1. **ECEC governance**

During Soviet times, Russia had a unified system of early childhood education and care for children aged 0 to 7 years, with centrally regulated directives. Today, the Russian Federation has a multi-level approach towards early childhood education and care. Responsibilities are shared between the Ministry of Education and Science of the Russian Federation (Ministerstvo Obrasovaniya i Nauki Rossijskoj Federacii) and the Ministries of Education in the 85 administrative divisions or ‘federal subjects’ (provinces, republics, okrugs, krais, oblasts, federal cities).

The Ministry of Education and Science of the Russian Federation sets down the curriculum requirements for both the public and private ECEC sector according to the 2010 Federal State Educational Standard (Federal’nyye gosudarstvennyye standarty obshchego obrazovaniya - FGOS) for Basic Education (in short: Federation Standard), whereas governance and implementation are devolved to the federal subject level.

At the level of the administrative divisions, ECEC is organised as a split system. Provision for under 3-year olds is not part of the official education system and is – particularly for the under 2-year olds – provided by the private sector and regulated by the Law on Consumer Rights. Hygiene standards are overseen by the Ministry of Health and the Ministry of Labour and Social Protection.

Kindergartens for 3- to 7-year olds (ISCED 02) come under the auspices of the Ministry of Education and Science. In 2012, early childhood education was officially recognised as the first stage in the education system (Bertram and Pascal 2016). The regional ministries of education are responsible for implementing national educational policies through steering and management strategies and through the allocation of resources. Responsibility for the organisation and co-funding of kindergartens lies with the municipalities (EFA 2015).

In 2010, the formal qualification requirements, competence specifications and duties of ECEC staff were regulated through an order of the Ministry of Health and Social Development (Ministervo Zdravoohranenija I Social’nogo Razvitija Rossijskoj Federacii). In 2013, the Ministry of Labour and Social Affairs issued a Professional Standard for pedagogical staff (order No. 544). However, this order has not yet been enforced and professional competencies are now under the direction of the new Minister of Education. In November 2016, the Federal Ministry of Education initiated a public consultation to invite the views of ECEC teachers. Following this consultation, amendments will be made to the Professional Standard, which will be issued by the Federal Ministry of Education and is expected to come into force in 2018.

2. **Who belongs to the early years workforce?**

2.1 **Regular contact staff in ECEC provision**

**Staff in kindergartens**

Kindergartens for 2- to 7-year olds are the main form of ECEC provision in Russia. Five main categories of staff are employed on a regular basis in kindergartens:

- **Kindergarten/Pre-primary Teachers** (*doshkolny pedagog/vospitatel*)
- **Kindergarten Teachers’ Assistants** (*assistant/nyanya*)
- **Specialist staff** (psychologists, speech therapists, teachers for music, sport, dance (*psykholog, logoped, pedagog po musike, fizkulture I tantcam*)

---

From 14 Nov-1 Dec. 2017 there was a public hearing on this topic (http://стандартпедагога.рф/theme.php?id=1#)
• Pedagogical Supervisors (metodist)
• Centre Heads (principals) and Deputy Centre Heads perform managerial tasks and are responsible for pedagogic, financial and legal issues. They are not involved in the daily educational programme.

The following staff may also be employed in kindergartens:
Children with special educational needs are supported by Special Needs Teachers and Special Needs Assistants (defectolog, tjutor). Settings may also employ a Social Pedagogue (socialny pedagog) to support children and families from disadvantaged backgrounds or a non-teaching Organisation/Coordination Teacher (pedagog organizator) who organises special events for important national holidays\(^2\) and cooperates with different social services. Since the Federal Standard stipulates that children in kindergarten have to learn about state and government, these holidays are organised as non-formal learning events.

Non-pedagogical staff include nurses as well as kitchen and administrative staff. Due to reorganisation in some federal subjects most of the non-pedagogical staff are outsourced.

**Staff in childcare settings for under 3-year olds**
Public infant-toddler centres (yasli) are mostly integrated into kindergartens and in these particular settings the children are educated and cared for by Kindergarten/Pre-primary Teachers (doshkolnyj pedagog/vospitatel) and Kindergarten Teachers’ Assistants, i.e. these children have access to the same qualified staff as older children. However, in privately-run childcare settings, the staffing situation is different since most of these settings do not have to adhere to government regulations. On the one hand, some of these elite settings attract highly educated staff through higher salaries. On the other hand, some of the very small private settings employ staff who have little more than an Assistant qualification.

**Table 1** provides an overview of staff who works in centre-based settings according to their occupational title, main workplace settings, main positions, main age-range focus of their initial professional studies (IPS) and the minimum qualification requirement. Core practitioners (i.e. staff with group or centre responsibility) are also categorised according to one of five ECEC professional profiles adapted from the original SEEPRO study (see Box 1 at end of this section).

5 We would like to point out that some parts of the Russian higher education system are not aligned with the Bologna system. The quality of the education plan differs considerably, therefore we decided to give ranges regarding the ISCED levels.

### 2.2 Structural composition of ECEC workforce

The ECEC workforce in the Russian Federation comprises two sets of personnel: those working in the pre-primary education sector (3-7 years) and those working in the childcare sector (0-3 years).

**Education sector (3-6)**

Staffing in the education sector comprises not only core practitioners but also therapists, sports, music and art teachers, psychologists and speech therapists (see Section 2.1). Teachers working in kindergartens and other early childhood education provision have to have at least a three-year post-secondary vocational education with a specialisation in early childhood education and pedagogy.

The level of initial professional education has been rising over the past few years: In 2015, 51% of teachers (643,700) in early childhood education held a university degree, compared with only 29% in 2002 (Taratukhina et al. 2006). Roughly the other half has a post-secondary level vocational teaching qualification.
In the near future, the federal Ministry of Education and Science plans to make a university degree of at least three years’ duration the minimum requirement for entry into the profession as a Kindergarten Teacher. This could lead to improved professional prestige and improved quality in early childhood education.

As in many other countries, male kindergarten/preschool teachers are rare (approx. 1%). Table 2 and Table 3 give an overview of the structural composition of the workforce in the pre-primary education sector.

**Childcare sector (0-3)**

Since the childcare sector for under-threes is not fully regulated, there are no reliable data available. However, it can be assumed that the pedagogical staff structure is similar to that for provision with the over-threes, although specialist support staff such as Special Needs Teachers, Organisation Teachers, Pedagogical Supervisors and Psychologists are not part of the staff in childcare centres. If special support is needed, parents have to apply for services in municipal or state kindergartens. In order to be more flexible in terms of job opportunities, staff in infant-toddler centres mostly follow qualification routes that also enable them to work in kindergartens.
3. **Initial professional studies (IPS)**

3.1 **Initial qualifying routes – higher education and vocational**

In Russia there are several qualifying routes on the vocational and university level. The VET training is very heterogeneously structured and the schedules are very different from each other, but they all contain a minimum of basic content and minimum hours, which are orientated on the required skills. The same is true at the university level (taking into account the studies for external participation on a part-time basis.) Therefore it is difficult to compare the quality of studies with the EQF or ISCD framework.

**Education sector (3-6)**

The following gives a brief description of the varying formal levels of initial professional studies, both within and between different occupational roles in the kindergarten sector (see also Klishin 2015):

**Kindergarten/Pre-Primary Teacher**
- University degree or vocational education/training with specialisation in Pedagogy and Early Childhood Education, or
- University degree or vocational education/training not related to education with additional training in the field of Education and Pedagogy

**Junior Kindergarten/Pre-primary Teacher**
- General vocational education/training, or
- Vocational education/training in the field of Education and Pedagogy

**Senior Teacher/Pedagogical Supervisor**
- University degree or vocational education/training in the field of Education and Pedagogy
- At least 2 years of work experience as a Kindergarten Teacher

**Kindergarten Teacher’s Assistant**
- School education and vocational education/training in the field of Education and Pedagogy
- No previous working experience required

**Psychologist**
- University degree or vocational education/training in the field of Education and Pedagogy, or
- University degree (diploma or diploma plus magistratura) or vocational education/training in the field of Pedagogy and Psychology

**Speech Therapist/Special Needs Teacher**
- University degree in the field of speech therapy/special needs

**Special Needs Assistant**
- University degree in the field of Education and Pedagogy
- Minimum of 2 years working experience in a pedagogical setting

**Social Pedagogue**
- University degree or vocational education/training in the field of Education and Pedagogics or Social Pedagogy
Organisation/Co-ordination Teacher
- University degree or vocational education/training in the field of Education and Pedagogy or in a field which fits to the job profile

Art Teacher/Sports Teacher
- University degree or vocational education/training in the field of Education and Pedagogy
- Proficiency in arts/sports

Centre Head/Principal
- University degree in the field of Government and Municipal Management, Human Resources Management or working experience as a Kindergarten Teacher of at least 5 years, or
- University degree and additional professional education/training in the field of Government and Municipal Management or Economics and at least 5 years of working experience in a management position.

Deputy Centre Head/Deputy Principal
- University degree in the field of Government and Municipal Management, Human Resources Management or working experience of at least 5 years, or
- University degree and additional professional education in the field of Government and Municipal Management or Economics and at least 5 years of working experience in a management position.

Director of a sub organisation (руководитель структурного подразделения)
- University degree with special focus on the profile of the organisation and working experience in this field of at least 3 years.

Childcare sector (0-3)

Although the childcare sector for under 3-year olds is not as regulated as the pre-primary sector and a three-year post-secondary vocational education is sufficient for working in settings for under-threes, staff mainly have the same qualifications as their colleagues working with older children in order to be more flexible in terms of job opportunities.

**Table 9**  
Russian Federation: Educator/Childcare Worker

**Main ECEC workplaces:** yaslye (infant-toddler centre) 1/1½–3 years; gruppy kratkovremennogo pribyvanija (sessional services), 1½–5 years

### 3.2 Competencies and curricula in IPS programmes

**Kindergarten/Pre-primary Teacher**  
*(post-secondary vocational route and university study route)*

**Educator/Childcare Worker** *(post-secondary vocational route)*

**Competency specifications**

Prospective Kindergarten/Pre-primary Teachers and Educators/Childcare Workers are expected to acquire knowledge in the following areas:

- Developments in the educational system of the Russian Federation;
- Laws and other regulations on education;
- UN Convention on children’s rights;
- Pedagogy; developmental and social psychology;
- Methods of observation and monitoring children’s activities;
- Pedagogical ethics;
- Theory and didactics of educational work;
- Leisure time activities;
- Methods of management of educational systems;
- Using modern pedagogical and digital technologies;
- Cooperating with children of different age-groups, parents, co-workers;
- Identification of conflict situations and coping strategies;
- Basic knowledge in ecology, economics, sociology;
- Basics of computer work with text editors, emails, browsers; using multimedia equipment;
- Employment policies and procedures in educational institutions;
- Regulations on labour protection and fire safety.

Curricular areas in the vocational route comprise:
- Pedagogical basics;
- Theory and methods of education;
- Federal Standard of Education;
- Didactics and methods of educational research and science;
- Pedagogy of preschool education;
- Psychology of the early years;
- Methods of teaching in preschool classes.

Curricular areas additional to the above in the university study route include:
- Humanistic subjects such as philosophy, history, foreign language, economics, educational linguistics;
- Organisational and legal basics;
- Developing a professional identity;
- Health issues in preschool education;
- Inclusive education;
- Preparing children for school;
- Innovations in preschool education;
- Language development, diagnosis of disorders and their prevention;
- Information technologies in education;
- Development of children’s graphic creativity.

Centre Head – university route

Competency specifications
A prospective centre head is expected to:
- Manage an educational institution according to the laws and other regulations;
- Combine teaching and administrative tasks;
- Implement the Federal State Educational Standard (FGOS);
- Decide on the grouping of children;
- Provide health and safety protection for the children;
- Respect the rights and freedom of pupils and employees of educational institutions;
- Define the strategic programme of the educational institution;
- Establish a work programme for the institution;
- Support participation in various programmes and projects;
- Supervise the continuing quality improvement of the educational institution;
- Implement educational programmes, curricula and training programmes in cooperation with municipalities or public organisations;
- Create conditions for the introduction of innovations;
- Promote a good working climate;
- Use budgetary funds effectively and efficiently;
- Supervise the salary fund according to the basic and stimulating aspects;
- Manage the staffing of the institution and select and recruit new staff;
- Solve personnel, administrative, financial, economic and other matters according to the charter of the educational institution;
- Create opportunities for the continuing professional development of staff;
- Provide satisfactory and safe working conditions;
- Deploy staff according to their knowledge and experience;
- Promote and enhance staff motivation;
- Provide conditions of staff participation in management decisions;
- Plan, coordinate and control the work of staff in the educational institution;
- Cooperate with public authorities, local government authorities and the general public, parents and others;
- Represent the educational institution in the public domain;
- Promote cooperation with education-related organisations and associations;
- Feel responsible for material resources, documentation and finances;
- Prepare annual reports for the service provider, including financial statements.

**Curricular areas** include subjects focussing on administration, finance, pedagogy, municipal management, budget management, public relations.

### 3.3 Alternative entry and qualification routes, system permeability

Persons already in possession of a post-secondary vocational award or a university degree in a non-related field can follow a so-called requalification course (*perekkvalifikacija*) to become a Kindergarten Teacher. The course comprises 500 hours of presence studies and 100 hours of personal/home-based study and includes the following curricular areas: pedagogical basics; theory and methods of education; Federal Standard for Education; didactics and methods of education research and science; preschool pedagogy; psychology of the early years; methods of teaching in kindergarten.

### 4. Workplace-based learning in the IPS of core practitioners

In Russia, the study routes of ECEC core practitioners are mainly theory-based. Only some colleges provide short-term practical placements in kindergartens. However, these are not evaluated and are not acknowledged in terms of the vocational award. So most young ECEC professionals are not properly prepared for their practical work. However, training-on-the-job is monitored by the Pedagogical Supervisor and individually designed for the new staff members. This is a kind of step-by-step introduction to the ECEC working environment; it is not formally structured or related to specific curricular areas. There are at least two reasons for this: one is a basic lack of knowledge in skills-orientated teaching, the other is the fact that using a competence matrix for assessment is still unusual. In the end, quantitative assessment procedures remain the favoured approach for internal auditing or awarding a licence (Mansarliyskaya 2016).
5. **Continuing professional development (CPD)**

In the Russian Federation, no standardised CPD exists for staff working in the childcare sector. Each member of staff is responsible for his/her own CPD, depending on their educational level. However, centre heads sometimes establish a CPD plan for their staff and are supported by the provider in terms of legal and administrative issues.

Kindergarten Teachers, on the other hand, are required to participate in at least one course of additional further qualification training of not less than 72 hours per year. These trainings can also include e-learning modules and homework as preparation for onsite CPD sessions.

In order to guarantee the quality of the teaching staff, all ECEC staff has to pass an accreditation or so-called attestation (*attestatcia*) every three years. For this they have to submit information on the teaching programmes attended, professional diplomas gained, additional qualifications, confirmation of participation in competitions to the local supervisory centre to prove that their qualification has been updated. Although staff in infant-toddler centres are not obliged to pass an attestation, most of them go through the process because it then enables them to work in settings with 3- to 6-year olds.

Whereas courses chosen for personal interests have to be paid by the employee, the obligatory 72-hours courses take place during working hours and are paid by the employer. They are provided either by public education service centres or by private teaching institutes. Moreover, pedagogical universities which are licensed by the local or federal ministry of education offer trainings on both general and specialised topics (e.g. improving creativity in kindergartens). There is a variety of courses on offer and the market is very competitive. Course fees vary between 5,000/6,000 RUB (79/95€) and 20,000 RUB (319€) depending on the topic and the reputation of the lecturer.

Centre heads decide about their staff’s participation on CPD courses and about the chosen topic in order to improve the profile of their setting (e.g. to strengthen a focus on inclusion or natural sciences). Centre heads also can grant free time to participate in CPD or to pass exams. But CPD is not recognised in terms of career advancement and acquired skills are not evaluated.

Additional qualifications can be achieved through university courses or post-diploma degrees (so called *magistratura*) which are comparable to a Bologna Master’s degree.

Kindergarten Teachers wishing to become Centre Heads additionally have to pass an examination with an oral test in front of a commission that decides whether the candidate is suitable for this position. If approved, the candidate is registered in a list for the next management position available. The test has to be repeated every three years.

Currently, there are no research projects on the topic of CPD, apart from some smaller regional model projects which have focused on team-building. There are no projects focussing on career assessment and development. At the moment all resources are allocated on developing competences on FGOS, so there is no room left for strategic career path development.

6. **Recent policy reforms and initiatives relating to ECEC staffing**

In recent years there have been no policy reforms relating to ECEC staffing. As mentioned in section 1, a new Federal Standard for Professional Education regarding the qualification of Kindergarten Teachers is under review at the different ministerial levels following a consultation process. A new law or Professional Standard is expected to be announced in 2018.
7. **Recent country-specific research relating to ECEC professionalisation and staffing issues**

Little research has been carried out on the initial professional studies of Kindergarten Teachers, possibly because of their low social status in Russia. New pedagogical and didactic approaches are taught in a 72-hour additional professional qualification, but not within the basic vocational education/training course. Current research tends to focus on the implementation of the Federal Standard, i.e. on topics needed to enhance Kindergarten Teachers’ competencies to meet the national requirements. There is little other research on professionalization or staffing issues.

8. **General workforce issues**

8.1 **Remuneration**

The career levels of kindergarten teachers are classified in three categories: junior, basic and senior level teachers. Salaries and work tasks vary according to these levels, which in turn are not only dependent on the qualification but also on additional activities such as publications, participation in conferences or professional competitions etc.

The salaries of Kindergarten Teachers vary greatly depending on the economic situation of a region. In 2015, the average salary was 25,600 RUB (406€) per month, i.e. 94% of the Russian average wage. According to order No. 167n issued by the Ministry of Labour and Social Affairs in 2013, government institutions are obliged to follow the rules of a so-called effective contract (Gazeta.ru 2015). According to article 129 of the Russian labour code, wages comprise three parts: 1) compensation for the work, depending on the qualification (minimum wage) and municipal/state budget (co-efficients); 2) additional payment for special/additional work; 3) incentives.

Kindergartens charge parents for additional hours (swimming, art classes etc.) and use this income to increase the salaries of the staff through creating a bonus pool. (The culture of bonuses or stimulation goes back to the Soviet area, where extra shifts and over-fulfilment of the work load led to incentives.) This practice can lead to even greater disparities within municipalities: In 2015, wages in Moscow ranged between 24,000 and 49,000 RUB (380 and 777€) for a full-time job (City Government of Moscow 2016). This is almost at the same salary level as primary school teachers.

8.2 **Full-time and part-time employment**

The work in kindergartens is organised in shifts. Kindergarten Teachers generally work full-time; certain kinds of teachers for children with special needs may work part-time. However, there are no statistical data available on this.

8.3 **Staff support measures in the workplace**

At the regional level, support for ECEC staff is organised through special centres set up by the regional governments (e.g. by the state ministry of education) that provide for example psychological advice or crisis intervention. Training on the job, when entering from education, is organised within the organisation. Mostly the methodical supervisor gives help and advice. Modern human resources approaches like career-path supervision or mentoring are not provided.
8.4 Non-contact time
Preparation and reporting is mainly done during the sleeping time of the children. Officially there is no extra time calculated in working contracts to fulfil non-teaching duties.

8.5 Staff shortages and recruitment strategies
Young people are attracted to professions which provide a certain amount of stability in status and income, particularly in times of economic constraints, which has been the case since the early 1990s. The profession of Kindergarten Teacher is neither a high status profession (Yurchenko 2013), nor do these teachers have a steady and nation-wide or region-wide regulated income. There is no overall Russian remuneration system for Kindergarten Teachers. Attendance rates in kindergartens have been rising, leading to a stronger demand for qualified staff. These shortages are being addressed by providing possibilities for the ‘requalification’ of professionals who lack knowledge and experience in early childhood pedagogy (see Section 3.3). To date there are no regulated recruitment strategies.

9. Workforce challenges – country expert assessment
Although the de-professionalisation trend of the 1990s has been halted, the Russian ECEC system still lacks modern approaches and kindergarten staff is not confident with their professional situation (Yurchenko and Mansurov 2014). As described above, currently there is no Professional Standard for the ECEC profession. Due to changes in society, technology and educational policy, new standards and qualification routes need to be developed. The challenge is to develop a complex system which also matches the new FGOS. However, an assessment by the Moscow State Pedagogical University showed that 40% of the pedagogical teams are still not yet ready to implement the Federal Standard (Miklaeva 2016a, 2016b, 2016c).

Another challenge is the further development of the vocational qualification routes. Currently, most of the budget goes to the universities and policy makers have to decide whether to focus on higher education as a qualification requirement for work in kindergartens or to strengthen the vocational routes.

Moreover, ECEC staff is not well paid; their salaries mostly depend on the budget situation in local authorities. Earning more money can only be achieved by increasing the already heavy workload. There is no research confirming these problems empirically – so the situation will probably not improve and will result in more staff shortages and larger groups of children. This, in combination with a lack of proficient professional know-how, is not likely to solve the problems regarding the implementation of the new Federal Standard.

A further challenge will be to raise the effectiveness of the preschool and school sector and to develop new strategies of administration.
