (DfE 2022a).

The ‘progress check’ made between the ages of 2 and 3 and is seen as a way of noticing potential developmental needs in order to provide additional support. ECEC providers are obliged to inform parents in a short written report about the progress of their 2 to 3 year-old children (particularly in the areas communication and language; physical development; and personal, social and emotional development). The report may also be passed on to the reception class teacher when the child starts school. Ongoing (formative) assessments by practitioners are considered to be an integral part of the learning and development process (DfE 2021b, 18).

The RBA, to be administered during the first weeks of reception class, “...is a short, interactive assessment...designed to take around 20 minutes. The assessment can be carried out by a teacher, teaching assistant, early years practitioner or any other trained education professional who should be familiar with the child taking the assessment” (DfE 2021b, 48).

The assessment instrument *Early Years Foundation Stage Profile* (EYFSP, DfE 2022b), that follows the regulations of the Standards and Testing Agency, must be completed at the latest at the end of June of the year in which the child turns 5. It provides an overview of the child’s abilities and skills, his or her progress related to specific learning goals and an assessment of his or her ‘school readiness’. All providers who receive state subsidies are obliged to complete the EYFSP. According to the Education Act 1996, the assessments should be sent to the local authorities who then pass them on to the Department for Education.

Centre-level internal evaluation

Self-assessments by ECEC staff are recommended, but are not mandatory (European Commission/EACEA/Eurydice 2019, 126).

External evaluation

External assessments of providers and staff are carried out at regular intervals by Ofsted (*Office for Standards in Education, Children’s Services and Skills*) and include both structural and process quality. Providers are assessed according to four ratings: ‘outstanding’, ‘good’, ‘requires improvement’, ‘inadequate’. As at 31 August 2022, 96% of childcare providers had been judged good or outstanding, remaining stable since August 2019. The proportion of providers judged outstanding had decreased from 20% to 15% since 31 August 2019 (Ofsted 2023).

Wales

Child-related assessment

Since 2015, the National Curriculum requires a baseline assessment of children within six weeks of starting school, and again at the end of the first year in school.

Since 2022 and the introduction of the *Curriculum for Wales* and the *Curriculum for Funded Non-Maintained Settings* (Welsh Government 2022d), a new set of assessment arrangements are in development – particularly for children aged 3–16 who fall under the remit of *Curriculum for Wales*. Under the *Curriculum for Wales* assessment progresses from 1–5, with principles of progression and descriptors of learning under the seven areas of learning and experience. The progression steps are on a continuum not associated with specific age ranges to support individual progress and continuity within the curriculum from 3–16.

Settings in funded non-maintained settings and schools have a statutory duty to follow assessment arrangements for children, including initial and ongoing assessment. This duty is set out

within the Curriculum and Assessment (Wales) Act 2021 (Gov.UK 2021). Draft Assessment Arrangements for funded non-maintained settings were published for consultation in 2022 (Welsh Government 2022c) with rollout expected for September 2023. The Draft Assessment Arrangements align to the principles of progression set out in *Curriculum for Wales* (Welsh Government, n.d.), supporting transition into and alignment with assessment arrangements in Curriculum for Wales in schools.

Centre-level internal evaluation

As in England, centre-level assessments by ECEC staff are recommended, but are not mandatory (European Commission/EACEA/Eurydice 2019, 126).

External evaluation

External inspections are carried out by Estyn, *Her Majesty's Inspectorate for Education and Training in Wales* for funded maintained settings, and include publicly funded nurseries. For the private non-maintained sector, the inspection framework of the *Care Inspectorate Wales* (CIW) places an emphasis on improving child development and wellbeing outcomes and has four core themes: well-being; care and development; environment; leadership and management (Welsh Government 2022b). Funded settings delivering the Curriculum for Wales for 3 to 4 year-olds are subject to a joint inspection by both Estyn and CIW. Many non-maintained settings align to external quality assurance programmes linked to umbrella support organisations including *PACEY Cymru* (Childminder's), National Day Nursery Association Wales (NDNA), Early Years Wales (sessional care) and *Mudiad Meithrin* (Welsh Medium nursery settings).

Scotland

Child-related assessment

Within the *Curriculum for Excellence* children's progress is continuously assessed, discussed with parents, and used in planning the next steps in their learning and development. Increasingly, early learning and childcare practitioners provide summative written reports for parents and the primary school to which the child transfers. Many local authorities have developed their own assessment procedures, including the children themselves reflecting on their own learning (Eurydice 2021a – no longer accessible).

Centre-level internal evaluation

There is no mandatory framework for centre-level assessment procedures.

External evaluation

External inspections of ELC settings are conducted by *Education Scotland*, which expects children to experience an appropriate balance across the eight areas of the *Curriculum for Excellence* (Scottish Government 2021a), and the Care Inspectorate, which focuses on national care standards, including learning environments and which has four key questions guiding inspections: 1: How good is our care, play and learning? 2: How good is our setting? 3: How good is our leadership? 4: How good is our staff team? (Care Inspectorate 2022). The 2022 review of Education Scotland and SQA noted: "As a matter of urgency the new independent Inspectorate should re-engage with the Care Inspectorate to agree a shared inspection framework designed to reduce the burden on early learning and childcare (ELC) practitioners and centres" (Scottish Government 2022).

Northern Ireland

Child-related assessment

There is no obligation for staff to assess children's progress during their time in ECEC provision before entering statutory schooling. However, both ongoing observations of and interactions with children in a range of situations over time and informing parents of progress are included as recommendations in the *Curricular Guidance*.

Centre-level internal evaluation

Self-evaluation procedures in ECEC settings are not obligatory.

External evaluation

External inspections of ECEC providers are carried out by the Education and Training Inspectorate (ETI) with the expectation that provision is in line with the *Curricular Guidance*. ETI also inspect preschool provision with funded places in the private and voluntary sector.

Health and Social Care Trust (HSCT) Early Years Social Services Team use Minimum Standards for Childminding and Day Care for Children Under Age 12 (Department of Health, Social Security and Public Safety 2018) to register new facilities and carry out inspections. National Minimum Standards describe the minimum requirements for regulated early years and childcare settings.

Inclusion agenda

Children with special educational needs and disabilities

In the UK, children with special educational needs and disability (SEND) have traditionally been included in mainstream provision as far as possible. Special education institutions exist for those children who cannot be given the necessary support in regular provision.

England

According to the *Children and Families Act 2014*, local authorities (education and health departments) have a duty to ensure that each child with SEND can attend maintained provision, i.e. in the case of children below school age, maintained nursery provision. Each setting must provide each child the special educational provision which his or her particular needs demand and ensure that the child can engage in the general activities of the setting together with children who do not have special educational needs. Guidance published by the Department for Education and the Department of Health in 2015 (*Special Educational Needs and Disability Code of Practice: 0 to 25 years*) recommends a four-step procedure: assessing, planning, acting and evaluating. Each maintained setting has a *Special Educational Needs Coordinator, SENCO* whose task is to sensitise and support the centre staff for this work and to co-operate closely with parents and external specialists.

However, government subsidies for ECEC providers calculated at a flat rate according to the Early Years National Funding Formula (ESFA 2021) fail to take into account the additional costs needed for appropriate provision for children with SEND. Local authorities are not always able to take over these costs within their austerity budgets, resulting in lack of access to publicly funded ECEC for 3 and 4 year-old children with SEND (Lloyd 2020, 87f).

Wales

In 2018, a new statutory framework was issued for supporting children and young people aged 0-25 with additional learning needs, the *Additional Learning Needs and Educational Tribunal*

(Wales) Act 2018. It has been introduced in a phased approach since September 2020. The term 'additional learning needs (ALN)' replaces the existing terms 'special educational needs' (SEN) and 'learning difficulties and/or disabilities' (LDD). Under this legislation, maintained nursery schools are required to have a designated Additional Learning Needs Co-ordinator (ALNCo). For children under compulsory school age not yet in a maintained setting, local authorities are required to appoint an Early Years ALN Lead Officer to help facilitate effective multi-agency collaboration (Welsh Government 2018). An Individual Development Plan will be created for each child with additional learning needs.

There is currently one special education nursery (up to 3 years) and pre-preparatory unit (4–7 years) in the same co-educational school in Cardiff.⁴

Scotland

Under the *Education Act (Additional Support for Learning), Scotland, Act 2004, amended 2009*, local authorities have a duty to identify, meet and keep under review the additional support needs of pupils for whose education they are responsible and to tailor provision according to their individual needs.

A government funded *Early Learning and Childcare Inclusion Fund* aimed to help children with additional support needs (ASN) to access their funded ELC entitlement. The Fund was managed by Children in Scotland. Staff working in ELC settings could apply for funding for training, resources, equipment and adaptations to support children with ASN within their setting that was not provided by statutory services. From 2018–2021, up to £2 million was distributed to selected registered ELC providers (Children in Scotland 2021).

In 2023, a total 1,620 children (2%) were registered as having a disability (Scottish Government 2023b, Table 7).

Northern Ireland

Primary legislation, The Special Educational Needs and Disability Act (NI) (2016), secondary legislation and a Code of Practice provide the legislative base for delivery of a SEN framework (Department of Education 2021).

The Special Educational Needs and Disability Order 2005, SENDO emphasises that these children should be included in mainstream schools wherever possible. Each child receives an annually reviewed *Statement of special educational needs*, which entitles him or her to the appropriate support. However, there is no specific reference to SEND in ECEC provision. The Department of Education has issued an Extended Early Years Special Educational Needs (SEN) Supplement as guidance for practitioners (Department of Education 2014).

Children with a migration background, Roma and Traveller children

In 2020/21, the five most common countries of birth of the non-British population living in Britain were India (896,000), Poland (682,000), Pakistan (456,000), Ireland (412,000) and Germany (347,000) (Statista 2023a).

In 2019, 9.3% of the population were of non-British origin. More than half (59.7%) of these came from EU28 countries. In the age group under 5 years, these shares were 7.6% and 64.5% respectively (Eurostat 2023c).

⁴ www.specialneedsguide.co.uk

England

For children whose home language is not English, the Statutory Framework for the EYFS (2021) requires providers to “take reasonable steps to provide opportunities for children to develop and use their home language in play and learning, supporting their language development at home” (DfE 2021b). Providers are also expected to ensure that children have opportunities to reach a good standard in the English language during the EYFS. Practitioners are expected to assess children’s skills in English.

Wales

In 2018, the Welsh Government published a strategy called “Enabling Gypsies, Roma and Travellers” which intends to raise awareness of the Foundation Phase free entitlement through improved communication between local authorities, ECEC providers and Gypsy, Roma and Traveller parents (Eurydice 2021b – no longer accessible).

Scotland

English as an additional language is specifically identified as a potential additional support need within the *Additional Support for Learning Statutory Guidance* (Scottish Government 2017).

In 2018, the Scottish Government published: *Improving educational outcomes for children and young people from travelling cultures*. Its purpose is to provide guidance about supporting Traveller children and young people and their families to engage in education so as to improve their life outcomes (Scottish Government 2018b).

In 2023, a total of 9,930 (11%) of children in local authority and partnership settings were registered as having a family language other than English. The local authorities provide English courses for children with a background of migration (Scottish Government 2023b, Table 7).

Northern Ireland

Settings which include Traveller children or children from Roma families are provided with additional subsidies from the Department of Education.

Parental leave arrangements⁵

Maternity leave is granted for 52 weeks and may start 11 weeks before the expected birth date. Two weeks after birth are compulsory. Six weeks are paid at 90% of the mother’s average earnings, and either a weekly lump sum of £172,48 (€202,18) is paid for an additional 33 weeks or 90% of the weekly gross income, whichever is the lower. The remaining 13 weeks are unpaid. The requirement for payment of allowances is a 26-week period of continuous employment before the 15th week preceding the expected birth date and a minimum weekly salary of £123 (€142,26).

Since April 2015, employed mothers are entitled to transfer all Maternity leave to the father, except for the two weeks of obligatory leave, i.e. up to 50 weeks. This period of leave is termed ‘**Shared parental leave**’ (SPL). SPL can only be taken in one-week (seven-day) blocks of time.

⁵ The information in this section is primarily based on the country report by Margaret O'Brien, Jamie Atkinson and Alison Koslowski in the *International Review of Leave Policies and Research 2023* (see *References*).

Fathers may take one or two weeks of **Paternity leave** paid with a weekly lump sum of £172,48 (€202,18) or 90% of average weekly income if this is lower. These two weeks must be taken in one part within 56 days of the child's birth.

Each parent is entitled to 18 weeks of unpaid and non-transferable **Parental leave** per child. However, these cannot be taken in one block. Not more than four weeks may be taken in any one year unless the parent's employer agrees to an alternative arrangement. This leave can be taken up to the child's 18th birthday.

Currently, no systematic statistical information about leave uptake is available.

Current challenges for the ECEC system in the United Kingdom

Country experts' assessment

The introduction to this section was written by **Liz Brooker** (†) in 2017 and continues to be relevant. **Eunice Lumsden** contributed updates in 2023 about the UK in general and the situation in England, with **Natalie MacDonald** adding Welsh perspectives and **Sarah Burton** Scottish perspectives.

Liz Brooker (†) (2017)

As this synopsis of key contextual data has shown, the four nations of the UK now find themselves differently positioned with regard to ECEC, as well as with regard to political, economic, social and cultural matters in general. Nevertheless, it remains the case that England, with over 55 million of the UK's total population of 65 million, faces the most complex and significant challenges, which are reported in this section. Whereas all four nations are struggling to meet the issues arising from funding constraints and rapidly changing professional roles and training, English ECEC finds itself in particularly challenging circumstances as a result of fundamental changes in ideology and policy on the part of successive governments.

1. Early childhood policy in the years from 1997-2010 was a key priority of the then Labour government, which invested in long-term and large-scale research projects (e.g. Sylva 2010, Mathers et al 2014) aimed at identifying the most 'effective' forms of provision in terms of young children's experiences and outcomes. The focus of these research projects became one of 'quality' and their findings were clear: children under 5 years of age benefited most from properly funded provision which combined education and care, which was led by trained teachers and which offered a balance of free play and adult-led activities. Legislation during these years resulted in a steady increase in teacher-led provision and a steady focus on children's experience. In the years since 2010, Conservative-led governments have reversed the focus on ECEC as a benefit for children, and have aimed instead to create services which allow parents to work. This change of direction is described in research reports, notably from the Sutton Trust (Waldfogel and Stewart 2017) as a shift from quality to quantity: children aged 3 and 4 whose parents are working are now entitled to 30 hours of free 'childcare' a week, to enable their parents to move into employment (children with a non-working parent are offered only 15 hours). But the nature of this 'childcare' no longer resembles the high-quality education and care standards set during the previous regime. The requirement for a teacher to be present in a non-school setting has been removed, and there is a move to allow nursery and reception classes in schools to be led by non-teachers. The Sutton Trust concludes that these moves are sharply increasing the inequality between more and less privileged groups of children, as the children of poorer working parents increasingly spend longer hours in poor-quality provision.

2. Government funding for the 30-hours free provision has been independently evaluated as well below the level required to create new places in existing settings, or to encourage the creation of new (PVI) settings. With the launch of the scheme in September 2017, it was reported that many existing settings had chosen not to offer the expanded provision, and in consequence that many parents were unable to find a place for their child.
3. Frequent changes to the IPE of those working in ECEC have failed to remedy the failings and shortages they were designed to address. The latest shift, from Early Years Professional Status to Early Years Teacher Status (without QTS) was intended to supply more 'teachers' without providing them with the same pay and conditions as Primary Teachers with an Early Years specialism. The intention was to expand the well-qualified workforce, but more cheaply than with a qualified-teacher workforce. However, the take-up of training for the new EYT status was slow, and has declined year on year, so that currently only 600 of the planned 2,500 training places have been taken up, and many HEI providers are closing their courses. ECEC in England is set to fall way below the proposed standards of qualification in the next few years.

Eunice Lumsden (2023)

Early Childhood Education and Care continues to be positioned differently in the four nations - as documented in the accompanying ECEC Workforce Profile (Lumsden 2024). In England, the three areas presented by Liz Brooker in 2017 continue to be dominant discourses, with the challenges they present exacerbated by the COVID pandemic (La Valle et al. 2022).

Research evidence on the importance of investing in early childhood has been recognised by policy makers in the UK. Since the pioneer investment era of the Labour Government (1997–2010), ECEC has continued to be a policy focus, with the 2023 Budget pledging to expand the 'free' childcare offer in stages by introducing as from April 2024-15 hours to all children over 9 months with working parents, rising to 30 hours for all children under five with working parents earning under £100,000 (€116,310) net income (DfE 2023a). While this direction must be welcomed, it does little to address the challenges for families unable to work or find employment that works around family life. This is despite the compelling evidence about the importance of high quality ECEC for child development and the fact that those children who would benefit most are less able to access it – a situation reinforced by the pandemic (see La Valle et al. 2022). As Moss and Cameron (2020) articulate, despite policy attention the fragmented nature of ECEC in England continues to drive a flawed system – a system, they argue, that has failed to pause and reflect on the purpose of ECEC and how it operates. Moreover, they suggest that the emphasis on 'school readiness', as well as the EYFS, and the focus on 'childcare' for parents, has arguably exacerbated the challenges for ECEC in England.

Investment in workforce development continues, with the Level 3 Early Educator (or equivalent) continuing as the mandated qualification in **England**. Investment in graduate leadership continues, but the transition from Early Years Professional Status to Early Years Teacher Status in 2013, without ensuring that employment conditions mirrored those of colleagues with Qualified Teacher Status, presents challenges to the recruitment and retention of those with EYTS. The number of providers of the EYTS qualification route continues to decline year on year. In 2022, 21% of the workforce held a Level 6 qualification (DfE 2022a) and in 2023, only 17 training providers were offering EYTS, 12 of which were HEIs (DfE 2023b) – a situation that compounds the fragmented nature of ECEC and the divide with Education (Moss and Cameron 2020).

In **Scotland**, the situation in relation to graduate leadership is different and the Childhood Practice degree is being taken up by the early years workforce such that Scottish Government data

shows an overall increase in staff who are degree qualified or undertaking a degree increasing by 17.8% between 2020 (5,015) and 2023 (5,906) (Scottish Government 2023b, 26).

It is not only graduate recruitment that is an issue, significant challenges of recruitment, qualification levels and staff shortages that have been a constant concern across the UK for employers, membership organisations and researchers, are materialising. The current situation for the ECEC workforce is extremely challenging and further exacerbated by the mixed economy of provision and, in England particularly, the marketisation and commercialisation of ECEC (Lloyd 2020). In the UK there are disparities in pay, working conditions and status between those with Qualified Teacher Status and the remainder of the ECEC workforce, disparities which have been sharpened by the current cost of living crisis across the country. In Scotland, for example, where most children attend publicly funded ECEC provision, the employment conditions and pay of practitioners and support workers who make up the largest proportion of staff in settings do not have qualifications or pay or career routes comparable to teachers. The dissatisfaction with pay levels led to potential strike action in September 2022 which was only cancelled when the pay rise offered was substantially increased.

In **England**, the number of settings closing or being acquired by larger companies has increased (DfE 2021c; Simon et al. 2021). While the Government promised several measures to support the sector in England, the 2023 Budget (HM Treasury 2023) gave ECEC providers the option of relaxing staff to child ratios (aligning England to Scottish requirements), a highly contested issue in the sector, particularly since the requirements for graduate leadership differ between the two nations.

In **Wales**, the expansion of the 30 free hours scheme and expansion of the Flying Start provision will see a significant increase in nationwide demand for spaces. In an already struggling workforce due to the impact of the pandemic, this is a real concern.

The ten-year Childcare, Play and Early Years Workforce Plan is under review (2023) and the pandemic has impacted on the number of students being able to complete placement hours for the Childcare qualifications. Additionally, the number of practitioners able to deliver through the medium of Welsh is concerning and part of the Welsh Government's *2050 One Million Welsh Speakers* campaign which aims to increase the number of Welsh speakers across Wales. For early years this includes investment in Welsh-medium provision with a target of an additional 150 settings by 2028 and providing training to develop the Welsh language skills of the existing workforce (Welsh Government 2020).

Plans for workforce registration are in discussion, similar to those in Scotland, in a move to support the recognition of the workforce as a significant and important profession. Ongoing feelings of being undervalued and poorly paid are impacting on sector recruitment and retention similar to issues outlined across the other three nations. A key priority is the continued drive for recognition and upskilling across the sector, the value of graduate level practice qualifications and ongoing support for the ECEC agenda in Wales is essential to meet increased demand for quality provision (Welsh Government 2019b).

Despite the divergence in ECEC policy approaches across the four nations of the UK it is evident that there is instability and that – beyond those with Qualified Teacher Status – the workforce is undervalued and poorly recompensed, making it difficult to forecast the future. In England there is an urgent need for strong and committed leadership in Government, alongside substantial and sustained investment, to ensure that *all* our youngest children have access to high quality ECEC provision. A key cornerstone is a qualified, graduate-led workforce that is valued and invested in; this does not currently appear to be a high priority for the incumbent Government.

Demographic data

Please note: For reasons of comparability, data on children are always reported up to 6 years of age, even if compulsory schooling starts earlier or later in some countries.

Population

In the year 2021 there were 67,026,300 persons resident in the United Kingdom. Over the past 20 years, the total population has risen continuously. The following national statistics of the total population shows the population of the constituent countries over time:

Table 14

United Kingdom: Overall population and population of constituent countries 2000-2021

	2000	2005	2015	2021
England	49,233,300	50,606,000	54,786,300	56,536,400
Wales	2,906,900	2,969,300	3,099,100	3,105,400
Scotland	5,062,900	5,110,200	5,373,000	5,479,900
Northern Ireland	1,682,900	1,727,700	1,851,600	1,904,600
United Kingdom	58,886,000	60,413,300	65,110,000	67,026,300

Source: ONS 2022b

Total fertility rate

In 2021, the average total fertility rate in the EU27 (from 2020) was 1.53. The highest total fertility rate of the 33 SEEPRO-3 countries was in France (1.84), the lowest in Malta (1.13). At 1.75, the UK is well above the EU27 average (Eurostat 2023d)⁶.

Children under age 6

Table 15

United Kingdom: Number of children according to age, 2021

	Number of children
Under 1 year-olds	675,477
1 year-olds	701,987
2 year-olds	719,130
3 year-olds	732,469
4 year-olds	751,206
5 year-olds	774,709
Total 0 to under 6 year-olds	4,354,978

Single households with children under age 6

In 2019, more than three-quarters (77.3%) of households with children under age 6 in the United Kingdom were couple households. Single households with under 6 year-olds accounted for 9.8% of all households. These were almost exclusively single mother households (9.1%).

Table 17

United Kingdom: Households with children under age 6, 2019

Household type	Total households	Total households, in per cent*
All households	7,208,800	
Couple households	5,572,900	77.3
Other household type	924,400	12.8
Single households, total	708,200	9.8
Single households, women	652,600	9.1

Employment rates of parents with children under age 6

In the United Kingdom, in 2023, the overall employment rate for men (15-64 years) was 79.4% and for women 72.1% (Statista 2023b).

In 2021, 70.7% of women and 95% of men (18-64 years) with children between 3 and 4 years were employed. Although an exact comparison is difficult because the dependent children's ages are different, the share of employed fathers was significantly above the EU-average (87.5%)

⁷ The data for 2000 include the EU15-Länder at that time (AT, BE, DK, DE, IE, EL, ES, F, FI, IT, LU, NL, PT, SE, UK). The 2005 data (EU25) include CY, CZ, EE, HU, LV, LT, MT, PL, SI, SK. Data for 2015 include the additional EU28 countries BG, RO und HR. Data for EU27 (from 2020) comprise the countries of the EU28 without the UK.

as was that of mothers (EU-average 64%). This also applies for employed mothers and fathers with children under age 2 (72.4% and 93.1% respectively) (Eurostat 2023e, ONS 2022c).

Table 18a

United Kingdom: Employment rates of parents with children under 6 compared with other EU countries, 2010 und 2021

	2010	
	Mothers, in %	Fathers, in %
United Kingdom	58.2	87.6
Highest rate of employment in 27 EU countries ⁸	Denmark: 82.7	Netherlands: 93.4
Lowest rate of employment in 27 EU countries	Hungary: 31.7	Latvia: 72.7
	2021	
	Mothers, in %	Fathers, in %
United Kingdom (with children 3–4 years)*	70.7	95.0
Highest rate of employment in 27 (2020) EU countries ⁹	Luxembourg: 81.9	Sweden: 95.1
Lowest rate of employment in 27 (2020) EU countries	Czech Republic: 42.5	Romania: 78.5

Source: Eurostat 2023e, *ONS 2022c

For the SEEPRO-3 countries that were not part of the EU27(2020) in 2021/2022, like the United Kingdom, data are displayed in *Table 18b*

Table 18b

Employment rates in non-EU SEEPRO-3 countries, 2021/2022/2023

Countries	Parents with children under 6 years		Overall employment rate	
	Mothers in %	Fathers in %	Women in %	Men in %
*Norway (2022)	82.9	94.3	75.4	80.1
***Russia (2021/2022)	67.1 (2021)	k.A.	55.6 (2022)	70.4 (2022)
*Serbia (2022)	64.4	78.3	57.9	71.0

Children at risk of poverty or social exclusion¹⁰

In 2018, 28.1% of children under 6 were at risk of poverty or social exclusion. This proportion was above the then EU28 average (22.7%). The share of all persons at risk of poverty or social exclusion in the total population was 22.8% compared to the EU average of 21.8%. 3.1% of children under 6 and 1.9% of the total population suffered from severe material deprivation (EU28-average 5.3% and 4.0% respectively) (Eurostat 2023g, h – data after 2018 not available).
